MIDDLESEX VS. JERSEY CITY HEIGHTS.—Well, the return match between the Middlesex Gun Club and the Jersey City Heights came off on the grounds of the former club at Dunnellen on the 19th inst., and came near being a Waterloo for the Heights boys. Query? Have the Jersey City Heights really had their day and is their glory departed for ever? Or is the old Jersey City Heights a team of champions, brilliant victories unparalleled in history, at last puffed up and arrogant become enervated, relying upon their past record, to meet an ignominious defeat at the hands of a club of but a few months' existence? The 10:30 train from Jersey City carried a large delegation of the Jersey boys to Dunnellen, where they were met at the depot by Dan Terry, Captain of the Middlesex Gun Club, and escorted to coaches to the grounds, some half mile distant. The Middlesex have a fine club house, the residence of which is very satisfactorily arranged in regard to the sun, boundaries, etc. It is a building about the club house is a cool cellar beneath for the preservation of the birds, only being sent to market. It would make a tip-top wine cellar, only the Ms. are decidedly prohibition or anti-wine. The Ms. are a right good sort of boys and know how to treat their guests. The collation served up was good and in ample quantities. We missed the superb clam chowder of our friend Carmody, though we saw his glowing face among the intensely interested delegation from the Heights. As the close of the match, there were many little episodes, so to speak, of an interesting character. Dr. Burdett lost one bird by his gun catching under his coat. Two birds on each side were scored lost by the dog in his haste driving the bird out of bounds. In each case the bird would probably have been gathered by a careful man. One of the Middlesex men lost his bird because his gun was not in proper shape as he went to the score. Dickens's next to last bird was clearly shot on the ground, as both the ground and the ground had been decided had a decision been called for in time. No less than two and probably three, birds would have been decided lost to the Middlesex, had the challenges been prompt, on the position of the gun below the elbow. But there seemed a disposition on both sides to have everything fair and friendly. During the shooting of the second squid it seemed evident, or at least probable, to both Captain Terry, of the Middlesex, and Captain Heritage, of the Jersey City Heights, that some of their most reliable team shooters would not be on hand. Therefore, a compact was made that instead of 5 men on the last squid, there should be only 2, making only 17 men on side. Heritage named his men (Dr. Burdett and J. von Lengerke), but before the finish of the score of the third squid Terry's men appeared. Heritage's did not. The Middlesex boys insisted on shooting the 20 men, knowing that it was their only show. As the third squid's score showed the Jersey City Heights 2 birds ahead, and with their two shooters mentioned they would surely win. Heritage knew this, and insisted on not filling the squid with shooter shooters against the last men the Middlesex could furnish, as they had been held in reserve especially; but the Jersey City Heights boys don't know how to do a small thing, and as they have always prided themselves on shooting a full team and the full strength of the club, they decided to fill out and shoot the 20 men, all thinking that they would surely be beaten, Captain Heritage especially being very indignant—with reason, too. He had the interest of the club at heart; he knew he had the man. The boys all appreciated his zeal, but they at the same time felt that the honor of the club was of far more value than the \$50 (the price of the birds). As long as it was expected that the match, like the previous one, should be 20 men on a side, and the J. C. H. had that number of men on the ground, they ought to shoot them even if they did lose, and they are all better satisfied to have it come out a tie than to have won the match with 17 men and a slur on the good name of the club. Our jolly sporting editor of the *Constitutionalist* (Plainfield) tries to make an outrageous pun, and a very muddy chestnut at that, and give a dig at Jacobus, the steel business. That won't do, my dear E. There was no dog in the last shot at all; the bird dropped dead 5 yds. or more from the back score, and was picked up and held up in the presence of all by Capt. Heritage. That was a very creditable shot of young Still, a young member of the club, his first shot on a team, put on at the last moment, no wonder he was nervous. He did not do himself justice. But the last shot, when Middlesex had killed Still, must kill to the ground. To miss a shot, how he was to be to the ground, the gun trembling in his hand, his knees shaking, but with firm compressed lip he planted his foot down and called "pull." The bird proved to be an incomer. Still was shooting Von Lengerke's gun, a close choke. The bird came on to all appearance unharmed. Sutherland of the Jersey City Journal and the undersigned both scored it lost and the match won by the Middlesex, when a shout went up and pandemonium broke loose. The bird had dropped dead just behind Still and within bounds. How was it? How was it? How was it? And poor Still, they took him in their arms carrying him into the club room amid the most vociferous acclamations, and in their excitement nearly smothered the young hero. Still secured the bird and will have it stuffed as a memento of how he, the youngest member, the first time he shot, saved the club from defeat. From the score it will be seen that there was some very poor, really unaccountable poor, shooting. The percentage, as all agree, was up the third squid's score, finishing decidedly in favor of the Middlesex, about 90 per cent. But there is no excuse for an old shot like Collins making such a record. When he shoots his own gun with his own shells loaded as he knows how to load them he is a safe man, but rushing from his office, reaching the grounds in a hurry, shooting first one member's gun then another's, is it a wonder that he gets but 3 where the club counted on him for at least 7 out of the 8? It is not justice to himself, it is a wrong on the club. The match was a tie, or draw, all

bets were declared off, and the breath came regular and the blood in its course through the system dropped to its usual velocity. The duffer saved the day. The following is the official score:

Twenty men each club, 25 yds. rise, 8 birds per man, 1 barrel only, gun below elbow until bird is on the wing. Major J. S. Hutchinson, Judge for Middlesex, George B. Eaton judge for Jersey City Heights, Capt. J. S. Staats, referee; G. F. Sutherland scorer for the Jersey City Heights, Judge G. P. Suydam for the Middlesex.

LONG BRANCH, May 19.—The West End Gun Club held its last shoot of the season on their grounds at West End to-day. The match was to decide who should possess the gold medal and who the leather medal. Ten glass balls were shot at 18 yds. The following is the score: Chas. Morris, 9; E. E. Tabor, 4; Gen. Vickers, 10; D. C. Bearmore, 8; J. Van Dyke, 8; Wm. Goodwin, 9; Richard B. Moore, 6; Elyvon 10; 10. As General Vickers and Elyvon tied, it was decided that they should shoot at 5 balls to decide the contest. Green broke 3 and Gen. Vickers, 5, which gave him the medal. The leather medal was awarded to Mr. E. E. Tabor.

COLLEGE MARKSMEN.—The Harvard Shooting Club held a class shoot on the afternoon of May 20, at East Watertown. A high north-west wind interfered considerably with the scores; 25 birds, 18 yds., 5 angles: '86 team—Slocum, 20; Austin, F. B., 17; Allen, W. S., 15; Bradley, 20—72. '87 team—Palmer, F. S., 19; Mead, F. S., 15; Coolidge, F. S., 15; Austin, 11; handicap, 12—72. '88 team—Clyde, 12; Overton, 4; Carpenter, 9; average score, 13; handicap, 20—68. '89 team—Grew, 13; Perry, 11; Greene, 11; Proctor, 6; handicap 24—65. In shooting off the tie between '88 and '87, 5 birds, '88 won, 18 to 11.

JAMAICA PLAIN GUN CLUB.—At the annual meeting, May 22, the following officers were elected: S. D. Harris, President; D. L. Brown, Treasurer; J. F. Boothby, Captain; C. H. Cilley, Secretary. The report of the treasurer shows the club to be in a flourishing condition financially with a good prospect for the future. The members are all active shooters and turn out in good numbers at every shoot in proportion to their membership which is rapidly increasing.

ST. AUGUSTINE, Fla., has a flourishing gun club. The shoots are held alternate Saturdays.

Yachting.

FIXTURES.

There are still many clubs not represented below, and some of the dates in the table are not official. We ask the aid of club secretaries and others in completing and correcting the list:

29. Portland, Cruise.	10. Hull, Novelty, Hull.
30. Corinthian, Club, Marblehead	10. Corinthian, Club, Marblehead
31. Sandy Bay, Pen. Rockport.	10. Sandy Bay, Pen. Rockport.
32. Knickerbocker, Spring Reg.	13. Beverly, Cham, Marblehead.
33. Onondaga, Opening, On. Lake.	13. Great Head, Ladies', Winthrop.
34. S. C. Y. C., Opening, N. Y. Bay.	14. Hull, Cham., Hull.
35. New Haven, Opening, N. Y. Bay.	15-17. Amer. (Steam), Annual.
36. Toledo, Pennant, Toledo.	17. Sandy Bay, Cor., Rockport.
37. Brooklyn, Opening, N. Y. Bay.	17 to 25. Knickerbocker, Cruise.
38. Atlantic, Opening, N. Y. Bay.	17. Jersey City, Annual.
39. Corinthian, San Francisco.	17. Atlantic, Cruise.
40. Newark, Annual.	21. Hull, Ladies', Hull.
41. Jersey City, Opening, N. Y. Bay.	22. Boston, Cup, City Point.
	23. Dorchester, Club, Harrison.
	24. Beverly, Club, Mon. Beach.
	24. Corinthian, Ladies', Marblehead.
	24. Sandy Bay, Pen. Gloucester.
	24. Great Head, Cham., Winthrop.
	24. Quincy, Club.
	24. Great Head, Cham., Winthrop.
	30. L. Y. R. A., Belleville.
	31. Beverly, Cham., Swampscott.
	31. Hull, Cruise, Eastward.
	31. Sandy Bay, Ladies', Rockport.
	AUGUST.
	2. Sandy Bay, Open, Rockport
	2. L. Y. R. A., Kingston.
	2. N. Y. C., Annual, Cruise.
	6. L. Y. R. A., Oswego.
	7. Corinthian, Open, Marblehead.
	7. Beverly, Club, Mon. Beach.
	7. Quincy, Club.
	8. Quaker City, Review.
	9. Great Head, Cham., Winthrop.
	9. L. Y. R. A., Toronto.
	11. Great Head, Ladies', Winthrop.
	14. Sandy Bay, Club, Squam.
	14. Hull, Open, Hull.
	14. Beverly, Cham., Nahant.
	14-29. Quaker City, An. Cruise.
	21. Beverly, Open, Marblehead.
	24. Great Head, Cham., Winthrop.
	25. Hull, Ladies', Hull.
	25. Corinthian, Club, Marblehead.
	25. Hull, Cham., Hull.
	25. Sandy Bay, Open, Squam.
	SEPTEMBER.
	2. Boston, Cup, City Point.
	3. Quincy, Club.
	4. Dorchester, Club, Harrison.
	4. Beverly, Open, Mon. Beach.
	4. Corinthian, Cham., Marblehead.
	5. Sandy Bay, Pen., Rockport.
	6. Newark, Open.
	6. Quaker City, Cup, 2d Class.
	8. Great Head, Cham., Winthrop.
	11. Hull, Cham., Hull.
	11. Corinthian, Sweepstake, Marblehead.
	11. Sandy Bay, Sweep, Gloucester.
	17. Toledo, Pen., Toledo.
	19. Quaker City, Review & Cruise.
	19. Sandy Bay, Club, Rockport.
	19. Great Head, Cham., Winthrop.
	25. Buffalo, Club, Lake Erie.
	25. Beverly, Club, Nahant.

THE SEAWANHAKA CORINTHIAN Y. C.

A VERY important meeting of the S. C. Y. C. was held on May 19 at Delmonico's with Com. Canfield in the chair. Besides the ordinary business of the club several matters came up which are of general interest to yachtsmen and which incidentally serve to show that the club is in as sound a condition as ever and as active in the promotion of yacht racing. On motion of Mr. Tams the section of the by-laws reading, "There shall be an annual squaldron cruise, the date for which shall be fixed at the regular meeting of the club held in May," was stricken out as not properly a part of the by-laws, but a matter to be settled by the officers according to circumstances. Last year, owing to the many events on hand, the cruise was omitted, but one will probably be ordered this season. Notice was given that the club would, after May 31, occupy the old basin, formerly held by them, between Tompkinsville and Stapleton, Staten Island. The club yacht *Venture* will be moored here and a janitor will be in attendance. Four new members were declared elected and the names of five candidates were presented. A letter was received from one of the members who lately resigned, asking leave to withdraw his resignation, which was granted. The following amendments were read by the secretary in the absence of Mr. L. P. Bayard, their proposer. The first proposition was to amend that part of Rule II, Section 1, relating to classification of cutters, sloops and yawls to read as follows:

First class, measuring 75ft. load waterline length and over; second class, measuring 55ft. and less than 75ft. load waterline length; third class, measuring 45ft. and less than 55ft. load waterline length; fourth class, measuring 35ft. and less than 45ft. load waterline length; fifth class, measuring less than 35ft. load waterline length. This change involves only the addition of a larger class and a renumbering of the classes. In view of the large yachts lately built, one of which is the flagship of the club, some such change was necessary, the only question being the limit for the larger class. Seventy-five feet was proposed in the original amendment merely as a suggestion, and the subject was generally discussed. It was desired to keep in the new second class the yachts now racing in the first class, all of which, with one exception, *Edouard*, are under 70ft. waterline. It was suggested that this figure would be better than 75, as when a vessel is once established in a class it is certain to be there for 75ft. is a wide step. After much discussion the length of 71m was fixed upon, thus including *Bedouin*, and the measure was passed.

The other amendment offered by Mr. Bayard was a radical one, and was discussed at length, and only carried after some opposition. It read as follows:

"To amend Rule X, relating to Corinthian crews, by striking out all of Sec. 2 and substituting the following:

Sec. 2. Professional crews shall be allowed on schooners and first class cutters, sloops and yawls."

"Sec. 3. Second class cutters, sloops and yawls may carry four professionals as part of their crew."

"Sec. 4. Yachts carrying professional crews in whole or in part, shall be subject to Rules XII and XIII."

Every year the Sailing Committee have found great difficulty in filling the entries, owing to the difficulty of securing a sufficient number of amateurs to man the larger yachts, and also to the reluctance of many owners to taking their vessels outside in the hands of an amateur crew. In the club and about New York from whose numbers competent crews for any yacht could be selected; but it is very difficult to get together eight or nine men who can spare any time for preparation or practice such as is needed in yacht racing, while at the date of the first regatta a good many have soft hands and pale faces after a winter's work indoors. To handle a yacht of 60 to 90ft. requires a crew of strong, skillful men, well trained and used to working together, and while we have some such crews composed of regular sailors, there are many owners who are deterred from entering by the difficulty of manning their yachts with a good crew for only one race. The club is making special efforts this year to secure large entries in all the classes, which cannot be done, as experience has fully proved under the old rule.

The amendment was finally passed, with the result doubtless that, while some of the yachts now sailing with good amateur crews will retain them, the entries in the larger classes will be augmented by the large racers and probably two or three Eastern yachts, sailed by their regular crews. There will be more and more amateurs employed for manning the smaller yachts. The other regulations of the club, limiting number of crew and providing that the yachts must be sailed by amateurs, are still in force. At the conclusion of the meeting Mr. Centre announced that a cup to cost \$1,000 had been subscribed for by members of the club to be offered for the first class yachts *Priscilla*, *Mayflower*, *Puritan* and *Atlantic*, on June 19, the date of the annual regatta, on the following conditions: First, that three of the four yachts should start; second, that the yachts should not be sailed by professional crews; third, that they must carry balloon gas topsails, but otherwise to be subject to the rules of the Seawanhaka Corinthian Y. C. Of these, *Mayflower*, *Puritan* and *Priscilla* will in all probability enter, and it is hoped that *Atlantic* will be in also. The flagship, *Priscilla*, has arrived in New York and will be ready before Decoration Day, when the opening race of the club will be sailed. Mr. J. F. Tams has been appointed Fleet Captain. The race will be sailed in cruising trim, regular crews allowed. No entries will be required, but yachts intending to race must carry racing signals at the peak. The prizes will be \$25 in each class. The course will be to and around Buoy 8½.

HOW TO AVOID BEING DROWNED.

THE danger of drowning is present wherever water of any depth is found, and almost every person is liable at times to an accident which may result in their total submersion. Not only sailors, yachtsmen and canoeists, who spend much time afloat, but the ordinary traveler, even by rail and much more so when aboard a vessel, however large, may be called upon without warning to support himself unaided in the water for an indefinite time. In such a case it might be supposed that in this enlightened age the simple principles of flotation, its laws and their practical application, would be included in the elementary instruction of children, even if practical exercises in swimming were neglected; but such is far from being the case. Further than this, there are many who consider themselves fairly expert swimmers who have given no thought to the principles of flotation, on which their safety depends, and which, if well understood, may aid them in keeping afloat long after their powers as swimmers only are exhausted.

Those who would study this interesting subject will find much valuable information in a little book entitled "How to Avoid being Drowned; or, All About Flotation," by F. W. Brewster, M. A., of Trinity College, Cambridge, recently published by Messrs. Roberts & Lytle, of London. The author has made a large number of experiments with floating bodies, and has devoted special attention to the question of flotation in swimming, and the proper and sustained position of the body in the water. The definition of the terms, displacement, density, buoyancy, etc., are very clearly written, and the laws of flotation are explained in a simple and practical manner. The subject of life buoys is treated at length, and we extract a portion as being valuable to the yachtsman, the canoeist, and especially to the traveler. Those who seek amusement on the water are usually more or less athletic and able to swim, at least in smooth water; but the real seaman, as well as the ordinary traveler, is apt to be utterly helpless when thrown in the water, and unable even to avail himself of the support which may be at hand. How much harm may result and how the greatest benefit may be obtained are told as follows by the author:

"The desiderata to be embodied in a life-buoy are: First, that it should be capable of sustaining a human being; second, that it should be easy to secure or take hold of, and third, that it should be easy to use efficiently when secured."

A life-buoy is an article intended to be thrown to a man who is accidentally immersed in water, by means of which he can support himself until the arrival of further assistance; and not, as many persons think, circular things met with, in more or less profusion, on board ship. I am one of those who think it is all but useless to throw anything of the kind from a vessel under way, or where a straggle life is running, to a person who cannot swim, when struggling frantically in the water, unless the life-buoy is attached to a line and sent actually within easy reach. A man incapable of propelling himself through the water, and in swimming, is powerless to do more than hold on to the buoy, neither will the tide or current assist him in such endeavor, and even if he does grasp it, he is too hurried and unexperienced to make proper use of it, unless he can be hauled in at once.

Those responsible for the original production of the old circular life-buoy, still so much in vogue, possibly were of this opinion, and intended it solely for the use of swimmers, for anything more completely useless to a person unable to swim, even when once within grasp, than water, it is hard to find. It is impossible to draw it to the other hand, for the man who is placed within it, or who is able to get into it when in the water, it forms an excellent float. There is, however, ample evidence that its supposed utility is by no means thus limited, and we are driven to the conclusion that its peculiar shape has been adopted either through ignorance or indifference to results,

NEW JERSEY Y. C. 15th ANNUAL REGATTA.

THIS season the New Jersey Y. C. have decided to throw open their spring regatta on June 14 to the yachts of all organized yacht clubs, and have arranged their programme so as to induce as many entries as possible from other clubs. No entrance fee will be charged and a prize will be given in every class in which two or more yachts start. The classes are as follows: Class A, catamarans, 30ft. and over. Class B, cabin yachts, 31ft. and over. Class C, cabin yachts under 31ft. Class D, open yachts, 26ft. and over. Class E, open yachts, under 26ft. and over 21ft. Class F, open yachts, under 21ft.

The following conditions will govern the race: The start will be a flying one from a line between the dock on Bedloe's Island and a stakeboat anchored off the same. The signal to get ready will be given at 10:20 A. M. by a blast from the steamboat's whistle, and five minutes later the signal to start will be a blast of the gun. The lowering of the club flag on the steamboat. Five minutes later a blast of the whistle and the hoisting of the club flag will handicap all boats not then over the line. Course for Class A will be across an imaginary line between stakeboat and dock on Bedloe's Island to Robbins' Reef buoy 17, passing to west of same, thence to and around buoys 9 and 13 in the Lower Bay, leaving on port hand, to south and west of Robbins' Reef buoy 17, to the place of starting. Class B—For Class B the same as Class A, except turning buoy 11 instead of buoy 9. Classes C and D—For Classes C and D the same as Class B, except turning buoy 13 instead of buoy 11. Class E—For Class E will be to Robbins' Reef buoy 17, passing to west of same, thence to and around buoy 13, leaving on port hand and return south and west of Robbins' Reef buoy, thence to starting point. Class F—For Class F the same as Class E, except turning off Lafayette on port hand instead of buoy 13. The race must be made in eight hours.

The regatta will be governed by the by-laws of the New Jersey Y. C.

Length on waterline and half the overhang will be taken as the sailing length, the allowance being in classes A and F, one minute to the foot; other classes one and one-half minutes to the foot.

Any boat shifting ballast will be disqualified and considered out of the race.

The following sails may be carried: Catamarans, jib and mainsail; cabin sloops and cutters, jib (or jib and staysail), jibtopsail, mainsail and working topsail; open sloops, jib and mainsail; catboats, mainsail only. Stormjib may be used in place of jib, if necessary. One man to every 5ft., and one additional for the fractional part of 5ft., will be allowed. Numbers must be carried conspicuously on the mainsail, as the time will not be taken for boats without them. Numbers, not delivered before, can be obtained at the stakeboat, which will be anchored off Bedloe's Island on the morning of the race. Prizes will be delivered at the first regular meeting of the club following the regatta.

The steamer Blackbird, with judges and guests, will leave Fifth street dock, Hoboken, at 9:30 A. M.; West Avenue street, N. Y., at 9:45 A. M., and Pier 8, foot of Rector street, N. Y., at 10 A. M. The entries can be made up to June 7, to W. H. Dilworth, 563 Greenwich street, N. Y.; Geo. E. Garland, 11 Wall street, N. Y.; John Curtin, 95 West street, N. Y.; M. V. E. Everson, 105 Garden street, Hoboken; J. F. Ogden, N. Y. Y. C. House, foot Tenth street, Hoboken.

INSPECTORS AND STEAM LAUNCHES.

Editor Forest and Stream:

I have waited to see if any one would answer Mr. Vary's letter on "Licenses For Small Steam Launches," in FOREST AND STREAM of March 25. The principle involved is all right. The Government cannot be too strict in the inspection and demands for protection of life and property, but the practice is altogether too sharp and the demands of the law, as construed by some local inspectors, is beyond reason and common sense. No matter what are the abilities of the person owning a boat he cannot run one even for the pleasure and convenience of his family.

I will give Mr. Vary a leaf from the book of my experience. I am a M. E. by profession and hold a State license for an engineer, made the plans of my own engine and intended putting in a Herreshoff boiler; with my boy's help my engine would be entirely a home shop make, a coupled high-pressure, turning 1,300 per minute actual work, my theory was that this was the best.

But I found objections raised on every side: first, you cannot get a marine license; second, you cannot get a pilot's license; third, a Herreshoff boiler won't be passed by the Supervising Inspector! I found objections raised by engineers and government officials on every hand, and one told me the Supervising Inspector of the district had instructions to sit down on all such things as these "tea kettles."

The whole thing is fostered by the narrow, selfish jealousy of the marine men; but let me tell you, I am going to have my boat all the same. More than this, my wife and boy will go out in it, and we intend enjoying many fishing trips in the little firefly. The boy can box a compass, and can bring a tug down Lake Superior from the island in a snow squall, and if my license is not better than the usual license granted to men coming from the fire-hole to pull the throttle and reversing lever of a common tugboat, then I will throw my engineer's diploma to the dogs and make fire of my instrument box and implements, and say goodby to steam-engineering; but I don't have to do it, as the boys say.

DULUTH, MINN. NORMAN.

THE FOUR LARGE YACHTS.

THE spirited action of the Seawanhaka Corinthian Y. C. in offering a valuable prize for the four large yachts, offers an incentive that will probably hasten still more the fitting out, and bring all of them out on the Bay in regatta week. Should they enter for the S. C. Y. C. Cup, they will probably enter as well for the two preceding races, and we shall see rare sport from such a quartette. Atlantic is nearly ready for a trial trip, and will be under sail this week. The lead is still being piled into her, 65 tons being now in and under the unknown quantity is still needed to bring her down to the load line. Comparisons are odious, but a heavy displacement "lead mine" like Genesta or Galatea carries only 70 or 72 tons, while this American centerboard sloop carries 65+ tons. Also the "complicated" cutter rig of Mayflower calls for 113 blocks, while the simple American rig of Atlantic swings 180. Priscilla left Wilmington, Del., on Saturday morning, and, beating down from New-castle, ran up the beach, arriving here on Sunday, with Com. Canfield and Messrs. Center, Tams, Chubb, and Lemoyne on board. She is now at Poillon's yard. Mayflower will bend sails this week for a trial trip. Puritan has been out at Kelly's railway, East Boston, for a thorough cleaning and a coat of bronze paint. Her rudder has been widened 1 1/2 in. with new backing, and her peak, throat and sheet blocks have been replaced by larger ones.

THE LOSS OF THE OONA.

THE English mails bring the news of a most unfortunate and fatal disaster to the cutter Oona, by which five yachtsmen including Mr. Wm. Evans Paton, the designer, lost their lives. This is the most extreme "five" yet built, nearly 60ft. over all, very light hull, carrying 94 tons of lead, a large sail spread and wide outrigger canoes. She was bound from Southampton on a trial trip, leaving on May 4 with one of her owners, Mr. Plunkett, her designer, Mr. Paton, and a crew of three, one of them the mate of Tara. She called at Kingston on the 5th, and after leaving there encountered a very heavy gale. She evidently was endeavoring to enter the port of Malahide, on the Irish coast, when she struck the bar and went to pieces, all hands being lost. Part of the hull and spar came ashore later on but the full particulars are not yet known. Mr. Wm. Evans Paton was a young naval architect of rare promise, well known as the designer of Olga, Currytush, Luath and other successful boats, and his death is a serious loss to yachting. Until further details are known it is impossible to assign the cause of such a disaster, but it seems that the new boat, to a greater extent than any of her predecessors, was an extreme racing machine, and from lightness of build and size of rig unfit for any other work.

ON THE DELAWARE RIVER.—Editor Forest and Stream: Delaware River sailors do not propose to be left this season, and all the clubs have inaugurated a series of races that in completeness excel former years. From the 30-pound canoe, grading through the tuck-ups, 15ft. to 29ft. open boats, until reaching the 70ft. sea-going schooners; all are getting their ships in the very best order. New ones have been built, and the stock on hand have been improved in model and rig and thoroughly rejuvenated. The Trenton, Riverton, Pennsylvania, Southwark, Cooper's Point Canoe, and Corinthian (15 to 19ft.) and the Quaker City clubs are all in first-rate condition. Mr. C. Middleton, schooner yacht Helela, has presented to the Q. C. Y. C. a valuable and artistic challenge cup, designed by the donor, for first class sloops. Dr. Vallette, schooner yacht Avelon, has also presented an elaborate and very beautiful cup for second class sloops. A handsome cup is in embryo for third class sloops. The Agile (Thomas) in this class, won Commodore Bancroft's challenge cup three times in succession after a six years' fight, and copping local matters, let me bespeak for the Atlantic first choice to meet the Galatea to defend the America's Cup.—R. G. WILKINS.

GREAT HEAD Y. C.—An open regatta of the Great Head Y. C. will be sailed on June 5, off Whitport, Mass., starting at 11 A. M. the courses being as follows: First Class—From judge's boat to flag float moored off Revere Beach Ferry, East Boston, leaving it on port, to Sculpin Ledge, Buoy No. 2, off Long Island, leaving it on port, thence to judge's boat, passing between judge's boat and flag float, to Black Buoy No. 6, Lower Middle, leaving it on port, and back to judge's boat. Distance, 7 miles. Fourth Class—From judge's boat to flag float off Cottage Park, leaving it on port, thence to and around Snake Island, leaving it on port, back to judge's boat, leaving it on port, twice over, finishing between judge's boat and flag float. Distance, 4 miles. The position of the judge's boat is liable to be changed outside of Snake Island for the finish. The classes will be as follows: First, 21 to 26ft., second, 19 to 21ft., third, 15 to 19ft.; fourth, under 15ft. All will start from an anchor, as follows: A preparatory gun will be fired from the judge's boat at 11 A. M. for the first class to come into line. At 11:15 A. M. a second gun will be fired for first class to start and second class to come into line. At 11:30 A. M. a gun will be fired for the second class to start and the third class to come into line. At 11:45 A. M. a gun will be fired for the third class to start and fourth class to come into line. At 12 M. a gun will be fired for the fourth class to start. One man may be carried for every 5ft. of waterline or fractional thereof. Sloops may carry jib and mainsail, catboats mainsail only, with no limit to sail or ballast in the fourth class. The rules of the N. E. Y. R. A. will govern the race. The entrance fees will be \$2 in the first, \$1 in the second and third, 50 cents in fourth. Prizes will be given in each class. Messrs. Peleg Aborn, S. S. Smith and J. H. Bartley are the judges. Entries to be made with Chas. C. Hutchinson, 126 Commercial street, Boston, on or before 12 M. Friday, June 4. All fees to be paid at time of entry. No postponement on account of weather.

QUINCY Y. C. OPENING REGATTA.—The opening of the season by the Quincy Y. C. on May 23 brought out fifteen boats, all but one, the Mabel, going over the course. Mabel carried away her peak balliard block and did not start. Rocket parted her bobstay, but continued the race. The wind was fresh from the southwest. The times were:

FIRST CLASS.			
	Length.	Actual.	Corrected.
Thibe, S. A. Freeman	21.03	2 11 46	1 42 26
Echo, E. L. Burwell	23.11	2 07 09	1 44 37
Amy, E. W. Baxter	21.06	2 18 15	1 49 12
SECOND CLASS.			
Tartar, F. L. Dunne	19.11	1 38 55	1 11 57
Pet, J. W. McFarland	20.04	1 44 02	1 17 14
Diadem, L. Hayward	18.06	1 52 35	1 24 03
Mabel, G. R. Howe	20.05	disabled	

THIRD CLASS.			
	Length.	Actual.	Corrected.
Flora Lee, D. H. Lincoln	17.03	1 21 00	0 55 16
Mischief, D. W. Belcher	16.11	1 39 02	0 58 57
Rocket, H. M. Paxson	16.07	1 38 54	1 07 27
Fury, J. H. Putnam	16.09	1 37 43	1 11 24
Elsie, C. F. Hardwick	16.10	1 39 30	1 13 19
Elfin, J. F. Cully	16.08	1 42 12	1 15 50

The first and second prizes in each class were \$5 and \$3. Messrs. E. W. Baxter, W. W. Sheen and C. H. Porter were the judges.

THE AGGIE—LURLINE MATCHES.—San Francisco yachtsmen have been excited lately over a match race between Aggie, a centerboard schooner, 70x23 ft., on loadline, and 5ft. 8in. draft, and Lurline, a keel schooner, 72ft. 3in. x21ft., and 8ft. 3in. draft. Two races were sailed and no conclusion reached, as neither was finished within the limit of ten hours. The course was around the Farallone Islands some thirty miles out in the Pacific Ocean. On May 2, the first attempt, the two started at 10 A. M. the L.S.W. from Point Bonita to Point Lobos, the wind very light, W.S.W. and Lurline leading. About 1:30 the wind increased and shifted toward S., leaving Aggie in a good weather berth, so that she was soon the leader and rounded the outer mark 32m. ahead, in a very light wind. Soon after the wind freshened, and under balloon jib and staysail Lurline made up rapidly her lost time, and took first place, holding it until the finish, which, however, was not until 9:50 P. M., with Aggie about 10m. astern. On May 9 the match was resailed, Aggie going away first at 10:10:43, and Lurline at 10:13:24, with a very light head wind and a light swell. Lurline soon began to make up the loss at the start, and at well up to windward, though Aggie foretrenched on her and gained some in the footing. At 5:01:30 Lurline turned, with Aggie at 5:21. Lurline led all the way home, finishing at 8:29:40, with Aggie at 8:50:02. On May 16 the race was sailed again, Aggie winning by 2m. 46s.

STEAM LAUNCHES AND SAILING BOATS.—A new catalogue of boats and canoes has lately been issued by Mr. F. Joyner of Glens Falls, N. Y., in which is included a new steam launch 25x5ft. 6in., fitted with the new Boston pattern Shipman engine. The hull is built of cedar, copper-fastened and varnished, and is very handsomely finished. The propeller may be fitted so as to swing to either side for steering, by means of a flexible joint, or a rudder may be used. A smaller launch, 18x4ft. 6in., is also built. Mr. Joyner has also several sets of his sailrig and rowing boats of the Irene model, fitted in various styles. The catalogue contains detailed descriptions of many varieties of boats, club gigs and barges, cruising and coasting canoes of the celebrated Diamond model, hunting boats and of canoe sails, rod runners and fittings of all kinds. The agents in New York are Messrs. Adams & Young, 470 Broadway, N. Y.

NEW YORK Y. C.—On May 21, the third regular meeting of the N. Y. Y. C. was held. The date of the annual cruise was fixed for Aug. 4, to rendezvous at New London. The regulation prohibiting the use of clubtopsails on the cruise was reconsidered, but no action was taken. The following members were elected: Messrs. J. W. Thompson, Newbold Brown, George A. Cornack, W. Seligman, Tarant Putnam, James Brown Potter, Joseph Hutchinson, A. M. Huntington, W. Leggett Brown, Dr. E. L. McGinnis, Frederic Gebhard, Charles D. Owen, P. H. O'Hara, Richard P. Lounsbury, George E. Chisholm, John W. Masury, S. K. Pinckney and James M. Motley.

YORKVILLE Y. C.—On May 23 the Yorkville Y. C. started to sail its 6th annual regatta over a course from One Hundred and Fourth street around the Stepping Stones, the time limit being 6 hours. The starters being Eclipse, Goodenough, Traveler, Benzine, Captain, Harry C., Little Dean, Little Bear, Molly McCarthy, Emma B., May-gena and Emily B. The wind was so light that but 5 boats completed the course. Little Dean, Goodenough, Captain, Benzine, Traveler. Traveler was in class D, time 5:45; Little Dean in class G, time 5:12, and Captain in class H, time 5:14.

REVA.—The new Reva, Mr. Pierre Lorillard's twin screw steam yacht, whose first trip on May 22 down the Sound, after two unsuccessful attempts previously. She was trying at a good rate when she passed Whitestone. The boats at her davits prevent her from being mistaken for a harbor tug.

LARCHMONT Y. C.—The annual spring regatta of this club will take place on June 5, starting at 10:45 A. M. A challenge pennant will be awarded in each class, with a prize if three yachts start and a second prize if five start.

CORONET.—On May 22 the new schooner Coronet started on a trial trip, running out around the lightship and back with her owner and a large party on board. She behaved very well and fully comes up to the expectations of her owner.

GRACIE.—The alterations to the hull of the Gracie were completed last week at Piepprass's and she was launched from the railway. Her spars will be stepped at once.

TOLEDO Y. C.—The date of the second pennant match has been changed to July 3 in place of July 5, so as not to conflict with the Inter Lake Y. R. A. at Detroit.

CARLOTTA.—Mr. Belknap's schooner arrived at New York on May 22 from Florida.

Don't twist your neck off, but use Allen's bow-facing oars. Little catalogue free, Fred A. Allen, Monmouth, Ill.—Adv.

HUMPHREYS' SPECIFIC VETERINARY MANUAL.—A cure for the diseases of horses, sheep, hogs, dogs, man and poultry. Fourth revised and enlarged edition. That Dr. Humphreys has presented a system of treatment that is at once simple and devoid of danger is unquestioned. That he has also a system which is successful in curing the diseases of domestic animals as well as simple and harmless, brings a wonderful array of facts to prove. It is very difficult to read over in his catalogue the testimony of hundreds of intelligent persons from every part of the country, and of every position in life, and not be convinced. That being admitted, we have then an entire system of treatment for domestic animals, so simple that any intelligent owner or his man can use the Veterinary Specifics without fear of injuring the animal, and successful to a degree heretofore unknown. It has now been in use twenty-five years, and is presumed to have passed its novitiate, and has secured a place and standing not readily assailed, and of its success in curing diseases among animals by such mild and safe means, no one but can wish it the most ample scope and boundless popularity. The above book may be obtained by applying to the Company, 109 Fulton street, New York City.—Adv.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, accompanied by the recommendation of an active member of the A. C. A., together with the sum of \$3 for initiation fee and first year's dues, to the secretary, who will present the names to the commodore. Money should be sent by registered letter, or money order on Saratoga Springs, N. Y.

FIXTURES.

Mohican Races every Thursday through the season.
May 29, 30, 31—Connecticut Meet, Calla Shasta Grove.
May 29, 30, 31—Hudson River Meet, Coddington's Dock, Roundout.
May 30—Mohican Cruise, Susquehanna River.
May 31—Pittsburgh Regatta.
May 31—Yonkers C. C. Cruise.
May 31—Oakland C. C. Regatta.
June 1—Oakland C. C. Camp, Clear Lake.
June 12—Brooklyn C. C. Paddling Race.
June 12—N. Y. C. C., Spring Regatta, 1st Race Com. Trophy.
June 26—N. Y. C. C., 2d Race Commodore's Trophy.
July 3—N. Y. C. C., Trials International Races.
July 3—N. Y. C. C., 3d Race Commodore's Trophy.
July 10—Brooklyn C. C. Paddling Race.
July 10—N. Y. C. C., 3d Race Commodore's Trophy.
July 24—N. Y. C. C., 4th Race Commodore's Trophy.
Aug. 7—N. Y. C. C., 5th Race Commodore's Trophy.
Aug. 7—Brooklyn C. C., Paddling Race.
Aug. 13—27—A. C. Meet, Grindstone Island.
Sept. 4—Brooklyn C. C., Paddling Race.
Sept. 4—N. Y. C. C., International Cup Races.
Sept. 11—N. Y. C. C., 6th Race Commodore's Trophy.
Sept. 18—Brooklyn C. C., Sailing Races.
Sept. 25—Brooklyn C. C., Challenge Cup.
Sept. 25—N. Y. C. C., 7th Race Commodore's Trophy.
Oct. 2—N. Y. C. C., Fall Regatta.

NEW YORK C. C.

THE New York C. C. opens its sixteenth season on June 12 with its spring regatta, the programme of which will soon be ready. The club house is now at West Brighton for repairs to hull at Starin's dry dock, but will be in place shortly at the basin lately occupied by the Seawanhaka Y. C. at Tompkinsville Landing, S. L. The S. C. Y. C. will move to their old quarters in Bechtel's basin, where the canoe house wintered. The new location of the canoe club is an excellent one, and with the new railroad it can be easily reached in less than thirty minutes from the Battery. During the season, a series of races will be sailed for a trophy offered by Com. Munroe, under the following conditions: These races shall be open to members only, each competitor to sail his own canoe and to sail the same canoe in all races. In these races there will be no limit of ballast or sail, and no distinction of class save that nothing over 33in. beam will be admitted. The trophy will be presented to the winner on the day of the fall regatta, and its holder will be known as the N. Y. C. champion sailor of '86.

The club sailing course will be from the house around a stakeboat off Fort Wadsworth, thence around Buoy 18, and home. Admission to the club house on race days will be by ticket only. The dates for the Trophy races are June 13-26, July 10-24, Aug. 7, Sept. 11-25. The dates for the selection of three or more to defend the Cup will be sailed on July 8 and 5, and the Cup races on Sept. 4, unless the date has to be changed to meet the visiting canoeists. The fleet this year has been increased by a number of new canoes, Com. Munroe's, 15x25, Lassic model; Vice-Com. Stephens' Hermit, 15x30; Mr. Nadal's Lassic model, Sea Urchin, 15x28; Mr. Palmer's new canoe; Mr. Wardell's and several others, while the membership is largely augmented. The club now has the best location about New York, easily accessible and with fine water for sailing, and the present season promises to be the most active it has ever known.

A 500-MILE CRUISE ON THE RIVERS OF NORTHERN CALIFORNIA.

BY MORRISON F. PEXLEY AND E. RUSSELL COOPER.

(Continued).

NEXT morning we were up and had finished our breakfast before the first symptoms of dawn showed in the east, fully determined to start before the river fog which we knew we were only a few miles distant. About nine in the morning, we arrived at its mouth, and there was a strong wind blowing up stream we soon had all sail set and went tearing along at the rate of four or five knots, and the current running as much more. Toward dusk we ran ashore and had a hasty meal, and again took to the canoes, intending to avail ourselves of every breath of wind. It was a clear, starlight night, but starlight is not the best light in the world to steer by when you are unacquainted with the landmarks and the current is running on to sandbars and under leaning trees that sweep the surface. About three in the morning we passed some lights on the starboard side, which we afterward found belonged to the town of Nicholas. We were now commencing to feel rather played out after our day's paddling and the continued strain on our nerves consequent upon such hazardous sailing. When the first light of dawn spread over the eastern sky, we ran ashore and rolled in, thoroughly satisfied with our canoes, selves, and the world in general, but too tired to think of details. We did not awake until the sun shining into our tents told us that it was past noon, and the diminutive keepsake that I carried suspended by a crushed strawberry ribbon, pointed to the hour of two. The noises that always accompany a large town were brought faintly to our ears, and upon making inquiries at a neighboring farmhouse we found that the town of Marysville was but two miles away; thus we had made in the last twenty-four hours more than 55 miles.

Not having any particular object in visiting Marysville, we contented ourselves with listening to a glowing account of its importance as a manufacturing center for the northern part of the State and were sorry to hear that the hydraulic mines in the Sierras were sending down such quantities of the detritus, known as slickens, that the town is fated to be buried within the next ten years. We again tumbled ourselves on board in the afternoon and went several miles down the river, looking for a good place to camp, but such was the thickness of the slickens deposits on the banks, that we were compelled to sleep on the water, after a light cold supper.

The Feather River, though possessing better scenic effects than the Sacramento, still has the same monotony which characterizes the former, and of late years its beauty has been further marred by the enormous deposits of slickens that now clog the channel where it was formerly 20 or 30ft. deep. Having been for a time on such muddy water, we were struck more forcibly than ever when we entered the Sacramento, by the contrast between the two great bodies of water, one limpid and colorless, the other a deep color resembling brown oyle in tint. The water for about two hundred yards did not seem to mix, and a person might run his canoe down the center and place one hand in water clear as crystal, while the other would bring up a dirty fluid that bore no apparent kinship to aqua pura; half a mile further down the waters appeared more congenial but not entirely sociable, for you might see occasionally a patch of Feather River floating along all by itself, evidently not caring to intermix with its snow-bred brother from the North.

We noticed here a large number of water cranes and other birds of aquatic tastes wading serenely on the shores with much implied contempt for us as though we were unarmed. We bagged several of them, and in accordance with requests from two absent, though often-remembered persons, saved their plumes to deck other heads. Among other things we secured some turtles, which Talisman assured me were extremely toothsome when properly prepared. Here-with I give the receipt, as I saw him manufacture it, knowing that the public will not allow such a meteoric scintillation in the gastronomic line to pass unheeded. Six live turtles were taken from a "green and mossy log" (means of taking unknown); they were then

put into three gallons of cold muddy water and boiled for three hours, after which the heads are chopped off and the meat and fat taken out; next take a dozen pieces of hard rock, half as many potatoes and an equal number of onions; mix well together, being sure not to disturb the weevils in the hardback for fear that they may escape; this is then to be stewed for five hours with the turtle meat, and some Chile peppers and wine added. It is then far superior to anything that comes out of a bash mill; and on one occasion I have known Talisman to wrap himself around one gallon of the article and then do a good day's work afterward. However, he was only allowed to make it once as long as I was chief cook and pot-washer. The 20th day of May found us at the mouth of the great father of mud and gold dust, the American River, which in comparison with the now muddy Sacramento, looks of an inky blackness. When we had passed under the railroad bridge it was commencing to grow dark, but as there was no sign of a beach on either side of the river, we kept on, from minute to minute expecting at each turn to see some place where we might camp for the night. As I was crossing the mid-channel I felt a slight shock as though the keel had touched some obstruction on the river bottom; my source with my paddle the could feel no bottom, and concluded that it must have been some salmon forging his way up stream.

The wind and current had both augmented in strength, so that while the latter was running about six knots, we were sailing seven or eight. Talisman called from across the river to tell me that he was stuck on a bar just as I felt another scrape on the keel similar to the first, and then another. On making a more careful investigation with the paddle than before, I came to the conclusion that the river's bed was a series of waves of sand, the crests of which were scraped by the keels of the canoes in passing over them. Talisman having released himself from the bar where he had grounded, came across the river, and we determined to pitch our tents above the next bend, beach or no beach. When we finally camped it was about two miles from the City of Sacramento, which lay to the S. W. of us, and all through the night we listened to the whistles of the freight engines as they worked in the yards making up their trains, even this usually annoying sound being welcome to us, not having heard it for three weeks before.

When I used the word "pitched" in the above paragraph it was incorrect, for the only pitching that we did was to run the canoes along side a log that jutted out into the stream, and threw our camping kit ashore, to be followed by ourselves, and as the slickens forms the very worst species of quicksand, it was hard work to get ashore at all. While seated at the fire that night, drawing cloverly inspirations from our briars, we were agreeably surprised by receiving a visit from an old "der", who had a cabin some way back from the river bank and had seen our fire. Among some of his earlier experiences which he related to us was the following story, which I give minus the inimitable expressions and grotesque gestures of the old miner:

"In the early days, before California were much of a place, me and some other young fellows got up a party bound up this same river for the gold mines; we were all as green as grass as far as game went, didn't know the difference between a duck and a coot. Did you ever eat a coot?" he inquired. Upon receiving a negative reply he continued and said: "Well, take my advice and never make the mistake of tryin' to. We had an old musket along with us in the skiff, one of them as they call a yawger, and one day, Ed, Martin, one of the boys, shot what we thought was some kind of a duck, and brought it to camp." Here he paused for a few whiffs at his pipe.

"Next day being Sunday, we thought we'd have duck for dinner, so he was picked, stuffed with bread crumbs, bacon and onions, and put on to boil. Well, he must have been on about two hours, when we tried him with a fork to see if he was done; the meat didn't give with a turn. We told Martin to try it with a hunting knife, which didn't have no more effect on him than the fork; so he was left in peace till we finished the rest of our grub. Then one of the boys said that all he needed was more bilin', so we put him back on the fire to bile, and he staid there the best part of the day, and when we went to bed that night he was still a bilin' and tougher than ever. That contrariness made the boys mad, and they was in for bilin' thet shaz if they had to boil 'im ev'ry day till we got to the mines, an' they did, and I'll tell you, if you was ever to run over the next last camp place you'd find him bilin' yet." And the grizzled pioneer leaped back and laughed in his senile hollow tone, at the thought of his first and everlasting potpie.

The immense quantities of mud that have settled on the banks of the American have killed most of the small trees and so withered the larger ones that their beauty is forever gone. About two days of hard work trying to force our keels through the soft quicksand that grated along the bottom, no matter what part of the river you took, we finally abandoned the task and turned our faces southward. About 6 o'clock one fine evening we found ourselves near the mouth of the American and only a half mile from the State capital. On the port bank there was a large and healthy sickens bar. It was impossible to camp there; but on the right side was a bank, seven or eight feet high and covered with small willows. To this we directed our course. Just beside the bank, and partly floating in the water, was a huge pine log. Having assured ourselves that there was no danger of its going adrift, we made the canoeists take to the log, and over the log the provisions were put upon the bank, and then came the problem of how to cook them. There was only room for the two of us to stand on the bank, and the willows were as thick as nature could weave their sickly stems together. Talisman having set his mind on a good supper in honor of its being the last day of the cruise, seized the hatchet and commenced a deadly onslaught that threatened to depopulate the thicket if long continued, while I plunged into the tangled mass of vegetation to secure wood. A more unlikely place for a camp I never saw; the only available wood was the dead branches that had not yet fallen to the ground and disappeared under the cover of the blackberry vines. By dint of hard scratching and a good deal of undignified clambering I managed to get enough wood to cook a good supper and found that Talisman had cleared a good space for the camp fire.

Next morning after breakfast we started in to give everything a general cleaning up, for the last pot of coffee had been boiled and the last hot cake turned, so that we were to leave this cruise. The canoes were cleaned, the brass work polished, the dry storages of the Talisman scrubbed out to remove the smell of onions, but nothing had any effect on them. We next turned our attention to the wardrobes that we carried. Talisman turned his canoe into a laundry and scrubbed away, using the deck for a wasboard, while I mended the various rips and tears that had occurred at different times. By 10 o'clock the strugs of clothes that had been raised by the halliards between the masts were dry and I had finished the last rent. Everything having been carefully stowed on board, we said good-bye to the American River and paddled gracefully and leisurely into our old friend the Sacramento, and in a few minutes reached the city of that name. We were here entertained in the most hospitable manner by our friends and shown off to no small extent by our friend Martin, who evidently thought that a real live canoeist was no small curiosity especially when attired in such a costume as the one that we wore—blue shirts and knickerbockers with stockings to match, white canvas shoes and red sashes and Tam O'Shanter's kind of a head knife suspended by the scabb.

Our hospitable friends at last allowed us to leave and we arrived at San Francisco at 11 o'clock, and found that two of our friends from the club had started across from Oakland, after business hours, for the sake of meeting us, and the next morning (Sunday) we all sailed home together, receiving quite an ovation from the assembled canoe-men.

Here I leave you, hoping that if you have had the patience and good nature to follow us through the description of our cruise in the far West, that you will not be satisfied by simply reading of such trips, but will go and do likewise, when grim winter has released his icy hold upon your rivers and lakes.

On this cruise we made 500 miles by our canoes alone, and by canoe and steamer the distance of 1,000 miles.

Our voyage is ended, the canoes hauled up on the beach of time to wait the flowing tide, each gentle ripple slowly encroaching on the sandy shore, till step by step they once more surround our crafts to float them on its watery deep.

So 'twill be with us as the years drag slowly by, each one helping to lessen the allotted limit of our lives, when that is reached we will be launched on a different course, one where each cruiser must paddle his own canoe.

And the lily stems when we have passed them by, will but sink to rest, till other bands and other minds shall softly part their leaves as they voyage in the wake we have left.

CANOEING AT LYNN.—What little canoeing has been done in this vicinity has heretofore been by the unorganized efforts on the part of a dozen or so of "terrified amateurs," only to or three of whom are A. C. A. men. Their field was restricted to Flax Pond until last season, when they ventured upon Blue Water and participated in the city aquatic event of July 4. This year a serious movement is made toward a beginning, and a club has been organized and steps taken to move the house to a good place on the harbor front, increasing thereby the chances for salt-water cruises and the inducements for new members to join. The following preamble to the rules is adopted: Whereas, Believing from our individual experience that the pastime known as canoeing has claims upon the attention of many persons who, while in need of an active outdoor exercise, are as yet unaware of the merits possessed by this safe, healthful, interesting and inexpensive sport; that it is full of complete diversion from the ordinary pursuits of life; that it requires activity sufficient for physical development and recuperation; that it is replete with opportunities that are conducive to sentiment of a healthy and inspiring sort by reason of the very nature of its pursuit; that it fosters an interest in the history of the primitive people who once dwelt here and with whose traditions and traces the locality still abounds for it is their rude canoe, modified and improved, which is the medium of our sport, and although there is a wide gulf between their simple paddle or pole and the patent appurtenances of today, and from the bush in the bow to the cloud of muslin spread by ballasted Pearls, we believe the canoe is still potent to imbue much of the independence and simplicity which characterized its originators; and, whereas, we believe that in organizing as a club our ability to pursue the sport and to promote its claims, to which we adopt the attention of any person, will be largely increased; therefore, we adopt the following constitution and by-laws: Article 1. This club shall be known as the Sagamore Canoe Club. Article 2. The officers shall consist of a captain, mate and purser. The other articles are modelled upon similar lines to those of other clubs. Ernest Bellaty, of Lynn, is the first captain; Jos. B. Center, of Lynn, the mate, and Clarence Murphy, of Salem, purser, and there are about half a dozen first-class sailing canoes in the club house. The club is to be represented at the Springfield meet.—CLARENCE MURPHY, Purser.

KNICKERBOCKER C. C.—Sixth annual spring regatta, May 22, at 153d Street, New York. First race called at 3 o'clock. Every event was open to canoeists from any club. The weather was perfect; a good strong breeze from the south blowing against the first of the ebb tide made it possible for all canoes to get over the course in good time, yet left the water smooth enough for the paddling contest. A large number of visitors were present, among them many young ladies, friends of club members, and they all got good views of the races from the pier near the club house, where camp chairs were provided for them. Flags were given as prizes to the first and second canoe in each event having three or more starters. A 3-mile sailing race came first, twice around a triangular course: Stag, E. W. Brown; Fox, C. B. Vaux; Yvonne, Wm. Whitlock; Evangeline, C. V. R. Schuyler; Guenn, M. V. Brokaw; Lorelei, E. C. Griffin. Stag, Fox and Lorelei, of the K. C. C., and Yvonne, Guenn and Evangeline of the Brocken C. C., but which was sailed by a N. Y. C. C. member and the line first, Guenn and Stag following very closely and together, the rest a few seconds later; all with medium sized sails or reefs. Fox rounded the buoy first and then shook out a reef, losing the lead to Stag while doing it. Lorelei dropped out. Stag kept the lead to the finish. Yvonne got third place the first round and kept it. Fox second, Evangeline got fourth place and Guenn fifth at the finish. Stag is a 15x30 canoe with dead rise, Fox is same size, same board—only one large plate with flat floor, and Yvonne carrying much more crew than Stag, could never catch her. The Fox sailed the whole race with board up, as the tide helped on the two windward legs of the course. Yvonne sailed her maiden race with a very small spread of canvas. A half-mile paddling race between Gould and Foster was won by Foster. Class IV, paddling race was won by Foster in Lasata against Evangeline (Schuyler), Yvonne (Whitlock), and Lorelei (Griffin). The combination race was left out and a 3-mile sailing race substituted, once around the course. Yvonne (Whitlock) Guenn substituted, once around the course. The boats got off almost exactly even and kept very close together all round the course. Evangeline winning by a length the better of Guenn, Yvonne a few seconds behind Guenn.

MOHICAN RACES.—The monthly race, unlimited as to sail or ballast, for the club champion badge and pennant was sailed over the club course, 3 miles, on Thursday, May 20. Entries: Thetis, P. M. Wackerhagen, senior; Annie O., L. Thomas, senior; Marion B. R. Oliver, senior; Arno, H. C. Cushman, junior. A strong northwest wind was blowing with frequent squalls, and the boats were close reefed carrying an average of 60ft. of sail. Start was made promptly at 5:30, the competitors getting well together. For the first mile Marion B. led, followed closely by Thetis, Annie O., third, and Arno fourth. Then Thetis shook out the reef in her main in spite of frequent knock downs from the squalls, and passing to windward of Marion B. rounded the 1½ mile buoy just ahead of her, the Annie O. some moments later. The captain of the Marion B. then boisted his entire main, giving him 60ft. to Thetis 72ft., both carrying reefed dummies about 15ft. in addition. The race between them was then neck and neck for home, the Marion B. steadily overhauling the Thetis, and finally getting to windward and passing her on the second tack. The pace grew great and the excitement intense, the squalls coming thick and fast and the wind veering about continually several points. On the last half mile the Thetis began to close the gap but in vain, as the Marion B. poked her nose across the line a half a length ahead, just 34min. from the start. Annie O. a minute later, and Arno not timed. The Vesper was not entered, as her captain was absent from the city; but the Marion B., her twin sister with the exception of two light centerboards instead of a single Alwood, upheld the honor of "the model." On Thursday next, May 27, the 60 limit race for the Oliver cup will be sailed.—ROBERT SHAW OLIVER, Captain M. C. C.

A. C. A.—Mr. M. E. Graves, of St. Paul, Minn., is a candidate for membership. Secretary Néidé writes us from St. Paul that he had expected to join the Hudson River regatta at Rondout, but would be unable to do so. He will make a cruise, with a friend, down the Cany-on or Brule Rivers, on May 20.

OAKLAND C. C.—A new canoe, the Spray, 15x36in., has lately been added to the fleet. Her owner and builder is an amateur, Mr. Geo. Engelbrecht. She will have a Radix board as soon as one can be had from New York; meanwhile she has a 3in. keel. The club now numbers 19 with 14 canoes, and several more boats will soon be added, including two from Rushton. The club house is well fitted with kitchen, dressing room, pantries and meeting room. The programme for Decoration Day is as follows: First race, at 9:30 A. M.—Rowing in single sculls, by members of the Columbia Rowing Club. Second race—Paddling in canoes—Class one, two men, three entries; Class two and three, one man each, six and eight entries. Third race—Rowing—Four eared shells, two crews from the Columbia Rowing Club. Fourth race—Sailing, yawls—Nettie, Boudia, Mosquito, Skiffs—Mattie, Rush, Dauntless. Fifth race—Canoe sailing race, Class one—Flirt, Spray, Mystic, Falcon, Zoe Mou. Class two—Water Lily, Shadow, Belle, Columbia, Shadow. Class three—Volante, Undine, Black Dwarf, White Cap. Class two starts three minutes after Class one. Class three starts three minutes after Class two. Sixth—Sailing race (for the prize pennant)—Entries, the winners of the fourth and fifth races, the winning canoe, yawl and skiff. Seventh—Consolation sailing race—Open to all except winners in previous races. Eighth—Canoe tournament—Entries, Mystic, Flirt, Spray, Undine, Falcon, Zoe Mou. Ninth—Swimming race. The first race will be called at 9:30 o'clock sharp. Mr. C. G. Yale will act as referee, and Marcus P. Wiggin and Marcus D. Hyde as judges and starters.

HARTFORD C. C.—Editor Forest and Stream: The regular May meeting of the Hartford C. C. found a number present in their canoe house, and after the admission of several new members there was a general talk on canoeing interests, upon the coming spring meet of this and the Springfield clubs at Calla Shasta, and upon the looks of the canoes in the house. Several of the canoes have just come from renovating shops and are looking finely. All have wintered well and our members are already planning way ahead into summer, the focus of all plans being of course the A. C. A. meet at Grindstone Island. The discussions of the last winter, notably that at the camp-fire of our president, at which the editor of the *Canoeist* was present, have brought forth fruit in the shape of new sails, in new styles, and with promising features for speed and cruising. The members of our executive committee have sent out invitations to all of our associated members to join in a camp dinner on the racing day of the Calla Shasta meet.—SECRETARY.

ANSWERS TO CORRESPONDENTS.

G. W. R.—The accent in name Lefever is on the penult.
G. H. C., Boston, Mass.—It will do no harm to clip the dog.
G. W. J.—Write to J. McNaughton's Sons, furriers, New York City.
W. L. B., Smithburg, N. J.—See Shot columns in last week's paper.
Trefolt, Cleveland, O.—Trefolt is black and tau, with white on chest.

J. B. P., Ohio.—Mr. C. M. Cordell, of Buffalo, can probably give you the information.

W. W. S., Lake Linden.—Make the lower mast 25ft. from ground to upper cap; masthead, 8ft. 6in. long.

F. G. S., Monroe, Mich.—We have never seen the target and do not know the address of its manufacturers.

S. S. H., Creighton, Pa.—We do not know where to refer you. Shall publish them as soon as they can be obtained.

J. T. W., Waterbury, Vt.—100x2 duck is heavy enough for canvas cases. Paint it with boiled linseed oil and terebinth dryer.

P. AND B., Bridgeport, Conn.—There is a pamphlet publication of the New York laws (price 25 cents), but not amended up to date.

H. J. M., New York.—We would not advise in-breeding so closely, although it is frequently done and often with apparently good result.

J. F. L.—For an extended discussion of the squirrel question, see FOREST AND STREAM, Dec. 27, 1897, and Jan. 24, Feb. 7 and March 21, 1898.

J. F. R., Lock Haven, Pa.—1 and 2. Yes. 3. We would not advise spraying, as it is a cruel and unnatural operation and often unsatisfactory.

C. P. E.—See article page 300, and others in former numbers giving full information about the region. There are stage and backboard connections.

C. H. H.—You will find full drawings of Mohican sail in the FOREST AND STREAM of Nov. 13, 1891, or in "Canoe Building for Amateurs," for sale at this office.

W. O. W.—You will be likely to find good quail shooting in the neighborhood of Homosassa. The fishing is good there in January for a variety of fish.

F. C. P.—We cannot give you definite information, but suggest that you will find what you want in any of the bill tows of Western Massachusetts back from the railroad.

Jav. Chatham, R. B.—The Coot is 30ft. x 8ft. 6in. on waterline. The word "board" is equivalent to tack or leg. All three flags should be carried at masthead, of course only one at a time, according to circumstances.

J. C. W. Paterson.—The stock on my shotgun is so long that when I have my finger on the first trigger the butt catches under my arm when I raise it quick. I would like to know how much I could cut off and not hurt the balance. Do you think an inch and a half too much? Aus. Take it to a gunsmith; it can be cut without any difficulty.

R. M. C., British Columbia.—Illustrations of yachts and yacht races are occasionally given in *Harper's Weekly* (Harpers & Bros., New York, \$1 per year) and *Frank Leslie's Illustrated Newspaper* (Mrs. Frank Leslie, New York, \$1 per year). Neither of these give special news reports of yachting. There is no illustrated publication devoted to yachting in this country.

A. V. B., Philadelphia.—1. Where can I get about 1,000 brook trout fry old enough to stock a stream? 2. About what would they cost? 3. About what age is the ordinary brook trout when it weighs a quarter of a pound? Ans. 1. Write James Annin, Caledonia, N. Y.; W. L. Gilbert, Plymouth, Mass., or Livingston Stone, Charlestown, N. H. 2. See answer above. 3. About two years old if well fed.

M. J. E., New York.—Will you be kind enough to inform me how to catch salmon trout? What kind of bait is generally used, and what period of the year is best for catching them? Aus. Troll for them from a boat with a stiff rod, five to seven feet long, and a reel that will hold 200 feet of line. Use a live minnow, chub or suck-r, and 3 feet above it put on 3 or 4 ounces of lead, according to depth of water. Row slowly, so that your bait snks near the bottom. Use lead and line according to depth. We prefer a single hook to a gang.

A. C. G., Poughkeepsie, N. Y.—Which is the most common way for clubs to shoot, class shooting or unclassified? If a shooter got a pigeon too low for a fair shot, say three feet high, and took it, must he abide by the result or would he be allowed another shot? If the pigeon would have struck the net, but it was broken it before reaching it, would it score, and if so, miss it, and it was accepted by the net would he be entitled to another shot? Where can we get the complete rules for clay pigeon shooting and how much do they cost? Ans. 1. Class shooting. 2. Yes. 3. If he broke it, it would score, if he missed it, it would be scored against him. Write to the Ligon-sky Company.

BAKER'S Breakfast Cocoa.

Warranted absolutely pure
Cocoa, from which the excess of
Oil has been removed. It has three
times the strength of Cocoa mixed
with Starch, Arrowroot or Sugar,
and is therefore far more economi-
cal, costing less than one cent a
cup. It is delicious, nourishing,
strengthening, easily digested, and
admirably adapted for invalids as
well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws
which govern the operations of digestion and nutri-
tion, and by a careful application of the fine prop-
erties of well-selected Cocoa, Mr. Epps has provided
our breakfast tables with a delicately flavored
beverage which may save us many heavy doctors'
bills. It is by the judicious use of such articles of
diet that a constitution may be gradually built up
until strong enough to resist every tendency to
disease. Hundreds of subtle maladies are floating
around us ready to attack wherever there is a weak
point. We may escape many a fatal shaft by keep-
ing ourselves well fortified with pure blood and a
properly nourished frame."—Civil Service Gazette.
Made simply with boiling water or milk. Sold
only in half-pound tins by Grocers, labelled thus:
JAMES EPPS & CO., Homoeopathic Chem-
ists, London, England.

and given entire satisfaction. Hundreds testify
that they can be worn with comfort.

Will be sent C.O.D. Ask your
dealer for them, or send for circular.

HANNAFORD VENTILATED BOOT CO.
79 Milk Street, Boston.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because
the author gives explicit and intelligible directions for preparing such dishes as he has him-
self actually tested in camp and on a cruise. This is just where the recipes differ from the
absurdly impracticable dishes given in some so-called camp cookery books. The cooking
outfit is described, and numerous hints on camp economy add to the value of the work.
Cloth, 96 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very
beginning, describes and explains the rudiments in the simplest and plainest way possible.
Everything is made intelligible for beginners; and besides this A B C teaching there are so
many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the
study of these. The book is complete and concise—no useless duff between its covers. The
subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and
rules. The text is further elucidated by numerous practical drawings, and the beauty of the
book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe
Building." Price, postpaid, \$1.00.

"HAMBROOKS," AN EARTHLY PARADISE. Pleasant, Health, Happiness. A Thing of Beauty is a Joy Forever. A charming home on the Choptank River, the prospective route of the Chesapeake & Delaware Ship Canal. About 1 mile from Cambridge, the most attractive and thriving town in Maryland. Contains 166 acres of very fertile land, in the highest condition of improvement—8 acres in wood. Choice fruit. Double brick house, 50x50, with frame addition, 11 rooms, besides pantries and cellars. Large barn, stable, corn houses and tenant houses. Soil mostly loamy, easily cultivated, very responsive, equally adapted for fruit, grass or grain. House stands in a 4-acre lawn, well shaded, 100 yards from the terraced bank of the river—at this point two miles wide. Situation in the highest degree healthful, beautiful and convenient. River salt, abounding in fish, oysters and game. Best situation on the river for bedding and packing oysters profitably. Climate mild; diphtheria, catarrh and pulmonary diseases almost unknown. Suitable in an uncommon degree for a place of public resort or sanatorium summer and winter. Equally desirable as a gentleman's country seat, affording every facility for boating, bathing and all aquatic amusements. Society of the best in Maryland—intelligent, courteous and kind. Present owner has occupied it for 12 years. No mortgage or other incumbrance. Title unquestionable. Steamboats and rail facilities daily; likewise telegraph. No such property is offered or can be bought in this State. A rare opportunity for a gentleman of wealth, taste and leisure, seeking recreation, health and rational enjoyment. Steamers leave Light street wharf, Baltimore, every night at 9 o'clock for Cambridge. Early morning train from Philadelphia, Wilmington & Baltimore Depot, via Delaware Railroad, at Wilmington. Come and see. Price, \$20,000. E. G. WATERS, M. D., 216 McCulloch st., Baltimore, Md., or A. E. WATERS, Cambridge, Dorchester Co., Md. may13,4t

MAPLE KENNELS,

PATTERSON, NEW YORK.

Offer for sale a choice litter of pointer puppies, whelped March 19, 1886, by champion Fritz (A.K.R. 263) out of Bird (A.K.R. 1638), also a first prize winner; liver and white and lemon and white. Dogs, \$15 to \$20; bitches, \$10 to \$15 each. Puppies from this union make first-class field dogs, as will be seen by letter below concerning field performance of a puppy (from previous litter) when only 12 wks. old.

DEAR SIR—I had Bessie in the woods yesterday and she behaved finely. She will hunt almost equal to an old dog, is not in the least gunshy, and on my shooting a ruffed grouse came to as fine a point on dead bird as you would wish to see, pointing it about 10 feet away. Please book my order for a dog pup from next litter. Yours truly,

S. M. O'DONNOR, Cashier First National Bank.

Rowett Beagle Pups.

A litter now 5 wks. old, by Victor (A.K.R. 3191) out of Zany (A.K.R. 2318). Such a combination of blood should make these pups exceedingly valuable for hench or field. None can be better bred. Price of males, \$15; females, \$10.

ASSOCIATED FANCIERS,

For further particulars address UNIVERSITY CLUB, 1316 Walnut street, Philadelphia. may27,4t

FOR SALE.—FOX-TERRIER DOG, PRIZE WINNER 3 yrs. old. Price reasonable. Address Box 230 New Brighton, Staten Island. may27,2t

FOR SALE.—GORDON SETTER DOG DUKE, 3 yrs. old, one of the fastest setters in the country. Has been hunted three seasons and is very staunch and retrieves nicely. Will be shown on game if desired. See American Field, March 13, 1886. Address F. E. CLARK, 426 North avenue, Bridgeport, Conn. may27,4t

FOR SALE.—A HANDSOME BULL-TERRIER dog, 7 mos. old, pure white, by Saxon (A.K.R. 1703) ex Zook, both prize winners. Address ARTHUR READIE, 49 Prospect street, Pawtucket, R. I.

The Kennel.

GREYHOUNDS.

I will sell one or two of my champion Bounding Boy—champion Begonia litter of pups. H. W. HUNTINGTON, 148 S. 8th st., Brooklyn.

FOR SALE.

Collie Shepherd.

BOX 472, PITTSBURGH, PA.

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Maryland, Md.

Rory O'More Kennels.

For Sale—Thoroughbred red Irish setter stock, full pedigree. Address with stamp, W. N. CALLENDER, Albany, N. Y.

DOGS FOR SALE.

Setters, pointers, spaniels, foxhounds, beagles, sachshunds, Newfoundlanders, German tiger mastiffs, fox-terriers, Scotch terriers, Shetland terriers, Yorkshire terriers, bull-terriers, bulldogs, pugs, French poodles, St. Bernards, mastiffs and black and tan terriers. Pups of all the above breeds constantly on hand. Those desiring to purchase will do well to consult me. WM. W. SILVEY, 135 South Eighth street, Philadelphia, Pa.

The Field Sportsman's Picture Co.,

PALMYRA, N. Y.,

Are now prepared to furnish copies of the photographs taken by Mr. Walker at the Eastern Field Trials. Lists and prices on application.

For Sale—Hornell Spaniel Puppies.

The best in the world; 142 prizes in two years proves it. From 3 to 10 mos. old. No culls or \$5 pups ever sold. In the Stud—Address, J. OTIS FELLOWS, Soc. Hornellville, N. Y., or G. W. LEAVITT, Pres., 32 Hamilton street, Boston, Mass.

Claire-Reeta Kennels.

PALMYRA, N. Y.

Irish and Gordon setters for work as well as show. dec17,4t

Buena Vista Kennels.

ST. BERNARDS

Fashionably bred and of the best known strains, Correct in color, markings, etc. Grown dogs and puppies for sale; full and guaranteed pedigree sent with each dog sold. Only superior specimens sent from the Kennels. Address, with stamp, KENSICO STATION, WESTCHESTER CO., N. Y.

BEAGLES.

For Sale—Thoroughbred English beagle hounds, prize winners and from prize winning stock. Some extra fine brood bitches in whelp and some not in whelp. Prices very reasonable. Address ELMER E. SHANER, 122 Diamond Market, Pittsburgh, Pa. may20,2t

WM. GRAHAM, NEWTOWNBRED, BELFAST Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen firsts, nine special, three second and one third. At New York, 1884, seven firsts, six specials and one third.

FOR SALE.—ITALIAN GREYHOUND PUPS from imported stock. Also fine English pups. HENRY C. BURDICK, 150 Bridge street, Springfield, Mass. dec34,4t

TRAINED FOXHOUNDS, THEY ARE OLD nosed strike dogs, start the fox, run him to the death. Trained cone dogs. Gray squirrel dogs. Rabbit dogs. One trained ferret. Lop-eared rabbits. Wyandotte chickens. H. C. GRAFF, Kensington, Ohio. dec34,4t

FOR SALE.—HAVING RECENTLY ADDED several fine brood bitches to the Landseer Kennels of Scotch deerhounds and greyhounds reduced the price of puppies. Some choice greyhounds now ready to ship. DR. VAN HUMMEL, Denver, Col. ap11,4t

BEAGLE PUPPIES.—SURE FUTURE WINNERS for sale. Several bitch puppies out of the prize winning bitches Pet and Krueger's Myrtle, by champion Bannerman. I never saw better ones. \$15 each or \$35 a couple. A. C. KRUEGER, Wrightsville, York Co., Pa. may27,4t

For Sale—English Beagles

Fine stock, full pedigree; all ages. Must be sold at once as owner is going west. Address Lock Box 37, Port Henry, N. Y. may27,4t

FOR SALE, \$25.—POINTER PUPPIES, BY Trinker's Bang—Pearlstone, she by Bang II.—Hebe. Trinker's Bang, by Croxthick—Trinker, won 1st in Western Field Trials. JAMES B. TURNER, 204 Dearborn street, Chicago. may27,4t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, JUNE 3, 1886.

VOL. XXVI.—No. 19.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications,

ANSWERS TO CORRESPONDENTS.

ket is exacted. When the club was projected, it naturally incurred the opposition of the market gunners, who had pretty well cleaned out the game of the vicinity; and it was also looked on with disfavor by some of the local sportsmen, who resented the notion of having their free range restricted. The market gunners the club could well afford to displease and oppose; the others have subsequently seen the excellent working of the plan and have become members.

The scheme is thoroughly satisfactory in practice. Game has increased since the new order of things. The members, at slight expense and trouble, have reaped decided rewards. The land owners are more than satisfied. They have been relieved of the invasions of irresponsible gunners, market hunters and hoodlums, who formerly tore down their fences, let down the bars, trampled the fields, and now and then left a charge of shot in a cow or horse. They now rest secure in the assurance that if trespassers invade their fields the offenders will be prosecuted by the club, one of whose committees has this special work in charge.

The revenue derived from the club members in fees for game killed is inconsiderable, but the freedom from irresponsible trespassing gunners is a decided gain, and few of the farmers now leasing their lands to the club would be willing to go back to the old disorder of things.

Such organizations should multiply and extend all over the land. There would then be less clashing of interests between farmers and sportsmen; for their interests are in reality identical and should be recognized as such.

THE CONDITIONS OF THE CUP RACES.

ON Tuesday last a reply was received by the Cup Committee from Mr. Beavor Webb, to their letter of April 26. Now that the veil of secrecy is finally withdrawn from this important epistle, it is more difficult than ever to understand why it could not be made public at once, and what reason there was for surrounding such a simple matter with unnecessary mystery. The substance of it is that the committee decline, to sail a race at Newport, they adhere to the race over the New York Y. C. course; and they decline to accept a mean of the N. Y. Y. C. and Y. R. A. time allowance. A concession is made in the second condition, in barring out Flynn's Knoll for the course, as requested by Mr. Beavor Webb last year.

In regard to the first condition, it was hardly to be expected that the club would consent to sail any of the matches so far from home, as the trouble and expense is considerable even in New York, and would be much greater at Newport. Of course the waters are better there, but to sail the races in August would necessitate holding the trial races at a very early date, and before the four boats have been thoroughly tested, while to go to Newport in September, perhaps for eight or ten days, is manifestly impracticable.

In the second condition we believe the committee have made a mistake in sacrificing an outside race over a fair course, for the sake of a mere club pageant which in all probability will be unfair to one boat or the other. The concession in regard to Flynn's Knoll is unimportant, the real fact is, as was apparent to every one who saw the final race last year, that no fair race can be guaranteed over such a course, when the importance of the race is so great and the interest in it so general. It is very easy now to promise to prevent interference by outside boats, but such a fleet as accompanied the race last year is utterly beyond human control, and partakes of the unwieldy nature of a mob in the street. The channel is narrow at the best for a duel between two big boats, one drawing 13ft., and with hundreds of steam and sailing craft rushing about as they please, no open course can be guaranteed, and a carelessly handled tug or lumbering coaster may put a sudden end to the race. Of course, under the deed of gift, the club has the right to sail one race only over this course, but it does not follow that, under the peculiar conditions of this race, such a proceeding is in a true sporting spirit. The Eastern yachtsmen would prefer an outside course, as fairer to both competitors.

As to time allowance, it was not to be expected that the committee would accept a rule which, like the Y. R. A., is really based on the assumption that Puritan, for instance, is 23ft. 7in. wide, and 11ft. 3in. deep, while Galatea is 15ft. wide, and 7ft. 6in. deep, which is virtually what the rule does, making Puritan 140 tons compared with Galatea's 90. Were the rule different and less severe on the wide boat it would be a fair proposal to average it with the N. Y. rule, but under the circumstances their decision cannot be questioned. In his reply Mr. Beavor Webb suggests that the

actual sail area be taken, in place of the approximate result, and there seems no reason why this should not be done as being really a fairer method. As we have not the actual sail area of Galatea it is impossible to tell just what the difference would be, but the method commends itself as a more accurate one and better suited to gauge the contestants in such an important race.

ABOLISH SPRING SHOOTING.

SOMETIMES trifling indications may give us a notion of how a law works, and a word or two from a distant locality may awaken a train of reflection, which will teach a valuable lesson. Such a lesson comes to us in a line or two from a correspondent in Long Island, who tells us that the beach birds have not for years been so abundant there as this spring, and that some of the larger species are even breeding there.

The reason for this is obvious. The law forbidding the killing of these birds in spring is said to have been pretty generally respected in most localities. The birds when they reached Long Island shores were not at once pursued with shotgun and driven away. Finding quiet spots where food was plenty, they have lingered and have become very gentle. No doubt some of them will breed, and as a result the beach-bird shooting in August and September will be better than it has been for years. Every State in the Union ought to pass a law forbidding the shooting of birds of any kind after the first of January.

To match the line from Long Island comes word from a correspondent in the lake region of Minnesota that the red-heads and bluebills are nesting in good numbers there this spring, and that the chicken crop promises to be good. If people can only be induced to protect birds of all kinds in spring, and to make the shooting season short, a beneficent Nature will fill up the gaps made by the sportsman in the ranks of the game birds, and he will have shooting—good shooting—for all time. But the carnival of wasteful destruction which has been going on for so long must cease, and men must learn to enjoy in moderation the good things which the wood and the waters provide.

WAKING UP AT LAST.

THE project to permit a railway to run through the Yellowstone National Park has been before the people for several months. It has been the subject of investigations before several committees of Congress, whose reports have been published and are accessible to the public. Many of these documents have been printed in FOREST AND STREAM, and have been duly commented on. Up to the present time, however, the great daily papers have had hardly a word to say on the subject. Within the past few days the New York Herald and Times have each spoken about the railroad, the Herald having had a column despatch from Washington, made up from the minority report of the Senate committee on territories, published in these columns three weeks ago. The following day the Times published an editorial called out by the Herald despatch, in which the railroad project was denounced as a job, and the strength of the lobby which is working for it was pointedly referred to. Both of these articles take the right side of the question, and we trust that although the interest which is displayed is rather late in manifesting itself, it may not be without its effect.

The statement that two roads are being surveyed to the Clark's Fork mines, neither of which roads will infringe upon the Park, is true, but the surveys are not being conducted by the Northern Pacific R. R., though, if the roads are built, it may be done by that corporation.

THE NATIONAL RIFLE CLUB MEET at Vernon, Vt., last week, was a most enjoyable affair for the veterans who form what deserves to be called the old guard of muzzle shooters. In our rifle columns will be found a very full and an appreciative account of the meeting. The presence and participation of some of the representatives of the modern breech-loading rifle added zest to the competition.

THE DIDN'T-KNOW-IT-WAS-LOADED GENIUS is regularly reported in the daily papers, playing his (or her) usual pranks with rifle, shotgun and pistol, which are usually loaded just enough to kill the unfortunate victim of this fatal idiotic playfulness.

THE NATIONAL SPORTSMEN'S ASSOCIATION will convene at Chicago next Tuesday in its first annual gathering.

COMMON SENSE GAME CLUBS.

ATTENTION has been called to the success attending the formation and maintenance of game clubs which lease the shooting privileges of tracts of land. The system is one which is found to work well, and it offers a solution of the vexed problem of local game conservation. The form of organization may be very simple, little machinery is required. The results attained are more satisfactory than those attending any other form of game protective effort, aside from the actual possession of the protected territory.

One such organization is the Middlesex County Association, with headquarters at Middleton, Conn. This society, which has been described at length in these columns, has steadily won its way in the respect of the community, and has accomplished much in creating and fostering a general regard for game laws and the principles of game protection. Its membership is open to reputable persons of 18 years of age and over, the annual dues are small, and there is a considerable tract of country preserved for the exclusive shooting and angling of the members. The association has for four or five years devoted some effort to the restocking with trout of streams in the neighborhood, and the improved fishing has tended to increase public respect for the principles and practices of the society.

Elsewhere are printed the rules of the Easthampton Game Club, of Easthampton, Mass., which is now in its third year. The club has acquired exclusive shooting privileges over a number of adjoining farms and tracts of land. On this territory the club maintains signboards warning off trespassers. The signs read: "Hunting or being on these grounds for any purpose prohibited.—Owner." Each member is provided with a card, on one side of which is the membership certificate: "Mr.— is a member of the Easthampton Game Club for the year ending Dec. 31, 188—, Sect'y." The other side of the card is ruled in columns for memoranda of date, number of grouse, woodcock, quail and gray squirrels killed, and name of owner on whose land the game is taken. Members are required to record all game killed, with the particulars of date and place, and on Jan 1 to report to the treasurer of the club, paying a fee of ten cents for every bird and squirrel killed. The treasurer then in turn pays each landowner for the total amount of game taken on his premises.

The membership of the club is open to persons above fourteen years of age. The annual dues are \$1. Strict compliance with the rule against killing game for the mar-

The Sportsman Tourist.

ROCKY MOUNTAIN RESORTS.

Editor Forest and Stream:

There have appeared in your paper from time to time inquiries and articles about good points for summer recreation for business and professional men whose general welfare requires rest from indoor duties, and whose inclination is to spend such time in hunting and fishing because their object is more perfectly attained in those health-restoring pursuits. Some of these inquiries are directed toward the Rocky Mountains, and I am quite confident that if those desiring such recreation but realized one-half the enjoyment to be found in that region, not only in the pursuits named but in the contemplation of the scenic wonders which there abound, hundreds would go there instead of longing about the hotel verandahs at the watering places of the East. And yet I know that some who do go to the region named are as to the game and fish more or less disappointed. Not because they are not there, but because of unwise selection of time or place.

Having spent a portion of each summer in these mountains (in Colorado) for several years past, especially searching for the best game and fish regions, I venture a few suggestions, hoping they may serve to assist those who in the absence of friends there in whom they can rely as to these matters might be disappointed.

A recent communication in the FOREST AND STREAM says that fish abound in all the streams of Colorado west of the main range of the mountains. In a certain sense this is true, and yet the individual who, relying on that statement, should go there before the 15th of July, would fail to catch a fish, especially along the railroads and in the larger streams.

There is no doubt but Colorado affords the best hunting and fishing to be found on the continent easily accessible by rail, and yet there are times and also places when neither can be successfully done.

I have always endeavored to find places where both can be had within a reasonable distance of the camp, and have invariably been obliged to go from ten to twenty-five miles away from the railroads, although fishing alone can often be had along the railroad lines, especially beyond the main range in the waters running to the Pacific.

For hunting to kill quantity, of course fall is the best time. But it has its snowstorms and cold. But for all-around pleasure in camp, July and the first half of August is the choice time. The fishing is then at its best, while the young mountain grouse and other small game is good size, and the males and young of the larger game, such as deer, elk and the like, are in good condition. Of course no sportsman would kill more than was required for camp use, and never an old or breeding female. The climate of Colorado is then in its perfection, the atmosphere is dry and yet cool, and an outdoor camp is pleasant as May in the East. The larger streams, owing to the snow in the mountains, which remains until the middle or last of July usually, do not get clear enough before that time for good fishing; but the smaller ones, especially up in the mountains where the beds are rocky, are generally in good condition by July 10. The game at that season has also retreated to the higher altitudes, so that the proper combination is found only in those regions. Poisonous reptiles are unknown in central Colorado, while in that altitude the nights are too cool for mosquitoes, which, with an occasional cinnamon or silver-tip bear and mountain lion, are the only ravenous beasts which live in that region.

A day or so of a drive with teams from the railroad will reach these favorable spots, where, with a fair camp outfit, more real enjoyment can be had than at any other place that I know of on the continent.

A camping party may "rough it" and live on bacon and hard bread and sleep under a dog tent if they desire, but I have never thought it very beneficial or pleasant for those who have but a short time to spend in trying to get used to it. Neither is it necessary to have loads of cots, silverware, etc. The sensible way is to have a good, sizable tent, the necessary camp cooking utensils, with plenty of canned fruits and vegetables, even if it requires an extra team or two extra pack animals to carry them. Thus equipped a party will be comfortable, a very necessary condition to rest and enjoyment. The additional cost amounts to but little, and the larger the party the less the proportionate expense. After years of experiment in camp methods I have settled on the medium standard of equipment as far preferable to either extreme, where recreation is the prime object.

The expense of such a trip, say for thirty days, in the Rocky Mountains, is much less than is generally supposed. I have made them repeatedly from this place inside of \$150 per individual, for all expenses, including cost of camp, teams, etc. Our camping expenses, including teams, tents, provisions and outfit being less than \$1.25 per day each, while out.

If I were to lay out a trip of this kind it would be from Denver via the Denver & Rio Grande Railroad to Manitou, where a day or so can be pleasantly spent among its surrounding natural wonders, equaled in a similar space nowhere in the world; thence through the Grand Cañon of the Arkansas, crossing the great continental divide at Marshall Pass (10,852 feet elevation); thence to Gunnison or some town in the Gunnison country, where teams and outfits can always be had at reasonable prices and from whence the best game and fish regions can be reached in one or two days' drive. When the camp is over, return by the Denver & South Park Railroad over the Alpine Pass (11,623 feet elevation and the highest railroad point in America); thence to Leadville, taking the Union Pacific "high line," which runs on the very top of the continental divide, crossing it twice from side to side; thence down the Platte Cañon to Denver. Such a trip comprises all the grandest of Colorado's scenic attractions, and there is no trip of equal length in the world that can compare with it. The expense named will cover this trip, which can be made in thirty days, giving two weeks or more in camp. Acquaintance at the various

points and previously made arrangements brought the expense somewhat below what it would be for a party of strangers going for the first time; but by judicious management it can be done at the price named.

These summer trips have become regular annual events with some of us who prefer recreation in mountain camps to any other, and finding them so enjoyable, have been enlarging our circle from year to year, until last year our members came from five States, even so far away as Alabama, and several of whom we never met until we came together by previous appointment at Denver. We have learned that a camp of strangers get along better generally than one in which the members are too well acquainted, and some of the most pleasant friendships of a lifetime were formed in a Rocky Mountain camp. And so this yearly trip has come to be what horsemen would call a sort of "free for all," the fact that an applicant was a reader of some such paper as the FOREST AND STREAM being regarded as *prima facie* evidence of respectability and a sufficient passport for admission. A true sportsman secures to himself an additional pleasure when he can assist others to participate in the pleasures of the camp and chase.

We will make our start this year about the usual time—July 1—and if any reader of the FOREST AND STREAM should feel inclined to join us and will write me, I will cheerfully give him further particulars. The precise camping ground is not yet determined, and probably will not be until after our arrival at Denver, to be then governed by game reports and the condition of the streams. DAVID C. BEAMAN.

OTTUMWA, IOWA, May, 1886.

A CARBERRY DEER HUNT.

THE readers of your most interesting paper are regaled weekly with stirring accounts of bear and deer hunts, in which celebrated hunters have, by wonderful feats of woodcraft and daring, redoubled their claims on Nimrodian fame, and it strikes me that it will afford a contrast and perhaps amuse by its novelty, if I, a novice, recount my own experience in the hunting of my first deer.

This to me most interesting event took place near Carberry, Manitoba, in the fall of '84. Carberry is a village on the south edge of the Big Plain. East, west and south of it is a vast region of sandhills. In the sandhills to the south is a poplar bush about sixteen miles long, within this a spruce bush, and in the middle of the last is a tamarac bog, the source of the Pine River. The deer have nearly all been exterminated in this region; they are so scarce that a white man hardly thinks of going out for a deer hunt, yet an old elk

"JUMPING DEER."

has occasionally been seen, and the Indians sometimes bring a few jumping deer (*Cariacus macrotis*) into the village, while on rare occasions they kill a moose within twenty miles of the settlement.

The prospect of learning something of deer hunting in this locality was not particularly bright, still, I had often seen deer tracks in muddy places, when on ornithological rambles, so there was no doubt of the presence of game; therefore, after the first snowfall, I resolved that since there are some deer about here, and since, after having found a track, it is only a question of time and perseverance before one comes up with the track maker, I do hereby register a vow that I will not cease to hunt in those hills until I bring out a deer, unless the shooting season close before I succeed. Accordingly, on the 27th day of October I set out on foot and traveled fifteen miles without seeing anything. The next day I went further and fared no better. On the third day I found two stale elk tracks, but got home weary and empty-handed, after walking twenty miles through the deep snow. The mileage is given with confidence, as the region was surveyed some years ago, and I have discovered many of the stakes. Next day I went still further and in a new direction, found a stale track, and was led by it to a quiet, wooded tract, where fresh signs were exceedingly abundant. On the fifth day I drove to the bush with several companions, who were glad enough to profit by my labors, though they had laughed at my faith previously. I saw no deer, but Mr. James Duff, who was with me, had five good chances which he was obliged to let slip, as he had only a shotgun.

Early next morning I set off again with my brother. I saw seven deer, he saw two. I wounded one with buckshot but did not get it.

This was the first time I had ever seen a wild deer. I shall not forget the impression made by the sight. We were going over the brow of a hill when I noticed a very fresh track and said: "We had better follow that a little, it looks so new." Before I had gone many steps my brother cried: "Look out, there's a deer just ahead of you!" Sure enough, down in the hollow among the scrub, were the white tails of two deer, bobbing up and down. The deer themselves were of the same color of the scrub, but the pure white tails being held erect, were strikingly conspicuous. I stood gazing at the graceful creatures for a moment or two, and then they moved off a little and commenced to rise in the air with a peculiar bounding action, although without any apparent effort. They seemed to be playing, their movements were so entirely without any appearance of haste or alarm. It did not occur to me at first that they were running away. The idea I had in my mind of a deer speeding was formed on seeing a dog or a fox. I expected to see the labored straining and the vast athletic bounds; but no, these evidently had not yet commenced to run, they seemed to be merely bounding up and down in the air, and it was only on noting the different hilltops which their feet touched lightly in succession, and by seeing the fair, rounded forms rapidly becoming smaller in the distance, that it dawned on me they

were flying for safety. Higher and higher they rose each time; gracefully their bodies swayed inward as they described a curve along some bold ridge, or for a long space the white bannerets seemed hanging in the air while these wingless birds were really sailing over a deep gully. I stood gazing until they were out of sight, and it never once occurred to me to shoot.

When they were gone I went to their trail where they had appeared to be rising and falling over the same place. Here was one track, where was the next? I looked all around, and was surprised to see a blank for fifteen feet; I went on—another blank, and again and again. The blanks increased to eighteen feet, then to twenty and then to twenty-five feet. Each of those playful, effortless bounds covered a space of eighteen to twenty-five feet. Ye gods! They do not run at all, they fly, and once in a while come down again to tap the hilltops with their dainty hoofs. Later on in the day I saw three more and fired two charges of buckshot at them without securing any.

During the whole of the next day I traveled without seeing anything.

On the eighth day I went again with some companions, saw nothing all day. As we were going home, James Duff proposed that I should go with him for another look before we gave up. We went to the wooded shores of what is known as Smith's Lake, and almost immediately started three splendid deer. They ran past us at a distance of about one hundred yards. We both fired. One of the deer was wounded but they all went away, fleetly bounding over the hills. We followed the trail at a run, overjoyed to see a slight drip of blood at each bound. Before stepping on to the top of each hill, we looked carefully lest the deer should be in the hollow. After traveling several miles, as we rose to the top of a hill I peered over, then sank back on the snow, crying under my breath, "Here they are." We both crawled to the brow of the hill, and there, forty yards away, stood two deer looking at us. Our hands began to tremble as we hastily, too hastily, threw up our rifles and fired—without the slightest effect. The deer stood gazing at us. In furious haste we reloaded, and quivering in every limb with the "buck ague," we blazed away with no better luck, and as the deer turned to begin the playful bounding, I sent another useless ball after them. I simply felt sick to think of what we had done; if we had had the slightest degree of coolness, we would have been sure of two fine deer.

However, we were still on the track of the deer we had wounded, and followed in vain until sundown. Then we came upon an Indian who was evidently hunting the same three deer. He had fired at and turned them, and then with an amount of open-heartedness unusual for an Indian, he told us where they went, and added that "they would spend the night there, and he would get them in the morning when the wounded one would be too stiff to travel much." We bade him good night and went homeward until out of his sight, when we turned and went to the thicket where he said the deer were lying. It was dark when we arrived there, but we put the deer out so as to prevent the Indian getting ahead of us in the morning. Then we started off, weary and hungry, for a twelve miles tramp home through the snow.

I have often been asked in the East if the Fenimore Cooper Indian exists or ever did exist. If fine physique, manly qualities and a certain amount of freedom from grosser vices will "fill the bill," I have certainly seen many of these Indians among the Crees. My recent acquaintance was a Cree and a fair representative of his tribe. His name was Chaska. He was about six feet in his moccasins, straight and well built, his features decidedly aquiline, his hair hung in two long black braids, ornamented with a bunch of brass rings and thimbles. He was dressed in the customary white blanket and leggings. A scarlet handkerchief covered his ears. He carried the usual fire-bag, knife and gun. He was a minor chief and evidently a man of experience, for he spoke excellent English.

On the ninth day I went with several companions to the deer bush by dawn before the Indians were astir, although they were camped close at hand. We foolishly went all together into the bush where the deer were; they separated, and we were misled by one of them. When a mile away we heard the Indians behind us, occasionally shouting. It was Chaska directing his two men. Then we heard a shot, then renewed shouting of orders, and another shot, and another, then unmistakable yells of triumph. We went back and found that the Indians had got both the deer. Chaska had put one man at each end of the bush and gone into it himself. He shouted his orders, for as long as jumping deer do not see the hunter they appear to care little for hearing him.

I met Chaska in the afternoon, we were both running on the same trail. I said to him: "Why did you take our deer?"

He said, "How your deer?"

"Because I put the first ball into it."

Then he said, "Who owns wild beasts? The man who kills them owns them, and I killed those deer."

It was evidently no use arguing with him, for he has possession, but I made a note of it for future reference.

We hunted together all that afternoon and I got from him a lot of hints and instructions in deer-stalking. He was really a splendid fellow. I found that, like most of the Indians, he was a very poor rifle shot, and but for his skill and experience in woodcraft, would have fared no better than ourselves.

During the afternoon my companions drove home. Determined to hang on to the last, I hunted till dark and walked home.

During the whole of the next day I tramped about alone. On the next I went with James Duff, who alone of my companions seems gifted with any degree of perseverance. We saw nothing and I had both my feet slightly frost-bitten. On the twelfth day, in spite of my injured feet, I started off alone. Started three deer; followed them in vain for fifteen miles. On the next day my brother drove with me to where I quit the trail the day before, and after following for two hours, we came across two deer which we tracked in vain for five miles. Then we went back to camp for dinner. My brother was disgusted, and after resting, drove home. I

went back to the trail and continued to follow with the utmost caution. Late in the afternoon, as I cautiously peered over a rising, I caught a glimpse of what looked like a deer lying in the scrub beyond. I watched for a few moments until a slight movement of the ear dispelled all doubts. I tried in vain to get nearer, so having guessed the distance at a hundred and fifty yards, I put up the rifle. But oh! how terribly the muzzle wobbled, and I laid the weapon down with a groan—it's no use. But after waiting a few minutes I tried again, and finding my hand now steady, fired. The deer jumped up and stood looking about. I fired again and again, and then as he moved off I wasted a fourth charge. My first shot struck A, the second B, the third C, the

fourth D. If B had come first, I had won my deer; but as it was, he went off gaily bounding. I ran on the track for ten miles. While rapidly ascending a hill I stumbled and had the misfortune to give my knee a severe blow on a projecting root. At night I reached home completely exhausted, after having traveled thirty miles on foot.

On the next, the fourteenth day, I went again with Duff to where I had quitted the trail the day before. The locality was a sort of corner with a way in and a way out. I said to my companion, "Wait until I cross to the exit, then you close in and drive them past."

When I arrived at my appointed station there were two deer tracks just gone out, and Duff's track after them. I called him pet names for being so hasty, and thought, "Well, if you are going to go tearing off in that mad way, you can go; I'll wait here." So I looked out a good warm camping place, and, having the kettle and provisions on my shoulders, soon made myself comfortable and lay by the fire all day. In the evening I took a short walk and came across Duff doing the same. On questioning him, I found that he had seen a track ahead of him which he supposed was mine (really that of an Indian), and thought, "Well, if he is going to go off in that style, it's no use of me following;" so he looked out a camp and lay by the fire all day, on the same hill, and only two hundred yards from where I was "foxing" in the same way.

Altogether I have now traveled 265 miles (215 on foot), have been out fourteen days, have had twelve shots at deer, have had both my feet frost-bitten, have injured my knee and lost weight as well as the confidence of friends, who believed I could do anything I undertook, and still have not killed my deer.

My knee grew worse, so I lay up for a week, but resolved to be a better shot when next I went forth. I made a deer out of wood and set it up 250 yards away from the door and blazed away at it until I was able to hit the mark three out of five times. And then I longed to be free again; but my knee was still very painful. I felt like a hawk with a broken wing; but knowing the danger of overworking a strained knee, I stayed at home for the full week. This was the only time when I almost repented having said I would fetch out a deer, the only time when I felt my confidence shaking. Lying still went hard against the grain, for the only athletic exercise that I delight and excel in is this fast traveling. So far, I have not met with one that I cannot leave behind. Duff is the fastest man with whom I have hunted, and often I have to wait for him to catch up. (I'm bragging now.)

Fifteenth day.—At length feeling my knee fully recovered I once more started off, and my friends smiled derisively as they saw "young hopeful" start hunting again.

In the hills I met Duff with three others. Altogether now five in number, we set off in line to beat the woods. Partridges and hares enough came to hand, but I carried the rifle and cared for none of these things. The line had traveled about three miles, when I struck a fresh deer trail; this was late in the afternoon, but away I went on it until dark. Mr. Gordon Wright had arranged to drive in with the sleigh and so save us walking home. At the time appointed all were at the tryst but myself; all were agreed that it was no use waiting for that fellow; he had likely struck a trail and might be twenty miles away. So they drove home and left me. They seem rather to pity me for imposing on myself such long, toilsome tramps, but none of them realize what a glorious enjoyment it is to me to feel myself so independent in my strength. Ten miles is to me now no more than half a mile to most persons. I can run all day and come home fresh; and always when alone in these lonely places I feel running through me so strong a gush of glorious exhilaration that no trouble in my mind can stand before it; and since a man's troubles are nowhere but in his mind, my troubles all are blotted out and my happiness complete.

"Why do I undertake these toilsome, fruitless tramps?" Surely it is worth it to be perfectly happy, to foreknow that

dim land of the idealist's dream, where sorrow is unknown and whence misery is banished forevermore. The trees are riven around me by the intense cold; my food is spent; the farmers on the plain are glad to stay indoors, but the feeling of this place, the delight of freedom and the fire of health suffice to keep me all aglow; and so I can afford to smile at my companions, driven home in the sleigh, shivering yet pitying me.

A blood red sun was sinking when I crossed Kennedy's Plain, the snow was dyed red, a golden moon was rising through the eastern pink. The endless forest of poplars stood with their marble columns supporting a wide purple roof of thickly interlacing branches. It was so perfectly beautiful and so unmarred by the settler's axe that I almost wished I were not soon going home to Ontario. Then as I went on more glad still after what I had seen, I more than once fairly shouted for very wildness. The road lay for three miles through a dense wood, and as I was nearly through I thought I heard my comrades shouting back to me. I was surprised as it was now night and late; I made the woods echo again with a shout, and then listened for the response. A long melancholy howl, and another, and another and another. "Wolves" I thought, and I mimicked their howling and noted by the sound that they were gathering together, doubtless hunting. Then as they responded to my howls, I noticed that they were rapidly coming nearer. "H'm," I thought, "It's me you're hunting, is it?" I was just leaving the woods and as the sounds bore down nearer on my trail, I turned and stood perfectly still, thinking: "Well, if those wolves are foolish enough to attack a man armed with a Winchester rifle, just let them come on." And so I waited. Nearer and nearer they came until I heard them at the edge of the timber only fifty yards away. They must have seen me then; there was a low growl, a snarl or two, and all was still. I heard them no more, but after a little turned and went on my way.

Next day I tramped twenty-five miles alone, with the usual luck. On the next (the 17th day) I went in a new direction, into the spruce and tamarac swamp. On the road in I had the satisfaction of killing a hare, and of snipping off the heads of three partridges, with the rifle, thereby getting the best possible assurance that my aim was becoming true. When well into the swamp, I came across the tracks of four moose, but it was too late to follow them so I returned.

"A GREAT RUSTY RED BEAST CHARGING THROUGH THE BRUSH."

What a fascination there is about tracks in the snow; what endless stories one will read and learn from the telltale snow; there is something fantastic about the thought that just at the other end of that row of dots is the beast that made them, and it is only a question of time for one to overtake it. The record of every movement is so perfect that it affects one most strangely. I remember long ago writing down a day among the tracks, at a time when I was less accustomed to them, and therefore more impressed than now. Here it is in doggerel for which the writer's then youthfulness must be the apology:

The white owl sits on the low snow drift and thinks that the time flies slow,
Ere the door of the shanty is opened, and forth to the trapping we go.
Over the rolling prairie deep in snow, over the highest ridge into the poplar scrub below,
Reading as I run the tale of the tracks in the snow. Here runs the straight fox trail;
Here one foot raised, he sniffed the light wind I throw;
There's where he struck the hare track fresh, and the fox tracks following go—
And I think of the meeting those trailers will have, a mile away or so.
Now here are the chains of the grouse's trail, they turn and they wind to and fro;
And I crouch low down and peer around, for new are the tracks in the snow.
Then I crawl along, till with a loud whirr the pack for safety go.
Save two that fall at the "bang" of the gun and flecked with blood is the snow.
(Still keeps the owl, his distance safe, but follows now fast, now slow).
Now here is the place where a poisoned bait was thrown a few hours ago,
A wolf has smelt it in the wind, and traced and swallowed it too;
Here 'twas groining his vitals and choking his breath; that wolf skin, is mine, Ohio!
See! he wend a few steps more, and staggered again, but no!
The wild hardy life of the wolf gives strength to conquer this deadly foe.
And soon grow the steps more steady and strong, till he's bounding away o'er the snow.
(Still the white owl following far behind, winnows over the ground full low).

Now here is the place of another bait, and fox tracks come and go, And the bait is gone and the fox is gone, but with shortened steps and slow.

I follow and scan as I onward run, and take in the tale of the snow, To the nearest cover, the dotted guide, and just by the bushes, lo! There's a yellow fur—See! the crafty beast is stark and dead in the snow.

From a high limb the yellow eyes take in the scene below, And bide till the carrion furless lies and is left alone in the snow; And bide till the hunter takes up his spoils, and takes up his gun to go. This is the chance that he longed for so when he followed me over the snow.

Time was wearing on, my deer was not yet killed, and I feared that the season would close ere I had fulfilled my vow, therefore I resolved to lose no more time in returning each evening. So taking three days' provisions in a sleigh, I drove to the bush with Mr. Gordon Wright. On the road we called at Mr. James Duff's, and having added his provisions, he joined us. After a two hour's drive we came to a sandy hill in the woods, it was covered with spruce trees, and well suited for a camp. In the center of the thicket we cleared a space, and then made a wind screen of spruce boughs. Gordon then left us.

After having dined we set out for where I had seen the fresh moose tracks two days ago. These we followed, and after a tedious tramp of about two miles, they led us into a dense poplar bush. Presently we came on the place where they had lain all night, and the signs began to be fresher, but they had so crossed and re-crossed their trail that it became almost impossible to follow or distinguish the most recent tracks.

After wasting about three hours in fruitlessly trying to pick up the trail in short detours of a hundred yards or so, we agreed that it was unlikely they would continue in this locality where we had tramped so long and so often made signal whistles to each other, our best plan would be to make a circuit about the whole grove to pick up the trail where it went out. This involved a journey of fully two miles, and it was not completed when night came on. Accordingly we left off after having gone around three sides, without striking the trail, and returned to the camp.

Nineteenth day.—I slept well on the ground and awoke refreshed about midnight. Duff, being less used to roughing

it, did not sleep much, but kept up the fire and wished for day. So when I awoke, we agreed that it must be near morning, and we set to and made a hearty breakfast. After long waiting in vain for dawn, I went to sleep again, and must have slept six hours before the real dawn came, when once again we made a good breakfast.

We set off as soon as there was light enough for us to see the trail, and in half an hour found where the moose had left the heavy bush. Then came a long tramp over and often through sloughs, for moose, unlike jumping deer, have no fear of a bog, although they evidently distinguish between the willow sloughs which are deep, but safe, being frozen, and the birch sloughs, which look shallow, but are grassy and exceedingly treacherous.

Fresher and fresher grew the signs; more and more cautiously we advanced, stepping in the tracks of the moose to avoid the crunching of the snow. Now we felt sure we were closing on our quarry; presently the wailing of the moose-bird fell on my anxious ear and struck my ear with prophetic force. I glanced at my hunting companion, but he did not seem to under-

stand. Then on ahead of us we heard a twig snap; the suspense was becoming oppressive, but with the utmost caution we continued to crawl on the tortuous chain of tracks, which still wound about as the moose had been browsing. Alas! we were making a fatal mistake. So far we had done all that old hunters could have done. Now that we were within two hundred yards of the beasts, and since there was no wind, we should have separated and gone, one to the right and the other to the left; then, since we might have known they would not go back on their own trail, we would have them compassed about on three sides and so stand the best chance of seeing them. But no, we tried to go on as before; then an unlucky stick cracked, and I thought I heard sounds of motion ahead of me. Another ten minutes' crawl proved it to be true. There the snow showed plainly where the three giant browsers had fallen into line, and gone off at a pace which would put to shame the long, hard gallop of the wolf, or would leave even the swift, untiring deer-hound far behind.

Without caution now but still hopefully, we started rapidly upon the trail. Previously we had trodden in the moose tracks, now it took two springs to cover the space between each of them.

For a few minutes we hastened on when, far on ahead of us we heard a faint "bang, bang," two shots. We stopped and gazed blankly at each other, perfectly disgusted to think that we had driven our moose right into the fire of some other hunters, probably Indians.

Then dejectedly we started again, hoping that it was not so. But suddenly the idea struck me, the chances are the moose will only be turned by the shots, and then they will come back on their tracks. Jim agreed with me, so we then proceeded more cautiously. Scarcely two minutes had elapsed before I saw in a clearer space some two hundred yards ahead, a great rusty red beast charging through the bush toward us. Into the snow I dropped like a shot; my companion saw nothing but dropped because I did. On came the whirlwind of red hair, his body swaying inward as he rounded the trees, like a racer turning a corner. Nose up, horns back, mane erect, a vision of tremendous brute strength as he dashed on toward us with that speed which is his greatest safety.

What thousands of thoughts of moose-killing rushed into my mind as I crouched on the snow, right on the trail, right in the path of the maned monster, that was tearing through the timber toward us. It several times occurred to me that it was most likely he would kill me, but I lay and bode my time. Then, just as he was within twenty yards of trampling on us, I sprang to my feet, shouting:

"Now Jim!"

With two awful snorts that I shall not soon forget, the moose sprang to one side, and for a moment stood and stared, uncertain what to do.

"Bang, Bang!"

With a plunge the monster started off again, crashing through the woods. My heart sank terribly as I thought how like this was to my former failures. But strange to tell, the moose came to a dead halt only eighty yards away, in full view, and again stared at us. Then in an imploring voice of terrible earnestness, I heard Jim behind me: "Oh, Ernest! be careful this time!" I took steady aim for his shoulder and fired; then as he again went off at his former furious pace, I sent a third ball whistling after him.

With feelings of mingled hope and fear we crossed over to his trail, and there—oh! savage glee, at every stride was a jet of blood. What a thrill of hope and triumph.

"Our moose, Jim, if I have to follow to Brandon!"

"Not so far as that," said Jim, pointing to the crimson splashes.

And away we ran on the trail like wolves, fairly gloating over the continued jets of blood.

There are glorious dyes in the sunset skies
There's splendor in heaven's fair bow,
There's noblest color in beauty's bright eyes,
To kindle our feelings, I know.
But to stir up the inmost soul of a man,
And to fire him with frenzied glow,
To double his manhood, yet prove him a brute,
There never were richer, brighter dyes,
Than the spotless white where it crimsoned lies,
With a life being split on the snow.

I had read so much of the tremendous distances that a moose will travel, even with a mortal wound, that I was prepared for a ten mile run, but to my surprise, before we had run four hundred yards, Jim shouted "Here he is."

Sure enough, there he lay, with his knees doubled under him, like an ox in pasture. As we drew near he looked back calmly over his shoulder.

"Guess we better bleed him," said Jim.

"Guess you better look out," said I, "I'd as soon go near a wounded lion as a wounded moose."

"Well, let's give him a couple more balls."

So we both fired into him without the slightest visible effect.

"Let's go 'round to his head."

Accordingly we went around, keeping at a safe distance. Jim was about to fire when our victim's head drooped, then fell flat. I put a ball through his brain, his legs straightened out, quivered and lay still. The moose was dead.

Jim bled him. Then we stood for a few minutes gazing on the magnificent beast with feelings of rapture and triumph; feelings, in my case, not unmingled with regret that what was once such a noble animal should be lying at our feet, shorn of its majestic beauty, and now no more than a great load of butcher meat.

But we were not yet in safe possession; we feared that the Indians were on his trail. So we went back to where we first saw him and satisfied ourselves that there was no blood on the snow until after we had fired.

"Now," said I, "we'll draw cuts for who's to go to Carberry for a team and who's to guard the moose."

"No," said Jim, "I'll go to Carberry; you know better what to do if the Indians come and claim the moose."

As I knew that I was the better traveler, and was, moreover, well acquainted with the country, I would have preferred to run for the team; but Jim was determined to be the messenger, so I settled to guard our quarry.

It was now about 11 A. M. For a while I amused myself examining the splendid animal. By the stretch of my arms he stood six feet three inches at the shoulders, and to this must be added the height of a mane over six inches long. I estimated him to weigh about 800 pounds. After a little I went back on the trail to examine the places he had passed through and learn, if possible, the effect of each ball, for not one had missed its mark. Then, as I went a little further, my eye caught something moving through the woods. Soon I saw that it was an Indian coming toward me. Immediately I turned and set off toward our moose, but he overtook me before I arrived there. He was certainly the least prepossessing savage I had ever seen. At the outset he saluted me in a characteristic manner by giving me a grunt. Not having any particular use for it, I at once returned it. My stock of Indian was very limited and his stock of English was still smaller, so that our conversation throughout was carried on chiefly by means of dumb show. Presently he said, "Moose." Whereat I grunted in that peculiar tone which gives to the sound the signification of "You bet." Then we came to the carcass and he said "moose" again, and, pointing to himself and his gun, made as though about to take possession. Thereupon I pushed him back and informed him that his calculations were founded on erroneous data. Having gazed on me for a second or two with an aspect of doting tenderness, he proceeded to go through the pantomime of shooting twice, then pointed to the wounds made by Jim's rifle, as they were too large for my piece, but I pointed to Jim's weapon and spoiled that move. Once or twice he made a move toward the animal, but I stood between with my rifle cocked. Whereat he kept up a refrain

of "Wah nich seeehy" with such energy that I was afraid he meant something uncomplimentary, but I afterward found that this meant only, "No, brother, you are very bad."

Of course, I was unwilling to resort to violence, but he saw that I was going to hold on to the deer at any price, so he changed his aspect and made show of dividing, and each taking half. To this amiable suggestion I replied with an energetic "Kawain," which literally means "veto," but with my strong inflection meant, at least, "you can bet your life I won't."

I was hungry now, and having my dinner with me, I sat on the moose and ate it, all the time holding my rifle ready, pausing now and then to veto by a large majority all the motions for equitable division brought forward by the member for Dakota, for he kept up his speech most of the time. Finally, having finished my meal, I laid my head three times on my hand, and pointing to the moose, described a tortuous course in the air, then tapped my rifle and clapped my hands five times, which in English means: "For three days (sleeps) I followed that moose; I killed him after five shots, so he's mine and you may as well clear out." At this he drew himself up to his full height (he was about six inches taller than myself) and informed me that he was a Sioux, and that there were four more like him at the camp and they would come. Whereat I thought, "If there are four more as ugly-looking specimens as yourself, the sight of the gang should be enough to scare all the Powers of Darkness into lunacy;" but I could not translate the sentiment to him. So with another look of bewitching tenderness, he strode off to bring the other braves.

Meanwhile I paced up and down, hoping my companions would come soon, but determined to hold the moose at any cost, if the Indians came in force to take him. For five hours I paced up and down, then I heard guns, then an axe and a dog, and in a few minutes Jim reappeared with Gordon Wright and two others in the bob-sleighs, and soon we were all aboard triumphant and merry, and arrived in Carberry about seven o'clock, to find that already word of our success had gone before us, and over a dozen of the neighbors came down to Wright's that night to see the moose and congratulate us.

"PAUSING NOW AND THEN TO VETO."

More than one, when they heard about the Indian's attempted fraud, wondered why I did not shoot him, for "it's nothing to shoot a Sioux." It is unnecessary to add that I did not agree with them.

And so, after traveling about three hundred miles on foot, through the snow, during nineteen days of toil, I have kept my hunting vow and killed the grandest beast of chase that roams America's forests. And those who have taken the trouble to read through this strictly truthful diary (written at the time), can judge for themselves whether the reward was commensurate with the labor. As for me, I never had the slightest doubt on the subject, and both Mr. Duff and myself will not cease to look back on the days of our hunting together, with pleasurable emotion that can be understood only by the sportsman or the naturalist, who appreciates the chase not by the avoider's return, but rather by seeing therein a real elixir of life for the present, and a fountain of delightful memories for the future.

ERNEST E. T. SETON.

DAYS WITH THE BARMECIDE CLUB.

III.

THE sun came along at about its usual time, possibly a few minutes later, but not enough to make any particular difference in the programme, while an unobtrusive shower of melody lent its charms to the loveliness of the morning. The air was fragrant with the resinous odor of pine and spruce and balsam; the lake was smiling in its morning sleep and mirrored the hills and forests that encompassed it and the soft cloud shadows gliding over it. How well the color wears on these great hills, the same dark green that I remember a score of years ago. Yet they need legislative patching, for here and there, and too often, are breaks where the wind, fire or the axe has played sad havoc.

It is a likely morning for fishing and beautiful in its atmosphere of cheerfulness, of content and good fellowship. We found the trout rose best in the early morning and in the gloaming. How unspokeably fair the lake in its emerald setting, its surface lightening up with a benignant smile of welcome. There's a still, small voice which tells us the fish

are on the feed, nay more, we can see them jumping for their morning meal, and we have a suspicious confidence that we can beguile some of them with tantalizing Palmer or hackle.

Goldsmith makes Doctor Primrose say that courtship is a happier state than marriage, and if the uncertain time of wooing is sweeter than the plighted troth, with its warmth and happiness and love, it is most assuredly slightly different from the uncertainty of going a-fishing. The anticipation of the latter is just a degree lower than the delicious tingling which steals down your spine, sparkles in your eyes and glows on your cheeks, when some veteran grandee of the water takes hold and makes your reel to whizz.

Five minutes' pull brings Storm off the east end of the little island, and five minutes later he was lost to all surroundings save his sport. A master of hounds had a motto which was "Throw your heart over and your horse will follow." When Storm's leader was fully extended, you might have heard one trout say to another, "You lead the way, I'll follow." Two trout did come at the first reeling in. No heed gave Storm to the swallows dimpling the water in their rapid flight, to the dragon flies in their shining armor, to the woodpecker noisily tapping a tree on the mountain side, to the kingfisher poised almost motionless overhead, to the swash of the ripples that touched his boat so gently as they passed; but a look of intense pleasure was centered on line and leader. Sometimes a slightly-hooked trout would break away in spite of priest and prayer-book, and vanish into the watery whiteness of the whither, as the Frenchman would say, *wiz ze grand flourece*; but it mattered not, for like an office-holder resigning his position, there were plenty of others competent to fill his place.

Laugh and grow fat, angle and be happy; and angling is only one of the other names for perfect happiness. The bewitchment of its uncertainty hath a fascination like unto that of a charming widow. There is nothing visionary about the angler, for he deals in facts and searches for them; but if perchance he beguile himself with illusions, they are healthy ones. With a heart hopeful as a woman's, hope springs eternal in his breast, till he feels the lissome spring of his swaying rod, when that twenty-four carat ecstasy, the fulfillment of the angler's most extravagant fancy, takes complete possession. No hue and cry attend, for his light flickers under a bushel; no applause follows his skillful handling of rod and line, for none are near and few could appreciate; but we say to the honest gentle angler, as Gil Blas said to the stroller whom he found singing by the wayside, "Bravo! you put your heart into your business."

Time flies. It never flew faster. The sun's rays no longer fell askant, but marked high noon, and we pull ashore to the spring which is close by the outlet where we beach our boats and surrounded by a beautiful fringe of glossy emerald moss, soft as velvet, with great trees sighing above it. How good that water felt, for there was no taste to it, only a cool satisfying feeling it produced as it moistened our lips and throat. The following is an analysis of the water as made by Professor Angostura, of Hoboken. The result is expressed in grains, per Adirondack bucketful:

Sulphate of refresh.	7,733 grains.
Sulphate of wetness.	59,604 grains.
Sulphate of tickle.	12,007 grains.
Carbonate of solace.	29,889 grains.
Bicarbonate of cool.	32,009 grains.
Bicarbonate of life.	19,335 grains.
Chloride of smack.	4,406 grains.
Foreign matter.	Nix.

There was a slight trace of Medford rum, due to the accidental smashing of a bottle some yards above in the summer of '54, but it was so abominably and disappointingly slight that it didn't count.

What a spot for a noon day loaf. The bank bespangled with buttercups and daisies, which take one back to barefoot days when freckled and sunburnt we gathered them on the hillside and in the valley. Clusters of delicate and beautiful ferns were all around us, and water lilies bloom in the cool shallows near shore, and trees lean timidly over seeking like a pretty maiden to catch their reflection in the water. A rich mellow light hung like a veil of transparent gauze over the distant hills, and through the interlacing branches of spruce and hemlock soft beams are falling on the ground and playing their game of little shadows. Dear old resting place, may it be many a year before you are "tickled with a hoe" and made to "laugh with a harvest."

Our luncheon was eaten and digestion assisted by cut-plug and brier roots, and we chinned each other to sleep, all feeling that there was only one way to enjoy nature and that was in perfect carelessness, and it was far in the afternoon before we were again casting our flies, and long before the sun began to fling its parting rays through the branches of the trees we reel up and go to camp, leaving a couple of hours of the best fishing; but we are not insatiable sportsmen, whose only limit is darkness.

Our fish were dressed and put away in one of the cliff ice-houses, and no small job it is to properly care for a big mess of fish. One of the most useful articles a sportsman can carry is a pair of good thumb nails, not too long, but just the right length to be of use in dressing a fish or picking a bird. There is no tool to equal it in its specialty, nor one so easily managed. Indeed we have seen little children, scarcely able to talk or walk, who were really quite skilful in the management of their thumb nails. They are carried without much trouble and you are not likely to mislay them, and so always know where they are. We have learned to get ours in proper trim for an outing, and though we confess ignorance as to what is fashionable in thumb nails, we do know what is useful to encompass the uncertain grasp and the certain gliding of the slipping fish.

Came the witchery of eventide again, full of its subtle charms and dainty graces. The prolonged hush, the solemn stillness, the intermission after the voices of the day are silent and before the voices of the night commence, a

sweet undefined interval between full daylight and twilight. Mountains of snow-white clouds were drifting leisurely toward the west, as if to catch some of the brilliant hues which the sun was scattering so lavishly. The sky was flecked with their sprays and needles of gold, while the far away clouds were tinted with pale luminous lilac and brilliant orange which rapidly darkened, and then deep purple shadows filled the valley, which became fainter and more indistinct in the dream like light as long and low they crept. Then came the crescent moon and the trembling stars, making the sky one great field of throbbing light, and all was like a sweet, soft dream, mingling and harmonizing with our own content.

After everything had been snuggled up for the night, we entertained and wearied each other with recitals of experiences of forest and stream, some perhaps truthful, some probably otherwise.

"Speaking of bears," says Storm, "you have noticed, all of you, that bears in a state of captivity have a great fund of humor. They do many little things which show their appreciation of a good joke; but it was once my good fortune to witness the quaint humor of one which was not only wild but had sufficient reason to be mad. I was hunting between the timbered hills on Cold Springs, in Northern Wyoming. My companion was a dizzy tenderfoot, named—well, call him Ferguson, who actually didn't know tall grass from short timber. He once asked me, in all seriousness, if there wasn't more land to the acre in Wyoming than in New York. We were after white-tailed deer and jumped a bear. My companion shot at it and must have merely stung it somewhere, and not seriously. My rifle, a repeating one, had just that moment got out of order, and was of no present account.

"The bear came for us and we lit out. Ferguson was too speedy for me and soon reached the nearest available tree, while I did my best to get there, encouraging myself by saying, 'Go in legs; if body wins you shall have half.' I reached the tree which Ferguson was hugging, but standing on the ground. 'Quick, Storm,' he said, 'climb right up behind me.' He was either pleading the baby act, insanity, or some defense of that kind, and it proved as good as an alibi. I had barely time to secure a safe position up above, when bruin arrived and halted to survey the ridiculous scene. Ferguson had braced his feet on the ground and was clasping the tree in his closest embrace. Evidently the bear enjoyed the picture, for casting a pleasant look at me and a pitying glance at Ferguson, and saying, as near as I could understand him, 'Well, that fellow just downs my comprehension,' he turned and lumbered away."

FRIENDLY CRITICISMS.

A STROLL through the animal quarters in Central Park on Decoration Day showed an enormous crowd of people, all of whom were greatly interested in the various animals confined here. To mingle with this throng and witness the eagerness with which they view the different wild creatures to be seen there, would convince any one of the value of such a collection of animals, the importance of keeping the captive beasts in good condition, of adding to their comfort and of increasing their numbers. It is certain that there is no sight in or about New York which affords so much pleasure to so large a number of people as the collection of animals at the park.

This collection is in charge of Mr. W. A. Conklin, who is greatly interested in it, but he is allowed no sufficient sum to expend upon the animals, and the space devoted to them is utterly insufficient for their needs.

To maintain captive animals in a condition at all approaching health, their surroundings should as nearly as possible resemble those to which they are accustomed in a state of nature. They should have the food best suited to them, and in as great variety as possible; should have as much room as practicable and every attention should be paid to relieving them from the ailments which must necessarily follow the unnatural conditions of their existence in captivity. We feel sure that Mr. Conklin makes every effort to do as much for his charges as is possible, under the circumstances, but in the hope of awakening some intelligent interest in the public mind in this collection we desire to call attention to a number of instances in which the animals are improperly cared for—a stranger may often discover omissions which would be overlooked by one who is always on the ground.

To the left of the Fifth avenue entrance to the Menagerie is a divided cage, which holds a buffalo bull, cow and calf. The animals appear to be in fair condition, but it will be noted by every one who sees them that their coats are very ragged, and that a large part of the winter's fleece still clings to their flanks. The wild buffalo would long before this time have got rid of all this by scratching or by wallowing, and his hide would be as smooth—except on the hump, neck and head—as that of a well-groomed horse. These buffaloes, however, have no opportunity to rub or scratch or wallow, and therefore the effort of nature to throw off the old dead coat should be assisted. The buffalo should be groomed; not perhaps with currycomb and brush, but a heavy card on the end of a long handle, or even a garden rake, ought to be used to tear away the dead hair of last winter's growth. The scratching would not only improve the appearance of the animals, but would add a vast deal to their comfort, and while it might not be very patiently borne at first, would be greatly enjoyed by them after a little. This same scratching, carding or grooming ought to be done to many other animals. The miserable elk, and some of the deer and the camels, would be improved in looks and their health benefited by it.

Coming back again to the buffalo pen, we notice that the floor consists apparently of smooth boards. In a state of nature the buffalo is constantly on the move. Walking and running over ground now loamy, now sandy, or gravelly or rocky, he wears down his hoofs, and this wear is, of course, replaced by fresh growth. In the buffalo pen at the Park there is no opportunity for this wearing away, and the hoofs of the captives grow too fast and show a tendency to become long. It would be an advantage to have the floor of the cage covered with gravel to a depth of three or four inches so that whatever wear is possible in this limited space might take place. It must be said that these captive buffalo appear to be in good condition and healthy.

Passing along the walk among the paddocks occupied by the camels, the cattle of various breeds and the deer, one cannot but observe the limited accommodations allotted to them and the utter absence of any green thing on the ground, for the grass has long since been destroyed by the ceaseless tread of the poor beasts, and only the hard, bare, parched clay remains. It was not always so, for in years gone by the Central Park had a fine deer pasture on the meadow where now the Art Museum stands, and the elk and the deer could then be seen there almost as in nature.

The bears have the best accommodations of any of the animals in the park, and they repay the expense attending the erection of their quarters by the interest which they excite. At all hours of the day the cage is surrounded by a crowd of persons of all ages, who seem never to tire of watching the antics of the animals. In one division of the large cage are two Polar bears in good condition, and in the other three black bears and the two FOREST AND STREAM grizzlies. The latter are most mischievous and full of fun, and spend almost all their time—when they are not begging dainties from the spectators—in playing with each other or with the black bears. They wrestle and box and chase each other up and down over the rocks in very amusing fashion. During one of the warm days we have had recently, the female—known as The Kisser—has spent a great deal of her time in the water tank, where she bathes in most luxuriant fashion. We do not know on what the bears are fed, but are told that it is entirely bread. This should not be so. Any one who is acquainted with bruin at home knows that at this season of the year, and until the berries are ripe, his food consists very largely of roots. So the bears should now have roots given them. A bushel of mixed carrots, turnips and parsnips would go as far as a bushel of bread, and would certainly cost no more. Stale, worthless fruit might be given them in considerable quantities and would cost no more than so much bread, while it would be vastly relished by the animals, would make them healthy and improve their coats. Bears will eat anything, and a variety of food should be furnished them.

An interesting inclosure is the one which contains the prairie dogs. These little rodents do not seem to be in good condition. They have not shed their winter coats, and yet on some of them appear bare patches where the hair has entirely dropped off, as if they were afflicted with some skin disease. Moreover they scratch themselves continually as if greatly troubled with vermin. In their inclosure we saw a heap of corn, on which, we presume, they are expected to subsist. There seems no reason why they should not have an armful of freshly cut grass thrown to them three times a day. It would certainly improve their appearance and their health. Some plan ought to be devised for moving their inclosure from time to time. The labor of making fresh burrows would be good for them, and the change would in a measure rid them of the fleas, which ordinarily trouble them.

Space does not permit us now to call attention to other matters where beneficial changes might be made.

We are sure that no one regrets more than Mr. Conklin, the wretched parsimony of the city government, which forbids him to expend money for the benefit of his collections, but the suggestions which we have made could be carried out without cost, and the trifling labor involved would be a very small price to pay for the improved condition of the animals.

FLORIDA MOCKING BIRDS.

Editor Forest and Stream:

I inclose you an editorial from the daily Times-Union of this city, which voices the sentiment of ninety-nine-hundredths of the liberal and enlightened people of this State. It applies not only to our sweet-throated songster, but to all of our song and forest birds. Our State has been ravaged the past winter by the taxidermist and millinery butchers, until longer forbearance has ceased to be a virtue. Our beach and shore birds have almost entirely disappeared; our bluejays, cardinals and mocking birds are rarely seen. We are determined to put a stop to this. I am now preparing a game law, which we trust our Legislature will pass in January next; and if so, you may rest assured it will be enforced, at least in this portion of the State. The great work of the AUDUBON SOCIETY came none too soon. Through their agency alone will the depopulation of our woods and fields be stopped. Let them persevere. Public sentiment all over the country is coming to the rescue, and a grand triumph awaits them.

SPORTSMAN.

JACKSONVILLE, Florida.

The Times-Union says:

The destruction of our song birds has been so great of late years that we have found it our duty as well as pleasure to protest against it and to urge that legal measures should be taken to prevent their extermination. Prominent among the feathered choir we have mentioned the mocking bird—the prima donna of the Southern field and grove. The destruction of which we have spoken has been wanton; it had no aim save to destroy something, or to get a subject for the taxidermists, or for those horrid milliners who decorate indescribable bonnets with the remains of feathered beauties, whose natural plumage they debauch with their abominable aniline dyes. But it seems that there is another class of people who war against the birds, and particularly against the mocking birds. Mr. Kennard, of Waldo, sends us the following letter:

WALDO, Fla., April 29.—To the Editor of the Times-Union: Having seen several pieces published asking to have a law passed to protect the mocking bird, I, for one, heartily protest against any such law. I consider the mocking bird one of the greatest pests that we have. We have to depend for support in a great measure on raising small fruits, and no one knows but those thus engaged the amount of damage done by this same curse. And now to have a law passed not giving me the right to protect my own interest! What next? No sir; I say the mocking bird must go. Very respectfully, SAM. J. KENNARD.

Oh, no, Mr. Kennard; the mocking bird must not go. You will feel differently on the subject after you have reflected a little on the cruel sentence of extermination you have pronounced. We don't dispute the declaration of your bill of rights; you have a right to protect your property and your crops; so has every American citizen. But how? If your mule should get hungry and break into your cornfield, you surely would not kill him; you would not even "wallop" him; you would get him something to eat; you would—

"Put him in the barn and give him some hay,
And say, Gee, whoa! Come up, Jerry."

At least that's what we think you would do, for it is what we should do under like circumstances. Now apply this principle to the mocking bird. He is one of your scavengers; he eats twice as many insects as he does berries, and he is

worthy of his hire. Instead of spending money for powder and shot and losing valuable time in gunning for him, plant an extra patch in berries for his use and let him eat his fill of the succulent fruit. He will vary his diet with bugs and worms and insects galore, all of which are destructive of your berries and your crops. The idea that birds are a nuisance because they eat a few berries, is a relic of the unthinking and ignorant ages when the peasant thought the goatsucker bird really milked the goats instead of catching the flies and vermin that were continually pestering the animals.

The mocking bird must *not* go. Look at the trim, saucy fellow as he sits swaying on the topmost bough of the water-oak, gazing brightly up into the clear empyrean, the liquid trills, crescendo, diminuendo and staccato notes pouring from his throat with a spontaneity that tells of his contentment with this world and all that is therein. Note the air of abandon and reckless glee with which he gives the whistle of the quail, the piping of the thrush, the scream of the jay, and the softened sweetness with which he executes the trills and quavers of the smaller of his feathered brethren. The Northern bobolink and robin, the English lark, the tuneful linnet, and the pet of the drawing-room, the canary, are all rivaled at once in his delirious song. He is emphatically a Southern institution. The clash of arms and the roar and smoke of battle did not change him in the least. The sounds of strife and the discordant echoes of brother cursing the brother whose blood he sought added not a single piece to his repertoire or a new note to his song. As he was in the beginning he is now and ever shall be, world without end, the most glorious and truest-hearted songster of the Southern woods. He never has been and he never need be—reconstructed.

O no, Mr. Kennard, the mocking bird must not go; plant him a new patch of berries and let him sing and eat and eat and sing until the long moss ceases to wave and bird songs melt into the song of the angels at the last day.

A NOTE ABOUT AUDUBON.—A Springfield, Mass., correspondent sends us this extract from a letter written by Lewis Warriner, Jan. 2, 1841, Audubon being at that time a guest of Rev. W. O. B. Peabody, the Unitarian minister in Springfield: "I saw Mr. Audubon, the illustrious ornithologist, the other day, a noble specimen of our fallen race, firm figure, tall, something like S. V. S. Wilder, but with nothing of his important air. 'A man of great simplicity,' Mr. Peabody remarked to me, 'He is fifty-six years old. His hair is long and almost white, and he has an eye of uncommon brilliancy. I venerate him more than almost any one. His love of nature is so strong that he is going to start for the Rocky Mountains on the first of May next, to be gone five years. I heard him say that he with his wife and two sons chased a wren fifteen hundred miles and that the wren cost him one thousand dollars. Mr. Howard told me that Mr. Audubon was at a dinner-party at Mr. Th. H. Perkins's in Roxbury when he heard the note of a bird he had been looking for a long time, got excused for a moment, took his gun which he always carries with him, slept in the woods that night, and did not return for ten days, when he found the bird, having been in the meantime on foot to Sandwich on Cape Cod."

HABITS OF THE EAGLE.—East Toledo, May 15.—Editor Forest and Stream: The young eagle hatched April 26 is now about the size of a full grown barn pigeon, and is growing very rapidly. I have closely observed the habits of the eagle for many years. The pairs select their location for nesting generally in the top of a white oak tree and as far from the ground as possible. They nest in the same tree as long as the tree stands, and then select a tree as near by as possible. Their nests range from ten to fifteen and twenty miles apart. They lay out their fishing and hunting grounds, and no eagle is allowed to encroach on another eagle's ground; if it does there is sure to be a fight. As soon as the young birds are old enough to take care of themselves, they are driven away to hunt a new locality for themselves. In the month of November the eagles have a grand rally and are seen high in the air for several days, when the majority go South, but many remain at home all winter.—HENRY HUICE.

New Publications.

"OUR NEW ALASKA."

IT is always pleasant to read a book written by Mr. Charles Hallock. His writings are always vivid and full of life, and convey a striking picture of the scene described. To the sportsman his books have an especial charm, for in his travels Mr. Hallock is sure to discover something that is worth telling about the fish or game of any region he visits, and to tell it in his own entertaining way; a way which sportsmen have learned to love.

It is with great satisfaction that we announce the coming publication of Mr. Hallock's new book on Alaska. That far off corner of the globe, so long neglected, is rapidly coming into prominence in our national affairs, and after having been neglected ever since the date of its purchase, is now attracting the attention of tourist and capitalist, and of trader, miner and fisherman. The Governor of Alaska is now in Washington, urging upon Congress the importance of organizing the Territory, a work which is imperatively demanded by its growing commercial importance.

The most beautiful scenery in America—if not in the world—is to be found in the rock-faced firds of Alaska and along the coast to the south of it, and the charms of a journey thither need no description to the many travelers who have visited it since it was made so easily accessible by the opening of the great Northern highway across the Continent. Nowadays the stream of tourist travel tends strongly toward that northern region which has always been so distant and is now so near. *Omne ignotum pro magnifico*, and the far off has indeed a wonderful attraction.

Mr. Hallock's personal investigations in Alaska have resulted in the collection of a great amount of material on a variety of topics. He treats of the country—its past and present; of its resources—its timber, its mines, its fisheries and its fur trade; of the Indian question, of the government, of its natural history, the scenery and of sport. The old Russian days, the subsequent period of stagnation, and the present one of activity are fully discussed. Of Alaska's future Mr. Hallock speaks in very hopeful terms.

The book is one which will find its way into the hands of every one who has followed the history of Alaska since it became a United States Territory, and besides these all who expect to visit the region will look eagerly for its appearance.

The volume will be a handsome crown octavo, of about 250 pages, beautifully illustrated from sketches made on the spot, and a map covering all the points of interest along established lines of travel.

It is now in press and will be published about July 1, by the Forest and Stream Publishing Company.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

THE ELUSIVE BLUE GROUSE.

I.—IN THE SHADOW OF SHASTA.

I do not know whether the grouse of the Pacific slope obtains elsewhere or not. In such works on natural history as I have at hand, I do not find it described at all accurately, the prairie-chicken or pinuated grouse, in size and outline resembling it most. The California grouse is only found in the forests on mountains and the high hills, and I think feeds mostly upon the buds of fir and pine trees. The male bird has the accented appendage about its neck which it inflates with air when "drumming"—I should say grunting—and which is naked and orange-colored. Both male and female have yellowish-red crescents over the eyes, and they are of a brownish blue in color flecked slightly with white on breast and tail.

They are a fine table bird, and it is fun to shoot them. I mean by that, it is fun to shoot them after you see them. Of course one must see any game before he shoots, but it is harder to find a blue grouse when you know where he is, and it is more difficult to see him after you find him, than it is to shoot him, cook him and eat him. For instance it is this way: You want a grouse, and you hear him grunting away in a big tree just over there. You take your gun and step over. After you reach the tree you find you are mistaken in his location. He is grunting at frequent intervals, and you listen a little more carefully, and then you find that he is in a tree up half way on the hillside. After climbing to the tree which you have carefully marked, you hear him and get ready to shoot. He grunts again, and you are surprised to find that he is further up the hill, and you rest a while. Then you re-locate him and this time you get it. He is in a lone tree on the comb of the ridge. You climb leisurely as the hill is steep and there is no hurry. You reach the comb of the ridge and the tree, and find yourself on a small bench of the mountain, with timbered ridges all around. You listen and scan the tree from its lower branches upward, but you can't see him, so you refrain from shooting him for a moment. You look toward camp and see it a full half mile away, and wonder that you could have heard the dull grunting of the grouse so far. While you look you hear him again. You listen twice, and then you swear, if you want to. He is grunting away, and he is down about where you come from, that is, he *must* be. Then you hear another and then another, and they are above, further up the hill—or at least they *may* be, and you hear others in all directions in general, and no direction in particular, and then you begin to think you are drunk—if it is at all possible that you may be so.

But you want a grouse, and the woods are full of them, and you listen, and listen, until you have certainly located one that drums the loudest. He is in a big fir 200 yards to the left, and you start for him, when a small twig drops from the tree under which you have been standing, and looking up you seem to see something. As you look you see the head and neck of a small bird, apparently, away up the tree 100 feet from the ground, the neck grows larger and a dull heavy grunt booms directly down the trunk. You strain your eyes but you can see nothing distinctly, but you fire at the locality with your load of No. 4. Then there is a commotion above, a flutter of wings, a shower of twigs that rattle down the tree, a swish and thud and you have him! You are surprised somewhat, and think of firing up the tree in hopes of doing it again. You know now how to do it, and at once make for others and locate a great many which are not there, and find about a dozen which you never see, finally giving up the sport with a stiff neck and tired legs.

Grouse are still drumming all around, but you start for camp. Suddenly as you stride carelessly along, a grouse whirs away from your feet, and watching it, as it is out of range before you can shoot, you mark it down or rather up in a tall tree, and you see an apparent knot near a limb. You are wise and fire straight and true, and await the commotion as before. But nothing commotes, and on closer investigation you observe that the knot is not the grouse. But he did not leave the tree and you see him half an hour later, just as you begin to despair, higher up than where he alighted and close to the main trunk. He is sitting flat on a limb and his head alone discloses his presence. You blaze away, and this time he comes, and is a beauty. They are both cocks, and the brace will go six pounds. Going to camp you flush a couple of hens, and find a nest with an egg or two as they have begun to lay. The nests are merely bare spots on the ground selected near a stump or a rock.

But as I say it is fun to shoot grouse when you see them. With a good dog the hens could be readily found and shot, but the grunters are the birds to kill, and if they ever come out of the trees, I have not found it out in my experience. In the fall, when in coveys, they take to trees as soon as flushed and scatter, but the whole flock may then be shot (as they rarely fly a second time when disturbed)—if you can see them.

ESAU.

SHASTA, California.

WILDFOWL OF WESTERN WATERS.

(Concluded from page 348.)

OF the ducks to be found in the West the mallard (*Anas boschas*), sometimes called greenhead, is our staple, all things considered. Some other kinds are more numerous, while two other species bring a better price in market, but this latter arises largely from prejudice, as a plump, fat mallard, especially if corn fed, is as fine eating as any duck that flies.

In the fall of the year mallards are generally found about the wild rice marshes or at their roosting ponds, and vast numbers are killed before cold weather closes the waters and drives them southward. But it is in the spring when the bottom lands are overflowed, and the water is a foot or two deep in large tracts of pin-oaks, soft maples and other kinds of timber, that the best shooting is to be had, and the numbers killed at such times are almost past belief.

One man, during the mild winter of 1877-8, killed over three thousand of this species, the water being up in the heavy timber nearly all that season. As a matter of curiosity I wish to mention that this man once killed a mallard,

which was to all appearances a female in every respect except the head, which was green like a drake's, thus furnishing a parallel to the bearded woman or an antlered doe.

THE BLACK MALLARD (*Anas obscura*), formerly known as the black or dusky duck, is not plenty here, but some seasons there is a notable increase in the numbers, although compared with other kinds they can never be regarded as numerous. They are known only as black mallards in the West, under the mistaken impression that they are only instances of melanism in *Anas boschas*. Their haunts and habits with us are very similar to the latter, but they are an entirely different species. I am glad, however, that the authorities have accepted the Western name, as it is more distinctive than black duck, which might apply to any species of dark plumage.

GADWALLS (*Chaulelasmus streperus*), locally known as gray duck, cannot be called plenty, yet when shooting other varieties of shoal water ducks which inhabit rather open water, the bag will usually show a fair sprinkling of them.

PINTAILS (*Agila acuta*), known universally in the West as sprigtails, sometimes sharp-tails, and rarely as water-pheasants. These birds for some unknown reason are usually scarcer in the fall, both relatively and absolutely, than most other species, although a good many are killed. But in the spring when the country is alive with countless millions of wildfowl of every kind known to the West, I think I am safe in saying that pintails outnumber by far any other one species. Immense quantities are killed, and were it not for the fact that the market-hunters do not care particularly to pursue them owing to the low price, the numbers shot would be much greater. The pintail crosses rather frequently with the mallard, producing a hybrid partaking of the characteristics of both in about equal degree. This is the only hybrid I know of whose existence is at all common in a state of nature. There is occasionally a peculiar coloration of the pintails which I have never seen mentioned in any work or writing on ornithology. In this case the feathers of a drake on the forepart of neck, breast and under the wings, instead of being pure white, as it should be in the regulation plumage, is a rather bright brick-dust red. I am satisfied it is not due to age, season or condition, neither is it anything like the dull gray of the summer plumage. When the sun shines fairly on the breasts of a flock of these reddish sprigs they present a very queer appearance.

BALDPATE (*Mareca americana*).—Generally known here as widgeons. These ducks are somewhat more plenty than gadwalls, and considerably more of them are killed, as they decoy better and are apparently not so sharp-sighted and suspicious, still some other kinds are so much more numerous that widgeons do not seem to constitute any considerable portion of the masses.

THE SHOVELLER (*Spatula clypeata*) always called spoonbill here, is fairly well represented at times, and seems to sell as readily as other "small ducks," yet few care to make any special effort to get them, and they are looked on with a good deal of contempt.

BLUE-WINGED TEAL (*Querquedula discors*) are at times very plenty in the fall, especially in certain localities which seem to have peculiar attractions for them, and as they pack close together in large flocks and require such a light blow to kill or disable them, very many are often killed at a single discharge and large bags made. Both kinds of teal bring the same price, though by the knowing ones this species is regarded, fancifully I think, as superior on the table to the

GREEN-WINGED TEAL (*Nettion carolinensis*), which, while not so plentiful in the fall as the preceding, is more so in the spring, but as they are usually in smaller flocks and are much more tenacious of life, perhaps not so many are killed.

THE CINNAMON TEAL (*Querquedula cyanoptera*) I have never seen and believe it never visits these parts, although the appearance of one flock on the Illinois Bottom was reported to me some years ago by a man who might possibly have been mistaken, albeit he claims to have killed one.

WOOD DUCK, SUMMER DUCK (*Aix sponsa*) is the only species which breeds in this immediate vicinity in any considerable numbers. When they arrive in the spring they are almost always paired off, and commence nesting from the latter part of March on through April. By the first of July many broods can fly, and all are able to take wing by Aug. 15, when the open season commences. About the middle of September the most of them have been killed off or gone south, although some scattering ones are to be found until quite heavy frosts set in. In the summer and fall they are in small flocks, and rarely in large droves like most other ducks.

THE SCAUP DUCK (*Fulix marila*) and LITTLE BLACKHEAD (*Fulix affinis*) are both known as bluebills with us, and the names under which they pass in the East, such as broad-bills, blackheads and scamps would hardly be intelligible here. Rarely they are called "blackjacks," but this name is almost invariably reserved for the next species. Bluebills at times are remarkably abundant, especially in the spring, and enormous numbers of them are killed, even by the regular market-shooters, who do not hold them in as much contempt as they do pintails and some others, though the price is no better. They decoy so readily, fly so continuously, and their flight is so steady yet swift, that it is hard for the hunter to resist the temptation, unless large ducks are very plenty, and besides there are always chances for canvasbacks and redheads when shooting bluebills.

THE RING-BILLED BLACKHEAD (*Fulix collaris*) would not be recognized here under any other name than "blackjack." When we wish to be facetious we call him "colored John." Sometimes they are called "ringnecks" on account of the chestnut collar. The remarks on bluebills will apply about equally as well to this species, which perhaps is not quite so much appreciated.

There is a duck which formerly visited this section in pretty fair numbers, but of recent years neither I nor hunters to whom I have spoken about it have been able to get a specimen. I can find no name for nor description of it in any book on the subject, and the Smithsonian authorities are not able to identify it from my description, although professing their ability to do so if they could see a specimen. The bird evidently belongs to the scaup tribe, and I have abundant reason to think that I cannot possibly be mistaken about its former existence. To make my description perfectly clear, I will begin by stating the well-known fact that the bluebills are very light colored on the back, nearly as much so as the canvasback (I am confining my remarks to the males in this description), while the ringneck (*F. collaris*) has the back a very dark brown, nearly black. Well, my great unknown has the size, shape and color of *collaris* in everything except the bill. My recollection is that the eyes are not so bright a yellow either. Premising that I am a very poor draughtsman, and that I draw from memory, I submit the following crude outlines of the bills of the three

species, representing them as if seen from above. The nostrils are not shown.

Fig. 1 is intended to represent the bluebills' bill, the

whole being a light bluish lead color, except the nail which is black. Fig. 2 belongs to the ringneck, in which the base and tip are black, and the center bluish lead color, with two narrow, pure white bands extending clear across, separating black from lead color. It will be noticed that the bill is nearly straight along the sides, not widening near as much as the bluebills'. Fig. 3 gives a faint idea of the unnamed duck. In this case the bill widens toward the tip, not quite as much as the first, yet more than the ringneck's, but instead of being pale blue in color it is black, except four little ill-defined spots, which are bluish white, shading off into the general black. Now that is as good a description as I can give from memory. I have handled a good many, also killed them myself, both male and female, both spring and fall, so it is not a variation due to sex or season. The last one I ever saw was one I shot in the spring of 1876. Since then, as before stated, I have failed to secure one for determination, but a friend just returned from the Sangamon reports a hunter who has noticed them later, so I hope to secure one before long. It may possibly be a cross between *marila* or *affinis* and *collaris*, which might account for the bill, but then the plumage should resemble both species, which it does not. So until I can secure a specimen and have it identified the subject must remain a mystery.

THE CANVASBACK (*Elthya calliservia*) is the prince of ducks. Some think we don't have genuine canvasbacks in the West, but we do, and of just as fine flavor as any celery-fed ones that ever paddled the waters of the Chesapeake. They are seldom plenty in the fall, but in spring, especially with high water after a hard winter, they are here in force. Doubtless not so many as along the coast, but enough to enable those who are fixed for the business and understand it to make bags sometimes of over a hundred a day. It has been reported to me of two hunters, living within fifteen miles of here, taking two hundred and sixty in one day, but one of them I know to be one of the best hunters on the river.

REDHEAD (*Elthya americana*), occasionally called redneck. Usually very plenty in spring and very many are killed, especially by those shooting bluebills with which, and also ringnecks, they frequently travel in the same flock.

BARROW'S GOLDEN EYE (*Clangula islandica*).—Not at all common. My hunting partner killed one in the spring of 1881 and I had it identified by Prof. S. F. Baird, who stated that it was a northern species, not often found so far south, except in the higher Rocky Mountains where it breeds, but that its presence in Illinois had once before been reported from the Wabash River by Mr. Ridgway.

AMERICAN GOLDEN EYE (*Clangula glaucum americana*).—Generally known here as the whistler, but often called big ice duck, big river duck, big butterball, and sometimes big shellduck, from their feeding on shellfish, etc. While not plenty, yet seldom a season passes without more or less of them making their appearance, but their feeding grounds are generally different from those of the ducks pursued for profit, and therefore they are only killed when they come in the way.

BUTTERBALL; BUFFLEHEAD (*Clangula albeola*).—Also variously known as little whistler, little ice duck, etc. This beautiful little fowl is usually moderately plenty, but not a great many are killed, for the same reason given for the whistler.

THE RUDDY DUCK (*Erimaturus rubida*), called in the East "stiff-tail," "spinetail," and "rook," so far as my information extends, is of such rare occurrence here as to have no local name, nor indeed any name at all, though specimens are sometimes secured.

The three species of fish ducks (American sheldrake [*Mergus merganser americanus*], red-breasted sheldrake [*Mergus serrator*] and hooded sheldrake [*Lophodytes cucullatus*]) all visit this section, but are never pursued by the regular hunters.

These are all the species of ducks and geese which, to my certain knowledge, make their appearance along the Illinois River. If any other of the sixteen species of North American ducks which I have left unnoticed ever stray in even casually, I am ignorant of the fact. I have purposely avoided all mention of the loons, cormorants, pelicans, herons, etc.

JUNUS P. LEACH.

NOTE.—Since the above was written I have discovered another hunter who claims to have killed a cinnamon teal, so that its occasional occurrence here may be considered as proved. Very recently a hunter sent me a bird for identification which he had shot on the Illinois River and which proved to be a young male surf duck (*Pelecanus perspicillata*). It certainly is a *rara avis* with us.

J. P. L.

NIPISSENG AND TROUT LAKE.—W., of Cobourg, Ont., asks for more information about hunting and fishing at Nipissing and Trout Lake. Partridges were not particularly plenty, though we saw a number of broods; they were almost as tame as chickens and quite different from the wary bird of this vicinity. There are plenty of deer and moose there. October is probably the best time for them, though were it not against the law they could be easily found in July by floating. The usual way of hunting deer there in the fall is by running them to water with dogs. Still-hunting is very little practiced till snow comes. R. B. Jessup, North Bay, can give more information about the hunting than we can, as we were there in August. September is a good time to go for lake trout and maskalonge; probably the bass would not be biting as freely as in August, but the maskalonge fishing would be better, and the latter are to be found of thirty pounds and upward. The lake trout are in deep water till they go on the spawning beds about October. Live bait, minnows, etc. are best, though they are not very particular.—B. AND H.

EASTHAMPTON GAME CLUB.

FOLLOWING are the by-laws and the form of agreement entered into by the members of the club and the land owners from whom they rent shooting privileges:

BY-LAWS.

1. The name of this organization shall be the Easthampton Game Club, of Easthampton, Mass.
2. Its officers shall consist of a president, secretary and treasurer, and such other officers as the association may deem necessary.
3. There shall be three standing committees called the land committee, the prosecuting committee and the posting committee.
4. The duty of the land committee shall be to negotiate with land owners for the exclusive right of this association to take game on their grounds for such consideration as may be agreed upon between the parties, giving the association the right to prosecute all trespassers under the statute. The area of territory hired for such purposes shall be left largely to the discretion of the committee, but all acts of committees shall be subject to the approval of the association.
5. The duty of the prosecuting committee shall be to keep careful watch of the premises controlled by the association and to prosecute all violations of the trespass act when in their judgment the case demands it.
6. The duty of the posting committee shall be to post such lands as are reported to them by the land committee as being under control of the association.
7. The above-named committees shall consist of three members each, and shall be elected at the annual meeting of the association.
8. The president, secretary and treasurer shall be elected at the annual meeting of the association, or by special election should a vacancy occur.
9. The election of all officers and committees may be by nomination and *viva voce* vote of the association.
10. There may be special committees appointed at any time by the association for special purposes.
11. The annual meeting of this association shall be held on the first Wednesday of July, and special meetings, by request of five members. It shall be the duty of the secretary to notify each member of said meeting six days before the time of its appointment.
12. All members will be required to pay a fee of two dollars on admission to the association. Any citizen of Easthampton may be admitted a member by being recommended by prosecuting committee and paying fees. Any member found violating these by-laws and so reported can be expelled at any meeting duly called.
13. Each member shall report to the secretary and treasurer the amount and kind of game taken, and on whose lands during the hunting season, and pay into the treasury all dues on or before the first day of January of each year.
14. No member shall be allowed to take game for the market. To guard against fires, all members will be required to use the manufactured wad, and none other under any circumstances. All members will use care in climbing fences and see that they are not disturbed or made unsafe thereby.
15. It shall be the duty of the treasurer to pay over to the owners of land, each his share of all dues at the close of the season, *i. e.*, on or before the tenth day of January each year.
16. It shall be the duty of the secretary to record the preceding articles and the following form of agreement, leaving space for signatures in a record book kept for that and other purposes connected with this association.

AGREEMENT.

17. We, the undersigned, agree to abide by the above rules and regulations, and will use our influence to sustain them as long as we are members of this association.
- The undersigned land owners hereby license and grant to the members of the Easthampton Game Club, the exclusive right to hunt upon our respective lands, and allow them to post necessary notices, upon condition that they or their dogs are to do no damage to fences, crops or other property on our respective lands, and that for each partridge, quail, woodcock or gray squirrel killed upon our respective lands, the owner of the land on which the same is killed is to receive ten cents from the club.
- We, however, respectively reserve the right to hunt and allow any guest to hunt on our own lands, and also reserve the right to revoke this license and annul this agreement, as to the club or any of its members by giving written notice to the secretary of the club.

A TAME PREP.—Chelsea, Mass.—While gunning one morning in the fall of 1884, on a marsh in Everett, I shot a ring-necked peep whose tail feathers were firmly tied together by a piece of cotton cord. The bird was tame and had evidently escaped captivity. The bird calmly pecked away while I emptied three cartridges at him. This is something unusual for a shore bird to do. Perhaps by an allusion to the foregoing in the columns of the FOREST AND STREAM the ownership of the bird might be brought to light. In explanation of my poor marksmanship, I would say that a run in rubber boots just before the shooting had shaken my nerves considerably.—W. H. W.

DISMAL SWAMP BEAR PROMISE.—Belvidere, N. C., May 24.—A very destructive fire has been for some time raging in the cane brakes of the Dismal Swamp, and the bears and deer are coming out near the shore, where the fire has not burned. Three fine deer were seen last week at play in a field near the swamp, and the bears have begun eating the farmers' pigs. The boys put the hounds in a few days ago and succeeded in killing a very fine young bear. We are looking forward to plenty of sport next fall hunting bruin, as all the back swamp has been thoroughly burned and the berry lands near the shore are still unburned, with the promise of plenty of fruit, and these, with an occasional fat pig, will be sufficient to entice bruin from far and near.—A. F. R.

WHICH IS THE BEST WAY OF PRESERVING BIRDS IN WARM WEATHER?—In Minnesota, during August and September, huntsmen draw prairie chickens and wild ducks as soon as possible after shooting them, and fill in the cavity with grass so as to prevent their spoiling. At Cobb's Island, where almost thousands of beach birds are, or used to be, shipped in the hottest weather to Alexandria, Baltimore and Washington, the old gunners will tell you that birds will keep longer undrawn and unpecked than in any other way. And in the markets of New York city you see all the poultry

try picked, but airtight, as they call it. "Old Timer" is glad Dr. Ellzey has no faith in the scent-suppression notion; but he wishes your compositor would follow "copy," and not print fanciful thing for fanciful theory, or slosh for slash. In Virginia a slash is a piece of wet ground on which briars, huckleberry bushes and the like usually grow, thus forming a good hiding place for partridges. And so the slashes of Hanover, historic as the birth place of Henry Clay, is a section of country famous for its yearly crop of frogs, mosquitoes and huckleberries, coons and possums.—OLD TIMER (Hanover county, Va., May 26).

A BLACK FOX.—Escanaba, Mich., May 27.—To-day I saw a young black fox here that was captured a few days since. I should think he is about one-half grown. The tip of the tail is white. He is rather woolly, as the long hair is not yet out.—A. F. Y.

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.—Adv.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—XIV.

I WAS out in the first gray of the morning to find the promise made good with a cloudless sky of spangled blue, paling at the approach of the glorious sun, who heralded his coming by a few faint streaks of light, diverging above the treetops across the lake, and soon a rim of fire peeped above the line of green, and as it mounted and showed full and clear and round above, hill and hollow, lake and woodland emerged refreshed and bright from the week of somber storm, each moisture-laden twig and leaf and blade of grass decked out in glittering jewels by the genial rays of the golden morning sun.

I sat in front of the fly enjoying the scene lost in a dreamy reverie till aroused by the clear, tremulo laugh of a loon away down the lake, rejoicing, I had a conceit, in the fullness of his heart at the glorious morning following the change of weather and the loveliness of the placid lake with its background of green-clad hills.

It was a rare picture, full of bright color and mellow tints laid on with nature's deftest touch; a picture to feel thankful for, and the loon and I had seemingly drifted into the same channel of thought and were rendering up our homage to the weather god, but each in a different way.

But the others were missing all this fresh morning air and invigorating sunshine and there was plenty for all.

Rousing out the philosopher by pulling the blankets off him, we soon had fire going in the stoves and preparations for breakfast under way. Then old Dan and Ben were "pestered" till they agreed to get out as the least of two evils and by the harmless invention that breakfast was ready, and yanking the covers from Muller and Jim a couple of times and receiving as many blessings (?) in return, they were induced to get up, not, however, without sundry growls and snorts at being disturbed out of their morning nap.

When old Ben crawled out of the tent he threw his hat in the air with "Hooray, Danny, come out o' that ye old pelican! ef the sun aint up an' a shinin' like a house afire I hope I may never go a-fishin' agin; hooray!" and then he went through another highly edifying sandhill crane dance of brief duration, seemingly as a "blow off" to his overwrought feelings. He was interrupted in the midst of his grotesque caperings by some littering and talking over in the direction of the "henery," and this appeared to strike him as a new field where he could "hev a little fun." Picking up a short native fish pole lying near the water, that had doubtless yanked out many a brave sunfish and striped perch, he made a wide circuit, and tiptoeing up behind the tent where the girls were having the usual morning chattering match, he brought it down on the sloping canvas with a resounding whack, at the same time shouting "breckfust!" in a tone that might have been heard half way to Sutton's Bay. Simultaneous with the whack six feminine screams and squeals, varying little in pitch or intensity, rent the air, and Ben, dropping the fish pole, fled over to the kitchen fly, his face beaming with satisfaction, to relate how he had "skeered them gals into six different kinds o' conniptions." When the commotion in the tent had subsided a voice from within fired a threat of evening up scores after him in the shape of, "Never mind, Hyper [they had shortened him up from Hyperboler to Hyper], you'll catch it when we come out." But when they came out into the bright sunshine the beauty of the morning drove all thoughts of punishing Hyper out of their minds, and the entertainment was postponed to another day.

This first appearance of the sun for a week worked a marvelous change in the camp, and when all had taken the regular morning wash at the stand near the water and Ben had again yelled breckfust, we gathered around the table with light hearts and smiling faces, the girls looking as rosy as the morning itself, as happy a lot of "old children" as ever surrounded a camp-fire.

Even old Dan was overheard humming fragments of an ancient ditty as he sat at the head of the table stirring his coffee and beating time against the sides of the china tin cup with his spoon. This unusual burst of melody from the old meadow lark so astonished the family that the table chatter stopped, and as he looked up to ascertain the cause of so much silence, he was overwhelmed with confusion by a peal of laughter and a clapping of hands that fairly turned his head; but old Ben, always loaded for fun, knocked all the music out of him and started the hilarity afresh by remarking, in his dry way, "Who ever heard ov a pelican tryin' to sing before?"

The philosopher, too, seemed to have struck a better streak in his cookery than usual; the biscuits were lighter, the coffee had a more "sarchin' an' appetizin' odor," and the corn bread, baked with an eye to tickling the palate of ye skipper, was a marvel in its way, albeit the surroundings were not just at hand to give it the true "Texas flavor," to which old Ben laid the affliction of his watery eyes.

Breakfast over, the first thing necessary was to stretch a couple of clothes lines, a supply of which is always to be found among the "calamities," and give the bed clothing a sun bath and a thorough airing, a part of camp work that should be done every day, "ceptin' when it rains." A little care in this direction will, as old Ben aptly puts it, "keep yer

tents from smellin' like a woodpecker's nest;" and our tents, under the six days of almost continuous rain, had begun to give out a somewhat unsavory and musty flavor which could not well be avoided while everything was damp. In half an hour the lines were strung with blankets, quilts, shawls, dresses, etc., and the little cross fence back of the henery covered with coats, pillows, dirty shirts, old breeches and other gear, all sadly in need of sun and air, and the camp presented the appearance of a general wash day for the whole neighborhood. Lines that had been wet or damp for a week were run off the reels to a stump back in the field and stretched clear of the ground to dry, and about everything movable was spread and hung out to get the benefit of the change o' weather, only the tents and fly being left standing to scam and slack the tension on the guys under the influence of the warm sun rays.

The philosopher, busy with a general clean up of his department, whistled "voriferously" at a city tune picked up from some stray resorter, the frogs in the menagerie box at the water's edge meantime crowding to the side where the sun slanted in through the wires of their cage to croak a grateful accompaniment to the melody to help swell the measure of general thanksgiving.

Then, as a reminder that we were wasting the best part of the morning, a kingfisher came flapping slowly down the lake flying low and cleaving with noiseless wing the wisps of soft gray mist that still hung over the water along shore, and with an upward sweep perched with teetering uncertainty for a moment on a dead limb reaching over the water a few rods above camp, when with a "good morning" bow he unwound a yard or two of line with the old familiar chatter preparatory to a cast in the water below for his morning meal. But the patient fisher was left to his watch for some unwary young perch or shiner to come within reach of his cast, and when at last the camp had been turned inside out, we bethought us it was about time to go a-fishing ourselves, and to this end the boats were drawn up on the bank and emptied of water, tackle overhauled, frogs selected from the box, and in short order the fishing fleet was ready to sail.

Miss Annie demanded the services of "brother Hen" to furnish motive power for her and little Top. Jim offered himself up a willing victim to Mother Jim and Fanny, and old Dan was made happy when Ben proposed to go out with him "ef he'd do half the rowin'." (With only one arm, old Dan can't row a stroke, but the blessed old soul never gets out of humor about it.)

This arrangement left for the skipper Bob and Kit, and the luxury of a nine miles' pull, for we had been elected to go to Provemont to mail divers and sundry letters written during the "rainy season," bring back mail for the party, and lay in a fresh stock of maple sugar, our supply having unaccountably vanished, leaving nothing but a sweet memory behind. (The twins hazarded the suggestion that the sugar might have been left out and got rained on and melted, and then when they thought the skipper wasn't looking, they slyly nudged each other and looked very solemn and innocent, but the scheme didn't work.)

But as the skipper was a tireless sort of an old machine at a pair of oars, he didn't mind a pull of ten or a dozen miles unless against a smart headwind, and after the other boats were off, up and across the lake the "mail boat," freighted with "first class matter," the heft of it represented by Bob and Kit, with the skipper as "route agent" in charge, left her wharf with a good stiff ash breeze blowing in our favor, which soon wafted us out of sight of camp, around the point below where Kit had taken her first bass. Of course where she had taken one there ought to be another, and as a special favor to her the breeze was allowed to die out while we baited and drifted idly along the rushes for a quarter of a mile, fishing with a patience born of hope for that other bass. But not even a hungry longface was around to start the blood to a quicker flow and the breeze was freshened up a couple of knots till we came to the little bay where the big pickerel had been water-logged and killed with a blow of the paddle on our first trip down. Here the same success attended us as at the point above, and we went on our way, however, still hopeful of better luck and with hearts as light as the fleecy streamers of woods gossamer floating by us on the lazy air.

As we passed the flaming red maple bush which the girls had partly stripped on our first trip to the P. O., they wanted to be put ashore for another apronful of the bright leaves, and to this end the skipper was plied with entreaties, and plain coaxing, and compliments and cajolery, and finally with dire threats of a one-sided hair-pulling match when we got back to camp; but as he didn't care much for another lesson in botany he was proof against their entreaties and blandishments, and stood in small fear of the hair pulling, having treated his capillary adornment to a close cut before leaving home, and being in such good trim to resist attacks of this nature he could afford a grin of satisfaction in anticipation of the defeat "o' them two gals" when the hair-pulling match should come off.

Miss Kit simply said, "old contrariness," and Bob, with one of her prolonged and bewildering winks, "wished I wouldn't catch a fish the whole day," and then they lost themselves in a short fit of sulks, but their usual good humor was restored by a trumped up quotation from the "postal laws and regulations" which was twisted into something like, "It shall be unlawful for any person or persons in charge of the U. S. mails to delay the same by stopping or lingering by the wayside to gather a lot of 'bresh' with red leaves on, ferns, cat tails or other flowers," but when Bob struck a fish off the mouth of a little stream a half mile further on a section was readily found in the regulations covering cases of this kind, and the boat was stopped while she gave a display of science in the art, in a tussle with a big-mouthed bass that would have thrown her Uncle Ben into "conniptions."

In truth, however, Bob was as cool as an old veteran, handling her fish with an earnestness and a grim determination on her usually sunny face that quite won the skipper's heart.

There had been no word spoken while the fight was going on, but now when the bass was led alongside, she said with the deliberation of speech that was always a reminder of old Ben, "There, James Mackerel! if you can't catch fish, you can be of some use to Kit and me by getting them in the boat and taking them off the hook." The "sass box" but that bass managed to even things up as he was lifted in the boat by giving his tail just the required flirt to dash near a half pint of water over Miss Bob, at which James Mackerel consoled himself in a quiet chuckle while bending over the fish to release the hook; but Bob seemed to have a suspicion that he had a hand in the shower of water that doused her, and I have a dim recollection that she was not far wrong. However, Bob was not an old enough angler to have learned the odd freaks bass will sometimes get into their heads in

the matter of throwing water as they are lifted into a boat, but when she reads this she will doubtless make up her mind which was the offender that day and have another score to settle with James Mackerel.

The skipper was again made to be of use by putting a fresh frog on her hook and we went on our way.

Twice before reaching a point opposite the "oil well" (the oil well will be spoken of further on) he was of use taking in a fish, one for each of the girls, his own frog trailing away astern on the outside, attracting about as much attention as a "bound boy at a corn huskin'."

As we passed under the bridge at the head of the narrows Kit was impressed with the notion that there might be another bass lurking around the raft of logs where she had taken one a week before, and she laid herself out to perfectly astonish Bob and the skipper by one of her famous "wood-chopper casts" that would drop the frog within a couple of feet of the raft at the exact spot desired. But the best laid schemes of mice and girls, etc. In her anxiety to acquit herself with credit in "Papa's eyes" she put "a little too much vehemence in the cast" and brought the frog down on the outermost log with a whack that knocked him as limber as a wet rag, at the same time the hook caught in the bark of the log and refused to let go, and the fair expert in overhand casting wilted down on the seat utterly demoralized and "bilin' over" with disgust at the unlooked for result of her pet cast.

Miss Bob and the skipper smiled, cautiously at first, then snickered a little, and finally broke into open and unrestrained hilarity that lasted till some time after the boat was backed up and the hook released. The frog had no more life left in him than an old rusty railroad spike.

This ended the fishing for the down trip and we pulled down to the landing and walked up to the store, to be cordially greeted by neighbor Couturier and treated to a lunch of cheese, crackers, cakes and maple sugar, for it was long past the dinner hour, with a draught of cool water from the pump, after declining an invitation to step down in the cellar and sample a glass of his "old port" manufactured doubtless somewhere in the wilds of Chicago or St. Louis.

Friends at home had not forgotten us and we found in P. M. Couturier's receptacle for all classes of mail matter (the drawer under the counter) letters for nearly all in the party, and a bundle of Cincinnati dailies largely taken up with "editorial amenities," politics personals, and base ball scores.

We loafed around the store till the afternoon tri-weekly mail came in from Traverse City, which brought another batch of dailies and two or three letters, among the latter one from "Old Knots," saying he would be with us on the following Wednesday, and requesting me to "announce to that Illinois cowboy [meaning old Ben] that I'm coming up to take his scalp." Whether this was intended to mean a contemplated "risin' o' Ben's har," or as a challenge to a trial of skill in a day's fishing in which he would lay Ben out, was not quite clear, but when told of the message Knots had sent, the old cowboy unconcernedly remarked between whiffs, "ef that ole stub an' twist knots an' 'nails comes up here a foolin' round after my scalp I'll jest fill his ole hide chuck full o' perforated holes."

The pull back to camp was made under the slanting rays of the hot afternoon sun, that struck in on the skipper till he was so lazy toward the last that he could barely lift the oars, and when Miss Kit insisted on taking a first lesson in rowing, she was allowed with a hypocritical show of reluctance to try her hand, but the lesson didn't last long. The rail fence course of old Knots on Black Lake, working his boat in the teeth of a heavy blow, was a chalk-line mark compared with the erratic angles and curves described by our boat, as shown by the double line of bubbles churned up by the oar blades as they were lifted high in air and brought down with a seeming determination to find the bottom of the lake at every stroke. The circus lasted till the over-lapping oars caught one of Miss Kitty's thumbs and peeled off a section of cuticle, the catastrophe eliciting an explosive and very forcible "goodness," with the accent about all on the ness.

When the applause at this feat had subsided and the damaged thumb repaired with a piece of court plaster and duly kissed to ease the hurt, as in the long gone by days when she was a "toddlor" (and it is surprising how bad a hurt a kiss will heal) we swapped seats and again the oars fell with lazy sweep and noiseless stroke as the boat was brought to her course and headed on the last short stretch for camp.

It may be chronicled that we took five bass to camp, besides a couple of goggle-eyes that showed their lack of discretion in trying to swallow Bob's frog, and the skipper's bait was as dead as a pickled herring and without an abrasion or toothmark. Bob's wish had been gratified; I hadn't caught a fish the whole day, but I was in a contented frame of mind at having ministered to the happiness and enjoyment of the two girls, and this was in the nature of a recompense for a duty performed and a claim on a sound night's rest.

The others were all in and arranging the tents for the night, after having enjoyed to the full the bright and beautiful day. Each boat had brought in a string of fish with Mother Jim at the head with a bass of over four pounds and old Dan and Ben at the tail with a "lawyer," which Ben tried to palm off on the girls for a "newfangled lake trout," or "to speak more proper," he said with a flourish, "it's a kind o' a summer spesies o' the canine nanycoosh, which is never known to bite less ye after 'em somethin' to bite at an' spit on yer bait."

After supper the home letters were read over again to make sure nothing had been missed, papers looked over to see what had been going on back in the busy world, and when darkness fell the camp-fire was kindled to repel the thickening shadows, and by the time the experiences and pleasures of the day had all been told over around its cheerful blaze, little Top was in the land of dreams and it was creeping well on to the turn of the night before the circle was ready to break up and exchange good nights.

KINGFISHER.

(TO BE CONTINUED.)

RANGELEY, Me.—The following catches of trout are reported from Capt. Barker's Camp Bemis. First two days' fishing—Catch of A. Houghton, of Worcester, Mass., 5 pounds and 10½ pounds. Catch of C. H. Fenally, of Westboro, Mass., 4½ and 5 pounds. Catch of Mr. Rawson, one 6 pounds. Catch of Mr. Burton, one 8½ pounds. Catch of C. W. Fisher, North Attleboro, Mass., one 7 pounds. Catch of B. F. Quimby, of Worcester, Mass., 4½, 5 and 6 pounds. Catch of Holley Harrington, 3½ and 5½ pounds. Catch of H. M. Dudworth, 4½ pounds. Catch of Mr. Houghton, 4½ pounds; Mrs. M. A. Whittier, 3½ pounds.

NEW ENGLAND TROUT WATERS.

THERE begins to be more spirit to the reports from the trout waters, and the temptation is greater to be there. Boston gentlemen begin to be seen on the street with faces turned quite a nut brown, and the happy look they wear is to be found only in the eye of the returned and successful sportsman. Will they tell you all about it? Oh, yes! If you only have the time, they will talk you blind about that trout or landlocked salmon; for the landlocks have actually become a feature in the angling in Maine waters. No very large "red spots" have been heard from yet, but good sportsmen are very enthusiastic over the landlocks they have caught. One veteran trout fisherman, who took four landlocks at Rangeley the other day, neither above three and a half pounds, says: "Give me a landlocked salmon before all the other fish I have ever caught. There is more life in one than in two trout. It took me fully twenty minutes to land my largest one—only about three and a half pounds." But it is anticipated that the landlock fishing will drop off as suddenly as it began; that is, if it follows the principle known in other waters, where the landlocks have been known for years. In the Sebago these fish follow up the smelts when they seek the streams and shallow water to spawn, and then the fun with the landlocks begins. The smelts cease "to run" as it is termed, and the landlocks are done for that season. In the Androscoggin waters, where there are no smelts, it is expected that the landlocks have followed up the chubs—minnows—so common there, and that they will take their departure for deep and unknown waters early and suddenly. However, such is not yet known to be the fact in these comparatively new waters for these fish, and their friends may be happily disappointed. At all events the showing up of landlocked salmon in the Androscoggin lakes this spring, has established a happy fact for anglers, and a triumph in fish propagation very gratifying to everybody, and more especially to the worthy fish commissioners of that State, who have labored so arduously in that direction. Commissioner Stanley himself, a very successful and an enthusiastic fly-fisherman, is still firm in the belief that when the habits of the landlocked salmon are better known, they will be taken with the fly at almost all seasons adapted to that sport. He has himself taken them with the fly in Weld pond this spring. SPECIAL.

JULIO T. BUEL.

WHO that has used "spoon bait" does not know the name of "Buel" as stamped upon the silvery spinners offered to the bass, pike, and maskinonge? As the first man in America to take out a patent for trolling and spinning bait, his name became famous among anglers who fish with these implements, and his death at Whitehall, N. Y., on May 13 will be widely regretted. Mr. Buel was a man with a wide circle of personal friends because of his upright life, public spirit and kindly humor. The following notice of him, written by Mr. W. H. Bodwell for the New York Sun, is so complete and truthful that we republish it entire:

"Julio T. Buel, who died in Whitehall on the 13th inst., was probably better known, through his fishing tackle, to the lovers of the piscatorial art than any other man in the country. He took out the first patent in this country for trolling and spinning bait, and was the first to engage in its manufacture. Born in Vermont nearly eighty years ago, in close vicinity to Castle Pond and the many other famous trout streams and lakes of that part of the State, he early familiarized himself with the habits of the trout, and before he was fifteen years of age he was known as the most skillful fly-fisherman of that region. It was in Castleton Pond, when in about his eighteenth year, he made his first experience with a trolling bait. It was a crude affair indeed compared with the beautiful and artistic bait he turned out in later years, samples of which are sure to be found in the outfit of every sportsman who visits the Adirondacks or the great lakes and rivers of this country and Canada. It was almost the counter part of the bowl of a large spoon, made of heavy tin. One side was painted a bright vermilion, and the other was polished as bright as the traditional New England milk pan. To the smaller end was attached the hook, and to the other the line. Young Buel's first effort in Castleton Pond with this rude contrivance was a revelation to all the fishermen of that country. The size and number of fish he took from the depths of the pond had never before been approached. In fact, many of the old residents thereabouts continue to use what is known as 'Buel's spoon' in its original shape and will not believe that any improvement can be made upon it.

"When about 30 years of age he removed to Whitehall, and engaged in the furrier business. But the location was so tempting to a true fisherman that more of his time was given to fishing and devising attractive bait with which to catch fish than to the manufacture of hats. Only six miles away was Lake George, swarming with trout of enormous size, while Lake Champlain, in the vicinity of Whitehall, was a famous feeding ground for muskallonge, pickerel, black bass and pike, while less than a day's journey would take him into the very heart of the Adirondack wilderness. Almost all of Mr. Buel's time was spent in devising baits for different species of fish and in testing them. He made long trips to the Adirondacks, the lakes and rivers where these different species lived, in order to thoroughly test his new devices. When satisfied with the working of one he would secure a patent upon it, lap it away and go to work upon new ones. At first, he used to say, he had no idea of ever making the manufacture of fishing bait a business. But the sportsmen he met on these trips in the Adirondacks and elsewhere, as well as his neighbors, whom he always freely supplied with his baits, soon spread the reputation of his devices, and orders and requests from them poured in upon him from every part of the country. The result was that the furrier business soon gave way to a little rude machinery, and the manufacture of trolling and spinning baits was begun. This was nearly fifty years ago, and the little brick building on Canal street, during all that time, until within a very recent period, has been the place from which has come the great bulk of the fishing bait which has delighted the heart of all scientific fishermen. But the demand outgrew Mr. Buel's facilities for supplying it. He positively refused to put in new and improved machinery, or to increase his force of workmen. The old shop grew dingy, cobwebs hung in festoons over the door and windows, the old-fashioned chairs and the empty dry goods box, known as the 'seat of honor,' stood ready to welcome all who called to talk with 'the judge,' as Mr. Buel became familiarly known in these later years, upon his favorite topic of fish and their habits, and to tell of famous exploits in days past. For the last ten or a dozen years Mr. Buel has been able to go fishing but

very little, and less than a year ago it became plain to him and his friends that he must give up. No man stood higher in the confidence and esteem of his neighbors than Julio T. Buel. For several years he was deputy collector of customs for the district of Champlain, and he also filled various local offices. He had an inexhaustible fund of stories of his fishing experiences, and had an entertaining way of telling them."

SOUTHERN TIER ANGLERS.

LAST evening train No. 2 on the Erie road brought back to Elmira the members of the Southern Tier Anglers' Association, who were returning from their second annual excursion to the trouting streams of Potter county, Pa. Through the courtesy of John N. Abbott, general passenger agent, and Superintendent Cable, of the Erie road, a handsome special car was provided for the excursionists. It was tastefully trimmed with flags and bore an inscription which told what was going on in it. Train No. 29 drew it Tuesday morning to Addison, where it was side-tracked, and the anglers betook themselves to the special train provided by Frank M. Baker, superintendent of the Addison and Northern Pennsylvania railway. The engine and cars were trimmed with flags, and the big black-and-white inscription banner was transferred from the Erie car to the main coach. Additions to the party were made at several points, and when all names were on the list it read as follows: W. W. Fish, J. S. Fassett, C. H. Gridley, George M. Robinson, G. H. Parkhurst, G. W. Treadwell, Ray Thompson, D. Atwater, J. J. Bash, F. S. Rice, E. L. Adams, N. J. Thompson, Charles H. Baldwin, Jay S. Butler, W. P. Fish, Daniel E. Rick, P. F. S. Slaymaker, R. J. Knox, Elmira; the Hon. William Smythe, Judge C. A. Clark and H. Anstin Clark, Owego; C. S. Mather, Lawrenceville; W. L. Watrous, Waverly; J. F. Parkhurst, and C. L. Pattison, Elkland; Colonel J. M. Jones, New York; W. A. Bayliss of the Erie; Editor Roberts of the Addison Advertiser and the indefatigable, inexhaustible and justly popular superintendent of the A. & N. P. railway, Frank M. Baker. The rain which fell heavily in the morning, but, of course, could not subdue old fishermen, grew lighter and lighter, until at last it ceased entirely, and good weather ruled from that time out. The charming scenery, which makes the line of the A. & N. P. famous as one of the most picturesque in America, was fully enjoyed. At Elkland the pranks began. As the train stopped a boy in fantastic fishing gear came aboard, called loudly for a well known legislator and delivered to him a string of chub, as if filling an order. The laughter over this had scarcely died away, when another stop brought a box by express to a prominent dry good merchant containing a decorated codfish. At Knoxville a huge herb and vegetable bouquet, having in its depths a really desirable nosegay, was presented to an eligible bachelor editor. At Osecola a box was handed to a young man whose thinness is somewhat phenomenal, and which was found to contain "something to hold him together"—a corset. Gaines was reached soon after 1 o'clock, and the anglers, tired with their forenoon's search after trout, were escorted to the Hotel Vermilyea, where they found them in abundance. While waiting to hear the dinner bell some rare music was furnished by a wandering German minstrel, whose rendering of "Narragansett Bay" accompanied by physical contortions of his own invention upon the guitar, will never be forgotten. The excellent dinner was dispatched with all the relish and zest which fisherman's appetites alone can furnish. The printed bill of far, elaborately prepared by the thin genius who received the corset, was a surprise to everybody. It was certainly unique. Stray copies which floated out into the hands of the public, were seized upon by the authorities and locked up as anarchists' manifestoes. With the dessert came the impromptu speeches called out by Toastmaster Fassett. In the midst of this calamitous dispensation an elegant split-bamboo fishing rod was presented to Superintendent Baker. In addition to the other consideration a vote of thanks was given to W. H. Vermilyea and W. A. Rexford of the well managed hotel. This house by the way is the famous Izaak Walton house so long conducted by the late Horace Vermilyea, known as "Uncle Hod, the king of the rod." It has been enlarged and improved and is a popular resort for fishermen. Engineer DeGroat's whistle summoned the party and the train to Galeton, the terminus of the railway. There fine wagons received the members and carried them over the hills and through the valleys to Germania, where August Voss, the landlord of the only gasthaus, gave them a hearty welcome and excellent accommodations. After a first-class supper, the evening was pleasantly spent with cards, music, cigars, fireworks and preparations for the morrow's fishing. The next morning's sunrise found many of the anglers chasing the elusive trout. Fortunately Landlord Voss had secured fifteen pounds the day before, and these were served in superb style by Mrs. Voss for breakfast. Those who did not fish, and those who did, all enjoyed a season in the music room, bowling alleys, etc., of Herr Schwarzenbach's "brauerei," which is the German for chemical laboratory, or something of that sort. Notwithstanding his kindness, Herr Schwarzenbach maltreated his visitors. Last evening the party drove back to Galeton and were given an unequalled trout dinner at the Ainsley House. Many Elmira fishermen know that the cooking of trout is done to perfection by Mrs. Ainsley, and those who do not should find it out by experience as soon as possible. The railway brought the association quickly homeward, a stop of an hour being made at Elkland, where one of the members, L. L. Pattison, entertained his comrades in a most hospitable manner at his delightful home. As the train drew into Addison about nine o'clock the last of the firework stock was employed in giving the valley and village a reddish tint. It is said that an alarm of fire was given in the town because of the unusual sight, and the prolonged whistling of locomotives. Bidding Mr. Baker farewell and taking possession of the Erie car which was soon attached to No. 2, the party came home sadly pondering on the fact that a whole year must elapse before they could go again.—Elmira, N. Y., Advertiser, May 27.

"WOODCRAFT."—When a man has spent a great many months in the woods, he presumably has learned something which other folks of less experience might find it worth while to know. After you have camped out as much as "Nessmuk" you yourself may gather as much woods lore as he has; but it will be rather a sensible thing for you now to secure his book "Woodcraft," and from its pages gather a score or two of hints which will add to the comfort and pleasure of an angling or shooting or camping excursion.

LAKE ERIE BASS FISHING.—The Pelee party of Dayton anglers are all at home again, unburned and heartily pleased with their sojourn on the green isle of the lake, but, according to the Dayton Journal, sorely disappointed with the fishing. But they were not exceptions to the rule. Bass were not running anywhere in the lake. No one of the various parties from Cincinnati, Louisville, Columbus, Springfield, Toledo, Chicago and New York captured the fifth part of an average May string. As a rule, each boat with two good anglers, expects to return to the sojourning place in the evening after an all-day's devotion to the bass with a string of forty to sixty bass, and often more. This time the boats did not average above six or eight bass each all day long. Some of the best rodmen did not get a bite some days and were accordingly skunked. One-half the Dayton party of ten were served that way one day, and some congratulated themselves on taking even one. The stories published from Put-in-Bay were pure inventions. There is absolutely no rod-fishing at Put-in-Bay or near it, at any time. All the good catches reported from that point are made by parties who sail from thence in steamers to the East Sister, Cold Harbor, Old Hen and Chickens, Gull Island Reef and Pelee Islands. The Pelee Club at Sheridan Point, on the north-western corner of the island, and who have the most extravagant angler's outfit in the United States, had no better luck than others, notwithstanding their two steamers, one for supplies and mail, the other for sport. They have two oarsmen for each of their fishing boats, and fish to much better advantage than less expensive parties. This party represents over \$50,000,000 of capital, embracing such wealthy men as Hon. Charles Farwell, Marshal Field, Potter Palmer, Rynarson and others of Chicago. The club numbers thirty-four members. Their original assessment was \$1,000 each, their annual dues are \$200 each, and current expenses during fishing seasons added. They live in luxury, and are enthusiastic anglers. The Leffel party of Springfield, eighteen strong, had a commodious tug and made Put-in-Bay their headquarters. They had no better luck than the rest of us, although they sailed all over the lake. The Middle Bass party, mainly from Toledo, and the Cleveland Club, at Ballast Island, were equally unlucky. The weather was fair and intensely hot, and the water so clear that the bottom at ten or twelve feet depth was plainly visible. Most of the anglers have returned home and the spring fishing season for 1886 may be said to be practically ended. Various theories, none of them conclusive, are advanced for the failure of the bass—which are as conspicuously absent from the pounds as from the cunning rods of expert fishermen. The pound men cannot explain the mystery. Some assert that the bass had their run before the season opened, but this is contradicted by the fact that the pounds did not catch many. Had the bass run as usual, the pounds would have demonstrated it. Others assert that the bass have not yet come up the lake, but that is illogical, the season for running having passed two weeks ago. The most plausible theory for their non-biting is that the fish are on their spawning beds. No matter what was the cause, the spring of 1886 in Lake Erie for bass fishing will be recorded as a dismal failure.

CHATEAUGAY LAKE, Adirondacks, May 20.—For the trolling season this lake is unsurpassed by any lake in the State of its size. In 8½ days I caught 21 salmon trout, besides a good many brook trout, the salmon going from 3 to 7½ pounds, the speckled from ½ to 1½, although very early for brook trout. Others have done as well or better. Altogether about 200 salmon trout were taken this season, which is as good as any lake in the State can furnish for the same area. In the summer we have the best of fly-fishing, trout having been caught weighing 5½ pounds, salmon tipping the beam at 22 pounds. Not a bad record for a small lake. One afternoon 9 salmon were taken which dressed 65 pounds. Indian Point is a pleasant house on the lake, the proprietor, R. M. Shotts, is a genial sportsman and host and has had thirty years' experience in the Adirondacks, and is a perfect guide either in pursuit of deer or the speckled beauties of the water—E. W. Cook. The season opened two weeks earlier than usual here. We had a good catch of salmon, running from three to fifteen pounds. The trout season opens fair with good catches. Deer are all around us, and are robbing my cow of her pasture, but thanks to our legislators, they will soon be more "shy."—R. M. SHUTTS (Chateaugay Lake, N. Y.).

ATTACHING DROPPERS.—Centralia, Pa.—*Editor Forest and Stream:* I inclose a cord tied so that you may see how I attach droppers to the leader. No doubt your readers will

understand it without a long description. If droppers are not to be used and only the stretcher fly attached, then omit the first loop and you have a straight leader. I think this a better arrangement than the one illustrated by "Percyval" in your issue of April 15. The leader can be shortened or lengthened at pleasure, and the droppers can be placed at any distance desired.—SPICEWOOD.

LAKE ST. JOSEPH.—*Editor Forest and Stream:* I noticed a paragraph in a late number of your valuable paper, relating to Lake St. Joseph, near Quebec, Canada. This lake is a very fine, but by no means a new one. But the Quebec & St. John Railway is now opening out some splendid fishing grounds in that direction. There is good trout and black bass fishing in the lake, also large 'lunge' or great lake trout are sometimes taken. The Messrs. Waters and son wish to pose as great fishermen and are frequently informing the public, through the press, of the wonderfully large fish they catch, but never relate that they take them off night lines at the wee sma' hours of the morning and not in the "afternoon," as stated. As this style of fishing is illegal, these lines which, by the way, were quite a curiosity, being one-quarter of an inch thick, with some fifty or sixty hooks and ten pound sinkers attached, were seized and exhibited in Quebec with the owner's name placed on them. It is said that these splendid 'lunge' can always be obtained fresh at the hotel from ten to fifteen cents per pound; therefore strangers need no ropes nor get up at unearthly hours to procure these fish. It may not be sportsmanlike, but they need not return home with empty baskets.—VERBUM SAP.

THE "SUN'S" FISH YARNS.—*Editor Forest and Stream:* About two weeks ago there appeared in the Sun an article in regard to the trout fishing in Eastern Pennsylvania, which was calculated to make any decent trout rod jump out of its case, put itself together, thrust itself into the hand of its owner, and drag him willy nilly to the scene of such astounding piscatorial exploits. Now, I do not mean to contradict, impugn, or even question the strict accuracy of the statements in the article aforesaid, notwithstanding the result of previous investigations of such matters. All I wish to say is this: I sent a copy of the newspaper, having marked the article with red ink (it was so ink-redible, you know), to the proprietor of a certain village hotel in the heart of the Monroe county trout region, and asked him to tell me what he knew about the alleged facts concerning the capture of so many one, two and three pound trout in his vicinity. Here is his reply, received to-day. Neither his grammar nor orthography is as good, perhaps, as that of some of your deer hounding legislators at Albany, but he always tells the truth: "Dear ser, I recieved yours and aboute the fishing up thair I dont now, that seams like a big fish story I would like to se you a gain. Yours truly —."—K. (Perth Amboy, N. J., May 28).

FLY-FISHING FOR SHAD.—Holyoke, Mass., May 31.—Nothing new on last week's report of shad fishing. On Friday, 28th inst., they ran the net all day; result, two shad. Up to noon to-day, four shad. Fishing not a shadow of its former self. Unless the Massachusetts Commissioners of Fisheries commence hatching here again through August and September, the shad industry of this place is done. Anglers will have to try the Housatonic; Chatahoochie at Columbus, Georgia. If taken at Columbus in deep water, why not in the Hudson and other streams where the shad abound? It is all folly, a scientific stick in the mud, to say shad don't feed in fresh water. All nature proclaims against such a theory, at the very time when all their powers are called into the most active exertions, going up stream against strong currents and turbulent waters, and reproducing their species, the most eventful period of their watery lives, unless it is out of the water into the frying pan.—THOMAS CHALMERS.

LAKE DRUMMOND. Belvidere, N. C.—The skipper of the Coot, in his map of last issue, does not give "Lake Drummond" sufficient prominence. In accordance with his scale, he makes it only about 3x4 miles, while in reality it is 6x7 miles and a most picturesque piece of very deep and clear "juniper water," with excellent bass and perch fishing for those who know the ropes—no "greenies" or "fancy fishermen" need apply—only those "to the manor born" can succeed there, i. e., only those who have had experience, or have an experienced guide, can do enough to pay for the inconvenience of getting in and out. The Dismal Swamp canal was cut for the purpose of getting at the Valencia cypress and juniper timber of that region and not the pine, as represented by "C. P. K." although much pine is now rafted through the various canals, from the highlands of the different eastern counties of North Carolina.—A. F. R.

NOTES FROM NEW ORLEANS.—The waters in the bayous of the Mississippi Sound are fast clearing and settling. Silver fish have been seen round the Rigolets, and fishermen are preparing to go out to capture them.—A new sporting club has been formed at Look Out. It is composed of twelve members, comprising the leading business men of the city, and is called the Pearl River Club.—There is on the tapis a pegging fish match. In this each contestant is tied to a peg on the border of a stream and fishes there a certain length of time. The one catching the least number of fish pays for the dinner.—Quite a crowd assembled in front of Branch 27, at West End, yesterday, to view the big catch made by Sam Merlin. It was the biggest thing of the kind ever hooked in these waters, the monster garfish weighing 150 pounds and was fully six feet in length.

A NORTH CAROLINA BASS.—Belvidere, N. C., May 24.—A friend of mine caught a bass of the big-mouthed persuasion last week which pulled down the scales at ten pounds strong two hours after being caught. The fish was caught in a millpond near this "hamlet," and was a "fighter from away back."—A. F. R.

DR. J. A. HENSHALL is making an extended pleasure trip up the Mississippi River in company with Judge Longworth, of Cincinnati. The party are on Judge Longworth's pleasure yacht Co., specially built and fitted up for such cruising. Dr. Henshall's address is care Geo. B. Ellard, Esq., 158 East Third street, Cincinnati.

COLUMBUS CASTING TOURNAMENT.—The anglers of Columbus, O., are talking of a fly-casting tournament. Persons interested should address Mr. W. H. Miller, Box 245, Columbus, O.

Every pair of Allen's bow facing ears warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

Fishculture.

PROTECTING NEW YORK OYSTER BEDS.—Fish Commissioner E. G. Blackford has appointed Joseph W. Mersereau of Staten Island, State Oyster Protector. The bill creating the office provides that it shall not be lawful for any person or persons, corporation or corporations, to place or cause to be placed in any waters within the jurisdiction of the State, any sludge acid or other refuse matter, resulting from the manufacture or process of manufacture, or treatment of crude or refined material from any oil refinery, or oil works, any sugar refinery or sugar works, or from any gas house or building or buildings used for the making of gas, or to deposit in the waters any substance injurious to oyster culture. The law further provides that it shall not be lawful to throw or cause to be thrown from any boat, scow or vessel whatsoever into the waters of Long Island Sound, or into the bays or harbors opening into the same west of a line drawn from Eaton's Neck due north to the boundary line between New York State and the State of Connecticut any cinders, ashes, refuse or garbage. The Fish Commissioner is authorized by the law to appoint a person, who shall be known as the State Oyster Protector, whose duty it shall be to patrol under the directions of the Fish Commissioner the oyster regions of the State. The salary of the Protector is fixed at \$1,000 per annum and expenses. Mr. Mersereau is an old oyster planter, but of late years has been in the employ of the Pennsylvania Railroad Company. His application was indorsed by the oyster growers of Staten Island, and the dealers at the foot of West Tenth street. He will enter on the discharge of his duties at once.

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

Aug. 24, 25, 26 and 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. George H. Hill, Manager, P. O. Box 78, Cincinnati, O.

Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point N. J.

WILKESBARRE DOG SHOW.

Editor Forest and Stream:

I herewith send a few notes on the Wilkesbarre dog show, which opened for three days on May 25, but as I had just sufficient time to get through with my classes and catch the train for Philadelphia, I had no opportunity of looking at the setter or beagle classes. The show was got up for the benefit of the armory fund, for which a fair is also being held in the city, and the gentlemen in charge deserve the greatest credit for the way in which the show was arranged and managed. The dogs were nicely and comfortably benched in the old Armory building, a good ring was provided for the judging, and in addition we had a well printed catalogue, for which I suppose we must thank Mr. W. H. Tuck, the secretary. In mastiff dogs our old friend Agrippa had a walk over and also beat Duchess for the special. It was a close thing between the litter sisters Duchess and Rena, but the extra height and better head of Duchess turned the scale. The Rev. Chas. F. Kelley won first and second in St. Bernards with Bonivard II. and Cassandra. Both were out of condition and Cassandra had a big litter of puppies in her stall. Newfoundlanders were the usual collection, first going to a black and white of good size, but curly coat, and second to a short coat, black dog, weak in head.

As Mr. Lindsay was unable to attend the show I was set down for pointers, but had only five in two classes. The three dogs were an odd lot. Sweep was the best in head and style, but is shelly. Fred, liver, is deficient in quality and wide in front. Trump was as fat as a pig, very thick in head and crooked in front. Of the two bitches, I gave first to Dora, as Beau Beau was in shocking condition. The winning spaniels are nearly all old friends, the only new face of consequence being Hornell Fancy, of the same buff color as the one shown at the Fanciers' show. It ought to turn out a good one, but it was very timid in the ring. The four fox-terriers made up a very poor class, and I stretched it to give Nellie a second prize; but she was of the right size and the others were giants. The winning collie, Major, was a very fair specimen and won easily. Only one half-bred terrier was shown as a bulldog, and got nothing; but the bull-terrier class was a good one, thanks to Mr. Dole's entry of four. Count of course won, and the grand body and make up of Mark-Eyed Victor was not to be denied in comparison with his mother's weak head and wall-eye and Lady in White's lack of condition. This is a new bitch of Mr. Dole's, wonderfully good in head.

A class for Skyes was filled with rough terriers and with three of the same sort in the miscellaneous class. A very fair lot of six was picked out for a rough terrier class; a blue saddle and tan dog got first and next came a pure white, shown too fat, but good in coat. Thumb, the winning pug, is of good size and otherwise a fair little dog. Ky-ky was not in condition to show off well. Sir Lucifer, fresh from his great victory at St. Louis, excited the curiosity of the country folks. He won easily enough in the large miscellaneous class, and Boss, a Mexican hairless, was as easy a winner in the small class. Mrs. Kramer had the Italian greyhound prizes all to herself. The last class was greyhounds, and Begonia won from what must have been a good dog at one time, but he was showing too many signs of old age to beat the bitch. Following is a complete list of the

AWARDS.

MASTIFFS.—Dogs: 1st, Lackawanna Kennels Agrippa. Bitches: 1st, G. U. Sturdevant & Co.'s Duchess; 2d, Col. S. H. Sturdevant's Rena.

ST. BERNARDS.—1st and 2d, Rev. C. F. Kelley's Bonivard II. and Cassandra.

NEWFOUNDLANDS.—1st, W. Bauer's Cimarron; 2d, G. H. Parrish's Rover.

POINTERS.—Dogs: 1st, G. H. Butler's Sweep; 2d, W. W. McCain's Fred. High com., J. Laning's Trump. Bitches: 1st, J. Laning's Dora; 2d, Lackawanna Kennels' Beau Beau.

ENGLISH SETTERS.—Dogs: 1st, Prof. E. R. Sprague's Royal Date; 2d, G. H. Wright's Kollo. Very high com., T. S. Sperring's Flight. High com., E. O. Weeks's Don. Com., Dr. E. Troxell's Duke. Bitches: 1st, H. Bowdley's May; 2d, H. M. Beck's Victoria Dale. Very high com., M. Coolbaugh's Trunket.

IRISH SETTERS.—Dogs: 1st, I. H. Roberts's Bruce; 2d, R. A. Spalding's Garry. Very high com., L. B. Hillard's Micky Free. Com., G. L. Darte's Rex. Bitches: 1st, 2d and very high com., I. H. Roberts's Hebe, Jessie and Little Nell. Very high com., W. W. Kendall's Lorna Doone. Com., C. A. Quick's Glennie. Puppies: 1st, C. A. Quick's Glennie. Very high com., S. C. Struther's Fashion II. High com., J. B. Woodard's Mack.

FIELD SPANIELS.—1st and 2d, Hornell Spaniel Club's Hornell Mikado and Hornell Dan. High com., S. Ayers's Barney.

COCKER SPANIELS.—Black—1st, American Cocker Kennels' Doc; 2d and very high com., Hornell Spaniel Club's Hornell Jack and Hornell Silk. Very high com., W. T. Payne's Suzette and Lackawanna Kennels' Bubble. Com., W. Ricketts's Jack. OTHER THAN BLACK—1st, 2d and very high com., Hornell Spaniel Club's Hornell Fancy, Hornell Belle II. and Hornell Tri-color. Very high com., M. Martin's Gipsy. High com., F. Bullard's Psyche.

BEGGLES.—Dogs: 1st, J. Kaschenbach's Driver; equal 2d, W. F. Streeter's Frisk and Rallywood. Very high com., H. C. Wolfe's Frisker. Bitches: 1st, W. F. Streeter's Lizzie; 2d, J. C. Huntington's Betsy. Very high com., O. Smith's Swift. UNDER 12 INCHES.—1st and 2d, W. F. Steeter's Marchboy II. and Skipper. Very high com., H. C. Wolfe's Frank.

FOXTERRIERS.—1st, withheld; G. Dearie's Nellie.

COLLIES.—1st, N. Harvey's Major; 2d, O. Thomas's Zeus. High com., E. Huff's Tip. Com., Gen. P. Oliver's Nemo.

BULLDOGS.—Prizes withheld.

BULL TERRIERS.—1st, F. F. Dole's Count; 2d, F. M. Chase's Mark-Eyed Victor. Very high com. and high com., F. F. Dole's Young Venom, Lady in White and The Baron.

BLACK AND TAN TERRIERS.—1st, F. H. Gates's Fly; 2d, W. L. & J. L. Carey's Zip.

ROUGH TERRIERS.—Open—1st, F. A. Phelps's Budge; 2d, J. A. Waring's Beauty. Very high com., J. Langford's Tony.

TOY TERRIERS.—1st, N. Wolfe's Nig; 2d, L. Hart's Tiny.

PUGS.—1st and 2d, G. W. Fisher's Thumb and Ky Ky. High com., J. Howell's Nankipoo.

GREYHOUNDS.—1st, H. W. Huntington's Begonia; 2d, Gen. P. Oliver's Flash.

ITALIAN GREYHOUNDS.—1st, 2d, very high com. and high com., Mrs. Annie M. Kramer's Tiny, Effie, Dixie and Don. High com. and com., Lackawanna Kennels' Posey and Dot.

MISCELLANEOUS.—Over 25 lbs.—1st, Glencoe Collie Kennels' Sir Lucifer; 2d, Lackawanna Kennels' Muff. Very high com., E. G. Butzbach's Jumbo.—Under 25 lbs.—1st, L. T. Morgan's Boss; 2d, W. J. McLaughlin's Tip.

SPECIAL PRIZES.

Best brace of pugs, Thumb and Ky Ky. Best beagle, Marchboy II.; mastiff, Agrippa; cocker spaniel, Doc; English setter, Royal Dale; sporting kennel, I. H. Roberts; non-sporting kennel, F. F. Dole.

PACIFIC COAST DERBY.

Editor Forest and Stream:

I send you herewith a correct list of the entries for the puppy stake at the next meeting of the Pacific Coast Field Trial Club, to be held in December next. Somehow the number of eligible youngsters is very small this year, but there are scores of little fellows whose owners expect to be heard from next year. It would not surprise me if the list of puppy entries in 1887 would number forty to fifty. It will be noticed that there is a preponderance of pointers this year, but the California Kennels (Post and Watson), of this city, have now one litter of pups from Janet (Count Noble—Dashing Novice), by their Harold, litter brother to Gath's Hope and Gath's Mark. Their Sweetheart (litter sister to Janet) has just arrived home from her long trip to Tennessee, whither she went to visit Sportsman. In about a week she will add several youngsters to increase the stock of pure bred dogs in this State. These blue blooded setters will come in contact next year with young pointers sired by Vandevort's Don, Cosby's Bow, Jr., Barney's Tom Pinch, and the Bassford Kennels. There is a prospect of this year's trials being held in the San Joaquin Valley, where birds are plentiful, the ground level, and the cover more like that where the Eastern trials are run. It is of no use to attempt to have field trials in a chapparral thicket.

The great trouble here is to get for judges men who have had experience at field trials. Many members of the club hope that Mr. Vandevort will consent to act as one of the judges this year. The entries closed May 1, with a forfeit of \$5 and \$15 additional to fill. Fifty per cent. of the entrance money goes to the winner, thirty per cent. to second and twenty per cent. to third.

POINTERS.

FRAIL (J. M. Bassford, Jr., Vacaville, Cal.)—Liver and white bitch, age not stated (Lemmie B.—Beautiful Queen).

CLIMAX (E. W. Briggs, San Francisco Cal.)—Lemon and white dog, one year (Bang Bang—Bellona).

JAYBIRD (E. R. Robbins, Sacramento, Cal.)—Liver and white dog, nine months (Bow, Jr.—Ash).

FLEET (H. A. Bassford, Vacaville, Cal.)—Liver and white dog, age not stated (Lemmie B.—Beautiful Queen).

BEN CORTON (H. C. Brown, Sacramento, Cal.)—Liver and white dog, five months (Bow, Jr.—Jessie Belle).

PRUDE (H. C. Brown, Sacramento, Cal.)—Liver and white bitch, five months (Bow, Jr.—Jessie Belle).

VANEAU (G. T. Allender, Marin, Cal.)—Liver and white dog, ten months (Glen R.—Josie Bow).

PROFESSOR (G. W. Bassford, Vacaville, Cal.)—Liver and white dog, ten months (Glen R.—Josie Bow).

SANCHO PANZA (N. E. White, Sacramento, Cal.)—Liver and white dog, nine months (Bow, Jr.—Ash).

ENGLISH SETTERS.

SHOT (Chas. Kaeding, San Francisco, Cal.)—Black, white and tan dog, nine months (Regent—Fannie).

MAB (E. G. Eastman, Oakland, Cal.)—Black, white and tan bitch, thirteen months (Regent—Sybil II.). N. E. WHITE.

SACRAMENTO, CAL., May 11.

DOG SHOW SECRETARIES.

Editor Forest and Stream:

I have received a letter from Mr. H. B. Hanford saying I quoted him correctly. He writes me as follows: "President Gregg certainly did say to me, 'This is a poor place for protests; we don't bother much with them.' to which I answered that 'if the society could not "bother" itself enough to see that justice was done, it could not expect to have many New York exhibitors at its next show.'"

Mr. Hanford will furnish an affidavit as above should Mr. Gregg deny his rash assertion. President Gregg is in a hole, and the only thing for him to do is to pull the hole in after him.

V. M. H.

Editor Forest and Stream:

On the above subject I would like to say that I find that I have been unjust to the Pittsburgh committee in my strictures on their refusal of the protest in the St. Bernard puppy class. In common with many others, I had got the idea firmly fixed in my mind that the puppy class was restricted to twelve months and under. The fact is that by the most marvellous blunder I ever saw in a premium list, the ages for puppies were not given in several classes, among them mastiffs, St. Bernards, and Newfoundlanders. (As the Pittsburgh club is death on setters, they got this fixed at eighteen months.) Now what a committee ought to do under such circumstances, I confess, is a little too deep for me. All other exhibitors in the mastiff and St. Bernard classes had taken it as under twelve months, and with the exception of the winning puppy, all were under that age. But when a committee does not specify the age of a puppy class, what is the right thing to do is somewhat of a puzzle.

Nothing, however, can justify such action as "V. M. H." reports the president to have taken. To say to a protestor, who was apparently in good faith, that the club would not act on protests, was simply the most atrocious piece of high handed injustice I have ever yet known in connection with dog shows. If this is not disproved, the exhibitor who exhibits there again, will certainly be a fool, unless he "stands in." I note that "V. M. H." does not say that this was within his knowledge, and if he has proof of it, he certainly owes it to the doggy public to give it. I trust, however, for the sake of so old a show as Pittsburgh, that there has been some mistake about it.

W. WADE.

HULTON, PA., May 24, 1886.

ANNUAL MEETING OF THE A. K. C.—The annual meeting of the American Kennel Club which was called for the 29th ult. at the Hoffman House, was not held. Another illustration of this organization's way of doing things. This was an important meeting of the most important club in the country; yet, there was no quorum. Proxies were in abundance, but it was unanimously decided, by those present, that the proxies could not be counted as club representatives, unless there was a quorum, as Section 3 of Rule 10 stipulates that "At any regular or special meeting of this Association, five members in person shall constitute a quorum." As it was, there were only three. J. L. Morgan of the Hartford Club, J. O. Donner of the Westminster, and C. J. Peshall of the New Jersey Club. Mr. Vredenburgh was at his post, but he acts as secretary only. The Hartford, National Field Trials, Montreal, Cincinnati and Pittsburgh clubs had not even the courtesy to communicate with the secretary, and state their inability to send a representative, or to mail their proxies. The meeting is adjourned to Thursday, June 10, at 8 P. M.

SPANIEL JUDGING AT NEW YORK.—"Senex" used to charge the Hornell Club with "selling the little ones for cockers and the big ones for field spaniels." If his shades could revisit this earth, how they would haunt the spaniel judge at the late Westminster show for awarding a prize to Brahmin as a cocker, and also a prize to his son Bandit as a field spaniel! These awards suggest a few queries. Does Mr. Kirk consider a field spaniel and a cocker spaniel as the same except as to weight? If so, why does he not exert his influence to have the "cocker" class abolished, and the field spaniel class made into two divisions for large and small dogs respectively? If Mr. K. does consider the cocker a distinct type or breed, it certainly would seem that the prize should have been withheld from one of the dogs mentioned on the ground of being cross-bred.—BRINDLE.

DOG LOST.—Stolen about May 10, the all black Newfoundland dog Major. He is rather small, flat-coated, carries tail low. About four years old. His front teeth are a good deal worn down from carrying sticks and stones. He is believed to have been sent to some other city. Any one who may recognize him will confer a favor by communicating with William Burke, FOREST AND STREAM office.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Ben Adam. By Jas. W. Bullock, Cincinnati, O. for fawn mastiff dog, whelped Dec. 10, 1885, by Adam J. (A.K.R. 3367) out of Yolande (A.K.R. 3364).

Budge, Snudge, Quaker and Shaker. By Essex Kennels, Andover, Mass. for fawn pug dogs, whelped March 11, 1886, by Tam (Young Toby—Judy) out of Titania (A.K.R. 471).

Janish. By Empire State Kennels, Savannah, Ga., for white, with brindle markings, bull bitch, whelped Nov. 25, 1885, by Boz (A.K.R. 443) out of Bellona (A.K.R. 173).

Lady Glen. By Detroit Kennel Club, Detroit, Mich., for liver and white pointer bitch, whelped Dec. 17, 1885, by King Bow (Bow—Taffey) out of Sue (Hindoo—Princess Bow).

Little Jim. By Detroit Kennel Club, Detroit, Mich., for black, white and tan fox-terrier dog, whelped April 10, 1886, by Wasp (Vakeel—Village Belle) out of Fannie (Pincher—Dumpty).

Countess Tashko. By Detroit Kennel Club, Detroit, Mich., for lemon and white pointer bitch, whelped Dec. 12, 1885, by King Bow (Bow—Taffey) out of Ruby Croxeth (Croxeth—Seitner's Lass).

Young Bow. By Detroit Kennel Club, Detroit, Mich., for liver and white pointer dog, whelped Dec. 12, 1885, by King Bow (Bow—Taffey) out of Ruby Croxeth (Croxeth—Seitner's Lass).

Bradstone. By Detroit Kennel Club, Detroit, Mich., for black, white and tan Llewellyn setter dog, whelped Feb. 26, 1886, by Pride of Dixie (Gladstone—Countess Druid) out of Victory (Count Rapier—Reign).

Bow's Beauty and Lady Pearl. By Detroit Kennel Club, Detroit, Mich., for liver and white ticked pointer bitches, whelped Dec. 17, 1885, by King Bow (Bow—Taffey) out of Sue (Hindoo—Princess Bow).

Elaïne and Alice. By Detroit Kennel Club, Detroit, Mich., for black cocker spaniel bitches, whelped March 31, 1886, by Jack out of Nellie.

BRED.

Notes must be sent on the Prepared Blanks.

Newton Abbot Lady—Young Obo. A. Clinton Wilmerding's (New York) spaniel bitch Newton Abbot Lady (Bend Or—Lady Bird) to J. P. Willey's Young Obo, April 1.

Queen Bess—King Ban. W. B. Seaman's (Elizabeth, N.J.) red Irish setter bitch Queen Bess (A.K.R. 1970) to Chas. T. Barney's King Ban (Elcho—Bess), May 3.

Coro of Wetherall—Rockingham. F. Windholz's (New York) English setter bitch Coro of Wetherall (Sir Alister—Mena) to his Rockingham (Bethus—Bess), May 2.

Edith—Shady. C. E. Gilchrist's (Charlestown, Mass.) cocker spaniel bitch Edith (Brush II.—Olivia) to F. H. Perrin's Shady (A.K.R. 2085), May 22.

Rosa—Bracket. J. H. Phelan's (Jersey City, N.J.) pointer bitch Rosa (A.K.R. 1443) to Graphic Kennels' Bracket (Graphic—Bloomo), April 22.

Revel III.—Donald. Graphic Kennels' (Jersey City, N.J.) pointer bitch Revel III. (Graphic—Beryl) to their Donald (Bob—Sappho), April 26 and 28.

Lucia—Bracket. D. S. Gregory's (New York) pointer bitch Lucia (Croxeth—Belle) to Graphic Kennels' Bracket (Graphic—Bloomo), May 17.

Seph G.—Graphic. J. B. S. Holmes's (Goldsbrough) pointer bitch Seph G. (Scray—Dart) to Graphic Kennels' Graphic (A.K.R. 3411), April 17 and 18.

Daphne II.—Essex. Essex Kennels' (Andover, Mass.) St. Bernard bitch Daphne II. (A.K.R. 480) to the Essex (A.K.R. 393), May 3.

Daphne K.—Bob. F. W. White's (Worcester, Mass.) pointer bitch Daphne K. (Prince—Chip) to G. W. Amory's Bob (Bang—Princess Kate), April 20.

Judy—Duke. F. A. Smith's (Detroit, Mich.) pug bitch Judy (Pugy—Flossy) to D. M. Ferry's imported Duke, May 12.

Flash—Barney. Detroit Kennel Club (Detroit, Mich.) fox-terrier bitch Flash (Frogan—Fannie) to W. W. Wheaton's Barney (Peter II. Fawn), April 28.

Bow Queen—King Bow. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Bow Queen (Sleaford—Dawn) to their King Bow (Bow—Taffey), May 4.

Ruby Croxeth—King Bow. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Ruby Croxeth (Croxeth—Seitner's Lass) to their King Bow (Bow—Taffey), April 23.

Sue—King Bow. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Sue (Hindoo—Princess Bow) to their King Bow (Bow—Taffey), May 13.

Reign—Dashing Bervyn. Detroit Kennels' (Detroit, Mass.) Llewellyn setter bitch Reign (Belton—Breezy) to Arnold Burges's Dashing Bervyn (Dash II.—Countess Bear), May 11.

Early Dawn—Dashing Bervyn. Detroit Kennels' (Detroit, Mich.) Llewellyn setter bitch Early Dawn (Nixey—Princess Louise) to Arnold Burges's Dashing Monarch (Dash II.—Countess Bear), May 5.

WHELPS.

Notes must be sent on the Prepared Blanks.

Topsey. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Topsey (A.K.R. 3262), April 28, three dogs, by his Merchant Prince.

Countess. E. H. Moore's (Melrose, Mass.) mastiff bitch Countess (A.K.R. 2220), May 3, twelve (six dogs), by his Ilford Caution.

Bess. E. H. Moore's (Melrose, Mass.) mastiff bitch Bess (A.K.R. 2971), May 7, ten (five dogs), by his Ilford Caution.

Brown Betty. A. W. Day's (Dunellen, N.J.) spaniel bitch Brown Betty (A.K.R. 3008), May 5, five (two dogs), by A. Clinton Wilmerding's Black Prince (A.K.R. 62); four black and one liver; two bitches since dead.

Zona. Wm. H. Moseley's (New Haven, Conn.) spaniel bitch Zona (A.K.R. 1880), April 2, seven (four dogs), by A. Clinton Wilmerding's Black Prince (A.K.R. 62); six black and one liver; one dog since dead.

Florie. Samuel Coulson's (Montreal, Can.) red Irish setter bitch Florie (Glencho—Biddy), May 21, eleven (four dogs), by his Shaun Rhue (Conn—Nan).

Berice V. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Berice V. (A.K.R. 3008), April 33, ten (six dogs), by his Merchant Prince.

Flame. John G. Tod's (Harrisburg, Tex.) red Irish setter bitch Flame (Von—Floss), April 29, thirteen (seven dogs), by S. Conrad's Rufus (Rufus—Cara).

Quittie. Warwick Kennels' (Bridgeport, Conn.) beagle bitch Quittie, April 30, four (one dog), by J. Ellis's Jim.

Piney. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Piney (Banman—Kate), May 12, five (three dogs), by Shaner's Driver (Warrior—Fanny), all since dead.

Vickey. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Vickey (Racer—Vic), May 21, three (two dogs), by W. E. Deane's Little Duke, Jr. (Little Duke—Rose).

Donna. Chas. E. Taylor's (Bath, Me.) English setter bitch Donna (Royal Clue—Dryad), May 18, three dogs, by A. M. Tuck's Dash III. (Blue Prince—Armstrong's Old Kate).

Fly. W. H. Moseley's (New Haven, Conn.) English setter bitch Fly, April 18, eight (six dogs), by E. A. Cannon's Yale Belton (Belton—Blonde).

Temptation. M. Mills's (Jersey City, N.J.) pointer bitch Temptation (A.K.R. 1590), May 8, eleven (four dogs), by C. J. Peshall's Nick of Nasa (Naso II.—Pettigo).

Hornell Blanche. Geo. J. Northrop's (Marquette, Mich.) cocker spaniel bitch Hornell Blanche (A.K.R. 3612), April 21, three (two dogs), by Hornell Spaniel Club's Hornell Silk (A.K.R. 1397).

Janet II. Wm. T. Wells's (Wethersfield, Conn.) collie bitch Janet II. (A.K.R. 3626), May 6, five (two dogs), by Lathan Kennels' Montrose (A.K.R. 891).

SALES.

Notes must be sent on the Prepared Blanks.

Trinket. White, black and tan beagle bitch, age and pedigree not given, by A. C. Krueger, Wrightsville, Pa., to W. Stewart Diffenderfer, Baltimore, Md.

Budge, Snudge, Quaker and Shaker. Fawn pug dogs, whelped March 11, 1886, by Sam out of Titania (A.K.R. 471), by Essex Kennels, Andover, Mass., to Chequasset Kennels, Lancaster, Mass.

Janish. White, with brindle markings, bull bitch, whelped March 25, 1885, by Boz (A.K.R. 443) out of Bellona (A.K.R. 1730), by R. W. Livingston, New York, to Empire State Kennels, Savannah, Ga.

Marion. Black and white cocker spaniel bitch (A.K.R. 2689), by A. Clinton Wilmerding, New York, to C. V. Sewell, Tarrytown, N. Y.

Suzette. Black cocker spaniel bitch, whelped July 15, 1885, by Sport out of Suwanne (A.K.R. 658), by A. Clinton Wilmerding, New York, to W. T. Payne, same place.

Bessie. Pug bitch, whelped Sept. 13, by Bunny out of Judy, by Henry C. Burdick, Springfield, Mass., to T. J. Flack, Washington, D. C.

Edith. Black cocker spaniel bitch, whelped Oct. 12, 1885, by Brush II. out of Olivia, by Chas. E. Taylor, Bath, Me., to C. E. Gilchrist, Charlestown, Mass.

Pride of Dixie—Victory whelp. Black, white and tan English setter bitch, whelped Feb. 26, 1886, by Detroit Kennel Club, Detroit, Mich., to W. Fischer, same place.

Pride of Dixie—Edith (A.K.R. 110) whelps. English setters, whelped Feb. 21, 1886, by Detroit Kennels, Detroit, Mich., a black, white and tan dog to Wm. Fischer, same place; a liver and white dog to F. W. Chapman, Darlington, Wis., and a white bitch to S. A. Howes, Battle Creek, Mich.

Bannerman—Queen whelps. Beagles, whelped Jan. 23, 1886, by A. C. Krueger, Wrightsville, Pa., one pair to Elmer E. Shaner, Pittsburgh, Pa.

Jack—Nellie whelps. Black cocker spaniels, whelped March 31, 1886, by Detroit Kennel Club, Detroit, Mich., a dog each to J. Sinclair, W. H. Blades and ex-Mayor W. W. Wheaton, all of same place.

Harold—Dido whelps. Red and white English and Irish setters, whelped March 6, 1886, by California Kennels, Sacramento, Cal., a dog to P. C. Jurzens, Traver, Cal.; a dog to E. Owen, Elk Grove, Cal., and a bitch to Dr. C. M. Hill, Eureka, Cal.

Pride of Dixie—Victory whelp. Black, white and tan fox-terrier bitch, whelped Feb. 26, 1886, by Detroit Kennel Club, Detroit, Mich., to W. C. Thuston, same place.

Yale Belton—Fly whelps. English setter bitches, whelped April 9, 1886, by Wm. H. Moseley, New Haven, Conn., one each to Charles Hinkley and F. A. Canon, same place, and one to Geo. Cheltis, New Marlboro, Mass.

Black Prince—Zona whelps. Spaniels, whelped April 2, 1886, by Wm. H. Moseley, New Haven, Conn., a black dog to S. R. Hemingway, a liver dog to John W. Francis, a black bitch to Chas. Hinkley, a black bitch to Jas. E. McCann, a black bitch to Wm. A. Chamberlin, all of same place, and a black dog to C. E. Longley, Providence, R. I.

PRESENTATIONS.

Jack—Nellie whelp. Black cocker spaniel bitch, whelped March 31, 1886, by Detroit Kennel Club, Detroit, Mich., to David Downing, same place.

ALLEN's bow-facing ears can be attached to any mouth in 5 minutes. Try them. Little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NATIONAL RIFLE CLUB.

VERNON, Vt., May 27.—A dozen sedate-looking gentlemen squatted along on low stools, clad in work-a-day clothes, each looking with a pre-occupied air out through the low shutter opening of the house in which they sat. There a lull in the blowing day and away banged a dozen rifles with the noise and effect of small pieces of ordnance. This was the scene which greeted your correspondent on his arrival at this quiet Green Mountain hamlet yesterday morning.

It was the annual spring meet of the National Rifle Club, and the men were shooting with the old style muzzleloaders at the old-fashioned targets, and scoring according to the old mode of string measure. They were a sort of Rip Van Winkle gathering, and one felt prompted to ask where they had taken the long nap and where they had kept the weapons from rusting all the time. The club itself has grown into one of the institutions of the country. Its record runs back long before the war, and far back in the fifties and forties the charter members tell of gatherings where there was some shooting, plenty of rivalry and no end of a good social time. The weapons of those days were of massive affairs and the printed notices of the meetings with the list of allowances which the 40lbs. barrels are to make to the 15lbs. pigmies shows what at one time were the classes of rifles in the meetings.

The club has been a progressive affair though, and now such a thing as a 40-pound barrel would be a rarity. Members recall such, but they were handicapped out of existence and nobody seems particularly sorry that they have gone. The club is rather an aggregation of the sports of the country. There are officers elected at the fall meeting. Then a programme is made up. It is always the same. Three strings of ten shots each. Shot on two days. Each one shooting hands \$5 to the secretary. This fund pays the trifling expenses of the meeting and the remainder is divided in a sweep-stake fashion. Those who enter become members for the nonce and when the meeting breaks up and the shooters take courtly adieu one of another the society exists only in the secretary's notebook and the next gathering. There are no disputes, no expensive machinery, no eating up of funds in numerous waste. Simple shoot and good fellowship, what could be more truly rural, more idyllic, more sportsmanlike.

The oldest member shook his head, thought a while, thought some more, and finally said that he reckoned the first steps were taken in 1854 or '55 toward making the gatherings more formal than they had been. Before that time they had met and shot, but after a surprise party fashion, nobody being quite sure when he started for the rendezvous whether he would have a solitary bit of practice or whether he would form one of a jolly company. All in all the club is a unique sort of an institution. The one great aim of its members is to secure the greatest accuracy. Such a trifling fact as the utter impracticability of lugging the arm about in any useful fashion for hunting or general target work, does not seem to bother the National members at all. Once convinced that they can gain a quarter inch on a string of ten shots by adding half a dozen pounds of metal to the barrel and the added weight is put on without a question.

This particular spring meeting was to become an episode in the history of the club. Much correspondence had been indulged in with the Walnut Hill marksmen, and these capital shooters of the modern school had promised to come up Vermontward and try conclusions with their antediluvian prototypes. The old fellows were delighted with the prospect of a good lively set-to, for the spirit of fight is strong within them, and there had been so much talk on the score of the olden times. Such a thing here and there, and every body was charmed at the prospect of having the two classes of arms brought side by side, each in the hands of enthusiastic experts and each shooting under the same weather conditions. So when the 12 o'clock train came up from the southward at vester noon, and out of it tumbled Himman and Rabbeth, Frye, Ellsworth and Maynard, each with rifle and shooting traps, it was generally agreed that the spring meeting of 1886 was to be a big success. The chroniclers were there too, ready with pen and pencil to picture in word and the doings of this novel rifle meet. Mr. Gould came down from Boston, that the Rifle might know all that occurred, and with convenient camera caught the various doings of the riflemen.

The new comers were greeted in the most kindly spirit. There was the range 40 rods away from that little out-house sort of a shooting box. Across yonder bit of low-lying water-covered meadow to the face of the low hill where a temporary fence of slabs sufficed to hold the paper in place. Such a scene here and there, and all manner of streamers, for each marksman carried his own private wind signals, and stuck them up as his fancy dictated. Some used long whip-lash streamers of silk, slightly weighted at the tip. Others again preferred the bag-like bits of muslin and these stood out like great bleached boloznas. One had contrived a wee wind signal, a model on a quarter inch scale of the big dial at Creedmoor. It was a picturesque range, but the main interest was at the firing point. Here was the house we have mentioned, and on the side facing the range, the old-fashioned westward shutters lifted up, really opening the house side. They were low and one was compelled to stoop or sit down on the low stools if a view of the targets was desired. Pushed up against this opening ranged in line were the rests on which the muzzleloaders were placed. They were of the saw-horse pattern, securely fastened to stakes driven into the soil and so arranged that when placed upon them the gun muzzle would be about 2ft. from the ground. Along the outer side of the shooting box, and close to the side facing the range, were the workbenches with notches along its front edge, and here the members do the manual work of the shooting, cleaning and swabbing, patching and loading, with all that care and deliberation which characterizes the typical muzzleman.

Let us take our friends in order, beginning in that far away corner where a portly gentleman whose clear eye in a measure belie the slight tinge of gray in his hair. He is Mr. R. C. Cressy, of Brattleboro, Vt. His arm is of Brockway make, with the latest catalog barrel, navy workbench with notches along its front edge, and here the members do the manual work of the shooting, cleaning and swabbing, patching and loading, with all that care and deliberation which characterizes the typical muzzleman.

THE BULLETS—FULL SIZE.

Grains.	Grains.	Grains.
1. Stephenson.....603	6. Brockway.....417	11. Hinman.....258
2. Brown.....671	7. Cressy.....338½	12. Rabbeth.....330
3. Lowe.....585½	8. Park.....356	13. Frye.....330
4. Smith.....649	9. Cox.....305½	14. Ellsworth.....293
5. Penn.....572	10. Fletcher.....339½	15. Farrow.....163½

box weighed 389½ grains, while a powder charge weighed 84½ grains. He uses a greased paper patch laid in two pieces across the gun muzzle. Like the majority of the other weapons, his arm is slightly choke bored, a point upon which some of the marksmen lay a great deal of stress. His method of attaching the weapon to the rest is very simple. The crosspiece attached to the barrel has in it a V-shaped notch, and this goes to a screw fastened in the rest top. In the rear there are the usual thumbscrews, one below lifting the rear of the piece, and one on either side giving the brass notched piece in which the barrel rests a lateral motion.

Next to Mr. Cressy sits D. A. Brown, of Boston. He has a round barrel arm made by Warner, of Syracuse. It falls within the 15lbs. standard, has a uniform twist of rifling with one turn in 20in., 8 grooves, of .45-caliber. The barrel is 30in. long, and is slightly larger at the muzzle than the breech, the purpose of this disposition of weight of metal being to stiffen this outer end of the barrel and prevent in a measure the springing of the barrel. Mr. Brown uses a Warner made bullet, with a hard point built up of a 1 to 1 antimony and tin composition, while the rear end of the bullet is of pure lead, the two parts are closely swaged together, and the taking of the rifling by the pure lead heel is the point aimed at in this composite missile. He uses powder of the Dead Shot brand, American Powder Company make. The bullet, weighed by your correspondent, as all the other powder and bullet weights in this report were taken, showed a weight of 671 grains, while a single powder charge showed 142½ grains. In loading, Mr. Brown uses a linen she-lacked and then greased, two narrow strips laid crossways of the muzzle in order that the eight grooves might be taken uniformly. His shooting stand resembles exactly a miniature gun carriage. There are two long ways on either side on which the cross head forward rests and slides, while at the rear there are two side and bottom screws. Mr. Brown is deliberation and good nature itself. His every motion is cyphered down to a system, and it is almost amusing to see him pour the powder in, and then with moistened rod at once look for it. Yet in this way he avoids that constant menace of the absent minded muzzle marksmen, a bullet in the barrel and no powder behind it.

Next in the line came Farrow—W. Milton Farrow, known on every rifle range from California to Constantinople. He is now a Brattleboro resident, making rifles, and it was one of his own make that he was shooting. He had secured a rest and had elbowed his way in among the old timers. His weapon was the plummy one of the meet-ing. It weighed complete but 5lbs., had a 34in. barrel of .38-cal. and had 7 grooves of 1 turn in 16in. The rifling was peculiar with a ratchet cut and one on which Mr. Farrow pinned his faith. The powder charge—American Co. FF. make—weighed 46grs. and the bullet 163½grs. The last was a 1 to 20 composition, hot drawn. In loading,

Mr. Farrow, after carefully cleaning, inserted the patched bullet, and after pushing it home with a gauged wooden rod, from the rear in-serted the freshly loaded cartridge shell behind it. Mr. Farrow had all the advantages of the dead rest, the long sight and the sliding when the recoil came. He had clamped a crosspiece to his barrel near the muzzle and this enabled him to use the wooden rest he had secured.

Mr. L. Park, of Greenfield, Mass., was next in the line of closely-crowded shooters. He was the funny fellow of the company and sandwiched his shots with rallies of wit. He had come up to have a good time, and his advice to those about him on shooting topics would have filled a manual on the subject. He strongly urged a member who had missed the foot-square target to take the rifle down and introduce the weapon to the target, while his sly jokes at the men

who knew it all were often keen and to the point. He had an octagonal 15lbs. barrel, .38-cal., 1 to 16 even twist, 8 grooves. The bullets were of uniform composition, 1 tin to 20 lead, and the powder used was Hazard's FFG. The barrel was 30in. long, and was made by Brockway. A charge taken showed 82½ grains of powder to 356 grains of lead. In loading he used paper patches; while on the rest a very complete brass cast rear device for elevating and swinging the rifle butt. The big, booming piece did not look out of place in Mr. Park's big, brawny clutch. He handled it like a toy pistol, but a puny National Guardsman would have found it a stiff burden.

Mr. F. Penn is one of the younger members of the club. He resides at Dover Plains, N. Y., but generally manages to get up and enjoy the shoots. He uses a gun made by Phillips, of New York, and in this meeting was in very bad luck, owing, he thought, to the use of some special cartridge he had made. These were of the composite type with a hard point, made by putting 2 ounces of antimony in a pound of lead, while the bullet heels were of pure lead. The weapon was of .45-caliber, having 8 grooves of a gain twist rifling starting in at one turn in 72 inches and finishing with one turn in 24 inches. The barrel was 27 inches long, of octagonal form, and into it he poured Hazard's FFG powder. One charge weighed showed 128 grains, while one of the bullets turned the scale at 572 grains. A stout wooden block held the gun while the entire block was moved on its bed from a center pin forward by the three rear screws. It was a simple, strong, though somewhat clumsy device. A paper patch was used in loading.

Mr. E. B. Stephenson followed along the line with his big muzzle-loader. It shook a small section of the State when it went off. It was a .50-caliber weapon with a 30in. 15lbs. octagonal barrel made by Ferris. There were 9 grooves, necessitating in loading three paper patch slips. The rifling grooves were concentric with the bore of the barrel and had a gain twist increasing from 1 in 72 to 1 in 24in. The bullet is worthy of special attention. It was of the composite order, with a soft heel, a soft point and a hard inner section, this gave that close grip on the rifling when the upsetting came which was particularly striven for in this make of bullet. A paper patch was used and Hazard's FFG powder. A charge taken and weighed showed 608 grains of lead and 118½ of powder. The rest device was the simplest in the house. Two bent strips on either side forward preventing any jumping up of the muzzle, while the barrel rested on a broad tongue, the upturned edges of which afforded place for the screws used in side adjustments.

Veteran L. C. Smith was next in the line, a patriarch among patri-archs, he knows the history of the club since its formation. He was a charter member and has never missed a meeting. He is yet full of shoot and is always deep in some experiment to settle some point in the science of rifle shooting. The consequence is that as a prize winner his name does not appear as often as it otherwise would. His gun has a 28-inch octagon barrel. To name its maker would be difficult, since it has been cut and re-cut so frequently. It is of .44-cal. with a uniform twist of 1 in 18. The bullet is of similar make to that used by Mr. Brown, and comes from the works of Warner, at Syra-cuse. Behind it he puts Fg powder of Hazard make. A sample charge weighed 113 grains in powder and 649 grains in bullet. He uses a cut paper patch, made in the form of a Greek cross, so that the paper is not doubled below the heel of the bullet. His rest in shooting is a very complete one with a pair of guiding ways forward, while the shifting of the trigger end is done with great throttle valve wheels. This, as many of the other guns, has the double nipple. In place of using the ordinary percussion cap, a flat primer is placed over the nipple paper, and over it a false nipple with a striking pin is screwed. This pin when struck by the falling hammer starts the primer and the charge is ignited without any loss of powder or spitting from the touch-hole.

D. S. Cox, of Neperan, Westchester Co., N. Y., has a .38-cal gun having a 28 in. octagonal barrel, with 8 grooves and a steady twist of 1 in 16. His bullet is 1 to 20 uniform composition, and the powder FFG, Hazard. The loss of one hand puts him to some disad-vantage but not to any material extent, and he is always ready on time for his shot in the string. He uses stout parchment paper patch cut very narrow. His rest has a narrow iron guiding way forward, while a brass resting block, near the breech, enables quick adjust-

ment to be made, as the cross hair lines of the telescope demand. A sample load showed 305½ grains of lead and 69 grains of powder.

Norman S. Brockway has the solemnity of an owl, and carries about with him the responsibilities of the whole match. He is a rifle maker at Bellows Falls, and knows all about this style of rifle. He is the secretary of the club, and seems to have a life lease on the position. He goes to work in his methodical way, not only in his official labor, but in his shooting as well. He uses one of his own make of rifles, an octagonal barrel, 28 in. long, .42 cal., with 8 grooves, twisting evenly 1 in 16 inches, and the powder used is Hazard's FFG and the patch strips are of the usual parchment paper sort. A V an the rifle cross head pushed home close on the screw projecting from the rest bed, and the rifle is ready for shoot-ing, guided by the stout compact directing rest at the rear. One charge showed that the cold pressed bullet of 1 in 20 compositions weighed 417 grains, while the powder showed 99 grains.

C. F. Fletcher, of Bellows Falls, Vt., is another of the young men in the ranks. He uses a Brockway made gun and has a .38-cal. rifle with a 28 inch octagon barrel. There are six grooves of 1 in 16 twist, and the bullet is of the cold pressed type and of 1 in 20 composition. The powder is of Hazard FFG make, a charge taken weighed 320½ grains of lead with 82½ grains of powder. He uses a paper cross patch, and in loading is most careful in every movement, being specially care-ful about the cleaning out of the rifle before inserting a fresh charge of powder. His rest is of a simple sort, a V notch forward and a block with three screws at completing the fixtures.

Wm. V. Lowe is a Fitchburg, Mass., citizen, and comes up to the match with what he styles a mongrel gun, that is several makers and remakers have tried to make it better and with varying success. It has a 28-inch octagon barrel, .45-caliber with a uniform twist of rifling 1 turn in 20 inches and 8 grooves. He uses a combination bullet lead butt and hard joint, and employs Fg Hazard powder, one charge taken and weighed showed 108 grains of powder to 535½ of lead. His patch is a thin parchment paper one cut in Greek cross fashion and with an abundance of grease. His rest is of a double base, the upper one on which the rifle was placed being movable at the rear and so admitting a vertical and lateral adjustment.

Outside of the shooting house the breechloader visitors from Bos-ton were accommodated. A rest was improvised by driving two stakes in the ground, placing a crosshead and then a long plank with a notched block at the end enabled the Bostonians to sit comfortably on chairs and draw their rifles carefully and exactly.

Mr. Hinman used a .35 ea. Maynard and into this he put the patched bullet and the freshly loaded shell, charged with Laflin and Rand musket powder; a sample charge of powder weighed 61½grs., while the bullet of 1 to 20 composition weighed 258grs.

F. J. Rabbeth had a Remington-Heppburn rifle of .38 cal. It had a round barrel and aperture front sight, as did the arms of his associates—Messrs. Hinman, Frye and Ellsworth. He had the regular 30gr. Remington patched bullet, as shown, of 1 to 20 composition. It

was loaded with Laflin & Rand musket powder. A sample charge showed, powder 67½grs.; bullet 330grs.

Mr. Frye used a Ballard .38-cal. rifle of the ordinary make. His patched bullets were the 30gr. Remington make and the powder, Hazard's FFG, a sample charge weighing 55½grs. in powder and 330grs. in lead.

Mr. Ellsworth, jolly and fat, capital at off-hand work, as his Man-chester score of the week preceding showed, not so good at the

strange rests provided, was provided with a 30in. long barrel Ballard of .38-cal., loaded with a homemade bullet of 1 to 30 composition. The rifle was in all respects like that of Mr. Frye, with the full Rigby barrel. The powder used was Oriental Fg and a pattern charge showed 48grs. of powder to 293grs. of lead.

The plan of shooting is a very simple one: On the morning of the first day each man devotes his time to fixing up his shooting stand. There is a small trunk full of tools—oil bottle, rags, ammunition and quick-knocks of every kind—to be unpacked; then the gun itself and the telescope and the rest fixture, all are unpacked, and the various parts put in place. This is no small job. Each man takes a card-board about a foot square, tacks it upon the low fence against which

the shooting is done, and then the small black patch or "budd" is banged away at until the marksman has everything down fine. He watches the flags, makes due allowance for wind, finally determines just where the aiming budd is to be placed in order to get the shots aimed about the spot where the lines drawn from opposite angles of the piece of cardboard cross in the center. So it may happen that each of a dozen men may be aiming at a dozen different points and all striving to get their shots bunched at the same point. When each man has got his piece in good working order there is a pause for luncheon, and then comes the counting string. It is shot on a time limit; that is, a timekeeper with watch in hand waits until all are loaded and then the call of "Time" is made. Five minutes elapse, and in that period of time the shot must be fired. Each rifle is in place, with hammer raised, "click," and the hair triggers are set. Then in silence each waits for those flags to be a trifle less frisky; for that fidgety wind to swing about to the other side of the center before touching off. Each is, in fact, waiting for that precise wind which prevailed when he fired his last trial shot, the record of which he knew and was satisfied with. Often in a temporary lull the line of rifles will go off in a volley. While again, some unlucky one who waited for a better chance is compelled, when he hears the voice of the timer call out "Four and three-quarters," to shoot in whatever wind may be blowing at the time. As the rifle recoils, the right hand is ready to check it; but from first to last there is no sighting beyond a glance through the telescope to see that the cross-hairs have not been directed to another point.

For loading another five minutes is allowed, and there is need of it. First the muzzle end of the barrel is wiped off, then the false muzzle is carefully fixed and linked down; then comes the pumping and the cleaning. One after another the patches are adjusted to the wiping rod and passed down. There are patches wet with saliva and others saturated with oil. Finally come the cleaner bits of rag, and then perhaps another final patch, fixed just right. Each man has his own style of swabbing out, and the expression of serious concern on the faces of some as they keep their eyes on the rafters as the stick goes up and down almost suggests that a silent prayer goes up as the stick goes down. The barrel clean, the loading is in order. The powder is poured from the flask with just such a tap and no other to the measuring tubes. Then down the funnel at the barrel mouth, and if the shooter be particularly careful he carries his method to the point of sending a stick down to see that the powder is really there, and the light stick resting on the granules gives them just the proper amount of packing. Then the patch, in some of the false muzzle inserted in side slips until they cross directly over the bore; or perhaps if the patch is already cut out, it is placed in a depression cut across the top of the false nipple. Now the bullet, just given a turn in the greasy finger or perhaps wiped carefully with an oily rag and then placed upon the patch. The ball starter now comes in and assists in pressing the bullet well down into the barrel, a collar fitting over the barrel end, a piston in it whose hollow end just

fits over the bullet point, and with several sharp blows from the lump of leather-bound lead at hand, the bullet, patched with exactitude, is pushed down out of sight. Then the rod comes in again, and down the bullet is propelled, now very easily, until it rests with a fixed pressure upon the top of the powder. The capping is another operation, the old cap picked off with point of pen-knife, and when a new primer has been inserted and the nipple rescrewed, the piece is ready for the timer's call for the second shot.

Meantime a lad has patched each bullet-hole with a narrow strip of paper, a second shot comes, it may cut the patch, if so there is no dispute as might very readily arise when such close shooting is done. So on through the series of the shots consuming an hour and a half perhaps, for each man, when time is called, looks and waits for the wind to suit him, and the loading is a matter not to be slurred over by any means.

The question of a proper allowance to be made the smaller rifles was the first one considered after the Bostonians had unlimbered and prepared for work. "Make your own proposition and we will agree to it," was the generous proffer of the home guard of muzzle shooters. So the visitors thought that ten per cent. for telescopic sights should be allowed, then an additional ten per cent. for the fixed rest, and finally three inches off the string for the difference in the weight of weapons. Under these conditions of difference the men shot, and the complete scores of the several strings will show how the handicap worked.

The first string was shot on the afternoon of the 26th. The weather was chilly, far past the point of comfort, while a wind flickering and shifting in fish-tail fashion from about the 12 o'clock point, made the shooting very "unsartin." Indeed, the breech man soon found out where the advantage of the rest system was, for where they with where the eye down to peep sight were unable to catch any fluctuation of the wind, and often pulled trigger just as the gust followed the lull, the muzzle shooters sat with eyes wide open watching the streamer, and when the right second came a slight pressure of the finger on the hair trigger and off the piece of ordnance went. It will be seen that the light guns held their own, and Rabbeth, quick to catch the condition of the difficult new range, had won a place among the three prize winners at the head of the column. Fletcher made a very creditable target indeed, especially under the conditions. The shooting over, there was a general pilgrimage to the targets, and as Secretary Brockway drew the tickets the probabilities of place were canvassed. On the back of each bit of pasteboard the shooter's name was written, so that when the scorer having thrust a pin into the exact center and having attached the measuring rod, did not know the marksman as he read off the shots in inches, eights and sixteenths.

An evening spent in rifle chat, in talk of trajectories and deflection, of initial velocity and windage and all the other topics of interest to marksmen, and all hands retired to an early couch to sleep sound till early morn, then up for a double string. The wind had moderated in a great measure, and again the marksmen were at it bright and early to get windage before the time was called on the first string. The breechmen had caught the bearing of things in better shape, worked together with more harmony, and the counting up found two of them leading the score. This was somewhat of a surprise to the host club men, but they were satisfied that the score bud had been made in direct rivalry, and were more than pleased with the fact that the breechloaders could do so well. The target of honor in this match belongs to Mr. Hinman. It is unfortunate that the antiquated style of marking does not admit of numbering the shots, but such as the target is we present it, in full size, and remembering that it was shot at 220 yards, it is good work even from the sort of rest provided for the day.

With a sky threatening rain, there was no recess between the second and third strings of the meeting. The wind had died down some, and the strange rifle range sight was presented of men waiting for a bit more breeze to come up to wait them on the target. This was the position of those men who had sighted during the morning when the wind was fresher and could not afford to do any trial shooting in the midst of their string. There were at the finish of this string

fewer men who carried off their targets rather than have their scores go upon the record. None of the breech men appear in the place of the winners, though Mr. Frye just falls within it. Mr. Farrow, who was not in good luck. He was busy at his perpetual experimenting, and was not in the best of form. The big Warner gun of Mr. Brown came to the front in good style, and a string of less than 10 inches was deserving of special credit when the rather tricky wind is considered. In addition to the 50, 30 and 20 per cent. division to first, second and third in each string there was a silver medal presented by Mr. L. C. Smith for the best aggregate string of the meeting. This went to Mr. Brown on a total of 35 1/2 inches for the 30 shots. Very close, even with the arm used.

SUMMARY.

	1st String.	2d String.	3d String.	Total.
Brown.....	13 1/2	12 1/2	9 1/2	35 1/2

Cressy.....	18 1/2	18 1/2	18 1/2	55 1/2
Fenn.....	19 1/2	19 1/2	19 1/2	58 1/2

The meeting, on the whole, had been a capital success; so thought the old National Rifle Club. For though it is old in years it is full of the true youthful sportsman's feeling; so thought the visitors, for they had been most kindly treated and carried away with them only the most pleasant recollections of the quiet little Vermont village just over the Massachusetts line. To our readers we present the whole story, with figures and picture. The targets are taken from the original cards. The scores are from the official record, while the weight of powder and lead where given are from the samples taken by your correspondent [and weighed by an expert in the Fairbanks Scale Co. on a Fairbanks scale.—Ed. F. AND S.]. There were regrets for absent ones; for Gardner of Scranton, Romer of Peekskill, Warner of Syracuse, Tyler and Col. Rice of Vermont, Wm. Wetmore of New Hampshire, D. C. Pearl of Meriden, Conn., and W. B. Farrington of Boston, while the standard conundrum was where Phillips, the gunmaker, had hidden himself in the Far West. The adieu were given, with an accompanying hope that the next meeting of the club would see a

large delegation of the modern school of marksmen, those who think with your correspondent that accuracy of the very highest degree may be secured without the accompanying discomfits of the heavy ordnance style of weapon.

Following are records of winners at former meetings of the National Rifle Club, furnished by Secretary N. D. Brockway. Strings of 10 shots at 40 rods, given in inches and fractions:

No. 1 String.	No. 2 String.	No. 3 String.
L. Spencer.....17 5-16	H W Smith.....15 15-16	L. Spencer.....16 1/2

NEWARK, May 26.—On Monday last Mr. Godfrey Snellen, of the Essex A. R. C. shot a match for \$50 with Mr. Lever of Elizabeth, at the Essex range. The match was shot under rules of the N. R. A. at Zettler ring target. Mr. Snellen won the match with the score of 1,141 points, to Mr. Lever's 1,100 points, out of a possible 1,200. Another match was arranged between the same parties, for the same amount, for an early date at Elizabeth, Mr. Snellen to give Mr. Lever 30 points.

IOWA STATE SHOOT.—The ninth annual convention and tournament of the Iowa State Association for the Protection of Game and Fish will be held at Burlington, Iowa, June 15 to 18, inclusive. The association has made every effort to make this the most successful meeting ever held in the State, and judging from the numerous assurances received, the managers believe the attendance will be double that of previous years. The grounds selected are very fine, buildings commodious, and the comfort of visitors has been carefully looked after. The committee promise lots of live birds, and almost every variety of inanimate targets; and four shoots will be carried on at the same time, enabling shooters to enter different matches and avoid those long waits between shoots. There is a large number of extra prizes, some of them very valuable, and a large citizens' purse, also a novelty shoot, which will be very interesting.

WORCESTER, Mass., May 27.—Battery B. of the State Militia, is located here. It is the only organization of this kind in the State, and has two objects in view, practice and to meet the joint standing committee on military affairs of the Legislature. The result was a surprise, to all, it being the first time the men had used the guns with ammunition. The distance was 200yds. The target was four by six feet with an eight inch bullseye. Out of the possible 25 the work of each man was as follows:

Capt F W Wellington.....	5453—21	Corp Dunkertou.....	4323—14
Lieut J E Merrill.....	4132—10	Priv Doherty.....	3232—11
Surg F H Gifford.....	0534—15	Priv Stickler.....	4323—11

Hall, M. C.....	01010001110111010000—13		
Simpson.....	01011000011010000001w.		

Ties on 13: A. E. Hall 001; M. C. Hall 111.

SAN ANTONIO, Tex., May 20.—In the State sportsmen's shoot today, at seventy live birds, there were fifty-six entries. Middlebrook won first money; Wheeler, Dollarhide, Micklejohn, Kelly, and Downie Durdege second; and third money was divided between Asafarther, Warren Merz and Erichson. Shoot No. 6 was a surprise shoot at six blackbirds. There were fifty-four entries. Peterson, Yocum, Lueck and Holt tied on a clean score, and in the shoot off Yocum won a basket of chickens. Erichson, N. H., Alder, Lawson and Allen, of Dollarhide third, and Middlebrook fourth.

LOWELL, Mass., May 26.—The Lowell Rod and Gun Club began a short shooting tournament on its new grounds in Tewksbury to-day. There was a very large attendance including many well-known marksmen from various parts of New England. There were 20 events. The special prize of \$100 for each day, offered by the United States Cartridge Company, divided in four parts, was won as follows: Davis and Beaudray, of Worcester, divided first, \$40; Faulkner, of Lowell, \$30; Adams, of Lowell, \$20; and George, of Boston, second, \$30. Perham, of Truro, Cooper, of Exeter, N. H., Alder, Lawson and Allen, of Boston, third, \$30. Bager, of Marlboro, and Frost, of Lowell, fourth, \$10.

NEWARK VS. ELIZABETH.—The Southside Gun Club, of Newark, sustained its first defeat on Thursday, May 20 at the hands of the Elizabeth Gun Club. Teams of 9 men shot at Lockport "bats," a new form of "crockery birds." Each man shot at 21 in the match and the clubs tied on 113 broken. The tie was shot off at 3 birds each and Elizabeth men broke 21 out of 27, while the Newarkers only smashed 18, making the total 139 to 130.

OTAWA, May 25.—The Liguwsky champion pigeon shooting contest took place in Ottawa on Saturday last. Tarpo took the cup for Cameron, of the former owner, by two points. The following was the score: Throp 19, Cameron 17, DeLaurier 15, Smythe 5, Cameron, however, made a good show in the closing sweepstake, securing seven straight and winning first money.

DES MOINES, May 20.—A contest for the championship of the U. S. in wing shooting live birds was held here to-day between J. Stice, of Jacksonville, Ill., and C. W. Budd, of this city. The trial was with fifty birds, and was won by Budd, with a score of 47, to 41 by Stice. Budd missed the three first, but shot the last 47 birds straight without a miss. One month ago Budd won the champion medal from Stice at Jacksonville, and now holds it subject to challenge once in thirty days for a year.

NEW DORP, S. I., May 27.—Emerald Gun Club of New York City. Men at live pigeons, ground traps, 21, 25 and 30yds. rise, 80yds. bound, shot under club rules. Prizes:

R Reagan, 21.....	0001000111—4	N Measel, 30.....	101010111—7
L Schermernhorn, 30.....	010111110—7	F Schrader, 21.....	010111111—8
T Codey, 25.....	010110111—7	Wm Glassum, 30.....	101000101—5
J Measel, 25.....	110101010—7	J W Godfrey, 25.....	101010101—7
P Butz, 25.....	101010100—6	L Gehering, 21.....	101010011—7
J J Keenan, 21.....	111010100—6	M McMunn, 21.....	001111111—8
H DeLaurier, 21.....	101010100—6	G Remsen, 25.....	010101111—7
J Sidney, 25.....	101010000—4	A McHale, 21.....	010001001—3
J Howard, 21.....	010001011—5		

Ties for first, 25 yds.: Schrader 1110—3, McMunn 1111—4. Ties for second, 30yds.: L. Schermernhorn 10, T. Codey 0, J. Measel 111111—8, N. Measel 11, L. Gehering (25yds.), O. G. Remsen 11111111—9. Ties at 25yds.: P. Butz 11111—5, P. J. Keenan 1111—4. President Howard again wins fourth, a handsome gold medal.—Times, Conn., Recording Secretary.

WORCESTER, Mass., May 26.—The arrangements for a tournament under the auspices of the Worcester Sportsmen's Club are complete. It will be at Coal Mine, Brook Range.

WINCHESTON, Mass., May 26.—At the regular meet to-day of the Wincheston Gun Club, the men tried their hand at breaking clay pigeons. The four men out of a possible ten made the following totals: J. Sutherland, Jr., 10; F. F. Hopgood, 8; A. H. Felsb, 3; P. S. Doris, 2.

PUBLISHER'S DEPARTMENT.

ALLEN'S bow-facing oars, \$8 per pair. Fred A. Allen, Monmouth, Ill.—Advt.

ONE IN SIX of those insured under the accident policies of the Travelers, of Hartford, Conn., in 1884, was killed or injured by accident, and received cash benefits.—Advt.

AMONG THE NORTHERN LAKES of Wisconsin, Minnesota and Iowa, are hundreds of delightful places where one can pass the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely rejuvenated. Each recurring season brings to Oconomowoc, Wausau, Beaver Dam, Frontenac, Okoboji, Minnetonka, White Bear, and innumerable other charming localities, with romantic names, thousands of our best people whose winter homes are on either side of Mason and Dixon's line. Elegance and comfort at a moderate cost can be readily obtained. A list of summer homes with all necessary information pertaining thereto is being distributed by the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—Advt.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, raps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

Mohican Races every Thursday through the season.

June 12—Brooklyn C. C. Paddling Race.	
June 13—N. Y. C. C. Spring Regatta, 1st Race Com. Trophy.	
June 20—N. Y. C. C. 2d Race Commodore's Trophy.	
July 3—N. Y. C. C. Trials International Races.	
July 8—W. A. C. A. Meet, Lake Erie.	
July 10—Brooklyn C. C. Paddling Race.	
July 10—N. Y. C. C. 3d Race Commodore's Trophy.	
July 24—N. Y. C. C. 4th Race Commodore's Trophy.	
Aug. 7—N. Y. C. C. 5th Race Commodore's Trophy.	
Aug. 7—Brooklyn C. C. Paddling Race.	
Aug. 13—W. A. C. A. Meet, Grindstone Island.	
Sept. 4—Brooklyn C. C. Paddling Race.	
Sept. 4—N. Y. C. C. International Cup Races.	
Sept. 11—N. Y. C. C. 6th Race Commodore's Trophy.

Sept. 25—Brooklyn C. C. Challenge Cup.	
Sept. 25—N. Y. C. C. 7th Race Commodore's Trophy.	
Oct. 2—N. Y. C. C. Fall Regatta.	

PITTSBURGH C. C. OPENING.

THE Pittsburgh C. C. opened the season May 27, in their usual fashion, which is more of a social gathering than a regatta. An excursion steamer was chartered for the day, and with the canoes, their skippers and invited guests—ladies and gentlemen—ran up the Monongahela far enough to escape the smoke of the city, and then tied up to the bank for the day. Owing to delay in starting and time required to make the run up, the first race was not called until after lunch. The intention had been to have three sailing races, class A, B, and a free for all; but as class A would be simply a gift for Nirvana, that race was dropped, and the free-for-all called first—about 3 P. M.

The entries were Lorna, J. K. Bakewell, just come home from Washington; Marguerite, G. H. Singer; Delight, R. W. Bailey; Amariyllis, C. F. Holdship, and Katrina, W. E. Woodwell; all class B, and Nirvana, A. K. Nimick, of class A. Holdship and Woodwell, whose own canoes are still in their winter quarters at Coumough Lake, were both in strange boats which they had never sailed before. The left seat, Marguerite, was returning when second shot was fired. The six canoes were strung all across the river, Lorna on the extreme right, then Katrina, Nirvana, Amariyllis, Delight and Marguerite. The wind seemed to come in narrow streaks, and Katrina was the first to catch it, running 100 feet ahead of the line. As there seemed to be a little more wind on the right, Delight edged over across Nirvana's stern, but had hardly done so when a puff on craft then another being becalmed, by the time the line was tolerably equal, for after running two-thirds of the way to turn, the whole six were lapped. Under the bridge the wind was very bad. Delight was first around, with Amariyllis close behind, and Nirvana next, while the others lost all steerage way and drifted about, head down stream, for a time, thus losing all chance for the race.

On the first leg to windward Nirvana was much the best handled and promptly took the lead. After one or two tacks, however, the wind headed her off just as she crossed Delight's bow, and she bad to tack and follow in second place. The wind now increased to a good whole sail breeze, but it was puffy and uncertain in direction, and before long Nirvana got a slant which enabled her to stand directly down the river for a little while. Delight, on opposite tack, being compelled to run square across. This, of course, gave the Class A boat a good lead, and for some time it looked as if she had the race safe, but when almost to the lower buoy the wind failed her, and the larger canoe closed up as to follow Nirvana's stern close around the flag, and they settled for final run on nearly even terms. Meanwhile the rear boats had finally rounded the pier, and Katrina, on her best sailing point, started in for third place. Amariyllis had such a long lead that it took almost all the windward work to get past her, and when the buoy was turned the leaders were almost up to the finish line, so the old Lansingburgh had to be content with third, the first club race the ever failed to win.

The two canoes in the slow race of it before the light breeze, and the larger canoe finally scraped ahead, and on her maiden race by only 9 seconds. Delight is a new, double board canoe, built by Capt. Ruggles, of Charlotte, N. Y., is 15ft. long, 30in. beam, and carried 80ft. of sail in this race. Nirvana is only 14 by 27in., and carried 67ft. She was built by Stephens in the spring of 1884, and needs no introduction to any A. C. man who was at Grindstone last year.

CANOEES AND SAILING BOATS.

AMERICAN canoeists have always taken a great interest in the Nautlius canoes as the pattern after which the majority of American canoes were modelled for many years. The one shown above is the fourth of this water, and has a special interest from the fact that she was the subject of a lengthy controversy as to her ownership between "Deja" and our canoeists last season, the result being two races, both won by the canoe. The larger boat in this case, the Wideawake, was 16ft. long, 3ft. 6in. beam, decked like a canoe, with a centerboard of 130 pounds. She was schooner-rigged, fitted with oars, and had a belt of cork 3in. in diameter around each gunwale to increase her buoyancy. The Nautlius was 14x28, rigged as shown, a very inferior boat as respects to those of to-day. The question of superiority was easily settled by two races, one on Sept. 9, 1874, and one on Oct. 3, on the Solent, the first in a light to moderate breeze, and the second in a fresh breeze and rough water. The two are described as follows in the Field of September and October:

[From London Field, Sept. 9, 1871.]

"The course selected for this miniature yacht race was from Southsea Pier to the Gillicker Buoy and back, a distance of five miles. The wind at starting was a nice S.E. breeze, with the sea in a lumpy condition, which, however, smoothed down when the wind got lighter. At 2:30 stations were taken up, with all sail set—Nautlius under large Chinese mainsail and a mizzen; Wideawake (a schooner) under gaff main and foresails and fore staysails.

"At 3:07 she was hailed aft, and the vessels came off on their course. All doubt as to the probable result of the race was once dispelled by the little Nautlius walking right away from her large opponent. The tide race, with its accompanying breakers, was steadily sailed through; the Nautlius increasing her lead and stand-

lug well up to windward, weathered and 'wore' round the mark buoy, the Wideawake being a little short of a mile before the time. The Wideawake, however, stuck pluckily to it, but with little hope of regaining the lost ground, as the wind was falling light. During the whole time the wherries accompanying the race had to use oars as well as sails in keeping up with the leading canoe. Messenger, the ex-champion sculler and builder of the boats, who had come down from London on purpose, accompanied the race in one of these sailing wherries. When the Wideawake rounded the buoy the Nautlius had run a mile and three-quarters on her homeward passage of two miles and a half, and arrived at Southsea Pier this winner by nearly two miles. The wind now died away altogether, and a calm came over the face of the deep." Wideawake was to be back to Southsea.

"The chief interest in this match, from a boating point of view, was occasioned by the great difference in the design, size and rig of the competing vessels; the Nautlius, by Mr. Baden-Powell, a bona fide traveling canoe, a well-known flyer, having taken the two first sailing prizes of the Canoe Club—beam 2ft. 4in. and woe len keel 14in. deep—against the Wideawake, nearly twice her size, and having an iron drop keel, 130 pounds."

[From London Field, Oct. 7, 1871.]

The second race or return match between the Nautlius canoe and Wideawake was sailed on Tuesday last, and created some excitement at Southsea, where several members of the canoe club had gathered to witness the event. It will be remembered that the first match between these vessels ended in a victory for the Nautlius, and that the owner of the Wideawake was dissatisfied with the result, which he attributed to lack of wind. A lively correspondence ensued in our columns, culminating in an agreement to sail a second match, the owner of the Nautlius (the smaller vessel) considerably allowing to his opponent the choice of course.

At noon on Tuesday the Wideawake arrived on Southsea Pier, and was carried thence to a point some distance to the eastward by five men, a sixth bringing up the rear with a heavy box of ballast upon his shoulder. Both the vessels have been so thoroughly described in these columns, that it is unnecessary to dwell upon their peculiarities. We may, however, mention the fact that the Wideawake is no longer schooner-rigged, her owner having made something like a yawl of her. The Nautlius used the sliding spret rig with which she won the canoe club sailing races.

As the time fixed for the start approached, a steamer, which had been chartered for the occasion by Mr. George Bishop, left his yacht Pandora at Gosport and proceeded to Southsea, having the Nautlius in tow. On board were a party of ladies and gentlemen, including "Nautlius," "Ringleader," "Octoborn" and other members of the canoe club. By the time that such preliminary arrangements as taking ballast on board and adjusting life belts were completed, half an hour had passed, but both vessels were ready to commence the race at a quarter to three. "Wideawake" had previously proposed, and "Nautlius" had agreed, to sail from Southsea Pier round the Spit Fork to the Gillicker Buoy, and thence to Southsea Pier, so that when they met aloft with sails up, a flying start became almost a matter of course. At 2h. 50m., with a nice breeze blowing from the westward, the two vessels started away very evenly. Almost as soon as they were under way the Nautlius commenced leading, and, although much the smaller vessel, was so well handled that before the Spit Fort was reached she led the Wideawake by more than a hundred yards. Mr. Powell went well to leeward of the fortification, but his opponent kept close to the stonework. Directly the Wideawake got under the lee of the fort, she became to a certain extent at the mercy of the westward going tide, which carried her dangerously near the wooden piles. Fortunately, no accident occurred, and as each vessel in turn escaped from the butt of the masonry, sheets were hauled in and the Wideawake bowled along over the scatestest sea, the back of her fleet little leader. As the wind met the tide, quite a lively sea was knocked up, and white horses were plentiful; still the little vessels behaved remarkably well, and considerable admiration was expressed by the spectators at the manner in which they flew along. This was decidedly the most exciting part of the interesting match, as, although the Nautlius had a long lead, the Wideawake at last appeared to be holding her own. For to some minutes the leader was bothered by a cutter, which persistently heaved to, and, however, the yacht had sailed away under the influence of a freshening breeze, the Nautlius was put at the seas very prettily, and the Wideawake, which had gained a good deal, tore through the seas, wetting her occupant considerably and appearing to ship water freely. It was just the weather for which her owner had expressed a desire, and it was, moreover, precisely the weather in which she appeared to the greatest advantage. As the two craft went dashing along it was felt that the time had come when the question of superiority was to be decided. Even the ladies on board the accompanying steamer appeared to be greatly interested in the match, and scarcely turned to look at the ironclad Sultan as they passed her. As the competing boats stood on in the direction of Ryde Pier through some very lively water, Mr. Powell eased his vessel admirably over the bigger waves when, after having sailed perhaps a mile and a half, he reached the Spit Fort, he let her go for a few yards, lifted suddenly, held his mainsail aweather, and notwithstanding the lumpy water, accomplished the feat of staying—slowly, but thoroughly—by the aid of sails and rudder alone. During the performance of this well-executed maneuver, the Wideawake shot past to windward, and stood on to the southward, while her lively rival started upon a long leg for the Gillicker Buoy. Having gone perhaps two hundred yards beyond the spot at which the Nautlius went about, the Wideawake proceeded to follow suit; but the attempt was anything but successful, for, as her head flew up into the wind and there remained, so that she was helplessly in trouble. A few vain attempts to get away, her skipper gave it up and paddled her about. This was felt to be the climax of the match, as such a course of procedure on the part of a competitor was tantamount to an acknowledgment of defeat. Very little interest was taken in the portion of the race which followed, as the Nautlius fetched the Gillicker Buoy without difficulty at 3h. 45m. 30s., the Wideawake following at 3h. 45m. 55s. Mr. Powell then sailed from the Spit Fort, and, where he set his foresail (spinnaker) and doffed his life belt, and across the mouth of Portsmouth Harbor to the pier at Southsea, which he reached at 4h. 20m., having occupied exactly one hour and a half in accomplishing the distance of about six miles. The Wideawake ran goose-winged from the Buoy, but did not go to the pier. [The results of the two races were to prove the superiority of the small canoe over a much larger boat of inferior model, and to demonstrate the ability of the canoe under sail in really rough water when properly handled.]

THE ROYAL C. C.—HENDON LAKE.

ON Saturday last the members of this club sailed a match on Hendon Lake, the prizes being the "senior flag" and a sweepstake. The weather was anything but nice for canoe sailing as a pastime; but was the weather which had been, so to speak, asked for to test the various canoe models in a hard blow and rough water. The wind was a strong westerly breeze, a gale down channel, and created quite a lively sea on Hendon Lake. The canoes were limited to eighty square feet of sail, but the Nautlius was necessary in the circumstances, as close reefs were the order of the day. The match was robbed of its entries all but two, owing to the severity of the elements. Sabrina, in taking a preliminary canter, with a good deal too much sail on, by the way, capsized, and was not pumped dry and put in sufficient order in time to start, though her owner pluckily managed to start, and was sailed three times as much weight in her center plate. The triangular course was sailed, and the wind was steady and strong on two sides, but baffling, and with heavy squalls on the third side. The three rounds—six miles—were well sailed, and, considering the faulty side, over half a mile in extent, it was a very fast race, the total time being 1h. 29m. for the six miles, about one mile and a quarter of which was dead slow for pace, with savage knockdown puffs from over the trees. Nautlius won the flag at 5:30 P. M., followed by Diamond at 5:36 P. M.

This match winds up the club races on Hendon Lake, unless some visitor should be found to challenge for a race, or a supplementary race or two be made among the members. The match, however, has given Mr. Powell the opportunity of testing his new boat at hard-weather sailing, with results which ought to satisfy him.

One question of considerable interest to canoe sailors—in contemplation of the International Trophy races to be sailed in America this September—has been much debated during the race, namely, the effect in such weather of the American fashion of the skipper sitting out on the "weather deck" and steering by hand, and the Nautlius

THE TRIAL TRIPS OF THE NEW YACHTS.

IN view of the coming races during regatta week much interest has been taken in all yachting men in the speedy completion of the new boats, and especially in the indications given in their trial trips. Both of the two new ones, with Priscilla, were to be tested, and this has now been done as far as a preliminary sail, with furl and unstretched canvas and rigging can do. The first out was Priscilla, who made the trip up from Wilmington successfully, though there is much to be done before she is in racing trim and fit to pass judgment upon.

The first of the new pair under sail was Atlantic, who made her opening effort on Thursday last on New York Bay. The day was rainy and unpleasant and promised badly, but in the afternoon a fresh breeze came in from S. W. bringing with it the big yawl, Cythera, just in from England via Madeira and Nassau, meeting Atlantic below the Narrows.

At 3 A. M. the yacht was towed out of Mumm's Basin, scraping on the bar just outside. When anchored in deep water her board was swept in and hung, and by 10 A. M. the gentlemen most interested in her were on the ground discussing the weather anxiously. After waiting for a time for Com. Fish, Messrs. Church and Lawton of the Regatta and Construction committees, with Mr. Mumm the builder, Mr. Phillip Ellsworth, Captain Joe Ellsworth, Mr. Low, the rigger, Mr. Sawyer, who made her sails, Mr. J. T. Lovejoy, Mr. Frank Hopkins and Mr. Langley went on board, and at 11:30 the yacht was under way, with lower sails set and a boat astern. Daphne sailed in company for a short time, but the big boat soon left her astern. Outside the Narrows Grayling joined company, for a heat down to the upper Hospital Island, the stickstecker having decidedly the better of the bout. Off the island both started down wind, the schooner soon leading the new boat considerably.

Next Fanny was met with and the two ran down together, the new boat leading, but she soon turned back to meet Priscilla, as the latter was seen coming down. Atlantic hove to in the Narrows and started when Priscilla was just on her weather quarter. The start was quite even, the iron boat being about 300 ft. to windward. Both boats held the harbor tack down toward the Hospital Island, and at the end of half an hour the new boat was from two to three hundred feet ahead of Priscilla and in a weather berth. Here Atlantic jibed and started home, but it was some little time before Priscilla decided to follow, Atlantic being 300 or 400 ft. ahead. The conditions of the race down were soon reversed, Priscilla rapidly picking up the other and passing her. A topsail was set on Atlantic, but she could hardly hold her own.

In the Narrows Priscilla turned and went down again, while Atlantic continued to Bay Ridge, anchoring about 4:30. While the brush was not conclusive, she seemed to hold closer to windward than Priscilla, though the latter was so close to the West Bank that any further luffing would have been dangerous. It was very evident that the amount of ballast, said to be 55 tons, was insufficient, and the 10 tons of iron in her will be removed and 20 tons of lead put in. In the smooth water she trimmed very well, and entered and left the water very easily. On Saturday and Sunday she was out again, trying and sweating canvas.

It was intended to try Mayflower on Friday last, but the tide was not high enough to float her out of the basin dredged for her next to Lawley's Wharf. On Saturday she hauled out and anchored and next day sailed for Marblehead. She ran out to sea for some distance in company with Huron and then the two started for Marblehead, Mayflower arriving some distance ahead of Huron. On Decoration Day she was out again with Huron and beat her badly. Her ballast has been made up, improving the trim, and she sailed much better than on the previous day. In the afternoon she anchored off City Point again. Puritan was out to Marblehead and back, but did not sail with Mayflower.

DECORATION DAY.

THE observance of Decoration Day seems likely to be diverted from its original purpose, and it is already largely celebrated as the first outdoor holiday of the year, the New Year's Day of the Outers; and while it seems wrong to depart from the beautiful idea of the day as originally instituted, there is no doubt that such a holiday is of the greatest benefit in this age of worry and bustle. Of course the water sports claimed a large share of the holiday makers; oarsmen, boat sailors, canoeists and chiefly yachtsmen have looked forward to it for months as the formal opening of their season. About New York the day was a very disappointing one for the latter, as there was not wind enough for sailing and all the races ended in tedious drifts. A large number of vessels were afloat about the city, but all suffered from the dull weather. Down the bay were the big schooners, Atlantic, Priscilla, Montezuma, Rena, Winth, the curious little shoal-draft schooner that did so well in the South, the winter, and most noticeable of all, the first real representative of the "picturesque rig" yet seen in American water, the big yawl Cythera, with a comical looking mizzen aft, lying the stars and stripes, and with New York on her stern. She was built by Fife, of Fairlie (the elder), in 1874, and has done a fair share of racing in her day before obituary.

In 1875 she was rebuilt by Reid, of Port Glasgow, and is now about 85 feet waterline, 17 feet 3 inches beam, and draws 13 feet. With her high bulwarks, bold side, and seagoing rig she looks the perfect ship that she has proved herself to be. She was purchased last winter by Mr. W. A. W. Stewart, who joined her in England in company with his wife and Mr. C. Smith Lee of the Oriva. With Captain S. Grosvenor Porter, of the P. M. S. S. Co., as navigator, the party left Southampton for Madeira, and were caught in a gale in the Bay of Biscay, being taken to four harbors. Stopping at Madeira and Nassau, they arrived at New York on May 27, in 6 days 6 hours. The voyage was undertaken for the benefit of Mr. Stewart's health, which has been greatly improved. On Monday Cythera was under sail early and down with the yachts, returning in the evening. Mr. Stewart has secured an American registry for the vessel, under an old law, we believe, and will sail her under the American flag, an important fact in view of the importation of cutters of late.

The largest tug out was that of the Atlantic Y. C., who were ready early off Bay Ridge, the huge sail of Atlantic conspicuous above all others. The wind was northeast, and a little rain fell from the cloudy sky. At 10:30 the fleet started and sailed down the Bay with very little wind. The small yachts, Arab, Nomad and Merlin, turned Buoy 11 at 11:31:30, 11:32 and 11:32:30, respectively, after which they were becalmed and came to anchor. The others continued down the Bay with no better results. Atlantic was towed home by the tug hired by Mr. Stebbins, the photographer, and the others found their way home as best they could late in the afternoon. No times were taken at the finish.

The fleet of the Seawanhaka C. Y. C. were at anchor off Staten Island with mainsails set and racing flags at the peak, for a race down the bay; a prize of \$35 being given in each class. At 11 A. M. they were sent away by a gun from the flagship, Clara and Ysout going over the line first. Both Clara and Bedouin are fitted with faced mainsails, a fashion that the little one, at least, is not likely to follow long. The fleet went down with booms off and spinnakers set. Priscilla far astern she waited to time the laggards and then had to get her anchor. Once in the Lower Bay the wind dropped, coming at times from the S. W. and then from its old quarter, so that yacht racing was not to be thought of. Priscilla found her way home, thanks to the tide, after anchoring for a time, and was ready to time the winners. Clara came in at 6 P. M. and Bedouin about the same time, the latter not finishing as she had no competitor. The Knickerbocker Y. C. were to sail their annual spring regatta and 44 yachts started, but they met with the same ill luck, and at 5:30 p. m. the race was declared off and will be resailed on Saturday. The order of the boats that turned the Gangway buoy was:

Lizzie R. 3 49 00 Triant 4 32 05
Ananda 5 21 24 Tivoli 4 50 00
Duster 4 00 00 Surf 4 52 30
Loena 4 06 00 Culprit Fay 4 59 40
Adle 4 29 25 Undine 5 02 55
Black Hawk 4 30 30 Lena 5 06 00

The Newark Y. C. started a race in Newark Bay, but failed to find wind, so the race was declared off.

The New Jersey Y. C. fleet started from Hoboken in the morning, sailing down to Sandy Hook, and the Jersey City Y. C. were out also. The Brooklyn C. Y. C. celebrated the opening of their new club house at Guntherville, and the Pavana Y. C. of Jersey City started a scrub race without time allowance which was won by the Hoodoo with Fedora second.

In Boston the chief event of the day was the South Boston Y. C. race, the course for the first class being 11 miles, for the second and third classes 3 miles, and fourth class 6 miles. The conditions were as follows: Yachts winning two races in the series will be awarded the championship prize. Other prizes will be determined on the best relative showing made in the series. In case of a tie in any class no yacht should win two races in three, there shall be a "sail off" among the winners of first positions during the series which will determine the prize winners. In determining second and third prizes, first positions will take precedence of seconds, and seconds of thirds.

The prizes were: First class—Championship prize, a silver cup, value \$40; second prize, a silver cigar stand, value \$15. Second class—Championship prize, a silver cup, value \$35; second prize, a silver cigar stand, value \$15. Third class—Championship prize, a silver cup, value \$35; second prize, a silver pitcher, value \$12; third prize, silver cup, value \$6. Third class centerboards—The same. Fourth class

keels—Champion prize, a silver cup, value \$15; second prize a silver cup, value \$5. Fourth class centerboards—The same.

The judges were Messrs. Thomas Christian, Alvin J. Morrill, G. F. Clarke, R. V. King, W. K. Prior; regatta committee, Commodore Henry Hussey, chairman, O. A. Ruggles, J. B. Farrell, C. McKenna, W. C. Cherrington, W. H. Buckley, James Bertram, John J. Bligh. The full times were:

FIRST CLASS KEELS AND CENTERBOARDS.				
	Length.	Start.	Return.	Corrected.
Violet (c. b.), J. H. McKee	34.06	10 50 09	12 53 02	1 36 57

Charlotte, Thomas Cross	18.04	11 00 09	withdrawn	
Vidette, P. F. Burke	19.05	11 00 12	12 36 30	1 12 39

The winners were: First class—prize, Violet; second, Maggie. Second class keels, first, Altair; second, White Wings. Second class centerboard, first, Hector; second, Lizzie Warner. Third class keels, first, Fearless; second, Volante; third, Tike. Third class centerboards, first, Flora Lee; second, Victor. Fourth class keels, first, Mischief; second, Vidette.

A band was in attendance and the entertainment closed with dancing in the evening. The Dorchester Y. C. sailed their 94th race and opening sail. Starting at 10:30 and no boats started in the second class. The summary is as follows:

THIRD CLASS (KEELS).				
	Length.	Actual.	Corrected.	
Echo, Burwell & Litchfield	25.01	3 16 50	2 32 05	
Kitty, E. H. Tarbox	23.04	3 21 37	2 34 02	
Gem, H. W. Savage	26.06	3 40 10	2 57 25	

FOURTH CLASS (CENTERBOARDS).				
	Length.	Actual.	Corrected.	
Mascot, G. F. Burkhardt	22.03	3 58 18	3 08 33	
Gracie, J. W. Hill	23.01	4 02 26	3 14 26	

FOURTH CLASS.				
	Length.	Actual.	Corrected.	
Mabel, G. R. Howe	20.01	1 57 43	1 25 10	
Tartar, F. L. Dunne	20.01	1 53 41	1 26 08	
Scamp, Frank Gray	18.05	2 08 36	1 28 51	
Thistle, S. A. Freeman	30.10	2 02 57	1 31 19	
Sheep, Walter G. H. Woodsum	18.08	2 10 40	1 33 50	
Myrtle, G. H. Poor	19.01	withdrawn		
Sea Gull, W. H. Besarick	20.09	withdrawn		

FIFTH CLASS.				
	Length.	Actual.	Corrected.	
Rocket, H. M. Faxoux	16.02	2 11 11	1 33 00	
Nonpareil, Edward Lanning	19.00	2 12 12	1 35 22	
Guenn, W. L. Guenn	17.06	2 12 31	1 36 37	
Dora, George Lewis, Jr.	16.10	2 13 39	1 36 31	
Nada, William G. Gay	17.02	2 16 08	1 39 33	

The prizes were as follows: Third class, \$15 and \$10 for keels, \$15 and \$10 for centerboards. Fourth class, \$12 and \$6. Fifth class, \$5 and \$5. The judges were A. J. Clark, Erastus Willard and W. B. McClellan, and the judges' boat the Belle, Capt. J. E. Baker.

The sweepstakes race of the Jeffries Y. C. was sailed in the afternoon, starting at 1:05. A close race was had between the cutter Eolus and the centerboard sloop Seabird, the former winning. The times were:

FIRST CLASS KEELS (SLOOPS).				
	Length.	Actual.	Corrected.	
Eolus, Rood and Johnson	36.00	2 00 13	2 00 13	
Zulu, Charles Pike	26.00	2 01 59	2 01 59	
Emily, J. H. Porter	25.06	2 04 05	2 03 37	

SECOND CLASS KEELS (SLOOPS).				
	Length.	Actual.	Corrected.	
Zetta, Fowle and Warren	18.09	1 57 57	1 53 10	
Judith, E. Pigeon	22.09	1 58 20	1 58 20	
Dora, E. H. Wells	18.00	2 11 45	2 05 54	
Lillie, H. Wells	18.00	2 13 59	2 08 08	
Thega, Johnson and Hall	21.04	2 10 05	2 08 34	
Gipse, F. W. Proctor	21.08	2 10 02	2 08 29	

CENTERBOARDS.				
	Length.	Actual.	Corrected.	
Topsey, John McGlynn	18.11	1 52 09	1 47 46	
Seabird, Charles L. Joy	22.08	1 50 20	1 50 26	
Mischief, Belcher	16.02	1 59 15	1 51 44	
Spoker, Fred Lovejoy	18.03	1 58 15	1 52 49	
Clytie, E. A. Cook	19.01	1 57 37	1 57 45	
Unknown, Ambrose Martin	18.00	2 02 25	1 57 45	
Fancy, C. E. Flagge	19.07	2 01 01	1 56 30	

There were two cash prizes in each class, \$10 and \$5, respectively first and second. In the evening the club observed its first "ladies' night," and the spacious apartments were crowded with pretty devotees of all that is nautical and their bronzed and salty looking cavaliers in true sailor rigs. Dancing, music, both vocal and instrumental, and a bountiful collation brought to a close a red letter yachting day in East Boston. The regatta was in charge of Messrs. E. T. Pigeon, J. B. Pigeon and John Marno acted as judges, and Ambrose A. Martin officiated as measurer.

The Great Head Y. C. sailed a race in the afternoon off Winthrop, 12 boats starting. Fancy, C. E. Flagge, won in first class, and Ariel, Mr. Belcher, in the second class.

At Rockport the Sandy Bay Y. C. sailed the first race for the Cunningham Cup, over a 6 mile course, 16 yachts starting in a good S. E. breeze. The Louette won in 2:33:50, actual time, with Silver Cloud second.

A race was sailed at Fall River for local yachts, resulting as follows:

FIRST CLASS.				
	Length.	Actual.	Corrected.	
Alice, L. A. Budlong, Providence	22.25	1 24 14	2 24 03

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

D. R. S., Bridgeton, N. J.—The New Jersey open seasons for woodcock are July 1–31 inclusive, and Oct. 1–Dec. 15 inclusive.

E. E., Danville, Ind.—June is as bad a month as any for black bass in Northern Indiana and Michigan. The fish spawn in May, as a rule, although a few may be found attending to their nests by the first of June.

PATTERSON, Ont.—Are the "compressed fluid steel" barrels made by Greener superior to the best Damascus barrels and why?—DECOY. Ans. Only advantage is in their tightness, being much lighter in weight than laminated or Damascus.

WATERTOWN, N. Y.—I should like to ask if the conical bullet caps, advertised in your journal, can be used in a Ballard rifle .22-caliber without injury to the same? I should very much like to use them if I can do so without injury.—W. Ans. Yes, if barrel is wiped out after use.

ELKHART, Ind.—Please tell me, if possible, where I can get Kay buck-shot cartridges, 10-gauge? I have had your city pretty well searched over for them in vain, but they are really a good thing and I want more of them. If not to be had will the Winans and wooden regulator do as well?—A. L. Ans. A. B. Kay & Co., Newark, N. J.

GLENS FALLS, N. Y.—Will you kindly advise me what penetration one ought to expect from a 7½ to 8-gauge gun with cylinder barrels, also modified and full choke, 3drs. F.F. powder, 1oz. No. 8 chilled shot. What kind of earboard is used for testing the penetration?—F. Ans. Full-choke gun, 3drs., 136oz., 270 pellets to ounce; 21 sheets.

EAU CLAIRE, Wis.—Please tell me what sized wads I must use in a Parker gun, No. 12. The card that comes with the gun says that it is targeted with No. 9 wads. I don't believe I can load paper shells with wads larger than the shell without bulging my cartridges. Also, is laminated steel as good as Damascus steel except in name and appearance?—B. Ans. Parker guns require larger wads than other makes on account of their method of boring. Laminated and Damascus are equally good if of same grade of metal.

M. M. B., Berlin Heights.—I have kept wild geese for the past twelve years which have never bred until this season. This morning the old geese came off with three goslings, but as I know but little of their habits, under the circumstances, have not examined to see whether she has more eggs yet in the nest. Would you be so kind as to give me any information you may possess regarding food, care, etc., for the welfare of the youngsters? Ans. Treat them in all respects as you would tame ones, seeing that they have plenty of green grass with their other food.

WEAKFISH, New York.—1. Have you ever heard of the common brook euryfish being successfully used as bait for weakfish? Does weakfish bite as early as June 1 here, and on what bait? Ans. 1. No; but we do not see why they would not be good. Salt water bait can usually be had cheaper. 2. Some seasons they do, it depends upon temperature, but July is a better month.

UMPGA FERRY, Ore.—I have an extra fine Winchester rifle that has a beautiful polished stock. Can you tell me how I may put such a finish on a curled or birdseye maple stock? In what way does a matted rifle barrel differ from any other? Who now holds the cup shot for at Creedmoor by English and American riflemen in 1876?—E. Ans. Any good gunsmith can do it with pumice stone. Matted rib is made by putting fine line across the top of the barrel, which takes away all reflection of light. The English have the champion trophy.

COAHOMA, Memphis, Tenn.—I send by this mail a bug, which has been kindly treated to a dose of chloroform before he took the sleeper for New York. There have lately appeared large numbers of these beetles around the electric lights in Memphis and Vicksburg. They fly against the lights, and fall on the pavements in such numbers as to excite general remark. He is a stranger to these

parts. Can you give his name and occupation, and where he came from? Ans. The specimen is a *Belostomatidae*, a water beetle quite common and very destructive to young fish and fish eggs. It passes the day in the water, but leaves it at night to take long flights.

VIKESBURG, Miss.—You will oblige me by answering in your next issue the following questions, viz: 1. What material advantages have metallic shot shell over those made of paper? 2. Are earboard wads better than felt for over shot in a full choke gun? 3. Is there any machine in use for crimping metallic shells without injury to the shell? 4. In loading a No. 10 metallic shell with No. 8 wads for a full choke gun, will any injury to the gun result?—P. Ans. 1. No advantage. 2. Yes. 3. No. 4. No, if the barrels are of proper thickness and strength.

MANTTOWOC, Wis.—In your issue of the 8th inst., Mr. Milton P. Peirce, of Philadelphia, says: "I would as soon do without a rifle as without a telescopic sight, whether for target or general game shooting." etc. Would you please inform me where such sights for hunting purposes can be obtained. To avoid any misunderstanding I would say that I do not mean telescopic sights for stationary target or turkey shooting, but such as are "practical hunting sights."—A. W. Ans. Only one kind of telescope sights and they extend the whole length of barrel, and are intended to magnify the object. "Practical hunting sights" do not magnify. Both kind can be procured at 178 Broadway.

NORWICH, Conn.—Inform me through your columns how much more, if any, a pair of 10 gauge barrels would weigh over a pair of 12, both ordered to be made up into an 8lb gun, barrels to be of same material and length. 2. If I had a single barrel 12 gauge bored out so as to make the interior diameter equal a 10, how much weight of metal would be cut away? 3. Could I easily get a barrel heavy enough to have it cut away this much or would I be obliged to have it specially ordered?—C. B. S. Ans. The 10-bore barrels will weigh less than the 12-bore of same length, but how much less can't say. There are plenty of 12-bore barrels thick enough to bore out to 10, but would probably have to be specially ordered.

SEA ROOTS.—We have your inquiry for tackle and bait for rock bass. Please tell us what waters you fish in, and we can judge what fish you refer to. In explanation we would say the "rock bass," *Ambloplites rupestris*, of the fresh waters from Vermont to the Great Lake region and Manitoba south to Louisiana is fished for in a different manner from the salt water "rock bass," *Serranus clathratus*, of the Pacific coast. Again: the "striped bass," *Morone saxatilis*, of the Atlantic coast is called "rockfish" in the South, and in intermediate places the names are combined and it is known as "rock" or "rock bass." The first named fish can be taken with a trout rod and fly, or with minnow or worm bait.

CENTREVILLE, Ontario.—Is it necessary to reduce or crimp rifle cartridge shells around the bullet in order to give good results? Does a set of reloading tools usually include a shell reducer? Where could I get a pair of bullet moulds to cast bullets with concave base?—T. Ans. The bullet should fit snugly in the shell. Set of reloading tools does not include shell reducer.

FEATHERS FOR FLY MAKING.—New Haven, Conn., May 26.—O. E. B., Fall River, Mass.—I noticed your inquiry in FOREST AND STREAM, May 20, about procuring feathers for fly making. As I have had some difficulty that way myself, I thought perhaps you would like to have one or two points I have found out. Feathers of the turkey, dove, hen, partridge, etc., are not hard to obtain; in the fall you can easily get them in the markets. As to hackles a good point is this. The Japanese stores are now selling for from 10 to 20 cents apiece small dusters entirely made up of hackles of all the natural colors. A couple of these will furnish all you will want for amateur work, and they are in my experience 100 per cent. cheaper obtained in this way than through the dealers. If you happen to be in New York at any time, you can get them at Van Tine's, on Broadway, but almost any store that sells Japanese goods has them, in any large city. You can get almost any thing you want for fly making of A. B. Shipley & Son, 503 Commerce street, Philadelphia,

Penn. Send for catalogue, 10 cents. These dealers are excessively high priced, however, and you are not always sure of getting exactly what you want, but you can get those things from them that you can't elsewhere. As to dyed feathers, blue, green, yellow, red, etc., for wings of flies, the best plan I have found is to go to the warehouses of the wholesale feather dealers. There are plenty of them in New York, if you should happen to be there. To find them consult a business directory. Andrade is a good one. I can't say as to other places; you can get what you want there for a song. In one place I picked up enough scattered feathers from the floor to tie flies for several years. You may also at some of these places get dyed hackles, but not always. The millinery stores are good places to rummage in for these peacocks' feathers; you can get them at any of these places, either at the Japanese stores or at the wholesale houses, or at stores where they sell fancy goods. In conclusion, allow me to recommend keeping camphor with your feathers, etc., or the moths will play havoc with them.—PERCYVAL.

CAPE GOD.—There is no process by which lines weakened by age or decay can be strengthened. The samples of twisted hair lines which you sent seem to be quite strong, but from the size of them we judge them to have been stronger. We would not risk them with a salmon, a modern water-proof silk line is smoother and stronger. As for the rods which your father left, they being lancewood, are liable to be serviceable, but test them. If you can lift a three-pound weight off the floor with them, with the line running through the rings to the reel, you may consider them fit to handle a twenty-pound salmon with. If you break a joint in the test, you may find the remainder of the rod good. The condition of these rods will depend on the character of the place where they have been kept. If you have a rod maker near you, let him examine them.

GREENHORN.—Opelika, Ala.—There is a pond in this vicinity that is teeming with black bass, locally called trout, that with the primitive method used are very hard to capture. A few are caught with minnows, but this kind of bait is hard to procure and keep. Now, I want to know if you can tell me how best to fish for them, and what would be the best artificial lure to use. I have never seen any fly fishing done, nor have ever even seen a fly. Ans.—Examine the stomachs of the fish, and learn what they are feeding on. For artificial baits or flies write to our advertising tackle dealers. We cannot recommend artificial baits but small "spoon hooks" may be used. The grandest sport, however, is with the artificial fly, if you can cast it. We advise that you get a stout fly rod, say about 10 feet long and from 8 to 10 ounces in weight, a click reel, not a multiplier, a silk line and leader, and a few flies and learn how to cast. You will need a landing net also.

A pet deer in a Sacramento saloon, being frightened, jumped out through a pane of glass 7 inches wide by 13 inches long. The spectators looked on in amazement, it seeming impossible that so large an animal could pass through a hole so small.—San Francisco Alta.

Mr. Barnum says that he has wasted \$5,000 on boomerang throwers. "You've heard of Australian bushraen," he said, "who have a weapon made of a bent stick that they throw with wonderful skill, hitting the prey unerringly, the boomerang returning of itself to fall at the feet of the marksman? I had an agent to go from London to the wilds of New South Wales; but he writes me that the accounts are two-thirds lies; and the remaining third isn't worth bringing away. The boomerang is a fact, and the native Australian savages fling it at game—missing about as often as hitting; and it will return, if it strikes nothing, to somewhere near the starting point, but with no sort of certainty. My man searched thoroughly, and witnessed the feats of the best experts to be found, but they amounted to nothing in particular. The famous boomerang is practically a myth."

Dickerman Pat. Hammerless Single-Barrel Shotgun.

DESIGNED ESPECIALLY FOR

TRAP SHOOTING.

12-GAUGE NOW READY.

Weight 6½ to 7 lbs.

Warranted to throw 300
No. 8 shot in 30-inch circle
at 33 yards.

All Modern Improvements.

Automatic Safety Pistol Grip. Double Bolt, Rubber Butt Plate, Full Choke, Blued Frame, with Twist, Laminated or Damascus Barrels.

The **Top Snap** is utilized as the lever for cocking the hammer as well as breaking up the gun. The lever is so adjusted that the gun is broken up and hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the trigger, locking the latter firmly into the bent of the hammer. The **Safety Button** is located just in front of the trigger, and is fully protected by the guard (as shown in cut). Pronounced by the trade and sportsmen generally the **Finest Single Gun Made**. **INTERCHANGEABLE RIFLE BARRELS OF ALL CALIBERS** furnished for these guns if desired. **SEND FOR CIRCULAR.**

Manufactured by **THE STRONG FIRE ARMS CO., New Haven, Conn., U. S. A.**

Neat and Elegant.

A great addition to the appearance of any lawn. Just the thing for porch and lawn use and for camping parties. Light and strong and folds compactly. Can be carried as easily as a common camp stool. Send for illustrated catalogue of Hammock and Invalid Chairs free to any address.

HUBBARD HAMMOCK CHAIR CO.,
Sauk Centre, Minn.

10 consecutive shots at 200 yds. off hand, Dec. 18, 1885, with Ballard 6½ Rifle, 38-55, by Wm. P. Gage, Saratoga, N. Y. Highest recorded score in the U. S. on the American Decimal Target, counting 95. Cut is one-quarter size.

20 consecutive shots at 200 yds. off hand, made in the Sharpshooters' Match at Walnut Hill, Mass., Dec. 26, 1881, by H. G. Bixby, of Nashua, N. H., being two consecutive scores counting 115 each on the Mass. Target. These were made with a Ballard 6½, 38-55. Cut is one-sixth size.

10 consecutive shots at 200 yds. with rest, made at Guttenberg, N. J., on May 8, 1886, by M. Dorrier, using a Ballard No. 10 Rifle, 38-55. Cut is full size.

Province of Quebec

PUBLIC NOTICE.

LEASES OF THE ANGLING PRIVILEGES pertaining to the ungranted lauds bordering on a few Salmon Rivers on the north and south sides of the River and Gulf of St. Lawrence, and a number of lakes situated for the most part along the line of the Quebec & Lake St. John Railway, will be offered to public competition, at the Department of Crown Lands, Quebec, on

Wednesday, 30th June next, 1886,
At Eleven o'clock A. M.

A list of said Rivers and Lakes is published in the *Quebec Official Gazette* of this date.

For further information address the undersigned, or the office of the Forest and Stream Pub. Co.

W. W. LYNCH,
Commissioner of Crown Lands,
Department of Crown Lands,
Quebec, May 29, 1886.
May 29, 1886.

"HAMBROOKS." AN EARTHLY PARADISE. Pleasure, Health, Happiness. "A Thing of Beauty is a Joy Forever." A charming home on the Choptank River, the prospective route of the Chesapeake & Delaware Ship Canal. About 1 mile from Cambridge, the most attractive and thriving town in Maryland. Contains 160 acres of very fertile land, in the highest condition of improvement—8 acres in wood. Choice fruit. Double brick house, 50x50, with frame addition, 11 rooms, besides pantries and cellars. Large barn, stable, corn houses and tenant houses. Soil mostly loamy, easily cultivated, very responsive, equally adapted for fruit, grass or grain. House stands in a 4-acre lawn, well shaded, 100 yards from the terraced bank of the river—at this point two miles wide. Situation in the highest degree healthful, beautiful and convenient. River salt, abounding in fish, oysters and game. Best situation on the river for bedding and packing oysters profitably. Climate mild: diphtheria, catarrh and pulmonary diseases almost unknown. Suitable in an uncommon degree for a place of public resort or sanatorium summer and winter. Equally desirable as a gentleman's country seat, affording every facility for boating, bathing and all aquatic amusements. Society of the best in Maryland—intelligent, courteous and kind. Present owner has occupied it for 13 years. No mortgage or other incumbrance. Title unquestionable. Steamboats and rail facilities daily: likewise telegraph. No such property is offered or can be bought in this State. A rare opportunity for a gentleman of wealth, taste and leisure, seeking recreation, health and rational enjoyment. Steamers leave Light street wharf, Baltimore, every night at 9 o'clock for Cambridge. Early morning train from Philadelphia, Wilmington & Baltimore Depot, via Delaware Railroad, at Wilmington. Come and see. Price, \$20,000. E. G. WATERS, M. D., 218 McCulloch st., Baltimore, Md., or A. E. WATERS, Cambridge, Dorchester Co., Md. may13,4t

ANSWERS TO CORRESPONDENTS.

PAUL SEES A GREAT LIGHT.

THE forest warden of the Adirondacks, Mr. Samuel F. Gorman, who has made an investigation of the woodlands of that region, reports to the Forestry Commission that a vast amount of the State's timber has been and is now being "converted to the use of private persons," which is a polite way of saying stolen by timber thieves. Forester Gorman's inspection also developed the interesting fact that the Northern Adirondack Railway Company has trespassed upon the State's land in Township No. 14 of Franklin county and has cut off the woods. The Forestry Commission has brought a suit against the Northern Adirondack Railway Company for \$25,000 damages. This railway, which now extends from Moira to St. Regis Falls, has been authorized to extend its line twenty-four miles further to Buck Mountain. It is purely a timber road. Its contemplated extension is for the purpose of opening a tract of dense forest of 30,000 acres, which is to be cleared. The construction of such a road means that the woods will disappear before it. Whatever the lumberman leaves is destroyed by fires set by locomotive sparks. A timber railroad converts the land into a desolate waste. The effect, if less speedy, is as sure as that of a forest fire. The result of the Northern Adirondack Railroad lumber operations will be a curse to the region. Even so mentally myopic an individual as Paul Smith has at last come to recognize this.

Smith is a typical North Woods landlord. Last winter, when the deer hounders were working to bamboozle the New York Legislature, they brought him down from his Adirondack hotel and put him on exhibition on the floor of the Assembly as a North Woods sage and philosopher. The members were given to understand that Smith, who is reputed to own everything and everybody—men, souls and boats, in his Adirondack bailiwick—was in favor of hounding, as a potent means of deer preservation. The stratagem had the desired result. Members who would not know a deer from a hedgehog were so impressed by the sapient air of the gray-headed wise man of the North Woods that they voted clubs every time by an overwhelming majority; and Smith went home to put his vassals in trim for the next dog campaign. The deer in his region are so nearly extinct that the "sports" who patronize his house can get venison by no

other mode than dogging, and Smith with characteristic logic reasoned that if hounding would only bring more patrons to fill his till this year, the last deer ought to be clubbed—for after Smith the deluge.

When the forest destroying railroad was projected, inasmuch as it would bring tourists almost to his door, the thrifty sage of the St. Regis was delighted. The certainty of the desolation to be wrought disturbed him never a tittle; the road would bring grist to his mill; if it ruined the country, well and good—after Smith the deluge. But the desolation has come before the arrival of the guests. The ruin is already being wrought. The forests are thinned out. The witchery of the woodland is gone. The hills are shorn of their glory. And Smith is bewailing. He is reported to "groan every time he hears of the progress of the road." His hounding philosophy has failed him. As a sage he would now pose in sorry plight for the instruction of Assemblymen. Paul is beholding a great light. It is not a miraculous manifestation from above like that which shone about Saul of Tarsus on his way to Damascus, but a feeble glimmering of common sense admitted by the clearing away of the trees about the famous Adirondack hostelry. Possibly when the last deer has been clubbed and the last tree felled, every Adirondack Peter Simple may have profited by the new dispensation of unobstructed sunshine and sense.

A NEW USE FOR DOGS.

SOME individuals value dogs as pets, friends and companions; some maintain them as guardians of life and property; others as useful auxiliaries in the field; in some part of Europe dogs are used as draught animals and beasts of burden; certain Indian tribes eat dogs; among some savage nations the dog is worshipped; in other lands dogs are looked upon as materialized souls of the departed; the Supreme Court of the State of Maine holds that dogs are wild beasts, *feræ nature*, and as such may be lawfully made war upon and exterminated; city dog catchers regard dogs as the legitimate plunder of highway robbery at thirty cents apiece; and the pound man reckons up their value when after drowning they are sold to the offal gatherers; fashionable ladies wear small or large dogs, just as they assume or put away new styles of headgear; Dr. John Brown made use of a dog as the subject of a literary effort which—as such things go—is immortal; circus clowns train troupes of trick dogs; blind men are led about by dogs to beg; some dogs are life preservers, rescuing human beings from watery graves; in Damascus dogs are protected as scavengers; in London dogs are cut up alive by vivisectionists; the "best dog in the world" is used chiefly for brag; and again, in every part of the world there are dogs which are good for nothing save drowning in a bucket before ever their eyes open to give them a glimpse of the world.

A New Jersey doctor, Beriah A. Watson, has discovered a new use for this creature. He had the genius to recognize in the dog an animal possessing a spine, which might, by a proper device of a devilish trap, be broken for experimental purposes. The doctor is an "expert" employed by the Pennsylvania Railroad Company in accident damage suits. An expert is a man who is employed to go on the witness stand and swear to the best of his knowledge, belief, medical skill and conscience, in defense of the side which retains him. The Pennsylvania Railroad Company has been annoyed by suits brought against it by persons who claimed to have received spinal injuries in railroad accidents. The Jersey City doctor, being employed to give his professional aid and comfort to the railroad as defendant in such suits, conceived the brilliant notion that by subjecting a few hundred dogs to prolonged torture he might gain some data that could be worked to the pecuniary advantage of his employers. By carefully noting the death in life of a sufficient number of brutes whose spines had been broken in his trap, and making detailed memoranda of the successive stages of their agony, he hoped to save to the Pennsylvania corporation the few hundreds or thousands of dollars it might otherwise be compelled to disburse; and thus conscientiously earn his wages as its servant.

The doctor at once became a dog fancier. He developed a great taste for dogs. He liked them—that is, he liked to break their backs in his trap and then study them as they staggered about or fell down and died. Forty-one dogs, gathered up by newsboys, had been led into the doctor's barn and put through the trap, and their living and dying duly recorded, without anything of material benefit to the railroad "expert," when the Society for the Prevention of Cruelty to Animals stepped in and put an end to the abomination. There is every prospect that the doctor will be

denied any further watching of broken-backed dogs. If he longs for new scientific fields to conquer, there is an opening up on the Northwest coast. The Kootenai Indians of British Columbia have a cheerful custom of carrying the helpless old people of the tribe to remote localities and there abandoning them to die. Science might profit by a minute and faithful record of the successive stages of the subject's symptoms, as observed by a dispassionate and coldly professional student. The savages probably would not interfere, and the doctor, baulked of fame and fortune from his investigation of broken-spined dogs, would have the field of lingering Kootenai dissolution all to himself.

POLLUTING NEW YORK HARBOR.—Few persons are aware to what an extent the waters of New York Harbor and the western end of Long Island Sound have been polluted by the oil refineries at Staten Island and Hunter's Point. These refineries have for years poured a substance known as "sludge acid" into these waters, and this has settled all over the bottom, making a sticky mass which has destroyed the oysters, lobsters, crabs and the smaller life which attracts fish, and has also left a scum upon the surface which is offensive. We have repeatedly called attention to this matter as an outrage upon the people, and now that the bill which was introduced into the Assembly by Mr. Doyle has become a law we hope to see it enforced. We referred to this in our fishcultural columns last week, and now that Commissioner Blackford has appointed a man to enforce this law, we hope that the big oil refineries will be made to take care of their refuse. The new law makes it unlawful for persons, corporations, oil refiners, etc., to cause any refuse matter to be placed in any of the waters within the jurisdiction of the State, under a penalty of \$1,000 for each and every offense; and also forbids the throwing from boats, scows and any vessels whatever, of ashes, cinders, refuse or garbage, into the waters of the Long Island Sound, west of Eaton's Neck, or into any of the bays or harbors opening into the same, under a penalty of \$500 for each and every offense. Although intended primarily to protect the oyster beds, it is just what is needed for the fishing interests of the harbor and Long Island Sound. We hope to hear that the great "Standard Oil Works," which has so long made a sewer of Newtown Creek and the harbor, will be asked to step up and pay some heavy fines.

SALMON IN THE HUDSON.—Another triumph has been scored for fishculture. Salmon have been taken in the Hudson this season to the number of perhaps half a dozen at present writing. They are all recorded from Troy, below the State dam, with exception of one taken in Gravesend Bay which we noticed a few weeks ago. In former years an occasional stray salmon has been captured in the river at rare intervals, but these fish, coming just four years after the first stocking of the river, point to the planting of 1882 as the source of their origin. In that year a small plant was made for the U. S. Fish Commission, from the hatchery of Mr. Thomas Clapham, at Roslyn, Long Island, by Mr. Fred Mather, who has since continued the work on a larger scale, from the station of the New York Fish Commission, at Cold Spring Harbor, under orders of Professor Baird of the U. S. Fish Commission. State Commissioner Blackford is making efforts to get all the information possible concerning the capture of salmon in the river; and we shall, no doubt, hear of others being taken. The eggs from which these fish were hatched came from the U. S. station at Orland, Me., in charge of Mr. C. G. Atkins. The Hudson may yet become a salmon stream. Put up the fishways now and protect the fish which have escaped the meshes of the innumerable shad nets of the lower river, and give them a fair chance.

A TYPICAL CASE.—The effort now being made by the citizens of Antrim county, Michigan, to put a period to the netting and spearing of the remaining fish in their waters is a typical case. The illogical views of the spearers, the apathetic attitude of the average citizen, the difficulties, oppositions and hostilities encountered by the reformers, all have their counterparts in every locality where similar reforms have been attempted. The success of the Antrim County Association—for it is backed by men who know how to achieve success—will be an encouragement for other like movements in Michigan.

THE LARGE TROUT RECORD.—The record of brook trout which weigh 10 pounds or more, now includes a fish of 10 pounds 10 ounces, caught in Lake Mooselucmaguntic, Maine, last week. It is reported in our angling columns.

The Sportsman Tourist.

THE TROUT STREAM THAT NOBODY KNOWS.

HAVE you heard of the trout stream that nobody knows,
Stealing silent and sheltered 'neath o'erhanging trees,
While out through the meadows it ripples and flows,
Kissed by the grasses, caressed by the breeze?

Secuded it wanders unheeded by man,
Unknown to the angler, secure from his wiles,
And the trout, unmolested (no fear of the pan),
Leap and dart and bask safely in nature's sweet smiles.

I heard of a trout stream that nobody knows
(A friend (?) told it me and I vowed I'd ne'er tell),
The world after that had a couleur de rose,
And my dreams were of trout creeks, rods, reels and—well.

I resolved to explore this wonderful stream,
To enjoy a day's outing alone by its side,
And so, by the virtue of stage coach and steau,
I arrived like a bridegroom equipped for his bride.

For no bridegroom adjusted his nuptial day tie
More deftly than I tied my leader that day;
I tested my reel and the shade of each fly,
And trembling and eager went forth to the fray.

I followed directions and soon found the stream—
It was sparkling, pellucid, than crystal more clear.
But what is that signboard, Great Scott! do I dream?
"No fishing or hunting allowed around here."

Like most of the craft, I discarded the sign,
And made a deft cast o'er a black darkling pool.
A rise, a stroug tug and a quick straight'ning line,
And I landed a chub!—less than six by the rule.

Down a well-beaten path I encountered a boy
With a twig for a rod and a pail for a reel;
His face was all radiant and shining with joy,
For his pail held a sucker, two chubs and an eel.

He offered the lot for a broad silver half,
And remarked, "They are better than nothin', you know."
But I spurned his kind offer, demurred at his laugh,
And wended my way to fresh pastures below.

Encouraged, I worked as I ne'er worked before,
Tried new flies, luscious worms, every art I possessed.
But I got not a rise, and met anglers more
Than I'd any idea the whole country possessed.

At last I departed disgusted and sore,
With a hearty consignment to deepest of woes
Of that friend who had put me (he's my friend no more)
On the banks of that trout stream that nobody knows.

H. W. D. L.

DAYS WITH THE BARMCEIDE CLUB.

IV.

IT WAS a bonny morning with a mild and exquisite sky of tenderest blue. It was impossible not to feel the exhilaration in the magic of the forest air, more potent in its effects than the cunning products of alchemy. A scarlet-headed woodpecker making the chips fly in some hollow beech tree awakened us. The engineer and conductor of our freight train had remained over a day at Our Lake in order that he might have a mess of trout to take home with him, as he said his "old woman would be powerful dispirited if he come back out no fish," so giving him what we had on the ice and instructing him when to come after us, we bade him good-bye, and away we went with the enthusiasm of reawakened life to our sport; Roy and Storm to the lake, and Glen to the brook below—a baby of a river and a pretty stream it is, alive and bristling (if a brook can bristle) with charming surprises as it flows on to join the river ever so far away; here running riot or chanting gaily around the slippery rocks and working through or leaping over the smooth boulders, with a rippling musical sound like the refrain of an old ballad; then a stretch like a sheet of undulating glass, over which the rosy mayflowers lean and blush at their own vanity; jutting rocks and fallen trees turn it this way and that, hold it for a little in stillwaters, while it gathers masses of creamy bubbles, then releases it and lets it go in white-capped disorder, dancing to its own wild music and seeking the rest it never finds.

In the quiet at the upper pool, just above where the waters begin to whirl in furious dance, resided one of the best known and most influential trout in the "destrict." We had been told of him on our way up, and informed regarding some of his peculiarities. One man said he was an old "sockdolager," whatever that may be, while another said there was no use trying for him, but cautioned us not to miss fishing the pool, for there were others in it good enough to try our tackle to the last ounce.

Glen was to have the pools this morning, and none more likely to render a good account of his stewardship, for, as Tom Northbeam described Mr. Greenshield to the clergyman, "I think he must have been a fish one day himself, he knows all their doings so well." A coachman and a scarlet ibis were attached to the carefully examined leader, a few throws on the shallow stretch above to remove the kinks, and Glen, making a quarter turn, landed his flies in the center of the pool, drew them slowly toward him and placed them further to the other side almost under a little fringe of alder; and his troutship went for that beautiful stretch, not with the boisterous rush of the school boy nearest the door, but like a polished gentleman entering a drawing-room. Quickly, as the almost imperceptible movement on top of the water showed, he sucked in that ibis; and just as quickly Glen fastened the hook. How suddenly everything changed. The trout was no longer the quiet, mild-mannered gentleman, but a fighter from the word, one who would not hesitate at any expedient to smother everything. He thinks the end justifies the means and he is right.

There was no misunderstanding the intentions of those demoniac gyrations. He's not one "to surrender ere the assault," nor for some time afterward, and he evinced a complete unity of purpose, a pressure, as it were, on the line of at least a hundred pounds to the square inch. See him! how that trout can play seven-up. He's high, low and game to the last. A neighboring kingfisher chattered his displeasure from the bare arms of a deceased pine in his noisy way, but there was a selfish sound about it that merited and received no attention. The trout is moving slowly and surely away

as the measured click, click, click of the reel announces, and heading down stream, Glen prepares to carry him through the short rapids to a pool below, where he brings him up with a round turn as smartly as though he had been hitched to a snubbing post. No, no, Mr. Trout, I am not afraid of you now (which reminds me of what the old lady said to the little boy who was eyeing the pie which was cut in very small pieces indeed, "Help yourself to a piece, sonny, and don't be afraid of it." The boy answered, "I would not be afraid of it if it were twice as big.") Carefully, now, shshshsh! At last he yields to the combined influence of split bamboo and coercion. Now the landing net. So-o-o, good enough. Toss him ashore on the long lush grass. Handsome fellow you are, whether leaping the cascades, rushing through the riffs, circling among the eddies, or breaking upward in the mirror-like pools, a fit theme for the eloquence of Dawson, and on the table a dietetic glory to whom Soyer can do no more than justice.

Perhaps he didn't weigh a ton, but probably he was a "sockdolager," and surely the pool was worth the trying, as were also the others just below, as Glen's reel testified ere he was through with them. The angling on the lake was equally good for Roy and Storm, and the morning's sport was full of abundant satisfaction. The late afternoon fly-casting was a repetition of our morning's experience, though we returned to the water every fish that was not seriously damaged, and which we thought would have a good chance of growing older, heavier and wiser.

Not much more than a stone's throw from Our Lake was another lake of perhaps three quarters of a mile long, and averaging about two hundred yards in width. The shores were very irregular, and from no point could an extended view of the lake be had. Between this and Our Lake was a carry (or drag) of not more than thirty yards, and you launched your boat into good fishing, but the other end afforded better and gave you besides a nice outlet where one was almost always certain of a few good rises. We have never paddled the length of this lake without seeing from one to a dozen or more deer feeding along shore. Its jutting points and sudden turns enables one to paddle very close to the deer before they are aware of the presence of strangers, and many a time did we amuse ourselves by seeing how near we could approach them, and then watch their curious movements before they were fully satisfied as to our identity, and then how gracefully they would bound away and disappear in the forest.

Did we kill any of them? Now that is a leading question, especially as this was the close season; but to be candid and truthful, Storm did kill one and only one, a young buck, though he might easily have killed a dozen. We found him quite a welcome addition to our supplies at camp and thereby reconciled our consciences to his unseasonable taking off. All facts considered, we don't think any sportsman in the world will attach any blame nor unsportsmanlike conduct to the proceedings, and if they do we can only plead that honest confession, which is said to be "good for the soul," is like charity, it "covers a multitude of sins."

The outlet of the lake was very broad, smooth and shallow where it left the lake, but gradually narrowed until it became as turbulent as the orthodox mountain stream. The fish at the head of the outlet were of fairly good size, but grew smaller as the stream grew narrower and more rapid in its movement. We gave it several investigations during our stay in the neighborhood, more for the sake of variety than for any extra inducements it afforded in the way of sport.

The only well-defined break in the circle of hills which encompassed Our Lake was near the upper end, where the land was low and swampy and covered with a heavy growth of tamarack. A few rods south a neighboring lake discharged its surplus into this, and here was always a favorite place for casting the fly with almost a certainty of reward. There was also a wide spread of lily pads, and by casting just on the outside edge of them and using a scarlet ibis one could coax, in the early morning before the sun was fairly under way on his day's journey, a half dozen or more early fish. Red ibis would do the trick; or, if flies of that description were not in the book, a little piece of red flannel carefully attached to the hook made a very taking substitute; in fact, so wonderfully well did it answer that we economized to the extent of using in this particular locality the flannel fly altogether.

By poling or pushing our boat through the lily pads toward the tamarack swamp we could a frogging go, and by using a medium-sized hook and a piece of bright scarlet flannel secure quite a welcome addition to our menu; in fact, as trout and, shall we say it, venison (that venison is like Banquo's ghost, it will not down) began to pall on our appetites, the frogs more than compensated for their failure to longer tickle our palates. The catching of them could hardly be catalogued under the head of sport, but it contributed a little variety to our day-to-day doings.

Toward the lower end of the lake is a small rocky island, partly covered with blackberry bushes, but entirely denuded of timber. It is called Friz Island from the alleged fact of a French deer hunter passing several days there, nearly freezing and starving before he was rescued from his predicament. He was bounding deer late in the fall. He had put out his dogs and then rowed to the island, there to watch for any deer which they might drive into the lake. Unfortunately he neglected to secure his boat, and the first intimation he had of his actual position was seeing the little craft go drifting down toward the outlet. Here was a pretty howlded, for he was unable to swim a stroke; he had no matches to set fire to the small green brush at hand, and not a mouthful to eat. His friends at the settlement, when his dogs returned without him, organized a party to search for him, and found him after he had been a prisoner for eight or ten days. He was found more dead than alive, but complained only of the cold, which he called "friz." Served him right for hounding deer, and we hope it cured him, but doubt it.

MILLARD.

CAPT. MARTIN SCOTT.—Every one of your readers should know all about Capt. Martin Scott and of his famous muzzle-loader rifle shooting, also the famous story of that wise coon, also of Capt. Scott's heroic life and of his gallant death upon the field of battle where (near the writer of this) he fell face to the enemy. Now who will be kind enough to write an article for FOREST AND STREAM, giving a short account of Capt. Martin Scott's career, both as a great rifle shot and hunter and as a military man. I hope some one of his old comrades of the early days of our western frontier will step to the front and answer to this most worthy call. There must be I think a few yet remaining of his old associates who knew him better than myself. I will wait for a time to hear them speak.—MAJ. H. W. MERRILL (New York, May 21).

Natural History.

Address all communications to the Forest and Stream Publishing Co.

BIRDS OF CENTRAL PARK, NEW YORK.

A PRELIMINARY LIST, BY LEWIS B. WOODRUFF AND AUGUSTUS G. PAINE, JR.

Drawn up May 31, 1886.

The nomenclature and classification are those of the American Ornithologists' Union "Check List." For some valuable additions to this list credit is given to Mr. E. T. Adney.

1. *Larus marinus* (47) Great Black-backed Gull.—Winter visitant; rare.
2. *Larus argentatus smithsonianus* (51a) American Herring Gull.—Winter resident; abundant.
3. *Aix sponsa* (144) Wood Duck.—Summer resident; not common.
4. *Branta canadensis* (172) Canada Goose.—Rare; generally observed during migration.
5. *Botaurus lentiginosus* (190) American Bittern.—Rare. A specimen was observed May 10, 1886, by E. T. Adney.
6. *Ardea cirescens* (201) Green Heron.—Summer resident; not common.
7. *Nycticorax nycticorax naevius* (202) Black-crowned Night Heron.—Summer resident; not uncommon. A specimen has been observed in December.
8. *Fulica americana* (231) American Coot.—Spring and fall migrant; common.
9. *Actitis macularia* (263) Spotted Sandpiper.—Summer resident; common.
10. *Agelaius coccifer* (273) Killdeer.—Rare. Observed by E. T. Adney, Sept. 3, 1884.
11. *Colinus virginianus* (289) Bob White.—Resident; not common.
12. *Bonasa umbellus* (300) Ruffed Grouse. Resident; not common.
13. *Accipiter velox* (332) Sharp-shinned Hawk.—Rare. Observed by E. T. Adney.
14. *Buteo borealis* (337) Red-tailed Hawk.—Resident; most common in fall.
15. *Haliaeetus leucocephalus* (352) Bald Eagle.—Very rare. A specimen remained two months in the Park during the fall of 1886.
16. *Pandion haliaetus carolinensis* (364) American Osprey.—This species is not rare in the vicinity of Riverside Park, and occasionally is observed flying high over Central Park.
17. *Syrnium nebulosum* (368) Barred Owl.—Winter resident; common.
18. *Nyctala acadica* (372) Saw-whet Owl.—Resident; not common.
19. *Megascops asio* (373) Screech Owl.—Resident; not common.
20. *Coccyzus erythrophthalmus* (388) Black-billed Cuckoo.—Summer resident; rare. E. T. Adney.
21. *Ceryle alcyon* (390) Belted Kingfisher.—Summer resident; not common.
22. *Dryobates villosus* (373) Hairy Woodpecker.—Resident; not common.
23. *Dryobates pubescens* (394) Downy Woodpecker.—Resident; common.
24. *Sphyrapicus varius* (402) Yellow-bellied Sapsucker.—Migrant; not common.
25. *Melanerpes erythrocephalus* (406) Red-headed Woodpecker.—Rare. Observed by E. T. Adney, Aug. 27, 1885.
26. *Colaptes auratus* (412) Yellow-shafted Flicker.—Resident; not uncommon.
27. *Antrostomus cocciferus* (147) Whip-poor-will.—Summer resident; rare. Observed by E. T. Adney.
28. *Chordeiles virginianus* (420) Nighthawk.—Summer resident; common, breeds.
29. *Chaetura pelagica* (423) Chimmey Swift.—Summer resident; very common.
30. *Trochilus colubris* (428) Ruby-throated Humming Bird.—Summer resident; common.
31. *Tyrannus tyrannus* (444) Kingbird.—Summer resident; very common; breeds.
32. *Myiarchus cinerascens* (432) Crested Flycatcher.—Summer resident; rare. Observed by E. T. Adney.
33. *Sayornis phoebe* (436) Phoebe.—Summer resident; very common; breeds.
34. *Contopus virens* (461) Wood Pewee.—Summer resident; common.
35. *Empidonax flaviventris* (463) Yellow-bellied Flycatcher.—Rare. Observed on Sept. 19-Oct. 10, 1885, by E. T. Adney.
36. *Empidonax minimus* (467) Least Flycatcher.—Summer resident; very common; breeds.
37. *Alauda arvensis* (473) Skylark.—Six pairs were let loose in the Park by Mr. J. R. Jones in 1867. The experiment could not have been a success, as there is no sign of their having become naturalized.
38. *Cyanocitta cristata* (477) Blue Jay.—Resident; not common.
39. *Corvus americanus* (488) American Crow.—Resident; common.
40. *Dolichonyx oryzivorus* (494) Bobolink.—Summer resident; not common.
41. *Molothrus ater* (495) Cowbird.—Summer resident; common; breeds.
42. *Agelaius phoeniceus* (498) Redwing Blackbird.—Summer resident; not common.
43. *Sturnella magna* (501) Meadow Lark.—Summer resident; common.
44. *Icterus spurius* (506) Orchard Oriole.—Summer resident; common, breeds.
45. *Icterus galbula* (507) Baltimore Oriole.—Summer resident; common, breeds.
46. *Scolecophagus carolinus* (509) Rusty Blackbird.—Spring and fall migrant; common.
47. *Quiscalus quiscula* (511) Purple Grackle.—Arrives first of March and remains till December. Abundant; breeds.
48. *Carpodacus purpureus* (517) Purple Finch.—Summer resident; not common, breeds.
49. *Loxia curvirostris minor* (521) American Crossbill.—Winter resident; rare.
50. *Spinus tristis* (529) American Goldfinch.—Resident; abundant.
51. *Spinus pinus* (533) Pine Siskin.—Spring, fall and winter visitant; not uncommon.
52. *Poocetes gramineus* (540) Vesper Sparrow.—Summer resident; common.
53. *Ammodramus sandwichensis savanna* (542a) Savanna Sparrow.—Summer resident; common.
54. *Zonotrichia leucophrys* (554) White-crowned Sparrow.—Spring and fall migrant; not common.

55. *Zonotrichia albicollis* (558) White-throated Sparrow.—Spring, fall and winter resident; abundant.
 56. *Spizella monticola* (559) Tree Sparrow.—Winter visitant; not common.
 57. *Spizella socialis* (560) Chipping Sparrow.—Resident; abundant in summer; breeds.
 58. *Spizella pusilla* (563) Field Sparrow.—Summer resident; common; breeds.
 59. *Junco hyemalis* (567) Slate-colored Junco.—Winter resident; abundant.
 60. *Melospiza fasciata* (581) Song Sparrow.—Resident; abundant in summer; breeds.
 61. *Melospiza georgiana* (584) Swamp Sparrow.—Summer resident; not common.
 62. *Passerella iliaca* (585) Fox Sparrow.—Migrant; abundant. A few remained through the winter of '84-'85.
 63. *Pipilo erythrophthalmus* (587) Towhee.—Summer resident; common.
 64. *Cardinalis cardinalis* (593) Cardinal.—Resident; common; breeds.
 65. *Abia ludoviciana* (595) Rose-breasted Grosbeak.—Summer resident; not common.
 66. *Passerina cyanea* (598) Indigo Bunting.—Summer resident; not common.
 67. *Piranga erythromelas* (608) Scarlet Tanager.—Summer resident; not common.
 68. *Chelidon erythrogaster* (613) Barn Swallow.—Summer resident; abundant; breeds.
 69. *Tachycineta bicolor* (614) Tree Swallow.—Very common in spring and fall.
 70. *Chicocola riparia* (616) Bank Swallow.—Summer resident; common.
 71. *Ampelis cedrorum* (619) Cedar Waxwing.—Resident; most common in summer.
 72. *Vireo olivaceus* (624) Red-eyed Vireo.—Summer resident; common; breeds.
 73. *Vireo gilvus* (627) Warbling Vireo.—Summer resident; not common.
 74. *Vireo flavifrons* (628) Yellow-throated Vireo.—Summer resident; not common.
 75. *Vireo noveboracensis* (631) White-eyed Vireo.—Rare summer resident. Observed by E. T. Adney.
 76. *Mniotilta varia* (636) Black and White Warbler.—Summer resident; common.
 77. *Helminthophila vernivorus* (639) Worm-eating Warbler.—Rare summer resident.
 78. *Helminthophila pinus* (641) Blue-winged Warbler.—A very rare summer resident.
 79. *Helminthophila chrysopetra* (643) Golden-winged Warbler.—A very rare summer resident. E. T. Adney.
 80. *Helminthophila ruficapilla* (643) Nashville Warbler.—Spring and fall migrant; common.
 81. *Comptolypis americana* (648) Parula Warbler.—Chiefly spring and fall migrant; very common.
 82. *Dendroica aestiva* (652) Yellow Warbler.—Summer resident; abundant; breeds.
 83. *Dendroica caerulescens* (654) Black-throated Blue Warbler.—Spring and fall migrant; very common.
 84. *Dendroica coronata* (655) Myrtle Warbler.—Spring and fall migrant; abundant.
 85. *Dendroica maculosa* (657) Magnolia Warbler.—Spring and fall migrant; very common.
 86. *Dendroica cerulea* (658) Cerulean Warbler.—Observed by Mr. Basil H. Dutcher, May 5 1886.
 87. *Dendroica pennsylvanica* (659) Chestnut-sided Warbler.—Summer resident; common; breeds.
 88. *Dendroica castanea* (660) Bay-breasted Warbler.—Spring and fall migrant; not very rare.
 89. *Dendroica striata* (661) Blackpoll Warbler.—Spring and fall migrant; very common.
 90. *Dendroica blackburniae* (662) Blackburnian Warbler.—Spring and fall migrant; not uncommon.
 91. *Dendroica virens* (667) Black-throated Green Warbler.—Spring and fall migrant; very common.
 92. *Dendroica vigosii* (671) Pine Warbler.—Spring and fall migrant; not common.
 93. *Dendroica palmarum hypochrysea* (672a) Yellow Palm Warbler.—Spring and fall migrant; common.
 94. *Seiurus aurocapillus* (674) Oven Bird.—Summer resident; common.
 95. *Seiurus noveboracensis* (675) Water Thrush.—Chiefly spring and fall migrant; not uncommon.
 96. *Seiurus motacilla* (676) Louisiana Water Thrush.—Rare. Observed by E. T. Adney.
 97. *Geothlypis trichas* (681) Maryland Yellowthroat.—Summer resident; very common; breeds.
 98. *Icteria virens* (683) Yellow-breasted Chat.—Summer resident; not common.
 99. *Sylvania mitrata* (684) Hooded Warbler.—Very rare. A male specimen was observed on May 11, 1886. The movements of the bird were watched for more than an hour.
 100. *Sylvania pusilla* (685) Wilson's Warbler.—Spring and fall migrant; not common.
 101. *Sylvania canadensis* (686) Canadian Warbler.—Spring and fall migrant; common.
 102. *Setophaga ruticilla* (687) American Redstart.—Summer resident; very common; breeds.
 103. *Mimus polyglottos* (703) Mockingbird.—This species has been repeatedly observed, but under conditions that render it probable that the specimens were escaped cage birds.
 104. *Galeoscoptes carolinensis* (704) Catbird.—Summer resident; very common; breeds abundantly.
 105. *Harporhynchus rufus* (705) Brown Thrasher.—Summer resident; common; breeds. A specimen remained through the winter of '84-'85.
 106. *Troglodytes aëdon* (721) House Wren.—Common summer resident; breeds.
 107. *Troglodytes hiemalis* (722) Winter Wren.—Winter resident; rare.
 108. *Certhia familiaris americana* (726) Brown Creeper.—Winter resident; common.
 109. *Sitta carolinensis* (727) White-breasted Nuthatch.—Resident; common.
 110. *Sitta canadensis* (728) Red-breasted Nuthatch.—Winter resident; not common.
 111. *Parus atricapillus* (735) Chickadee.—Winter resident; common.
 112. *Regulus satrapa* (748) Golden-crowned Kinglet.—Spring and fall migrant; common. Occasionally seen during the winter.
 113. *Regulus calendula* (749) Ruby-crowned Kinglet.—Spring and fall migrant; common.
 114. *Turdus mustelinus* (755) Wood Thrush.—Summer resident; common; breeds.
 115. *Turdus fuscescens* (756) Wilson's Thrush.—Summer resident; common; breeds.

116. *Turdus ustulatus swainsonii* (758a) Olive-backed Thrush.—Spring and fall migrant; not common.
 117. *Turdus aonalaschke pallasi* (759b) Hermit Thrush.—Spring and fall migrant; common.
 118. *Merula migratoria* (761) American Robin.—Summer resident; abundant; breeds. A few winter.
 119. *Sialia sialis* (766) Bluebird.—Summer resident; common.
 NOTE.
 120. *Passer domesticus* (—) House Sparrow.—Resident; very abundant; breeds.
 121. *Carduelis elegans* (—) European Goldfinch.—Resident; common; breeds.

THE AUDUBON SOCIETY.

THE editor recently suggested that those who favor the objects and aims of the AUDUBON SOCIETY should do their best to help it along, and if necessary smother their pet aversions to any unfortunate class of birds which may have incurred their displeasure, until the objects aforesaid shall have been accomplished. I consider this position a sound one and hope that it will be generally so regarded. I am reminded of a man who the other day in speaking of our new fish and game protective association, said to me that had we inserted in our constitution one article which had been omitted he would join the society. This was, he said, a clause discountenancing the catching of fish on the Sabbath.

"My dear sir," said I, "if you had attended the meetings and helped to organize the association, you could have proposed that or any other article you chose, and it would have been put to vote. As it was we lacked your valuable assistance and had to do the best we could without it."

This man will reap the benefit of our labors in the increased supplies of fish at his door; and those who do not join the AUDUBON SOCIETY because they want to shoot hawks or some other feathered creature will nevertheless profit by its efforts and the result of its work. KELPIE.

MAY 31.
 THE "HOOF SNAKE" MYTH.—Logansport, Ind., June 4.—*Editor Forest and Stream:* Tally one more in favor of the hoop snake question. I clipped the following from the Peru (Ind.) *Sentinel*.—KANKAKEE. The inclosure reads: "Most all our readers have heard of the hoop snake, but comparatively few, if any, have seen one. Indeed, many are inclined to doubt the existence of it, but all surmises are set at rest, as James Nolan, living on O. P. Webb's farm one half mile south of town, killed one Monday forenoon. He discovered it in a ravine and when it saw him it rolled up in the shape of a hoop, but he struck it with a club and disabled it. Mr. Nolan had never seen a hoop snake, but had heard of it and noticed that when he touched the body with a stick the tail at once struck the stick with considerable force. He experimented some time until thoroughly convinced that he had found the genuine hoop snake. After it was entirely dead Mr. Nolan cut off the needle in the end of the snake's tail and now has it in a bottle where all can see it who are disposed to make the trip to his residence. The needle, or sting, is seven-sixteenths of an inch long, looks like a thorn from a locust tree and is of a black color. The snake is five feet and six inches long, of a black color showing golden as it moved. The under surface of the monster was a dirty yellow. The remains are still where the snake was killed and can be seen by all who are curious to look at a genuine hoop snake. Mr. Nolan is a truthful man and there is not the slightest doubt that he killed a hoop snake, as both the snake and stinger can be seen. We believe it is the first instance of the kind in this country."

GAME BREEDING IN CONFINEMENT.—Osakis, Minn., May 30.—*Editor Forest and Stream:* For the benefit of your readers I note the breeding of wild game in captivity. T. B. Johnson, our leading merchant, has his yard inclosed with wire netting, the meshes small enough to hold quail. In the yard he has a happy family, consisting of two antelopes two years old (the female of which threw two fawns about a week ago), rabbits of several kinds, California quails, Bob Whites, parrots, and several cages of native birds. The Bob Whites he has had two years. The first season they laid, but the nest was destroyed by a cat; last year the hen bird laid, and after sitting about a week, was killed. The cock bird then took the nest, hatched out the young and reared them. The flock of eleven has dwindled down to five, two of which are now laying. The California quail, of which he has ten, are dropping their eggs around the yard, but so far do not make any nests. They are all very tame, so much so that they hardly get out of the way of even a stranger.—S. W. S.

THE TOLEDO EAGLET.—Mr. Emory D. Potter, of Toledo, O., writes to Dr. E. Sterling, of Cleveland, under date of June 2, of the Toledo eaglets: "I visited the birds and found the woolly head as lively as a cricket. The old ones will allow no one but Mr. Hulce, who feeds them, to come near the cage. I never heard before of eagles breeding in confinement. The young one is growing nicely. Mr. Hulce has bred quail, blackbirds, robins, ring doves and several other kinds of wild birds in wire cages. The eagle laid one egg last year (at five years old) but it did not hatch. I see no reason why he may not stock the whole country with eagles and the singing birds of our forests.—E. D. POTTER."

CROW CATCHING MINNONS.—Richardson Lake, Me., June 2.—*Editor Forest and Stream:* I saw a somewhat curious feature in the crow line to-day while I was looking upon the lake, which I never saw before, but may be common enough for all I know—that of a common crow striking for minnows in the water. After two unsuccessful efforts the crow carried off from the surface of the water in its bill a minnow about three inches long. It was in quite plain sight, and evidently taken from a school of small fry about 100 feet from the shore.—J. P. W.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—1 black-headed lemur (*Lemur brunneus*), 1 Mousa monkey (*Cercopithecus mona*), 6 Rhesus monkeys (*Macaca erythraea*), 2 Hamadryas baboons (*Cynocephalus hamadryas*), 1 Diana monkey (*Cercopithecus diana*), 1 black-headed spider monkey (*Ateles melanocephalus*), 2 Gillespie's hair seals (*Zalophus gillespiei*), 1 Peruvian Jay (*Xanthoeca inca*), 1 yellow-winged sugar bird (*Caretta cyanea*), 1 European wax-wing (*Amphispiza bilineata*), 2 Egyptian geese (*Chelone pex egypciaca*), 1 ground dove (*Chamepelia passerina*) and 2 twoline pythons (*Python bivittatus*). Presented—1 wildcat (*Lynx rufus*), 1 opossum (*Didelphis virginiana*), 1 woodchuck (*Arctomys monax*), 5 yellow birds (*Chrysomitris tristis*), 2 crows (*Corvus americanus*), 5 crow blackbirds (*Quiscalus purpureus*), 1 great-horned owl (*Bubo virginianus*), 8 screech owls (*Scops asio*), 1 robin (*Turdus migratorius*), 4 alligators (*Alligator mississippiensis*), 1 pine snake (*Erythronotus melanoleucus*), and 1 red-bellied terrapin (*Pseudemys rugosa*). Born—3 prairie wolves (*Canis latrans*), 1 bactrian camel (*Camelus bactrianus*), 5 prairie dogs (*Cynomys ludovicianus*), and 1 elk (*Cervus canadensis*). Exchanged—2 golden eagles (*Aquila chrysaetos*).

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

TURKEY SHOOTING FOR A HAT.

ABOUT the middle of April myself and three others planned to go to the woods and spend a week after turkeys, so one Monday morning we packed a tent and camp equipments and some provisions into a wagon, and drove to the woods where we proposed to camp. We arrived at our destination a little before dark, and after pitching the tent and making some hasty arrangements for the night, ate our supper and turned in, planning to be up early in the morning, there being a prize of a new hat awaiting the man who should kill the first gobbler. The hat was to be paid for by the other three.

Our camp was situated near the line between Garland and Perry counties, in a very mountainous piece of country, being on the watershed between the waters running south to the Washita, north to the Fourche la Pave, and east to the Saline. The teamster who had brought us out was to return home in the morning and come after us again at the end of the week. Our party consisted of, first, Mr. P., a man of somewhere near fifty years of age, who belongs to the legal profession. He had acquired some experience in woodcraft previous to this trip. He used a breechloading gun of Colt's make. Second, Mr. L., of about one-half the age of the former, of mercantile pursuits, a genuine lover of the woods and the gun, and who never lets a chance of enjoying them go by unimproved; his gun was a Parker. Third, Joe A., a native of this State, also a half centurion, and who had spent probably one-half his life in camp among the forests and mountains of the frontier. He still sticks to the old muzzleloading rifle, and says he would not give it for any of the new-fangled perpetually loaded arrangements of the present day. Every one to his notion, you know. Lastly, the subscriber. My gun on this trip was a .38-cal. Ballard rifle.

Thursday morning was cloudy and windy, a state of things rather unfavorable to our morning's hunt. Mr. P. and Joe went to the east of camp and Mr. L. and I went to the west. It was not yet daylight, and the clouds obscured the moon, which was just past full, so that traveling in strange woods was attended with some difficulties. After leaving camp a short distance we separated, each one taking a different direction and striking out for himself. I followed a narrow ridge of the hills until I thought myself far enough from camp and from the others, and daylight beginning to appear, I sat down to wait and listen. The wind made so much noise among the treetops that sounds could not be heard at any great distance. After waiting until the sun must have been fully up I thought I heard the gobbling of a turkey to windward and I moved in that direction and got near enough to hear him quite plainly; but he seemed to be traveling away from me, and the country being so rough and broken I did not succeed in getting near enough for him to hear me call, so I had to give him up, and finally returned to camp. I found Mr. P. in camp, and the others soon came in, no one having yet won the new hat.

After breakfast we fixed up the camp in better shape and then started out again, Joe and Mr. L. going together this time and Mr. P. and I taking the opposite direction. The country is a series of high, rocky and gravelly ridges, running in every conceivable direction, with steep hollows between, some of them occupied by small streams formed by springs. A good country to get lost in unless one is pretty well versed in woodcraft. The woods had been burned over earlier in the spring and was very free from underbrush. The timber is mostly yellow pine, interspersed with hickory and several kinds of oak. Our object to-day was not so much to procure game as to look for signs and locate the ranging places of turkeys. We saw several deer during the day, but, it being the close season for them, we did not pay much attention to them. We found turkey signs quite plentiful and saw turkeys three or four times; but the woods being so open, their sharp eyes proved better than ours, as all we saw were either running or flying. But we learned the woods and found their range, and laid our plans to "sarcumvent" (to quote Nattie Bumpo) some of them in the morning, when we would have the chances more in our favor. We killed some squirrels and saw a good many quail, but the open season for quail having closed the 1st of April, they were not molested.

We returned to camp about the middle of the afternoon, and somewhat later the others returned, also bringing some squirrels. Joe had taken a running shot at a gobbler but without effect, and Mr. L. had seen a turkey hen within shooting distance but did not shoot, as it was agreed among us that we would not kill a hen at this season of the year, although there was no law to prevent.

Wednesday morning we left camp before daybreak, and each one started for the place he had selected the day before. The morning was still and warmer although still a little cloudy. But the moon gave sufficient light to make traveling tolerably easy. I went to a high part of the ridge where several hollows started out from near the same place, running off in different directions, and Mr. P. went to another such place some distance away. Soon after daylight I heard a gobbler in the head of a sharp hollow a little to my right, and soon after another off in front of me and further away. I commenced to call and both would answer me, and soon the one nearest me flew off the roost, alighting about seventy-five yards from me and somewhat below me, as I was on the top of the ridge. I began to think that perhaps the new hat would be mine, but just about that time I heard the report of a gun away off to the east of me, and I was not quite so sure of it. But in about five minutes after, I had the satisfaction of seeing first the head and neck and then the body of the gobbler appear above the rise of the hill and coming toward me. He came up within about fifty yards of me, and stopped to look and listen for the old hen he supposed to be up there on the ridge. I was sitting with my back against a tree, facing him, gun to shoulder and finger on trigger, and hardly daring to wink or draw a long breath. As soon as he stopped the front sight dropped upon his breast and the sharp report of the rifle startled the echoes. The turkey gave one bound and spread his wings to fly, but the bullet had done its work and he rolled upon the ground a dead gobbler. The other

one evidently left for a safe country as I heard nothing more of him. I took my dead turkey and went off in the direction Mr. P. had taken. I soon met him coming toward me. He said he had heard a turkey gobbling near him, but could not call it up as he was a poor hand at calling. We moved off across a hollow and over the wet ridge, when we heard another gobbling off to the south of us. We went around the point of a hill toward him, and having the hill between us and him we succeeded in getting near enough for him to hear me call, so we prepared ourselves for him and I undertook to call him up so that Mr. P. could get a shot. After answering me several times he seemed to be coming nearer, and finally we could hear him strut and drag his wings just around the point of the hill from us. There was an old pine turned out by the roots not more than thirty yards before us, and soon he stepped out from behind this root into plain view. Mr. P. fired one barrel and the turkey rolled over, but got his wings spread and started to fly, the steep hillside giving him a good start. But Mr. P. gave him the other barrel before he had fully got under way, and he fell and rolled and flopped down the hill to the bottom, where we found him feet up, dead.

We were both now well satisfied to go back to camp, where we found Mr. L. with a fine gobbler hung up before the tent. He immediately asked me if that was my rifle he heard about five minutes after he shot. I told him it was, and asked if he killed his turkey outright or if he had to run it down before he got it. He said the turkey managed to flop off a little piece, but he had him in hand when he heard my shot. So we decided that he had won the hat by about two minutes and a half.

We dressed one of the turkeys and cooked breakfast, and after waiting some time for Joe ate our share and put his by the fire to keep warm. Joe did not return until nearly 10 o'clock, and we had become really concerned about him. He said he had heard the report of our guns and was determined he would not come back empty-handed if he could help it; but luck was against him this time, as he did not get a shot at anything. "But," said he, "I'll get even with the rest of you before the week is up," which prediction he fulfilled to his satisfaction. We spent a portion of each day in hunting, aside from our morning's trip, but the woods were so open that we were not very successful in getting any game in the daytime.

Thursday morning was clear and still and delightfully warm, and every gobbler in the woods seemed determined to make the most noise. At one time I could hear four different turkeys gobbling in as many different directions. I succeeded in calling up and killing one before the sun was fairly up; then changed my position, so as to call for Mr. P. again. I commenced to call and two came from opposite directions. I fixed myself to shoot one and Mr. P. the other. Mr. P.'s came within shooting distance first and he fired, killing his. The other turned to run and I fired, but missed him. He arose and flew across a hollow in front of us, alighting on the other side, and started to run up the hill. I had another cartridge in the rifle by the time he struck the ground. He was fully one hundred yards away, but could not run very fast up the hill. I fired again, hitting him in the back, and he came tumbling down the hill toward us. Joe came into camp this morning also bringing two turkeys. Mr. L. was the unlucky one this morning, he having got a shot, but did not kill his turkey.

Friday morning was cloudy and windy again, and Joe was the only one of us who brought in a turkey. Friday evening our teamster arrived, and we made preparations for our last hunt in the morning. Saturday morning was clear and still. Joe and Mr. L. each got a turkey. Mr. P. and I did not meet with success this morning. We did not hear but one gobbler, and he had found other company before we got near enough to him to call. We got within sight of him and a hen, but they saw us and flew before we were within shooting distance. The proceeds of our hunt were eleven turkeys, Joe killing four, Mr. P. and Mr. L. two each, and I three.

LEW WILLOW.

ARKANSAS.

THE ELUSIVE BLUE GROUSE.

II.—IN THE THICKETS OF THE MUSSEL-SHELL.

THE sun's first rays, peeping through the open door of our log cabin, banished all thought of sleep for that day. Springing from under the warm blankets with a sigh of regret, Jack Miller and I hastily pulled ourselves together, and our boots on the wrong feet, of course, as we always did when in a hurry. After an exchange of prisoners had been effected, we finished our simple toilet, and raced over to the cabin serving us for a kitchen, dining-room and drawing-room combined.

As we ran the keen, bracing and invigorating air made us feel like race horses with sinews of steel, while the thick October frost was ground into diamond dust by our heavy riding boots.

Bursting into the kitchen, we found cook busily making baking powder rolls and frying salt pork and potatoes, which merrily sputtering over the fire strongly appealed to my ravenous appetite.

Jack and I were spending a year on our Montana cattle ranch. This ranch is situated on the Musselshell River, and consists of four roughly-built cabins with a stable, all having mud roofs, and a few miles of superb pasturing land under fence. We had about eight thousand cattle on the range, and eighty horses for round up purposes and daily use.

The penetrating smell of breakfast soon brought out of their shack our six men, but half awake, with tousled heads and disordered clothes. But a turn at the only wash bowl and towel of which the ranch could boast, soon transformed them into as many handsome cowboys, all perfect specimens of their class. They were each known by some curious sobriquet, and were quite a peaceable set of fellows when not full of bad whisky.

Finishing a meal of a size to make an Eastern man pale with horror, one of the boys rode after the horses feeding in the pasture a little distance away. He soon appeared, driving them before his circling lariat into the corral. There we lassoed and saddled our favorite hunters, and, slipping guns into slings, galloped off to wage war upon the grouse.

At this season the favorite retreats of mountain or blue grouse, as they are sometimes called, are thickets of young cottonwood along the river bottoms, in which grow many kinds of berries and roots. The young birds, fully fledged by this time, become very fat and juicy, affording excellent sport for both gun and palate.

There was a large tract of land covered with these thickets about seven miles down the river from the ranch; for this we now set out. A pleasant ride brought us to it, and selecting a promising spot, we picketed the horses with a lariat.

Our grouse is a noble game bird. It is about twice the size of a partridge, much swifter on wing, and more delicately flavored. Their plumage assumes a dull gray tint at a little distance, corresponding so closely to the color of brush that it is almost impossible to distinguish them until they dart from under your very feet. In summer, when flushed, they go but a little way and then settle down until again disturbed later on. However, a mile is no long flight when they are thoroughly frightened. Some of their habits resemble very closely those of the domestic fowl. They are extremely fond of rolling and scratching in loose earth, and always cackle when excited exactly like a hen. It is terribly annoying to hear them all around you and not to be able to catch the least glimpse of one on the ground.

I had scarcely torn my way through a thickly woven mass of wild currants and rose bushes, when whirr—whirr—whirr—r-r, I darted five grouse. Quickly throwing up my gun, I emptied both barrels at this covey, and had the satisfaction of seeing two of them fall. Securing these I slipped a couple of fresh shells into my smoking gun and pushed ahead.

About this time Jack made a very fine shot, deserving mention, as it is seldom accomplished. He was a little ahead and about fifty yards to the right, when three birds were flushed. Killing two with the right barrel, he dropped the third with his left, in very pretty style.

Shooting a good many grouse on the way we finally emerged from the tangled undergrowth, to find the Mussel-shell rippling at our feet. A herd of deer drinking from the shelving bank opposite vanished like phantoms through the brightly tinted bushes, leaving no proof of their reality, save delicate prints on the yielding sand.

The sight that met our eyes was too beautiful to describe. Like a band of burnished silver, winding in and out between bristling cliffs and spurs of the ancient mountains, ran our tiny river. Here and there, dotting its placid surface, lay flocks of ducks and geese, welcoming each newly arriving comrade with wild and musical cries of delight. Tall cottonwood trees lined either bank, over the tops of which could be seen the white-haired Snowies, seemingly separated from our touch by a light veil of haze.

The impatient neighing of our ponies dispelling a reverie which had stolen over us, we snatched up our game and took the shortest cut to them, finding they had eaten up everything within range. Springing into the saddle we went to another place also frequented by grouse. There we found them in abundance, and shooting until ammunition gave out suspended operations for the day.

We must have presented a funny appearance riding home with necklaces of grouse, gamebags full of grouse, and grouse hanging from every conceivable place. Our bag was as follows: Jack's shooting 21 birds and I 25 made a total of 46 grouse.

Arriving home before dinner time, we dressed half of our game, and had a hard time to get them all in the oven at once. The reader will not believe me when I say those 46 grouse disappeared in three meals.

W. S. S.

NOTES FROM THE NORTH WOODS.

Editor Forest and Stream:

Having just returned from a two-weeks camping out in the Adirondacks, I will give a short account of how things looked there this spring from a sportsman's point of view. First, the winter has been unusually mild and the spring unusually early, hence game has wintered well and prospects for fall hunting are very good. Our camp was on the highest waters of Hamilton county and twenty-five miles from the nearest house. Within a mile water flowed into Cedar River, thence into the Upper Hudson, Moose River, thence through Black to St. Lawrence rivers, and also through West Canada Creek to the Mohawk, showing us to be on the water shed of the Wilderness. The mountains about us there are locally known as the Blue Ridge, and being so inaccessible are the great breeding place of deer. A large pack of wolves now stay in this section, and if they keep on increasing the State should offer sufficient bounty to insure their extinction, as they kill more game than the sportsmen. One of our guides, a trapper who lives all winter in said mountain, came on a pack of twelve wolves that had a buck down, last March. He drove them off, but the deer's throat was cut. He skinned out a quarter, which, with his peltries, made quite a load on snow shoes, and went to his winter camp about one and one-half miles away. He returned for more meat in less than two hours, but found the bones only, the wolves having made short work of what he had left. Having his rifle this time, he tried to get a shot at the rascals, but they were too shy. He says that the hawks, owls and foxes were very destructive of partridges the past winter, and hardly a day passed that he did not find their feathers on the snow and evidences of their sanguinary taking off.

In felling a tree ninety feet back of our camp, a partridge was scared from her nest in which we found eleven eggs. She came back toward evening and afterward was so tame that every day the boys would watch her with interest. Squirrels are very numerous there this spring. A guide caught a young one which we soon tamed and had around camp while there. Hedgehogs prowling around nights furnished a chance for fusillades that awoke the tenderfeet in the party with novel sensations. In going in we had to leave part of our supplies at Pillsbury Lake (named after the new warden of Blackwell's Island, a true sportsman, by the way). The guides going back for the duffle next day found that a bear had been there before them, and had made away with the bacon, left his teeth marks in the soap bars, torn open and scattered the crackers and flour, and raised Cain generally. But we found fish so plenty that we did not miss our loss. Bears are very numerous and will furnish excellent sport for hunters this fall. Deer are very plenty, and can be readily seen by daylight anywhere in that section.

We had an A1 cook in "Honest" John Plumley, of Long Lake (as Murray's book calls him), and the increased avoirdupois of every one in the party shows what good cooking and camp life can do for any one that is sensible enough to try it.

I am glad to learn through your valuable paper that the Rhinelander estate has got into hands that will help enforce our game laws. I do not believe in large estates in America, but the good results of Dr. Brandreth's owning a six miles square township north of Raquette is known to all familiar with the Woods. I have fished and hunted all over the Rhinelander estate, and know that if in the right men's hands it is a grand thing for the south part of Adirondacks and a sure place for sport for its owners.

We all feel that we have secured a new lease of life by our trip, and that with renewed energy we can in business

easily make up for the time spent so gloriously on the lakes and streams of the North Woods. M. S. NORTHRUP.

JOHNSTOWN, N. Y., May 31, 1886.

Mr. P. H. Apgar, of Syracuse, who has been an annual visitor to the North Woods for thirty-five years, writes from Number Four to a home paper: "Governor Seymour was well-known to many people here, and his sudden death was a shock to them. Years ago he was a frequent visitor to the Wilderness, and he could tell many tales of his adventures during these excursions which were always made in the winter season. He used to say that the winter months were the best time to see the Wilderness; that then there was far more to be learned of the habits and character of the animals than in summer, that the proper time for hunting and trapping was after the snow fell. He had no passion for angling, and was no expert huntsman and paid little attention to either; but he liked to study the habits of the game that abounded in the Wilderness. He would occasionally shoot a deer, and once killed a moose, said to have been the last one ever seen in these woods, although hunters thereabouts claim to have crossed their tracks within the last five or ten years.

"What remained of the moose were mostly, if not altogether, destroyed by the last generation of hunters, and the deer will be exterminated by the same methods before the close of the present generation, if the Legislature continues to play with this question as it is now doing. A year ago it passed an act prohibiting the hounding of these animals at all seasons; this session it so amended the act as to legalize the practice between the 1st of September and the 5th of October. Other parts of the act are so framed as to give the hounders a virtual monopoly of the slaughter. No 'floating' is permitted until the middle of August, which in effect prohibits that method of hunting, for deer seldom come to the water at so late a period, and after hounding opens, of course, floating would be a ridiculous formality. No deer can be killed in any way after Nov. 1, and this is also a prohibition against 'still-hunting'—the only method of hunting those animals which is justified by the rules of true sportsmanship. So, if the law is enforced, the result, as before stated, will be to render the drivers complete masters of the field, with power to slay the deer *ad libitum*. Everybody who is experienced in woodcraft knows that the hounding of deer is the surest and most effective means of destruction yet invented. Floating, crusting and trapping are harmless pastimes compared with the death-dealing practice of hounding. The main support of the new law came from the northeastern part of the Wilderness, where the deer have been nearly exterminated by hounding, and where venison can be no longer obtained to any considerable extent either by hounding or any other method of capture. The principal operations of the hounders will now be transferred to the Beaver River, the Fulton Chain and the Oswegatchie, where the deer have had some chance for their lives, and where very few were slaughtered last year. Any one who may come upon these waters in September will be regaled day and night during that month with the music of the hounds, and will be enabled to estimate for himself the extent of the bloody work which will then be in progress under the sanction of law.

"The passage of the new act has caused no little hubbub throughout the Wilderness, particularly in the western portion. It is the universal topic everywhere, and will continue so until some change is made or the act wholly repealed. Everybody here, guides and others, are hostile to the measure, and will place all legal obstacles in the way of its enforcement. Already steps have been taken to combine all parties against the hounding of deer on the waters of the Beaver River, and the same course will be taken on the Fulton Chain and Oswegatchie. On Monday evening last a meeting of persons interested in the matter was held at the house of S. B. Edwards, which was attended by about twenty individuals. C. W. Puffer presided and Charles Griffith acted as secretary of the meeting. After an animated discussion it was unanimously resolved that a society be formed for the purpose of discouraging in every proper way the hounding of deer under the law, and of using their best efforts for the repeal of the obnoxious measure. The society having been duly organized, those officers for the first year as follows: President, Joseph C. Dunbar; Vice-presidents, Mark Smith, Charles H. Smith, James Lewis, John Hitchcock, Charles W. Puffer, S. B. Edwards and William R. Smith; Secretary, Charles Griffith; treasurer, Charles Fenton. A paper was then presented and adopted pledging the members of the society and others whose signatures may be obtained to discountenance and oppose by all lawful means the practice of hounding. The paper was ordered printed for general circulation. It is quite safe to conclude that the 'deerslayers' will find a cool reception along the waters of the Beaver River this fall.

"Mr. Fenton is still engaged in enlarging his house for the accommodation of summer guests at Number Four. He has lately removed the 'little red house' to a new location and converted it into a cottage, and is building a two-story house in its place to be ready for occupation this season. He is also building a boat house at the landing on Beaver Lake of sufficient size to accommodate twenty-five or thirty boats."

MONTREAL, June 1.—The Fish and Game Protection Club of the Province of Quebec, which was organized in February, 1859, has just been incorporated. It is admitted by all that it is one of the strongest organizations of its kind on this continent, and counts among its members some of the leading men of the country. The act of incorporation reads as follows: "An act to facilitate the formation of Fish and Game Protection Clubs in the Province." By virtue of an order in Council No. 192, approved by His Honor the Lieutenant-Governor of the Province of Quebec, on the 20th day of May, 1886, M. M. George, H. Mathews, John Nelson, Jr., William H. Rintoul, Louis Alphonse Boyer, William H. Atwater, Edward B. Goodacre, George U. Ahern, Hubert Root Ives, Isaac H. Stearns, Jas. Slesor, Ernest Lacroix, Andrew Dawes, H. W. King, Thomas C. Brainerd, C. de Salaberry, Robert McKay, A. N. Shewan, all of the city of Montreal in the said Province, and others marked in the schedule hereto annexed (over 300). And all other persons who are now or who may hereafter become members of the club incorporated in virtue of the said order in Council, are hereby constituted a body corporate and politic under the name of "Fish and Game Protection Club of the Province of Quebec." The act of incorporation was obtained through the indefatigable exertions of Mr. Selkirk Cross, who spared neither time nor labor in his endeavors to place the Fish and Game Protection Club of Montreal upon a sound and legal basis.

A WINTER HUNT.

FOR thirty-six hours had the large flaked snow been driven down by the January wind; and when on Friday night A. R. and myself met, we planned a hunt for the succeeding day. Rabbits were plenty and pinnated and ruffed grouse were common. If the thermometer was below 20° we were not to go, and so the first thing early in the morning was to look at the slender tube of mercury so as to see if we could fulfill our bright hopes for the day. How gloomy I felt to see the mercury away down in the morning, but bound to at least try it anyhow, I shouldered game bag (filled with grub) and gun and started to R.'s. He met me at the door, and with "We'll go, anyhow" at sight of me, he started back and soon reappeared all prepared. Without a word we trudged along until the last house on the limits of town was passed, and then we both exclaimed, "We-w, but don't the wind hum."

Sweeping across the level prairie it gathered great drifts of snow and hurled them against the snow fences near the railroad track on which we were walking. Well bundled up we easily kept warm by fast walking, but soon decided to leave the track and cut across fields to the grounds, so making a big jump into the drift at the edge of the railroad embankment we tug, roll, stumble and crawl through the drift. Going due north we had to face the wind, which we at first slightly dislike, but soon feel fully repaid when a great flock of chickens start up with that whiz and whir that tightens every muscle and on which all thoughts are instantly eulored. Having a favorite single barrel, it brings down one an instant slow in taking flight, while R., having a more difficult show, emptied his two loads, in order to be sure of the one he first chose.

Not having wanted to take the dogs through the storm, we take their place and dig our victims out of the drift into which they dove. Having seen the rest settle in a neighboring cornfield, we followed them, and by keeping a large hill between we were able to get near them. But as we came near the top of the hill we were obliged to walk openly toward them. As we saw them they took flight, and being out of range we were obliged to retrace our steps.

Seeing brush and timber half a mile in advance, we tried a short cut that led across a valley or ravine. As we approached the cut, R. gave a big jump trying to cross it. It was filled with snow and he sunk up to his arm-pits, while his feet paddled in a puddle under the snow. Slowly approaching him, by the aid of a scarf I succeeded in pulling him out, and, taking another path, we went on.

Going through a large field of hazel brush we saw no rabbits whatever; so we concluded that, on account of the storm, they had all taken to the timber, as they generally do. Facing toward the tall trees, we plunged through the immense drifts. On reaching the edge of the woods we stopped at an old straw stack to eat dinner, or rather our frozen bread and meat. Digging in the straw, we soon were rested and warmed, and then we started on our fun.

Through the timber ran a small stream. We each took a side and walked down, beating the brush; we came to bunny, buried in some great heap of twigs and branches; he would wait until we knocked at his door, by kicking it, then out he would pop to run about thirty feet only to turn a somersault into the soft snow. We would sight a little in front of their ears and paying no attention to brush, we were very sure to get our meat. Going for about a mile in this way I suddenly came upon tracks in the snow. Calling R. we went on very slowly for about fifty feet, when up with a "wheet, wheet, whirr" went a ruffed grouse. I shot and then R., but he flew on unharmed on account of the trees. Stooping and looking along the surface we saw seven gathered near together, all attention. Hastily reloading we counted and shot, not wishing to take them on the wing among the trees. Three remained while the rest went on, two of which we afterward got. Returning we got a few more rabbits, and as we reached town after the worst walking I ever had, chilled and very near played out, R. had 5 rabbits, 1 chicken, 2 pheasants, while I had 6 rabbits, 1 chicken, 3 pheasants; R. 8, myself 10; so the single barrel held its own stoutly against the double. CANVASBACK.

OSCEOLA, Ia.

FORECLAW OF THE BIG GRIZZLY.—*Editor Forest and Stream:* I send you an exact size sketch of the foreclaw of the big grizzly which "P," your most able correspondent and Rocky Mountain hunter, killed, and a full account of which appeared in your columns in the Christmas number. "P" sent me this claw just before the time of your publication, as a gift and curiosity. It is referred to in his article and I think a published sketch of it will prove interesting and

furnish an item of authentic history for the naturalist. The boys and the beginners with the rifle and at hunting will look upon it with a kind of cold shudder, and the city and village "expert" will have to admit that there is no "tender-foot" about this bear nor about "P." either. I often see, Mr. Editor, your two young half-grown grizzlies in the Central Park menagerie. In their new iron-grated cage they always attract crowds to see them. There are other species of bear mixed with them, but there are none whose claws seem more striking than theirs. As they have access to a hole in the rock for sleeping, and the privileges of climbing the rock by day, it is presumable they sometimes imagine they are in their native mountains themselves, and thus for the moment they appear to be as "happy as two young cubs."—MAJ. H. W. MERRILL.

MR. PRINGLE'S SNIPE SCORE.—A correspondent wishes full details of Mr. Pringle's famous snipe score in Louisiana some years ago. Can any of our readers furnish the information?

THE STANDART SHOOTING CLUB, of Denver, Col., is an organization of sportsmen, who have secured the exclusive shooting privileges on certain lakes on the land of J. W. Bowles, Esq., about one and one half miles west of Littleton, Colorado. The club has erected a comfortable, commodious club house, with bunks and bedding and necessary kitchen utensils, and sufficient stable room; has planted wild rice and erected blinds, and has decoys and other accessories. The lease of its lakes runs for five years from 1884, with privilege of extension for a like term. While the house and grounds are neither large or elegant, they are comfortable and sufficient, and while it is not believed the game will be seriously depleted by our members, a great deal of genuine sport is afforded. The club as an organization, and its individual members, have materially aided in securing proper game laws, and insisted upon their strict enforcement.

HOW LONG DO FOXES AND HOUNDS RUN?—A New York fox hunter has printed a statement that red foxes in his section run before their best hounds from twelve to forty-eight hours. Pray, how fast can any animal run after he has been running forty-eight hours? In Virginia all the fox hunters who catch red foxes will tell you that if a pack of hounds fail to run into reynard or to run him to earth within six hours of constant running he goes scott free that day. Sometimes an old red will run straight away thirty or forty miles and throw out all the huntsmen and all the dogs except a few of the stoutest and fleetest; but you can never prove by any one that that fox was caught. A long fox chase, that is to say, a chase of twelve hours, means slow dogs, and they can't catch a red fox unless a load of lead is thrown into him; and any fox hunter who in this State would swindle a fox out of his life by shooting him would be inexorably tabooed by all the fraternity. But no fox and no hound ever ran forty-eight hours on a stretch.—RED EYE (Virginia).

QUERIES ABOUT MOUNTAIN SHEEP AND GOATS.—Rocky Mountains, Montana.—*Editor Forest and Stream:* Very little is known about our bighorn (*Ovis montana*) and our goat (*Apoecerus columbianus*). Now cannot some of your many readers tell us something about their habits? Following are a few questions I would like answered: Are the summer and winter ranges of each different? Which side of the mountains do they stay on most in winter? Which in summer? When does the rutting season begin and how long does it continue? About what time are the young born? What is their principal food? Do they eat much grass? What quadruped is their greatest enemy?—GREENHORN.

GAME PROSPECTS IN TEXAS.—Edna, Tex., May 21.—We are having an exceptional dry season this spring, and the prospect for chickens and quail is very fine. I came a distance of twenty-five miles this morning by rail, and saw two broods of chickens in the road, they were about the size of quail and could fly nicely, while the pairs of quail flying up along the road bed were innumerable. Wish you could come down here this fall, I could give you all the turkey shooting you wished, and throw in deer for good measure.—LEX.

THE BEST READING FOR CAMP.—Aroostook County, Maine, May 30.—*Editor Forest and Stream:* I start to-morrow for a summer's outing in the wilderness—upper St. John and its main tributaries. I shall divide the season into several trips, coming down each trip for a recruit; and copies of the paper will be so nice to take along for reading. I had no reading on my trip up there last summer. I go where I will meet none others, roughing it in its fullest sense (just what I like), my one pole the only companion.—MAINE.

APPLETON, Wis., May 31.—There are a number of ruffed grouse left over here; I saw six different ones in a few hours stroll a few weeks since; one of them was drumming. They were not at all wild. I think deer had a pretty hard winter on account of deep snow. A large herd wintered within five miles of town, but few people here knew of it, and none were killed illegally I believe.—FUR.

"THE ENCHANTED SUMMER-LAND" is the apt title given by the Chicago and Northwestern Railway to the favored country reached via their line and its connection. A handsomely printed pamphlet bearing this title and descriptive of the summer resorts, angling and shooting points, is sent out by R. S. Hair, General Passenger Agent, Chicago, Ill.

SULLIVAN COUNTY, N. Y.—Monticello, June 7.—Young partridge and woodcock are very plenty and good shooting can be had in this vicinity next fall. Deer are also quite plenty five miles south of this place on the barrens. Good bass fishing can be had here any time during the summer; all the lakes are well stocked.—C. F. KENT.

CLUB RULES.—We have frequent calls for copies of club rules, by-laws and constitutions. Secretaries of gun clubs, angling clubs and game protective associations will oblige us by sending spare copies of their printed rules, that these may be in turn sent to organizers of new clubs.

TENNESSEE.—Nashville, May 21.—Bob White can be heard in all directions. With a favorable summer sport will be good here next fall.—REX.

PUBLICATIONS RECEIVED.

THROUGH THE YELLOWSTONE PARK ON HORSEBACK is the title of a pleasing little book by Gen. George W. Wingate, just published by the O. Judd Company. It is an account of a trip made last summer by the author, in company with his wife and daughter. Instead of following the ordinary route of tourist travel, the party went to Bozeman, there procured guides, wagons and animals, and made the trip to the Park on horseback, a method which gave them great satisfaction. The party visited the Mammoth Hot Springs, the Geyser Basins and the Canyon, returning to Bozeman by way of the Madison Basin. Thence they curiously spelt Tarzans' Pass and Henry's Lake. They had a delightful trip, a number of adventures, such as losing their horses and meeting "bad men," and good fishing. After passing out of the Park General Wingate killed a few elk. The book is pleasantly written and the story is told in a simple, attractive fashion. The principal merit of the narrative is that it gives in great detail just what the party took with them, what they found useful and what superfluous. It will, therefore, prove a useful book of reference to those who propose for themselves a similar trip through this region. The chapters on game and on the flora of the Park are by far the least satisfactory in the book, and contain many erroneous statements. That on the rifle, on the other hand, is very useful, though we can by no means agree with all the author's conclusions.

THAT OLD BOAT.

FELLOW angler, if you have the patience to read this, then tell me, does it not agree with a number of similar experiences that you can easily recall as your mind quickly turns back over the pages of memory? Some one has raised great hopes in your mind by telling you of some mysterious lake or pond that very few people ever fish. He describes it, and the wonderful luck he had there, or ought to have had but for some unforeseen accident. After he concludes his glowing account you mentally put this spot down as a place to be visited on the first opportunity.

After a time fortune favors you and you prepare for the trip. How carefully you plan and what keen anticipation swells your heart. At last, after the journey, you arrive. Perhaps you have come on the cars, perchance been driven, or again possibly it is your own mules that have carried you with your goods upon you back. No matter, you arrive at the stopping place near by and then descend to the lake. Finally, loaded down with duffle of various sorts, you burst through the bushes or struggle through the marsh and stand upon the shore. The lake lies with its shining levels before you. How beautiful it appears to you. Your eye sweeps the shore line, scans the points, explores the various bays and nooks, and you mentally decide on a number of promising spots which you feel quite certain are full of monsters, all eagerly awaiting your bait or fly. And it is almost equally certain that these spots are likely to be some of the very worst in the lake. It is not till an angler knows his ground that he can feel at all positive on this point. But this is the first time that you have seen this water, and you decide that you will have fine sport. You mentally run over all the points you have heard in its favor, and a bright glow tints the coming hour. This is the way an angler always feels when he sees a new lake. His hope always tips the balance of uncertainty on the favorable side.

But, while admiring the lake, you have also been looking for the boat. At last you find it. It looks anything but encouraging. In the first place it has been built with an utter disregard of all principles of natural science. Here are no "wave line" theories exemplified, it is all rule of thumb and a very bad rule and thumb it must have been. Then it is made of huge planks an inch thick and though it may weigh only 300 pounds now, it will weigh four tons at least after you have pulled it a couple of hours in the teeth of the wind, with those short stumpy oars, one of which weighs a pound more than the other and is a foot longer, and on a seat which is sure to be too high or too low. In one case you will either bark your knuckles on your knees, or in the other nearly crack your back at every stroke. Then you can easily see that as it has no skag and with those unequal oars, it will steer sixteen ways of a Saturday, and your chief endeavor will be to keep it straight. This, however, is no easy task, for the old thing being so heavy, when it begins to turn it is bound to keep on doing so. At first it turns so slowly that you think you can easily check it, but it keeps on in spite of every effort, swinging faster and faster till it suddenly whirls with a velocity that takes your breath away and makes your head swim.

But I have become so interested in describing its vagaries afloat, that I have forgotten to tell how it got there.

When you find it on the shore with its remnants of gray or red paint on the worn planks, it is half full of water. The bottom has various relics on it, such as bleached worms, some dead fish, an old tin bait can, some rusty tackle and other things which evince a former occupancy. Perhaps there is even a minnow or two swimming around in it, who survived the ordeals of the last excursion.

When you see the water your heart sinks. The boat will leak! But no! you recall the heavy shower of the day before. That is it! there is where the water came in! The boat has been so well soaked that you decide it cannot leak. Vain hope! wait till you have been afloat an hour or two.

But you must get the water out. You take the tin can and commence bailing. After ten minutes steady work, which has produced no apparent effect, you decide that you will turn the boat up and dump it out. The rest come to help, and finally, after a struggle which makes every muscle in your back, arms and legs crack, she is on her side and the water running out. After letting her down, you notice the seats are all wet and you will have a chilly feeling when you sit down. Finally the duffle is aboard and you are off. Then you notice those little eccentricities that I mentioned above.

After you row a while or have been at anchor a short time, you notice a thin thread of water creeping along the side or bottom. She leaks! never mind, we can keep it under with the bailer. About this time you get a fish. This raises your hopes to fever heat. He is small, but the big fellows will be along in a minute. He is quickly taken from the hook and thrown into the bottom of the boat. He rewards this attention by getting into that wet spot and flapping his tail in a way that sends a shower bath over you. Compelled by this annoyance to stop fishing, you hastily kick him up under the forward thwart and hope he will die there peacefully. For a time all seems well, but soon he is back there again and the process is repeated. This time you kill him and decide that henceforth you will be humane and kill your fish.

You do for a time and all goes well save that the water in the bottom is steadily gaining ground and your feet and everything else are getting very wet. You grin heroically and resolve to not mind it. Perhaps the sport has been growing brisk and in a moment of forgetfulness you throw another fish down without first killing him. This time the effect is tremendous. There is now so much water in the bottom that as soon as he strikes it a regular rain commences over every one. In catching him you get wet all over. And thus the time goes on and mayhap you will have good luck and just as possibly not, but whether you do or not you will be sure to excrete that old boat.

In concluding I cannot help relating an incident that happened last summer, and which illustrates the above. A party of us were out bass fishing. We had precisely such a boat as I have described above. It was divided into three compartments by vertical boards. The middle compartment leaked very badly, and there were about five inches of water in it, in spite of our efforts. I sat at one end, Van, who had been rowing, sat in the middle, over the water, with his feet on the dividing board. Between us, on the second thwart,

was a youngster of twelve. The last of our party was in the bow.

We had scarcely been anchored a moment before I heard an exclamation from the boy. I turned around and saw him tugging at his band-line. He was in a state of great excitement and his eyes stood out like saucers. He immediately began hauling in line with astonishing rapidity. Before I could remonstrate a two-pound bass broke water. The boy took in line so quickly that when he broke he was no more than four feet from the boat. In his course in the air the bass accurately described a right angle, for at the very top of his leap the boy, by a vigorous jerk, swept him horizontally through the air and to the boat.

He fell, full of vigor and fight, directly into the middle compartment and at once unhooked himself. The first intimation of the sport that Van received was a dose of water. He smiled grimly and never stirred. The water was just deep enough to swim in well and the fun began. The boy made several vain efforts to catch him and then retired with me to the stern. We grinned securely and awaited events.

Pretty soon Van got a teacupful of water down the back of his neck. His ire began to rise. The bass made another circuit and Van got another ducking. This time human nature could stand it no longer and he went for him. Round and round went the fish, Van chasing. The bass was so quick and slippery he could not get hold of him. Meanwhile he was getting wetter all the time. At last, full of wrath, he seized a stretcher, and on hands and knees in the water, hunted that bass into a corner, got him between his knees and fast and clnbbd him till he was dead. When he arose he was a streaming and sorry spectacle, but he calmly, without noticing us, went on with his fishing. As for us, we laughed till we were tired and then resumed our sport, but we had no luck. I think the fish must have heard that fight in the boat and concluded that it was a dangerous neighborhood and retired from it.

But oh! these boats; what has the great band of outers not suffered from them. It is all very well for the canoeist who totes his dainty craft with him to smile, but we are not all canoeists and we cry—who shall deliver us from the curse of this bondage? PERCYVAL.

TROUT FISHING ON CEDAR RIVER.

[The following relation takes the place of the "Camps of the Kingfishers" this week. After reading it, the reader will perhaps reflect that in no respect was the composition of the camp more felicitous than in its possession of two such chroniclers as "Kingfisher" himself and "Snake Root."]

I HAD never creeled a trout. Bass I knew and salmon I had worried to the death. The silver perch, rock bass, the naughty pickrel and the whole horde of mongrels, to say nothing of the sucker tribe, were familiar to my hook; but trout—the beautiful trout—was with me a stranger. Hence, when Jeems Mackerel, the mighty "Kingfisher," quietly remarked one night by the camp-fire that there were trout in Cedar, I mentally concluded the day was not distant when Cedar and myself would become acquainted.

The opportunity was not delayed. We had encamped last August—eight of us, including the cook—on Central Lake, Michigan, at the mouth of Sweeney's Creek. At fishing we were a dismal failure. Neither bass nor maselonage noticed our presence. We caught pickrel, and even deigned to watch the blue gills and rock bass swallow our bait, for we were getting desperate. Old Knots swore once or twice in a moment of absentmindedness, a thing so unusual with him it startled the boys and caused Uncle Dan to lose his balance on a log and fall over backward. The old "Suckermooogen" was so dazed by the continued succession of ill-luck that he couldn't see a big deer that trotted on the opposite side of the lake one morning, and offered to bet "the beer" that it was an Alderney cow. You see Bill is a cattle raiser. Another one of the party lost his appetite feeding on pickrel bones, and still another began to talk sentiment.

This thing couldn't last. So one night I nudged Jeems Mackerel in the side, and suggested that "to-morrow would be a good time to try the trout on Cedar." He swallowed the bait.

"All right," said he, "we'll get up early, gather a nice lot of clams for bait and be off."

Now this was contrary to my orthodox views of trout. I had read in divers publications of the exquisite and thrilling pleasure experienced in luring the gamy trout from their lurking places in the sheltered pool. I had heard how artificial flies, deftly constructed, had been lightly dropped on the water, only to be caught up by a gleam of gold spangled with spots and alive with electric activity. To my mind trout fishing was encircled with a perfect halo of angling de light—a dream of picturesque beauty and loveliness, of sylvan shades and shadowy pools, of delicate and deft handling of willow rods and enticing flies. To submerge all this imagery in the cold and clammy proposition made by Jeems Mackerel to gather "clam bait" to catch trout with gave a shock to my nerves that was paralyzing. I was sorry afterward the shock didn't confine me to camp.

Next morning I rose early, and following instructions, occupied the half hour before breakfast in boating about the shallow water in front of camp, searching the bottom for clams, or "mussels," as we called them down in Kentucky. To catch a clam requires some art where the water is three or four feet deep. They rest on the bottom with the shell slightly ajar, and the prospector gently protrudes a sharpened stick toward this orifice. If the aim is good and the approach gentle and the thrust made at the right time the clam shuts his shell on the stick and is lifted into the boat "just as easy." But if the stick touches the shell too soon or the aim is imperfect the jaws of that clam close quickly and its prospect of being used as bait is gone, perhaps forever.

When passing through Cincinnati, en route, I had bought a small red box in the shape of a new moon, as something likely to prove useful on our trip. This red box was now brought forth and partly filled with clam, chopped into small pieces like boarding-house hash. Tying this around my waist with a twine string, that other beautiful theory of landing trout with a "tapering willow rod" was exploded by equipping myself (again at J. M.'s suggestion) with a short, stout, stiff cane pole—just such a pole as the darkies use to catch suckers with in Elk Horn Creek. Jeems Mackerel condescended to inform me, when these arrangements were completed, that I "now appeared the *beau idéal* of a trout fisherman—*sans peur et sans reproche*," or some gibberish of that sort. Strongly suspecting that he was attempting to grease me with doubtful compliments, I cut short his foreign phrases by remarking, in the most sarcastic way, that anglers, like poets, were born, not made.

There was something more in the shot than chagrin at the despoilment of my preconceived notions of the implements essential to trout fishing, for every soul in camp is an ardent

believer in Jeems Mackerel as a "born fisherman." The tacit recognition of his proficiency in that line, whether perceived in my retort or not, at least silenced his batteries.

Half an hour after sunrise we glided down the lake, skirted the wooded points jutting the swamp where the eagles built their nests, rounded the three pretty islands below, threaded the patches of weeds that grew thickly in the shallow waters adjacent, entered the mouth of Intermediate River, and gliding rapidly down its crooked stream, soon landed a half mile above Bellaire, at the head of the rapids. This growing village we reached after a few minutes walk, and at once began inquiries among its inhabitants touching Cedar, its trout qualities, and the best place to strike it. Sifting the information gained, we concluded our best course would be to reach the coveted stream at a point some three miles away, at the intersection of the township road, then follow its meanderings until close to Bellaire, by which time we estimated the sun would be low and our creels heavy.

As we left the village by a road that led straight away to the east, piercing the center of a broad avenue cut through the dense forests, we fell in with a brother angler, a native, hastening in the same direction. A glance at his outfit sent another shock to my notions of trout fishing. A bamboo pole, fully seventeen feet long and an inch and a half at the butt, lay on his shoulder, and we judged its elasticity as scarcely discounting a good-sized fence rail. The line attached to its small end seemed large enough and strong enough to haul a cow out of a sink hole. Matching this formidable equipment was a stout canvas bag slung from the shoulder, close and compact, and capable of hiding a bushel of trout.

"Say, Kentucky, how's that for high?" said my Kingfisher comrade as we closed up on our new friend.

"Well, I should say nearly twenty feet," I replied. "Do you think he can travel on Cedar with that rig?"

"Oh, yes. You see he takes all the stiffen' out of the trout when he jerks 'em with that pole. Just breaks the spinal column at the first snatch, and saves any further killin'." And then, you see, when the stream is too deep to wade, he just lays his pole down, one end on each bank, and snakes across to the other side. Bet yer life, though, that canvas bag will cook his trout before night."

The explanation and prediction were both satisfactory, for if there is anything Jeems Mackerel can't explain, or any aching void of human inquiry he can't fill, and do it in a way that fills you chuck full of satisfaction, it is not going to be found lying loose around camp.

Overtaking the angler with the big bamboo, we suggested inquiringly that "perhaps he was going fishin'—perhaps not." "Well, I reckon perhaps you are right," said he, "leastways I calculate on ketchin' a few trout out of Cedar before I get back."

"Thar ain't nothin' like tryin'," said Jeems Mackerel (who had a way of dropping naturally into any style of vernacular that he chose—a peculiarity that more than once upset the gravity of the camp of the Kingfishers, "for if old Bill Hess hadn't a tried he never would a strangled that wild cat up in Canada. That cat gin him a powerful tussel, though, but Bill ain't the feller to squeal when a cat is tryin' to scratch a hole in his bread-basket."

With this quaint allusion to an unknown episode in Bill Hess's adventures (unknown probably to Hess himself), Jeems Mackerel relapsed into silence. I looked away through the woods at something that wasn't there, and our new comrade, after waiting apparently to hear how Hess got away with the cat, wisely concluded the matter was postponed, and changed the subject.

"Thar's a friend of mine going to jine me out here by the Fair Grounds, and we are goin' to fish together. Three other fellows," he added, "went troutin' on Cedar early this mornin'. Guess they'll get the best of the luck before we hev a chance."

By this time we reached the inclosure denominated the Fair Grounds. Two or three acres of weeds and stumps, surrounded by a plain board fence, and supplemented by a few board shanties, it had more the appearance of a deserted clearing than a spot dedicated to an exhibition of the products of industry. At the further end of the inclosure our new acquaintance raised a loud hullo, which was quickly answered from the other side of the clearing, and his expected friend was seen wading across the field. A half mile further on they turned sharply to the left, and bidding us good bye disappeared in the thick woods.

The sun was now getting high in the tops of the trees above us, and not yet having compassed more than half the distance, we fell into a long Indian lope and "lit out" for our destination. Jeems Mackerel is long-winded and tough, and despite that constitutional weakness for water that prevented him from passing a brook without imbibing a goodly portion of the crystal fluid, he managed to keep a good second. A half hour more brought us to a point where we detected a faint path, nearly obscured by fallen leaves, diverging to the left. As we had been instructed to follow the left fork of the path about this distance out, I halted, and studying the "lay," asked Jeems Mackerel what he thought about it. Circling round and examining the faint traces of travel, then taking an observation by the sun of the direction in which both forks of the road pointed, the old veteran, whose instinct was equal to the scent of a deerhound, and seldom was at fault in an emergency, finally remarked, "Well, I guess we'll take the left hand path. It aims right anyhow, and a feller that aims to be right and fails, ain't to be blamed much."

His conclusions were right, for the path proved to be a sort of cut-off that led into the main township road a few yards over the hill. Following the latter down a sharp descent, we landed on a bridge of logs that spanned a small, clear, rippling stream. The township road was merely a path through the dense woods, and the bridge of split slabs, though evidently long built, had not even the imprint of a wheeled vehicle upon its smooth surface. It was a virgin bridge, and no doubt one of those cases of work ordered for the benefit of the contractor.

"I guess we ain't lost," said Jeems Mackerel, as he dropped the butt of his rod upon the bridge and peeped slyly over the edge into the water. The latter formed a small pool on the upper side of the bridge, and gliding swiftly under its cover, halted in a twirling eddy on the lower side before it darted under the bushes and vanished.

"Call this a trout stream?" I disgustedly inquired, "why, it isn't big enough to furnish a day's washing for a country hotel."

"You bet it's a trout stream—a genuine orthodox, square up and down camp meetin' trout stream," replied Jeems Mackerel, "and I'm going to lift a speckled trout out of the water in about two minutes."

He unwound his line, attached a small bit of red clam to

his hook, and cautiously slipping to the edge of the bridge, dangled the bait temptingly on the surface of the water just under the shadow of a clump of bushes. There were no trout there or they were not hungry, for none sprang to the feast. Changing to the lower end of the bridge, he tried the eddy for only a second, when the quick jerk upward of rod and line indicated that something had been developed.

"There! I had a bite."

The eager expression of pleasure that illumined his features at this one nibble amused me greatly, and I encouraged him with the inquiry: "Was it a fly or mosquito bite? Looks as if it was about the same size and strength."

Covering me with a crushing look of pity at my apparent lack of appreciation of the presence of trout, he caught the bait in one hand, and raising his rod overhead with the other, he leaped from the bridge into a fresh pile of "bresh," and waded through while it cracked and bent and switched his legs and body. "Come on," said he, "we'll follow the stream down and fish as we go, for we are 'bound for the happy land o' Canaan.'" The "bresh" and logs were "powerful thick," and I hunted around for a better opening than wading through a thicket. Spying a log covered with green moss that seemed to reach out into the wilderness, I cautiously stepped on it and meandered toward the top. The next thing I knew, the moss being damp and slimy slid out from under one foot, and after trying to make one leg three feet longer than the other, and grasping at the twigs and branches in reach, I gave a free pantomime of hair pulling from a head that wasn't visible, and then went down with a crash into a mass of brush and logs that were not quite as soft as a bed of balsams. The fall didn't hurt me much, but surprised me a good deal. Rising on one elbow, I looked up and listened. I expected to hear Jeems Mackerel express his satisfaction at my style of traveling. Fortunately he had disappeared, and I counted one in my favor.

Anybody can disappear on Cedar. It is the worst tangle I ever saw. The fallen timber looks as if it had been tied up into knots and "crimps" and "bangs." The standing timber is so close and the shade so dense one can't tell whether it's dinner or supper time. The soil is light and spongy, and affords so little hold for the roots of trees that the latter topple over as soon as they get big enough to catch the wind. Wind-rows are common. In fact, the whole forest seems a wind row. Logs heaped on logs, trees on trees, brush growing everywhere and around everything, an interminable mass of limb, and log, and brier, and brush, until one is dazed with the prospect of getting through it. And right in the midst of this fearful labyrinth, as if ashamed of sun and daylight, the waters of Cedar River steal their way. Into its hidden pools and foam-clad eddies even the flecked sunlight dares not peep.

Picking my bruised limbs from the "bresh" and recovering my cap and rod, I crawled through to the other side, where I found just room enough to stand upright. My companion had vanished. The smell of the woods, the tinkle of the stream and the one incipient nibble had fired his soul, and he was off "a-huntin'" for the speckled beauties like an old hound on a hot track.

Guessing that down stream was my course, I had only to trace the water in the deep tangle and follow, as best I could, its uncertain wanderings. This was no easy job in that wilderness of fallen timber and mazy thickets. Trailing my rod behind me I crawled or climbed from one vantage point to another, until shortly I spied a little quiet pool under the brow of a projecting bank. This I approached under cover, and baiting my hook with a bit of clam gently dropped it into the water. A splash and a quick tug at the line instantly followed. Small as was the evidence of something alive in that hole, it sent an electric tingle through every nerve. Mechanically I jerked the pole upward, and at once found myself fishing in the leafy branches overhead. I had missed my first bite, or rather my first trout. Recovering my line and a bunch of twigs at the same time, I cleared the hook and again sought to tempt the concealed fish. But it was idle. He let me "severely alone."

Moving a little further on I tried another pool, about the size of a water-bucket, that lay partly concealed under a big log that covered its face. The clam had scarcely reflected its rosy coloring in the crystal depths, when a galvanic current ran up the line and caused me to yield a responsive jerk. The effort tossed a massive trout of about five inches length, backward among the leaves. I searched for the little darling that had dropped from the hook and soon had its diminutive form stretched in the palm of my hand. It was my first trout. Mingled disgust and wonder seized me. Disgust that I had come so far and suffered so much to capture such a wee thing as that, and wonder at the icy coldness it imparted to my hand. Then I began to admire the spots on its sides, coupled with the rich band of gold that melted above imperceptibly into a shade of bronze, and below into a pinkish tint bordering a base of silvery white. And when I recalled what a fierce tug it gave at the hook I was not sure I had any right to get mad about the matter after all.

One fact at any rate permeated my brain at that time and has never gotten away since and that is—for its weight and appearance, no fish on the "livin' yearth" (as J. M. would say) can equal a trout for an unhesitating solid square pull at the end of a fishing line. There's no dodging about a trout—no sickly, sentimental nosing about the hook. He goes at the bait with a dart like a skyrocket—sometimes leaping clean out of the water—and as he flashes back to his cover with the hook in his mouth, an impression crosses your mind that you have captured a streak of greased lightning.

Dropping my first trout back into the water—for it came within the guardianship of the law—I now hastened to overtake Jeems Mackerel. Perhaps you know what it is "to hasten" along the banks of Cedar. Well, it means a good deal more than one may care to tell. Plunging to your knees in mud and slime, stumbling over roots, butting against trees, bruising your limbs on logs, scratching your nose on briars, sinking the naked hook to the barb in your fingers, and all this time the flies are sticking their poisonous fangs in the back of your neck and the mosquitoes are tasting your ears and making blood pimples on your nose. There nothing like trout on Cedar.

After ten minutes of "hastening" I saw the bushes shake ahead, and getting nearer, spied the old "Kingfisher" skinning out on a limb that projected over a pool much larger than I had yet seen. He was showing his rod ahead, and, with knees hugging the slender limb, was balancing the hind part of his body in the air to prevent too much of it from getting on the wrong side.

I stopped and watched the maneuvers of the old veteran. After getting as far out on the limb as he deemed safe and sufficient, he bent a branch down until he could put it under his left arm as a steadier, and then unreeling about a foot of line he projected the hook previously baited toward the sur-

face of the pool. "Virtue has its own reward," and so had Jeems Mackerel. A trout instantly took the bait, and a second later was dangling at the extremity of the short line. Jeems was now in "hookety." The limbs were too thick to recover the fish properly, and his hold too precarious to go fooling round. The old fish hawk seemed to study a bit, and then just slid the rod backward between his legs, keeping the tip slightly elevated until he could reach the wriggling trout, which he took off and slid into his breeches pocket for safety. Then fingering his clam box with his left hand, he rebaited the hook, and bless my eyes! if he didn't actually spit on his bait and again drop it in the pool for another bite. "Superstition and raisin' is stronger than edicashun," says "Old Knots," and after that feat of Jeems Mackerel, I don't doubt its truth.

The trout wouldn't take the bait any more, so Jeems Mackerel backed himself down to solid earth as a bear would back down a tree—stern foremost. Getting upright on his hind legs, the old fellow caught sight of me. Giving a self-satisfying chuckle, and dropping naturally into one of his vernacular styles of expression, he remarked: "Snake Root! yer'll have to do a heap more things than skinnin' a log if yer goin' to circumvent trout on Cedar. Yer can't tell always when or whar yer goin' to ketch 'em, or what kind of bait they'll tackle. They are just like wimmen—monstrous fickle and onsartin' when you want 'em most."

As he delivered this sage piece of philosophy, he slid his hand into his breeches pocket, and extracting the trout, proceeded to string it on a forked twig with several others he had previously captured. Then turning round, he started to lead the way along the stream. "Come on, pardner," said he, "and we'll rake some more of the toothsome mcrcsels from their dens."

Alas for the treacherous soil of Cedar! As the old "Kingfisher" closed his comforting assurance, one of his feet went down in a muskrat hole and the other got tangled up in a root, and for about twenty feet there was a regular circus performance. The right foot scattered dirt and leaves as it came forcibly from the hole, and toppling forward, Jeems nearly lost his balance, then executed a semi-hop and jump, only to reel off sideways; snatching at saplings and wiping the bushes clear of dry debris from the last flood, he finally landed, head on, against the trunk of a monster hemlock. But for the obstacle, I firmly believe he would have continued to fall fully twenty feet further.

"Jerusalem!" he exclaimed, "my brains feel sorter paralyzed." Then glancing anxiously at his rod that went fishing in the bushes on its own hook, he added, "What would Uncle Dan Sloan say to see me playin' leap frog that way? It reminds me," he continued, "of the day old Bill Hess killed a bar upon Sturgeon. Arter trackin' him a long ways old Bill finally caught sight of him down in a holler. Takin' a quick sight he let 'Old Hannah' loose, and down tumbled the bar over a log in the bushes. The bresh was so thick yer couldn't see yer hand afore ye, hardly, and old Bill was so anxious to stick his knife in the brute, he forgot his eddication and went a runnin' to the spot. He couldn't tell exactly the lay o' the land, and befo' he knowed it he jumped over a log and lit kerfummux right on the bar. The varmint was only skotched, and when Bill jumped on him, it sort o' waked him up like, and givin' a screech like a wildcat, it up and tried to hug Bill. As his gun was empty and his knife onhand at that particular minit, Bill didn't think it was necessary to stop and explain the accident, but he up and lit out—and they do say [at this point Jeems Mackerel paused to chuckle] that he riz and fell over logs and 'bresh', and tore saplins worse nor a three-legged mule with a bushel o' horns on his back. He just cleaned a path in the woods so plain that next year the county surveyor run a wagon road whar Bill had blazed the way. However, let's likker."

Involuntarily I felt for the small flask of "soothin' syrup" or Kentucky "opodeldoc," which I carried in my hip poeket for use in case of possible snake bite.

"No, no," exclaimed the veteran "Kingfisher," resuming his normal expression, "that article and myself don't harmonize. We are not on speakin' terms. Humanity was never made better by its use, and while I don't interfere with my friends in finding a spell o' comfort and a realizin' sense o' consolation in light doses of the fluid—as for me, I don't want any better liquid than sparkles and bubbles right out o' the ground. It's the coolestest, the sweetest and the purest drink on the face of the livin' yearth, and Michigan is the spot where it comes up colder and fresher and more self-satisfyin' than anywhere else, accordin' to my notion."

As he concluded this bit of apostrophe to water and to Michigan, Jeems Mackerel picked up his rod, and gathering the half dozen trout that had been scattered among the leaves by his prolonged fall, he led the way in search of another trout hole.

Aside from the difficulties of travel involved in climbing over fallen timber and creeping through the matted undergrowth, it was frequently necessary to make detours to get around points that were too formidable to attack, or to avoid marshy places where depth was no object. Meanwhile the flies were getting in their work and the mosquitoes were having a jamboree time. They had evidently posted spies and pickets out on the edge of the forest, and the whole tribe had been informed of our presence as providing a supply of choice meat. There is nothing modest about the actions of a Cedar River mosquito. He just plants himself where the flesh is tenderest and proceeds to dig his way into the soil with the indifference of a sexton. Just think of 40,000 of these insects following you for hours and taking turns at tasting your blood!

We had been following the little stream in its tortuous course for perhaps a mile in a straight line, or about five miles as we wobbled, and by industrious work had managed to creel about a dozen trout, none of them weighing above four ounces. Hunting the deepest holes, the stream finally seemed to divide up and disappear, and while searching for it we suddenly came plump on a watercourse five or six times larger. It went splashing on its way, diving under roots, darting under banks of green mould and behaving like a genuine forest torrent.

This was Cedar River itself, and we had simply been spending hours in fishing a tributary of that famous stream. Jeems Mackerel ought to have known better. If he didn't, he might at least have suspected that something was wrong, for it wasn't the first time he had trouted on Cedar. However, we forgave him freely for two reasons: First, because we have no doubt the old fellow was actually lost, and second, because Cedar River didn't afford any more trout than its tributary. As I looked at the little string of fingerlings that dangled on his twig, I could not repress a pang of sorrow that the poor things should be weaned so soon,

The old "Kingfisher" never seemed to tire nor grow impatient. One minute he would be astride a swinging limb, and, with one hand clutching a branch overhead, he would strain his back trying to drop his hook under an opposite bank, just where the water paused a minute to enjoy the rest it could find nowhere else. Then he would skin out on a log and imitate his namesake by sitting motionless for an indefinite period, under the delusion that the trout beneath would forget he was there. Or, lying flat on the ground and nudging along as he pushed his rod in front, he would crawl slowly and painfully to the brink of some eddying pool only to return disappointed. With the zeal of a disciple and an implanted love of nature in her original robes, I stuck closely to the practices of the veteran fisherman, and with a little more than equal lack of success.

As the afternoon wore on the shadows rapidly deepened and gathering clouds warned us of rain ahead. We hurried along as rapidly as it was possible, for a night passed in the swamps of Cedar, with its millions of flies and mosquitoes, and its damp, chilly atmosphere, was a prospect too gloomy to contemplate. We had only time to pause now and then to try some pool more inviting than the rest. Travel as we might, there was no moment too pressing for the old "Kingfisher" to kneel down and swallow a mouthful of the deliciously cool water of every spring and tiny rivulet we passed. May the time never come when the tinkling music of the running waters and the clear depths of the cooling springs shall cease to refresh, with their poetic imagery, the weariness of his mind, nor fail to plant themselves as free gifts of nature beside his path, wherever his footsteps may tread in the gentle pastime of "ye noble angler!"

At last the rain drops began to patter down through the leaves and fall in larger drops on the ground at our feet. In half an hour the rain had increased to a steady fall that bethought no letting up. Fortunately we now came to a sort of path, made by cutting off the saplings two or three inches above the ground, and hewing a log out of the way here and there. This at least indicated the shortest way out, and while we took an occasional tumble over the stumps, and slipped on the wet banks of the numerous gullies we crossed, we made fair headway. Jeems Mackerel said there was an old clearing ahead somewhere, and when we reached that we had only to climb the bank and find ourselves in sight of the Fair Grounds. Pulling down my hunting cap and buttoning my coat to the chin, I faced the rain with all the contentment possible. Jeems Mackerel's old slouch hat bent its rim down and shot its peak to the sky as if it were used to rain and rather enjoyed it. At last, after an hour's twisting and tumbling, a gleam of light was revealed ahead, and then the long, gaunt forms of burned trees reached up toward the leaden sky. The faint path we followed suddenly terminated at a huge upturned tree that blocked the way. Climbing the trunk we saw nothing ahead but a mass of wet weeds, marsh grass and brush. The outlet was shut off entirely.

"Got to fly," said Jeems Mackerel.

"Wings too wet," I replied.

"Watch me sail," said J. M., and suiting the action to the word he poised himself on the end of a limb, then with rod overhead he leaped into the dripping weeds and bushes. There was evidently a bottom to the thing, as he demonstrated by wading through to the top of the bank. I had no choice but to follow. In dropping among the brush I nearly broke my ankle on a concealed limb. I didn't know it was there. The reeds shed water like a duck's back. By dint of hard pulling and slipping and sliding I reached the top of the bank. The more extended view this elevation gave me, enabled me to see J. Mackerel wading waist high through the tangled grass and burrs and sprouts that infested the clearing. He was making a "bee line" for the Fair Grounds and shedding water as Jim Wolf shed "sassers" as, fighting the tomcats, he fell off the shed roof into the plates of candy set out to cool. I followed his illustrious example, tracking him by the water line, and bent brush and weeds, and soon had the satisfaction of reaching the main road where it crossed a tiny rivulet.

Taking a short rest under a tree while the Kingfisher was making away with a quart or two of his favorite beverage from the cooling stream, I noticed two or three dozen spoiled trout scattered over the ground. It needed no second thought to recognize in their pallid forms the rejected contents of that old canvas bag we had seen earlier in the day, and about whose cooking properties Jeems Mackerel so forcibly prophesied.

From this point to Bellaire, the rain fell in torrents. We first sought shelter under the trees, hugging their trunks and dodging the streams that came down the under side. As the cold drops finally went crawling down our backs, between skin and cover, and having a prejudice against the mean feelings that come of being soaked by inches, we concluded to quit temperizing and to walk into the deluge like men. It rained some. In fact it came down so hard we began to feel sorry we hadn't some cork life preservers with us, so we could float and save the labor of traveling. Jeems said he hadn't had so much fun "since the big storm on Carp Lake."

[Mem.—That was the time Jeems Mackerel wrote of the big fish biting his spoon in half, and of his riding four foot waves in an egg shell. Jeems is a veteran.]

As we tramped through Bellaire, with sand and water mixed sloshing in my shoes, I remembered that little speech of J. M.'s about my being the "beau ideal" of a trout fisherman, "sans peur et sans reproche." The thought excited my risibles until, laughing outright, the old snipe heard me and looked around inquiringly.

"Nothin', only laughin' to keep up the circulation."

He knew that was a whopper, but reserving his wrath, he turned his face to the front and pushed on. It was getting dark when we reached the boats. The "Kingfisher's" fondness for rowing (he resents any interference with his prerogative as chief oarsman) served him a good turn on the backward trip up Intermediate River and Central Lake to camp. While the exercise kept him warm, I sat in the stern and shivered with wet and cold. I fancied the old rascal (Jeems is a shade under seventy) enjoyed my discomfort. I afterward got even with him on a tour to Six Mile Lake.

Our arrival in camp was hailed with such a degree of welcome that we almost forgot the troubles of the trip. I am not sure, though, that the prospect of a change from pickering to trout for breakfast didn't have something to do with that welcome. "Old Knots" said that on this special occasion there would be no harm in breaking the rule of abstemiousness and swallowin' a dose of "opodeldoc" to drive chills and rheumatism from the system. Uncle Dan removed his pipe from his mouth and suggested that "all things were made for some use, and as we might be wene snake bit unbeknownst, there was no harm in vaccinatin' against the pizen." As "Suckermooogen Bill" added his approval with

the sage observation "that there was but one time to die," I felt my strength as a cold-water disciple oozing out my finger ends, and with desperate resolution was about to submit to the infliction, when Jeems Mackerel concluded the inquest by icily remarking, "When a fellow wants to go to the circus, it's wonderful how anxious he is to have the children see the animiles, and how much natural history that is in a Bengal tiger, a spotted hyena and a monkey."

I firmly believe Jeems Mackerel will become a confirmed cold water inebriate. I had my satisfaction, however, for while he was satisfying that enormous appetite of which he is almost sole possessor, he attempted to drain the bottom of a can of peaches, and a humble "yellow jacket" that had gone to sleep in the bottom touched the hot end of his body to Jeems's tongue, and for ten minutes I thought he was trying to exhibit that circus, "natural history" and all. "Suckermooogen Bill," a splendid cattle doctor, spent two days treatin' what he called a "ginooise case of black tongue." Uncle Dan thought it was small pox and wanted to inoculate. I suggested that Furr and Snyder might go around the neighborhood and collect up the children and bring 'em to camp to see "the evil effects and witness the awful example of indulging too much in cold water as 'it comes sparklin' and bubblin' fresh out o' the ground."

When the old Kingfisher got well of that "yaller jacket," he spent most of his time persuading the boys not to mention the subject outside of camp, and specially not to let his wife know anything of the circumstance, "for," said he, "she always did vow that men had more tongue than wimmen, specially if Jeems Mackerel was around."

We never told anybody about the affair, and don't expect to, as we consider this little episode "don't count."

Snake Root.

FRANKFORT, KY.

THE NEW YORK TROUT LAW.

THE laws regulating the capture of all kinds of trout, have again been amended by the Legislature of New York, and the bill has been signed by the Governor. In our issue of May 27, Mr. John D. Collins complained of errors in the law as it stood, and on the 25th the bill introduced by Mr. Doyle to correct these errors, had passed. The Governor has signed it, and we notice that the date of capture for brook trout is restored to April 1, except in the counties included in the forest preserve, and that the new brown trout are protected. We regret that the clause restricting the capture of brook trout under six inches in length, was left out. Perhaps this was "done in the engrossing" where it is claimed that the error in the former law occurred. We give the law in full:

AN ACT to amend chapter one hundred and twenty-four of the laws of eighteen hundred and eighty-six, entitled, "An Act for the preservation of moose, wild deer, birds, fish and other game." Passed May 25, 1888; three-fifths being present.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Chapter one hundred and twenty-four, of the laws of eighteen hundred and eighty-six, entitled, "An Act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended so as to read as follows:

§ 1. No person shall catch, or attempt to catch, or kill or expose for sale, or have in possession after the same has been caught, or killed, any speckled trout, brook trout, California trout, brown trout, salmon trout or land-locked salmon, save only from the first day of April to the first day of September in each year, except in the counties included in the forest preserve, established by chapter two hundred and eighty-three of the laws of eighteen hundred and eighty-five, where it shall not be lawful to catch, or attempt to catch or kill, or expose for sale, any speckled trout, brook trout, brown trout, and California trout, save only from the first day of May to the first day of September, and salmon trout and land-locked salmon from the first day of May to the first day of October in each year. No person shall at any time take or catch any speckled trout, brook trout, brown trout, salmon trout, land-locked salmon or California trout, from any of the waters of this State for the purpose of stocking a private or public pond or stream except from the waters of Lake Ontario. No person shall at any time willfully molest or disturb any of the fish mentioned in this section, while they are upon their natural spawning beds during the spawning season, except in the waters of Lake Ontario, nor shall any person take any of said fish, or any spawn or milt from any of said fish while upon their natural spawning beds in any of the waters of this State (except such as are wholly private). Any person violating any of the foregoing provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of ten dollars for an attempt, and twenty-five dollars for each fish caught or killed, exposed for sale or had in possession during the prohibited season aforesaid; and a penalty of fifty dollars for disturbing or molesting fish upon the spawning beds, or taking spawn or milt therefrom, with twenty-five dollars additional for each fish taken thereon. The foregoing provisions are not to apply to the operations of State or public hatcheries, or to the artificial propagation of said fish by State or public authority; nor to the taking, transportation or possession of fish-ry thus artificially propagated or distributed for the stocking of waters. Owners or proprietors of private hatcheries are also exempted therefrom to the extent that they may take fish, spawn or milt in their own private waters, for the purpose of artificial propagation, inclusive of the sale, transportation and possession of fish-ry or spawn thus obtained or propagated for the purpose of stocking waters. In all other respects these provisions are to apply. No officer of the State nor any person, shall place or deposit in any of the waters of the Adirondack region of this State (so called) any fish, or fish-ry, or spawn, or milt, except speckled trout, brook trout, brown trout, salmon trout, California trout, or land-locked salmon unless the fish deposited or placed in such waters are indigenous to the particular water where placed, except that non-preying or non-destructive fish, such as usually constitute food for the species above named, may be therein placed. Any person offending against this provision shall be deemed guilty of a misdemeanor, punishable by imprisonment in a penitentiary or county jail for a period not exceeding eighteen months or a fine not exceeding a penalty of five hundred dollars, or both, in the discretion of the court, for each fish or spawn deposited in violation thereof. No person, common carrier, corporation, association or company shall, at any time, carry or transport or have in his or its possession for the purpose of transportation, any speckled trout, salmon trout, California trout, or land-locked salmon caught or killed in that portion of this State constituting the forest preserve; and any person, common carrier, corporation, association or company which has in his or its possession any such trout shall be deemed to have them in possession in violation of this section; provided, however, that they may transport from the forest preserve, or have in possession for the purpose of transportation, speckled trout, brook trout, brown trout and California trout from the first day of May to the first day of September, and salmon trout or land-locked salmon from the first day of May to the first day of October in any year, caught or killed in the forest preserve, for each owner of said trout, provided that they be accompanied by such owner. Any person offending against this provision shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each trout or part thereof had in possession for transportation in violation of this provision, and may be proceeded against in any county of this State in which the offender or prosecutor resides or the offender has an office for the transaction of business.

SECTION 2. This act shall take effect immediately.

THE NORTHERN LAKES OF CANADA are described with routes, guide to best camping, fishing and shooting localities, hotels, cost of travel, etc., in a 200 page guide book prepared by Barlow Cumberland, Toronto, Canada. There are maps of the Muskoka Lakes, Simcoe and Couchiching, Georgian Bay and other waters. The book is crammed full of useful information, designed to point out the way and make it easy for tourists, pleasure seekers, sightseers, anglers, shooters, canoeists and all the other wings of summer outers in the Dominion. The maps are of special value, being drawn on the panorama plan,

SALMON IN THE HUDSON.

Troy, N. Y., June 7.—*Editor Forest and Stream:* Several salmon have been taken below the dam at this city within the past week. There are known to be four and there are rumors of others. The largest one which we have any positive record of weighed 14½ pounds, and it was a fine plump fish. The salmon are now stopped at the dam here and are being taken in nets. This should be stopped at once and fishways should be built to allow them to reach the upper river where they can spawn. The fact that there are salmon in the Hudson should arouse anglers and game protectors to see that the first crop is not destroyed.—J. H. R.

Mr. H. P. Schuyler, of Troy, has written to Mr. M. M. Backus, of New York, that on Monday last a 14½ pound salmon was caught at the State dam, making the third within a week whose aggregate weight was 35 pounds. Mr. Backus writes to Mr. Blackford that there is an impression at Troy that a few years ago the State Legislature made an appropriation for a fishway at Troy, but it never has been built. Mr. Schuyler says that the fish referred to will be the last one killed, as "a few knights of the angle intend to take matters in hand," and that his brother has notified the fishermen that all fish taken in future must be returned to the water, and adds: "I believe the waters in the vicinity of the dam are swarming with salmon that are unable to get above the dam."

Troy, N. Y., June 7.—*Editor Forest and Stream:* Two salmon have been taken here. These must be fish that were planted three or four years ago by the U. S. Fish Commission from the Long Island hatchery. I saw the first shipment taken to North Creek by Mr. Mather in 1883 while they were on the platform at Saratoga, and expressed my opinion to him that it was doubtful if they would ever return, because they were so small. I am prepared to believe that more will come.—D. Y. SMITH.

Troy, N. Y., June 4.—On the second day of June some fishermen took from the waters of the Hudson, just below the State dam at this city, a strange fish, some ten pounds in weight. They presented the fish to their employer, who was also ignorant of its proper name and species, but found it very good eating. Yesterday another of the same fish was taken at the same place. It was brought to the city and in the evening I had the pleasure of inspecting a fine male salmon, which measured 28 inches in length, 16 in girth, and weighed 10 pounds 8 ounces. Did not the Legislature provide for the construction of a fishway in the above-mentioned dam? If so, let us have it at once.—SEYMOUR VAN SANTVOORD.

EYED HOOKS.

"NOTHING is new," said Talleyrand, "but that which is forgotten," and the saying is strikingly illustrated by the eyed hook. Eyed hooks have been in use by fishermen so long that the "oldest inhabitant" does not recollect their first adoption; and yet when their existence had at last become like the aborigines of this country, almost improved off the face of the earth, they were suddenly resuscitated—reinvented with some improvements—and, lo! according to Mr. Levison (and others), those which have the eye turned up are "about perfect," and, to pile Pelion on Ossa, those with turned down eyes, labelled with the talismanic name of "Pennell," are "much superior" to the "about perfect" ones. Moreover, Mr. Levison recommends fly-fishermen not to lose much time about giving the latter hooks a fair trial. I would suggest that the angler wait till their price is more reasonable. At present the manufacturers ask what is aptly characterized by a large English firm of dealers writing recently a "murderous price," in fact, about ten times that of the best Sproat, which is, in my opinion, a far superior weapon in regard to shape of bend.

To those who are not acquainted with the eyed hook a few words concerning its history, form and utility may be of interest. The "turned up" eyed hook existed at least half a century ago. That I know, for in the fly-book of my paternal grandfather I find the remains of flies dressed on them. But they were ill made and coarse, and usually of the Kirby bend, a maker who is said originally to have derived his secret of tempering hooks from Prince Rupert. Hence these hooks, till within the last few years, were employed chiefly for sea-fishing and night lines for eels; their apotheosis in the dress of a quill-gnat floating fly had not yet been accomplished.

At last, about five years since, the disciples of the floating-fly school of up-stream fishing for trout, beginning with those fishing the English Itchen, Test and other Hampshire chalk streams, found that the drying of the fly in the air cracked off so many flies—added by the gossamer gut which is used of necessity—that some remedy, partial or entire, became imperative. The needle-eye hook was first tried and found undesirable because the eye cuts the gut, and finally, Messrs. Bankart and Hall—two justly esteemed premier fly-fishermen—after countless experiments and failures, succeeded in devising the turned up eyed hook which, as to bend, they decided, after the most exact and careful trials, be it remembered, should be a modification of the Sneek and Limerick. I have fished with these hooks over the shyest of English trout—those of the Itchen—and can indorse the enthusiastic opinion of all the chief anglers of England, from Francis Francis downward; and also that of Mr. Levison, that they were and are "about perfect." That was the general verdict. They hooked the fish with certainty, showing that a rigid gut snell was not absolutely necessary at the end of the shank; their penetration and holding power were conceded to be in advance of the Sproat or round bend, and their fouling quality, by reason of the "Sneeky" side twist, was *par excellence* all that could be desired. "The force of nature could no further go," was opined by all who thought about the matter. In a word they were "about perfect."

But anon arises the drastic and reforming Mr. Pennell. This gentleman, I gladly concede, rejoices in a piscatorial record of a very high character. In it we find that he had undoubtedly written the best book on pike fishing, substituted six typical and supremely bizarre compilations of feather, silk and tinsel for the thousand and one flies of the entomologist angler, with which he proposed to slaughter all the members of the family *Salmonidae*; and that his is the distinction of having advised down-stream fly fishing, withstanding to the face that price of trout fishers, Stewart, author of the "Practical Angler." In his recent volume of the Badminton series, he advances the "turned down" eyed hook. This gives its only right to be named after him: for the down-eyed hook was made by Allcock & Co., of Redditch, as they assert, twenty years ago for Holyrood, of

Gracechurch street, London, and the bend of the hook is precisely that of the old Limerick. It is amusing therefore to read Mr. Pennell, writing (*Fishing Gazette*, April 8), "I am advised that the sale of these hooks under my name by unauthorized firms would be contrary to law." How sublimely modest in the gifted author of "Puck on Pegasus!"

To advert, however, to the practical utility of the eyed hooks generally, it seems to me that their chief merit lies in their being less liable to break off in casting, and in the ready changeability of which they are susceptible. Still in this regard their benefit is like every good thing in this "best of all possible worlds," not unalloyed. When fishing a cold mountain stream in a chilly wind—not by any means an impossible conjunction of events—with numb fingers, the tying of even the "gain knot" (Mr. Pennell's again, though as old as the first bit of string) is fraught with difficulty, and I know by experience that the tiny fly may more easily slip from the fingers than the old-fashioned snelled hook, and that the eye of the hook to this short sighted generation of neuresthetic and over-worked money grubbers is often provokingly indistinct, and as evening gathers round and the fish hasten to make the most of it, this is to say, the least of it, like Lord Palmerston's world, "a fortuitous concatenation of incongruous" circumstances against the enjoyment of the eyed hook, whether its eye squints up or down.

J. HARRINGTON KEENE.

MANCHESTER, VT.

ANTRIM COUNTY ASSOCIATION.

At a meeting of the Antrim County, Mich., Game and Fish Protective Association at Central Lake, the following officers were elected: Roswell Leavitt, of Bellaire, President; George M. Clow, of Central Lake, Vice-President; F. H. Thurston, of Central Lake, Secretary; Thomas M. Rushton, of Central Lake, Treasurer; George W. Albrecht, of Bellaire, Vice-President for Kearney township; Jesse A. Cary, of Central Lake, Vice-President for Central Lake township.

Mr. Leavitt moved for a vote to see whether, as a society, the association will exert its influence to enforce the present statute laws of this State for the protection of game and fish. In response every member voted "yea."

The following explanation of the spirit and purpose of the association is given by the secretary in the *Breeze*: "The following is intended to explain the motives and intentions of those who have organized the Fish and Game Protective Association: They believe that among our inalienable rights are life, liberty, and the catching of fish. Life and liberty we have, but how to catch the fish? I used to be called a good fisherman, and settled on these lakes expecting to have all the fishing I wanted. In the past three years I have not caught ten pounds, and I think it useless to try with the only legal means—a hook and line. Some say: 'Spear them—net them—shoot them—blow them up with dynamite.' In answer it may be urged that such methods are illegal. But we are told to pay no attention to the laws, that nobody minds them, and that we can't get fish unless we break these statutes, or buy from those who do. Now there are those among us who, while quite willing to fish with spears, are not prepared to defy the law, and who believe that disregard of existing statutes of any kind is a very bad sign. If A breaks one law, B another, and C a third, and so on without hindrance from public opinion, we should soon have no law. It is better that our laws should be obeyed; then, if they are wrong, or need improvement, let all combine together about the needed changes. Our association mean to try its best to learn the reasons why the supply of fish in our waters, once bountiful, has in most of the lakes so fallen off that we can hardly get a 'mess' of bass or pickerel unless we spear them, and even by such means only in spawning time. Such is the general verdict. If this is the fact, and if we must depend upon the spear for our supply of fish, then by all means let spearing be legalized, so that when a man wants to exercise that craft, he need not go about it like a thief. 'If it shall appear that the fault is in the absence of proper fish ladders at the dams, let measures be taken to have the needful work done, and give the people a fair chance, which, I take it, means the chance to catch a few fish with a hook and line, as we did five years ago. If a man has no spear, he ought not, therefore, to be defrauded of his rights. Some have talked about this association proposing to do something or other to interfere with the rights of the poor. How can this be done? The poor, as the rich, whoever they may be, are equally affected by existing laws, they can join the society for twenty-five cents, and one would think, could easily outvote all other classes. It would seem for their interest to join the society, and add their influence to assist in obtaining the repeal of unjust laws, if any such exist, and help to secure the passage of others which shall maintain their rights in our fish and game."

"One gentleman of Central Lake spoke feelingly, just before the organization of the society, and said that he could get as much fish now as he ever could. He admitted that it would be by spearing (contrary to law). His brother stated that fish are very scarce compared to their former abundance. The first did not favor the association, the second did."

"A prominent farmer of Echo, who attended the meeting but heartily opposed it (mainly, as I think, from a misapprehension of its objects), emphatically denounced the whole movement as contrary to the interests of the poor. He said that the supply of fish would always be about the same, and as many as people wanted could be had on the upper lakes. Perhaps he was right in this last statement. The fish in spawning time are likely to go up stream as far as they can get, but they seldom return to feed the poor along the shores of Central Lake. The spears around Six Mile Lake and Scofield's dam attend to that part of the business, but how long will the supply last?"

"I once asked this same gentleman from Echo to use his influence in getting a starch factory established at Central Lake. It would have been backed by heavy capital, and would have proved an important industry. It offered to pay 25 cents, cash, for potatoes just out of the ground, regardless of size. He in reply, speaking as now, in what he said was the interest of the poor and needy, scouted the idea. The price was too low, and he fought the project tooth and nail. There has since been no year when potatoes could not have been bought for less money, and just now they go begging at fifteen cents. The shrewdest sometimes fail in judgment, and we may thank this gentleman, and those who sided with him, that we have no home market for our potato crop."

"There is no doubt that we ought to have in our waters a better supply of fish, but without organized efforts we shall never have it. This is why a few, among whom are represented the farmer, the teacher, the lawyer, the merchant, and

others, have joined hands and made a move in what they believed to be one of the real interests of the people of Antrim county. Will not others, no matter what may be their occupation or possessions, assist us by joining the Antrim County Fish and Game Protective Association, and help secure equal rights for all? F. H. THURSTON."

DECORATION DAY AT BLOOMING GROVE

THE special car attached to the 4:30 P. M. train on the Erie road on Saturday, May 29, contained thirty-three members and guests on their way to the club house of the Blooming Grove Park Association, to pass Decoration Day. At the house were already twenty-seven guests, and the newcomers swelling the number to sixty, it took the superintendent some little while to arrange accommodation, but all were provided for.

Sunday, May 30, bright and warm, a beautiful day, was passed in various ways, some starting early for the Blooming Grove and Shohola fishing, others rowing on Lake Giles, no fishing being permitted there until July 1. Others walked over to the breeding park, to see the trout hatching and the new fish ponds. In the hatching troughs were upward of 75,000 fry, some hatched from eggs brought from the Michigan State Hatchery, some from Caledonia, some English brown trout, eggs imported from England, and some from eggs taken from the club's own breeders. In one of the raceways were 250 breeders all from the Shohola, as fine trout as one would want to see. Besides stocking its own streams the club will soon be in a position to supply the market with eggs and fry. One of the prettiest sights was to see the deer in the breeding park, an enclosure a mile square, come up to the salt lick. Timidly they step along, until at a word or a movement of the body, though you are standing 300 yards from them, away they dash out of sight. In this park are upward of 300 deer, and none are allowed to be killed, except in the fall, bucks may be killed still-hunting. Sunday was a quiet day though the members and guests were all enjoying themselves. In the evening, in the large parlor around the piano, the whole party of sixty joined in Moody and Sankey hymns, and later camp meeting tunes and some secular music. All seemed to catch the spirit of the occasion and each vied with his or her neighbor, in the desire to make it pleasant for all.

Monday was the day fixed for the several contests. Annexed are the scores, and it will be seen that they are scores to be proud of. There were several private contests, both in rifle shooting, pigeon and clay-pigeon shooting. Evening came too soon. Hardly was the day long enough to allow all the contests. Monday evening the various victors celebrated their victories by offering entertainment to all who would accept. Chess, billiards, whist games were indulged in, and the air of Pike county was made to resound with chorus after chorus. Some of the party left the club Monday afternoon for New York, but the larger part waited for Tuesday morning and the special car. Tuesday morning was perfectly beautiful when the six coaches left the club house at 6 A. M., all too sorry to go. Among those present were D. G. Croly, T. W. B. Hughes, G. H. McLean, Dr. S. M. Nash, R. J. Leggett and wife, H. W. Nason and wife, H. M. Williams and wife and daughter, T. E. U. Curtis, N. S. Smith, W. H. McCord, R. B. Lawrence and wife, H. W. Banks and wife, W. H. H. Stafford and wife, Joel Parker, W. F. Owens, J. B. Miley, H. M. Montgomery, C. R. Hewitt, Daniel Youmans and wife, D. Bacon, Dr. E. M. Sell, Frank Reynolds and many others.

Rifle match, 300 yds. for club prize, silver badge:
Curtis.....3350-15 Nason.....4333-17

Second match, at 10 birds:
Chapman.....110-2 Lawrence.....110-2
Nason.....00-0-2 Smith.....00-0-2

NEW FISHING IN CONNECTICUT.—Over the hills to the west of Newton lies a pretty spring-fed body of water, which the maps call Fountain Lake and the natives Taunton Pond. It is a favorite place with the fishermen, and unkind critics have asserted that there were more anglers than fish there half the time. It has been stocked half a dozen times, more or less, and the Connecticut Legislature has made laws for its special benefit without permanently increasing the number of its denizens. Four years ago, however, the pond was stocked with German carp. For two seasons nothing was seen of them, but last year a few representatives of the new fish were discovered prowling about places where the bottom is muddy. During the past few weeks some of them have been caught, and a day or two ago Andrew Nichols who lives near the pond and understands the science and art of fishing in it, captured a carp that weighed fifteen and one-half pounds—ten pounds more than any other fish ever taken out of the pond. The big carp is now a prisoner in a tub at Nichols's home. The scales on some part of its body are said to be as big as a silver dollar. The capture has boomed fishing in that locality generally. Fishermen who have invested bait in speculations in the Housatonic River have just solved a riddle which puzzled them for a year. About twelve months ago there appeared in the river what seemed to be a new fish, a sort of a cross between a bass and a prickback. This spring a good many of them have been caught, and, as they seemed to be larger than those of the same species captured last season, the wise men among the fishermen were kept busy trying to solve the problem. And now it turns out that they are rock bass which got into the Housatonic in this way: Three years ago the fish commissioners put into the river at New Milford 50,000 of what were supposed to be landlocked salmon fry. By some mistake the cans were mixed up and the greater part of the fish were rock bass. This explains the new species and the fishermen's puzzle.

THE FLUTTERING FLY.—We give herewith a cut of a new fly, invented by Mr. Wakeman Holberton and patented by Mr. Charles F. Imbrie, of the firm of Abbey & Imbrie, New York. A glance will show that the head of the fly is near the bend of the hook instead of at the end of the shank, in fact it is turned completely about. It is claimed that the new fly offers less resistance to the air in casting and more resistance to the water in drawing it in, thereby giving it a fluttering, lifelike motion, in fact appearing more like a natural insect than the old patterns whose wings close when being drawn through the water. Mr. Holberton says of this fly: "While the peculiar fluttering motion adds very much to its attractive qualities, its great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly. In five days fishing this season I caught sixty-six trout, losing only three that were hooked, an unusual small percentage, as every angler must admit."

THE FLUTTERING FLY.
Patented May 4th, 1886.

HOOKED IN THE GULLET.—The fight of a hooked trout depends much on the way in which it is hooked. A Detroit correspondent who sends a drawing of a 17½ inch, 24-pound trout, says: "My brother writes from Muskegon county as follows: 'I inclose a life-size drawing of a sockdologer (trout) that I caught out of the pond near the dam; was just about to draw up my line and go home when I felt a slight nibble, and drew up promptly but no game. Dropped in again and felt the same, but left the bait (the tail of a minnow) to allow the fish to gorge it; and sure enough he did, and when I pulled he came to the surface with a rush, and Paul, who was standing near, said, 'Brose, you have got a whale this time sure.' The hook had caught in his gullet and the strain caused him to keep his mouth open which soon drowned him. He didn't make half the fuss in consequence that a smaller one would have done caught in the lip. I finally drew him up on the shore of the dam, and Paul grabbed the line and flung him out, and you bet we just enjoyed the sight of so fine a fish, the largest caught in the creek so far, and a beauty in shape and color. Since then have caught a few; have taken forty-two in all.'"—C. J. T.

ANOTHER BIG TROUT.—Mr. Thos. B. Mills, of Wm. Mills & Son, No. 7 Warren street, N. Y., sends the following communication, describing a large trout just taken "in out of the wet" at Rangley: Quosoc Angling Association, Indian Rock, Me., Camp Kennebec, June 5, 1886.—Dr. Charles Haddock, of Beverly, Mass., George Oakes guide, took off Sandy Point, Lake Mooselucmeguntic, a trout weighing 10½ pounds. The weight was taken nine hours after fish was caught, and must have been at least 11 pounds at time of capture. Length, 28½ inches; girth, 16½ inches.—CHARLES G. WHITE, F. H. LOVELL, THOS. A. PERKINS, THOS. B. MILLS.

SUSQUEHANNA BASS.—Athens, Pa., June 7.—Bass fishing on the Susquehanna promises to be good here this summer, as they are taking the fly quite readily now as bait is not obtainable yet. The largest bass caught this season weighed 4 pounds 9 ounces and was taken by Mr. E. W. Davies on a black fly. A few others have been caught, but none as large as this. "The Six" have just returned from a trouting trip to Pine Creek, Potter county, with a fine mess of trout and all of good size.—P.

A SALMON YARN.—Now that the Atlantic coast rivers are being stocked with salmon, the hardy seafarer is gradually turning his inventive faculties from sea serpent yarns to stories of big salmon seen at the mouths of the stocked rivers and in the harbors. Capt. Studwell, of Babylon, L. I., is ahead with a tale of a salmon eight feet long observed last Friday evening in the Great South Bay.

THE DETROIT LAKE, ST. LOUIS, ST. PAUL AND MINNEAPOLIS FISHING AND SHOOTING CLUB issues for the benefit of members of the club and their invited guests, round trip tourist tickets from St. Paul or Minneapolis to Detroit and return, good until Oct. 31, following date of sale, at rate of \$6.

CLUB RULES—We have frequent calls for copies of club rules, by-laws and constitutions. Secretaries of gun clubs, angling clubs and game protective associations will oblige us by sending spare copies of their printed rules, that these may be in turn sent to organizers of new clubs.

ALLEN's bow-facing oars, \$8 per pair. Fred A. Allen, Monmouth, Ill.—Adv.

Fishculture.

Address all communications to the Forest and Stream Publishing Co.

SHAD FOR THE HUDSON.—Two car loads of shad have been sent from the central hatching station of the U. S. Fish Commission at Washington for the Hudson. They were offered to the New York Commission and accepted by State Commissioner Blackford. The first lot of 1,000,000 were planted at Troy and the second shipment of 500,000 were put in a Catskill. These with the 250,000 from Cold Spring Harbor, planted at Greenbush, makes a total of 1,750,000 already planted. As the shad of the Potomac spawn before those of the Hudson these fry get an earlier start. The New York Commission usually begins hatching about Catskill in June.

SALMON FOR THE ANDROSCOGGIN.—Belfast, Me., June 8.—The Fish Commissioners of this State have placed one hundred thousand salmon fry in the tributaries of the Androscoggin River. The fry are strong and healthy and promise well.—H.

FISHWAYS FOR NEW YORK RIVERS.—The Governor of the State of New York has signed the bill providing for fishways in the Schoodic and Mohawk rivers in Montgomery and Schoharie counties.

The so-called "trout" of South Georgia and Florida is not a trout but a black bass. Our perch are not perch but sunfish. A jack is a pickerel. Catfish are not all catfish; some of them are bull pouts. Our red-finned pike is only found in Southern waters and near the Gulf. Our war-mouth perch is a rock bass.—Quitman (Ga.) Free Press.

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olecott, Manager, Milwaukee, Wis.

Aug. 24, 25, 26 and 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. George H. Hill, Manager, P. O. Box 76, Cincinnati, O.

Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point N. J.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3689.

IRREGULAR BENCHINGS AT DOG SHOWS.

Editor Forest and Stream:

In your report of the recent show held by the W. K. C. your reporter complains of the manner of benching the dogs, those belonging to one exhibitor all together, regardless of class, offering as his objection, the trouble visitors and reporters have in finding certain dogs, the same of the attendant when required to take them into the judging ring.

It is true this trouble exists to a small extent, but there are greater conveniences to the exhibitor than he mentions, "a few steps in caring for them and the pleasure afforded in seeing them together."

The time is past when the "intelligent" exhibitor will put his dogs into the show to be cared for and shown by the regularly employed assistants of the club, knowing well the great disadvantage they will be under in the charge of a stranger, one almost always ignorant of what is fully required of him. The feeding, watering, and exercising is not all, particularly a young or inexperienced animal, wants. Then the pulling or kicking into the ring so often seen (the superintendent cannot be everywhere at the same time) and placed behind his (the attendant's) legs. We saw Mr. Donner send a well known handler for a bitch that was treated thus at the above show, and she really deserved her fate, which, under some hands, would have been overlooked. Then, how many dogs are groomed by the assistants?

You may say this is foreign to the subject. What is desired to be shown is of much greater importance to the exhibitor than you intimate—to have his dogs together that he may personally (or by proxy) groom, feed, water and generally care for them—the unobstructed view of each other, the smelling, an occasional caress; the presence will assist the dogs in enduring their confinement, there will be less noise, less nervous excitement, no fighting round the corners or over tops of the stalls, and last, but not least, far less cause of disease so prevalent and so much feared at shows. I have never had a case (or had one reported me in those I have sold) of distemper from attending the shows, and I attribute it in a great measure to training my dogs, young and old, within seeing and smelling distance of each other.

I think this greatly overbalances the slight inconvenience the visitors and the few reporters are put to in finding and comparing certain dogs. For the latter there are ample opportunities in the judging or exercising ring, upon the floor, etc., during the four days (it should be three) of the show.

Doubtless the management you complain of was the result of the gentlemanly superintendent or the club listening to the requests of exhibitors and waiving any desire or pride they may have had to have seen the numbers run with the catalogue.

As an exhibitor, I know its value and am for it all the time; if I cease to exhibit I will not deny it, having "been there."

Ask the owners of the dogs, from two to six in number, on the open benches in the show, and see if they do not say there is even much more than has been stated above in it, and surely they, as the foundation, should be condescended as much as possible with consistency.

E. W. JESTER.

St. George's, Del.

DOGS OF THE OCCIDENT.

Editor Forest and Stream:

Being a constant reader of your valuable paper for the past several years, and deriving great pleasure from reading it, I desire to correct a few misstatements in the interesting communication from Col. Stuart Taylor, published in your issue of May 13. He cannot be very well posted on dog matters, nor can he be very well acquainted with many of the dog fanciers or sportsmen on this coast; if he were he would know that your paper has many subscribers here, also that there are many fine bred dogs of various breeds owned by gentlemen in the Far West. The Colonel is known to be an impulsive man, and without a doubt has rushed into print on the impulse of the moment regardless of facts, of which he could have convinced himself if he had conversed with any of the many gentlemen who take an interest in kennel matters on this coast. I will, with your permission, mention a few of the many noted dogs that are owned here.

Senator Geo. Hearst imported to this coast the red Irish setter bitch Kate II. (E.K.S.B. 11,552), bred by Capt. J. H. O'Brien, Dublin, Ireland. She is by Sandy, dam, O'Brien's champion Kate. She took first prize at Belfast and Portland shows in 1882. She was exhibited at Crystal Palace of 1882-3, and on both occasions was beaten by her mother, champion Kate, the best Irish setter bitch in Great Britain. Mr. C. N. Post, of Sacramento, is the owner of a fine Irish setter bitch named Dido, bred by Capt. J. D. Brown, of Missouri Valley, Ia., one of the prominent breeders of the West. Dido was sired by champion Ben, dam Jessie, by imported Grouse out of imported Gipsy. Dido is a very fine bitch, but is strongly marked with white. A number of fine Irish setters are owned by Mr. A. B. Truman, of this city. The most prominent are Lady Elcho T. (A.K.R. 2777), Mike T. (A.K.R. 2779), Nemo T. and Bob T. Lady Elcho is by champion Elcho out of champion Noreen, and is a full sister to champion Elcho, Jr., a full sister to champion Glencho, half sister to champion Berkeley, half sister to champion Brush, half sister to champion Joe, Jr., the most noted dog that ever worked a field. On three different occasions he defeated the king of English setters, Gladstone. Lady Elcho is related to too many noted dogs for me to enumerate. Mike T. is by Nemo out of Nida, Nemo by Larry out of Quail III. Nida by Larry out of Red Bess, Larry by champion Elcho out of champion Rose. Quail III was imported *in utero*, and is by Red Gauntlet out of Quail II. Red Bess by King Bee out of Fannie, King Bee by imported champion York out of imported Banshee. Fannie by champion York out of Gipsy. This strain requires no eulogy, as it is well known throughout the dog world. Nemo T. is the sire of Mike T. He was purchased by Rev. Dr. Hill, of Salem, Ore., from the Cortland

Kennels, of Peekskill, N. Y. Last, but not least, the grandest dog that I ever saw (and I have seen quite a number of them) is Truman's Bob T., sired by Willard's Bob out of Senator Geo. Hearst's imported Kate II. I have in my possession a photograph of J. A. J. Sprague's champion Brush, which I have shown to a great number of my friends, and they one and all pronounced it the photograph of Truman's Bob T. This dog is as intelligent as he is beautiful. Mr. Scott is the owner of three very fine red Irish setters, Jerry, Lena and Pat O'More. Pat O'More is by champion Rory O'More out of Nora O'More. The above mentioned are very fine specimens of their breed and were purchased in the East by Mr. R. H. Neil. Chas. B. Keating, the well-known gunsmith and sportsman, is the owner of a very fine Irish setter, sired by Colgate's Pat out of Howe's Gipsy. He is a large and powerful dog. Judge E. Leavely, of Gilroy, is the owner of a full brother to Truman's Mike T., and there are a great number of the strain owned by R. H. Neil in this State.

This is as far as my limited knowledge extends of the Irish setters on this coast. In regard to other breeds it will afford me great pleasure to contribute what little knowledge I have of them to your valuable and interesting paper, from time to time. I desire to inform your readers that we have on this coast the full brothers and sisters of some of the most noted dogs in the United States.

It is a settled fact that the California Bench Show and Field Trials Club, of San Francisco, will give a bench show, commencing on the last week of July next. It is to be hoped that the Colonel will not wander in the future, and if his time is not occupied too much with the arduous duties of his federal office, I would be pleased to have him call around and see my file of the FOREST AND STREAM, when I will endeavor to convince him, by the records, that the term innocuous desuetude is rather wrongly implied in his kind and interesting communication to your much read paper. In my next communication I will endeavor to inform your readers of the quality of pointer stock on the Pacific coast.

SAN FRANCISCO, Cal., May 25.

THE A. K. C. AMENDMENT.

Editor Forest and Stream:

At the last meeting of the A. K. C. the following amendment was adopted:

"The champion rule was amended so as to authorize show committees to transfer a dog from open to champion class which had become qualified subsequent to the date of closing of entries."

It does not appear to me that the foregoing amendment could possibly have been discussed in all its different bearings before its adoption by the A. K. C. Viewing it now from the standpoint of an exhibitor, it further appears that it will lead to no end of complications and absolute dissatisfaction as well as annoyance both to exhibitor and the club.

To place the matter as I view it, it will be necessary to illustrate its workings. Assuming the premises, the case is as follows: I have 6 dogs—3 bitches and 3 dogs—two of which are already entered in champion classes. I have one dog and one bitch in open classes. I have won first in both open classes at New Haven and Boston, and not until after the entries at the W. K. C. are closed and the week preceding the show do I get advice that my dogs have won each first at Hartford. According to the amendment this throws both open class dogs into the champion classes, so I now have two bitches and two dogs in those classes.

Now the privilege must be allowed me to withdraw either two of my four dogs in champion classes, refund me my entry fees, change the catalogue now already in the hands of the printer, perhaps in those of the binder; also allow me two more entries in open class, and here change the catalogue again. In the event of not being allowed to withdraw two of my dogs from the champion classes, I am compelled to show the four against my will, thus subjecting my own dogs to be beaten by my own, which I otherwise would not permit.

In addition to this I must keep the two I have at home continually in good show form in order to meet such an emergency at the very eleventh hour; and since it takes at least six weeks to accomplish this, I must be at the additional expense without any apparent benefit accruing to either myself or my dogs.

Provision must be made allowing me to withdraw whichever of my dogs I please from the champion classes into which they have been thrust at a day's notice and also to substitute others in open class. I have now only touched upon the interests of the exhibitor who is within a stone's throw of the show at which this amendment will apply; what shall I say of the exhibitor who ships a good dog from St. Louis to Boston, and the owner when the show opens is notified that his dog is thrust into the champion class. He would never have shown against some champions, and here he is defeated without a chance of escape. Will he "kick"? Put yourself in his place. In case he is allowed to withdraw his dogs who will defray expenses of carriage, etc. The club? If not will the exhibitor be satisfied with the change?

A dog also may be fit to win in open class and yet have no chance against the champion, and to enter would mean positive defeat. Again there are special prizes for dogs in open classes which incentive to win may be sufficient for me to expend additional labor and time in getting my dogs in perfect condition and which I now am barred from competing for, as my other dogs are not in proper form. There are a dozen other reasons why this amendment should be abolished.

I trust the A. K. C. at its next meeting will recognize the force of my remarks and arguments and act upon them.

COMMON SENSE.

Editor Forest and Stream:

THE BREEDING OF TRINKET.—In reply to Mr. Schellhass regarding his beagle bitch Trinket (Flute—Queen), let me say that when his first letter appeared in which he drew my attention to the doubtfulness of the breeding of my bitch, I immediately sent a reply, which appeared May 25, and which read as follows: "For his note of May 8 concerning my beagle bitch Trinket, allow me to thank Mr. Schellhass for drawing my attention to the matter. My Trinket is the same bitch he alludes to as being advertised some time since by a Pittsfield party. Mr. Schellhass missed a very good chance to procure a first-class fielder for \$12. The price asked me for this bitch was \$25, and I consider her worth double that as a hunter alone. I shall investigate the correctness of her breeding and inform your readers of the result of my investigation, assuring them at the same time that it was far from my intention to misrepresent anything in connection with my dogs. Should this meet the eye of D. J. Jaquith of Pittsfield, Mass., from whom I purchased Trinket, I hope he will see the necessity of explaining the matter." Since then I have investigated the matter to the best of my ability. I wrote to Mr. Elmore, whom Mr. Jaquith gave as the breeder of this bitch. This gentleman seems to know nothing of selling or breeding this same bitch. This, together with Mr. Jaquith's failure to reply to any of my letters recently written him in regard to the full pedigree of the bitch, which he had promised to send with her, but failed to do so, leads me to believe that the breeding of the bitch has been misrepresented to me, and I am therefore under the circumstances perfectly willing to withdraw any claims made by me in ignorance of the facts, for this bitch. In regard to my advertising her under the name of Trinket, I cannot see how any one can construe this as a misrepresentation; besides that, I had sent the copy of my advertisement to the FOREST AND STREAM before I received the copy of Mr. S.'s first letter. —A. C. KRUEGER (Wrightsville, Pa.).

MASTIFF JUDGING.

Editor Forest and Stream:

I could not possibly get a mention in the class for logic that you would win first in, but then, it would be the logic of the collegian in the old song:

"Oh! logic, logic, not the shallow rules
Of Lockes and Bacon's, antiquated fools;
But wit's and wrangler's logic."

And you will remember how he demonstrated that an eel pie was a pigeon, and was rewarded by a promise of a chestnut horse, which was made good by a horse chestnut.

I do not think it will conduce much to the satisfaction of your readers for us to discuss horse chestnuts vs. chestnut horses, so I will let all your dogs at me go by unless they affect the more important question of what a good mastiff is. You quote Mr. S. W. Smith as saying that Baby was the better dog, but Ilford Caution the better mastiff. Which is the eel pie and which pigeon here? Isn't a mastiff a dog? If so, how can the worse dog be the better mastiff? Or are you giving only "wit's and wrangler's logic"? If the age of Crown Prince was the only objection that Mr. Beaufoy had to him, why did he select a dog in King Canute that is decidedly free from the snub nose and ricketiness of Crown Prince? (As I understand it, H. M. King Canute is lame behind, not straight or weak.) Dogs under twenty-seven inches are not disqualified by the standard? Why ain't they? Does not the standard propose to show what is the correct thing, and when it gives twenty-seven inches as the minimum, does it mean that twenty-five inches will do? Or can it be said that a measurement falling below the minimum is within the scope of the standard? This must be "eel pie." "Deficiency in the specimen" won't do, for that plainly means falling short of the intended perfection, but twenty-seven inches is a fixed, definite statement that allows of no ratiocination. Your worst stumble is over the comparative value of head and weak loin. Does not the standard say of loin, "broad, flat and muscular?" How can a weak loin be a muscular one? This must be "pigeon." As to "a walk, etc.," not counting as a demerit, do you propose to say for one moment that the standard was designed to encourage the breeding of lame dogs? If not, where is the significance of your reference? I "prove" the contrary by pointing to the course of the lights of the O. E. M. Club, do I? Well, the italics I now put in should dispose of that, or does "logic" imply that "some" is the whole? "The rules of the Kennel Club are silent as to standards," but is it not the place of the judge to learn what the standard set up by the conservators of the breed is, and then try to apply it? Your reference to the disputed paternity of Crown Prince loses force when it is remembered that the only question among English breeders is, was he by the Shah or by his son, the Emperor? As to the placing of Ilford Cambria and Lady Gladys, I understood Dr. Perry that he preferred Ilford Cambria, but that her indifferent condition and Lady Gladys's rare fettle was what decided him. This is a point that there is no use squealing about; it never can and never will be reduced to a positive definition, and must be left to the judge's fancy. As to Prussian Princess and Rosalind, I never saw the former move, and am positive that to my fancy she has far the grander head, as Rosalind sadly lacks depth of lower jaw. I just want to know if there can be any "plainer teaching" than that crippled dogs, dogs that shamble instead of walk, watch dogs that could not spring on a toad, should not be first prize winners? If you say that this is not correct, then you must say that we should breed lame dogs! The first-prize winner should be the dog we want to breed; if he is lame, we want to breed lame dogs. Considerations as to what he may prove in the stud are totally foreign here; the only question is, "which is the nearest the dog we want to breed?" and all the dog show rot that was ever got off cannot chance this proposition.

Now as to your criticisms on Baby. You say he is light of bone. He measures 11 inches, tight measure. My De Buch, who has always been commented on, "immense bone," measures just the same. "He stands too high on the leg." Well, he is 30 inches at the shoulder, and his elbow is fully 2 inches above the lower edge of his chest. If there is another dog in the land as comparatively short on the leg as this, please name him. Again quoting De Buch, he is always called short on the leg, but he cannot approach this. "He is faulty in muzzle." Well, I don't see where, unless "faulty" means short of perfect. He certainly would be improved by more breadth of muzzle, but it is only 3½ inches long and girths 15 inches. The lack of breadth is chiefly due to his muzzle being almost perfectly parallel, an excellence very uncommon in mastiffs, as I have seen them. "There is a lack of substance all through him." I will admit that he was low in flesh, but he is a dog of tremendous power and activity, and the man who could stand before his rush or spring will be well balanced on his pins. I would rather risk an encounter with any three of your dwarf or cripple pets than one with him. I may have been all wrong in supposing that layback is a characteristic of a pug, and if so, I beg the pug's pardon; but I do know that the one I compared with a "short-faced" mastiff was a first prize winner, and it *did* have lots of layback, if not as much as the mastiff.

The fact is, that the amount of rot and humbug that has crept into dog matters, particularly as to judging, is tremendous. Only a little while since, as sensible a man as "Porcupine" asserted that the puppy type of a collie was the correct one. Now remember that fashion can make enormous fools of us all, but the reign of the jade is only temporary, or rather the slut only sticks to one thing for a moment's time; and when you say that "a walk like a broken-legged grasshopper" is no demerit, you are bidding very high for the hussy's favor, and may get it, but don't you forget it, she will spile you very suddenly, and you will look very pretty in the fine mudhole she will land you in. I am sure I am very willing to "go before the country" with you on this bare issue as you state it, that a lame dog can be a good specimen.

W. WADE.

HULTON, Pa., May 28.

[We are not disposed to chop logic with our correspondent. There are a few points, however, in this communication that we will briefly notice, leaving to Mr. Wade the task of deducting and classifying the logic. In his article two short weeks ago, Mr. Wade speaks contemptuously of the course of some of the lights of the Old English Mastiff Club, which "certainly seem to point to the conclusion that all that a dog need have is a head, and that if that can be seen sticking out of its stall it is a waste of time to take him into the ring." To-day he says of Prussian Princess: "I never saw her move, and am positive that to my fancy she has far the grander head." If in deducting the logic of this, Mr. Wade should conclude that "the ruling fashion has been followed" with a vengeance, we can assure him that he will find but few to dissent from his view. Mr. Wade also "vigorously defended" Mr. Dalziel for placing Prussian Princess over Rosalind, notwithstanding the fact that he had not seen her move, and consequently was ignorant that her bad legs and shambling gait would "plainly teach" that "the ruling fashion" was still to the fore, and blindly followed. Mr. Wade trots out a lame dog with a flourish and offers to throw himself, dog and all, upon the mercy of a jury of his countrymen and abide the issue. Whatever he is driving at we fail to understand. A glance at the remarks which he misquotes will show that the fault of lameness was not under discussion, but that we only mentioned it to illustrate the working of the standard. When Mr. Wade can point out a single instance where FOREST AND STREAM has not condemned the fault, it will be time enough to "go before the country." It is an axiom of the intelligent mastiff breeder that a good head means good blood and a bad head the contrary. Bad legs and weak loins may soon be bred out by judicious mating, while

it takes years to alter the character of the head. That the standard, although in accordance with the ruling fashion, is too lenient with radical faults may be true. We tried to show Mr. Wade that his mastiff standard does not take due cognizance of what may be grave faults. We cited as an example the broken-legged, grasshopper-gaited specimen described by our correspondent, and pointed out to him that under the standard such a specimen might win, for the greatest number of possible merits forfeited by the lameness would be, under that standard, only 3½ out of a total score of 100 points. By proving this we were not in the least defending lameness as a desirable or even tolerable quality of a mastiff. On the contrary, we consider it a fault so grave that we think the standard ought to provide for positive demerits for the infirmities of the broken-legged grasshopper specimens. Nor does it follow that, since the standard permits such things, the judge or critic who impartially applies its rules as a test of the comparative merits of animals under examination is a blooming idiot or a deep-dyed villain, if occasionally a "good all-round dog" gets beaten by a competitor worse than him at some points, but enough his superior at others to win the place. If Mr. Wade will use the flood of eloquence and ink at his command in giving practical lessons of instruction to breeders, showing them just how they can produce grand-headed specimens that are perfect in other respects, instead of wasting his energies in waging Faustian warfare, he will both deserve and secure the sincere thanks of every lover of the noble breed.]

SPANIEL JUDGING AT NEW YORK.

Editor Forest and Stream:

What is "Brindle" trying to get through himself? In last week's FOREST AND STREAM he tells us of things that didn't happen at the recent New York show, and endeavors thereby to cast discredit on Mr. J. F. Kirk as a judge of spaniels. He states that Brahmin and Black Beau, Jr., won! The latter won, although he does not improve as he once gave promise to, and always will lack substance and be light of muzzle; but where did Brahmin win? Certainly not at New York, where he had competitors. There were two there better than he in his class, and I am not quite certain but three.

"Brindle" asks, "Does Mr. Kirk consider a field spaniel and a cocker as the same, except as to weight?" Certainly not, "Brindle," certainly not (though I hardly know the gentleman, I think I can answer for him). The field spaniel is a heavier headed, coarser dog all over than the cocker, with more lumber, but at the same time a most useful dog in the field; while the cocker is "eminently a well built, graceful and active little dog, showing strength without heaviness or clumsiness," etc., etc. [Vide American Spaniel Club Standard.] A winning cocker cannot be fattened up and be made a good field spaniel; nor a typical field spaniel be reduced and made to win in the cocker class. Sabe? We might breed two cockers and get both good field and cocker spaniels in the same litter. Why is it so? Because from time immemorial our predecessors, the English breeders, have bred cockers and field spaniels together, and our dogs to-day throw back. Whether it is advisable to alter this, or if it can be done, I am not prepared to say. However, "Brindle," be more careful next time you write for the public weal (?) and read up on spaniels beforehand.

BULLDOG.

AN "EXPERT" IN CRUELTY.

DR. BERAH H. WATSON, of Jersey City, was arrested last Friday on the charge of cruelty to animals. The arrest was made at the instance of President McAneny, of the S. F. P. C. A. and Mr. C. J. Peshall, President of the New Jersey Kennel Club. Watson is the Jersey City surgeon of the Pennsylvania Railroad and is an expert employed by the railroad company to give testimony in suits against it. The company found that people who were injured on the road frequently claimed that after some time had elapsed succeeding an accident they suffered from spinal diseases. In order to controvert this Watson began his experiments on the dogs. The matter coming to the notice of the S. F. P. C. A., President McAneny of that Society and Agent Crosby repaired to the doctor's barn, where the experiments had been made. The Jersey City Journal reports the visit as follows:

"The details of what was seen, and the information gained from the young man, who is evidently an assistant of the doctor, in his so-called scientific experiments are almost beyond belief. In one corner of the place was a pen, about twelve by six feet in dimensions, and in this were confined six dogs of mixed breeds. By the aid of a long stick the animals were stirred up and all seemed to be active and healthy except one, a large black brute, which refused to move from his recumbent position in response to the prodding of the stick. 'Where does the doctor get all these dogs?' asked Mr. McAneny of the conductor.

"He gets them all over," was the reply. "Many of them he buys from boys."

"How often do you feed them?" he was asked.

"Twice a day with fresh meat from the butchers."

Turning their attention from the pen, the visitors entered a partitioned room on the other side of the building. Its dimensions were about twice those of the pen. In this was rudely constructed table running the length of the room, a stove, several glass jars, which evidently contained specimens of some sort, and hanging upon the wall was a contrivance which looked like a portion of a set of harness, made of leather and canvas; attached to the ceiling of this room was a suspended rope. From questions put to the young colored man, the method used by the doctor is as follows: The harness is placed upon the dog selected for the experiment, and he is hoisted to the ceiling. A trap door is opened, and the dog being loosened from the harness, is allowed to drop through the trap. Under the dog is a similar trap opening in the floor below. Suspended from this lower trap door is a square frame of iron, suspended by side bars, about three feet below the floor. From two sides of this frame are projections of iron six inches long, extending inward, the space between the two points being about four inches. As the dog descends he comes down back first. He strikes against the iron projection, and if the result happens to be a fracture of the spinal column, the poor brute is ready for the long days of agony which he must endure to satisfy the curiosity of his tormentor. What becomes of the dogs which may be otherwise injured, the visitors did not learn.

Addressing his guide, President McAneny said: "Of course when the doctor breaks the dog's back you stop feeding the animal?"

"Yes," replied the boy, "we don't give them anything to eat then."

"How long do they live—a week or ten days?"

"About ten days," was the reply.

The young man showed the officers the place in which the maimed and suffering brutes are kept during the time of experiment, but it was empty. He denied that there were any such dogs about the place at that time, and a search of the premises failed to show any reason for doubting his assertion.

Dr. Arrowsmith, the veterinary surgeon of the S. F. P. C. A., visited the barn last night at the request of Mr. McAneny, and made an examination of the inactive black dog. He stated this morning that the animal was all right.

In explanation of the experiments being made by Dr. Watson, the surgeon made the following statement:

"I have known of these operations for some time, and I am satisfied that there is no cruelty exercised. Dr. Watson is an expert of the Pennsylvania Railroad in matters of accident, and he is working hard to gain the information necessary to determine a question which is often raised in the cases of parties who are injured by accidents. The desire if to find

whether a concussion to the spine will, after a lapse of two, three or six months, produce a decrease of vitality or loss of nervous power along any portion of the spinal cord. The dogs are placed under the influence of an anæsthetic, and the dog is then subjected to a blow or a fall. The desired effect, a simple concussion to the spine, is not always the result, as an injury to the muscles or tissues defeats the end desired."

The members of the New Jersey Kennel Club have interested themselves in the matter, and President Peshall, of the club, held a consultation this morning with President McAneny, of the S. F. P. C. A. It was decided that the work of Dr. Watson does not come within the limitation of Section 17 of the act for the prevention of cruelty to animals, which reads as follows:

"Nothing in this act contained shall be construed to prohibit or interfere with any properly conducted scientific experiments or investigations, which experiments or investigations shall be performed only under the authority of some regularly incorporated medical society of this State."

Certain physicians who have been spoken to about the case, say that there cannot be any possible benefit derived in the interest of science, and that the only apparent benefit to be derived from the experiment is to secure expert testimony for the use of the railroad and other corporations in defending suits. Mr. McAneny endeavored to see Dr. Watson, but was unable to do so.

A later report in the Journal says:

There is now in the hands of the Society for the Prevention of Cruelty to Animals a book in which the doctor kept a minute record of the features of each case, and a perusal of it may be interesting to the opponents of this system of scientific (?) research, as well as to those who are disciples of the practice. It will be seen that these operations, when stopped by the officers of the S. F. P. C. A., had extended over a period of about four months, commencing on Feb. 9. A resident in the vicinity of the doctor's place said yesterday: "The assistants came every other day about 3 o'clock and this is the day for them. Each dog seems to have been designated by a number." Here is a specimen of the records of the tortured brutes:

dog no. 22.

April 8—Stump-tailed dog. Dog dropped, apparently stunned for four minutes; pupils dilated. Nine minutes after fall dog got up and walked unsteadily across laboratory floor, and fell slowly. Answered calls. Forelegs stiffly extended. Saliva flows freely; occasional deep sighs; when placed on the table the dog expectorated a large quantity of bright red blood, mixed with frothy mucus. Seven hours after the drop the dog again arose, walked unsteadily across the laboratory floor and coughed periodically two or three times, expectating with each effort thick bloody sputa. The dog died at noon on April 9, and the spine was preserved for further examination.

It is probable that the Society will bring a separate suit for each case noted in the doctor's record. President Peshall, of the Kennel Club, wished to have the six dogs found in the pen taken from the barn and placed in the care of a competent person, but as the doctor promised that the animals should be well cared for, it was decided to let them remain there. President McAneny, of the S. F. P. C. A., has been the recipient of many thanks for the promptness which he has displayed in the matter, and he in turn feels grateful for the assistance which he has received from Mr. Peshall. The cases will be prosecuted vigorously, and with all the power of the Society.

Dr. Arrowsmith has explained that his expressed opinion of the want of cruelty in the operation was founded on Dr. Watson's untrue assertions to him. A Dr. Cropper, of Jersey City, has been arrested as an accomplice in the maltreatment of the dogs.

WESTERN FIELD TRIALS DERBY.—Editor Forest and Stream: In your list of entries for the Western Field Trials Derby you have Capt. Tucker's "Katarax" a black and white setter dog. It should be black and white pointer bitch. Will you please make the necessary correction.—R. C. VAN HORN.

L. & W. RUTHERFORD'S KENNELS.—Mr. Thos. Dawson has taken charge of the Messrs. Rutherford's kennels at Allemouchy, N. Y.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Joan II. By F. H. F. Mercer, Ottawa, Can., for Clumber spaniel bitch, whelped March 17, 1886, by Johnny (Ben-Jean) out of Jill (Flash-Judy).

Donal. By S. M. Young, New York, for red Irish setter dog, whelped Sept. 9, 1885, by Kelso (Glencho-Sweetheart) out of Tara (Nimrod-Sweetheart).

Met. By J. H. Conklin, New York, for red Irish setter bitch, whelped Oct. 20, 1885, by Elcho, Jr. (Elcho-Rose) out of Meg (Elcho-Rose).

Gladiator. By Geo. Ricker, Quincy, Ill., for black, white, tan and blue ticked English setter dog, whelped July 22, 1885, by Bonaparte (Royal Blue-Mojedaka) out of Queen Dido (Rake-Dido).

Tony. By E. K. Howes, Milwaukee, Wis., for liver and white pointer dog, whelped July 14, 1884, by Toby (Faust-Lady Jane) out of Lady Lou (Toby).

Paris Jr. By Chas. A. Tuttle, Newmarket, N. H., for blue belton Llewellyn setter dog, whelped Jan. 10, 1886, by Count Gladstone (Royal Blue-Mojedaka) out of Paris Queen (Paris-Miss Twilight).

Florence W. By Willard Van Tassel, Elizabeth, N. J., for black and tan Gordon setter bitch, whelped May 10, 1886, by Dixon's Pilot (Grouse, E. 5,091-Dixon's Man) out of Boss A. (A.K.R. 2490).

Apollo II. By Wm. J. Ehrlich, New York, for tawny and white rough-coated St. Bernard dog, whelped Nov. 21, 1885, by Nero (Apollo-Diana) out of Favorite.

Burly II. By Wm. J. Ehrlich, New York, for tawny brindle and white rough coated St. Bernard dog, whelped Jan. 25, 1885, by Bello (S.H.S.B. 14) out of Gemma (S.H.S.B. 111).

Gold Medal. By Geo. Gillivan, West Jefferson, O., for pug dog, whelped April 20, 1886, by Bradford Ruby (A.K.R. 2997) out of Flossy (A.K.R. 2490).

Gold Coin II. By Geo. Gillivan, West Jefferson, O., for pug dog, whelped May 29, 1886, by Treasure (A.K.R. 472) out of Peggy (A.K.R. 1894).

Genus. By W. H. Cookson, Hudson, N. Y., for tan and white fox-terrier bitch, whelped Feb. 25, 1885, by Regent Vox (Tackler-Sandy Vic) out of Nettie (A.K.R. 1704).

Dandy and Jenny. By W. H. Cookson, Hudson, N. Y., for black, tan and white fox-terrier dog and bitch, whelped Feb. 25, 1886, by Regent Vox (Tackler-Sandy Vic) out of Nettie (A.K.R. 1704).

Little Marquis. By Wm. J. Ehrlich, New York, for tawny and white pointer dog, whelped April 2, 1886, by Count (A.K.R. 8178) out of Young Venom (Old Prince-Venom).

Pride of Naso. By Geo. L. Wilms, Jersey City, N. J., for liver and white pointer dogs, whelped May 15, 1886, by Nick of Naso (Naso II. E. 8,123-Petigo, E. 15,175) out of Devonshire Queen (A.K.R. 3127).

Nick of Naso and Queen of Naso. By Geo. L. Wilms, Jersey City, N. J., for lemon and white pointer dog and bitch, whelped May 15, 1886, by Nick of Naso (Naso II. E. 8,123-Petigo, E. 15,175) out of Devonshire Queen (A.K.R. 3127).

Belfast and Ovid. By Harry E. Fletcher, Woodford's, Me., for red Irish setter dogs, whelped March 21, 1886, by Prince (A.K.R. 1963) out of Meg Merrilies (A.K.R. 2181).

Cumberland Kennels. By Harry A. Fletcher, Woodford's, Me., for his kennel list of Irish setters.

Duke-Rhabe Kennels. By Washington A. Coster, Flatbush, L. I., for his kennels of setters.

BRED.

Notes must be sent on the Prepared Blanks.

Vaynal-Bang. Tuckerfield Kennels' (West Newton, Mass.) pointer bitch Vaynal (Meteor-Rita Croxteth) to their imported Bang (Bang, E. 732-Salter's Luna, E. 5,016), May 10.

Belle Randolph-Bang. Tuckerfield Kennels' (West Newton, Mass.) imported pointer bitch Belle Randolph (Duke of Westminster's Sam-Juno II) to their imported Bang (Bang, E. 732-Salter's Luna, E. 5,016), May 3.

Daisy Ranger-Bang. Tuckerfield Kennels' (West Newton, Mass.) pointer bitch Daisy Ranger (Ranger Croxteth-Fannie Faust) to their imported Bang (Bang, E. 732-Salter's Luna, E. 5,016), April 28.

Daisy R-Bang. Tuckerfield Kennels' (West Newton, Mass.) pointer bitch Daisy R. (Croxteth-Bliss) to their imported Bang (Bang, E. 732-Salter's Luna, E. 5,016), April 19.

Lue-Bracket. Mr. Gregory's (New York City) pointer bitch Lucia (Croxteth-Belle) to Graphic Kennels' Bracket (Graphic-Bloom), May 17.

Ida-Buckelwe. Capt. C. E. McMurdo's (Charlottesville, Va.) English setter bitch Ida (Dashing Rover-Randee) to Duke-Rhodie Kennels' Buckelwe (A.K.R. 30), May 21.

Sheila-Otho. Hospice Kennels' (Arlington, N.J.) rough-coated St. Bernard bitch Sheila (A.K.R. 796) to their Otho (A.K.R. 438), May 11.

Nellie-Harold. Geo. C. Brown, Jr.'s (Carson City, Nev.) Irish setter bitch Nellie to California Kennels' Harold (Cath-Gem), May 17.

Little Fraud-Rex Gladstone. J. Yearseley, Jr.'s (Corte-ville, Pa.) English setter bitch Little Fraud (Druid's Boy-Victoria) to G. F. Clark's Rex Gladstone (Royal Gladstone-Mollie Druid), June 4.

Judy-Hector. H. B. Brackett's (Littleton, N.H.) bull-terrier bitch Judy (A.K.R. 3319) to J. W. Newman's Hector (A.K.R. 3318), April 13.

Fannie-Ranger. Wm. J. Furness's (Ogdensburgh, N.Y.) cocker spaniel bitch Fannie (Sam-Snipe) to his Ranger (Blanchard's Yarra-Nellie), April 15.

Nora-William Tell. C. H. Brewster's (South Hingham, Mass.) pointer bitch Nora (Favorite-Lotta) to C. A. Parker's William Tell (A.K.R. 2640), May 11.

Vera-William Tell. C. W. Tuttle's (Pawtucket, R.I.) pointer bitch Vera (Grant-Roxy) to C. A. Parker's William Tell (A.K.R. 2640), May 27.

WHEELS.

Notes must be sent on the Prepared Blanks.

Meg Merrilies. Harry A. Fletcher's (Woodford's, Me.) red Irish setter bitch Meg Merrilies (A.K.R. 2181), March 1, ten (six dogs), by his Priuce (A.K.R. 1968); four dogs and four bitches since dead.

Husler. White bull-terrier dog, whelped April 2, 1886, by Count out of Young Venom, by F. F. Dole, New Haven, Conn., to George Dashiell Fowle, Philadelphia, Pa.

PRESENTATIONS.

Lucille. Liver and white pointer bitch, 4 1/2 yrs. old, pedigree not given, by C. J. Peshali, New York, to Master Willie Mansfield, Graceville, Minn.

IMPORTATIONS.

Burry II. Rough-coated St. Bernard dog, 16 mos. old (Bello-Genma), by Wm. J. Ehrlich, New York, from Switzerland.

DEATHS.

Daisy Belle. Orange and white pointer bitch (A.K.R. 1788), owned by C. A. Parker, Worcester, Mass., from distemper.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

E. H., Baltimore.—My English setter is suffering with a sort of hacking cough. For some weeks I have noticed more or less of it. At times he seems to get better and then will be worse again, as though he had caught me cold. I at first thought he had a fish bone in his throat, but could discover nothing of the kind. He coughs and gasps in a very annoying manner to day, but otherwise seems in good health and spirits. He had distemper badly about fourteen months ago. It is very likely that the dog has taken cold, as I take him out into the country once a week for a run, and he usually finds a place in which to take a swim; however, his cough is dry and seems so obstinate. Ans. Your dog has chronic laryngitis, a very obstinate trouble to treat. Get nothing of the kind. Give him a solution of hyocyanum, one ounce; of camphor water, four ounces. Mix. Give teaspoonful in water three times daily. You may also make a solution of chlorate of potash, two full tablespoonfuls to the pint of water, and give a teaspoonful every two hours. Painting the throat with iodine sometimes is of benefit.

X., Halifax.—I have a medium-sized black dog of nearly nine years of age. For about a year he has been falling (not in vitality ap-

parently). His coat has become gray and thin, and it is quite bare at the back of his neck, also at his breast and belly. He smells offensively at times and has lately shown one or two small sores. He is also troubled with a sort of dry cough, and I think that he must either have a sore throat or have something wrong with his windpipe. His eyes are bright and healthy, and he is as frisky and in as good spirits as when in his prime, but he is a wretched looking dog. Although very fond of him, I had quite made up my mind to destroy him, but shall await the advice of *FOREST AND STREAM*, with the hope that such advice may assist me in overcoming the extreme measure of destruction. Ans. Your dog is pretty old, and the infirmities of age probably account in great part for his troubles. Give him Fowler's solution of arsenic in five drop doses twice daily in his food for a month; keep his bowels in order.

J. McHugh, Cranston, R.I.—My Irish setter dog is troubled as follows: Shaking his head, rubbing his ears with his paws, ears not inflamed, the back part of his mouth is covered with a thick white coating, and when tied up he runs from the mouth a tough, slimy mucus. When he shakes his head a lot of white stuff drops from his mouth. He is two years old, large and strong, good appetite and feels well otherwise. Please advise me what to do for him. Ans. If your dog has canker of the ear, use the following: Of bromo-chloral and laudanum each two drams, of water six drams. Mix. Drop a little in the ear twice daily. Give five drops Fowler's solution of arsenic twice daily in food.

J. E. F., Nova Scotia.—My thoroughbred bull-terrier, three years old, has been afflicted since last fall with a disease in the head causing a running at the ear. The veterinary surgeon here calls it canker in the ear, and has prescribed for it, but so far without success. Is there any remedy for it? Ans. Yes, canker can be cured. It may be that your dog has suppurative inflammation of the middle ear. For this the best thing is the following: Of bromo-chloral and laudanum each two drams, of water six drams. Mix. Drop a little in the ear night and morning after cleansing.

C. H. S., Gardner, N. H.—I wrote to you some time ago about my dog going blind, and you told me to use pulverized sugar on his eyes, but it does not help him. There is a blue film gathering on the eye; it is working from the lower part of the eye upward. If you could tell me of anything else I would be very much obliged. Ans. Use a solution of copper sulphate or bluestone, strength two grains to the ounce of water, and drop a little in the eye twice daily.

HALCYON, Brooklyn, N.Y.—Give the puppy plenty of exercise and feed milk, well-cooked vegetables, oatmeal and meat broth. As he gets older meat in moderate quantities may be fed. If he is troubled with worms, give him plenty of thick sour milk.

ALLEN's bow-facing oars can be attached to any boat in 5 minutes. Try them. Little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

Rifle and Trap Shooting.

RANGE AND GALLERY.

HAVERHILL, MASS., RIFLE CLUB. May 29.—Regular monthly contest for the badges, Creedmoor target:

SPRINGFIELD, Mass.—The fourteenth annual festival and tournament of the New England Rifle Association, under the auspices of the Springfield Schuetzen Verein, will be held at River Side Grove, near this city, on Tuesday, Wednesday, Thursday, and Friday, July 6, 7, 8 and 9. Over \$1,500 in prizes will be distributed. The following list of matches has been arranged:

No. 1. Target of Honor.—Open to members of the New England Rifle Association only. The winner takes the first choice of prizes and the king's gold badge, and will be crowned Shooting King for 1886. The valuable prize to the number of 35 will be given in connection with the "Target of Honor," which will be announced at the commencement of the festival. Three shots to a score, any rifle, one entry. The king will be crowned and prizes distributed on this target Wednesday evening, July 7, at 8 o'clock, at which time the annual summer evening's fest will be held at the grove.

No. 2. German Ring Target.—Open to all comers. Any rifle, 3 shots a score. Entry \$1, re-entry \$1; entries unlimited. Each shooter can obtain but one prize. Over \$300 in 24 prizes.

No. 3. Mass Target.—Open to all comers, 5 shots to a score, best three scores to count as one continuous score. Entry \$1, re-entry 50 cents; entries unlimited. Each shooter can obtain but one prize. National Rifle Association rules to govern. 24 prizes.

No. 4. Creedmoor Bullseye Target.—Sixty per cent. of entries on this target will be divided among holders of bullseye tickets daily. Ten tickets for \$1. Any rifle within the rules of the National Rifle Association.

No. 5. Bullseye Target.—Two and one-half inches bullseye in 12 inches of black, open to all comers, any rifle. Five tickets for \$1; entries unlimited for the four days; the shooter making the largest number of bullseyes during the tournament to be crowned king of the bullseye target for 1886, and to receive a handsome king's badge in addition to a cash prize of \$25; 5 other prizes.

No. 6. Creedmoor Target.—Open to all comers; military rifles, including specials; five shots to a score, best three scores to count as one continuous score. Entry \$1, re-entry 50 cents; entries unlimited. Each shooter can obtain but one prize. National Rifle Association rules to govern. Over \$120 in 14 prizes.

No. 7.—Open to teams of five men from any regular organized rifle club; German ring target, any rifle, five shots per man. Entry \$5 per team, re-entry \$3; entries unlimited. Four cash prizes, and to each member of the winning team a gold badge, to be known as the "Champion" team of the year 1886, 4 prizes.

No. 8. Military Team Match, Creedmoor Target.—Open to teams of five men, with two substitutes from any company of the National Guard; five shots per man. Entry \$5, re-entry \$3; entries unlimited. Rifles; each team to use the rifle used by their company on or before May 1, 1886. A handsome officer's sword and belt, suitably engraved, will be presented to the company to which the team winning first prize belongs, and a gold badge to each member and an additional gold badge to the member of the team making the highest individual score on the team score which wins first prize.

No. 9. Individual Military Match, Creedmoor Target.—Open to members of the Connecticut and Massachusetts National Guard only. Entry 50 cents, re-entry 25 cents; entries unlimited. Rifles same as in match No. 8; five shots each, best three scores to count as one continuous score; National Rifle Association rules to govern. Many prizes will be given on this target, the competitor making the highest aggregate score to have first choice, the other winners to choose in order of their respective scores. Each shooter can get but one prize.

No. 10. Open to members of the Springfield Schuetzen Verein only, who have not won over 65 points in five consecutive shots on this target; five shots each. Entries 25 cents each; entries unlimited. Each shooter can obtain but one prize.

No. 11. Man Target.—This target represents the head and body of a man, and is divided into half-inch vertical lines, center line counting 20. Open to all comers. \$175 will be distributed on this target in 20 prizes. Three shots to a score, any rifle. Entry \$1.50, re-entry \$1; entries unlimited. Each shooter can obtain but one prize.

REGULAR ARMY TEAM.—Orders have been issued from the headquarters of the United States army for the contest for army prizes with the rifle, to take place this year at Fort Leavenworth, Kan., beginning on September 22, to be conducted by Lieutenant-Colonel Blunt. The military team to represent the United States will be composed of two from the division of the Atlantic, six from the division of the Missouri and four from the division of the Pacific, with one alternate from each division.

BOSTON, June 3.—There was a small attendance at the Walnut Hill range to-day and a 9 to 11 o'clock wind prevailed. Capt. H. F. Briggs qualified for a bronze military badge and J. Francis made the last 86 needed for the Victory gold medal. The team match with the Minneapolis club, which was shot last Saturday is appended:

Team Match—M. R. A. Team.		Minneapolis Team.

WILMINGTON, Del., May 31.—Public matches were held by the Wilmington Rifle Club at Schuetzen Park this afternoon. In spite of the inclement weather there was a fair attendance. The conditions at the first match were: Creedmoor target, 200yds., off-hand and prizes divided by score classes. After deciding ties the prizes were awarded as follows: First, Irwin W. Seeds; second, Jerome B. Bell; third, Charles Heinel, Jr.; fourth, C. Carleton; fifth, Harry A. Heinel; sixth, J. A. Newman. The full score was:

Irwin W. Seeds	45555-24	Harry A. Heinel	44444-20
Jerome B. Bell	45455-23	Robert Miller	54434-20
Charles Heinel, Jr.	45455-22	J. E. Newman	44533-19
Charles Heinel, Jr.	55444-22	Howard Simpson	449 3-18
H. B. Seeds	44554-22	S. J. Newman	34431-18
C. Carleton	44445-21	J. Nedry	33430-13
Washington C. Seeds	44430-13		

The conditions of the second match were: Massachusetts target, 200yds., off-hand, and prizes divided by highest scores. Ties decided, the prizes were awarded as follows: First, Jerome B. Bell; second, J. E. Newman; third, C. Carleton; fourth, Robert Miller; fifth, Chas. Heinel, Sr.; sixth, Harry A. Heinel. The following was the full score:

Jerome B. Bell	10 11 12 10 8-51	W. C. Seeds	8 8 10 5-38
J. E. Newman	8 9 11 11 10-49	H. B. Seeds	12 9 5 7 5-38
C. Carleton	6 11 10 11 10-48	H. Simpson	9 5 7 11 6-38
Robert Miller	11 7 11 10 9-48	S. J. Newman	6 8 10 11-35
C. Heinel, Sr.	10 7 10 8 10-45	Wm. A. Bacon	9 2 5 8-31
Harry A. Heinel	9 7 3 10 11-39	Chas. Heinel, Jr.	7 3 3 10 8-31
J. E. Seeds	4 8 11 9 10-39	J. Nedry	2 6 7 6 3-24
Irwin W. Seeds	4 9 8 11 8-33		

The conditions of the third match same as second. Ties decided, the prizes were awarded as follows: First, S. J. Newman; second, Jerome B. Bell; third, Henry B. Seeds; fourth, C. Carleton; fifth, Charles Heinel, Sr. The full score is as follows:

A. J. Newman	10 8 11-29	W. C. Seeds	6 10 8-34
Jerome B. Bell	9 10 9-25	J. E. Newman	2 12 8-32
C. Carleton	9 8 11-25	Irwin W. Seeds	6 9 5-20
Charles Heinel, Sr.	12 7 9-28	Howard Simpson	8 4 8-20
H. B. Seeds	11 8 9-28	Harry A. Heinel	8 9 2-19
Robert Miller	9 11 7-27	J. F. Seeds	6 4 5-15
William A. Bacon	7 7 8 11-26		

CREEDMOOR, June 5.—There was an unusually large number of entries in the champion marksman's class at Creedmoor to-day. Up to within a few minutes of the closing hour it was believed that Maj. Fox, of the 4th Brigade staff, had won the badge, but at 5:30 Private George S. Scott, of the Brooklyn 23d Regiment, beat the Major's score by two points. The winners were as follows:

	200yds.	500yds.	Total
Priv. George S. Scott, 23d Reg.	23	24	47
Major Fox, 4th Brigade Staff.	21	24	45
Lieut. J. S. Shepherd, 23d Reg.	20	24	44
Maj. Brown, 3d Brigade Staff.	22	22	44
Serge. Bentley, 7th Reg.	18	24	42
Serg. Gen. Robbins	20	22	42
Serge. Lotz, 13th Reg.	21	21	42
Serge. Smith, 23d Reg.	20	22	42

CINCINNATI, May 25.—The second shoot for the Bandle Team Trophy, open to any regularly organized gun club team of five in Hamilton County, took place to-day on the grounds of the Price Hill Gun Club, before an audience which numbered in the neighborhood of between four and five hundred. The weather was all that could be desired, barring an extremely strong wind blowing from the north, which speeded the straight-away birds to an extent simply wonderful. From the start the race was a hot one, but the Miami-town team cut the pace and shot a good strong race, especially during the latter part of the contest, when they broke twenty-three out of the last twenty-five birds shot. This club was looked upon as a mere fill-up, as was the East End, in the shoot before; and, strange to say, they made a laughing-stock of the other clubs entered. The winning team is a country-looking set of men, but, as the shooters term them, "perfect middleers." Wick, Miller, Schatzman and Cole proved a disappointment to their respective teams. The management, judge and referee, gave excellent satisfaction, especially the calling of Mr. Corrie, of Xenia, Ohio. The next shoot will take place on the East End Club's grounds. Appended are the official scores: National Gun Club—Meyer 8, W. Gihman 14, E. Fey 13, Gerhardt 11, Rust 10, Total 55.

Delhi (Ohio) Club—Whitlock 16, Robb 8, Belden 11, McAfee 13, McCullough 12, Total 60.

West End Club—Wenning 10, Joseph H. 15, Spangler 12, Behle 14, H. F. Robinson 12, Total 55.

Queen City Club—Burt 17, H. Ahlers 16, Strunk 15, O. Shaw 12, Wick 12, Total 72.

Independent Gun Club—Barker 13, Paul 13, Kessler 16, L. Fey 14, Kling 15, Total 72.

Columbia Club—Langdon 14, J. G. Dick 12, Whitney 17, A. C. Dick 14, Briggs 12, Total 73.

Price Hill Club—Drost 17, Topf 16, Chick 14, Judge 13, Miller 14, Total 74.

East End Club—Schatzman 11, Cole 14, Stuart 13, Mason 18, G. Given 19, Total 75.

Midtown Club—Small 14, Menger 16, Mr. Nose 17, Althouse 16, Arnolds 16, Total 79.

Wyoming Gun Club—Stoddard 14, Smiley 15, Jewett 12, Allan 14, Clark 17, Total 72.

CLUB SCORES.—Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays, and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.

BINGHAMTON, N. Y., May 28. Match at 20 single clay pigeons, 18yds., all contestants, open, barrel only. The breeze was very considerable, the chances of a strong wind blowing from shooter toward the trap. There were six contestants. Following is the score:

M. Boss.....0001101101011011—13

N. Waldron.....101011010011001101—12

H. Brown.....11110100110101100—13

O. Chapman.....101100101100001111—13

S. Keane.....10110010110101010—12

J. Schnell.....10011001001111100—12

BOSTON, June 2.—There was a fair attendance of trap shooters at the range at Walnut Hill to-day and the weather conditions were excellent. Following are the prize winners: 1. 6 clay pigeons—Baker, Brown and Nichols. 2. 2 pairs clay birds, double—Bartlett. 3. 6 clay birds at angles—Bartlett. 4. 5 blackbirds—Bartlett. 5. 3 pairs clay pigeons, double—Bartlett and Snow. 6. 5 blackbirds—Baker and Allen. 7. 5 clay birds, straightaway—Bartlett and Allen. 8. 6 clay pigeons—Allen. 9. Novelty match, 6 clay birds—Bartlett, Chase, Allen and Curtis. 10. 5 blackbirds, straightaway—Allen, Curtis, Stanton and Henry. 11. Badge sweep, 7 clay pigeons, 18yds.—Adams, Snow and Stanton. 12. Badge sweep, 3 pairs blackbirds, double—Adams, Swift and Chase. 13. 3 pairs clay birds—Stanton. 14. 6 clay pigeons, at angles—Adams, Swift and Baker. 15. 3 pairs clay pigeons—Baker. 16. Novelty match—Stanton. 17. 5 blackbirds straightaway—Stanton and Adams. 18. 6 clay pigeons—Swift. 20. 5 blackbirds, straightaway—Stanton. 21. Novelty match—Swift and Stanton. 22. 5 blackbirds, straightaway—Adams and Baker. 23. 5 straightaway blackbirds, 21yds.—Swift. 24. Miss and out—Snow. 25. Miss and out—Adams and Baker.

Diamond match, 7 single clay pigeons, 3 pairs blackbirds:

Singles. Pairs. Total		Non members.

Rinkle.....101111111—9	

*First medal. *Second medal. *Third medal. In shoot off Schaff won.

WELLINGTON, Mass., June 5.—The first prize winners at the Wellington Range to-day were: 1. 6 pigeons, Shumway; 2. 6 bats, Warren; 3. 6 pigeons, Shumway; 4. 6 blackbirds, Shumway; 5. 6 pigeons, Snow; 6. 6 bats, Snow and Shumway; 7. 6 pigeons, Wales, Lawson and Stanton; 8. 6 bats, Stanton; 9. 6 pigeons, Parker and Schaefer;

10. 6 bats, Stanton, Swift and Snow; 11. 3 pair pigeons, Schaefer; 12. 6 blackbirds, Wilson and Stanton; 13. 6 pigeons, Stanton and Lawson; 14. 6 bats, Wilson; 15. 6 pigeons, Stanton, Snow and Wales; 16. 5 pigeons, Wilson; 17. 5 bats, Stanton and Schaefer; 18. 5 pigeons, Stanton and Schaefer.

CLUB SCORES.—Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays, and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.

BROOKLYN, June 2.—The Fountain Gun Club members had a regular gala day to-day. Men with gun bags and satchels filled with cartridges streamed in through the gates of the Brooklyn Driving Club ground at Parkville, and soon the popping of guns went on at a lively rate. It was the inauguration shoot at the new ground and was the most successful one the Fountain Gun Club has ever had. 34 members shot for the five handsome prizes which had been donated for competition. The terms were 7 birds each, from 5 traps, 5yds apart. Boudan supplied a very good lot of pigeons, and the shooting was very energetic. The men—C. Wingert, 28yds., T. Lenington, 27yds., and M. J. Kearney, 27yds., killed seven straight birds and tied. In the shoot off for choice of prizes 1, 2, 3, Wingert killed three more, and won the handsome silver pitcher presented by Vice President J. H. Sawyer. Lenington killed three out of four and took a silver cup, Kearney got the silver goblet presented by President Crooke. An adjournment was then made to the hotel, where was the inauguration dinner; 54 sat down to it. President A. Crook presided at one table and Vice-President Sawyer at the other. Merriam resigned till far into the night. The score is as follows:

F. Infelix, 27yds.....111011—6	N. B. Cook, 28yds.....0110100—3
E. Dwyer, 27.....111110—6	C. H. Foote, 21.....1001000—3
C. A. Chappell, 25.....010010—2	Charles Lange, 21.....101000—2
Dr. Wynn, 28.....110110—5	T. Linington, 27.....111111—7
C. W. Wingert, 28.....111111—7	C. E. Fiske, 21.....0000—0
H. Thorpe, 24.....001011—4	J. A. Carney, 21.....060000—0
F. H. Andrews, 21.....100111—4	Jas. Halligan, 21.....001101—4
C. J. Smith, 21.....100101—3	R. J. Grace, 26.....110011—5
G. L. Hayes, 25.....010100—2	C. S. Kendall, 25.....110111—6
G. M. Van Saun, 26.....010101—4	W. A. Stewart, 25.....110101—5
F. H. Sawyer, 21.....010101—4	M. J. Kearney, 27.....111111—7
A. W. Phelps, 21.....010101—4	J. Beacham, 21.....110110—10
Dr. C. J. Monroe, 24.....101011—6	W. R. Selover, 25.....000111—3
E. H. Madison, 28.....101111—6	Dr. S. P. Veveridge, 27.....111110—6
L. T. Duryea, 27.....111111—6	W. L. Barker, 24.....110100—7
H. McLaughlin, 27.....111110—6	H. O'Farrell, 21.....101000—3
Able Crook, 23.....010110—4	T. S. Van Name, 21.....011000—2

In shooting off ties of 7, C. W. Wingert first, T. Lenington second, M. J. Kearney third. Ties of 6, C. S. Kendall fourth, L. Duryea fifth.

CENTRAL OHIO SHOOTING ASSOCIATION TOURNAMENT. Columbus, Ohio.—Second day, May 19, seventh match, 5 Ligovsky clay pigeons: Duffy 2, Aston 4, Ackerman 4, Wendt 3, Simmerman 3, Bourner 4, Harlow 4, Seibert 4, Mack 2, Keifer 3, Webb 3, Thomas 4, Mason 3, Astou and Seibert first, Wendt, Keifer and Mason second, Nick third.

Eighth match, 5 American birds: Aston 5, Duffy 5, Ackerman 4, Simmerman 3, Wendt 3, Seibert 4, Webb 5, Southwick 3, Mason 4, Keifer 2, Harlow 1, Madden 4, Irwen 5, Mack 4, Link 2, Thomas 4, Bower 4. Aston, Duffy, Irwin and Webb first, Thomas second, Wendt, Simmerman and Southwick third.

Ninth match, 4 pair Ligovsky clay pigeons: Wendt 7, Ackerman 4, Duffy 7, Simmerman 4, Seibert 5, Aston 5, Southwick 5, Mason 7, Link 3, Mack 3, Harlow 3, Keifer 3, Wendt, Duffy and Mason first, Aston second, Simmerman and Ackerman third.

Tenth match, 4 pair American birds: Aston 5, Mason 7, Duffy 5, Wendt 7, Bourner 6, Ackerman 4, Mack 4, Simmerman 4, Webb 7, Keifer 5. Mason, Wendt and Webb first, Bourner second, Duffy and Keifer third.

The event of the tourney was the eleventh match, conditions, 10 single and 5 pair Ligovsky clay pigeons, for the C. O. S. A. gold medals, prize money, and a valuable red frie setter, donated by Mr. Frank White, of the Boarding and Breeding Kennels, Dunkirk, O. The medals must be won three times to be owned.

Aston.....111110111—9	0 1 1 1 1 1 1—9—18
Duffy.....001101111—7	1 1 1 1 1 1 0—8—15
Simmerman.....111100111—7	0 0 1 1 1 1 0—4—11
Wendt.....100101111—7	1 1 1 1 0 1 1—7—14
Ackerman.....111111011—9	1 0 1 1 1 1 1—7—16
Keifer.....110110111—8	0 1 1 1 1 1 1—8—16
Link.....110110111—7	0 0 1 1 0 1 0—2—9
Webb.....111100100—6	1 1 1 1 1 1 1—10—16
M. Leish.....110010101—6	0 1 1 1 1 0 1—7—13
Mason.....111111111—10	1 1 1 1 1 1 1—8—18
Seibert.....111110111—8	1 1 1 1 1 1 1—9—17
Lawrence.....100011101—6	0 1 1 0 0 1 1—4—10

Aston and Mason divided first money, Seibert second, Ackerman, Keifer and Webb third. Mason not being a member of the C. O. S. A. the first medal and dog were won by "Aston," Geo. A. Warden, of Springfield. Frank Siebert, of Columbus, won the second medal, J. H. Keifer, of Dayton and Wm. Ackerman, of Lima, shot off for the third medal, the former winning.

Twelfth match, 7 American birds: Southwick 4, Buck 6, Ackerman 6, Mack 4, Aston 7, Bourner 2, Mason 2, Siebert 4, Keifer 6, Lawrence 0, Gray 5. The grand prize of \$50, open to members of the Association only, was divided as follows:

	Shot at.	Broke.	Average.	Prize.
"Aston" (Geo. A. Warden).....	79	61	80 pr. ct.	\$30
"Duffy" (Dr. L. E. Russell).....	79	60	79 pr. ct.	\$15
Chas. Wendt, Kenton, O.....	79	58	74 pr. ct.	\$10
Wm. Ackerman, Lima, O.....	79	55	70 pr. ct.	\$5

HARTFORD, Conn., June 5.—The members of the Colt Hammerless Gun Club formed two teams yesterday, each man shot at 20 pigeons, 18yds. rise:

McCook's Team.		J. Howe's Team.	
E. A. Folsom.....17	J. Howe.....12		
M. Cook.....13	J. Melrose.....17		
L. B. Cary.....12	J. Cook.....11		
O. B. Treat.....11	M. White.....13		
A. C. Mcullen.....13	E. C. Howe.....13		
L. Bushnell.....15	F. E. Watkins.....15		
J. Alger.....13	S. T. Colt.....8		
Vibberts.....15	Miner.....17		
C. B. Latimer.....9	A. C. Collins.....8		
H. M. Jacobs.....11—125	H. M. Jacobs.....11—123		

J. Melrose won the club medal by 110, shooting off a tie with E. A. Folsom, 3 birds, 21yds.

WASHINGTON HEIGHTS GUN CLUB.—At club grounds, 167th street and Ridge road, June 5, monthly shoot for club medal, 15 clay birds, 18yds.

Beck.....001010000101—5	Snook.....100110111010—10

THE CONDITIONS OF THE CUP RACES.

THE following letter was received on June 1 by the committee. The second letter is the one sent by the committee in April:

MY DEAR SIR.—I am instructed by the committee to acknowledge the receipt of your favor of April 26 last, and to thank your committee for the consideration they have given to the proposals contained in my letter of the 10th April last. I am instructed by Lieutenant Henn, R. N., to say that the reason given in your letter of April 26 he accepts the decision of your committee, that one of the races must be sailed over the New York Y. C. course and not at Newport, but thinks it would be undesirable Galatea should take part in any races until after one at least of the cup races has been sailed, as her doing so would necessarily tend to decrease the interest in them.

Lieutenant Henn would be glad if the committee would consider the

advisability of also barring the False Hook shoal in the New York Y. C. course, as with an off-shore wind and 3bb tide an advantage might be derived by taking a passage inside that shoal.

As the committee do not see their way to an alteration in the mode of determining the time allowance adopted last year, Lieutenant Henn will not, under the circumstances, press this point further, but suggests that the actual sail area of each vessel should be used instead of the approximate sail area found by the New York Y. C. rule.

Both Lieutenant Henn and myself fully appreciate the desire of the committee to meet his views and so to arrange the races as to insure true sport, and I am to inform your committee that his suggestions are made solely with a similar object. We are also fully sensible of the fair and sportsmanlike feeling displayed last year to Genesta, not only by American yachtsmen, but also by the general public of the United States, and nothing shall be wanting on our part to reciprocate and encourage this good feeling.

Again thanking your committee for their courtesy and trusting to have the pleasure of meeting them early in July next, when the suggestions herein can be discussed, I am, my dear sir, yours faithfully,

J. BEAVER WEBB, Esq., Secretary America's Cup Committee, New York, United States of America.

NEW YORK, April 26, 1886.
J. Beaver Webb, Esq., No. 18 Cranley Gardens, London, S. W., England.

MY DEAR SIR.—I am instructed by the America's Cup Committee of the New York Y. C. to acknowledge the receipt of your communication of the 10th inst., and to say that its contents have had the committee's most careful consideration. I am further instructed to say that the committee, in their previous communication to you, aimed at offering the same terms for the coming races for the America's Cup as were discussed and accepted last year, and which, on trial, were found to be satisfactory; and, with the strongest desire on their part to insure true sport in the contest and to meet every wish of Lieutenant Henn, they were unable to make any great changes from the propositions then submitted.

Referring to your suggestions in detail, the committee feel that it will be impossible to agree that one of the races shall take place off Newport. New York is the home port of the club, and its large number of members reside here or in the immediate vicinity, and, as you are aware, take great interest in the contest, and the committee feel that it would be an injustice to the members if one of the races should take place at such a distance.

Should the Galatea, however, be in these waters at the time of the yacht club cruise there will be several very important races arranged to take place at Newport, in which she is especially invited to participate, and the committee trust this will meet Lieutenant Henn's wishes in respect to joining the squadron and placing himself "en rapport" with American yachts and owners.

For somewhat similar reasons they are unable to leave out altogether a race over the New York Y. C. course. It is the regular race course of the club, the one with which the members of the club and the public are familiar, and in which the greatest interest is felt, and beyond this, it is the course which every challenger must have in mind as the one over which, in the event of a failure to mutually agree upon the terms of the contest, he must sail the one race for the Cup.

With the desire, however, to meet the objections which you make, the committee will agree to har Flyn's Knoll, which they think is quite practicable, and can be provided for in the regulations which will be made for the race.

They will also take special pains to prevent interference by accompanying vessels, which will be in the interest of both the contesting yachts.

The matter of the time allowance was carefully considered last year, and was referred to Mr. George L. Schuyler as umpire, and the committee accept his decision as then made as conclusive upon that subject. In the matter of the umpire the committee consider that the terms of the race should be mutually agreed upon, and it is not likely that referee will be needed. Should, however, any question arise, such as that of construction of terms, to settle which it would be desirable to appoint an umpire, you may be sure that there is no one whom the committee would prefer to Mr. Schuyler.

The committee desire me to assure Lieutenant Henn that in every detail not provided for they will strive in every way in their power to arrange that the race shall be fair and without advantage to either party, and the committee hope that your experience here last year will justify you in assuming that he had here no apprehension upon this point. I am, dear sir, very truly yours,

WILLIAM KREBS, Secretary of Committee,
No. 62 Wall street, New York.

GALATEA AND IREX.

ON Saturday last these two met for the first time this year in the New Thames Y. C. race from Southend to Harwich, Marjorie being with them in the A class, with Erycina, Arctura, Neptune, May and Annasoa in class C. Galatea held up well at the start, but owing to some trouble with her boomstays was obliged to retire, I

THETIS

The latter boat sailed over a 10-mile course to Fort Schuyler and return. Elephant and Wacondah are not yet measured, so the final result is not known. Lorna wins the silk club signal for the fastest corrected time over the course. A race for steam yachts was also run, Mystic beating Mary W.

ANOTHER SMALL CRUISER.—On June 1 there arrived at Port Morris, New York, a new cruiser, the *Seabird*, built at Kennebunkport, Me., for Mr. John Thornton, Jr., of New York, by C. Trot. The *Seabird* is similar to the *Elvira* or *Little Ida*, illustrated in the *FOREST AND STREAM*, but is 21 ft. over all, 7 ft. beam, 3 ft. 6 in. depth, with a rocker keel 1 ft. deep. She is a double ender, decked over, with a cabin 7 ft. long with 4 ft. headroom and two berths. Forward and aft are galvanized iron air tanks. The frame is of steamed oak planked with 1 1/4 in. cedar. The ballast on keel is 750 pounds, with 2,300 pounds cast to fit inside and 400 pounds in pigs, making 3,450 pounds, all iron. She has one pole mast with staysail and jib set flying. In charge of Mr. Geo. P. Willis, she sailed from Kennebunkport on May 24, calling at Gloucester, Boston, Chatham, Stonington and Saybrook, and reaching Port Morris on June 1 without any difficulty. From Chatham, Mass., the wind was ahead for the entire distance.

YACHTING NOTES.—Ranger, schooner, has been sold by Dr. Dawson, to Mr. Geo. Chisholm, N. Y. Y. C. Dr. Dawson has purchased the schooner *Elfin*, formerly *Latona*. . . The catboat now building by Capt. Townes for Mr. Vanderveer will have a hollow spar and a loose-footed mainsail. . . A new centerboard is building by Capt. Cuthbert, at Trenton, Ont. She will be 55 ft. over all, 4 ft. L. W. L. and 15 ft. beam, and is for Messrs. Cooley & Turley. . . Fortuna, schooner, Com. Hovey, E. Y. C., left Boston on a tug for New York. . . At Lawley's yard Sachem is painted and nearly ready for launching. The new 47 ft. boat, Mr. Fay's, will be named *Vandal*. Two small keel cats have been started from Mr. Burgess's designs. . . Mist, schooner, has been sold by Mr. J. H. Sherburne, of Boston, to Mr. A. C. Titcomb, of San Francisco. . . Westmore, catboat, of Newport, has been sold to Mr. M. C. D. Borden, of New York. . . Intrepid, schooner, has been docked and is now in commission.

LAUNCH OF A PILOT BOAT.—The new pilot boat, W. H. Starbuck, built by Ellis, of Tottenville, to take the place of Mary and Catherine, No. 6, sunk by a British tramp some time since, was launched on May 29. She is 82 ft. over all, 7 ft. L. W. L., 21 ft. 3 in. beam, 9 ft. 11 in. hold. Her mainmast is 73 ft., foremast 72 ft., topmast 23 ft., booms 52 and 26 ft. 6 in.; gaffs 26 and 20 ft. 6 in.; bowsprit 23 ft. 6 in. outboard. She stuck on the ways owing to her draft. Mr. Starbuck has had her cabin fitted up very handsomely.

GREENWICH Y. C.—The annual meeting of the Greenwich Y. C. was held at Greenwich, Conn., on last Monday, June 7, when the following officers were elected: Arthur E. Rendle, Commodore (re-elected); Geo. Tyson, Jr., Vice-Commodore; J. Williams, Rear-Commodore; Secretary and Treasurer, E. Burton Hart; Measurer, J. M. Tracy. Several new members were elected. The first pennant regatta will be held on June 26. The club cruise will take place about latter part of July, the grand annual regatta on or about Aug. 15, and the fall pennant regatta on or about Sept. 15.

NEW YORK Y. C.—A special meeting was held on June 3, at which the amendment prohibiting the use of clubtopsails on the cruise was reconsidered and withdrawn. During the evening a meeting of the Cup committee was held, at which it was decided that no further correspondence was necessary as Mr. Webb would be soon in New York.

AMERICA.—The lines of the *America* were taken off last week by Mr. McKee as a basis for Mr. Burgess's alterations. The old keel, siding only 4 1/2 in., will be replaced with a wider one, with new garboards. Work will go on as soon as Mr. Burgess completes the plans.

ECLIPSE Y. C.—This club sailed its annual regatta on Monday over the same course as the Williamsburg Y. C., but starting at 104th street. Twelve yachts entered, the winners being *Thorn*, second class; *Unknown*, third class; *Violet*, fourth class and *Venus*, fifth class. The *Osseo* carried the members and guests of the club.

CHARTS OF LAKE ONTARIO.—We have received from Mr. John T. Mott, of Oswego, the series of Coast Survey charts of Lake Ontario, showing the entire lake on one sheet, with larger charts of the various portions down the St. Lawrence to Chippewa Falls.

A VISIT FROM A STEAM YACHT.—We learn from *Le Yacht* that Mr. John Clark's steam yacht, *Mohican*, will sail for New York shortly to take part in the races of the American Y. C. for the International Challenge Cup.

MARJORIE.—Mr. Langley's new catboat, modeled by Mr. Ellisworth, is now completed, and has been named *Marjorie*. She will sail a race on July 5 with Mr. Seney's catboat, for \$250 a side.

Don't twist your neck off, but use Allen's bow-facing oars. Little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to *FOREST AND STREAM* their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to *FOREST AND STREAM* their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY.—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, accompanied by the recommendation of an active member of the A. C. A., together with the sum of \$3 for initiation fee and first year's dues, to the secretary, who will present the names to the commodore. Money should be sent by registered letter, or money order on Saratoga Springs, N. Y.

FIXTURES.

Mohican Races every Thursday through the season.
 June 12—Brooklyn C. C. Paddling Race.
 June 12—N. Y. C. C. Spring Regatta, 1st Race Com. Trophy.
 June 26—N. Y. C. C. 2d Race Commodore's Trophy.

 July 8-24—W. A. C. A. Meet, Lake Erie.
 July 10—Brooklyn C. C. Paddling Race.
 July 10—N. Y. C. C. 3d Race Commodore's Trophy.
 July 24—N. Y. C. C. 4th Race Commodore's Trophy.
 Aug. 7—N. Y. C. C. 5th Race Commodore's Trophy.
 Aug. 7—Brooklyn C. C. Paddling Race.
 Aug. 13-27—A. C. A. Meet, Grindstone Island.
 Aug. 21—Lake St. Annual.
 Sept. 4—Brooklyn C. C. Paddling Race.
 Sept. 4—N. Y. C. C. International Cup Races.
 Sept. 11—N. Y. C. C. 6th Race Commodore's Trophy.
 Sept. 18—Brooklyn C. C. Sailing Races.
 Sept. 25—Brooklyn C. C. Challenge Cup.
 Sept. 25—N. Y. C. C. 7th Race Commodore's Trophy.
 Oct. 2—N. Y. C. C. Fall Regatta.

THE LOCAL SPRING MEETS.

ONTARIO, MAY 22-24.

THE Ontario spring meeting of canoeists took place at Knapp's Point, on Wolf Island, five miles below Kingston, on May 22, and lasted three days.

The situation of the camp was as good as could be desired, and a most enjoyable time was had by the members of the R. M. C. C. and their friends, among whom on this occasion could not be numbered the almost ubiquitous mosquito, the canoeists having got the start of him for once.

The weather was fine, the sailing and paddling courses good, and the mess arrangements were very perfect. Commodore Fairbrough and Vice-Commodore Morrow were in command of the camp, and to their exertions is, in a great part, due its success.

Among the visitors were Mr. J. B. Carruthers, Professor Day, Lieutenants Hudon and Cochrane, Col. Cotton and Messrs. Forsyth and Greet, of Kingston, the Brockville Club being represented by Com. Richards and Mr. F. Turner.

At the last moment and after they had their canoes ready for shipment, Commodore Rathbun, of the A. C. A., and the members of the Deseronto Club were unable to attend.

Saturday and Sunday were spent in enjoyment of the first camping out that most of the canoeists had had this year, a roaring big fire being made each evening and the proceedings being enlivened by songs, stories and miscellaneous fun.

Monday morning set in with a spanking sou'west breeze, which diminished to a zephyr before the races could be started, so the sail-

ing races were a series of drifts with the various boats being becalmed several times.

For the decked canoe sailing race there were four entries, and Turner succeeded in crossing the winning line ahead, with Morrow a good second.

For the open canoe sailing race there were three entries, and the three boats kept within a stone's throw of each other up to the finish gun, crossing the line a little ahead of Panet. The single paddler race was won by Turner, who was closely pushed by Strickland, and the tandem paddling was won by Turner and Panet, Rogers and Strickland coming in second. Com. Richards's canoe Mona, designed by Stephens and built by Sauve, was taken to camp in hopes of a brush with Com. Rathbun's new Ruggles boat Star, but as the latter was not present she did not race. Shortly after the races were over and the prizes presented by Com. Fairbrough, the camp broke up and the always melancholy business of taking down tents and stowing camp material was got through with, while with many a hearty shake of the hand and many a farewell with "I'll meet you at Grindstone" added to it, the canoeists separated, some to go home by steamer and some to cruise to their destinations in their light crafts, all vowing the camp a great success and looking forward to all hands meeting again at the general A. C. A. meet in August.

BROOKLYN C. C. CRUISE, MAY 29-31.

"WHAT shall the Alligators do on Decoration Day?" had been a question of some little moment for us to decide. We had received invitations to attend the Connecticut River meet at Calla Shasta Grove and also the Hudson River meet at Rondont, but as few of us could be absent from Saturday morning until Tuesday, we decided upon a cruise and camp nearer home, with the hope that more of our members would be able to participate than would be the case if we went further away. A cruise from the club house to South Beach, Staten Island, a distance of about seven and a half miles, with Sunday at this place and return on Monday via Capt. Stillwell's Bath for dinner, was the general programme decided upon.

Orders were given for members to be in readiness for a start at 5 o'clock P. M. on Saturday, May 29, each man to be so equipped that he could cruise and camp independent of any one else; but if preferred, two men to mess together. At the same time each novice was in a measure placed under the care and instruction of a more experienced member, while the cruise and camp were under the command of Vice-Commodore Whitlock. At the appointed hour the fleet was in readiness, but a strong E. wind and head wind made it evident that some of the canoes would be unable to reach camp comfortably that night. It was decided to let those who so desired start at once, the others to remain at the club house and to go into camp on Sunday morning. Minx, Mr. Brokaw, Vixen, Mr. Johnson, Pilgrim, Mr. Gould, and Gueun, Mr. Sinclair, made up the first detachment, believing they could get around the forts before dark. They were accompanied for a short distance by Commodore Newman in the Sunbeam, Mr. Messier in the Berkeley, Mr. Baker in the Judy, and Mr. Dennison in the Box.

On Sunday morning the bulk of the fleet, consisting of the flagship Yvonne, Vice-Commodore Whitlock; Evangeline, Mr. Cook; Gauymede, Mr. Budington; Pagan, Mr. Weeks; Niente, Mr. Dummell; Crusee, Mr. Thornton; No Name, Mr. Fosdick; and Lone Star, Mr. Schuyler, had a most enjoyable sail down the bay, reaching camp at about 10 o'clock. Tents were pitched in good form, and, with the canoes drawn up in line upon the beach, made an exceedingly pretty picture. The veterans had come prepared with all the necessities, and the novices, knowing the proximity of the Alligator in general, had come laden with the luxuries of life. The afternoon was pleasantly passed as best suited the different individuals. The Elm Tree Lighthouse tower afforded a pleasant resort for some, while others sailed or dozed, as was most agreeable. Later some of the party returned to the city. After supper the native mosquito arrived in force, but fortunately the tents provided ample protection against his ardent attentions.

Monday morning opened with a strong easterly wind blowing, which drove away the mosquitoes. Breakfast of tongue, omelettes, broiled chicken and coffee was served. Camp was struck, the canoes packed, and the start for Bath was made. Later on a thunder shower came up which quite wet those unlucky ones not provided with oilers. The shower was followed by almost a dead calm, and sails were stowed and paddles were brought into requisition. The tide was running strong ebb, and before the fleet had made Coney Island several of the canoes had been carried below buoy 16. The crew of the Gannymede says he is constitutionally opposed to any kind of rowing, and but in this case it was paddle or no paddle, and he chose the former, and they placed their floats at the service of the canoeists and entered tained them very pleasantly. The fleet set sail at about 4 o'clock for the club house, which was reached at about 6 o'clock.

Comparing notes we found that between Saturday P. M. and Monday P. M. every boat in our club, with one exception (and her owner sailed the Guenn), had participated in the Decoration Day cruise to some extent. The fleet had covered twenty miles. In the party were five novices who had never been in canoes on a cruise before. All felt the cruise to have been a success, and it will probably be followed by other similar ones during the summer.

We find our location in the Province of Quebec a decided improvement upon the former one. The approach through the handsome grounds of the Atlantic Harbor Company being pleasant, while the clear passage from our float to the open waters of the Bay is most convenient. The B. C. C. now numbers twenty-five active members (no associate or honorary members) and a fleet of twenty-three first class canoes.

CRUISE OF THE LAKE ST. LOUIS C. C.

THE Lake St. Louis C. C. taking advantage of the Queen's birthday falling on a Monday, decided to have a cruise occupying the two days. So on Saturday, May 29, we left with a special car full of canoes for a place named Huntington, sixty-five miles from Lachine, canoes for a place named Huntington, sixty-five miles from Lachine. As I will have to name a few of the members on this voyage particularly, it would be as well to introduce the entire party and give the names of the canoes. Our worthy commodore paddled in his old reliable Shaweuegen, in which more cruising and racing has been done than in any canoe in the Province of Quebec. Commodore W. H. Riutoul, Commodore's clerk, Thos. Stewart, Shaweuegen; A. W. Morris, Vice-Commodore, H. W. Nelson, La Fleche; Charles Lamothé, C. D. Monk, Nokomis; A. J. Stewart, Robu Adair, Coquette; H. T. Wilgrees, C. E. Christian, Edith; A. T. Kohl, A. Henshaw, Puri; Fred Stewart, A. J. Henderson, Ida; A. Ward, H. S. Hunter, Peachblow; Forbes Torrance, Alex. Patterson, Vesper; A. Desbaret, F. Rolland, Oregon; E. P. Winslow, Nina; E. B. Jones, H. Laughlan, Lurline; Robert Ross, I. K. Bruce, Chestnut; C. S. Shaw, A. W. Shearwood, Water Lily; Thompson, W. F. Cooper, Bertie; W. Robertson, Geo. Auldjo, Marion L.

With this large party we arrived at mine host "Moirs" at Huntington, where we had our first portage from the car to the hotel. After dinner we walked through the town, singing national airs, to the

roller skating rink, and it would have been an enjoyable sight for a Lachine audience to have watched thirty-two greenbarns on roller skates. It was amusing to see the look of contempt cast upon us by the villagers, who doubtless go there every night, as some are very proficient in the art. Next morning at 8 o'clock we started homeward, and nothing worthy of note occurred till we reached Dewitville, and brother canoeists beware when you strike this spot. Imagine a high wall of rock, reaching half across the river with a cut about 25ft. wide through it, over this they have a rustic bridge. Our commodore hailed some farmers who were on this beautiful piece of architecture, and asked if we could go through. Being answered in the affirmative, he immediately entered this narrow passage, when what was his surprise to find a regular waterfall and rapid about 300yds. long, full of rocks, with a current running at the rate of thirty miles an hour. He got through with no mishap however, I think more owing to his general good luck than anything else, as it was impossible to control your canoe, a good paddler could just keep her straight. The Oregon, Lurline, Edith and Nokomis were all broken, the Oregon so badly that she had to be sent home by express and her crew found places in the other canoes. After an hour's delay in which Messrs. Jones and Laughlan went up to the village and bought rubber cloth, white lead, etc., and patched up their canoe, we started for St. Martine, where we were to stop over night. The rapids on this part of the river, though numerous and rocky, are not dangerous, and were fun to run an hour when in walked our rear-commodore who reported that Monk was up in a field watching his canoe and Messrs. Wilgrees and Christie were there too. We then got a buckboard and sent it for them. The hotel accommodation at St. Martine is very limited; we slept five in a room about 12x14ft. in size, but a sporting life is a hard life and everything counts. Next morning, after a game of baseball, we left for Lachine, encountering a few miles down the river a fall of about 5ft. over which all came in safety except the Edith and Peachblow, who doubtless feeling a little dry, did not watch how they steered and so upset. They and their clothes having been rescued and dried we made another start and followed the commodore Indian file, down the rest of the rapids which, though very enjoyable to me, might not appear so interesting when read about. Suffice it to say, that arriving at Dikie Island, two miles from Lachine, we formed a double line and paddled in this form to the club house, well pleased with our trip to Huntington.

MARION L.

SHERBROOKE BOATING AND CANOEING CLUB.—This club begins its second official season on June 10 with a formal opening of the house, and river illumination. The club is out of debt and owns a good boat house accommodating upward of thirty craft of all kinds belonging to some fifty active members. New members are joining, new boats on the way and altogether a very successful season is expected. The house is always open and full privileges are cordially extended to visiting strangers. During last season the register shows that nearly three hundred strangers were entertained, many of whom were A. C. A. men, who are always specially welcome. The officers for the year are: President, F. P. Buck; First Vice President, A. W. Oliver; Second Vice President, I. Edgell; Secretary, John H. Walsh; Treasurer, W. D. Fraser. Committee—H. R. Fraser, A. T. Winters, W. F. James, J. F. McKill, F. Hains, C. E. Thornton, M. M. Longee. Commodore, J. G. Walton. During the month of August the club will camp for a fortnight on Lake Memphremagog, where canoeists and others interested will be made welcome. The same prizes which were camped there last season encourage us to look for a pleasant time again. Particulars of camp and railway rates will be furnished on application to the secretary or commodore.—J. G. W. (Sherbrooke, Quebec, June 4).

OAKLAND C. C. CLEAR LAKE CRUISE.—The Oakland C. C. started on June 1, on a journey to Clear Lake, taking a steamer to Point Tiburon, across the bay, thence by freight train to Cloverdale, thence 35 miles by mule team across the mountains to Lakeport, where they launch. The fleet will include Mysie, Com. Blom; Flirt, Vice-Com. Harrison; Undine, Sec. Cooper; Zoe Mou, Treasurer Darneal; and A. C. A. men, who are always specially welcome. The officers for the year are: President, F. P. Buck; First Vice President, A. W. Oliver; Second Vice President, I. Edgell; Secretary, John H. Walsh; Treasurer, W. D. Fraser. Committee—H. R. Fraser, A. T. Winters, W. F. James, J. F. McKill, F. Hains, C. E. Thornton, M. M. Longee. Commodore, J. G. Walton. During the month of August the club will camp for a fortnight on Lake Memphremagog, where canoeists and others interested will be made welcome. The same prizes which were camped there last season encourage us to look for a pleasant time again. Particulars of camp and railway rates will be furnished on application to the secretary or commodore.—J. G. W. (Oakland, Calif., June 4).

OTTAWA C. C.—At the annual meeting in April last the following officers were elected: Commodore, W. F. Whitcher; Captain, J. S. Brongh; Secretary, F. H. Gisborne. Members of Committee—W. McL. Maingy, A. Hemming, J. St. C. McQuillin. Auditors—P. B. Symes and W. McL. Maingy. This season was opened by a splendid club cruise from Casselman, on the Canada Atlantic Railway, to Wendover, on the Ottawa River, a distance of fifty miles, with three rapids, under the command of the commodore, took part in the cruise, which extended over the 23d to the 24th inst., and was a great success. The club now numbers forty-eight members. We hope to have a good many more club cruises during the summer.—FRANCIS H. GIBBERNE, Secretary O. C. C.

NEW YORK C. C. ANNUAL REGATTA.—The club house of the N. Y. C. C. has been hauled out at Starin's dock and caulked and sheathed, and is now in position next to the old Sawanbaka, N. Y. C. house at Tompkinsville. The annual regatta will be held on Saturday next, starting at 3 P. M. The programme includes a sailing race for Classes A and B, sailing together, without limit; a sailing and paddling race, paddling race, for Classes III, and IV.; a hand-paddling race, and an upset race. The prizes will be flags for first and second. Boats leave South Ferry at 1:45 and 2:30 P. M.

DOWN THE SUSQUEHANNA.—A party of Mohicans, including Con. Oliver, Mr. Gibson, Captain Metcalf, U. S. A., Messrs. Palmer, Cushman and a guest, Count Thuan, of Austria, are on a cruise down the Susquehanna, having gone by rail to Binghamton on May 28 and started from there. They were at Wilkesbarre on June 5, with but two capsize to record.

TORONTO C. C.—A general meeting was held on June 2, at which the constitution and sailing rules were amended. Nine of the club cruised up the Humber on May 22-24.

Every pair of Allen's bow-facing oars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

BALTIMORE.—1. A. says if a rifle could be taken a sufficient distance above the earth and fired directly downward there would be a point in the bullet's flight where the force of the powder would be expended, and that gravity alone at that point would give a less velocity than immediately after leaving the weapon. B. claims to have studied the science of gunnery, and contends that the projectile's speed will increase continually. Kindly explain as fully as possible. 2. The same weapon being fired straight upward from the earth's surface, what will be the velocity upward and descending by seconds? Any possible difference in the density of the atmosphere not to be taken as a factor.—D. Ans. 1. Theoretically a bullet might be forced from a point beyond the influence of the earth's attraction, and in its flight pass into the space where it would come under the law of gravitation. 2. The rise or fall would vary so much under different conditions that it is almost impossible to give it. The bullet would fall end over end. Some experiments in that line have been made at Sandy Hook, where the bullets struck 300yds. from point fired from, and they struck flat or all ways; but when they were fired so weak ago I had occasion to take the gun from its case and while doing so I noticed a dark ring around the wads at the breech end. I removed the tallow from the barrels and found a spiral of rust in each. I have tried in every way to remove same, but with little effect. The Petmecky cleaner has no appreciable effect on the discoloration. I took the gun to a gunsmith who said that the marks were not rust, but "stains of rust." Can you tell me how I can remove them without having the barrels bored or cut with emery? Ans. Probably a wire scratch brush would remove them.

AUSTIN, NEV.—Can you inform me through your paper what changes have been made by the Government in the Springfield rifle? I have seen them mentioned as the "Improved Springfield" rifle. I would like also to know if these rifles can be purchased, and if so, where and the price.—C. Ans. It is called the improved Springfield rifle and is now known also as Model 1884. Has new rear and front sights; rear is graduated to 2,000yds.; front has a cover to shade it on bright days. Some minor details about bands changed. A detachable pistol grip is now issued on application. The barrel and other metal parts are finished with a new bluing process which is thought to be much better than old. There were some slight changes in chamber for 500-grain bullet. There has been no change in the rifling. They can probably be purchased on application by letter to the Chief of Ordnance, U. S. A., Washington, D. C.

D. M. P., Vicksburg, Miss.—Early in March I put my gun away for the season after thoroughly cleaning it. To insure its remaining in good order, I melted a lot of tallow and poured some in each barrel, and kept both ends with a wax cover to shade it on bright days. To take the gun from its case and while doing so I noticed a dark ring around the wads at the breech end. I removed the tallow from the barrels and found a spiral of rust in each. I have tried in every way to remove same, but with little effect. The Petmecky cleaner has no appreciable effect on the discoloration. I took the gun to a gunsmith who said that the marks were not rust, but "stains of rust." Can you tell me how I can remove them without having the barrels bored or cut with emery? Ans. Probably a wire scratch brush would remove them.

T. I. M. GREENBUSH, N. Y.—While fishing for eels on the 29th of May in the Hudson, about sixteen miles from Albany, it was noticed that all the eels had, under the skin, parasites varying in length from one to five inches. What are they? Ans. It is impossible to tell without seeing them. The lengths you name are very large for parasites of the skin or flesh of eels. We have known them to have intestinal parasites larger than those but do not know that eels are subject to the kind found by you. The parasites are, no doubt harmless to man as are those of fishes in general.

L. S. E., Philadelphia, 1st.—What is best bait for fresh-water bass and how to use it? 2. What are they taken with an artificial bait, if so, what is most used? 3. What hook is best for pickerel fishing? Ans. 1. The heirmite or dobson hook, hook it through the thorax and let it hang. 2. Yes. Spoons are best, but there are soft rubber imitations of crayfish, dobsons and grasshoppers that are used by some, although we do not recommend them. 3. If a single hook is used, a sprat from 4-10 to 8-10 is good. If gangs are used it depends upon the kind of bait and the size of the fish expected.

Btz, Wellsville, O.—Will you please answer following queries in your question column. 1. I am informed that the "kingbird" (so-called) does not possess a claw or food receptacle, such as is common to most other birds? 2. That they are very destructive to bees? Is this correct? Ans. 1. The anatomy of the kingbird does not differ materially from that of other birds of its family. 2. They are believed to be quite destructive to bees.

DEPRECATER.—In the market reports of the *Evening Post* I frequently notice a quotation of "small birds, 75 cents per dozen." Now, of what species are these birds, whence do they come, and what are they used for? Ans. The "small birds" we presume are peeps, ox-eyes, robin snipe, etc.

"TALES OF THE OCEAN."—Can any of your readers tell me where I can get "Tales of the Ocean"? It has long been out of print, but perhaps among the thousands of readers of the *FOREST AND STREAM*, there is some one who can tell me where I can procure a copy.—TARPOON.

A. P. S., Allentown, Pa.—We do not know of any makers of the cork coat in this country. You will find full instructions as to tents, waterproofing, and a wash for flies in "Woodcraft," by "Nessmuk," published by the *FOREST AND STREAM*.

TERRA NOVA, St. John's, Newfoundland.—1. The gun is liked by the trappers who use it. 2. "Gibson's Complete American Trapper," advertised elsewhere. 3. The bait is worth a trial if you want night fishing.

H. H. ROTHERFIELD, Sussex, Eng.—We believe that red deer have been imported into the United States from England, but of the result of the experiment we are not informed.

F. B. S.—Hunters Point.—1. The laws will be published in our next issue. 2. You can shoot trespassing dogs, but you will be liable for their value if they are killed.

S. P. C., Cincinnati, O.—You can carry a mainsail of 70ft. and a mizzen of 20ft. Follow the proportions of balance lug sails in "Canoe and Boat Building."

H. & W., New York.—Boats and canoes are sometimes built without any mounds by experienced workmen, but no special model can be made or copied.

W. B. B., New York.—You can get cedar boards of C. F. Hodsdon, 744 Water street. They are of all thicknesses and 6 to 12in. wide.

D. H. K.—You will find instructions for tanning in Gibson's "Complete American Trapper," which is advertised elsewhere.

W. D. A., Jr., Montclair, N. J.—The sails are not too large. Alcohol stoves can be had at any sporting goods store.

SILAS, Boston, Mass.—There is no shooting now in Massachusetts; everything is out of season.

J. M. C., Broome Center, N. Y.—We cannot recommend the boat for your use.

HIPPAS, Corinthian signifies amateur. The mattress should be thin, thick.

SUBSCRIBER.—We can furnish the book. Price \$1.50.

GRATEFUL—COMFORTING.
EPPS'S COCOA.
BREAKFAST.
"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.
Made simply with boiling water or milk. Sold only in half-pound tins by Grocers, labelled thus: JAMES EPPS & CO., Homoeopathic Chemists, London, England.

Canoe and Camp Cookery.
By "SENECA."
A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price \$1.00.
NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

ESTABLISHED 50 YEARS.

14 First Prize Medals. **WM. S. KIMBALL & CO.**

CANOE HANDLING.
By C. B. VAUX ("DOT").
A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.
NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row.

Province of Quebec
PUBLIC NOTICE.

LEASES OF THE ANGLING PRIVILEGES pertaining to the ungranted lands bordering on a few Salmon Rivers on the north and south sides of the River and Gulf of St. Lawrence, and a number of lakes situated for the most part along the line of the Quebec & Lake St. John Railway, will be offered to public competition, at the Department of Crown Lands, Quebec, on

Wednesday, 30th June next, 1886,
At Eleven o'clock A. M.

A list of said Rivers and Lakes is published in the Quebec Official Gazette of this date.

For further information address the undersigned, or the office of the Forest and Stream Pub. Co.

W. W. LYNCH,
Commissioner of Crown Lands.

Department of Crown Lands,
Quebec, May 29, 1886.

May 29, 1886.

"HANBROOKS." AN EARTHLY PARADISE. Pleasure, Health, Happiness. "A Thing of Beauty is a Joy Forever." A charming home on the Choptank River, the prospective route of the Chesapeake & Delaware Ship Canal. About 1 mile from Cambridge, the most attractive and thriving town in Maryland. Contains 100 acres of very fertile land, in the highest condition of improvement—8 acres in wood. Choice fruit. Double row of poplars, with frame addition, 11 rooms, besides pantries and cellars. Large barn, stable, corn houses and tenant houses. Soil mostly loamy, easily cultivated, very responsive, equally adapted for fruit, grass or grain. House stands in a 4-acre lawn, well shaded, 100 yards from the terraced bank of the river—at this point two miles wide. Situation in the highest degree healthful, beautiful and convenient. River salt, abounding in fish, oysters and game. Best situation on the river for bedding and packing oysters profitably. Climate mild; diphtheria, catarrh and pulmonary diseases almost unknown. Suitable in an uncommon degree for a place of public resort or sanatorium summer and winter. Equally desirable as a gentleman's country seat, affording every facility for boating, bathing and all aquatic amusements. Society of the best in Maryland—intelligent, courteous and kind. Present owner has occupied it for 13 years. No mortgage or other incumbrance. Title unquestionable. Steamboats and rail facilities daily; likewise telegraph. No such property is offered or can be bought in this State. A rare opportunity for a gentleman of wealth, taste and leisure, seeking recreation, health and rational enjoyment. Steamers leave Light street wharf, Baltimore, every night at 9 o'clock for Cambridge. Early morning train from Philadelphia, Wilmington & Baltimore Depot, via Delaware Railroad, at Wilmington. Come and see. Price, \$30,000. E. G. WATERS, M. D., 216 McCulloch st., Baltimore, Md., or A. E. WATERS, Cambridge, Dorchester Co., Md. may13,tf

ANSWERS TO CORRESPONDENTS.

CAPTURE OF THE CROW RESERVE.

THE Crow Indian Reservation includes about 4,500,000 acres of land in Western Montana south of the Yellowstone River. Except along the river bottoms it contains little arable land, and nowhere can farming be carried on without irrigation. But the broad prairies, rolling foothills and mountain parks are luxuriant with nutritious grass, and the reservation's advantages as a stock country are unsurpassed. This reservation is all that is left to the Crows of the broad lands that once were theirs. Here they live, subsisting on what the Government issues to them, for few of them have made any progress in industrial pursuits, and there is no game left. Some of the Crows have cows which were issued to them by the Government, and they have a good many ponies, but they have as yet done hardly anything toward learning how to till the ground.

Over the length and breadth of the reservation the cattle-men's herds feed and fatten on the acres which belong to the Indians. The few cows belonging to the latter range with the thousands owned by the whites, and are absorbed by them. It is the old story of the poor man's one ewe lamb which his rich neighbor coveted.

The trespassing of these cattle on the reservation is expressly forbidden by the regulations of the Indian Department. When the present Crow Agent, Williamson by name, went into office a few months since, he at once ordered all the cattle to be removed from the reservation. The cattlemen were not slow to take the hint, and it is charged that this order was the signal for them to put up money to secure permits to graze cattle on the reservation. Such permits have been issued to a number of firms, and, having acquired this foothold, the cattlemen propose to make still more sure of this great pasture land. They wish to secure it beyond a peradventure and for all time. They desire to fasten their grip upon these lands so firmly that it can never be loosened. This is their plan: They have arranged with the present agent to give them permits to throw their cattle on to the reserve. Having secured these permits from the agent, they have turned in the stock in large numbers and are now taking possession of the best locations. The permits which they have obtained cover the best agricultural and grazing lands on the reserve, and on these lands the

cattlemen are building permanent improvements, which will enable them to hold the land, should the reservation ever be thrown open to the public, and to bluff off actual settlers.

Among the firms and individuals who are alleged to have succeeded in getting permits to throw cattle on the reserve are the following: Briggs & Ellis, renewal of permit to graze cattle on the reservation, at fifty cents per head. Hoskins & McGill permit to graze bulls on the reservation, when not needed with the cows that graze north of the Yellowstone. Ash, permit to graze a small band of cattle on the reservation.

It is believed that there is no law for this permit system which is being carried out by agent Williamson, and that any cattleman has as much right to turn his cattle on the reservation as those who have these permits.

It is stated by those who are perfectly familiar with the reservation that Nelson Storey, of Bozeman, is building a permanent ranch on the reservation near Pryor Mountains, and that he has a permit to graze his cattle on the reserve. Whether he has such permit or not his cattle are there by thousands. So also are those belonging to I. K. Dillworth, making with those of Storey perhaps 20,000 in all. Last winter and spring they dotted the whole country between Pryor River and the western boundary of the reserve. Storey had then a hay ranch and corrals on Clark's Fork. Several of the cattle men have boasted that they have the reservation securely in their power.

It is not only the cattlemen who are encroaching on the reservation, for Thos. Barry, a sheepman of Rock Creek, stated last spring that he had a permit to graze his band of 6,000 head on the reservation up to June.

On the south, a cattleman of Wyoming, H. C. Lowell, whose stock ranges on Sage Creek and the Stinking Water, takes advantage of his proximity to the reservation to graze his cattle there too. As the case stands at present, the cattlemen seem in a fair way to gain absolute control of the reservation. This control will not benefit the Indians, who are at present unaware of the state of things, and would strenuously object were they not deceived in the matter, and when the time comes for throwing open the reservation, the desirable locations will be found to be all occupied by the cattlemen, who will find some means of holding on to them. The people and press of the Yellowstone valley are silent on this matter, for the great cattle firms interested have too much influence to be openly resisted.

The greater portion of the reservation is now under the control of the cattlemen. The Crows receive little or nothing in return, certainly not enough to pay them for the risk to their own small bands of cows and horses which are certain to be absorbed by the herds of the white men. The reservation should not be thus taken away from the Indians without their consent and handed over to the control of the rich cattle firms who, if they once fairly become established in it, will with difficulty be removed.

A searching investigation of this whole matter ought to be instituted by the Interior Department. If the agent has any authority for issuing these permits it ought to be known. If he has no authority the cattle ought to be at once removed and the agent too.

A CALL FOR MORE POROUS PLASTERS.

THE National American Swimmers' Association for the Protection of Women and Children from Death by Drowning convened in this city on Thursday morning of last week. A large number of delegates from swimming clubs and surf associations were present, and there were two members of the Lighthouse Board. The president, in welcoming the members, referred to the growth of the summer picnics, the multiplication of excursion steamers, catboats and "death traps," and the consequently growing field of usefulness for the association. A number of highly interesting and valuable papers were read. The delegate from the Wabash (Ind.) Swimming Club, presented a thoughtful essay on the "Impeding Influences of Quicksands in their Relation to Skirts;" and the delegate from the Ann Arbor (Mich.) Swimming Club, followed with a paper based on the researches of Prof. Arnold Guyot, showing that as the waters are gradually receding from the land the ultimate success of the Association was assured.

The secretary then read his report, in which was embodied the information collected by the Association since its last meeting, showing the number of deaths of women and children by drowning in 1885. The total proved to be enormously in excess of the number for 1884. This startling summary had a powerful effect upon the assembly, and it was felt by all present that something ought to be done about it. The Law Committee reported, recommending that the

picnic and excursion season be made uniform throughout the States.

Reports from clubs were then in order. These were particularly eloquent and instructive as showing the lamentable state of general apathy of the non-natorial public regarding the cause of protection from drowning. Some dissension was caused by an inexperienced delegate from Philadelphia who made the point that, inasmuch as in every case of drowning narrated by the speakers and of which they had been eye-witnesses there had been an abundant supply of all sorts of life-preservers, life-rafts, casks, hen coops, feather beds, hatches, oars, cork jackets and patented life-saving devices, the respective women and children would have been saved had the members themselves simply heaved some of these appliances overboard. Another new member somewhat incoherently formulated the proposition that in other cited instances, where infants had perished in very shallow water, the stalwart members of the National American Swimmers' Association for the Protection of Women and Children from Death by Drowning might have plunged in and personally rescued the little ones. These novel propositions were quickly shown by the older and more experienced delegates to be puerile and impracticable; and, harmony having been restored, it was unanimously resolved to pass resolutions. A committee was appointed to draw up the resolutions.

As it was now nearly noon and as the convention had before it important business relative to amending the rule of handicapping contestants in its three days' kitten-drowning tournament, the committee was empowered to adopt its own resolutions and send them to the press. After wrangling over the handicap kitten-drowning rules (during which the Lighthouse Board delegates "slid out") and the election of officers, the delegates took the noon boat for Coney Island, where an exhibition was given by the champion of the association, who succeeded in drowning out the ninety lives of ten cats in ninety minutes. The regular contests then began and continued until late Saturday night, the ties being drowned off Monday morning. The resolutions given out by the committee are as follows:

Whereas, The number of women and children drowned in the waters of the United States is annually increasing at a most alarming rate; and
Whereas, If the deaths by drowning multiply in the immediate future as they have in the immediate past, there is serious danger that the race may become extinct; and
Whereas, It is the unanimous conviction of this convention that something ought to be done about it; therefore, be it
Resolved, That we, the members of the National American Swimmers' Association for the Protection of Women and Children from Death by Drowning, do respectfully petition the Congress of the United States and the Legislatures of the respective States to make suitable provision for the increased manufacture of porous plasters to be applied to the resuscitation of the drowned.

BEAR MEAT.—"Mountain mutton" is the usual term employed by such of the Adirondack hotel men as serve venison out of season. Last Monday a gentleman, who has been prominent in organizing a new club in the Adirondacks, was relating to us the wonderful increase of the weight attained by one of the members during a few days stay at the new club grounds, which increase was thought to be due to the wonderful air, the trout and the "bear meat." In the course of the conversation, by a *lapsus lingue*, it transpired that the "bear meat" was from a May killed buck. The hotel keepers of Franklin county may still learn a point or two in culinary phraseology from the club men of Hamilton county.

THE MAINE HOUSE BURNERS.—Another one of the Shacker Band, of Wesley, Me., has been convicted and sent to jail for his part in the burning of Game Warden Munson's house and barn. In another column will be found an account of the reign of terror exercised by these ruffians. It is an extraordinary story. Dr. Hunter and his friends, who have at great personal peril assisted the authorities in the detection and punishment of the criminals, deserve great praise for their courage and public spirit.

ARE THERE DEER IN THE CATSKILLS?—In a report of the visit of Forestry Commissioner Cox to Slide Mountain, in Ulster county, N. Y., it is stated that in that region of the Catskills, bears, wildcats, foxes and deer are still to be found. We should like to have verification of the presence of deer there. Of the bears, wildcats and foxes, no question can be raised.

ABOLISH SPRING SHOOTING.—The Illinois Sportsmen's Association, as reported elsewhere, will endeavor to have spring shooting abolished from that State. It ought to be abolished from every State.

FLORIDA FOOLISHNESS.

AT the inter-state tournament of the National Gun Association, at Tallahassee, Florida, June 21, it is proposed to trap-shoot martins. Such a proceeding ought not to have the sanction of the National Gun Association, nor of the local club, nor of any individual making pretension of possessing the customary modicum of common sense. It is pure, unadulterated, aggravated foolishness.

All other considerations aside, there are abundant economic reasons why these birds should not be destroyed. Martins are insectivorous. That is to say they catch, eat and destroy vast numbers of injurious insects. In one of the volumes of *FOREST AND STREAM* is given a record by a naturalist, Mr. O. Widdman, of St. Louis, Mo., who watched a nest of a pair of martins sixteen hours, from 4 A. M. to 8 P. M., to see how many visits the parent birds made to feed their young. He found that in that time 312 visits to the four young were made, 119 by the male and 193 by the female. If we suppose only six insects to have been brought at each visit, this pair of birds would have destroyed, for their young alone, in this one summer's day, not far from 2,000 insects. It is hardly necessary for us to begin at the first pages of the primer and laboriously teach that creatures which perform such services for the community should not be thoughtlessly, not to say wickedly, destroyed in trap-shooting competitions. Florida does not enjoy such extraordinary immunity from insect pests that its citizens can afford to make war on martins and other like birds.

The number of martins which the National Gun Association proposes to trap-shoot at Tallahassee may be very small, so insignificant that the actual results of their destruction will be practically nothing. The harm likely to ensue is not, however, to be measured by the immediate material result of the proceeding. The National Gun Association and the gentlemen gathered in Tallahassee have a certain responsibility, because they will be looked upon as representing the attitude of sportsmen on such questions as this of the destruction of valuable insectivorous birds. If they shoot martins it will be a warrant for others to do the same. If they take a stand against the killing of useful birds, their example will have an influence on others. The proper thing for the Florida members of the National Gun Association to do at Tallahassee is to initiate a movement to secure from the Legislature of the State a law forbidding the destruction of martins and all other insectivorous birds, as well as birds of plum.

SPRING IN THE YELLOWSTONE PARK.

THE latest advices from the National Park, dated late in May, report a mild winter and the spring fairly opened.

Game is said to be plenty and to have wintered well. Elk have been seen in large numbers around Specimen Mountain near the mouth of Slough Creek, and East Fork travelers have reported seeing over two hundred head between Soda Butte and the Mammoth Hot Springs. A good many elk have wintered also in the Swan Lake and Indian Creek country, where they were fairly abundant last August. It is stated that these numbered from three to five hundred.

The usual band of mountain sheep have been seen on the slopes of Mt. Evarts, where they remained until after the lambs were born. Some of these were dropped not far from Gardiner's River.

A small band of fifteen or twenty head of antelope have been seen near the town of Gardiner, between the foot of Mt. Evarts and the river.

Early in the month of May, Geo. Miller, one of the Park Police, went from the Springs to Soda Butte, and when crossing Specimen divide, came upon three buffalo, a large bull, a cow and a smaller bull. As there was considerable snow the animals kept the road for some time, and when at length they turned off, Miller was only about twenty yards behind them. They did not appear to be greatly alarmed, and stopped soon after he had passed them.

A new road was recently opened from the Norris Basin to the Falls for the purpose of taking in building material for one of the hotel companies. James Blanding, one of Lieut. Kingman's foremen, broke this road, and reports having seen twenty-five bison and a great many elk. He did not reach any point where he could overlook the Hayden Valley, which is the great wintering place for game in the Park.

Building by new hotel companies is going on quite vigorously in the Park, and by this time the season may be considered to have fairly opened. A few tourists even went into the Park in May.

THE BOSTON DUMPING GROUND.

THE new Massachusetts game law is in many respects an improvement upon the statute it supplants. Its text is the outcome of much pulling and hauling by representatives of diverse interests. The members of the Massachusetts Fish and Game Protective Association had as usual the market-dealers to contend against, and as usual the game sellers came out ahead. They still have the privilege of receiving the unseasonable game which can find a market nowhere else. Western prairie chickens and venison and Eastern quail will find their way to the Boston dumping ground, and if Massachusetts game is not displayed on the same stalls it will be because Providence sometimes overrules the natural consequences of such grossly stupid legislation as the Massachusetts people are capable of perpetrating when game interests are at stake.

The Sportsman Tourist.

DAYS WITH THE BARMECIDE CLUB.

IV.

FOUR or five miles southeast of Onr Lake were three other lakes, all discharging their waters through the outlet of the most southerly of these; and their combined flows, in addition to numerous springs which added their mites, made a large stream, one to fill all the requirements of the angler. It was a wild rough place off the beaten track, and we were one of two parties who had visited it in the last three years.

We had to build a raft for our lake fishing, as we found the old one was water-soaked and nearly a complete wreck. If it had ever been "a thing of beauty" it was not "a joy forever," for its beauty, its joy and all its aesthetic and useful qualities were numbered with the past. The tramp from Onr Lake, building a raft and repairing shanty, consumed the greater part of the day, but the time was well occupied and enables us to devote the remainder of our stay to fishing, loading or ornamenting our residence and grounds as best suits us.

We were all pretty handy with the axe and had done our work well. The shanty was twenty yards from the lake and near a large spring which fairly tumbled over a ledge of rock into a low, cool, moss-covered pool, which we utilized as a kind of store house for portions of our supplies.

Healthily tired out after our tramp, day's work and preparations for the morrow, when the day's light was blown out we went to roost. Guide reported in the morning that a hedgehog or hedgehogs had made a nocturnal visit to our storehouse and had got away with a large portion of a bucket of butter. Report accepted with thanks. Hedgehogs may have our butter if they want it more than we do, which they evidently do. We have a rifle in camp and we are going to set that bucket of butter to-night.

The woodland stir and sounds of early morning had barely commenced ere we had finished breakfast and made ready for a raid on the beautiful wet home of the fishes. Storm and Roy take the raft, while Glen goes fishing afoot. There was a sky of tender gray with a suspicion of blue behind, which was trying to assert itself but with no present prospect of success, though the sun was doing its best to help the blue. The wind was so capricious there was no telling when it was blowing favorably for angling. It was a regular spree from all quarters of the compass. We had our doubts, but when you are in doubt take the trick, and Storm and Roy quietly dropped anchor and then dropped flies close up among the lily pads, where a spring branch emptied into the lake, and brought some lusty beauties to their creels.

The red ibis alone would tempt them. Nothing else in our judiciously stocked fly-books possessed any attractions for them. They cared not for highly-seasoned food; only demanded their plain and straight every time. There are some flies to which trout will rise only at certain times, and there are others to which they will rise at almost any time. The scarlet ibis, the grizzly king, the professor, the coachman, the Montreal and some others the practical angler will find killing enough every month the game laws allow him to use them. These are all recognized as standard. There is little need, at least in this country, of burdening yourself with the almost endless assortment of nondescripts, of which piscatorial theorists preach, for the most successful practical anglers find a comparatively limited assortment all that is requisite. A large majority of American anglers will tell you the same thing, though dealers display a collection confusing enough to perplex the novice. You will rarely find me here without a scarlet ibis on my leader. It may be a dropper, but it is more likely to be the stretcher fly.

Glen footed it around the lake to the outlet, where he adjusted his tackle and maneuvered for position. Oh, but it was a rare place for one who loves the mountain stream. There were beetling cliffs, bare and rugged, then openings above, but below a network of tangled branches, places where the fly could not be cast and where strategy only would succeed, then long stretches of shallow where one could cast "far off and fine." In places, huge trees had fallen across and into the stream, making perfect jungles of pine disorder and hemlock, which necessitated detours around them; but not a foot of fishing ground did the careful Glen waste. There was the faintest ripple of a suspicion that on the inside edge of the swirl beyond that projecting rock dwelt a prince of the family Glen has known so many years. He was not acquainted with this particular individual, but his intimacy with friends and relatives justifies his calling. He does not knock at the door, but sends his red-winged messenger and lets him tap ever so gently. No response? Try again and tap a little louder. No response? Try yet again and tap a little louder; push like a humming bird probing a honeysuckle. Al-ha! he is at home, and wide swings the palace gate as he springs hastily on to investigate the wherefore of this unseemly hubbub. Foul play, by my dorsal fin, foul play. Never was challenge fairer offered, and now good rod and reel and leader, all old times, once more. Mitchell to the front, and if you can smash him, don't hesitate a moment. With a wishywash the silver leader cuts a crescent in the dark, quiet pool below, and the wondering trout are bewildered at the eccentric movements of their royal countryman. The eccentricities of royalty were never more apparent. Handsome fellow, reckless devil, rushing frantically through his neighbor's domain. He is as Herbert says to Pip in "Great Expectations," "A good fellow, with impetuosity and hesitation, boldness and diffidence, action and dreaming, curiously mixed in him."

Glen explored the outlet pretty thoroughly for several miles before he returned to camp, and was very glowing in his praise and description of it.

For the men on the raft the fitful wind had indeed proved favorable and all went merry as a marriage bell. Roy managed, by a misstep or a slip, to fall off the raft into ten feet of water, incontinently disappearing and for a few moments was not to be seen, but had left a larger rippling circle than any feeding fish. But a little thing like that would not suffice to dampen his ardor, for to Storm's "What's the matter, Roy?" he resurrected the old "chestnut" for an answer, "Oh, nothing; I only went down to see if the anchor was all right." Reaching camp just in the deepening twilight and hungry as the proverbial fisherman, but with baskets, as Noah said of the ark, rather crowded, we found supper awaiting us. A few meditative puffs and then to bed and rest. Oh, these glorious nights in the woods, where one comes in late from a day's sport and, outstretched on his bed of browse, can find pleasure in listening to the booting of the owl, to the cricket's song and the croaking of the frogs, to the wind sighing through the trees and the plash of the gentle little wavelets that creep murmuringly up to the shore,

kissing the lily pads as they pass and encouraging you to sleep, while the hedgehog, unable to control his predatory instincts, is sacking your butter pail. However, guide keeping awake late that night, patiently awaited his coming and then shot him, so our account with that animal was balanced up to date.

We must cease from our angling for a day. We had been here three days, and during each one all the conditions had been favorable for good creels and we had made the most of it. The fourth day we were not to fish, so we slept until it was late, having breakfast at city hours. To many it would seem a very strange statement to make, that having a superabundance of game we refrained from capturing more at present; but such is the sad fact, and many is the time in the woods and on the plains when we have been guilty of the same offense. Many are the smiles and shrugs of the shoulder that have been given us for opinion's sake on this point, but we have always quietly endured them, because it was never numbers nor pounds avoirdupois that caused us to go out with rod or gun. No person loves to hunt or angle more than we, and we claim that the reckless, cruel slaughter of game for simply killing and wasting and throwing away, is a charge which cannot be held against us; and furthermore, we claim that our captures have been fair and sportsmanlike, and that we are in full sympathy with all laws tending to the better conservation of game, the young buck spoken of in the fourth section of this sketch to the contrary notwithstanding.

The ills and dangers that nature inflicts are numerous and merciless enough, but almost harmless in comparison to the skill employed by even the most honest and conscientious of sportsman; but what shall be said of the desperate chances they run when attacked in season and out by the villainous devices of the pot-hunter. "Blessings brighten as they take their flight," and we hope that law will more severely lock the stable door before the horse is stolen.

But then we had lots of fun around camp. There was plenty to do. Lots of little tricks to busy about. Glen tied a few flies and repaired a few leaders. Storm was boss and all hands at making some improvements on the raft. We read and smoked and slept, traded experiences and enjoyed to the fullest the three square meals provided by guide and company. It was a holiday for guide, as we chopped his wood, helped him get dinner and joined the chorus of his afternoon siesta.

And it was a glorious rest, where every bugle was in perfect harmony with its neighbor, and if one bugler awoke he was not mean nor selfish enough to repeat the miserable trick of the would-be funny man of tickling some sleeper with a straw. As well take a cup of water from parched lips. Nor was it indolence, this afternoon nap. It was medicine and good medicine too, and each man partook of it whatsoever he needed and was content. Full well he knew there would be no stupid finger drumming on the table nor any torturing whistle to disturb the calm.

Then we paddled over the lake and visited many a familiar point of old time and present interest only less interesting from the absence of former outers who had in times gone by frequented them with us. MILLARD.

CHEYENNE, Wyoming.

A DAY IN TUSCANY WITH THE QUAIL.

AN early rise, a hasty breakfast in the big kitchen of the "Fattoria," a run to the kennels, a joyous bark at our arrival, and the old gamekeeper and I sallied forth for the lowlands by the Arno, accompanied by a choice brace of pointers.

Reports had come in the evening before of the arrival of the migratory quail, nearly always quite a sudden event, and a few snipe could always be counted on. The "guardia" and I had loaded a few shells for my gun, a central-fire, which had excited a little curiosity in the neighborhood, as muzzleloaders were the rule, a few pin-fires the exception, and the central-fire an unknown quantity. The prevailing opinion was that it was a good enough arrangement for a gentleman to have, but not of any great advantage save the emolument of gun dealers. This was about twelve years ago.

We walked down the hills, a gentle breeze softly waving to and fro the new-born leaves and tendrils of the vines, gracefully festooning from tree to tree in luxuriant garlands. The dogs were gamboling ahead, now and then turning their heads and looking at us, to make sure whether or not their conduct was open to any criticism, and then resuming their chase through the green, waving wheatfields on either side of the path.

The old gamekeeper was a remarkable specimen, a kindly old giant whose huge proportions were well fitted to strike awe and terror into the craven hearts of any trespassers about the preserves. He sported a pair of cowhide boots, rising high above the knee, whose cubical capacity must have fallen little short of a bushel apiece. Deep in these boots were lost the ends of a pair of breeches, once of blue corduroy, but now somewhat iridescent from the play of light upon the many patches. His coat was of a brown canvas-like material, with more pockets than even Uphre-grove & McLellan can ever have dreamed of, and his cap was of the shape and hue of a section about eight inches below the end of a watermelon. It was graced by a bit of gold cord and a visor, a cap held in greater reverence and awe than ever was the covering of the tyrant Cessler. His gun would have deserved an engraving in a work upon ancient gunnery, a weapon born as a double-barreled flintlock which, after many years, had been placed in the hands of a cunning artisan, whence it had issued as a percussion gun, to again resume its destructive course. The muzzle had worn down to an edge as keen as that of many a razor I wot of, and the barrels held on to the stock partly by force of habit, and partly by the restraining influence of a piece of string. The stock was ornamented by a gargoylic which was alleged to present some similitude to the head of a stag, but which reminded me far more of one of those amazing and shapeless monsters we see depicted in the middle-age pictures of the "Temptation of St. Anthony." In the gamekeeper's hands, however, it proved itself endowed with wondrous qualities.

We soon reached the marshland, and a whistle recalled the dogs to seriousness. They went off ranging over a damp, sedgy field that stretched way off to the Arno, and the old dog suddenly fell on a point, the younger one backing beautifully. We advanced, and with a shrill cry three snipe rose. I shot and killed with my first barrel, but missed with the second; the old keeper had killed his first bird within three feet of where it arose, and downed the one I missed, saying afterward, as he stood reloading his gun, that he hoped my excellency didn't mind, for snipe were scarce and we might

as well bag all we could. He was quite relieved when I assured that my excellency did not object a bit. A little further on the dogs began to work around very carefully in the grass, the quail had been running around, and it was several minutes before they came to a point. We came up to the dogs, told them to go on, and they crawled up carefully a few yards when two quail arose, both of which I managed to kill. They were the first migratory quail I had ever shot, being birds about the size of a rail. They are very strong on the wing, and make as much noise as our quail in arising. They give a strong scent and afford excellent sport, being nearly always scattered singly or in pairs when they have been in the fields for some little time.

We went on further and found that these splendid little game birds were fairly abundant, not nearly as much so as they are on the banks of the Nile, but sufficiently to give us much sport. When a single bird or a pair arose, the keeper always waited for me to shoot first, and notwithstanding this he only missed two shots during the whole day, probably owing to the limited range of his gun, as I shot several birds that day at distances which seemed to him quite extraordinary, for each time he delivered an old Italian saw, to the effect that an oak tree was producing lemons.

The sport was indeed splendid, seldom did more than a quarter of an hour go by without a good point, and by 4 o'clock my fifty shells were exhausted, and we turned to oard home with about four dozen quail and seven snipe, besides two or three larks.

It may be interesting here to say that on the shores of the Mediterranean the quail arrive in huge numbers at certain times of the year, and they are netted in countless thousands and sent alive throughout Italy, where they are sold in the markets, lightly packed in low wicker-work cages. The Bishop of Capri, a small island near Sorrento, used to derive an income of about two thousand dollars from a tithe levied upon the quail netted upon the island, and may do so yet for aught I know. Notwithstanding this slaughter, they still come over from Africa in large numbers, many falling in the sea from exhaustion, or when overtaken by storms. I have often watched them arriving on the shore, and seen them fall so tired that they could be captured with the hands after a short run.

G. V. S.

AT THE AGENCY SCHOOLHOUSE.

LAST autumn a member of the FOREST AND STREAM staff attended an examination at an Indian schoolhouse in far Montana, where the Agency children had for a single year had the benefits of instruction in the rudiments of an English education. The progress which they had made in this short time was very remarkable, and their quickness in learning gave a most encouraging insight into the possibilities of Indian education.

We have recently had further news from this little schoolhouse, news of a very pleasant character, as is shown by the story told below:

Editor Forest and Stream:

At some leisure time, I promised to write you a brief history of the school at this place, or rather, some of my experience at teaching Indian children. We arrived here May 22, 1884. The school was in session then, but closed soon after for a summer vacation.

My first effort was to teach a class of sixteen girls sewing. My assistant and I cut and placed the garments ready for the needle, and they, being great imitators, we found no trouble in teaching them to use the needle and thimble. At the end of two months, we had completed a suit of clothes for each girl. And many a one with much better advantages would be glad to sew as neatly. There we felt our efforts were crowned with success.

Our day school opened September 1, 1884, with a full school, of which only two could speak English, or knew the alphabet. One of these we employed as an interpreter. Great patience and perseverance was required to teach them the letters, so they could understand or speak them in English. Our next effort was to teach them to sing the Lord's Prayer, which was by no means an easy task, but by practicing it a great many times, they came at last to sing it very well. Some of the children have very sweet voices.

About one month after the day school opened a boarding school was started, which accommodates twenty pupils. These children attended the day school regularly. And that gave us a much better chance to teach them, than those that came from the camps, for these latter generally attended the morning session only, in order to get the crackers that were issued to them at noon. They would come with their faces painted a bright red or striped with other colors, and dressed in full Indian uniform. We soon furnished them with water, soap and towel to remove the paint and tried to make them understand it was not necessary in making their toilet for school, to paint. But in this we were not very successful. The first year our supply of books was rather limited, and for the most we used charts, as the children were unable to understand English and the books were of little use to them, until they had made some progress in the language. And here I must say to their credit that they are equally as apt to learn, and in their deportment are above the average of white children. I have had but little trouble in controlling them. If there was any misconduct of any kind, I was never obliged to use any harsher means of correction than to talk to them. They would soon say they were "sorry and ashamed" (that being their words for repentance) and would "try and never do so again." At one time one of my boys, about eighteen years of age, became unruly and I told him I should have to correct him. He let his Indian nature appear and drew a knife. I was not at all alarmed, but talked quietly to him, and pretty soon he began to soften and then to cry, said he was ashamed of what he had done, and would burn his bad boy and be good ever after. So he proceeded to put a stick in the stove to burn, to represent his "bad boy," and true to his promise he has been a very good boy ever since.

It is said that Indians are a spiteful people. I have not found it so with my pupils. They never show the least spirit of revenge at my reproof, on the contrary they seem the more anxious to try to please.

My school is often visited by the leading Indians and parents of the children who attend school. They often ask to talk to them, and always give them good advice, telling them to mind their teachers, and study hard while they have a chance and not grow up in the dark like themselves. At one time, old White Calf, the chief of the tribe, in making a speech, told his boys he wanted them to study hard, and become scholars enough so that when they bought an article from a white man they would know when they handed him a bill, how much change they should receive and not be like himself, take whatever the white man saw proper to give him. The tears came into the old man's eyes as he spoke.

The school is provided with an organ and Gospel Hymn books. The children have learned to sing a great many hymns and patriotic songs including Yankee Doodle. There are some of them that have excellent voices, which if cultivated would make their possessors very fine singers. All the boarding school children can read, a part of them quite well. They take a great delight in writing and all write a very good hand. And all this they have learnt within the past year.

Natural History.

THE BIRD RANGE INCREASING.

Editor Forest and Stream:

The following notes may for your readers as well as myself possess a certain degree of interest:

On the 27th of May, in driving along the road about ten miles north of Elk Rapids in the country, I saw a bird at a distance of sixty or seventy yards, and from its appearance and manner of alighting in the grass, I was sure that it was a plover of some sort; a bird which I have never before seen in this region. This one was about the size of the upland plover of New England, but seemed lighter in color. I heard no note, and circumstances prevented me from extending my investigations.

A friend, in whom I have confidence, told me last week that he had seen not far from this village a pair of crossbills, this being the first instance within my knowledge of their appearance hereabouts.

My wife, yesterday, saw a brown thrush (*Harporhynchus rufus*). These I have never seen here, though others may have been more fortunate.

The lady above mentioned was yesterday walking in the garden when a finch alighted on her hat, and after pattering about for a short time took its departure. It may be mentioned that there were no wild birds' feathers upon the hat and this fact doubtless tended to inspire an unusual degree of confidence in the little creature, which left when it was ready to go and not before. It is told that Robinson Crusoe was horrified by a similar incident in his island experience; but I think there was in this case no feeling of that sort. It shows that we are on good terms with the most of our neighbors.

We have not up to this time been annoyed by the English sparrows, although I think that I have seen them as winter visitants. I am informed, however, that in Mancelona, twenty miles distant, they appeared last year in small numbers, but are now very numerous.

This region has only of late years been occupied by whites, and is even now but sparsely settled, and many birds common to the older communities of our State will, I doubt not, find a home here in time, where as yet they are unknown. I have been surprised that in all my excursions upon the waters of this county, I have never yet seen a bittern of any variety. These birds are so widely distributed, that with the abundance of food and other conveniences which our shores could furnish, it has seemed strange that none should come among us. The common blue heron is frequently to be seen, though they are less numerous than formerly. So with the loons, whose nests are regularly robbed by the raftsmen. I have an egg of this bird. I am glad to say that I did not rob the nest. I also have one of the wing plumes of a condor—a quill of extraordinary size, which, with the egg, has a conspicuous place among various outlandish matters which hang upon the walls of my sitting-room. Query. Is this a violation of the pledges I have given to the AUDUBON SOCIETY? I don't know. Were it the magnificent plumage of some tropic bird, or even the lustrous skin of a woodcock, I would have pulled them down at once; but that somber-hued old plume, with its forty years and more of past associations, still hangs on the wall. I have not been able to persuade myself that it is to be regarded in the light of a "decoration."

Although no shooting for millinery purposes has within my knowledge been practiced hereabout, I am persuaded that many of our smaller birds have been killed elsewhere during the migratory season. For example: I am informed by one of the firm of Cameron Brothers, at Torch Lake, that they have always protected the robins, which have heretofore nested in large numbers about their buildings and lumber yards; yet this year they have appeared in numbers sadly diminished. For this no apparent reason exists, save that which I have assigned, and it goes to show that the work of the AUDUBON SOCIETY was begun not a moment too soon.

The Florida gentleman who is so anxious to "stash" the mocking bird should remember that there are a few insects left in his State (there were a good many when I was there) and that without the birds there wouldn't be much of anything else but "bugs."

KELPIE.

CENTRAL LAKE, Mich., June 10.

BOYS AND BIRDS.

Editor Forest and Stream:

As this is the nesting season of our feathered songsters, I wish, through the FOREST AND STREAM and with your permission, to say a word to parents in regard to their boys in connection with birds and their nests.

In many of our Eastern cities and some of our Western cities as well, anti-feather societies are becoming very popular. I am pleased to note this fact, for, as a rule a woman's head-gear is ridiculous enough, but I look with horror upon a hat with a bird on it, no matter how fair the wearer may be. But to the subject. Perhaps it is not very generally known that boys about this time of the year and also later on, form themselves into little bands or clubs as it were, and start off on a crusade against birds and their nests; this is nevertheless a fact, as the writer was an eye-witness to an inventory that was being made by a band of these young robbers who had just returned from a crusade of this kind. One hat, that of the boss robber, contained nearly fifty eggs of various kinds. There were five boys in this gang and all had met with more or less success. Indeed, I was told by one of the boys that he had a collection amounting to somewhat over two hundred eggs at home and that his mother took great delight in looking over the different kinds. However, this might not have been true, at least I should hope not. Parents, do your boys belong to a band or club of this kind? If not, see to it that they do not become members. The remedy for this evil, for it is a sin and a shame, must come through the parents. I contend, and if a gentle admonition will not effect a cure, the flat side of a shingle, judiciously applied, will be found to be very efficacious.

M. H.

CHAMPAIGN, Ill., June, 1886.

CAN A SNAKE POISON ITSELF?—Fort Monroe, Va., May 23.—*Editor Forest and Stream:* Another idol shattered! A newspaper writer says: "Meanwhile the deadly but still pretty creature was writhing about the cane which held it, biting and tearing its own flesh. The strange fact which Dr. Weir Mitchell made known to the world in 1868, that a poisonous snake cannot poison itself, is no less strange because true." If the above assertion be true, what is to become of all our old stories of teasing a rattlesnake until, in his impotent rage, he terminates his own life with his fangs; or if the blacksnake which, when struck by the fangs of his horrid adversary, seeks the aid of some mysterious weed as an antidote, and soon returns to the fight with fresh vigor! No doubt many of the old woodsmen (?) can disprove the assertion of this rash doctor as readily as they can prove that the bullet from their trusty rifle "flies perfectly straight" for sixty or more yards.—A. O. S.

A FLORIDA FOX.—Glenice, Fla.—My next door neighbor's boys recently caught a gray fox, which was prowling around their hen coop one night. This is the first time in ten years residence here that I have seen or heard of a fox in this part of the State. They are sometimes found over on the Gulf coast, but it is a great curiosity here. Strange to say, the boys caught it in a common box trap which had been set and baited with cheese for a possum. Either the Florida fox is not as cunning and crafty as his northern relation, or else this one was unusually simple-minded. It was a full grown female, but seemed to me to be very small compared to those at the North. Dimensions, total length from tip to tip, 37 inches; body, 22 inches; tail, 15 inches; weight, 7½ pounds.—RED WING.

VORACITY OF THE BLACKSNAKE.—*Editor Forest and Stream:* In the early autumn of '74, I was rambling among the Berkshire Hills in Western Massachusetts, when about a hundred yards from a mountain brook I discovered a blacksnake working its way along with difficulty. Calling my friend's attention to it, we killed the snake, and noticing the unnatural size of its body, opened it and found in its stomach a frog nine inches in length. The snake measured three and a half feet. At another time I killed a blacksnake on the bank of the Hoosic River, near Pownall, Vt., that measured four feet and eleven inches, and its stomach contained a large rat. Another instance occurred near the same spot.—E. T.

BEARS.—THE FOREST AND STREAM'S grizzlies at Central Park receive daily through the month of June.

POISONOUS FISH AND FISH POISONING IN CHINA.

BY D. J. MACGOWAN, M. D.

[From the Chinese Recorder of February and April, 1886, by favor of Prof. S. F. Baird, U. S. Commissioner of Fish and Fisheries.]

THE porpoise occupies greater space by far in Chinese ichthyology than any fish. Ch'en's Cyclopaedia quotes thirty authors who refer to it. Few fishes are so prized for their flavor and none so much condemned for poisonous qualities. Like English, German, French and other maritime people, the Chinese name the animal from its resemblance to a pig—it is the ho-t'un—"river pig," of which there are two varieties, a white and a black. It enters the rivers from the sea early in spring, is very abundant in the Yangtze, which it ascends over a thousand miles, as far as the rapids allow. On its first appearance it is fat, and less hurtful as food than at a latter period. A portion of fat found in the abdomen is so esteemed that it is styled "Ti Tsze's milk," that lady being pre-eminent among all comely women for her beauty. One writer attributes the fatness to willow leaf buds, on which the porpoise feeds; but another combats that idea, inasmuch as the fatness is found to exist before the pendent willow branches reach the water's surface and begin to sprout. The former observer, it may be remarked, lived higher up the Yangtze, where the willow buds and porpoise appear synchronously. Another writer says willow buds are hurtful to fish. Porpoises, it is added, are a terror to fish, none daring to attack them; their appearance in large numbers indicates a blow. A centenarian author who wrote at the close of the twelfth century is cited to show the risk of indulging in porpoise flesh. It is quoted by the renowned poet See Tungpo, who remarks that "the price of porpoise eating is death," and then narrates how it happened that the aged author failed to see a full century. He being on a visit to a relative (a literary official at Pang-yang) was told by his host that the southern region produced nothing more savory than porpoise, some was ordered to be cooked for a repast. As the two were sitting down to partake of it, they had to rise to receive a guest; at that moment a cat pounced upon the dish, upset it and, with a dog, ate the dainty contents; but very soon it killed them both, thus plucking death from the watering mouths of guest and host. The poet adds, that in Honan the eating houses prepare mock porpoise dishes, and that in his opinion, the genuine article being fatal, the imitation should suffice to half kill the eaters. Animals seem to be more obnoxious to the poison than man. One authority says that cats and dogs partaking of it invariably die; and fishermen tell me that carrion birds will not eat porpoise entrails, or if they do they die speedily. The liver, which is regarded as a great delicacy, is often poisonous; the eyes and the blood and particularly that part which is found near the back, are always poisonous. All cases of fatal poisoning, however, appear to be due to neglect of certain precautions that require to be observed more minutely after the animals have made their visit to the rivers. In the first place, the parts indicated require to be well cut away and the flesh thoroughly washed, and when cooked to be well boiled. At Ningpo the boiling is kept up by careful people for eight hours. Further to secure safety, the Chinese olive or sugar cane is boiled with the flesh. A man who happens to be taking as medicine a sort of sage will assuredly be killed if he takes porpoise at the same time. The toxic effects vary according to the portion which is taken. The blood and liver are generally poisonous, the fat causes swelling and numbness of the tongue, eating the eyes produce dimness of vision. On the Lower Yangtze the fat is prepared for food by mixing it with liquor dregs and for the true burying it. With regard to the whole "river pig," a proverb says, "Eat if you wish to discard life;" but when well cooked all other food compared to it will be found insipid.

ANTIDOTES.—Antidotes to porpoise poisoning are the cosmetic which women use to give color to their lips (*Mirabilis salappia*) and the fire-dried flowers of *Mimosa catenulata*, pulverized and give in water; or give the Chinese olive (*Canarium*) and camphor soaked together in the water.

TEST.—To test a roe, throw some of the above cosmetic on the roe, when it is boiling; if it turns red, it is safe to eat; if it fails to take the color, it is poisonous.

Notwithstanding most magistrates issue proclamations from time to time cautioning people against the use of porpoise flesh, scarcely a spring passes without fatal cases of poisoning from that cause. The *Shên-pao* lately reported eleven deaths that occurred at Yangchow from eating portions of that fish. Again, five persons died at Anching in April last from eating porpoise. In one family a father and son were the victims; in the one vomiting was induced, in the

other emetics failed to act; both died. In another family a father, mother and daughter died from the same cause. They suffered much pain, with swelling of the abdomen, skin purple and benumbed, with greenish saliva from the mouth. Another case is worth giving, because of the symptoms from a work published in the last century. "A Shanghai graduate when on the eve of departing for the Pekin examination, entertained his friends at a banquet; being hungry, just before the guests' arrival he partook of some porpoise; when his friends arrived he found himself unable to make the usual salutation with his hands, they were paralyzed; soon his whole body became numb, and then his abdomen distended greatly, and he died quickly.

It would seem that porpoise poisoning is commoner on the Yangtze than on the coast, as if the ascent of the great river renders it less fit for food as a like toilsome journey does the shad. It is well known that sailors eat porpoise caught at sea with impunity, and islanders, as the Japanese, rarely suffer from porpoise eating.

POISONOUS FISH.—The Ningpo *Gazetteer* describes a fish, popularly called "tiger fish," which, by its needle-like tail, inflicts poisonous wounds on men and kills fish; men thus wounded suffer excruciating and protracted pain, say the people, who also declare that the spinous tail, if driven into a tree, will kill it; however, I have not found it hurtful in that manner. Somewhat similar is the "tiger fish," with hedgehog-like spines, which, piercing men, occasion pain; its bite is poisonous, and so is its flesh. On the coast of Chekiang and Fuhkien the "swallow-red fish" is found, which resembles the "ox-tailed fish." It darts with extreme velocity, inflicting painful wounds on mussel divers. Yet worse is the poisonous wound inflicted by a species of ray which has three spines in its tail; the pain is such as to keep the sufferer groaning for successive days and nights.

"A sort of sturgeon is found at Loyang which resembles a pig, its color is yellow. Its stench forbids near approach, and it is very poisonous; notwithstanding, when properly prepared, it is considered fit food for the Emperor, for it constitutes an article of tribute."

The tetradon, or globe-fish, is rejected by coastal fishermen, because it is poisonous, but those globe-fish that ascend the river are sought for, and when eviscerated and dried, are edible.

A silure, or mud-fish, is hurtful, particularly the kind with reddish eyes and no gills. No kind is to be eaten with ox liver, or with wild boar or venison. A small species of shark, called "white shark," having a rough skin and hard flesh, is slightly poisonous. Several kinds of eels are represented as hurtful. Some Ningpo people will not eat eels without first testing them. They are placed in a deep water jar, and if on the approach of a strong light they spring up, they are thrown away as not fit for food. There is a kind of eel that has its head turned upward that is not to be eaten. Eels that have perpendicular caudal fins are to be discarded; also, those with white spotted backs, those without gills, the "four-eyed" kind, the kind with black striped bellies, and the kind that weigh four or five catties. The Pên-t'siao shows the fallacy of the popular belief that eels spring from dead men's hair, by stating that they have eggs.

The "stone-striped fish" is described as causing vomiting. "It resembles the roach (b), and is a foot long with tiger-like markings. There are no males among these fish. According to native report, the females copulate with snakes, and have poisonous roes. In the south these fish are hung on trees where wasps' nests are found, by which means birds are attracted that devour the wasps. They swim on the surface of the water, but on the approach of men dive down."

A curious account is given of a poisonous lacertian. "It is amphibious, living in mountain creeks. Its forefeet are like those of a monkey, its hinder resemble those of a dog; it has a long tail, is seven or eight feet long, and has the cry of a child, which is indicated by the mode of writing one of its names. It climbs trees, and in times of drought fills its mouth with water, and concealing itself in jungle, covering its body with leaves and grass, expands its jaws. Birds, seeing the water therein contained, attempt to slake their thirst in the trap, when they are soon gulped down. The poison that it contains is removed by suspending it from a tree, and beating it until all flows out in the form of a white fluid."

Many crustaceans are poisonous—fifteen kinds are enumerated—several of them monstrosities. Antidotes for crab-poisoning are sweet basil or thyme, the juice of squash or of garlic, etc. Crabs eaten in pregnancy cause cross presentation. Crabs are not to be eaten with persimmons. The flesh of the king crab (*Limulus longispina*) is sometimes poisonous, and is employed as an anthelmintic. Field and ditch prawns are included in the list of poisonous crustaceans. Oysters are hurtful betimes in China as elsewhere.

POISONING FISH.

Allied to the subject of poisonous fishes is that of fish poisoning. At an early stage of their history, anterior perhaps to the legendary period when it is said the Chinese made the discovery of fire, and ere they acquired the art of fishing, they probably found dead fishes floating on the surface of streams, and in the course of time observed that the fall of certain seeds into the water was followed by the rise of fish to the surface. Then commenced the practice, which has continued to the present day, of catching fish by poisoning them. Another writer, referring to western China, says: "The waters are perfectly clear, and the people do not use nets in fishing; but in the winter season construct rafts and from these throw on the water a mixture of wheat and the seed of a species of polygonum pounded together, which being eaten by the fish, they are killed and rise to the surface, but in a short time they come to life again. This they call making the fish drunk."

In eastern Turkistan fish are obtained in a similar manner. "In the spring when the melted snow has swollen the rivers the fish are seen swimming about in all quarters. The fishermen immediately take a solution of herbs and sprinkle it on the water, by which the fish become perfectly stupefied and are easily caught. Mahomedans do not eat them to any great extent, except when mulberries are ripe, which are eaten always with them."

In this part of China seeds of the *Croton tiglium* are employed very extensively for the same purpose. They are powdered and cast into the water, and being, like the polygonum, extremely acrid, speedily kill the fish and crustaceans that partake of them; these seeds render them colorless and flavorless, but not hurtful. Purchasers are never deceived, as their appearance discloses their mode of death; they are bought by the poor because of their cheapness. Similar modes of poisoning fish prevail also on portions of the Grand Canal adjacent to the Yangtze, which sometimes call for the magisterial interdicts because damaging to public health. One of the district magistrates of Suchow lately issued a proclamation forbidding the sale of the "thunder-duke creeper, which miscreants employ for catching fish, terrapins, prawns, crabs and the like, killing them and injuring men."

Many centuries before our era, according to the Chou Polity, game laws existed, which interdicted the use of poison in the capture of fish (and of other animals as well) in the spring months; poisoning or capturing them in any way being restricted to autumn and winter, or when the animals attained maturity.

WENCHOW, January, 1886.

SUPPLEMENTARY.

The I-pa-lu states that on the Yangtze, where the waters are brackish from commingling of salt and fresh water, the porpoise is delicious food in early spring, but later it becomes rank and poisonous.

An interesting fact is added, which shows that animal to be subject to a disease which is manifested by a peculiar erup-

tion on the abdomen, which presents a mottled appearance of various colors, smooth and bright like castor oil seeds, varying in number. In this condition the fish is yet more rank, more offensive to smell, very poisonous, but still most toothsome. Besides rejecting these as food, reject also such as have two pupils to each eye, or such as show blood in stripes on the back: the female containing roe—all these are to be buried, lest dogs and poultry eat them, which would prove quickly fatal. Males containing a white substance are innocuous and excellent eating.

In cooking, remove the prickly skin, cut it up fine and boil together with the other portions. That portion of the tail which has no spines is the best flavored—it merits to be styled Yang-fu's stocking (as the fatty part is called after an imperial beauty of Chinese history). The flesh, liver, gills, fins, are all to be most thoroughly washed before cooking; place lard or oil in the pot and add wine, soy, onions, ginger, sugar, etc. Boil slowly for half a day, for it insufficiently boiled the pot-tage will surely kill the eater.

Porpoises disappear with the close of spring. What becomes of them then is not known. In Suchow, every family eats that fish, and for several tens of years I have heard of no deaths therefrom, which is not that as food they are less harmless, but because they are more thoroughly boiled.

Several years ago a friend presented me with two porpoises. I prepared them myself, but after making a meal of their flesh my mouth puckered up, and my hands became numb for a short time, eating the same on the following day, my mouth and hands were affected in the same manner, and I felt generally unwell. I took some olive, *canarium*, which proved antidotal. None of my family suffered from the viand that made me ill, which showed either that I was weak at the time, or had eaten more than they. Some days later, however, those who had suffered from previous disorders, experienced a return of their old affections, as I did myself. I therefore caution those who are fond of porpoise, to partake sparingly of the delicious food.

On the Cheh-kiang coast dried porpoise is sold all the year round by fish-mongers. It requires protracted boiling to become safe eating.

According to the *Dictionnaire Coréen-Francaise*, there is in the Korean coast waters a fish entirely round, a sea-toad, which is seldom eaten; its liver is a mortal poison.

THE SHACKER BAND.

Editor Forest and Stream:

Last January, Wilber Day, a most notorious poacher of Wesley, Maine, was tried and convicted for burning the house and barn and poisoning the cow, of Fish and Game Warden Fred Munson, of Wesley, in the night time, July 17, 1885.

It was proved on Day's trial that there was a crowd of young scoundrels calling themselves the "Shacker Band of Wesley," the name in Indian language meaning Deer Band. This organization has been in existence for over fifty years, but under other names suited to the exigency of the time. The purpose of this organization is to break down all law and restraint that should in the least interfere with depraved tastes. This crowd of young villains had been taught by the example of their parents and older companions, polished by the careful perusal of dime novel literature all their lives, and it is not wonderful that the result should be that they are finished criminals.

At the Supreme Court, holden at Calais in April, Devereaux Fenlason, another of this band, was tried and convicted for the same offense. The number concerned directly in the burning of Munson's buildings must have been ten or more. I mean the number at the fire the night of July 17, 1885; and at least ten more knew that the building was to be fired. No effort will be spared to bring the whole band to justice. A motion for a new trial was made in each case but was overruled by Judge Libby, and exceptions were then filed to the ruling of both Judge Libby and Danforth and sent up to the Law Term to be holden at Bangor this month. In case the higher court does not grant a new trial these leaders of the Shackers will receive their sentences at the Supreme Judicial Court to be holden at Machias the second Tuesday in October next. These fellows could not have made such a fight had not outsiders helped. We know that poachers and marketmen contributed from all parts of the county; but after the cussedness of the crowd was exposed in court there was a great change in public sympathy, and now I doubt if it would be possible for them to get help outside their band.

That your readers may better understand the importance of bringing this band of outlaws to justice, I must refer to the character of Wesley and its inhabitants during the last fifty years, so that you may also better see the difficulties we have had to encounter the last year in not only maintaining game protection, but in protecting our own persons and property.

Wesley is situated twenty miles northeast from Machias on the border of the great Machias Woods, the best deer park in Maine. Tradition tells us that a turbulent spirit was early developed in one portion of Wesley, and this spirit has steadily increased with the growth and decay of the town until the present time. One of the first acts of lawlessness was the attack on Sheriff Hapgood by several men dressed as Indians, who fired several shots at him, one bullet passing through his hat, and clipped his horse's mane and tail, and they burned property in his custody which had been taken for debt. Years rolled on, and the better portion of the community formed a church and had good schools, and the town prospered. Smart men and women were reared in this town, an honor to county and State; but many of these sought their fortunes in other lands never to return, while on the other hand, those of the lawless party were sure to return, and in some cases had to be helped to return by the town. The population in 1850 was 783; now it is about 250. This emigration has changed the character of the town, throwing the balance of power, by a small majority, into the hands of the lawless, or as they say, "the Shackers rule." Better families cannot be found in Maine than some of those living in Wesley, but at this time they are at the mercy of their fraternal enemies. It is hoped that a brighter day is beginning to dawn in Wesley now that the heel of the law is upon some of the necks of its wicked citizens.

To return to my subject—this turbulent spirit, which was

continually warring with the better element of society, came prominently to the surface at the breaking out of our civil war. They formed a company, drilled and prepared to resist recruiting and the draft, to use force if necessary. The draft came, and they resisted, killing Lieutenant Edwards, Deputy Provost Marshall, while in the discharge of his duty, and then they fled into New Brunswick. This was the most cruel murder in Maine during the war and showed a depravity of hearts not equalled or surpassed by any criminals in the United States. Time passed and no effort was made to hunt out and punish these criminals; officers died or moved out of the State, witnesses were scattered, and finally one by one the outlaws returned; but they were not good citizens, for they were ever ready to engage in any pursuit, lawful or otherwise, that would give promise of remuneration. They made most adroit smugglers and gave much trouble to officers of the Government. They plundered the land owners, taking vessel knees and shingle rift wherever they could find it. They set fire to timberland through malice, plundered logging camps, and whenever offended set fire to mills, barns, houses and such other property as the torch would destroy. This is the history of that lawless spirit as it comes down through the different generations to the present time, and now for the first time has the law stepped in to restrain or quell it. Formerly, whenever the law was invoked, perjury would clear the criminals; for that reason honest men shunned the law, and matters were allowed to drift on to destruction, as the rapid depopulation plainly demonstrates.

When the fish and game laws were enacted, then this element again came to the surface; but it was of a younger generation, with a few of the older ones to plan and cheer them on. They have up to the present resisted the laws, giving no heed whatever to them unless compelled to. The better portion of the citizens of Wesley soon found it was for their interests to have the laws enforced, and they demanded it. Wardens were appointed in Wesley, and then the war commenced. Wardens and all interested in game protection determined to put a stop to this miserable destruction of game in the very midst of our best game region, and our worthy Commissioner, Mr. Stilwell, gave us his most hearty support.

In the summer of 1884 complaint was made that Wesley parties were killing deer for the market. Wilmot Thompson caught Wilber Day and younger brother in the act and made complaint. Day was indicted, but escaped arrest until March, 1885, when two wardens, Pettingall and Munson, succeeded in arresting and putting in jail this most accomplished poacher. He was tried at Calais, convicted and fined, and gave bonds for his appearance at the Superior Court to be holden at Machias the following October. This made the Shacker Band furious, and they determined, to use their own language, to "clean out the whole thing" at any cost. The two active leaders, Wilber Day and Devereaux Fenlason, raved about town like madmen, armed with rifles, pistols and knives, hunting they said, for the "d—d wardens." Others met them at night and made plans for mischief.

Complaint was made in May that parties were hunting and killing deer on the Race Grounds, selling them for one dollar each to boil for feed for hens and to make into compost. Wardens Thompson and Munson were sent to catch the villains, and were attacked in the woods by Fenlason and another Shacker, who is now a good protectionist. The wardens, being well armed, escaped uninjured. These two fellows were arrested, tried before Justice Wilder, of Machias, and put under bonds to keep the peace for six months. This made Fenlason more furious, but his friend left the Shackers.

Soon after this a demonstration was made on Munson's house, next his garden was destroyed in the night and his apple trees girdled. Then more threats were made. On July 17 Munson had business at Machias, which would take him from home over night. Mrs. Munson, as usual when her husband was absent, was expected to stop at her father's, Mr. John H. Gray, about one-half mile from her own house. After milking the cow, feeding the pig, and locking up the barn and the house, Mrs. Munson went to meeting and from there to her father's house. This was the opportunity for the Shackers. They put out their guards, and after they were sure all was quiet, Day and Vance broke open the barn, drove out the cow and fed her with Paris green and meal; then left for home, about three-fourths of a mile from Munson's. Then Fenlason left his beat and touched a match to hay in the barn; others had previously kerosened the house and shed. It was proven at the trial of both Day and Fenlason that about one hour elapsed after the fire was discovered by the two nearest neighbors before the alarm was given. It is needless to say these neighbors were Shackers of both sexes and most accomplished liars. While the buildings were burning, Wilber Day at David Vance's house, assisted by Vance, wrote this letter:

"FRANK ZINK—Irite to inform you we have begun the fun and shall follow our hand on E. M. Smith & Son and Hunter the daval and W. T. and Hill.—FROM A FRIEND."

This note was found the next morning on the doorstep of Warden Zina Pennell, at Whitneyville, sixteen miles from Vance's house. It was proved that Wilber Day wrote this note, and it is known David Vance assisted and J. W. Day placed it on Pennell's doorstep.

After Munson's home with all its contents was burned, the family being left without a change of clothing, Mr. John H. Gray gave them shelter, and Machias friends assisted by presenting Mrs. Munson with a purse of \$100. Mrs. Munson was the only daughter of Mr. John H. Gray, an old and most worthy citizen of Wesley. Elated by the prospect of driving Munson out of town, the Shackers left this note for Mr. Gray:

"MR. JOHN GRAY—If you keep that damd black Fred Munson round your place you will have roast pig, too. Get rid of him as soon as you can, for if you don't you will be burnt out before a month goes by. We have started the fun and we will keep it up. By —, we mean it. Get the damd cuss out and your all right; if you don't, down it burns. We will take some of your cattle as a proof, by —. —REMEMBER."

This convinced all that something must be done; and the best citizens of Wesley petitioned Gov. Robie for aid. The town could do nothing, for the Shackers were in small majority, though they represented but a still smaller part of the property in town. Gov. Robie responded at once, and plans were made to hunt out and bring these villains to justice. My property and person being threatened, I assisted the officers as much as my time and means would allow. I was obliged to hire a special watch for my home when out of town for the greater part of the season. Mr. Stilwell directed his wardens to assist in every way possible, and they gave us most efficient aid.

All was chaos in Wesley. I never witnessed such scenes—frightened women and children, all work nearly suspended,

Every one, save the Shackers, felt that help must come from some source or ruin was at hand. In the mean time one of the advisers of the Shackers was sending letters to papers in different parts of the State trying to give the impression that James Gray, uncle of Mrs. Munson, burned the buildings for the insurance. This was a most cowardly attack on Mr. Gray because he held a mortgage of the property and there was a chance to make up a suspicion, in the calumniator's opinion, against a most exemplary and valuable citizen. Mr. Gray was sick at the time and in consequence of this worry and the constant fear for his property, as well as for the safety of his family, his reason failed and he died last March. His death was a great loss, not only to his family, but to the community. In about three weeks after Mr. J. H. Gray received the second letter, a third one was sent, the Shackers being impatient:

"MR. JOHN GRAY—You was warned once that if you kept that damned black Fred Munson at your house we would burn you out. You disregarded our warning. We don't want to burn you out, but we will if you keep him there. You will get no more warnings, but if he don't leave in a week we will kill some of your cattle, then if he don't get it we will take the hint and burn the house. We don't want your daughter to go; let her stay if she wants to; but he must go. We want you to tell everyone in Wesley that if they keep him (Fred) we will burn them out and by — we mean it. If Fred still hangs round here after these warnings we will have his heart's blood. If he leaves Wesley there will be no more trouble, but if he don't look out for fun. Git rid of him and you're all right—let the woman stay if she wants to.—REMEMBER."

Immediately after this letter was received by Gray, Munson and his family left Wesley; but the trouble did not stop, for in a few weeks the buildings of Warden Samuel Cushing were kerosened and fired, his horse and all his farming tools, buggy, work wagon and harnesses were burned in his barn; and it was only by almost superhuman efforts that his house was saved. It was found after the fire that the horse had been beheaded and his back bone cut in two places.

Public indignation was now nearly beyond control, but we cautioned all not to retaliate, under any provocation, but to trust the officers of the law. We had good men on the watch, reporting often, spies were in the midst of them, detectives were in correspondence and it was only a work of a little time that these villains could continue their atrocious wickedness. In November the wardens commenced their part of the "fun" and the result you have—the arrest and conviction of Wilber Day, a most notorious scoundrel, and Devereaux Fenlason, a most dangerous criminal, because he is a simpleton from birth. It was proved that Fenlason wrote the second and third letters. The Shackers made a most determined fight, and are now doing their best to liberate the two scoundrels now in jail. All the poachers in this part of the State have done their best to help and cheer on these villains, but now protection is more popular than ever before. Mr. Stilwell and his wardens have fought well, to say nothing of his legal friends who did such noble work in bringing these wicked wretches to justice.

I have spent a most miserable year in this fight. I am not an officer, but I am a friend of protection and believe in obedience to all laws, especially when clearly for the benefit of all, as are those for the protection of fish and game. It will be seen by the history of this and, as I have given it, that it was not the game laws that made the trouble, but the old untamed turbulent spirit of the fathers coming down through generations. Two murders in twenty years (Gray's death was as much a murder as was Edward's) is rather a hard showing for a little town of the size of Wesley. It is hoped that the law will continue its good work, and that Washington county will be freed from such scoundrels in the near future. I can not think of what would have been our condition at this time had not the law put a stop to such villainy.

MACHIAS, ME., June, 1886.

SAM. B. HUNTER.

GUN SLINGS FOR THE SADDLE.

Editor Forest and Stream:

The simple sling for carrying a gun in the saddle which I described in your issue of Oct. 1, 1885, called forth a little later (Nov. 5) two other devices similar to each other in design and application, but entirely different from the one I was using.

While the slings described by "J. J. M." and "G. E. O." possess some advantages, they have the great drawback of being somewhat cumbersome, and the gun being between the rider's thigh and forearm a heavy stumble must cause the gun barrel to pitch wildly forward, striking the flying rider or the horse, and perhaps breaking the stock of the gun as suggested by "J. J. M."

If "G. E. O." had read my article more carefully, his second and fourth objections would not have been given. If the gun fits the sling it does not require one hand to steady it when loping, and it cannot strike the horse in case of a fall, but its greatest fault is in its position athwart the rider, hampering him if the horse makes a bad stumble.

The sling described by "Millard" in FOREST AND STREAM of March 18 is an improvement on mine inasmuch as he leaves the tongue in. The upper one is unnecessary and I think better removed, the lower one keeps the gun from wearing against the horn of the saddle, but "Millard" has omitted the slightly prolonged free end which gives a good hold in slinging and especially in unslinging.

Having said this much for and against the simple strap, I will add that I have now discarded it except for a shotgun and when using a horse that will allow me to fire from the saddle. I always (?) dismount to shoot a rifle. The time lost is something, but the greater certainty of hitting is ample compensation for the loss of time, generally.

There is in use in some parts of this State and in Mexico, a stout leather sheath for carrying a carbine in the saddle. I find that they are kept for sale in San Francisco, and are simply a leather gun case reaching only past the lock and all or part of the length of the barrel. They are provided with two straps, sewed or riveted on, one fastening around the horn if a Mexican saddle or passed through the D of an English saddle, and the other secured to a small ring in the center of the back of the tree.

The carbine hangs on one side of the horse, muzzle forward, under the rider's leg, and by reaching out one hand he can draw it as quickly as a pistol from his hip pocket.

Acting upon the hint taken from this sling I have been carrying my shotgun in this way but without a holster, and have yet to find any fault with the method.

I have a leather strap one inch wide, passed through the D, hanging in a loop in front of my left leg. This is all the gear necessary. I pass the barrels forward between the stirrup leathers, letting them rest in the loop of the strap coming from the D or horn of the saddle, triggers uppermost. Raise the stock up and tie the rear saddle string around the grip, and the gun is in place. If there are no saddle strings a pair can be fastened to a ring in the back of the tree.

I can dismount and unlumber my gun quicker than a man can get out of a wagon and draw a gun from the back of the

wagon and do it with perfect safety, and when I have devised a snap hook to save untying the saddle strings (which I leave in a bow knot) I can prepare for action as rapidly as I desire.

If your gun is too fine a one to be adjusted in this way or you fear dust or rain and have not a full length leather case to hang at the saddle in which to place the gun, put on a cloth or canvas case which will take almost no time to slip off when you unsling the gun. If you use a leather holster leave it in place and withdraw the gun from it when wanted.

The first time you try it you may find the gun uncomfortable to your leg, by lengthening or shortening the forward or rear strap. Just what angle the gun will hang at will depend entirely upon the build of your horse. On some animals the stock will have to be entirely below the hip joint and the barrel nearly level. I have to bring the stock up as far as possible, and the barrel well down on my horse for my own comfort and that of the animal. With a proper adjustment of the gun barrel between the stirrups straps and under the bend of my knee, I can put the horse at any gait and not know of the gun's presence. And if I desire I could carry two guns as easily as one, one on each side. Even with one gun (mine weighs 10½ lbs. loaded) it is not necessary to carry ballast to make the saddle "trim."

If the horse is at all fractious it makes no difference as far as the gun is concerned, when you get off to open a gate (you will have to dismount to open a California rural gate) or walk up a trail leading the horse.

If any correspondent knows of still another way to carry a gun when in the saddle I should like to hear of it.

My gun is provided with a sling that I use when afoot, but I could not be induced to carry a gun in the manner of the British mounted infantry with the gun across the back for the very fear of that "severe blow from the barrel on the back of the head" if the horse should fall. I once fell down a steep hillside with my gun slung to my back, and the bump I received then I can feelingly remember. If the blow received when one is shot out of the saddle over the head of a falling horse is commensurate with the one received while on foot, I do not court it.

W. E. B.

OAKLAND, CAL., May 25.

THE BIRDS AT SOCIETY HILL.

"The time of the singing of birds has come, and the voice of the turtle is heard in the land."

IN one corner of the room where I write, my guns are standing, bright and clean, inside and out, ready for use when the season for sport shall come round in the cycle of time. Unfortunately, I have too many of them. Most of them are gifts from my friends, and as such, if for no other reason, are highly prized by me. I keep them in good condition so that whenever occasion shall require, I will find them fit for whatever field usage may be demanded. At present they serve only to remind me of the pleasures which they have afforded, the kindness of the donors and the hopes which they inspire, when Bob White and his mate have reared their brood and they are strong enough to make the air resonant with the whirl of their wings. Then, if on this side of the river of time, I expect to mount my old horse Frank, call up Argo and Esk, and range the fields on the banks of the Great Pee Dee or other localities where the prospects of game are good, and see whether my vision and nerves are adequate to supply my wants and those of my friends with the delicious little bird. Most of my shells are already loaded, boxed and labeled, and my favorite 14-bore will have an opportunity of showing their qualities, "when November chill blows loud with angry sigh." Inasmuch as the sporting season has passed, "I have no delight to pass away the time but to recall some of the bright days, when with chosen company I made the fields ring with the music of my little gun, and now and then had the satisfaction of seeing my pointer retrieve the fallen bird in gallant style. My memory also hords with delight the sayings and acts of my associates and the hospitalities and kindness of my entertainers.

Though too late in the season, my friend Crickett assured Teceel, Mud and myself, that he could find some excellent sport in the vicinity of Society Hill on the Pee Dee in South Carolina. A gentleman living at that place I had known when he was a boy, living in Fayetteville, N. C., but had not seen him for many years. Accordingly, on the 9th of March, we left home in our buggy, and sought the residence of John M. Waddill, where we felt certain we should meet with a hearty welcome. We had to travel about thirty-seven miles, and when we reached our destination, late in the afternoon, ourselves, horses and dogs were tired, and anxious for food and repose. Crickett had arrived the preceding day, and was in the fields when we drove up to the house. We were courteously received by our hostess, and assigned to our quarters. In a short while Crickett and his dogs Jack and Dot, and our host made their appearance. My acquaintance with Waddill was renewed, and he expressed himself—no doubt seriously—as glad to extend to me and the others all the comforts which his house could furnish. Crickett had killed twenty-five birds. These supplied our hostess's table with plenty of game to last until we could add to the stock.

The village, in the suburbs of which we stopped, took its name from the fact that, in the olden time, many of the planters on the river built residences at a convenient spot in the broken sandhills, where they could enjoy each other's society in a greater degree than when living apart on their estates. It was the home of some of the most distinguished citizens of the State, and was famed for the intelligence and elegant hospitality of its inhabitants. Its former splendors have departed, for its wealth has melted away. But the broad fields on both sides of the river are still there; and early in the season, when the herbage is abundant, they afford food and shelter to many coveys of the favorite game bird of the South. As I have said, our visit was made too late. The stubble had been turned over, the sedge had been burned and the cattle had browsed down the grass, so that Bob White had neither feeding places nor shelter suitable for the sportsman.

The morning after our arrival we would have sought the fields at once but for the fact that it was raining. Joe, the large black and tan setter of Teceel's; Argo, my little orange and white pointer, and Crickett's two dogs were all ardent for the sport. Mud, poor fellow, has no dog, and seems to want none, so long as the charity of friends will supply his necessities. Nor did he have a horse, having thrust himself upon the kindness of his kinsman to get himself carried to the hunting grounds. But our host had a gallant bay which he tendered for his use. The "Red Rover" though somewhat ungainly in form and lean in flesh—having been engaged in the Agricultural Department—had plenty of muscle to carry with ease the one hundred and twenty pounds of bones and gristle which were consigned to his powers of locomotion. The rain stopped about 11 o'clock and was succeeded by a sharp wind from the northwest. Notwith-

standing the uninviting character of the weather we concluded to hazard it, and accordingly, mounting our steeds, we set out for the Marlboro side of the river.

After crossing on a bridge, we took up the bank of the stream for several hundred yards following the road, and then turned sharply to the right. Near the point where the road leaves the river stands a monument of white marble—a cenotaph, probably—erected to the memory of Col. Kolb (pronounced Kulp), a partisan soldier of the war of 1776, who was killed at his house near the spot by some prowling loyalists, who had refused to rebel against the Crown and Government of Great Britain. What I thought when I read the inscription upon the marble I will not write. Alas! 'Can such things be without our special wonder?'

At this point, Teceel and I, with Joe and Argo, turned to the left, while Crickett, who had two dogs, and Mud, who had none, followed the highway. It is useless to go into details. Owing to the high wind the birds were all in cover, or in such close proximity to it as to render sport impossible; we found very few birds. When we reached home that night, I think the trophies of all guns amounted to twenty birds. Of these your correspondent can recall that he could legitimately claim only one. This he attributed to the fact that when he started out he inconsiderately put in the stock of his hammerless the choke pair of barrels. At all events, such was the result. Mud was in high glee because the Red Rover had borne him to victory over Wells—a glory which he rarely enjoyed.

We got back just about sundown, tired and hungry, and ready to enjoy the shad whose odor regaled us, even before we entered the dining-room. They were a real luxury—for the weather was cool and the fish were firm and fat. To my taste there is no better fish than the Pee Dee shad in the month of March. After a "square meal" on the part of all of us—and especially Mud, whose appetite is almost satiate, but whose virtuous never assimilate to the production of flesh, so far as we can see—we went to the parlor, and before a blazing fire talked of the past, present and future.

The following morning was a lovely one. At an early hour our hostess gave us an excellent breakfast, and had our lunch prepared. The horses—including the Red Rover—were saddled and brought out, the dogs lightly fed, having had a hearty meal the night before, and we started off to try our fortune in the bottoms lower down the river. Going along the railroad track nearly a mile, we crossed it, and began to hunt an inviting piece of land. We got up some birds, and Teceel and I killed three each, neither Crickett nor Mud having had a shot. Still further on another covey was roused, but all of them escaped. Soon after this my companion, Teceel, and I separated, by accident, and did not meet until night. This mishap threw three of us together, a very objectionable number for decent sport. Crickett, Mud and I followed closely down the bank of the stream, desiring to reach some broad bottoms, where, we were told, we could find an abundance of game. The prospect got worse and worse, and at last, near midday, our road gave out, and we were forced to take the back track. We lunched soon after, and then mounting our horses, changed our course, so as to reach, if possible, a large plantation, the property of Mr. Williams, of Baltimore. We hunted many good looking places on our route down the Georgetown road, but failed to find a bird.

About half past two we reached the estate named above, passed the plantation houses and turned into some fields on the left or eastern side of the highway. Soon we got up some birds and my bag and Crickett's became perceptibly heavier. Poor Mud! He hadn't "toteh" a feather in the last half dozen shots. Soon we could hear the faint boom of a gun, sometimes in rapid succession, which we suspected to be that of my lost companion. We found several new coveys and got more birds. About an hour before sundown my little dog Argo tightened his muscles into rigidity in an open field, near a pine thicket. A single bird flushed and settled not far off. Supposing, however, that there were others, I moved forward a little and ordered him on. A fine covey rose, and as I sat on my horse I fired one barrel only, wounding the bird. Then Crickett came up, and pointing out where the single bird went he flushed and killed it. Proceeding in the direction of the flight of the covey we dismounted. Crickett and Mud tied their horses, but I trusted to the honor of Frank and left him standing in the road with the bridle unfortunately over the pommel of the saddle. We put up the birds and Crickett got two, Mud got one and I killed the bird I had wounded and scored a clean miss at another. Then I saw that Frank had concluded to leave me to make my way back over the eight miles to Society Hill as best I could, and had gone on to get an early start on the provender at our host's barn. The prospect of that walk was not very charming, but I left my companions fusilading, while I "plodded my weary way." Luckily a negro man caught my horse near a mill, and supposing him to belong to a dismounted cavalryman below whose firing he had heard, bestrode the horse and rode toward me. Just as I met him my dog set a covey, and I wasted a load at them, as they flew through some woods. Following the direction I soon met Crickett and Mud, and we got in some shooting. They did better than I. I got in three shots but brought down no birds. I wounded two and missed cleanly as fair a chance as mortal ever had. The sun was just "wrapping the drapery of his couch about him" when I mounted my truant steed, handed the dinky a quarter of a dollar, and we started on the homeward journey. A young man at the mill told us that nearly an hour before he had seen a horseman with gun and dog pass on, who had quite a lot of birds. Crickett began to feel uneasy, for he found that Teceel was the man, and that he did not "stand head" that day.

A dark and weary ride of eight miles brought us to our resting place. When our trophies were counted, Teceel had 19, Crickett had 17, Wells 14 and Mud 7.

The following morning the others bade our kind friends adieu and started on their way to visit Col. Cash, who lives a few miles above. I took a different route, crossed the river and headed for home, via Bennettsville, the county seat of Marlboro—a place which I had never seen, though within thirty miles of my place of residence. I passed through some beautiful country before and after reaching Bennettsville, for that section is one of the most nicely cultivated parts of South Carolina. After leaving the town, a ride of about thirty miles over a strange and very forked road, destitute of mile posts such as did me any service, brought me home. My companions came the next day.

I am obliged to "A. F. R." of Belvidere, N. C., for the expressions of his sympathy in my "wild goose" experience. "A fellow feeling makes us wondrous kind." It would afford me pleasure to make his acquaintance. WELLS.

ROCKINGHAM, N. C.

AN ADVENTURE IN THE BURNT LANDS.

OUR friend is a genial and intelligent man with a fine brainy head, erect and easy carriage, upon whom the weight of many hard days' service and more than fifty winters sit lightly. If a farmer's institute wants an address he can give one both entertaining and instructive; if the Government wants a land survey made he is just the one who can do it, and it can be well assured that no stakes will be carelessly placed or lines shiftlessly projected; and if corporations or capitalists desire territory in the northern wilderness looked up and its value estimated either as land or for lumber, and purchases made, he is the man who will do the same with integrity and discretion, and not infrequently he is an operator for himself. For more than thirty years he has spent nearly every summer or part of the same in such pursuits in Michigan's northern woods, and while his name is Cannon (George Henry) and despite all the grand opportunity afforded him to come in contact with the enticing and greater game of the wilderness, he seems never to have been touched by the spirit of hunting, for he never hunts, neither carries gun or revolver for defense. In the winter he may generally be found at his pleasant farm residence in this locality, where is displayed an intelligent culture of field products and choice variety of fruits.

While we were at supper, a little time since, a genial face looked in on us and said, "Don't be in a hurry, I'm coming to take supper with you." And after supper our talk ran on long, for I like to go over the physical geography, waters and lands, metalliferous indications and developments, game and settlement of this remarkable region. Finally says our friend, "Did I ever tell you about that bear I killed two or three years ago? It was told that — killed it, but I myself was the one." "Let us have it," said I, and he proceeded to relate as follows:

"It was in the Upper Peninsula of the State and near the first of July. I had charge of two companies engaged in looking up and taking notes of the lands which had recently passed to the Mackinaw & Marquette Railroad interest, and at the time was operating in that part of this peninsula known as the 'Burnt Lands,' a peculiar and interesting region, extending southward from the falls of the great St. Mary's River to Lake Huron and westward for many miles, embracing an area of more than twelve hundred square miles. Upward of thirty years ago the forest fires raged with great fury over the largest part of this region, clearing the surface for the most part of the primitive forest growth, leaving here and there the standing blackened trunks of immense trees which the fires had not entirely destroyed nor the storms prostrated. A second and as yet smaller growth has sprung up, chiefly of the deciduous order, although clusters of evergreens, as the pines, spruces and cedar, are found everywhere in groups, which, interspersed in the grassy opening (for the land is famous for grass, which springs up freely wherever permitted), give to certain parts of the country a park-like appearance, which is very pleasantly enhanced by the tall and graceful elms which grow along the streams. This region, too, abounds in game; the black and the brown-nosed bear, deer, wolves, lynx and partridge, the last being common. A remarkable feature of the country is the abundance of several varieties of small wild fruits, each in its season, such as the buckberry, blackberry, raspberry, wintergreen berry and strawberries, thousands of acres being thickly covered by the latter, of fine and delicious quality, in the last part of June and the first of July, thus constituting a fine and favorite feeding ground for the black and brown bear, which are fond of all these berries, and, I may add, seem to extend to the strawberry a partiality as marked as that of man.

"During the summer of 1881 I was engaged with a party of men in a careful exploration of this region. In the berry season the bears congregate in large numbers in the openings and grassy savannahs, and were frequently seen by us. One day we saw seven in one group, quietly feeding on the berries. As they generally were some little distance away when we saw them, and we had not been molested, no particular uneasiness was felt in regard to them, and for many days myself and the several members of the party traversed the country unarmed and often alone in the prosecution of our work, without apprehension of danger. Upon two occasions, however, we received a slight warning upon coming close upon a bear unawares, when sharp growls and a liberal display of ugly-looking teeth gave unmistakable evidence that our presence was not agreeable, and we each time made quick steps in the opposite direction, feeling that they 'were better missed than found.'

"But one day our fancied security received a complete setback. It was in the second week in July, and I had set out early, accompanied by an assistant, to examine the country to the east and north of our camp. We had proceeded less than a mile when we separated, he to explore south and then westward to camp, while I was to go north to a river and then return. I had with me a light axe, which would weigh about two pounds, called by woodsmen a half axe, and a pocket compass; with the latter I obtained my direction, and with the axe would mark a line when desired. Our purpose not requiring a chain survey, I proceeded on my course, carefully taking and counting my steps, which was our method of measuring distance, and enabled us to readily find the locality of the corners, and in the practice of which we had become so expert as to be able to rely upon not varying from the chain survey in the distance of a mile more than from ten feet to ten inches. I had made one tally, or twenty rods, and stopped to enter the required notes in my field book. This through, I stepped over the small body of a tree lying before me, into which I had struck my axe, and was trying to settle the compass needle so as to continue my route, when I was suddenly and greatly startled by hearing a peculiar and startling sound, neither a bark nor a growl, unlike anything I had ever heard and apparently coming from something near at hand. Looking in the direction whence it came, I was astonished to see an immense she bear but a short distance away making furiously toward me, her glossy brown hair fairly glistening and standing straight out, her mouth wide open and viciously red, her whole look and bearing one of intense rage and ugliness, and evidencing intent of the most extreme mischief. To intensify the situation, I at the same moment caught a glimpse of four other bears at a little further distance, and it is not too much to admit that I should have been glad, in contradiction of the usual significance of the popular expression, to have been 'up a tree.' But no such grateful retreat was within safe reach; the locality was in the open, and while I saw a cluster of trees some rods away which might afford me the means of escape if I could reach it, an instantaneous measure of the distance by the eye decided the attempt too dangerous, and that my chance lay

in the result of a hand to hand conflict, to commence the next instant. Dropping my compass, I seized the axe by its handle, and as the bear came up and was about to rear and spring upon me, dealt her the heaviest blow I was capable of upon her head with the back of the axe, which so stunned her that she fell over to the ground. Lucky stars! But the big brute was not dead. She floundered about fearfully, and aught I knew might the next moment rally to the conflict. The determined blow had partially broken the helve of my axe, but hastily turning the axe's edge to the front, I managed to administer several deep cuts in her throat.

"All of this transpired in the course of a few moments. A singular and perfect coolness, without the sense of an effort and undisturbed by a flurry, spontaneously possessed me, and I instantaneously took in everything fully and clearly. It flashed into my mind that I could defend myself, and that her claws must not reach me or I was gone. I seemed to coolly say in my mind, and have ever believed that I said the same aloud, 'Yes, I see you, confound you, come on! I am enough for you!' and felt as I exclaimed.

"Believing the blows I had given the bear would prove fatal I immediately picked up the compass which fortunately had not been broken in the melee, and proceeded on the line of my survey, for I did not like to linger, as I had some apprehension that a scent of the blood might attract other bears to the locality. I had never once thought to call to my man for assistance who at the time could not have been more than forty rods distant.

I continued my survey to the river, and after completing my work and after a couple of hours' absence retraced my steps, very cautiously, surely, when I approached the vicinity of my encounter. Carefully approaching, I found my assailant dead, but evidently she had struggled terrifically and long for she had pounded the ground over a large space and completely cleared it of sticks and leaves.

"I proceeded to camp where all my men had arrived, and after dinner we started for the scene of conflict. We found the bear to be a she brown one of the largest size. She had evidently been followed by four cubs which were, no doubt, the bears I had glimpses of at the time of the onset. We straightened her out and one of the men laid down against her back to enable us to better judge of her size, when we found her length to considerably exceed that of the man. She was in good condition and must have weighed not less than five hundred pounds.

"Taking two paws for trophies and a ham for our cuisine, we returned and enjoyed for several days the pleasure of big bear meat at our table.

"This was one of the extremely rare cases when the brown bear of this region deliberately makes an attack on man. In an experience of thirty years in the wilderness surveying and looking land, I have known or learned of but two other instances; in both of these the bear had been wounded and the hunter was killed. The whole party were now convinced that we had run many risks, and thereafter no one was allowed to traverse the forest alone at any distance from camp.

"In a close encounter with any dangerous or enraged wild animal, I have great confidence in the small axe as a weapon and much prefer it to a rifle, and don't you see good reason why?"

The above is by no means the most interesting matter which can be drawn from the ample fund of our friend's experience, and some other day we intend to draw upon it again.

F. M. WILCOX.

ROCHESTER, Mich., June 7, 1886.

DAKOTA GAME.

Editor Forest and Stream:

Every evening as I ride over the beautiful prairies of Northern Dakota, I find many things to interest me. I see the Eastern farmers and stockmen making new homes and all happy because they at last had courage enough to quit the crowded Eastern States and come to as grand a climate and country as the sun shines on. The untold thousands of acres of waving wheat attest the fact of the plenty in store for all who may come, and the future for those who hesitate but will yet come. Again I see that the crop of prairie chickens is going to be large, I have not seen so many during the three years I have been here, and we all look forward to fine sport after August 15. The plover are here by the thousands, and we go out and bring in all we want.

I took a trip out West a few weeks ago. While at a little town called Dickinson, a large silver-tipped bear was brought in. He was poor, but dressed 498 pounds—a monster. Two cowboys had killed him after a hard fight with nothing more than their revolvers. They were riding, looking after their stock; when they were going through a patch of very high grass and sage brush, this bear, which was eating a calf he had just killed, rose up immediately in front of them and struck at one of the horses, and had the horse been less frightened or less quick in springing to one side and then bounding away, there would have been one less cowboy. The bear could outrun the pony, and had it not been that there were two of them there would have been trouble. I know that some folks think that a bear cannot run fast. It may be that he cannot when he is fat, but I have talked to reliable hunters in this country who tell me that a large mountain bear, when thin in the spring, will get away from a pony on a run of half a mile. The cowboys put eight bullets through this one and he did not seem to mind it; one penetrated the heart; the ninth struck him in the eye and killed him.

On this same trip I counted from my car window twenty antelope in one band, six in another, four in another, all within rifle shot of the train; and I saw a black bear within three miles of a town out on the open prairie. All the people in the train saw him and he was making tracks for a deep ravine where most likely he had a den. There are hundreds of antelope out there, and one hunter told me he had one hundred deer killed at one time last winter and they all lay in a pile till spring and spoiled because he could not dispose of them. The landlord of the hotel at which he was stopping said it was true, as the man came in during the winter and told him to go and get all he wanted, but being sixty miles away and venison selling at three and four cents at home, he did not go.

I see a gentleman in your last issue asks where he may go for a hunt. Let him come here at less cost than many other places and I will send him where he can get all the deer he wants; will be glad to correspond with any one.

W. H. WILLIAMSON.

BISMARCK, Dakota.

BEARS.—The FOREST AND STREAM's grizzlies at Central Park receive daily through the month of June.

COLORADO GAME AND FISH.

DENVER, Col., June 8.—I have just returned from a hasty trip through the mountains via South and Middle Parks, and offer a few notes that may interest those of your readers who are so fortunate as to look forward to a summer or autumn "outing" in this region. Last winter was rather mild and the snowfall light in most of the mountain sections of this State. In March and April there was a good deal of snow that melted rapidly without packing, raising the streams to maximum height by May 20, or about a month earlier than usual. The streams are now falling rapidly. A few trout are being caught with minnow bait, the settlers constraining the law as giving them the right to catch for their own use. By July 1, when the law is off, fishing bids fair to be first rate. All agree that trout are plentiful in all the larger streams. They have not ascended the small streams yet.

Hunters and frontier settlers also agree in the gratifying information that most varieties of game are increasing since the Indians quit roaming over the country and the enactment of our somewhat rigid game laws. It is true the law is frequently violated in respect to both fish and game, but wholesale slaughter, such as frequently occurred a few years ago, is now seldom heard of. The increase is noticeable in elk, deer, bear, beaver, and especially in grouse. The latter is quite remarkable, and this, so far, is an exceptionally favorable season for the birds. Buffalo have almost entirely disappeared, mountain sheep seldom come into the parks but are plentiful upon the high ranges where but very few are killed. Antelope are hardly ever seen in either South or Middle Park; a few years ago they were plentiful.

A hunter, August Bohm, on Williams Fork, in Middle Park, recently killed two bears in one week—a black and a grizzly—the latter a very large one, and for a long time previous a terror to the neighborhood. W. N. B.

HOW LONG DO FOXES RUN?

YOUR Virginia correspondent says no fox or hound ever ran forty-eight hours, which means that he knows nothing about our New England red foxes. Perhaps a Virginia fox can be caught by hounds in six hours, but we have a longer-winded set here in Massachusetts. I have kept foxhounds for twenty years, and always the best I could find, and I never owned nor saw the hound that could catch an old fox on bare ground. I have had my dogs catch them in light snows or in the last of February when the females began to get heavy with young. But I do not believe the foxhound lives that can catch one in twenty that he starts in October or November on the following we have in this part of the country. Three years ago I bought a pair of pups of Col. Tucker, of Gaston, N. C., as he advertises to have the fastest dogs in the South, and expected they would run away from our Northern hounds; but though they are a little faster on a snow track they are not able to get away from my old stock on bare ground, and it strikes me that if "Red Eye," of Virginia, will come to Massachusetts he will find that his fast dogs won't catch a fox in six hours or six days running. I have shot one fox that I know had been running more than thirty hours, as I started him early one morning and the dogs drove him steady all day without my getting a shot. In the afternoon of the second day I made out to get a shot, and, as "Red Eye" says, "swindled him out of his life." It is no uncommon thing in good following for a good hound to drive a fox forty-eight hours, as hundreds of our Northern fox hunters know.

HENRY C. NEWELL.

ASHBURNHAM, Mass.

NATIONAL SPORTSMEN'S ASSOCIATION.—The first annual convention of the National Association for the Protection of Game Birds and Fish began in the Palmer House, Chicago, June 8. At a meeting of the Executive Committee the following clubs were admitted to membership: Big Lake Gun Club, of Little Rock; Pulaski Sportsmen's Club, of Little Rock; Kent County Sportsmen's Club, of Grand Rapids, Mich. The Committee on Credentials reported the following clubs represented by delegates: Ouachita Rod Club, Hot Springs, Ark.; Audubon Club, Chicago; Ringgold Gun Club, Ringgold, Tenn.; Dardene Gun Club, St. Louis; Leisure Gun Club, Evansville, Ind.; Cumberland Gun Club, Chicago; Arkansas Gun Club, of Hot Springs, Ark.; Sportsmen's Association of Western Pennsylvania, Pittsburgh; Iowa State Sportsmen's Association; Missouri State Sportsmen's Association; Santa Fe Rod and Gun Club, Santa Fe, N. M.; South Side Gun Club, Milwaukee; Michigan State Sportsmen's Association; West Side Gun Club, Bay View, Wis.; Capital City Gun Club, Washington, D. C.; Chicago Shooting Club, Chicago. Fish Commissioners Dr. J. G. W. Steedman, of Missouri, and Col. H. H. Rattaken, of Arkansas, were also present. The report of the Executive Committee recommended several changes in the constitution. It also recommended that Congress be urged to take some action to prevent the wholesale slaughter and netting of game birds for export to Europe. The committee thought that the extraordinary destruction of song and other wild and non-game birds, in the past few years, for use for personal adornment by the women of the country, should be considered by the Association. The committee recommended the adoption of a resolution condemning the slaughter of song and non-game birds, and calling upon sportsmen and others to exert an influence in their families and among their associates for the discouragement of the practice of using them for personal adornment. This was adopted. The Law Committee's report recommended that bills be prepared in each State for presentation to the Legislature, for the proper protection of game, birds and fish; that game and fish wardens be appointed in every State and Territory, and that a bill be presented in Congress to regulate interstate commerce in game, birds and fish. This report was adopted. Dr. F. B. Norcom read an interesting paper on the ethics of sportsmanship. He divided sportsmen into three classes, the genuine article, the pretenders and the bad element in every community who kill in and out of season by every device known to man. Dr. J. G. W. Steedman, of Missouri, followed with a paper, in which he favored consolidation of fish and game commissioners into one paid commission in each State, with power to appoint and control paid game and fish wardens. Secretary West also read a paper, advocating better protection for game.

CHAMPAIGN, Ill., June 6.—Quail in this vicinity are about exterminated. Prairie chickens are doing fairly well this year, and shooting in the fall will be good. But we start out after them too early. I wish the law could be changed from Aug. 15 to Sept. 15.—M. H.

MASSACHUSETTS GAME LAW.

CHAPTER 276. An act for the better preservation of birds and game.

SECTION 1. Whoever takes or kills a pinnated grouse at any time, or a woodcock between the first day of January and the first day of August, or a ruffed grouse, commonly called partridge, between the first day of January and the first day of October, or a quail between the first day of January and the fifteenth day of October, or a woodcock or summer duck, black duck or teal, or any of the so-called duck species, between the fifteenth day of April and the first day of September, shall be punished by a fine of twenty dollars for every bird so taken or killed.

SEC. 2. Whoever takes or kills a plover, snipe, sandpiper, rail, or any of the so-called shore, marsh or beach birds, between the first day of May and the fifteenth day of July, or a wild or passenger pigeon, or a gull, or a tern, between the first day of May and the first day of October, shall be punished by a fine of ten dollars for every bird so taken or killed.

SEC. 3. Whoever buys, sells or has in possession any of the birds or animals named in this act and protected thereby, during the time within which the taking or killing thereof is prohibited, whenever or wherever the said birds or animals may have been taken or killed, shall be punished by a fine of twenty dollars for the birds protected by section one, and ten dollars for the birds protected by sections two and four; provided, however, that any person, firm or corporation dealing in game may buy, sell or have in possession quail from the fifteenth day of October to the first day of May, and pinnated grouse, wild pigeons and any of the so-called shore, marsh or beach birds, or of the so-called duck species, at any season, if not taken or killed in this Commonwealth contrary to the provisions of this act.

SEC. 4. Whoever takes or kills any wild or undomesticated bird not named in sections one and two, except English sparrows, crow blackbirds, crows, jays, birds of prey, wild geese and such fresh-water and sea fowl as are not named in sections one and two, or willfully destroys, disturbs or takes a nest or eggs of any wild or undomesticated birds, except of the birds herein exempt from protection, shall be punished by a fine of ten dollars; provided, that any person above the age of twenty-one years, having a certificate from the game commissioners, or from the president of the Boston Society of Natural History, to the effect that such person is engaged in the scientific study of ornithology or collecting in the interest of a scientific institution, may take the nest and eggs of, or at any season take or kill, any undomesticated bird, except woodcock, ruffed grouse and quail; but nothing therein contained shall be construed to authorize any person to enter upon private grounds without the consent of the owner thereof for the purpose of taking nests or eggs or killing birds; and provided, further, that the game commissioners and the president of the Boston Society of Natural History may at any time revoke any certificate they have, respectively issued.

SEC. 5. Whoever takes or kills a gray squirrel, hare or rabbit, between the first day of March and the first day of September, or within said time buys, sells, or offers for sale any of said animals, shall be punished by a fine of ten dollars.

SEC. 6. Whoever takes or kills a game bird or water fowl, hare or rabbit, by means of a trap, net or snare, or by the use of a ferret; and whoever, for the purpose of taking or killing a game bird, water fowl, hare or rabbit, constructs or sets any traps, snare or net, or uses a ferret; and whoever shoots at or kills a wild fowl or any of the so-called shore, marsh or beach birds, with or by the use of a swivel, or pivot gun, or by the use of a torch, jack or artificial light, or pursues any wild fowl with or by aid of a sailboat or steam-launch, shall be punished by the fine of twenty dollars.

SEC. 7. The commissioners of inland fisheries shall be game commissioners also; and their authority, by and by duty, shall extend to the protection and preservation of birds and animals in like manner as to fish.

SEC. 8. It shall be the duty of every officer qualified to serve criminal processes, to arrest without warrant any person whom they shall find taking or killing, or who has in possession birds or animals contrary to the provisions of this act; provided, however, that persons engaged in the business of regularly dealing in the buying and selling of game as an article of commerce, shall not be arrested without warrant for having in possession or selling game at their usual place of business. Any officer who neglects or refuses to enforce the provision herein contained shall be punished by fine not exceeding twenty dollars.

SEC. 9. All fines accruing under this act shall be paid one half to the complainant and one half to the city or town in which the offence is committed.

SEC. 10. Whoever takes, carries, sends or transports any of the birds or animals protected herein, out of this Commonwealth, the said birds or animals having been illegally taken or killed within this State, shall be punished by fine of twenty dollars.

SEC. 11. Chapter ninety-two of the Public Statutes, chapter thirty-six of the acts of the year eighteen hundred and eighty-three, and all acts and parts of acts inconsistent herewith are hereby repealed.

Approved June 10, 1886.

ABOLISH SPRING SHOOTING.—The New Albany, Ind., *Daily Ledger* remarks: "FOREST AND STREAM is paying a good deal of attention to the subject of spring wildfowl and bird shooting. Sportsmen will indorse this old and reliable sportsman's paper in its efforts to stop the merciless slaughter of birds in the spring of the year. FOREST AND STREAM devotes its attention to encouraging State legislation against the nefarious destruction and says that Congress has no authority on the subject. It may be right in this, but that is a question. If Congress would pass such an act public sentiment would sustain it and the courts would in all probability uphold it. It is worth the trial at all events. It would take a long time to get the necessary laws passed by all the States, while a bill could be put through Congress in a few days. Every man who loves the rod and gun and the buoyant health and genuine sport they afford, will lend his aid to any intelligent effort toward protecting fish and game.

OLD TIME ARMS.—The sale of the B. Homer Dixon cabinet of arms and armor which was held in this city last week included long-handled weapons, maces, martels, battle axes, crossbows, guns, pistols, locks, powder horns, spanners, bayonets, and miscellaneous objects. A wheel-lock pistol of 1575, bearing several engravings, including three coronets, sold for \$310. A wheel-lock patronel gun of 1600 was sold for \$91, while a wheel-lock musket of the sixteenth century brought \$51. A match lock caliver with a beautifully inlaid stock, was knocked down at \$115, while a match-lock musket of 1600 sold for \$55. A military flail, or holy water sprinkler, with a chain and a spiked ball attached, brought \$58.

MISSISSIPPI.—Huntington, Miss., June 8.—We have the finest prospect for quail the coming fall it has ever been my lot to chronicle. This place is situated on a very high bank of the Mississippi, and has been exempt from overflow since 1832. We had an abundance of the feathery tribe last fall, and but few hunters, owing to a scarcity of good dogs. One can see the quail in every direction; while passing through the fields it is nothing uncommon to see a dozen males together. The females are just now bringing out their young. The forests are full of squirrels. It is nothing uncommon to see a huntsman returning with two or three dozen after a half day's hunt. Fishing has not been good this spring owing to the water being high so long, keeping the lakes and bayous filled.—L.

HINTS IN CASE OF ACCIDENT.—Brooksville, Fla.—Two deer hunters, Messrs. Willie T. and Walker, had nearly reached home on their return from a recent hunt, when young Walker rode up on the left side of Willie T. with the remark, "Let me see your gun." The gun was across young Tucker's saddle, the muzzle pointing toward Walker, who caught it by the muzzle with his right hand and pulled it across the saddle pointed toward his left arm, two inches from the shoulder, the arm being bowed in the act of reining up his horse. By some means the hammer of the right hand barrel caught in the pommel of the saddle and fired the entire

contents (twenty-one small buckshot) into his arm, shooting it almost entirely off and severing the main arteries. Young Tucker very successfully corded the arm and begged Walker to remain where he was very quietly, till he could go for assistance, but this he declined to do, fearing to be left alone. He mounted and dismounted three times on his way home, which loosened the cord and caused him to lose a large quantity of blood, from which he died seven hours after. Now a bit of advice: Should a companion get shot in the arm or leg, do not be afraid to open the wound (it will not cause him the least pain), but go right into it, strip the clothing from around it at once, and possibly you can see the artery, and tie it up. If not, by pressing your thumb about on the limb you can stop the flow of blood, and then put a small pebble in place of your thumb, tie your handkerchief around over the pebble, insert a small stick or pocket knife and twist till the flow of blood has ceased entirely. Many men have lost their lives from not having a proper knowledge of such things.—SHEEPHEAD.

HIGH BALLISTICS.—*Editor Forest and Stream:* If a rifle were carried to a great height, say 20,000 feet above the earth's surface, and discharged earthward, the ball would owe nothing of its initial velocity to gravitation and would decrease in speed with the expenditure of the propelling force, until it reached a point at which its velocity would be precisely what it would have acquired in the same distance had it been dropped from the hand. From that point it would be subject to the force of gravitation and increase in velocity until it touched the surface. Its terminal speed would be the same as that of a similar ball dropped from the hand (provided the height were sufficient for the exhaustion of the propelling force) but in consequence of its higher initial velocity it would reach the earth sooner.—ARCHIMEDES.

!!—Wm. Snider, of Sugar Grove, O., had taken down an old shotgun with the intention of going squirreling, and blew in the muzzle, holding the hammer back with his foot to see if it was loaded. His foot slipped off and ???!!!

ILLINOIS PRAIRIE CHICKENS.—Ought the season for pinnated grouse in Illinois to open Sept. 15, instead of Aug. 15, as at present?

BEARS.—The FOREST AND STREAM's grizzlies at Centra Park receive daily through the month of June.

ALLEN'S how-facing oars can be attached to any boat in 5 minutes. Try them. Little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

Camp Fire Flickerings.

"That reminds me."

184.

THE "foxing" incident of Mr. Seton's deer hounding experience, as given in your issue of June 3, reminds me of something of the same sort in one of our own excursions.

Several years ago, trout fishing with a friend on a small stream which ran through rather thick forest, we struck the stream about two miles from its entrance into a millpond, intending to fish down to the pond. It was arranged that my friend should commence fishing where we struck the stream and fish down. I was to go down about a mile and commence to fish, and was to place a noticeable stick mid-stream so that he could leave off fishing where I started and follow down stream until he overtook me. I marked my starting place as agreed, and carefully fished down for about half a mile. Not getting very much fishing, I gave up and concluded to wait for my friend to come along. After waiting some time I hallowed in the direction as loud as I could for several times. Getting no reply and feeling tired and sleepy, I concluded I would lie down by the side of a big maple with the root of the tree for my pillow, and have a sleep until he came up. I stood my fishing rod up against the same tree on the opposite side, so my friend would be sure to see it if he did not see me. When my friend came along he saw my rod standing up by the tree but did not see me. He, thinking I had gone out in the woods for something and had left my rod there as a signal for him to stop, he sat down on a log not over ten feet from me, lighted his pipe, and went to reading a book he had with him, the maple tree being between us. After a while I awoke, sat up on the ground, and looking up stream for my friend, wondering what had become of him. I again shouted a tremendous shout—his name—up stream. My friend dropped his book, his pipe fell out of his mouth, and he looked at me as if I was a ghost just risen out of the earth. I was also frightened to see him so close to me and hear him speak so unexpectedly. A little explanation on both sides reconciled each of us, and we left for our buggy.

PORT ROWAN, ONT.

Sea and River Fishing.

Address all communications to the Forest and Stream Publishing Co.

THE PRESIDENT AS AN ANGLER.

A LOCKPORT, New York, correspondent, who was a schoolmate of President Cleveland, writes us that the latter's angling proclivities were developed at an early age. The published report of Mr. Cleveland's recent angling trip to the preserved waters of Fish Commissioner Delawar, near Deer Park, has called out the following reminiscence, related to a correspondent of the New York Times, by Mr. Charles B. Andrews, Superintendent of State Buildings in Albany:

"Half a dozen of us floated down the river from Buffalo one day," said he, "fishing for bass. Cleveland was in the party. The water was so clear that we could see the fish twenty feet below us on the bottom, and we were having fine sport pulling them in with our hand lines. Somebody suggested that we drift down Grand Island and eat our dinner on the grass. Before we finished our meal we began to discuss the organization of a permanent fishing club. We agreed upon it then and there. The membership was to be limited to twenty-five and every other week we were to have a fishing trip down the river and a dinner. We became the 'Jolly Reefers,' and by that name we were known around town. The most of us were married men. Our wives saw much to criticize in our name. It suggested to them such

an extravagant picture of sociability, especially when they saw it in cold type, that we could not resist their appeals to have it changed. Grover's uncle, Lewis F. Allen, owned a pretty little island near the Canadian side of the river, and Grover persuaded him to sell it to us. It contained about 40 acres of land and was one of the prettiest spots along the river. We bought it for about \$4,000 and then formally organized the Beaver Island Fishing Club, of which I was elected president. The other charter members of the club were Grover Cleveland, Robert L. Hayes, now Auditor of the United States Express Company in New York; Joseph Fairchild, long the Register in Bankruptcy in Buffalo; John D. Shephard, a large iron manufacturer, and Warren S. Miller, a lawyer.

"Then we built a handsome clubhouse, costing something like \$10,000, and there the members and their wives would come and live a week at a time. This was along in 1869 and 1870. After I had been president two or three years, Mr. Cleveland was elected to the office. We had regular fishing days at which every member was expected to be present. Each man had his boat and oarsman, and, trailing them along behind a steam yacht, we started for the scene of the day's sport. This might be up river or down river, as the Commodore of the day might indicate. Before starting we always elect a Commodore and Secretary. The former had absolute control of the movements of the party for the day and the latter kept a score of the day's catch. This kept the kickers in line, and you know that there are some men who, if the crowd happens to want to go to heaven, will insist on going the other way. The commodore settled all that. I am not sure, but I think Cleveland was our first Commodore. When we reached the fishing ground every man got into his boat and commenced to fish for all he was worth.

"We had a table showing how much the catch was worth. For instance a muskallonge counted 100, black bass and yellow pike 20 each, blue pike and pickerel 5 each, and rock bass and perch 1 each. The Secretary as fast as the members brought their catch aboard the yacht made the account, giving each man credit for his day's work. At the end of the season prizes were given to the man whose total count was greatest, to him who had made the greatest catch in one day, and to whoever had caught the largest fish. Mr. Cleveland got the prize one season for catching the biggest fish, and another for scoring the greatest catch. He captured several fine fish poles and reels in this way. Yes, he was as lucky in fishing as he has been in everything else, but then you want to remember that he attended strictly to business when he sat down to it. The President used to be a pretty good fisherman. He never got excited, and nothing seemed to ruffle his temper. It takes considerable skill to land a good-size bass when he starts upward from the river bottom in the attempt to shake your hook out of his mouth. If he can travel faster than you can haul in your line the chances are that he will slip you. Whenever we heard anybody in a particularly strong voice exclaim 'You rascal,' we knew Mr. Cleveland had lost his fish just as he had got him to the edge of the boat. I'm rather loth to believe that the Colonel took first prize for catch the other day. Still, the President may have been engrossed with other thoughts than those of a purely piscatorial nature."

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—XV.

THE second Sunday in camp was a pleasant contrast to the first one, and it was spent in a becoming manner, by the girls at least. However, as the evening drew on, some fish found their way to the camp by following a couple of the boats, the stringers hanging over the sides having somehow beguiled them into paying us a visit, but it is not necessary to these chronicles to point out the Sabbath-breaking culprits that took their places at the supper table in abashed silence under the reproving eye of gentle Mother Jim. Some trout there were, too, I believe, that were toiled across the lake to camp, but not even these in all their spotted glory could gloss over our departure from the trail of righteousness, and the culprits for their offending were sent to bed in disgrace. But the morning—and "a mess o' them spotted minners"—softened Mother Jim into a forgiving mood, and they were again taken into favor under a promise to do better in the future. The promise was given, however, with a mental reservation, and broken the very next Sunday, with much the same result, as Mother Jim had about made up her mind that it was a waste of time and breath to try to turn us from our sinful ways.

Breakfast disposed of, the boats were bailed out (Couturier's boats were of the leaky variety and a source of much (dis) comfort), tackle selected, and in short time the camp was deserted, save by the philosopher, who was left to air the bedding, concoct a camp kettle of new-fangled bean soup that he had expended much serious thought on, and devise new schemes for the entertainment of neighbor Horton's pigs.

The boats returned late in the afternoon, each with some fish, but the sport had not been as good as we had expected with the coming of fine weather; but we had enough for the camp and a dozen or more for our neighbors, who were always welcome to the day's catch except a few reserved for home consumption.

The next day was spent in much the same manner, old Ben and the skipper, however, putting in most of the day in "rounding up" a fresh supply of speckled frogs, as the menagerie box would barely furnish bait for another day's fishing.

Wednesday morning opened out blazing hot, and the shade of the big popple seemed to promise so much more comfort than an open boat under the broiling sun, that the girls decided to stay in camp and make life a burden to the philosopher by helping him to get up a famous dinner, in which "rozberry pie," doughnuts, rice pudding, with real rice, and green apple sauce were to be included. The programme once decided on, the philosopher was called on to produce the materials, and the campaign against his peace of mind for the day was opened, with Mother Jim at the head of the column to direct the movements of her command.

A boat coming down the lake a mile away, the oars glistering in the sun as they rose and fell in steady measure, scarcely attracted the attention of the old campers as they lounged in the shade, undecided whether to fish or not to fish; but when it approached within twenty rods and heading for the landing, a hair-raising yell, between the scream of a locomotive whistle and the screech of an untutored child of the forest with his hide full of "unrectified wrath," startled the camp into sudden life and commotion, for nothing "on the face o' this livin' airth" could produce such a melodious mingling of discordant sounds except "Old Knots."

"Ole stub-an'-twist Knots, er I'm a loon!" shouted Ben, and then five lusty yells, accompanied by the shrill soprano of the girls to balance the harmony, went over the water in an answering greeting, and as the boat came on, propelled by the easy, practical stroke of a stranger who handled the oars, preparations were made to receive him.

Old Ben having in mind the threat against his scalp, and having nothing at hand with which to "fill his ole hide chuck full o' perforated holes," hastily collected a half dozen fair sized boulders lying at the edge of the water and as they came within casting distance these were heaved with a precision that dropped them at quick intervals close alongside the boat, and as he could not get out of the way "Ole Stub-an'-twist" was treated to a shower bath, somewhat to his disgust and the astonishment of the boatman who was perhaps not used to this new style of welcome.

When the boat was pulled up and relieved of its load of "Knots," his old comrades surrounded him and he was put through a course of hand shaking, and kicks and cuffs that fairly knocked the breath out of him, and it was not until he had removed the tompon from the muzzle of his (pocket) pistol and fired a shot straight down brother Muller's throat that a truce was called. The missile, however, had no other effect on brother M. than to produce a temporary aberration of mind; it would require a whole battery of this sort of ordnance to lay him out. Verily the ways of welcoming a comrade to camp are divers and various.

The flurry of the first salutation over, the well beloved old "Kingfisher" was presented to the girls, strangers to him except Kit and Mother Jim, the reception was over and the camp resumed its wonted serenity.

But the countenance of Knots was a sight to behold. Instead of waiting at Traverse City for the afternoon boat, and coming in by Sutton's Bay and arriving in camp about 5 o'clock as we had expected, he had started with the boatman Meade, and came overland in an open vehicle to the saw-mill, and from there down the lake in a light yawl, slipping up on us about 10 in the forenoon. Built on the thin-skinned, light blonde order of architecture, the sun "had a skunner agin him," and had poured its rays down on him with such "sarchin' fervidness," assisted by the reflection from the water, that his face was the exact color of a freshly boiled lobster, and shone with the refulgence of a newly varnished red wagon. His face and the backs of his hands, which were in a similar fix, were quite painful for a time, but a few applications of a sunburn lotion and some fresh cream brought relief, and in a day or two Knots was himself again. But to day he had enough of the sun without trying the lake in an open boat for a fish or two, preferring to loaf around camp in the shade, doctor his burns and rest, that he might be fresh for a fair start in the morning. There was no fishing that day till the famous dinner had been disposed of and the shadows had begun to creep and lengthen out over the water along shore, the dinner having such a soporific effect that in half an hour after the big pudding pan had been scraped of its last spoonful, more than half the camp were in a sound nap, and the others too lazy and "triflin'" to draw a full breath. There was "some tall braggin'" as Ben said, over the dinner, that made the girls feel quite stuck up at the part they had taken in preparing it, but as I am writing this where none of them can get at me to pull my hair, I may venture, with a shaky conviction that I am raising a breeze about my ears, that to the philosopher's care and watchfulness in seeing that everything was not burned to a cinder, was mainly due the success of that feast.

Toward evening the spirit moved old Dan and Ben to take a boat and pull down the lake to the first point, and as the sun went down they returned with fish enough for breakfast, for which they received credit marks as being the only two in camp with energy enough left to lift an oar or wield a rod, even in the shadows of the departing day. But the night brought cooler air and refreshing sleep and we were out betimes in the morning sniffing the grateful odors of the woods and laying plans for the day's sport.

We had promised Knots a trout supper for his first day in camp, but his untimely coming in on us and the demonstrations attending it, and the big dinner, and the broiling sun of the previous day had combined to knock out of joint the trip Ben and I had planned up Maybert's Creek.

To-day, however, trout must be had, and Knots was invited to join in the intended slaughter of the innocents, but he is noted for two things, his bump of caution in unraveling the mysteries of an unsupported fish story, and a rooted belief that unwonted physical exercise is not good for the general system, and these two "leadin' traits o' character" moved him to ask about the lay of the stream, the density of the "bresh" along its banks, the probable number of logs and fallen trees he would be called on to straddle or crawl under to the estimated lineal rod, the lowest figure we could set on the number of skeeters to the square foot that would be lying in ambush for him at every kink of the stream thirsting for his gore, etc., and when all had been answered to his satisfaction he straightway made preparations to go out with Jim for a day's plain bass fishing, as trout fishing was a little too rich for his blood. We wished for old Dick, right there, that he might lay him out with one or two of his big, six-jointed, "side-achin'" words.

Here was an old veteran—who had faced the music in the trenches before Vicksburg and a half a score of other places where bullets were thick as mosquitoes in the tangles along Cedar River, who had earned his shoulder straps by three honorable wounds—flaunting the white feather right in the face of the enemy. And he had come up to see us with the especial purpose in view of this time having a few days' trout, but it may be noted that the "Ole Stub-an'-twist" has been promising himself the treat of a day with the trout wherever we have made a camp for the past five or six years, and goes always supplied with a half of the most elaborate and killing flies (with which he "hes heaps o' fun with the sunfish an' goggle eyes), but when it has come to a serious consideration of a trip up the Cedar, Cold Brook, or other stream of like possibilities, his courage has, as Dick says, "almost always invariably" oozed out, and he has gone back to the easier and more comfortable kind of sport—plain bass and pickerel fishing from a boat.

Knots has yet his first trout to take, and if that particular trout lives till Knots catches him, I have a notion he will be a toothless centenarian with an inch of moss on his back and his frame covered with barnacles.

Ben lit the brier root, filled a small minnow bucket with lunch, and when I had placed the rods and bait boxes in the boat we made a bee line for the log road across the lake and Maybert's Creek, leaving the others to divide up and go a fishing or stay in camp as the spirit might move them.

Our trip up the creek netted us over forty trout of fair size, besides the little fellows that we returned to the water

to help swell the count of the first dude that might chance on the stream. The skeeters bit even better than the trout, but Ben affirmed, after his fashion, that "skeeter bites was a cussed sight more unsatisfyin' than trout bites," and we were glad to get out to the road and back to the boat while the sun was yet a couple of hours above the hills.

A hundred yards from where we had left the boat the old road passed through an open spot of an acre or two, on which grew scattered patches of low, scrubby raspberry bushes, loaded with luscious red berries, and while we stopped to pick a few of the most tempting, Ben disturbed a speckled frog in his meditations, and after a fine piece of strategy he was "surrounded" and transferred to the minnow bucket. Beating around through the bushes we "skeered 'em up," as Ben said, every few feet, and in a short time we had the bucket nearly half full of the "speckled beauties" (new name just dug up for this species of batrachian for "old priority" to scratch his head over), and then we tried to figure out what attracted them so far from the water, away out here in a raspberry patch, where there was little grass and plenty of hot dry sand. Could it be that they had a "fruity tooth" and resorted here to satisfy its craving by scooping in a berry at every flying leap at the low bushes, or did they come after the bees and flies and the various kinds of winged and wingless bugs that infested the patch? We gave it up, and we didn't have sense enough to open one of them to see what manner of sustenance he had concealed about his person, or at least we didn't think of it; and this "didn't think of it" is about the main reason why so many of us go blundering through the woods without seeing or learning anything that we can turn to account as a benefit to ourselves or others. But every one cannot be a John Burroughs—may his eye never grow dim nor his pen lose its charm.

The little raspberry patch was a mine of comfort to us, for any day that we ran short of bait we could pull across and in a short time "hive" three or four dozen of the choicest speckled frogs, and the supply held out well on to the breaking up of camp.

Back in the boat again we changed our trout hooks and snells for bass hooks on gimp, and pulling out to the belt of bulrushes, spent an hour in some fair sport with the bass and long-snouts, and then across to camp, hurried a trifle, doubtless, by a vigorous tattoo on the bottom of a frying pan in the hands of the philosopher as a signal for supper.

Knots and Jim came in soon after we got to camp, a little disappointed over their string of fish, but they had passed a pleasant day in old time companionship, and they looked as contented, as Ben made it out, "as a small boy with a pocket full o' marv'ls an' a bran new kite."

Supper over, the camp-fire was started on the same old pile of ashes, and after entertaining the mosquitoes and gnats for a couple of hours and talking little "Top into the land o' nod, the council broke up and we went to bed with the plans all mapped out for the morrow's campaign. KINGFISHER.

NEW JERSEY NOTES.—The Newark *Call*, June 13, reports: Budd's Lake, in Morris county, is one of the prettiest bodies of water in the State. It is only one and a half miles long and less than a mile wide, but it is surrounded by beautiful scenery, is clear and generally calm and moreover teems with fish. Bass, perch and pickerel abound and are easily caught. The bass are chiefly small-mouthed, and it is said that this variety are more numerous and much larger in this lake than in any other New Jersey waters. Large-mouthed bass were placed in the lake last year by the Fish Commission, and a one-pound specimen was recently caught by Mr. Kazner, of Jersey City. A pickerel weighing four and a half pounds, was taken through the ice last winter. Two Newark anglers fished at the lake last week, and among other fish caught a four-pound small mouthed bass in minnow casting. The fish was caught among the lily pads with an eight-ounce fly-rod, and the angler risked his rod in snubbing the frisky captive as quickly as possible and playing him to and fro as close as possible to the boat. At the end of three minutes the fish was almost ready to hand in, but just at this critical moment the reel fell from the rod and sank into the water. He gripped the line against the rod and held the fish away from the boat, while his companion recovered the reel by pulling on the line until the spool was empty. Then putting it back in the reel seat, he wound up the slack line and said "Go ahead." The fish had meanwhile recovered his strength and was exploring the duck-weeds and lily pads, but he was safely boated and brought to Newark. The Forrest House at the lake was opened yesterday and several Newark families are booked for the season. Others have engaged accommodation at Budd's farm house. . . . Sheephead are biting at Barnegat, and the bluefish season at the inlet has fairly opened. Weakfish are being netted in enormous quantities, but are not taking bait with avidity. . . . The excursions to the Fishing Banks by the steamer Joanna will commence to-day and continue every Tuesday, Wednesday, Thursday and Saturday until further notice. The Joanna has been greatly improved since last season. The boat leaves Ripley's dock at 8:30. . . . Mr. John C. Roe, of Paterson, now stopping at the Lakeside House, Greenwood Lake, caught 106 fish Wednesday along the lower west shore of the lake. In his catch were 37 bass and 63 pickerel. Mr. George Wilson took 63 bass and pickerel on the same day. Thomas Garrison, the guide at Lakeside, caught 17 large-mouth bass in skittering on Wednesday night, and Senator Griggs and his son had excellent success in fly and minnow casting. Messrs. Samuel and Albert Schoch were at the Fuller House Tuesday and Wednesday, and had fine sport in pickerel fishing, under the care of the veteran oarsman, Bob Terhune. They also caught a few bass. Henry Folsom, of Orange, who was also stopping with Fuller, caught a large-mouth weighing 64 pounds, and F. Knowland a 34 pounder, with thirty other small-mouths. . . . Black bass fishing has been pursued with but little success is the Raritan river at Bound Brook and East Millstone. . . . Fishing is reported to be very good now at Somers Point. Many sheephead, drum and weakfish are being caught with hook and line. While fishing with a net one day last week Silas Boyle, of Somers Point, caught two sheephead, a large drum and five hundred pounds of weakfish in one haul. . . . A correspondent writes: "Seeing in the *Call* last Sunday what strings of perch were caught at Green Pond, Mr. J. B. Merrill and Mr. J. R. Sutton, of Morristown, went up Thursday afternoon and fished in the evening and early in the morning with great success. If anybody wants to catch fish I know of no place where they will be sure of getting the number they will there. There is a nice hotel, but it is so fixed in the landlord's lease—he cannot keep fishermen nor hire out any boats. Visitors have to go to a Mr. Clark, who will give the best accommodation he can in an old log house, but everything is very clean and charges very low."

LANDLOCKED SALMON IN THE MADAWASKA.—*Editor Forest and Stream:* The first landlocked salmon known to have been taken in this river was captured at this place a few evenings since in a dip-net that was taking whitefish. This fish is undoubtedly one of the 50,000 fry placed six years ago by order of the Ottawa Government in Temiscanata Lake, the head of Madawaska River, twenty-two miles distant. Five thousand were placed at the same time in Baker Lake. The size of this fish (8 pounds) shows these waters to be favorable. Temiscanata has long been the favorite resort of a few sportsmen for its splendid trout fishing. Doubtless many salmon have been taken there in the past; if so, the fact has been kept very quiet. Sportsmen can find a hotel, guides and boats at the lake, and many routes may here be taken on streams with plenty of trout and large game. Edmondston is the terminus of the New Brunswick Railway. From here the route is by team twenty-six miles up the Madawaska, a fine drive amid beautiful scenes. P. A. Babin, Esq., of the Babin House, this place, will answer inquiries.—WARFIELD (Edmondston, Madawaska county, N. B., June 7).

HOW TO CAST A FLY.—Paterson, N. J., June 11.—Will some of your readers kindly explain how a fly is tied? I have consulted various angling books as to fly-tying but could not comprehend them. In these books fly tying and casting the fly are so treated that it only explains the author's method, taking it for granted that you know something about the subject. The only comprehensive article on fly-casting that has been my good fortune to read appeared in the *FOREST AND STREAM* May 8; through the medium of this article and the help of a coach I learned to cast a fly to my own satisfaction.—G. A. M.

MINNESOTA FISHING.—Pillsbury, Minn.—During the past month fly-fishing in our many lakes has been exceptionally fine. Large catches and large fish have been the rule. I went out last Wednesday in company with W. L. Hall and O. M. Langly, of Wadena. We left my house at 1:30 P. M., returned before dark, and brought in 101 pounds of fish, mostly wall-eyed pike. We practiced still-fishing, using minnows for bait. Excellent reports are brought in from Long Lake, Big Swan and other noted resorts.—J. F. LOCKE.

AN INTERNATIONAL PLEASANTY.—Mr. Billy Florence, the justly celebrated and world-renowned actor, is a guest at the Windsor Hotel. He is on his way to the Ristigouche for a month's salmon fishing. He was seen by a friend buying a spade in the city, and on being asked the cause he said he was going to test the right of the Canadians to prevent a free American citizen digging his own bait! We wish our genial friend a pleasant trip.—*Montreal Herald*.

SHAD IN THE OHIO.—New Albany, Ind., June 5.—*Editor Forest and Stream:* Did the U. S. Fish Commission place any shad in the Ohio River or its tributaries? For several years the net and seine fishermen here have taken a few shad occasionally and this season a number have been on the market. Fishermen and others pronounce them Potomac shad. If they are how did they get here?—JAP. [The U. S. Fish Commission has for several years stocked the Ohio and its tributaries with shad.]

ROUSE'S POINT.—A picturesque and pleasant resort for anglers, within easy reach of New York, is Rouse's Point, on Lake Champlain. Here is combined the pleasure of good fishing, black bass, pike, pickerel, etc., being abundant, with comfortable living at the hotel, located on the western shore of the lake. See advertisement in other columns.

OSAKIS, MINN., May 29.—Pike are now biting nicely in the lake, thirty to fifty being caught to a line in an afternoon. Bass are also beginning to bite. Redheads and blue-bills are nesting in good numbers here this season. The chicken crop also promises good.—S. W. S.

SHRINKAGE OF WEIGHT.—Bridgeton, N. J.—A drumfish weighed sixty hours after capture eighty-four pounds. What was its approximate weight when landed?—F. S. J. C. [Probably ninety to ninety-five pounds, according to the state of the atmosphere.]

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.—*Advt.*

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

L. M.—Reference to the dictionary will show you that falcon is pronounced faw-ku.

E. E. A.—You can procure steel traps from any of the dealers in sportsmen's goods in this city. Write them for what you wish.

G. D. S., New York.—I have some 12-gauge paper shells which have been made for more than a year. Do you think it dangerous to use them? Ans. Not if loaded with black powder.

FRANK.—See notice of Chateaufort Lake in our last issue. That will probably furnish a satisfactory reply to your inquiry. For flies consult "Millard's" "Days With the Barmecide Club" in this issue.

F. S., Toronto.—Can you tell what bait to use for trolling for maske-longe? Ans. If you use live bait a sucker or chub is best, the former preferred because it lives longer when trolled. If dead fish are used on a gang of hooks either fish mentioned will do.

Mosquito.—For protection against insects use the preparation recommended by "Nessmuk" ("Woodcraft," page 23), which is as follows: Emsen tar, 3 ounces; castor oil, 2 ounces; oil of pennyroyal, 1 ounce. Smear together over slow fire and bottle for use. Rub it on thoroughly.

LEW WILLOW, Arkansas.—Do you require correspondents to sign their real name after they have written for you long enough so that you know who they are? Ans. It is often a convenience to us if the proper address be given, even by those correspondents with whose pseudonyms we are quite familiar.

J. R., Milwaukee.—1. Is it safe to shoot an English stub twist barrel with live drams of powder, weight of gun nine pounds, twelve-gauge? 2. Don't the choke of a gun wear away faster in a stub twist than in a Damascus barrel? 3. Is the gun as good as any other American make? Ans. 1. Yes. 2. No material difference. 3. Yes.

J. S., St. Paul.—1. Please let me know in your next issue where I can get a book on rules for dog fighting? 2. What is the best book on chicken dog training? Ans. 1. That is a subject on which we possess no information. 2. For training field dogs, Hammond's "Training vs. Breaking" is the best thing in print. We can supply it, price \$1.

N. S. G. C., Brooklyn.—In a sweepstake shoot, five entries, miss and out, two prizes, one drops out in first round, the second on the third round and the third on the fifth round, only two remaining in the shoot; who are entitled to the stakes? Ans. If fourth and fifth shooters have scored five each, they may agree to divide the prizes, otherwise they must shoot for first and second.

M. Hamilton, Ont.—I intend in July spending a couple of weeks in the north trout fishing. Very large trout are caught and I want to cure some specimens to bring home for exhibition. Can you give me a recipe for drying or curing them? Last year I caught speckled trout over six pounds in weight. Ans. Split the fish on the back and take out the back bone. Salt them well on the flesh side and put them on racks to dry in the sun or put a fire under them. Keep them dry.

SMELT HATCHING.

BY FRED MATHER.

[Read before the American Fisheries Society.]

AT the last meeting of this society I read a paper on "Hatching Smelt," giving the details of my first experiments, and stating at the same time that but little had been done with the eggs of this fish and that the literature of its culture was very limited. I have continued these experiments the present year and have but little to add to what I have before said. The eggs of the smelt are the most unsatisfactory of any fish eggs I have ever handled. Their glutinous character and small size forbids the separation of the dead from the living by the automatic jars or by hand picking, consequently they decay and become foul.

We have this year at the Cold Spring Harbor station of the N. Y. Fish Commission placed them upon the straw coverings of wine bottles, hung in ponds and also placed them in the hatchery in running water. Others were put on tin pans hung in the ponds and in the McDonald jars, under several different conditions; one of these was to place the newly taken eggs in a jar and by slowly rotating it to leave a covering of eggs all around the inside. Another mode was to put them in the jars and give them a strong circulation of water to prevent their adhering in masses as much as possible. The third method was to give a jar a very slight circulation and let them mass together.

The eggs exposed to light on the straw and tin pans in the open ponds out of doors were soon covered with fungus and did the worst of all, although a few hatched.

The first eggs obtained this year were obtained on Feb. 25, to the number of 400,000. Some of these were placed upon the straw coverings, referred to above, and others were put in jars, the main portion being thus deposited. Both these lots began to hatch on April 5, forty days after, and when I last saw them, on April 9, there were perhaps 10,000 already hatched; while the other eggs, taken on the same day and subjected to the same treatment, looked as though they would not hatch for four or five days yet. At this same date (April 9) a lot of eggs taken on March 6, nine days after the former lot, had already begun hatching. This seems to me to be a very wide margin of time for eggs which only take from thirty to forty days to hatch. The time occupied in hatching this year exceeds that of last season on account of the severe cold weather we have had throughout March. The eggs which were taken in thin layers on the inside of the glass jars by rotating, as above described, have done very badly. The others are doing fairly well, for smelt eggs.

I sent Mr. F. N. Clark some eggs this year, cautioning him not to throw them away no matter how badly they looked on the outside, how much fungus there might be there, nor how foul an odor might arise from them. At the same time I had fears that he might do this; for in our experiments we have found that the decaying eggs on the outside masses were so foul that nothing but previous experience could have convinced us that any good could have come from the inside of such a mass.

After looking the eggs over carefully I came to the conclusion that it was a possible thing that the outside eggs died because they were exposed to the light, and made an attempt to get more in order to test this theory, but we were unable to obtain them. I had arranged to divide the next lot of eggs into two portions; putting both into jars which were covered to exclude the light, and gave one a strong and the other a feeble circulation of water to test this method, which I shall do next year if the opportunity offers, for so far our work with smelt has not proved completely satisfactory. We can hatch forty or fifty per cent, and as each little adult smelt has from thirty to forty thousand eggs we actually get a great number of young fish, but we don't begin to get the percentages of fry that we do in operating with the salmon, the trout and the whitefish. I believe that we will reach this result by continued experiment; and it is one of those interesting questions which stimulate a worker to try and discover the cause of this great mortality.

When we remember the fact that a smelt goes up in swift brooks and deposits its eggs on stones, it is hard to believe that the eggs require a feeble circulation, as was suggested by my friend, the late Professor Rice. I have never had the opportunity to examine a stream after the smelt had finished spawning, and see exactly how these eggs were deposited in a state of nature. But the very fact that a little fish bears such a great quantity of eggs within it, shows that nature has provided for a great loss at some portion of the life of the young, either in the egg or afterward. Their exceedingly minute size when hatched, perhaps a quarter of an inch in length and of the diameter of a thread of No. 30 sewing cotton, renders them subject to be preyed upon by exceedingly small fishes, and an ordinary brook trout, when first beginning to feed, could probably accommodate half a dozen young smelts just from the egg in its stomach without inconvenience to itself. The young can swim as soon as they are hatched, and we confine them with brass wire cloth, No. 30 mesh.

Mr. Carman, who supplies me with smelts from Brookhaven, L. I., wrote on April 3, that he had taken a few more spawners, the last of the season, and we sent for them immediately; but before the arrival of the can, the fish had spawned, therefore we can place the extreme limits of their spawning season on his stream, this year, at February 25 and April 3. Some two weeks before the first-mentioned date, Mr. Blackford obtained some smelts from Long Island which were full of spawn, and I sent a man down there for more, but we failed to get any that were ripe. The fish which came to market had eggs extruding from their dead bodies; probably caused by handling and the jolting of the railway on their journey to the market. It is proposed this year, at the suggestion of Gen. R. U. Sherman, of the New York Commission, to plant a few in the Adirondack waters and see if they cannot be established there as they have been in the fresh waters of Vermont; and the result of this experiment will be watched with great interest.

I have spoken of the egg of the smelt as "glutinous," but "adhesive" would be a better term. On one side of the egg there is a filmy appendage which is the means of attachment to whatever it comes in contact with, and under the microscope it appears like an empty egg shell folded over and attached to one side of the egg only, while the other side is clean and round.

MR. CLARK—Mr. Chairman, I would say in regard to the eggs that Mr. Mather sent me at Northville that I found them in just the condition that he said I probably would. The first glance would give to a fish culturist the idea that of course they were all bad; but upon further examination, when you dig into them, you find that there is a small percentage of them that are good. I should say of those eggs that were sent to us about 15 to 20 per cent. were good. While Mr. Mather was reading his paper a thought occurred to me, and in the recital of his different experiments I listened to hear him say that he had tried one way, which he did not. About seven years ago, I think it was, I was at Gloucester, Mass., at the first time they were handling the cod for the United States Fish Commission. Among other experiments which Professor Baird tried was that of taking eggs of the Labrador herring, which are adhesive. They stick solid, and I tried a great many different experiments in taking eggs, and one of the ways was taking them on glass, which I found to be the best; and I think if a person is going to take adhesive eggs of

any kind and let them stick to anything, he will find glass the best of anything. At that time I made a box for hatching on glass. It was a small trough, with places in the side for the glass to slide down. One glass went to the bottom and the top was half an inch under water. The next glass stood half an inch above the water, like that so on down through, keeping the eggs that stuck to the glass on the side toward the water, so that the water passed up right by the eggs, and in that way we succeeded in hatching a better percentage than in any other way. I should think it would be well to try experiments with the smelt the same as they do with the wall-eyed pike, which I think Mr. Nevins and others have tried. I have, and I think the Michigan Commission has tried the same thing.

MR. MATHER—Mr. President, I would say in connection with what Mr. Clark has said that I had read very carefully his experiments with the herring and thought that his arrangement of glass slides was an excellent thing. As I understand it, that is for hatching in troughs, we have put them on the inside of a jar, as I have described, keeping it whirling and letting them adhere on a thin layer. I have now a theory, which of course remains to be proved, that it is the light that is fatal, because we find where those eggs adhere in masses, perhaps the size of a hickory nut or larger, that all the outside eggs become bad after a while and are covered with fungus, but you take hold of this mass and break it open and you will find the little fellow inside there all right, protected not only from the action of the light, but from the water. I don't understand how water can get into this mass. If I had been going to hatch them in troughs I should certainly have used the apparatus that Mr. Clark devised, and which I think is an exceedingly good thing for that mode of hatching.

MR. BISSELL—I would like to say a word about that smelt business. If it is the light that affects the eggs of the smelt, would not the light affect them in the natural conditions in a small stream? May it not rather, or more likely be, the motion of the water? I have been told by our men in the Michigan Fish Commission that one of the reasons that brook trout eggs cannot be handled successfully in the jars is that they have too much motion. Mr. Marks told me the other day when I proposed that during the first stages of handling the trout eggs they might be put into the jars and run in great numbers, and then as the bad eggs were worked off, place them upon trays and hatch them there—he said no, that would not answer, because if they had too violent a motion of the water it would addle the eggs. He said that had been proved by experiment. It seems to me that is much more likely to be the cause of it than the action of the light, particularly at the season of the year when the eggs are cast.

MR. MATHER—As regards brook trout in jars, no doubt the violent motion would be injurious to them, but where you have a little stop cock you can turn that and you can give them as much or as little motion as you like, and you can have a flow. The trouble in hatching trout in jars begins after you have got them hatched and they lie down in masses on each other and smother.

MR. CLARK—Yes, but the jar is not the thing for handling brook trout.

MR. BISSELL—You must have a good strong current in order to carry them up and float them in the jars.

MR. MATHER—With regard to the smelt eggs, I have never seen the natural stream after the smelt eggs were deposited by the fish. I have been on the ground before the hatching season began, and have seen them take smelts in very swift water, and it is a possible thing that the smelt eggs that are taken and adhere to the top of the stones die, while those which get into the crevices may escape. I don't state it as a fact, I simply state it as a possible thing. They do spawn in tolerably swift water. That I know, for I know the streams where they spawn.

MR. BISSELL—Are they shallow streams?

MR. MATHER—Quite shallow and running over stones. I have seen them in New Jersey pretty well up on the Hackensack River, and I have seen them at Locust Valley on Long Island where they take them, and they are both rapid streams. The stream at Locust Valley is a trout stream, very swift, running very rapid, and the eggs which we took last year on stones and placed in our hatching troughs, where we hatch the brook trout eggs, all came to nothing, that is those in a single layer, but where there were four or five deep we could pick off the top layer of bad eggs and find them good underneath.

MR. CLARK—I would like to ask Mr. Mather a question. What percentage did I understand you to say—that you had forty to fifty per cent. of good eggs?

MR. MATHER—That is about what we have now.

MR. CLARK—Well, Mr. Chairman, I don't think, with any adhesive eggs that were ever hatched, where you leave them to adhere, I don't think there is anybody ever hatched anything better than 40 to 50 per cent. of any kind, and I don't think they ever will. We don't with the herring, and we call it good.

DR. SWENEY—It seems to me that from all the eggs that are supplied in the spawning of these fish whose eggs are glutinous or adhesive, there is a provision of nature that the outer layer of the eggs acts as a protective coat to the inner mass, and as the gas permeates through the tissues and the air reaches the eggs on the principle of displacement, as the internal layer of eggs consumes the air, it is resupplied from the outside, and this putrid mass of eggs on the outside which seems so unproductive, may be in part as a defense also against animals, and is not the experience of Mr. Mather going to show that these eggs that seem to be spoiled on the outside, work no detriment to those within. That may be the principle, that the adhering mass of eggs is a protective coat to the inner stratum. It may be the explanation that the gas or vitalized air from the water reaches the eggs through the outer stratum.

A GOLD MEDAL FOR PROFESSOR BAIRD.

PROFESSOR BAIRD, U. S. Commissioner of Fish and Fisheries, has recently received from the Department of Fish-culture of the Lower Seine, France, a gold medal as an acknowledgment for some valuable sendings of fish ova. The medal was designed by Oudine. On the obverse is represented a female head bonnet with a chaplet of cereals. Legend: "Republique Française." On the reverse is inscribed "M. Spencer F. Baird, Commissioner of Fish and Fisheries," and the legend "Departement de la Seine Inferieure. La Commission de Pisciculture, 30 Novembre, 1885." The medal is about the size of a double eagle. It will be placed on exhibition in the north hall of the National Museum.

THE NEW YORK FISH COMMISSION.—The last Legislature refused to pass the bill creating the office of Chief of the Game Protectors, which was designed mainly to relieve Commissioner R. U. Sherman, the Secretary of the Board, from the burden of looking after the protectors and doing the drudgery of the Fish Commission, which had somehow fallen upon him. In consequence of the failure of this bill, which Gen. Sherman hoped would remove a load of thankless labor by him gratuitously performed to the shoulders of a paid official, the Commissioners of Fisheries at their last meeting authorized Mr. Sherman to employ a secretary to attend to all the work which falls to such an officer. He named Mr. H. H. Thompson, of Brooklyn, a gentleman well known in angling circles and one who is every way qualified for the place by both knowledge and disposition. The other members of the Board have endorsed the nomination, and we hope that Mr. Thompson will find it convenient to accept the duties.

EVERY pair of Allen's bow-facing oars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3810.

HORNELLVILLE DOG SHOW.

Editor Forest and Stream:

We have been solicited to give a bench show of dogs in connection with our exposition to be held Sept. 7 to 10. To ascertain definitely whether such a show would be acceptable to the leading dog fanciers of the country or not we addressed personal letters to nearly all of them. Their replies and promises to exhibit have led our board of directors to believe that such a show will be not only acceptable to the breeders, but a grand success for all interested. We shall issue a liberal premium list at once which may be had by addressing

C. W. ROBINSON, Secretary.

We claim the dates Sept. 8, 9, 10 for our dog show to be held here in conjunction with the Farmers' Club fair. Our club is a regularly incorporated institution under the New York State laws, and all premiums will be paid. We will have good classes, good judges, good premiums, good attendants, and exhibitors will not have to run the show, but it will be run for them. J. ORIS FELLOWS, Supt. Dog Show.

HORNELLVILLE, N. Y., June 8.

DOG SHOW NOTES.

AS we were busy taking notes along came an individual whose jerky gait and unhappy expression of countenance plainly betokened that something was wrong, in his estimation at least. Halting in front of us he surly demanded: "Which of these dogs won the prize?" Before we could answer him, a young fellow, who appeared to grasp the situation, pointed out as the winner one of the worst specimens in the class and warmly praised it for the many good qualities it possessed, scarcely looking at the animal. Our disgruntled friend exclaimed, "That is the worst specimen in the show by all odds." We then pointed at the winner, when he gave a glance and caustically remarked, "That brute! Why he is a great deal worse than the other, only look at him." Just then a well known fancier passed by, led by a wild-eyed exhibitor who yanked a dog off his bench, and placing him in front of the winner's stall, struck an attitude, the very personification of supreme contempt, and in a withering tone demanded to know if such an outrage was ever known. The fancier glanced at the dog, and in a tone indicative of surprise, said: "Why, your dog is the biggest." "Yes," said the owner, with an impatient gesture, "but the judge didn't see it." "And," continued the fancier, "has the longest tail." "I know it," said the owner, violently swinging his arms, "but why didn't the judge see it?" Stopping down the fancier examined his feet, then looking up with wide open eyes exclaimed, "Why he has got the biggest feet." This capped the climax. Wildly gesticulating and stamping his feet, the irate owner burst out, "I knew it all the time, but the blankety blanked judge never looked at his feet."

MEETING OF THE AMERICAN KENNEL CLUB.

THE adjourned annual meeting of the American Kennel Club was held at the Hoffman House on June 10. There were present Messrs. J. O. Donner, of the Westminster Kennel Club; C. J. Peshall, New Jersey; G. Edward Osborn, New Haven, and following gentlemen holding proxies: A. P. Vredenburg, Philadelphia; A. C. Wilmerding, Cleveland; A. E. Rendle, Hartford, and J. O. Donner, Pittsburgh. Mr. Donner was called to the chair. The regular order of business was gone through and the following officers elected for the ensuing year: President, Mr. Elliot Smith, Westminster Kennel Club, re-elected; First Vice-President, Mr. G. Edward Osborn, New Haven Kennel Club; Second Vice-President, Mr. W. H. Child, Philadelphia Kennel Club; Secretary, Mr. A. P. Vredenburg, New Jersey Kennel Club, re-elected. Upon the proposed amendment to the constitution being adopted, making the office of secretary and treasurer one, Mr. Vredenburg had those dual duties thrust upon him. All the old committees are to hold over.

At the meeting on May 6 Mr. Peshall gave notice that he would offer a resolution at the annual meeting to the effect that no member of a club should officiate as judge at a bench show given by his own club. Mr. Peshall duly offered this resolution, but after a lengthy and general discussion of the subject, he withdrew it.

The committee on credentials reported favorably on the application for admission of the Rhode Island Kennel Club.

The Chicago special prize matter again came up before the club, but only in the way of the committee asking for more time.

Mr. C. J. Peshall was appointed a committee of one to draw up a code of procedure to govern all cases of appeal that may be brought before the club in the future.

A protest was made by the Brooklyn Kennels against the awards in the Miscellaneous classes at the late New York show, on the grounds that the winners were not of recognized breeds. On motion it was referred to the Westminster Kennel Club.

The secretary was instructed to communicate with the two dog registers published in this country with the view of securing control of them in the interest of the A. K. C.

The question as to whether champion light-weight dogs should go into open or champion heavy-weight classes was generally discussed and finally laid over until the next meeting for further consideration.

The committee appointed to investigate as to the wins of which clubs giving shows prior to the establishment of the A. K. C. should be recognized by the club, reported progress. The meeting was adjourned, subject to the call of the President.

THE THREE THOUSAND EIGHT HUNDRED AND TEN PEDIGREE REGISTERS in the American Kennel Register include interesting, incalculable, inexhaustible and invaluable information indispensable in intelligent in (or out) breeding.

Morgan. Orange tawny, white markings, rough-coated St. Bernard dog whelped March, 1886, by Hermit (A.K.R. 23) out of Nun (A.K.R. 23), by Chequasset Kennels, Lancaster, Mass., to D. H. Patterson, Cleveland, O.

Tenor. Pug dog, whelped December, 1885, by Young Toby (A.K.R. 473) out of Tantrums (A.K.R. 472), by Chequasset Kennels, Lancaster, Mass., to Miss M. G. Kelsey, Clinton, N. Y.

Meinrad. Orange tawny, perfect white markings, rough-coated St. Bernard dog, whelped March, 1886, by Hermit (A.K.R. 23) out of Nun (A.K.R. 24), by Chequasset Kennels, Lancaster, Mass., to A. Smiley, Pittsburg, Pa.

Waverly. Black and fawn collie bitch, whelped Aug. 12, 1883 (A.K.R. 895), by Lothian Kennels, Stepmey, Conn., to W. R. Rathbun, Denver, Col.

Janish. White, with brindle markings, bull bitch, whelped Nov. 25, 1885, by Boz (A.K.R. 445) out of Bellona (A.K.R. 1730), by R. & W. Livingston, New York, to Empire State Kennels, Savannah, Ga.

Miss Blaney. Red Irish setter bitch, whelped Jan. 1, 1886, by Glencho out of Fanchon (A.K.R. 1844), by Alex. Kirkland, Tarrytown Heights, N. Y., to Burbank Brothers, same place.

Ben Deray. Black and tan collie dog, whelped Sept. 18, 1885 (A.K.R. 3499), by Tower Grove Collie Kennels, St. Louis, Mo., to Francis Teran, Fort Scott, Kan.

Stephon-Beauty IV. whelp. Sable collie dog, whelped March 19, 1886, by Tower Grove Collie Kennels, St. Louis, Mo., to C. A. Cunningham, same place.

DEATHS.

Governor. Black, tan and white collie dog (A.K.R. 2938), owned by Progressive Kennels, Flatbush, L. I., June 1.

Sensation's Lad. Lemon and white pointer dog (A.K.R. 928), owned by A. P. Vredenburg, Bergen Point, N. J., May 25; killed by cars.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEWARK TOURNAMENT.

THE 44th annual festival of the Newark Shooting Society was a great success at the shooting park on South Orange avenue during last week. Monday, Tuesday and Wednesday were the shooting days, and except for a tricky wind on the afternoon of the last day, the weather was satisfactory. There was a noticeable gathering of marksmen, a half dozen States were represented and the competition between the muzzle and breechloaders was very brisk indeed. All the shooting was at 200yds, and included the ring and man target, the bulls-eye target and a team match with a half dozen skillful teams in close fight.

The leading match was upon the ring target, shot under the following conditions: Open to all comers, Ring target, possible 75 on 3 shots. Prizes: 1st \$50, 2d \$40, 3d \$30, 4th \$25, 5th \$20, 6th \$18, 7th \$16, 8th \$15, 9th \$14, 10th \$13, 11th \$12, 12th \$11, 13th \$10, 14th \$10, 15th \$9, 16th \$9, 17th \$8, 18th \$8, 19th \$8, 20th \$6, 21st \$5, 22d \$5, 23d \$4, 24th \$4, 25th \$3, 26th \$3, 27th \$3, 28th \$3, 29th \$3, 30th \$3. Premium for best 3 tickets \$10, second best \$7, third best \$5. Each shooter may obtain as many tickets as he pleases, but can obtain but one prize and one premium. The score stood:

Wm Hayes.....	71	69	209	J P Norris.....	66	63	62	191
C Zimmermann.....	70	69	208	Hans.....	64	64	63	191
J Copperrsmith.....	71	69	208	G Schack.....	63	62	61	189
W M Farrow.....	72	67	209	G Schilling.....	64	62	60	186
G Joiner.....	73	67	209	V Stembach.....	68	60		
A Begerow.....	73	66	209	D Beyer.....	68	63		
V. H. Hurler.....	68	67	202	B Zettler.....	68	63		
M Dorrier.....	69	66	201	G Weigman.....	71	66		
H Blatter.....	68	67	205	A Seitz.....	66	62		
T Miller.....	69	66	205	Tayntor.....	65	62		
L T Lyon.....	67	67	200	Vogel.....	67	60		
E Flack.....	68	66	64	C Rein.....	71			
E Holzman.....	66	66	137	J H Brown.....	69			
O B Hull.....	69	65	137	C Gensch.....	64			
P Delahanty.....	67	65	136	A Lober.....	60			
J A Huggins.....	66	64	194	C J Zettler.....	65			
J Schneider.....	65	65	192	C W Karcher.....	65			
Hawks.....	64	64	192	G Froehche.....	61			
Hougrhausen.....	64	64	191	S Pazzini.....	61			

It will be seen from the score that J. Joiner and Begerow were tie for the leading place, with 73 in a possible 75. Farrow next with 72, then Hayes and Copperrsmith, Weigman and Rein with 71 each, followed by Zimmerman with 71, and so on down the list.

On the man target the competition was very close indeed, and the shots made were in many cases almost dead in line. The match was open to all comers, with prizes as follows: 1st \$40, 2d \$30, 3d \$25, 4th \$20, 5th \$18, 6th \$16, 7th \$14, 8th \$12, 9th \$10, 10th \$10, 11th \$9, 12th \$9, 13th \$8, 14th \$8, 15th \$8, 16th \$6, 17th \$5, 18th \$5, 19th \$4, 20th \$4, 21st \$3, 22d \$3, 23d \$2, 24th \$2, 25th \$2. Each shooter may purchase as many tickets as he pleases, but can obtain but one prize. The score stood:

L. Flack 57.	
M. Hayes and C. Zimmermann 56 each.	
W. M. Farrow, A. Lober, G. Joiner and B. Walther 55 each.	
V. Steinbach, F. Wiss and A. Begerow 51 each.	
D. Miller, J. A. Huggins, M. Dorrier, E. Holzman and G. Schilling 53 each.	
O. B. Hull, Hawks and Vogel 52 each.	
P. Miser and Honrighausen 51 each.	
G. Weigman, J. Schneider, C. J. Zettler, G. H. Freche and H. Blatter 50 each.	

At the bulls-eye target with its 4in. circle only counting, there were hundreds of shots fired. For the prizes of \$12, \$8, \$5, \$3 and \$2 in order for the greatest number of bulls made during the meeting, the winners were: Hay's 93, Huggins 82, Copperrsmith 80, Lober 30 and Schilling with 18 bulls respectively. There was much interest during the measuring up of the shots and the rule of the measurer was closely watched. The scale is divided into 40th of an inch, and the shot as near below the number as possible. In this scale, S. Dorrier's leading bulls-eye, which brought him 6th prize, was 26-400 of an inch from center of bull to center of shot, or about 1-16 of an inch. The conditions of the match made it open to all comers. The bulls-eye is 4in. in diameter, placed in a black of 12in., with the following prizes: 1st \$40, 2d \$30, 3d \$25, 4th \$20, 5th \$18, 6th \$16, 7th \$14, 8th \$12, 9th \$10, 10th \$10, 11th \$9, 12th \$9, 13th \$8, 14th \$8, 15th \$8, 16th \$6, 17th \$5, 18th \$5, 19th \$4, 20th \$4, 21st \$3, 22d \$3, 23d \$2, 24th \$2, 25th \$2. Each shooter may purchase as many tickets as he pleases, but can obtain but one prize. The score stood:

David Miller.....	177	70	112	367
J A Huggins.....	129	110	135	375
C J Zettler.....	129	107	147	383
A Vanderhorst.....	63	155		218
Dorrier 28, Gentzsch 98, F. Watts 106, Blatter 113, Karcher 116, Holzman 116, Copperrsmith 119, Farrow 131, Flack 137, J. Schneider 138, A. Begerow 145, J. D. Deleahanty 151, Lober 151, Wm. Klein 150, Ph. Klein 170, Brown 190, B. Zettler 212, Lust 210, Joiner 222, S. Lyon 235, Schack 244, Schilling 201.				

The team match was shot on the afternoon of Tuesday and was most closely fought. It was upon the ring target, making a possible score of 250 per man, under the following conditions: Open to all regularly organized clubs, four men to a team, 10 shots per man, on ring target. Each man must have been a member of the club he shoots with at least three months previous to date of match. Each club may enter as many teams as they may desire, but no shooter can shoot in more than one team. Each team will be awarded a gold medal, to be presented to the member making the highest score. After deducting 10 per cent. of receipts and cost of medals, the balance will be divided *pro rata* according to the number of teams entered.

The scores in this match ran:

First Zettler Team.		Second Newark Team.	
M Dorrier.....	208	I Norris.....	201
C Zimmermann.....	191	J P Delahanty.....	191
A Lober.....	206	G Schack.....	199
W Farrow.....	205	G Weigman.....	199
C G Zettler.....	193	H Blatter.....	196

First Newark Team.

J Copperrsmith.....	209	E Holzman.....	210
A Begerow.....	181	J Schneider.....	193
H Von der Horst.....	160	V Steinbach.....	191
F Waters.....	194	C Ochs.....	183
W Hayes.....	206	B Walther.....	187

Second Zettler Team.

G Joiner.....	206	C W Karcher.....	194
J H Brown.....	201	H Albig.....	193
L Flack.....	189	I Luft.....	179
B Zettler.....	190	H Guenther.....	167
D Miller.....	202	P Meter.....	187

The whole meeting was admirably conducted. The officers being: Shooting Masters, A. Begerow, Wm. Hayes, Shooting Committee, F. Haefel, F. Wiss, G. L. Freche, President, Gottfried Krueger; Secretary, L. Mussehl. Not a few of the marksmen will be in attendance at the Washington shoot of this week, while at the big Springfield shoot in July, the majority of those whose scores are given above may be expected again in lively competition.

HAVERHILL, MASS., RIFLE CLUB, June 12.—Practice match, standard target:

WILLIAMSTON, Del., June 9.—The regular weekly public rifle matches were held under the management of the Wilmington Rifle Club at Schuetzen Park to-day. First match, Creedmoor target, 200yds., off-hand, prizes by score classes:

C Heinel, Sr.....	5544	22	J Manz, Win.....	4444	20
R Miller, R S.....	4544	22	H A Heinel, Win.....	3444	20
J E Newman, R S.....	4444	21	I W Seeds, Win.....	4354	20
S J Newman, R S.....	4534	21	W A Bacon, R S.....	4343	19
W F Seeds.....	4444	20	H Simpson, R S.....	4443	19
C Heinel, Sr.....	4444	20	H Simpson, R S.....	4443	19

Second Match.—Massachusetts target, 200yds., off-hand, prizes by highest scores:

Charles Heinel, Sr.....	9	10	10	10	11	11	1
-------------------------	---	----	----	----	----	----	---

sportsmen, and a member of the Chicago Shooting Club. In winning the prize he killed 20 out of a possible 30 birds at 35 yds. rise. Twenty-eight of the birds fell in consecutive order. There were 15 ties on 14 birds. On the shoot-off at 15 birds Ab Price killed 14 straight, defeating his nearest competitor, McFarland. Price received a breech-loading shotgun and \$75 in cash. There were 19 ties on 13 birds. E. M. Hammond killed his 15 birds in order and defeated William Stahl. He took \$50 in cash and a hunting suit. There were also 19 ties on 12 birds. On the tenth round in the 15 bird shoot-off Pond, Whiting and Weber had light records, and decided to divide fourth money, \$10. This ended the shoot.

Shoot No. 3, a club championship contest, was then commenced. The teams were composed of four members, each of the same club and belonging to the State association, and the shoot was at 10 live birds each man, at 25 yds. rise. Owing to the lateness of the hour the shoot was only partially carried out. The first prize will be a \$100 diamond badge given by the association, and four diamond badges, one to go to each member of the winning team. The score will be given with tomorrow's record.

While the team shoot was in progress the open tournament was commenced. It opened with a contest at ten Peoria blackbirds at 18 yds. rise, free for all. The score stood as follows: Lynde 3, Thursty 7, Lamphire 9, Erb 4, Coppins 8, Cotton 7, Smith 7, Beck 2, Pond 5, Ashley 8, Lowe 6, Still 6, Hayward 6, May 8, Alexander 4, Aiken 5, Sheldon 7, McDuff 8, Woodson 7, Edwards 8, Godfrey 9, Hamburg 7, Wells 6, C. W. Smith 8, Brewer 6, Phillips 1, Shaft 6, B. White 7, Chamberlain 9, Sherman 8, Cook 8, Bellamy 7, Strawn 4, Brown 8, Hill 7, Carter 3, Gillespie 6, Flynn 8, Jones 2 (withdrew), Busnell 3, Caboon 9, J. Brewer 7, Wadsworth 8, Turtie 5, Lewis 5, Briggs 4, Brady 4, Hollister 7, Roneh 7, Lane 8, Henninger 7, Taylor 7, P. Stone 3, W. H. Erb 5, W. C. Smith 8, Farnestock 8, Black 6, Grimes 5, Barnard 6, George Kleinman 7, Beck 7, Orvis 8, Hammond 5, Hamline 7, Franklin 8, Airey 3, Stahl 6, Willard 10, Harbaugh 6, Kimball 8, Jones 4, Berger 7, McCartney 8, Laffin 8, Booth 5, Loyd 6, Peterson 8, Brown 8, Fox 3, Phillips 8, Riley 9, Harris 5, Wilcox 7, Okerhauser 7, Dilg 4, C. W. Smith 8, S. J. Smith 8, As may be seen by the score there were ninety three entries. C. E. Willard took first money, \$10.35. On the shoot-off for second money, \$69.75, J. R. Stice of Jacksonville, won and took the purse. He killed six straight birds. Edwards, Wadsworth, Kimball and Orvis divided third money, \$16.50.

A 6-birds weepstake shoot was then shot. There were 53 entries. Hill, Cook, McDuff and Baudle divided first money, \$18.30; Stice took second money, \$10.92, and third money—\$7.38—was not shot for on account of the lateness of the hour.

June 9.—The State shooting tournament was continued yesterday at Grand Crossing. Now that the open tournament has been commenced a number of faces of well known shooters about the country and some from distant States were noticed among the crack shots. The usual large attendance was present, and much interest is being manifested in the various events. The first event of the day, and probably the most interesting of the whole tournament, was the team shoot. The contest, which was close throughout, was at 10 live pigeons each man at 25 yds. rise. The following score resulted: South End Gun Club—John Palm 7, Geo. Christians 9, J. M. Hutchinson 9, M. J. Eich 9—31.

Decatur Gun Club—C. N. Powers 10, W. C. Smith 10, L. E. Brown 9, L. S. Carter 10—39.

Blue Island Gun Club—G. Hasburg 7, Dr. Brass 9, G. Boeber 7, G. Airy 9—32.

Calumet Gun Club—E. Seyfert 6, J. Thoenig 8, W. Kreuger 10, H. Beer 7—34.

Diana Gun Club—L. Hensler 8, A. Stafford 6, H. Ehlers 8, C. Burmeister 8—30.

Chicago Shooting Club—G. Kleinman 9, W. G. Payson 8, R. B. Organ 8, Abe Kleinman 10—35.

Naperville Gun Club—B. Sherman 10, F. Grimes 5, C. W. Sheldon 9, J. H. Ashley 10—34.

Makawba Gun Club—Charles Kern 8, J. Whiting 9, W. Muzzy 8, T. Wilmarth 9—34.

Auburn Gun Club—W. Goddard 8, J. Shoeling 4, H. Shirling 5, J. M. McCracken 4—31.

Chicago Gun Club—Percy Stone 8, C. H. Roach 5, A. M. Fox 8, E. M. Hammond 8—29.

Harold Gun Club—W. Hartman 8, Metcalf 6, C. W. Fairbanks 5, J. H. Taylor 6—25.

Evansston Gun Club—George Franklin 10, G. Beck 10, J. Smith 7, F. Dilg 9—36.

Havlock Gun Club—J. Auffrey 10, H. Ensch 7, R. J. Lewis 7, R. J. Farris 8—32.

Austin Gun Club—Trail 6, G. Davis 8, W. Cook 8, W. A. Henninger 5—27.

Audubon Gun Club (Chicago)—John Kleinman 10, W. W. Foss 9, C. E. Felton 8, H. F. Orvis 9—36.

Cumberland Gun Club—J. Gardner 9, Geo. Farmer 9, J. A. Snyder 8, W. W. McFarland 8—34.

Lake George Gun Club—J. Brady 9, Jaeger 8, J. F. Phillips 8, R. A. Turtie 10—35.

Geneseo Sporting Club—W. H. Harbaugh 8, T. Laffin 8, W. Stahl 9, B. Sands 10—36.

Forest-r Gun Club—Ed Price 10, G. C. Mosher 9, C. E. Willard 8, Abe Price 9—36.

Audubon Gun Club (Jacksonville)—Dr. Henry 10, C. E. Strawn 7, B. White 7, J. R. Stice 8—32.

Forest City Gun Club—J. N. Buker 8, S. J. Smith 9, G. W. Taylor 7, A. Hutchinson 10—34.

Illinois Valley Gun Club—F. F. Farnestock 8, R. E. Franklin 8, H. Connor 7, J. V. Brun 8—30.

The Decatur Gun Club, of Decatur, Ill., making the highest score—33 birds out of a possible 40—took the diamond badge and will be ranked as the champion team of the State during the coming year. For the second prize, \$65 in cash, there were four contesting clubs, the Evansston, Geneseo, Forester and Audubon. On the fourth shoot-off Audubon was shot out and the prize was divided by the remain ing teams. Teams from the Chicago Shooting Club and the Lake George Sportsmen's Association were out for the third prize, a double shot, breech-loading gun and \$25 in cash. On the shoot-off Lake George dropped out. For the fourth prize—a dozen rubberhead decoys and 2,000 paper shells—South End, Naperville, Makawba, Cumberland and Forest City were tied. Naperville did not show up and on the shoot-off Makawba and Cumberland divided.

Shoot No. 6 followed. It was a contest at 10 blue rock pigeons, 18 yds. rise. There were 31 entries. The score follows: Gillespie 10, Henninger 7, Ashley 8, McDuff 10, Sheldon 8, Wadsworth 8, Denning 6, Meaders 10, Bandle 10, Hill 7, Budd 9, Baker 8, Chamberlain 7, Brewer 7, Still 6, Alexander 7, Twichell 7, Riley 9, Cook 3, Fred Erb 5 (withdrew), Games 8, Sherman 5, Bower 7, Willard 8, Hayward 5, Orvis 6, Cotton 7, Franklin 5, Bellamy 4, Kimball 10, Carter 9, Henry 6. First money, \$76.50, was divided by Gillespie, McDuff, Meaders, Kimball and Teipel. Second money, \$45.90, was treated likewise by Bandle, Budd, Riley and Carter, while \$36.60, the third money, was taken care of by Ashley, Sheldon and Baker after three shoot-offs.

There were 54 entries for shoot No. 8, at 15 blackbirds, 9 singles and 3 pairs, open to all. The score was as follows, the first figure representing the total on singles and the latter on pairs: Bandle 8 4, Teipel 8 6, McDuff 9 5, F. Erb 8 6, Sheldon 8 5, McCartney 5 3, Maystone 4 7, Ashley 6 4, Chamberlain 7 5, Meaders 6 5, Stice 8 6, Willard 5 5, Budd 6 3, Hill 9 5, Farnestock 3 3, O'Leary 6 4, Cotton 6 5, Baker 4 5, Gillespie 9 3, Cummings 4 3, J. E. Riley 8 3, Kimball 7 5, White 8 4, Wadsworth 9 5, Denning 8 4, Carter 7 5, Davis 4 5, Bartholomae 4 3, Edwards 5 5, Sherman 6 3, Sheldon 8 3, Caboon 7 5, Wells 6 5, Barr 5 3, Hunter 4 5, Fuller 4 5, L. E. Brown 9 4, L. Van Vleck 6 1, B. Rock 9 5, Lamphire 12, Hayward 9 4, Stannard 9 4, Gaines 8 5, C. Wilcox 20, Shaft 6 2, Still 7 5, Cook 8 4, Smith 4 3, Lambert 5 1, Twichell 5 5, J. Wilcox 7 3, Riley 4 5, Stacy 7 3. Stice, Wadsworth, Rock, Teipel, McDuff, Hill and Fred Erb divided first money, \$70.20 without a shoot off. Hayward, Stannard, Gaines and Sheldon divided second money, \$52.65. Bandle, Gillespie and Carter took third money, \$35.10; and C. W. Sheldon and Andy Meaders divided fourth money, \$17.55, after a shoot-off.

Then commenced shoot No. 5, for a purse of \$1,000, divided as follows: \$400 to first, \$300 to second, \$200 to third, \$75 to fourth, and \$25 to fifth. The contest was at 12 live birds from five ground traps at 30 yds. rise. English rule to govern. The shoot was begun late late and score will be finished to-morrow.

June 10.—The most interesting and at times exciting shoot in the Illinois State tournament thus far was held to-day. Cheers were frequently heard when a favorite stepped to the score and killed his bird. There was the usual large attendance. The first shoot of the day was a contest at 10 blue rock pigeons at 18 yds. rise, \$5 entrance. There were 31 entries. The score at the close of the shoot stood as follows: Bandle 7, Teipel 8, Carter 9, McDuff 7, Sheldon 8, Wadsworth 7, Irwin 7, Meaders 7, Budd 8, Ashley 8, F. Erb 10, Thursty 9, Hill 9, Caboon 9, B. White 8, Hollister 7, Willard 8, Deming 9, Nathans 6, J. E. Reilly 8, B. Rock 6, Lamphire 7, Stice 10, C. W. Sheldon 10, Shaft 8, Nickerson 5, Badger 6, Gaines 7, Cotton 9, Eaton 8, Franklin 10, Twichell 6, Kimball 9, Gillespie 10. First money, \$75.75, was divided by Gillespie, Stice, Sheldon and Franklin without a shoot-off. Carter, Thursty, Hill, Caboon, Deming, Cotton and Kimball treated likewise second money, \$17.25. After a shoot-off, Budd and Bob White divided third money, \$13.50.

In the meantime, shoot No. 5 on the regular programme, commenced the day previous, was being held. This proved the great shoot of the tournament. The contest was for a purse of \$1,000, and in the main shot alone there were 972 pigeons shot at. The purse was divided as follows: \$400 to first, \$300 to second, \$200 to third,

\$75 to fourth and \$25 to fifth. English rules governed, allowing the use of both barrels. Guns of 12 or smaller gauge were allowed half a yard in the gauge. Others shot at 35 yds. The majority of the birds were well, and many a neat shot was made at a long distance with the new well, always evoking applause. The score stood as follows: Beck 12, J. Wilcox 12, Van Vleck 10, Harbaugh 8, A. Price 12, Felton 11, Carter 12, Starn 12, Stohl 22, McDuff 12, Hill 12, Brady 10, Woodring 12, Brewer 12, Gillespie 12, Wadsworth 11, Thursty 10, Bellamy 7, N. Row 11, Maystone 11, Godfrey 8, Hutchinson 11, Shepard 7, Ehlers 10, McCartney 12, C. Kern 8, Wilmarth 12, Chamberlain 9, Williams 9, B. E. Sheldon 9, B. Rock 12, Orvis 12, Draco 10, Wilcox 9, Abe Kleinman 12, Jaeger 8, Irwin 11, W. Baker 11, Sauds 10, Farmer 10, Elch 10, G. Kleinman 12, Fox 10, Meaders 9, Deming 10, Ashley 9, Nickerson 10, Budd 10, Teipel 10, J. E. Reilly 12, Twichell 8, Willard 7, Hollister 7, Whiting 10, W. Foss 10, Bandle 10, Fred Erb 12, Franklin 11, B. White 10, Hammond 4 (withdrew), Hasdell 9, Badger 8, Shaft 10, J. J. Smith 10, R. E. Franklin 10, W. C. Smith 12, John Kleinman 11, Turtie 11, Dilg 10, Reed 9, Barr 10, Christians 11, Stice 11, J. L. Williams 9, C. Beck 11, Laffin 12, Tucker 9, Muzzy 10, Elliott 10, Cotton 10, Henninger 10. There were 82 entries, and of these 20 made straight scores—Beck, Wilcox, A. Price, Carter, Starn, Stohl, McDuff, Hill, J. G. Riely, Woodring, Brewer, Gillespie, McCartney, G. Kleinman, A. Kleinman, Wilmarth, Orvis, W. C. Smith, Fred Erb and Laffo. Each of the 20 men pulled out his entrance money, \$15, leaving \$30 to be shot for. By the time the sixth shoot-off had been completed all had been shot out except Starn, McDuff, Hill, Reilly, G. Kleinman and Orvis. These divided the \$10. Starn, one of the 6 who made a straight score, was the head, is a cripple, both legs having been cut off in an accident some years ago. There were 12 shooters tied for second money. After a shoot-off the amount was divided by Maystone, Baker, J. Kleinman, Turtie, and Christians. Ties on 10, 9 and 8 were postponed until to-morrow.

June 11.—The first event to-day was the shoot-off to decide third, fourth and fifth moneys in shoot No. 5. There were 27 shooters tied on 10 for third money, \$300. Before the shoot-off each drew out \$5 and shot for the remaining \$65. Rock, White, Thursty and Dilg divided the money, each winning 15 yds. for fourth money, \$75. Each divided the money, each winning 15 yds. for fourth money, \$75. Each took out \$5, and on the shoot-off Ashley and Sheldon took the \$3.

Shoot No. 7 followed, at 10 live birds from 5 ground traps 30 yds. rise, English rules, allowing the use of both barrels. There were 57 entries at \$10 each. As first money amounted to about \$175, the shoot was watched with interest. The score resulted as follows: Farmer 8, Walker 9, Orvis 10, Wilcox 5, Draco 6, Starn 8, J. Williams 9, Riley 9, Thursty 7, Stice 9, G. Kleinman 9, Hill 8, E. B. 10, G. Beck 8, Brewer 2, McDuff 9, B. Badger 9, Woodring 10, Wadsworth 10, Maystone 7, Harbaugh 9, Carter 10, J. C. Carter 9, A. Kleinman 9, Badger 10, Turtie 8, Budd 9, Peterson 4, Gillespie 7, Sheldon 10, Kern 8, Twichell 10, Ashley 10, Deming 10, Stohl 6, Colcord 6, Bandle 8, A. Price 9, Elliott 9, Rock 9, Whiting 9, Christians 9, Elch 9, Reed 8, J. Kleinman 7, Baker 10, White 10, W. W. Foss 7, Bellamy 7, Chamberlain 9, N. Row 2, C. Strawn 10, E. Williams 8, Van Vleck 9, Shaft 6, Franklin 7, Ehlers 1 (withdrew). For first money there were 14 straight scores. They were made by Orvis, Brewer, Woodring, Wadsworth, Carter, Badger, Sheldon, Twichell, Deming, Baker, White, Turtie, Laffin and F. Erb. On the third shoot-off Sheldon, Twichell, Baker, Strawn and Erb remained, and on the next shoot off Sheldon was dropped from the winning ranks. Those remaining divided the \$174. There were 17 ties on 9 birds, and after 9 exciting rounds Stice, G. Kleinman, McCartney, Rock, Elch and Van Vleck divided second money, \$130.50. The ties on 8 and 7 were not shot off. Third money amounts to \$87, and fourth to \$43.50.

June 12.—To-day finished the tournament, the crowd was small, most of the sportsmen having returned to their homes. The first shoot was the tie for third and fourth money in shoot No. 7, which was not finished yesterday. For third money eleven tied. After one round on the tie shoot all dropped out except Farmer, Teipel, Price, and E. Williams, who divided \$87. Eight were tied for fourth money, \$13.50, and this was divided between Maystone, Gillespie and Foss.

Shoot No. 9 was at three pairs of live birds, twenty-one yards rise, from five ground traps; \$5 entrance. There were forty-nine entries, and the tie for third money was not finished. The finish of the first round of the shoot left Starn, Budd, Bandle and Stice, who divided first money, \$8.25. Turtie, Twichell, Teipel, Hill and Sheldon shot out nine others on the tie shoot for second money, \$49.35, and divided. Woodring, Cotton, White and Farmer divided \$32.90, third money.

In shoot No. 10, at seven live birds, there were fifty-four entries. Sixteen tied for first money, \$87.75, which was divided between Rock, Woodring, McDuff, Carter, Sheldon and Thursty, after all others were shot out. On the tie for second money, \$62.65, and after a third, \$33.10, A. B. Wadsworth and Abe Kleinman tied for the Muzzy average medal, each having killed forty-seven out of possible fifty birds. They will shoot off the tie at a future date.

TRENTON, N. J., June 12.—Trenton Gun Club, June 10, Ligowsky clay pigeon 5 traps, 5 yds. apart, all at highest tension, 18 yds. rise. The following score: C. H. Allen.....11011010100110110111-15
J. D. Evans.....01110101111111111111-21

H. Sydnay.....0111111100100101010110-12
C. Emmons.....10111111010100101111-13

Next shoot July 4.

THE RAUB CLAY DISKS.—Mr. Joseph L. Raub, the inventor of the cardboard disks and the magazine target trap for their use, has carried out his idea a step further, and now offers a target which will break, and so meet the demands of that large class of shooters who like to "see the feathers" fly when they have made a hit. The new target is made of straw, and may be put in the trap now sent out with the straw board markers.

TALLAHASSEE, Fla.—The fifth inter-State tournament, under the auspices of the National Gun Association, will be held at Tallahassee, Fla., June 21, 22 and 23, 1886. There will be team, individual and weepstake shooting at live pigeons, live martins, clay-pigeons, globe flights, etc. Prizes aggregating over \$2,500 in cash, also a diamond badge and two gold medals. Some 2,000 live pigeons have been secured, and a lively time is anticipated. Arrangements have been made for special railroad and hotel rates.—H. A. KLINE.

TOPSHAM, Me., May 31.—Riverside Club shoot, 30 pigeons, blue rocks and bats, 18 yds. rise:

Alexander.....1101111011111111111110-27
Purinton.....0111111111111111111111-28

Ties of 15 at four, Utter 2, Harris 2. Second tie, Utter 3, Harris 1.

WELLINGTON, Mass., June 12.—There was a large attendance of gunners and a good many ladies at the regular weekly shoot of the Wellington Gun Club to-day. The event of the day was the final contest for handsome hand-painted vase presented to the club for competition. It was won by Stanton, who broke 78 birds out of 80.

SARATOGA, June 10.—The gun club held a meeting to-day, but on account of the rain only five members were present. The score:

Wm. H. Boakes.....1 1 1 1 1 1 1 1 1 1-10
H. M. Livingston, Jr.....1 1 1 1 1 1 1 1 1 1-10
Wm. B. Gage.....0 0 0 0 0 0 0 0 0 0-0

BROCKTON, June 12.—On the grounds of the Brockton Shooting Club to-day the first prize winners were: 1, five bats; Wilbur and Allen; 2, five clay pigeons; Allen and Bartlett; 3, three pair clay pigeons; Bartlett; 4, five Knoxville blackbirds; Edward and L. Packard; 5, five bats; Wilbur; 6, three pair clay pigeons; Wilbur and L. Packard; 7, seven clay-pigeons; Wilbur; 8, seven bats; Tirrell.

BROOKLYN, June 9.—Good attendance was noticeable on the half-mile track to-day at the start of the third regular shoot of the Fountain Gun Club on their new grounds. Out of 97 birds shot at only 28 got away, the shooters being credited with 69 kills. The score is as follows: Class A.—Dr. Wynn, 29 yds.; 7; C. W. Jones, 27 yds.; 6; L. Duryea, 29 yds.; 6. Class B.—Dr. Leveridge, 24 yds.; 6; H. McLaughlin, 24 yds.; 5; T. Linington, 25 yds.; 5; C. Chappell, 25 yds.; 4; C. Kendall, 24 yds.; 3. Class C.—W. J. Stewart, 24 yds.; 6; Dr. Andrews, 24 yds.; 6; Dr. Monroe, 24 yds.; 5; G. L. Hayes, 24 yds.; 3; J. A. Lake, 24 yds.; 3. Ties—Stewart 3, Andrews 1.

NEW ORLEANS, June 6.—To-day the Crescent and Pelican Gun clubs met at the Lower City Park to shoot a match at 15 double bats. The following is the score:

Crescent Team.....15
Pelican Team.....19
R. W. Colomb.....17
D. Dugazon.....17
R. E. Roman.....21
E. Dickson.....22
Paul Landry.....10
G. Ellis.....16
Eug. Balade.....15
G. Surgenon.....13
D. F. Harrison.....24-102
E. S. DeBlanc.....15-102

The shoot off resulted in favor of the Crescent Gun Club by a majority of 4 birds.

NEW YORK STATE SHOOT.—Rochester, N. Y., June 11.—The annual State shoot has been set down to take place June 21, 22, 23, 24 and 25. Artificial targets will be shot at in all shoots but one, such, at least, is the announced intention of the managers.

FITCHBURG, Mass., June 10.—At the regular meet to-day at the River street range of the Fitchburg Rifle and Gun Club, the following were some of the totals made out of a possible 30 clay-pigeons: A. W. Baker, Jr., 15, W. F. Fox 15, J. I. Converse 10, W. A. Simonds 8, J. F. Lord 6.

WINCHENDON, Mass., June 10.—To-day members of the Winchendon Gun Club went out to their range for their regular meet. Out of a possible 20 clay-pigeons the following totals were made: J. Sutherland, Jr., 18, P. F. Davis 12, A. H. Felch 11, H. Lawrence 10, E. M. Whitney 10, S. F. Hopgood 9, F. E. Mann 8, F. M. Brown 7, A. Laurence 6.

WORCESTER, Mass., June 11.—The Worcester Sportsmen's Club held a two days' tournament this week at Coal Mine Brook Range. On the first day there was a contest for a special prize, a Spencer repeating shotgun. In this contest the targets were 5 clay on regular angles, 4 bats 2 angles and 5 blackbirds. There were 41 entries in this event. H. W. Eager and C. B. Holden both scored full marks. O. R. Dicke, T. G. Stanton, E. Welch, W. L. Davis, W. Dean, E. T. Smith, G. Tishury, A. R. Bowdish, 15 each; M. D. Gilman, F. Eames, C. H. Steery, H. Jourdan, E. W. Mmer, J. Beaudry and E. N. Cummings, each 14; C. Doane, G. Sampson, L. G. White, C. A. Parker, C. M. Stark and L. G. Adams, each 13; N. Folsom, R. P. Riter, G. J. Rugz, J. Nichols and H. Gardner, each 12; E. W. Tinker, Alha Houghton, H. W. Webster and L. R. Hudson, each 11; W. S. Perry, J. B. Tougan, A. B. Franklin, E. Whitaker and Frank Stone, each 10; E. Tolson, M. O. Whittier, G. P. Robinson and G. F. Robinson, each 9. Messrs. H. W. Eager, of Marlborough, and C. B. Holden, of this city, having scored the possible 16, shot off the tie, and Mr. Holden won the gun by breaking 16 straight without missing any. Mr. Eager broke 10 and dropped 3 and then withdrew.

On the second day of the tournament the special contest was for a Forehand and Wadsworth gun. The targets were 15 single clay pigeons, and W. Davis, E. W. Miner and J. B. Tougas tied at 14. H. W. Eager, O. R. Dicke, E. Whitaker, A. R. Bowdish and G. Howe each scored 13. W. S. Perry, T. G. Stanton, G. J. Rugz, E. Welch, G. E. Powers and J. Beaudry each scored 12. G. Graham, F. Eames, C. M. Stark, H. W. Webster, R. P. Rider and E. T. Smith each scored 11. C. B. Holden and E. W. Tinker scored 10 each. C. Doane, M. D. Gilman and L. G. White 9 each and A. B. Franklin 8, with a few smaller scores. In shooting of the tie Davis broke 4 out of 5, Miner 3 and Tougas 2, Mr. Davis winning the gun.

SAN FRANCISCO, June 6.—This morning a number of sportsmen met at the old Lava Beds to try the Cincinnati clay-pigeons. After number of trial shots a sweepstakes was started at five single birds, 15 yds. rise. Four men shot, and Messrs. Frost, Hill and Langton, each 10. A 10 bird sweepstakes was next. Frost honors with four breaks each. A 10 bird sweepstakes was next. Frost honors coming out first with 7, while Langton and Eyre tied for second place with the miserable score of three. Below are the scores:

Langton.....000001110-3 Crandall.....10000000-1
Frost.....000111111-7 Casey.....00101000-2
My

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc. of the clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neide, Schuylerville, N. Y. Candidates for membership must forward their names, accompanied by the recommendation of an active member of the A. C. A., together with the sum of \$3 for initiation fee and first year's dues, to the secretary, who will present the names to the commodore. Money should be sent by registered letter, or money order on Saratoga Springs, N. Y.

FIXTURES.

Mohican Races every Thursday through the season.
 June 25—N. Y. C. C., 2d Race Commodore's Trophy.
 July 2—N. Y. C. C., Trials International Races.
 July 8—W. A. C. A. Meet, Lake Erie.
 July 10—Brooklyn C. C., Paddling Race.
 July 10—N. Y. C. C., 3d Race Commodore's Trophy.
 July 24—N. Y. C. C., 4th Race Commodore's Trophy.
 Aug. 7—N. Y. C. C., 5th Race Commodore's Trophy.
 Aug. 7—Brooklyn C. C., Paddling Race.
 Aug. 21—W. A. C. A. Meet, Grindstone Island.
 Sept. 4—Brooklyn C. C., Paddling Race.
 Sept. 4—N. Y. C. C., International Cup Races.
 Sept. 11—N. Y. C. C., 6th Race Commodore's Trophy.
 Sept. 18—Brooklyn C. C., Sailing Races.
 Sept. 25—Brooklyn C. C., Challenge Cup.
 Oct. 25—N. Y. C. C., 7th Race Commodore's Trophy.
 Oct. 25—N. Y. C. C., Fall Regatta.

MOHICAN C. C. RACES.

THURSDAY, June 3.—Omitted, as many canoes were absent on cruise.

Thursday, June 10.—Seventy-five foot limit, silver badge race. Entries, seniors: Vesper, R. W. Gibson; Marion B., R. S. Oliver; Thetis, P. M. Wackerhagen; Annie O., E. L. Thomas; Juniors: Mermaid, L. J. Prince; Arno, H. C. Cushman; Tarantula, Wm. Wheeler. Canoes reported at starting buoy promptly at 5:30 P. M., but the wind was so light that the race was postponed until next day by the regatta committee. Same entries next day with exception of Vesper, her Captain having been unexpectedly called out of town. Moderate wind from N.W., with flaws and streaks.

The canoes got away in a bunch at 5:45 P. M., flying start. Thetis and Annie O. in lead, Mermaid, Arno and Marion B. in order named. Tarantula broke her main ballast and fell out. Marion B. soon took second place, pushing the Thetis closely for first mile. The latter getting a good flow increased her lead and rounded 1½-mile buoy well ahead, Marion B. second, closely followed by Annie O., then Arno and Mermaid in order named.

The homestretch was a beat to windward with a long and short leg. At the end of first leg Marion B. had made some points to windward of Thetis and bid fair to give her a good taste, but going about her steering gear slipped off leaving her rudder useless. The Annie O. meanwhile sailing very close and with a good slant of wind, managed to avoid going about and took second place.

The captain of the Marion B. with feelings too deep for words took out his paddle and finished the race, steering with it, although it was ticklish business sitting on deck when the flaws came. The finish was made in 40 minutes by Thetis with good lead, Annie O. second, Marion B. third, Arno fourth, Mermaid fifth. The Thetis takes the prize for the best sail in the regatta, and the Arno wins the junior pennant for the same period. Thursday next the June champion race.

ROBERT SHAW OLIVER, Captain M. C. C.

NEW YORK C. C. ANNUAL REGATTA.

THE open roof balcony of the yacht club house at Tompkinsville. S. I. was crowded on Saturday with the members and friends of the New York C. C. gathered to witness the annual spring regatta of the club. The floating club house is now moored beside the yacht club house in an excellent location, and the courses were arranged so as to be in view from both places. The first race, for the Commodore's trophy as well as the regular club prizes, was called at 3 P. M., the course as laid out being around a large ship at anchor off Clifton, then up and around the schooner Danitless, moored off the club house and home, making a beat down against the tide, and a short leg across wind and tide. A good breeze was blowing in from the Narrows, but most of the canoes carried full sail. Just prior to the start the first race was taken in tow by a tug and headed for New York, so the course was changed, a barkentine near by being taken as the first mark. The starters were: Nethia, Com. C. K. Munroe; Sea Bee, C. B. Vaux; Tramp, C. J. Stevens; Mime, E. D. Delavan, Jr.; Siren, R. B. Burchard; Sea Urchin, B. S. Nadal.

Sea Bee went off with a lead at the start, with Tramp and Nethia in chase, the others losing time in getting away. Sea Bee worked short tacks well in shore and was soon far ahead, while the other two sailed very evenly. Off Clifton Tramp missed the mark and returned without completing the course. Sea Bee came down the wind very fast, but failed to turn the last mark, and Nethia took first prize in her maiden race.

The next race was for small canoes, paddling, the starters being Messrs. Vaux, Drake, Paine and Seymour. Mr. Paine paddled a Berthon folding canoe, with mahogany deck, a very compact and handsome boat. Mr. Vaux won, with Mr. Drake second.

In the paddling race for larger canoes, the entries were: Lasata, Mr. G. Foster; Nethia, C. K. Munroe. Lasata won after a close contest.

A sailing race over a short course, three rounds, followed, the entries being: Sea Bee, C. B. Vaux; Tramp, C. J. Stevens; Nethia, C. K. Munroe; Mime, E. D. Delavan, Jr.; Sea Urchin, B. S. Nadal; Siren, R. B. Burchard. Sea Bee led the race and won easily, with Tramp second.

The hand-paddling race proved very amusing, the contestants keeping in their boats, their bodies bent close to the deck, while they paddled with hands only. Mr. Foster won, with Mr. Munroe second.

The last was an upset race between Messrs. Munroe, Paine, Delavan and Foster, won by Com. Munroe. The prizes given were silver flags. Races for the commodore's trophy will be held through the season, and the fall regatta will take place on Oct. 2.

LEND ME FIVE DOLLARS.

THE Hartford *Covant* last Saturday, June 12, had this item: "Yesterday a man calling himself Mansfield, who was boarding at the Allyn House, called upon Dr. Parnelle of the Hartford Canoe Club, and introducing himself, said he was one of a party of Chicago canoeists who were at Windsor Locks waiting to come down here the next day. Making an appointment for the afternoon, he went to Bristol to see Commodore Louis Jones. He showed there a letter from the Boat and Yacht Club of Chicago and he repeated the Windsor Locks story and said he had slept all the night before on the river bank at the Windsor Locks. Immediately he asked Mr. Jones to help him get a check cashed at the bank, but that did not work. Mr. Jones telephoned in to Mr. Davidson, also of the club, and he instituted inquiries which showed that there were no canoeists at Windsor Locks and that the gentleman who said he had slept on the river bank had really slept at the Allyn House. The opinion prevails that he is a swindler and there is a rumor that he is the man who swindled bicyclists in a similar way a while ago. If he is honest he has queer ideas of truth."

Dr. Parnelle sent this item to Mr. C. B. Vaux, of this city. Mr. Vaux had just read it, when in walked a man calling himself Bemis, who represented that he was one of twelve members of the Farragut Boat and Canoe Club, of Chicago, who were stranded down at New Brunswick. He presented the following letter:

THE RICHFIELD, Chicago, June 10.—C. B. Vaux, Esq.—Dear Sir: The Farragut Boat and Canoe Club beg to introduce Henry R. Bemis and his company to this membership. They are making the longest unbroken canoe journey that has been attempted in this country.

There are twelve of them starting. They hope to reach New York in time to enter for your club races. The Farragut Club commends them to your favor. Mr. Bemis, who is our Commodore, will ask for what he wants and introduce you, who are salt-water canoeists, to our fresh-water sailors. Our club would be glad to reciprocate favors you may show our wanderers.—Geo. R. Wright, Pres't.

Mr. Vaux, with the hospitality that distinguishes him, invited the whole kit of the Farraguts to call at the club house; but with the caution which also distinguishes him, he politely refused to loan the needy stranger the ready cash asked for.

Mr. Farragut Mansfield-Bemis is presumably still in distress.

BROOKLYN C. C. CHALLENGE CUP.

SATURDAY, June 5, the third contest for this trophy came off, the holder, Mr. Brokaw, being challenged by the donor, Mr. Budington. An encouraging feature of these contests is the large entry and good positions taken by the younger members of the club, who do not feel unduly handicapped by the sail area carried by some in the open races, and which in this is limited to 75ft. The wind was steady, a good whole sail breeze from the north, the course three miles, triangular, once around the buoy. The following started and crossed the line to a bad start in the order named: Yvonne, Wm. Whitlock; Minx, M. V. Brokaw (holder); Lone Star, C. V. R. Schuyler; Sunbeam, J. F. Newman; Niente, A. R. Dumell; Ganymede, T. B. Budington (challenger). The last two handicapped nearly 70yds. The Guenn, also, was sailed over the course with 75ft. rig by Mr. Sinclair, but owners only being allowed to compete, was not in the race.

The first leg was a run with booms to port. The Yvonne increased her lead slightly, the first buoy being gybed around as follows: Yvonne, Minx, Lone Star, Guenn, Sunbeam, Niente and Ganymede. This last boat being wildered, having broken down through haste in rigging and consequent imperfection in important details, and some queer antics were shown by the Niente but no accident occurred. Yvonne mistook the course, not having ascertained where the buoy lay, a careless error which had fatal result in this case, as the ground thus lost put her third round the second buoy. There Sunbeam showed in front, followed very closely by Minx, Guenn and Lone Star. For the second leg, the boat, home excellent judgment was shown by Minx, who kept on a long lead down the Bay circle of the crowd of yachts which ladies' day at the Atlantic Y. C. attracted, and also held a better wind, the breeze being off shore; she finally scored a win and retains the cup. Yvonne two seconds behind her, and Sunbeam a good third. No time was taken, the course not being measured.

A paddling race followed, of which the following is a summary: Course from the yacht club house to the Y. C. B. buoy, half mile paddling, for a special prize offered by the Ontario Canoe Company, Peterboro, Ont.: A. R. Dumell, Niente, first; A. B. Boyd, Guenn, second; G. P. Weekes, Pagan; C. G. Balmanno, Edna.

Saturday, June 12.—The sailing and paddling record races brought out entries as follows: Sailing, 3 miles, twice round, triangular, 1½-mile course, all Class B canoes: Yvonne, Wm. Whitlock, 95ft.; Lone Star, C. V. R. Schuyler, 70ft.; Ganymede, T. B. Budington, 10ft.; Minx, M. V. Brokaw, 70ft.; Sunbeam, J. F. Newman, 70ft.; Tip Top, R. J. Wilkin, 50ft.; Niente, A. R. Dumell, 60ft.; Kelpie, E. Blake, 60ft.; Edna, C. G. Balmanno, 60ft. To a capital start Yvonne jumped for the lead, but was soon collared and passed by Ganymede. Minx, Lone Star, Sunbeam and the others also fought every inch of the run out. As soon as the first buoy was rounded and the reach began, Minx and Sunbeam came rapidly to the front and at one time were closely pressed by Tip Top, whose rig, small as it was, fairly sent her flying at times. Minx got the best of the turn, although rounding the buoy second, and for a while led Yvonne and the fleet, but now being a windward fight she was soon passed by the new boat, which was not again headed. The second round was uneventful, the race finishing in the following order: Yvonne, Wm. Whitlock, first, 46min.; Minx, M. V. Brokaw; Sunbeam, J. F. Newman; Lone Star, C. V. R. Schuyler; Tip Top, R. J. Wilkin, the others withdrawn.

A paddling race followed; places were taken in the order of the entries below. C. V. R. Schuyler, Lone Star; A. R. Dumell, Niente; R. J. Wilkin, Tip Top; M. V. Brokaw, Minx; J. F. Newman, Sunbeam; W. Whitlock, Edna.

Six boats afterward sailed over to the N. Y. C. C., hoping to see something of their regatta, but arrived too late to do more than exchange greetings and sail back. These trials seem to show that of the smaller boats last year's Sunbeam is the best of the new models; Yvonne is either a failure or more probably is a long way off her proper trim yet and her owner will probably have to rely on the well tried Guenn for competition in the near future. The latter promises in time to be a rattler all round (she is not yet half built), and being a windward, is very fast, free, and a very easy paddler. The new Vespe, the Ganymede, seems very fast at times, but to windward has not yet held her own except in smooth water, in which the new Ideal Evangelical occasionally surprises her detractors. The old Shadow Minx, tumble-home keel and all, has proved that, well handled, very few boats can keep with her and much interest is felt in the trials yet to come off, which it is hoped will in a measure settle the much vexed question of what model is the best all round model and which the best open water canoe. GRINN.

THE MEET AT CALLA SHASTA.

FOR a number of years the Hartford and Springfield canoe clubs have held a joint meet on Decoration Day, one year near Hartford and the alternate year near Springfield. In 1885 the Springfields joined the Hartfords in dedicating their new club house, and the subject of a New England meet, which had been talked of by two or three members of each club, gained a new impetus; since then this spark has constantly grown in size, and during the past winter men from both clubs have been doing their utmost to bring it to a New England meet. This year it was Hartford's turn to go to Springfield and it was decided, by a committee formed of members from both clubs, to invite all the canoeists of New England to join in this encampment, in the hope of eventually making it a New England meet. Circulars were gotten up stating that the Hartford and Springfield clubs would hold a joint meet May 29, 30, 31 and June 1, at Calla Shasta, a grove on the west bank of the Connecticut River, four miles below Springfield, and inviting all canoeists in New England to join them. The Owl started up the river with ten canoes and the pretty little schooner-rigged pilot boat, the property of Mr. Thornton Smith, of New York, who left Smith's Island, off Norwalk, Wednesday morning at 5:30 A. M. under sail for Calla Shasta. He reached Saybrook Wednesday afternoon about 5 o'clock, shipped his boat on board the steamboat and reached Hartford Thursday morning. Mr. Smith and his brother Dr. Ledyard, are expert sailors and genuine and enthusiastic cruisers. The day was fine, the weather warm, and as "Mr. Cotton" had been previously ascertained, the "old station" at the locks had no objection to time to let the party through, and the trip was uneventful. They reached Calla Shasta at 3 o'clock in the afternoon. A delegation of Springfield men were on hand to receive them. By sundown more men reached the camp from both clubs, and a jolly time was had around the first camp-fire telling stories and singing songs.

Saturday the tents for visiting canoeists were pitched and camp officers elected. As every canoeist, guest, having been presented with a pretty badge of buff, saved ribbon bearing the words "Calla Shasta 1886," and beneath these, the totems and flags, tastefully arranged, of the Hartford and Springfield Clubs. The H. C. C. and S. C. C. badges were the same as the guest badges, with a small flap of blue ribbon bearing the word "member" and the initials of the club. Saturday night about fifty canoes were drawn up on the beach and double that number of men were gathered around the camp-fire, while Billy the janitor, the jewel of the Springfield Club, lent a weird charm to the fire light with his rhapsodic song, "The Great White Silk Hat." The camp-fire was Billy's especial pride, and it was only on such occasions that he deemed it fitting to wear the plug hat which he kindly donated, as a parting gift, to the Hartford Club at the breaking up of camp. At a meeting held in the pavilion, George L. Parnelle was chosen commodore of the camp and Rev. W. H. Larom, chaplain. The subject of a New England Association

was talked over. A committee of one from each club, and one to represent the unattached canoeists was appointed to consider the best form of organization. They reported that in their opinion the men assembled should form an association, elect the necessary officers and apply to the American Canoe Association, to be admitted as a branch of said Association. The report of the committee was accepted, and the following officers elected: Vice Commodore, Paul Butler, Lowell, Mass.; Rear Commodore, E. H. Barney, Springfield, Mass.; Purser, W. B. Davidson, Hartford, Conn. The Purser was directed to apply to the American Canoe Association for admission as a branch of that organization.

Sunday morning at half past ten the canoeists, to a man, gathered in the pavilion and the Episcopal service was conducted by Rev. W. H. Larom, of Stafford Springs, many of the canoeists being Episcopals, the responses were hearty and the hymns were rendered by a well chosen choir, a short sermon, much to the point, from 1st Corinthians, Chapter XVI, 13th verse: "Quit you like men," gave the small congregation food for thought. After dinner the time was spent in making new acquaintances and showing the pretty little craft that lay on the beach. A thunder storm drove all inside of the tents for a while, but donning rubber coats, boots and hats, all hands scattered out and gathering in a group, held an indignation meeting about the caterer, the small quantity of food, poorly cooked and served, for which the men were paying so much. It resulted in a visit of the whole crowd to the pavilion, where they told the caterer if things were not improved they should take no more meals with him. Well, the laugh came very near being on them, for the next morning (Monday) the caterer, who had been in the habit of reaching camp about five in the morning, did not put in appearance. Six o'clock came and still no caterer, the boys began to wonder where the breakfast was coming from, as only a few were prepared to cook for themselves. Some went to the farmhouse up the road and made arrangements for the balance of their meals while in camp and others began to cook their own breakfast. It was well on toward 7 o'clock when Mr. Man came and only a few were left to drink his poor coffee and avail themselves of the reduced prices.

Visitors now began to flock into camp, all sorts and kinds of vehicles were pressed into the service, the distance from Springfield being too great to walk. Bicycles and tricycles were everywhere every train to Loug Meadow brought friends, and by the time the races were called a crowd was packed within the grounds. At 8:30 the first event was called, a paddling race, ¼ mile and turn, 7 entries. The first prize was won by E. C. Knapp, of the S. C. A., in the Sylph; second prize by F. D. Walker, also of the S. C. A., in the Pecowick.

Second Event—Tandem Paddling, ¼ mile and Turn.—Four entries. First prize won by C. M. Shedd and C. H. McKnight, S. C. A. Second prize, E. A. Mosely, of Boston, and C. Murphy, of the Sagamore Club, of Salem, Mass., in the Katherine.

Third Event—Hand Paddling, 300yds.—Seven entries. First prize won by J. E. Sowles, of the S. C. A., in the Gluck; second prize, L. Q. Jones, of the H. C. C., in the Venture. As there was not wind enough for the sailing races, they were postponed until afternoon, and the paddling races were substituted.

Fourth Event—Standing Paddling, 400yds.—Five entries. First prize won by C. H. McKnight, S. C. A., in the Idlewild; second prize, F. A. Nickerson, S. C. A., in the Glorie.

Fifth Event—Novice sailing.—Five entries. First prize won by Charles P. Nichols, of the Lowell Club, in the Blanche, time 39min. 55sec.; second prize won by G. B. Riley, of the Winchester Club, in the Sylph, time 46min. 35sec.

Sixth Event (Extra)—Upset Race.—Six entries. First prize won by Thornton Smith, S. I. C. of New York, in the Joc. Mr. Smith had been in a canoe but three times before.

Seventh Event—Consolation Paddling.—Three entries. First prize won by A. W. Dodd, of the H. C. C., in the Charlotte.

Eighth Event—Sailing (No Ballast).—Six entries. First prize won by Q. Jones, of the H. C. C., in the Venture, time 25min. 30sec. Second prize, Paul Butler, of the Lowell Club, in the Blanche, time 30min. 55sec.

The four remaining races, sailing (no limit); sailing (limited area), open sailing and consolation sailing, were postponed for lack of wind, but it is hoped that a meet can be held in the fall, when these races will take place.

At 2 o'clock dinner was announced, and twenty-four sat down to a well filled table set under the trees in Mr. Lester's orchard, while a large number went to the farmhouse of Mr. Clarke. The thanks of all canoeists are due Mr. Lester and his good wife, also farmer Clarke, for their accommodation in feeding such a hungry horde.

Sundown saw the camp free from the day's visitors, and a big camp-fire drew all together for the last time at this meet, Banjo playing and singing by Messrs. Patterson, Shedd and Todd made much fun. Every one was enthusiastic over the bright prospects of the new association, and all looked forward to the meet in the fall as one to be remembered by all. Good-byes were being said on all sides, for many of the members were to leave on the night train, others on the early morning train. The last camp-fire of the Calla Shasta meet was at an end, all seemed to feel the sadness of parting and a quiet night was the result.

Tuesday morning was all bustle and hurry, pulling down tents and getting the canoes under way, and noon saw Calla Shasta shorn of its pretty white foliage. A hurrah! for the new association, and the canoeists, have done to its welfare, work for it and make it what it should be, an association of gentlemen. Q. B.

NOTES FROM LOWELL.—For the annual regatta of the Vesper Boat Club, to hold June 24, but one canoe race, tandem paddling, is announced; but this must not be taken as indicating a lack of canoe interest in the club. Since last season quite a sailing boom had been developed and most of the open paddling canoes, so largely neglected here, have been fitted with one or two sails apiece, some of them pretty large spreads too. Among the new craft added to the navy are a Stevens built, 28-inch sailing canoe with heavy lead keel, owned by John Walsh, and a beautiful 14 6x30 open Peterboro, with sail, just received by Ralph F. Brazer. Several new boats have also been received by unattached canoeists and the New Vamessit Club, organized by Messrs. Rolfe and Huntington, have built a small floating boat house at the foot of the Concord River, where they will keep a number of half a dozen craft. Three of these are creditable home-made canvas canoes of similar model to Vice-Commodore Butler's Blanche, which won two sailing prizes at Calla Shasta. One will have two boards, placed well forward and aft. There will probably be no general Merrimack River meet this year, but the Vesper boys have already taken their usual number of one-day trips on neighboring streams. Several Lowell representatives may be looked for at Grindstone in August, and two of the local brethren contemplate spending next winter canoeing in Florida.—F. H. F.

A MOSQUITO NET FOR CANOE TENTS.—Paterson, N. J., June 5.—*Editor Forest and Stream:* Now that cruising is in order I send an idea that I have carried out on my canoe L'Amour in regard to mosquito nets. I place two cords on the inside of my Mosquito tent, one on each side, and run them to end at top and bottom. I have made a small tent of mosquito net about 3ft. long, 1ft. wide, and 2ft. deep and very full at the bottom; four rings are fastened, one at each top corner and the cord on the main tent is slipped through the rings. The canoeist when seated in his canoe can pull the net over his head and fasten to coming or push it forward out of the way. The whole affair can be rolled up with the tent without fear of disarranging it.—A. S. PENNINGTON, Com. Paterson C. C.

CANOE SAILS AND TENTS.—Canoeists who are fitting out for camping will find a full list of all that they need in the new catalogue just issued by F. H. Hemenway, No. 60 South street, New York. Besides tents of the ordinary shapes, which he has long made a specialty of, Mr. Hemenway is now making canoe tents of all kinds, for use ashore or afloat, as well as flags, awnings, and club and private signals. He has lately made the sails for some of the new racing canoes, and proposes to devote special attention to this department. The catalogue contains, among other illustrations, cuts of cots, chairs and other camp goods used by canoeists. It is sent free to any address.

A. C. A. PRIZE FLAGS.—The Regatta Committee have received replies to their circular asking for prize flags for the A. C. A. races, from the following parties, who have promised to have made up the flags: W. B. Gibson, Dr. C. A. Neide, J. H. Rushton, Grant Van Deusen, Mrs. Geo. L. Parnelle, Mrs. R. S. Oliver, Mrs. F. S. Rathbun, Mrs. J. B. McMurich, Mrs. J. L. Weller. In order that there may be no lack of flags we would ask any who are intending to give one or more, to at once inform the committee of the fact, so that we may know what we can depend upon.—J. B. McMurich, Chairman Regatta Committee.

LAKE ST. LOUIS C. C.—The date fixed for the regatta of the Lake St. Louis C. C. this year is Aug. 21, at Lachine. The leading event, of course, is the tandem race for the silver challenge cups in best and best open canoes, open to amateur members of any canoe club in Canada of good standing; in fact, any member of the A. C. A. will find a warm reception from the club if he happens to pass Lachine. Any information can be obtained by writing to Mr. Geo. Auldjo, Lachine, P. Q.

A. C. A. MEMBERSHIP.—The following names have been received for membership in the A. C. A.: J. H. Ten Eyck Burt, Cazenovia, N. Y. T. J. Baxter, Boston; H. Tucker, Brooklyn, N. Y.

Don't twist your neck off, but use Allen's bow-facing oars. Little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

24. Beverly, Club, Mon. Beach.	25. Buffalo, Club, Lake Erie.
24. Corinthian, Ladies', Marblehead.	25. Beverly, Club, Nahant.

NEW JERSEY Y. C. 15TH ANNUAL REGATTA.

EXCEPT in the matter of wind, the New Jersey Y. C. were badly served by the weather on Monday, as a northeast storm brought a chill rain with it, making it very unpleasant for the spectators. The race was thrown open to yachts of other clubs, and a number of entries were promised, but only a part of them appeared, both Crocodile and Arab being among the absent. Only 19 of the 33 entries started, and but 12 of these completed the course; a very great pity, considering the number of calm days in the yachting calendar and the brisk northeast breeze that blew on this occasion. All classes started and finished off Bedloe's Island, the catamarans turning Buoy 9 and 16, Class B turned Buoy 11 and 16, Classes C and D Buoy 13 and 16, Class E Buoy 13 only, and Class F rounded Fort Lafayette.

The steamer Blackbird was anchored off Bedloe's Island at 11 A. M., by which time the breeze had freshened so much that most of the boats turned in one or even two reefs. At 11:10 the starting whistle blew, with the handicap at 11:15, the yachts crossing in the following order:

Cyclone.....	11 12 52	Teaser.....	11 17 36
Wayward.....	11 12 53	Nemesis.....	11 18 21
Siren.....	11 13 37	Eggr.....	11 18 16
Truant.....	11 13 49	Alexander F.....	11 18 59
Geo. B. Deane.....	11 14 10	Wave.....	11 19 30
Letitia.....	11 14 17	Wabasso.....	11 19 59
Rambler.....	11 14 45	Vixen.....	11 20 28
Cate Cate.....	11 15 12	Henry Gray.....	11 20 00
Louise.....	11 15 22	Triton.....	11 27 00
Charm.....	11 16 11		

All after Rambler were handicapped. The tide was half down and the ebb carried them on swiftly. The small class turned Fort Lafayette as follows:

Cate Cate.....	12 01 00	Wave.....	12 04 40
Truant.....	12 02 30		

The larger boats were timed at Buoy 13:

Siren.....	12 12 10	Geo. B. Deane.....	12 14 45
Rambler.....	12 13 21	Charm.....	12 14 50
Louise.....	12 12 40	Alexander F.....	12 15 40

Shortly after the turn the Charm and Geo. B. Deane fouled in tacking, but no damage was done. The beat home was made against a strong wind, the yachts carrying full sail, though most of them would have been satisfied with a reef in. The new jib and mainsail boat, Siren, built by McGeehan for Dr. Doremus, for the use of his sons, won her first race, sailing well all day.

CLASS A—CATAMARANS, 30FT. AND OVER.			
Start.	Finish.	Elapsed.	Corrected.
Eggr.....	11 15 00	2 11 35	2 56 53
Cyclone.....	11 15 00	Not timed.	
Nemesis.....	11 15 00	2 28 12	3 23 12

CLASS B—CABIN YACHTS, 31FT. AND OVER.			
Start.	Finish.	Elapsed.	Corrected.
Wayward.....	11 12 53	Not timed.	

CLASS C—CABIN YACHTS, UNDER 31FT.			
Start.	Finish.	Elapsed.	Corrected.
Letitia.....	11 14 17	2 17 07	3 02 50
Alexander F.....	11 15 00	2 18 35	3 03 35
Wabasso.....	11 15 00	2 49 48	3 31 29
Vixen.....	11 15 00	Not timed.	
Louise.....	11 15 00	Not timed.	

CLASS D—OPEN YACHTS, 25FT. AND OVER.			
Start.	Finish.	Elapsed.	Corrected.
Charm.....	11 15 00	2 31 17	3 16 17
Henry Gray.....	11 15 00	Did not finish.	

CLASS E—OPEN YACHTS, 21 TO 25FT.			
Start.	Finish.	Elapsed.	Corrected.
Rambler.....	11 14 45	Ran aground.	
Geo. B. Deane.....	11 14 45	2 37 10	3 13 15
Siren.....	11 13 37	2 10 23	2 56 46

CLASS F—OPEN YACHTS, UNDER 21FT.			
Start.	Finish.	Elapsed.	Corrected.
Cate Cate.....	11 15 00	2 08 06	2 53 06
Truant.....	11 13 49	Not timed.	
Wave.....	11 15 00	1 59 05	2 44 05
Triton.....	11 15 00	Did not finish.	
Teaser.....	11 15 00	1 55 45	2 40 45

The winners are Eggr, Wayward, Letitia, Charm, Siren and Teaser. The judges were Messrs. Geo. E. Gartland and A. Jeanneret.

SANDY BAY Y. C. REGATTA.

THE second regatta of the Sandy Bay Y. C. was sailed on June 12 over a course from the judges' line off the Pavilion Beach to a buoy off Eastern Point, thence across to a buoy off Rafe's Chasm and return to the judges' line, and repeat, a distance of 12 miles. The yachts were in two classes, 20 to 26ft. waterline and under 20ft., and sweepstake prizes were given in each class, while the Sassafras carried Cup was also to be sailed for. Before the race the Cunningham away her bowsprit. The start was made at 1:50 P. M., Silver Cloud, Lottie, Haskins, Petrel, White Wings, Spark, Louette, Tyrant, Alpine, Jennie C., Puritan, Adele, Osceola and Lottie in order. The order at first was Silver Cloud, White Wings, Louette and Petrel. The full times were:

	Length.	Elapsed.	Corrected.
Louette, Haskins.....	22.00	2 16 55	2 00 49
Silver Cloud, McLaughlin.....	21.09	2 21 11	2 00 41
Tyrant, Elwell.....	21.08	2 22 24	2 11 06
White Wings, Perry.....	21.10	2 25 55	2 15 34
Petrel, McLaughlin.....	21.09	2 26 41	2 16 11
Lottie, Haskins.....	26.00	2 14 45	2 10 14
Alpine, unknown.....	16.07	2 41 30	2 21 06
Spark, Gaffney.....	18.00	2 41 24	2 24 11
Puritan, unknown.....	19.06	2 43 20	2 25 01

Louette wins a second leg for the cup and first prize in her class.

BROOKLYN Y. C. ANNUAL REGATTA.

THE annual regatta of the Brooklyn Y. C. was sailed on June 12 over the following courses: For classes A and C, crossing an imaginary line drawn from the judges' steamer to a mark buoy anchored in front thereof, a distance of 200yds., to black buoy No. 7, on the lower end of the west bank, leaving the same on the port hand, thence home, crossing said imaginary line at the finish. Distance 13 3/4 miles.

For classes B, D, 1, 2 and 3 start the same as above, thence to Southwest Spit buoy No. 8 1/2, leaving same on port hand, thence home, crossing the imaginary line at the finish. Distance 16 1/2 miles. For Class 4, start as above, thence to Southwest Spit buoy No. 8 1/2, leaving same to port, thence to black buoy No. 5 at Sandy Hook Point, leaving same to port, thence return to Southwest Spit buoy 8 1/2 leaving same to starboard, thence home, crossing said line at the finish. Distance 20 1/2 miles. All yachts, both going and returning, pass to the westward of the stone or dumb beacon and to the eastward of black buoys 9, 11, 13, 15 on the west bank.

The yachts were divided as follows: Class 1.—Cabin sloops, cutters, yawls and schooners of 25ft. sailing length and under. Class 2.—Cabin sloops, cutters, yawls and schooners of 30ft. sailing length and under to 25ft. Class 3.—Cabin sloops, cutters, yawls and schooners of 35ft. sailing length and under to 30ft. Class 4.—Cabin sloops, cutters, yawls and schooners over 35ft. sailing length but not exceeding 45ft. waterline. Class A.—Open catboats, 20ft. and under. Class B.—Open catboats, all over 20ft. Class C.—Open sloops, 25ft. and under. Class D.—Open sloops, all over 25ft. The following yachts were entered in the various classes:

CLASS A—CABIN SLOOPS.

	Percy Williams.	Length over all.
--	-----------------	------------------

Outvie.....	45.00
Hattie S.....	38.00

CLASS 3—CABIN SLOOPS.

CLASS C—OPEN SLOOPS.

Faustina.....	1 06 43	3 37 00	2 29 17
Surprise.....	1 06 43	3 37 00	2 29 17

Bess had no competitor in the second class, Hattie S. lost her top mast and did not finish. The judges followed the race on the launch Edward Burfield.

ATLANTIC Y. C. ANNUAL REGATTA, JUNE 15.

A SPECIAL feature of regatta week this year is the presence of a large fleet from Boston, bent on adding to the score of last year's victory a lot of new mugs. Fortuna came in last week, having sailed around; Puritan, Gitana and Thetis arrived on Saturday, the former receiving a perfect ovation from whistles and bells on her passage past the city to her old anchorage off Stapleton while Mayflower was found at anchor on Thursday morning off Bay Ridge. She had left Boston on Thursday night, falling foul of fogs and calms and not reaching New York until Monday night, too late to enter on Tuesday. She went on the screw dock on Wednesday, and will probably sail to-day in the New York Y. C. Regatta.

This year's regatta of the Atlantic Y. C. is especially noticeable from the large proportion of new boats or of boats new to New York waters that entered, no less than 8 out of the 35 starters being on the water for the first time. The regatta was sailed on the trial. First of course is the supreme effort of the Atlantic Y. C., the culmination of twenty years' experience of the American centerboard sloop model. No other club of its size has been as fondly devoted to the ancient American sloop, and none has contended so stoutly for the principles on which that esteemed craft was supposed to be constructed, and it is now not a little amusing to see the result of it; a boat that is even less of a sloop than any of her competitors and that stands forth a confession in wood and lead, of the fallacious views so long held by the believers in the sloop. An attempt is still made to foist upon the public the delusion of dubbing them "sloops," but it is too late to impose on even the greenest yachtsmen. True, they have beam and centerboard to fall back on, but in all other respects they are the direct opposite of a sloop. Technically, in view of their rig, they are cutters, but without falling back on that, three or them at least, Atlantic, Puritan and Mayflower, may fairly be designated as centerboard cutters.

Whatever merits they may show her to possess, Atlantic certainly cannot number beauty among them. It was bad enough when sailing about the bay aloft and decks, she was very well sailed on Tuesday, far seems faster than last year. She was very well sailed for places and was favored more than the others in the shaking up for places and beyond the Scotland, she worked for and fully deserved all she won. The double stay arrangement on her and Atlantic seems to have its disadvantages, as both had trouble at the Sandy Hook lightship in hoisting balloon jibtopsails to windward. The ex-sharpie Vedette also made her reappearance after another "lightning" change, now coming out as a deep draft, lead keel, round-bottomed schooner. The next new one on the list of entries is the schooner Leona, long known about New York, but rebuilt and newly rigged last winter, and sailing her first race in her new form on Tuesday, coming in second to Agnes.

Like her is Gracie, of almost forgotten age, but extensively altered this spring. Her appearance certainly has been very much improved, and as to speed, one race is not sufficient to judge by, though she was well astern out to the Scotland, finally losing to Thetis on allowance.

In the third class was another real new one, Cinderella, Mr. Iselin's racer. Since her race at Larchmont her mast has been shortened 15in. and bowsprit 2ft. Again she was well astern of Clara all day, especially so during the first half.

Concord is a new boat in New York waters, a centerboard, lead keel sloop, owned by Com. H. C. Roome, J. C. Y. C. and Nirvana, a deep keel boat, from Boston, is only new to New York. Another Boston boat, a lead keel one, is Adelaide, built by Wood Bros. for Mr. Robert Underhill. With her high counter, low waist, and consequent sheer, she looked a cousin to Atlantic and was no more of a beauty. Her stern, ending in a big triangle with its lower angle deeply immersed, proclaimed a close relationship to Neva, Gleam, Cricket and other of Wood's boats; but below water she is of a different type, following more the Puritan model. Her rig, of course, showed double headsails. The last new one, Arab, we have before described; a deep, lead-loaded centerboard craft, with very large rig and single jib. The entries in the various classes were:

SPECIAL CLASS.

B.....	Priscilla.....	A. Cass Canfield.
C.....	Puritan.....	J. Maclellan Forbes.
D.....	Atlantic.....	Maxwell, Fish and Lawton.

32.....	Idleran.....	Walter Southwick.

CLASS H—CABIN SLOOPS.

33.....

nearly becalmed, the leaders close together. Priscilla alone carried a big balloon jibtop-sail and what wind there was she caught, drawing into first place on the heat to the lightship.

All came for it well together, but, nipping as close as possible, Priscilla weathered it on starboard tack and was off down hill, wind and tide helping her, while Puritan and Atlantic had to make another tack under the mark before rounding. Atlantic turned second, but dropped her balloon overboard in setting it. Puritan followed, while after her came the cutter Clara, fourth of the fleet. The times were:

Priscilla.....	2 25 25	Grayling.....	2 42 45
Atlantic.....	2 23 26	Gracie.....	2 50 33
Puritan.....	2 30 07	Montauk.....	2 55 06
Clara.....	2 37 30	Cinderella.....	3 00 00

No sooner were they off for home than Atlantic and Puritan began a luffing match, the latter to windward, making two charges for Atlantic's weather, while Priscilla was leaving both. The two stern chasers dropped spinnaker booms in readiness, while Atlantic gained a little; but soon the white one came upon her weather again, this time taking the lead-of her and holding it to the close. After she passed her spinnaker went up. Priscilla following at once, staying her well forward, while Atlantic's was not set for seven or eight minutes after.

Up the Bay was a tedious journey, little wind and no excitement over such a finish. Priscilla continued to gain until within a half mile of buoy 15, the breeze dropped, and by the time she was a quarter of a mile from the finish she lay motionless, save for the flood tide. The others were still coming, holding a light breeze and threatening to pass her, but she drifted on, finishing at 5:57. When they reached the calm streak they also stopped, sails dropped idly and some were taken in the two boats drifting up almost sideways. Puritan had led the sailing, but Atlantic proved the best drifter, and finally crossed the line in an oblique position, while her less fortunate rival, without steering way drifted just outside the markboat and did not finish.

The others came very slowly up to Bay Ridge, the finish being devoid of any excitement. Gracie managed to overtake Thetis and led her in, but lost on time allowance. The times were:

CLASS K-SLOOPS.				
Hypatia.....	10 49 54	5 14 08	6 27 14	6 27 14

The winners are: Class A, Grayling first, Montauk second prize; Class B, Agnes first, Leona second prize; Class C, Thetis first prize; Class D, Clara first, Athlon second prize; Class E, Penguin first, Adelaide second prize, and Penguin winning Livingston Memorial prize; Class F, Crocodile; Class G, Ilderan; Class H, Arab; Hypatia, walk-over in Class K.

The race was far from satisfactory and by no means settles the question of the best boat. Atlantic did well in the early part, in making up the lost ground at the start, but from the Lightship in she was fairly outdistanced by Priscilla and Puritan, the latter holding first until the wind left them above the line. Thetis, sailed by Captain Crocker, astonished her friends, and the outsiders as well, by the way she went off over the first half of the course and finally won a prize for Boston by beating Gracie. Clara added another to her string of victories, beating her class and everything else except Gracie and Thetis. Cinderella, her special rival, was 15 minutes astern, while the old sloops, Thistle and Roamer, were less than an hour behind her. To-day, most of them met again in the New York Y. C. regatta, the entries being as follows, measurement given being for time allowance:

No.	Yacht.	Owner.	Feet.
10.....	Dauntless.....	C. H. Colt.....	112.60
11.....	Gitana.....	William F. Weld.....	96.33
12.....	Republic.....	Wright Duryea.....	97.06

QUAKER CITY Y. C. REGATTA.—The annual regatta of the Quaker City Y. C. was sailed on June 9 on the Delaware, the course being from Market street to Chester Buoy and return, 36 miles. The entries were as follows: Schooners, Helen, Avalon. First class cabin yachts, 38ft. and over, Venetia, Minerva and Sunbeam. Second class cabin yachts, 32 to 38ft., Olga and Consort. Third class cabin yachts, 27 to 32ft., Azile, Minerva, Anita, Nahma and Carrie Z. Fifth class, open boats, Hurley. The wind was from S. E., and the tide running out at 11:05 A. M., when the race started. Minerva led but was soon passed by Venetia, who held her lead to the end. Helen had the better of Avalon over the entire course. More wind came up off Fort Mifflin, and kites were taken in. Venetia turned the mark at 12:50, with Sunbeam at 12:51. Spinnakers were set on the run home. Venetia and Olga lost their topmasts, but continued the race, the former winning. The times at finish were:

Venetia.....	2 37 40	Nahma.....	3 13 40
Sunbeam.....	2 40 50	Minerva.....	3 18 13
Helen.....	2 53 25	Anita.....	3 20 07
Minerva.....	2 53 50	Carrie L.....	3 24 45
Avalon.....	2 56 05	Agile.....	3 36 16
Consort.....	3 13 53	Hurley.....	3 24 46

The prizes were: Schooner class, nickel-plated chronometer clock; first class, first prize, Bliss taffrail log; second prize, swinging ice pitcher; second class, Valette cup; third class, first prize, champion flag; second prize, yacht ensign; third prize, cabin light; fifth class, champion flag. The judges were A. F. Bancroft, S. A. Wood and R. G. Wilkins.

SEAWANHAKE C. Y. C. REGATTA.—The entries for Saturday are as follows: Schooners, Fertuna, Grayling, Ruth Gitana. First class cutters, sloops and yawls: Atlantic, Priscilla, Puritan, Mayflower. Second class: Bedouin, Gracie. Third class: Clara, Cinderella, Regina. Fourth class: Rival. Fifth class: Ysult, Nomad, Culprit Fay, Nyssa, Elephant.

COOPER'S POINT C. Y. C.—The first of the semi-monthly races of this club was sailed in a strong N. W. wind from Cooper's Point around Petty's Island, two rounds or 30 miles. In the first class, 16ft. to 19ft., were the J. W. Norcross, Humes and Middleton. Second class, 14ft. to 16ft., R. G. Wilkins, W. Almond, E. L. Metz, W. G. Cook and Trucksent. The former started at 2:06, the latter at 2:13. The first round was timed as follows: Norcross 2:03, Wilkins 3:30. The Middleton carried away her mast step, Almond fouled the mark, the Humes split her sail and the Metz capsized. The Norcross finished at 4:17 and the Wilkins at 4:40. No other yachts completed the course. Prize flags, the gifts of Capt. Wilkins, were given in each class. The starter and referee was Capt. Rufus G. Wilkins; judges, Frank Carr and R. W. Kerswell; time-keeper, H. Clay Funk. The Wilkins and Almond will sail a match for \$50 per side, shortly.

ALICE, schooner, Mr. W. L. Lockhard, of Boston, has had 8 tons of lead added to her keel.

GREAT HEAD Y. C. PROTESTS.—On June 11 a meeting was held to decide the protests arising out of the races of June 5. That against Flora Lee was not proved and she was awarded the prize. That of Majel against Silver Cloud was not pressed, as the owner of Majel did not appear, and the one against Dart was withdrawn. The prizes awarded were as follows: First class—First prize, \$33; second, \$14; third, \$10. Second class—First prize, \$18; second, \$11; third, \$8. Third class—First prize, \$15; second, \$12; third, \$8. Fourth class—First prize, \$4.50; second, \$2.50; third, \$1.50.

MOBILE Y. C.—At the annual meeting of this club the following officers were chosen: J. S. Woodhull, Commodore; H. Pillais, Vice-Commodore; W. E. Kirkbride, Secretary and Treasurer. Governing Committee, J. S. Woodhull (ex-officio), Chairman; W. B. Curran and F. S. Gibson. The club is in a sound financial condition, and the prospects for a successful season are flattering, having a membership of fifty and a fleet of about fifteen boats, with large additions to both on the card. The only fixed event at present is our annual cup regatta, to be sailed at Point Clear on July 4.

CHESAPEAKE BAY Y. C.—The Chesapeake Bay Y. C. held its annual meeting on June 7. The officers elected for the year were: W. O. S. Dimpfel, Commodore; Col. F. C. Goldsborough, Vice-Commodore, and J. G. Morris, Secretary and Treasurer. J. G. Morris was also elected Measurer. July 17 was named as the day for the annual review of the club, on which occasion a match will be held for Chesapeake canoes and buckeyes. Race to take place in Miles River from Deep Water Point. Messrs. Dimpfel and Morris were appointed regatta committee.

AMERICAN Y. C.—At a special meeting held June 8, Col. W. H. Glider was elected an honorary member of the club. A club signal was presented to him, which he will endeavor to hoist on the North Pole when he reaches it by sailing.

PENNSYLVANIA Y. C. REGATTA.—The times in the Pennsylvania Y. C. Regatta of May 31 were: Birch, 3:15; Bennett, 3:21; Little Tycoon, 3:25, and Cocktail fourth.

ADRIENNE, schooner, Commodore Pfaff, was launched by Lawleys last week. The owner's son will sail her during his absence in Europe.

MIRAMICHI Y. C.—On June 5 the yachts of the Miramichi Y. C. turned out for a short cruise, Kittich, Commodore Miller, leading the fleet.

TORONTO Y. C.—A race was sailed on June 5 between Mischief and Meteor for a purse of \$100, the latter winning by 4 min. 30 sec.

SACHEM.—Lawleys launched Messrs. Owens & Metcalf's schooner on Tuesday, and will have her ready in about three weeks.

XARIFA.—On Saturday last the English yawl Xarifa arrived New York from Antigua. She is a little larger than Cythera.

GREAT HEAD Y. C.—The race of this club on June 12 did not finish, owing to lack of wind.

VANDAL, Mr. Fay's New yacht, is now nearly rigged at Lawley's yard.

UNA, schooner, has been sold to Mr. E. Hanseon, of Boston.

An experiment to test the speed of the swallow's flight has just been made at Favia. Two hen birds were taken from their broods, carried to Milan, and were released at a given hour. Both made their way back to their nests in thirteen minutes, which gave their rate of speed at eighty-seven and a half miles an hour.

ABBEE & IMBRIE,
Manufacturers of every description of

FINE FISHING TACKLE,
18 Vesey Street (Fourth door from the Astor House), New York.

Dickerman Pat. Hammerless Single-Barrel Shotgun.
DESIGNED ESPECIALLY FOR
TRAP SHOOTING.

12-GAUGE NOW READY.
Weight 6½ to 7 lbs.

Warranted to throw 300
No. 8 shot in 30-inch circle
at 33 yards.

All Modern Improvements.
Automatic Safety Pistol Grip, Double Bolt, Rubber Butt Plate, Full Choke, Blued Frame, with Twist, Laminated or Damascus Barrels.

The Top Snap is utilized as the lever for cocking the hammer as well as breaking up the gun. The leverage is so adjusted that the gun is broken up and hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the trigger, locking the latter firmly into the bent of the hammer. The Safety Button is located just in front of the trigger, and is fully protected by the guard (as shown in cut). Pronounced by the trade and sportsmen generally the **Finest Single Gun Made.** INTERCHANGEABLE RIFLE BARRELS OF ALL CALIBERS furnished for these guns if desired. SEND FOR CIRCULAR.

Manufactured by THE STRONG FIRE ARMS CO., New Haven, Conn., U. S. A.

SCHOVERLING, DALY & GALES.

Charles Daly Hammerless.

THE BEST HAMMERLESS GUN IN THE WORLD.

W H Y .

THE PECULIAR SYSTEM OF BORING, CHOKING AND CHAMBERING gives the maxim result in closeness of shooting (this, however, can be done by any one), combined with PENETRATION. This latter is the great point. Ask any one who shoots a Daly and they will tell you they "Kill dead."

THE GREAT SUPERIORITY IN ACCURACY OF THE FITTING AND CLOSENESS OF THE WORK makes the guns last a lifetime. Large numbers of DALY GUNS have been in use a score of years, and are as tight to-day as when first made. The workmen who make these guns are all "ARTISTS IN IRON AND WOOD." We confidently assert that no better or closer work can be found in the world, whether it comes from a Purdy, a Grant, or a Westley Richards.

THE BARRELS AND LOCKWORK ARE MADE OF FIRST QUALITY MATERIAL. One of the great points in a gun is the accuracy with which the barrels are put together. It costs more to put a pair of barrels together properly than it does to make an ordinary gun out and out. DALY GUNS have no superior in this respect.

THE ANSON & DEELEY SYSTEM, ON WHICH THESE GUNS ARE MADE, is the best ever yet put on the market. It is the same system as used by Westley Richards, Harrington & Richardson and many others. The only objection has been that the forearm of the frame is rather short. We have, however, overcome this difficulty, and a DALY HAMMERLESS ANSON & DEELEY SYSTEM WITH LONG BODY IS THE STRONGEST HAMMERLESS IN THE WORLD.

THEY ARE BEAUTIFUL IN OUTLINE, ARTISTIC IN FINISH. THE STOCKS HAVE HANDSOME FIGURE. They are stocked for use, "come up" properly. It is a pleasure to handle them, and to look at them is like viewing a handsome picture. A DALY is A "THING OF BEAUTY."

THE RIBS ARE HAND MATTED (not machine work which does not give the best effect) and give a perfectly dead surface to sight over.

PROOF.

While in sales every other Hammerless Gun has fallen off at least 50 per cent. this season (which has been a dull one in gun trade) the DALY has increased 50 per cent. Everyone who has one is enthusiastic in their praise.

SCHOVERLING, DALY & GALES, 84 & 86 Chambers Street, New York.

The Rapid Machine Loader

For which we are sole agents will be ready for delivery July 1.

We have just received a model of the Loader, and we are satisfied that it is vastly superior in simplicity, compactness, accuracy and durability to any machine of the kind ever made before. Mr. C. E. Overbaugh, who is thoroughly practical, has had years of experience in loading shells, and is a first-class mechanic, examined it and tested it exhaustively, and said "it is the best loader ever made."

The RAPID will be adapted to all gauges, viz.: 10, 12, 14, 16 and 20. Additional cost for more than one gauge, \$1.00 per size. To change the gauge it is simply necessary to exchange shell barrel and plunger head.

Capacity of Charges { 2½ to 5 Drams.
1 to 2½ Ounces.

Price of Loader, \$12.00.

Fixed Ammunition for Shotguns.

TATHAM & BROS., Eastern Agents,
 82 Beekman Street, New York City.

10 consecutive shots at 200yds. off-hand, Dec. 18, 1885, with Ballard 6½ Rifle, 38—55, by Wm. P. Gage, Saratoga, N. Y. Highest recorded score in the U. S. on the American Decimal Target, counting 95. Cut is one-quarter size.

20 consecutive shots at 200yds. off-hand, made in the Sharpshooters' Match at Walnut Hill, Mass., Dec. 26, 1881, by H. G. Bixby, of Nashua, N. H., being two consecutive scores counting 115 each on the Mass. Target. These were made with a Ballard 6½, 38—55. Cut is one-sixth size.

10 consecutive shots at 200yds. with rest, made at Guttenberg, N. J., on May 8, 1886, by M. Dorrier, using a Ballard No. 10 Rifle, 38—55. Cut is full size.

Send for Reduced Price List of Marlin and Ballard Rifles, dated June 1st, 1886.

THE MARLIN FIRE ARMS CO., New Haven, Conn.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette*. Made simply with boiling water or milk. Sold only in half-pound tins by Grocers, labelled thus: **JAMES EPPS & CO., Homoeopathic Chemists, London, England.**

HANNAFORD Ventilated RUBBER BOOTS.

The only boots made that **WILL NOT sweat or chill the feet. WILL KEEP the feet dry and warm.** These boots have been in use for two seasons, and given entire satisfaction. Hundreds testify that they can be worn with comfort. Will be sent C.O.D. Ask your dealer for them, or send for circular. **HANNAFORD VENTILATED BOOT CO.** 79 Milk Street, Boston.

The English "Fishing Gazette."

Devoted to angling, river, lake and sea fishing, and pisciculture.

Every Saturday, 16 pages, folio, price 2d. Volume XI. commenced with number 429 for July 11, 1885.

EDITOR—R. B. MARSTON

Free by post for one year for 12s. 6d. (say \$3.20) to any address in the United States.

Sent direct from the office for any portion of a year at the above rate. U. S. postage stamps can be remitted, or money order payable to Sampson, Low, Marston & Co., the proprietors.

Contains special articles on all fresh and salt water fish and fishing; reports of the state of the rivers; reports from angling clubs; pisciculture and natural history; where to fish; angling notes and queries; angling exchange column; notices of fishing tackle, books, &c., and other features. A copy of the current number can be had (post free) by sending six cents in stamps to R. B. Marston, the FISHING GAZETTE office, 12 and 13, Fetter-lane, London.

The FISHING GAZETTE circulates extensively among anglers and country gentlemen in all parts of the Empire.

"There is a large public interest in fishing. . . . An excellent class organ."—*World*.

"One of the best authorities on these and kindred subjects."—*Truth*.

"A brighter and gayer little paper is not published."—*Mayfair*.

The FISHING GAZETTE is quoted by the *Times* and all the best papers.

One of the best mediums for

ADVERTISEMENTS

of fishing tackle makers, fishcultivists, hotels and fishing quarters, whisky, waterproof fishing goods, cigars and tobacco, books of angling, and all other requirements of anglers; as well for all general advertisements addressed to a letter-to-do class in all parts of the country and abroad.

Office—12 and 13, Fetter-lane, London

14 First Prize Medals. WM. S. KIMBALL & CO.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.

THE CROW RESERVE.

IN reply to the FOREST AND STREAM's charge that the Crow Indian reservation has been captured by the cattlemen, the Interior Department, through Commissioner Atkins, has given out an explanation and a denial. The explanation, as reported in the New York Times, and copied elsewhere, is in effect a corroboration of the statements made by us. The department explains that leases may lawfully be made; but it appears from Commissioner Atkins's own showing that no single one of the cattlemen, whose herds now cover the reserve, has a lease or any warrant whatever for the occupation. They are, therefore, all trespassers, and should without delay be ejected. The sheepman Barry, who, after dickering with the department without driving a bargain, put his sheep on the reserve and paid nothing, is only one of a class of defiant trespassers, who infest the reservation "without a shadow of right."

Having thus shown the condition of affairs on the Crow reserve to be fully as bad as or worse than that described in these columns, the department expresses a touching confidence in its agent and denies the truth of the charges of the FOREST AND STREAM, "basing this denial on a thorough knowledge of his [the agent's] probity, and a lack of any accurate information, etc."—a somewhat extraordinary basis.

The confidence in the Crow agent's probity is good enough so far as it goes, but it is to be hoped that the department will supplement this by securing the accurate information without which it cannot properly remedy the abuses complained of. We again urge the Secretary of the Interior to make a searching investigation of the condition of affairs in the Crow reserve. Rightly conducted, such an inquiry will show the truth of the FOREST AND STREAM's charges—that the choice lands of the reservation have been taken by the cattlemen, who are now practically in control of the reserve, and by the construction of permanent improvements are preparing to maintain their hold in the future; that the Indians do not receive proper compensation for the privileges accorded, are not justly treated, do not acquiesce in the taking of their lands, and are in part deceived as to the actual condition of affairs. When the department's confidence in its agent is complemented or supplanted by accurate information on these points, we trust that prompt official action may fol-

low, and the cattlemen may have reason to give over their boast that they have the Crow reserve in their power.

THE PARK RAILROAD JOB.

THE bill to grant a right of way to the Cinnabar & Clark's Fork Railroad Company through the Yellowstone National Park came up in the Senate last Monday, on motion of Mr. Butler, of South Carolina, the champion of the railroad schemers. Mr. Vest made a strong speech in opposition to the bill. "He denied that the road was intended in good faith to reach mining property. Why had not at least a preliminary survey been made? He would not appeal to men who thought the Mammoth Cave and Niagara Falls should be transferred to commercial use, or that the Great Geysers should be devoted to laundry purposes and dished out to Chinamen for dirty linen. But he would appeal to Senators to preserve at least one spot of beauty from the rack and roar of commerce and the greed and avarice of selfish men. The railroad company's object was not to get to a mine but to carry passengers to and through the Park. The construction of this road, Mr. Vest asserted, would be the destruction of the Yellowstone Park. A former officer of the Interior Department had haunted the Senate in the interest of this bill. Some suggestions had been made to the effect that Mr. Vest and other Senators who opposed this bill were the tools of the Northern Pacific Railroad Company. Any statement of that kind was utterly and infamously false. No man connected with that company had ever dared to approach Mr. Vest on the subject. If the Northern Pacific Railroad Company had any interest whatever in the matter it was that a road through the Park should be built, as it would form a branch of that road."

The question went over for a future consideration.

SONG BIRDS AND STATISTICS.

A CINCINNATI gentleman has been entertaining the Society of Natural History of that city with some statistics to prove, theoretically, that the possible destruction of song birds by milliners' agents and other wholesale bird hunters can have no appreciable effect upon the grand sum total of the birds, which for the three Americas he puts at 3,000,000,000, including all the feathered species. His conclusions are (1) that the great bulk of millinery feather goods are from other than song birds; (2) that song birds are in little demand because of their plain plumage; (3) that the birds of brilliant plumage utilized by the milliners are of South American and other foreign origin; (4) that the destruction of harmful species compensates for that of useful species; (5) that even if all the birds so destroyed were song birds, the reduction in numbers from this cause would still be inappreciable in its effects on the fauna of the country at large.

Figures may, under skilful manipulation, be made to prove anything. But no manipulation of figures in the millions and billions can restore to the gardens and orchards and meadows and pastures and woods the birds which have been destroyed to adorn women's headgear. No arithmetician with his addition, multiplication and progression can help the people of this country to see birds where there are no birds. Figure as one may, the incontrovertible fact remains that the song birds have been destroyed in such vast numbers that the effect is appreciable; it has been seen and lamented by men and women in widely separated localities. There is no imagination about it. Those who have undertaken the task of awakening public sentiment to make an end of the song bird slaughter are not engaged in combating an imaginary evil. They are contending against a folly whose actual material evil results are perfectly plain to every one whose gaze is not confined to theoretical expansions of the multiplication table.

THE FIRST TEN THOUSAND ROLL of AUDUBON SOCIETY members will be reached and passed this month. New members are enrolling at the rate of a thousand a week. That means that the song bird feathers have had their day as hat decorations. Ten thousand—and by and by there will be tens of thousands—of people who think alike on such a topic must have an influence on the sentiment of the day.

QUAIL IN THE HAY FIELD.—If there are quail in the hay fields, instead of driving the mower over the nests or the young broods, put the dogs in to locate the birds, mark the spot, and when the team reaches it turn the horses' heads to one side. We suggested the plan last year. It was tried with success. It is a little trouble, but it may save the birds.

SUSTAIN THE PRIZE LIST.

THE officers of the National Rifle Association contemplate the preparation of a circular addressed to the public and asking for the establishment by wealthy citizens of prizes and challenge trophies. Wimbledon has scores of such gifts placed at the disposal of the managing council, and in this way records are kept up and certain trophies carry with their possession a championship in this or that style of shooting. In this way rivalry is kept bright and active, and those in control of the meeting feel encouraged and able to offer large added prize lists in money to each of the matches.

Creedmoor needs something of the same sort. It has had such trophies in the past, and they have helped very much in keeping up the interest in the art. The Army and Navy Journal Cup was such. The Hilton shield of to-day is another example of how popular such a prize may become and how much good it may do.

Gen. G. W. Wingate, the heart of the Association, in talking recently on this subject after speaking of the necessity of keeping up the militia to a state of efficiency as shots, said: "But in order to keep up this skill and bring it to the highest state of efficiency possible we must have competition and emulation, and in order to do this we must have prizes. The prizes given at Wimbledon are to a very large extent contributed by public spirited citizens, and are of such value as to make their acquisition an object for the volunteers. It is necessary that prizes going over from match to match be provided if these matches are to be continued. The Association cannot afford to provide them. What we want is some suitable trophy which can be contended for by teams from different organizations, and not held finally till won three times. Such a course would make the teams more ambitious and would insure a higher degree of skill among the marksmen."

This is exactly the pressing want of rifle practice to-day. It is hardly reasonable to expect militia marksmen to go out and give of their time and money without some incentive. The public has a direct interest in having the shooting ability kept up, and the rich class of citizens perhaps more than others, and it is but fair that trophies, prizes, gifts, etc., be offered, so that when victory does follow effort the winning guardsmen or team may have something to show as an emblem of that success.

We have faith that, if this matter is put strongly and clearly before the public, there will be a prompt and satisfactory response from many quarters, and, the system having been established and its good results shown, there will then be a steady and liberal support to the work which for a dozen years past the National Rifle Association has been courageously carrying on.

THE SIX-INCH TROUT LAW.—Several States have a clause in their fish laws forbidding the taking of trout under six inches in length. The provision is a most wholesome restriction on the unreasonable and foolish destruction of fingerlings. The line between trout fit to basket and trout unfit must be drawn somewhere, and the limit of six inches is none too small. The New York law did have such a clause, but the stupid politicians in the last Legislature did away with it. The markets are now open for the reception of the fry; and Mr. John D. Collins, secretary of the Utica Fish and Game Protective Association, tells that bushels of little trout taken in the headwaters of streams are shipped to New York, Philadelphia and Boston markets. This is not very encouraging to the public-spirited persons who have contributed time and money in efforts to restock the depleted streams of the State.

NEW YORK COUNTY SUPERVISORS.—The county supervisors in New York have authority to add to the protection of game and fish, but no authority to take from it. They may increase the close season on any species; they may not shorten it. The Rockland county supervisors have voted to open the woodcock season July 1. This they cannot do. The State law provides that the season shall open August 1: persons who shoot woodcock in Rockland county before that date will be just as much liable to a penalty as if the supervisors had taken no action; the unauthorized step of the supervisors will excuse no one.

CLUB RULES.—We have frequent calls for copies of club rules, by-laws and constitutions. Secretaries of gun clubs, angling clubs and game protective associations will oblige us by sending spare copies of their printed rules, that these may be in turn sent to organizers of new clubs.

The Sportsman Tourist.

DAYS WITH THE BARMECIDE CLUB.

VI.

CAMP, where so much time is always spent, should be made as pleasant, attractive and convenient as possible. Nay, more than that, if you can make it luxurious with the primitive means at hand, do so. There is little sense in a hand-to-mouth existence, in having everything at sixes and sevens, even in an outing where we are supposed to expect a certain degree of roughing. Roughing it does not mean the hard side of a board, water boiled until it is burned, nor a roof which "lets in the sunshine and the rain." The best man for roughing it is the one who knows how to smooth it.

Odd times were employed in clearing out the underbrush and fallen limbs in the front yard. The little path to the lake was attended to, and now in the darkest night we can go from shanty to raft without stubbing our toes or losing our temper. We made a table with comfortable seats, and our meals were doubly enjoyable that we could take them without cramping our legs and straining neck and back. We made a little landing where we could get aboard our raft as conveniently as stepping from one room to another. We doubled the thickness of our hemlock mattress, and studied in every way to smooth our roughing, and our work was a good investment. It saved time and words. Tom Draw's idea of the man best adapted to roughing it was the correct one. He believed in the man who was accustomed to a good bed and good food.

Guide wanted to go home. Would be gone two days. We gave him a basket of fine trout for his good wife and the children, and she sent back by him all the eggs he could safely pack. They were fresh, and with a few pounds of butter and a pair of chickens, which accompanied the eggs, admirably filled up a blank space in our bill of fare.

Roy struck one morning what he called the condensed essence of a holy terror. He was paddling the raft a few yards out from the lily pads between the landing and the outlet. He had attained with a liberal application of muscle a tortoise-like headway to the craft, when suddenly splash, he heard the upward and downward break of a trout. He turned quickly enough to see the great circling ripple extending larger and larger each moment. He brought the raft to an anchor and cast over the place where he had seen the jump. Expectation was away up on the top shelf. He could now and then see the lusty fellow cautiously following the flies as they were drawn away from him, but he seemed to be positive of the deception, and would survey it with an intelligent look that boded no good fortune for Roy.

Draw in thy shining leader,
Those flies ne'er cheat my sight;
You are luring me to danger
With your graceful casts and light.

Roy had about convinced himself that this gentleman would not be tempted, and drop by drop the spring of hope which bubbled up so brightly was running dry, when lo! the stretcher fly was taken with a flourish that would suffice to throw every train of disagreeable reflections off the track. There was a little preliminary skirmishing and then the battle opened in earnest all along the line, and the party of the first part was fully occupied with the rapid rushes of the party of the second part in the water. It was only by heroic remedies that Roy could prevent a junction of his leader with the water plants close by.

There was something akin to insanity in the movements of the trout, which was a very large one, yet there was method in his madness. Finally he approached the raft unwillingly, took a good look at the captain of the craft, and not being particularly impressed with his personal appearance, refused to venture aboard, and with a desperate rush accomplished his object of getting among the weeds, where he disengaged himself from his unhealthy alliance with the leader, which came back to Roy slightly shortened and with a fly missing. He will remember that tussle long enough to recount it to his speckled grandchildren. Roy was without doubt a trifle disappointed over the result of the strike and play, but took it very philosophically. "Good leather, my boy. You were partly mine for a few minutes anyhow. What further sport could I have counted on with you had I landed you? Now you are free to come again some other day, and thanking you for a pleasant visit I wish you good day and good luck. As the German Ambassador says, 'I don't think you was very much worth nohow.'"

The meeting adjourned. Roy immediately proceeded to repair the damage inflicted by the seceding delegate, and then pulled, poled or paddled a bit further down the shore, stopping occasionally to flirt his flies over some rippling circle made by a late breakfast. He gathered in a half dozen, which remained gathered, and with a kind word and a gentle hand he returned others to their homes, requesting them to add weight and wisdom against his next visit.

One afternoon we returned to camp, where we found Roy puffing away at his briarwood as though his life depended on his consuming a certain amount of tobacco in a brief amount of time. He had evidently not stumbled across prosperity in his morning promenade down the creek, but had evidently run afoul of a mosquito Balaklava, for his face was swollen large enough to give one the impression that it entertained serious thoughts of embarking in business on its own account. It made its owner look as though he contemplated suicide soon as he had finished his next pipe. But how mistaken one would have been to have taken his face as an index to his heart.

"Yes, I've had a splendid time. The walk down the creek was simply charming. The waters purred and sang their songs of summer gladness as cheerfully as of yore, the whispering leaves and swaying branches seemed on the best of terms with the morning breeze, which tempered the rays of the sun but did not disperse the mosquitoes to any appreciable extent, and they have got their work in on me accordingly—thanks to my forgetting tar and oil. But mosquitoes and blackflies must indulge in luxuries occasionally, else they might close shop and retire from business, and I don't propose to boycott them. No, if I didn't have what most people would call good luck, I know of something which has. Another hedgehog has been making a visit to our butter pail. Oh, yes, he's left some. He was no thoroughbred hog, you know. How he must have enjoyed such a find, and how I would have liked to watch him when he discovered the yellow bonanza. Great Scott! how he must have enjoyed it."

"You don't mean to say our butter has been stolen and that it would have afforded you any amusement to have seen a disgusting hedgehog making away with it? You make me tired, Roy."

"What! complaining again? Well, I do love what they call a grumbler, but not a chronic one. Give me one who uses a little judgment, even if it be only a little."

"Come now, Roy, with all your good nature had you been the beggar who asked food of the Barmecide prince you would have pulled his nose and pitched him out of his own window had he dared to have played such a measly old joke on you."

Complain? Well, if there was any complain in Roy's vocabulary it must have begun with a k and an u, for it would never have been found under the C's nor over them. He would be pretty thoroughly demoralized and weakened when he could not make an enjoyable meal of fresh air and mountain scenery. He could extract any amount of comfort and sport from the most unpromising beginnings and the most disastrous endings.

"Where are your trout?"

"There in the basket. I thought I'd just have a little smoke before dressing them."

"There are none here. This is your basket, isn't it?"

Roy, looking benignly on the proceedings, answered yes.

"There is nothing in it."

"Nothing in it? Why, man, it's full of pleasant reminiscences of which you are a part."

"Thank you. You'd better dress them after your next pipe."

"All right, I'll commence on you."

"Where are your fish, anyhow?"

"In the lake"

"That's a good place for them. They'll keep."

Murmuring avails nothing; and Roy's was the right spirit, and we entered into it, perhaps, not fully. To him everything ministers to his pleasure. The birds rioting in song, the shimmer of a rippled lake, the dripping of a leaky roof into his ear, rosy twilight lingering on the hilltop, the doughy heaviness of half-baked bread, the soft plaintive lullaby of a meadow brook and the persistent proings of empty mosquitoes are to him mines of pure delight. The guide said to him one day when he came to camp hungry as a wolf, "I'm very sorry, Mr. Roy, for I think I've scorched the potatoes." "Oh! that's all right; a little scorching improves them and I'm not sure but the more they are scorched the better they are." The only time we knew of his being out of condition and inclined to complain was when he said "Hang a country where dried apples are a luxury."

We saw deer in abundance every day, but refrained from even disturbing them, for the novelty of their appearance had worn off and they had become so accustomed to seeing and hearing us that they almost seemed as though they had lost a little of their instinctive fear of man.

Natural History.

THE FISHER.

THE fisher (*Mustela pennantiae* Erxl.), called by hunters "black cat," is not very abundant, yet sufficiently so to make a special part of the fall and winter hunt.

The size and shape much resemble the fox, excepting the legs, which are much shorter. The color is black all over except the shoulders and neck, which is mixed with a rich gray, when prime. His body is about two feet long, and tail one foot, bushy and black. Weight about twenty pounds.

The fur is valuable, commanding for individual skins in the wholesale market ten dollars. The texture of the hide is thick and tough as compared with the mink (American sable), but the fur is fine, black and long. This animal is very industrious and mischievous—a perfect pest to the martin hunter, sometimes following his lines of log traps for miles and knocking them to pieces and stealing the bait.

A general rule among fur hunters is to build a larger trap, about one in eight, along the mountain side, especially for the fisher, and by so doing the hunter not only saves his martins but occasionally secures a specimen of more value. It is not a sure thing, however, for the fisher is an artful and shy creature, especially if he is an old one and has been trapped before, as then they will often contrive to get at the bait without springing the trap.

The surest way to capture them is with steel traps, and the usual manner of setting it is in open houses built of evergreen boughs, about four or five feet high, and three feet deep. Stick down a forked stick in the extreme back of the cubby, and put your bait on it. Then set your trap in front of the bait (18 or 20 inches from it); cover your trap with fine moss so that it will all look natural; fasten the trap securely to a small detached tree, and tie the top of the tree so that the animal can swing it round at liberty.

The best bait is supposed to be fresh fish, yet he will take any fresh meat, and he is bound to have it too. I once, while hunting the Rangeley wilderness, was sorely tried by a fisher's robbing my traps, and set a steel trap for him, and for several weeks he outgeneraled me by stealing the bait. He knew just as well as I did where my trap set, and he would get around or over it and carry off the bait every time. I tried him in all the ways I could contrive, with no better success. Finally I set in another steel trap in front of the one already set, and next time I visited my traps I had him, and he had eaten or chewed into small pieces every little tree he could reach, even the bough-house in which the traps were set was a pile of chips.

I could always tell when I came in sight of a trap set for a fisher if I had him, for he would invariably eat up his house and every other available thing within reach, and form a mound of chips, a fitting monument of his industry and savageness.

They often gnaw off their foot in the trap and get away on three legs. This is sagaciously done by gnawing all the foot and leg that is below the jaws of the trap and then pulling out the leg. I once caught one with only two whole legs; he had been trapped twice before and lost a leg each time. They are very tenacious of life, and may be said to have "nine lives" like the cat family. The natural food of the fisher in this State is the white hare; they follow them persistently until the poor hare has to succumb to fatigue.

Their noise is like a child when it cries in a mournful tone, and again it makes a sharp, short whistle. The track on the snow shows only two feet, one a little in advance of the other, with sharp-pointed toes, when running, but when walking he spreads out his toes, making a broad track and very near together, diagonally opposite each other. They are very uncertain in their habits, going to-day in one place and to-morrow in another, so that it is difficult to set traps with any certainty for their capture. They run chiefly on

mountains and in the deep forest, beating back as civilization advances, maintaining their solitary habits in the wildest haunts. Some hunters assert that the fishers go into brooks for fish, but I have never noticed any evidence of this. I have caught several specimens alive for zoological gardens, both in this country and in Europe, but they have to be kept in iron-lined cages, as they will continually gnaw wood, and by their industry soon make their escape. Very few are trapped now compared to former years.

J. G. R.
BETHEL, Maine.

ADDITIONS TO CALIFORNIA AVIFAUNA.

THE occurrence of the yellow rail and European widgcon in this State was first recorded by Dr. J. G. Cooper in the Proceedings of the California Academy of Natural Sciences, Vol. IV., pages 8 and 9.

I do not know if the specimens were deposited in any collection and they may not now be found.

It may have been from an oversight or perhaps doubts as to the identity of the species that these two have been excluded from the birds of this State, and yet I do not understand why the statements and data of these birds again in California which I sent to some Eastern ornithologists should have been wholly ignored. I trust that my making known the following facts in FOREST AND STREAM and the presence of the skins in my collection will be sufficient to convince the most incredulous.

Porzana northracensis (Gmelin), Yellow Rail.—I took a female of this species on the salt marsh of Alvarado, Alameda county, Dec. 28, 1883. No. 1169, female. Writer's collection.

The bird flushed from close before me and flying a few yards dropped into the grass and skulked out of sight. It was soon found and pointed by my red setter and I picked it up alive. When first caught it made a sound very much like a young chicken in distress. Another specimen of this species which I have seen was shot near Cordelia, Solano county, last year by Mr. W. G. Blunt.

The small size and probable scarcity of the bird, together with its secretive habits, has no doubt caused it to be overlooked by collectors.

Anas penelope (Linn.), Widgcon.—I received a specimen in the flesh from the market in San Francisco, the source of Dr. Cooper's specimens, which, as he suggests, "were probably stragglers from Asia instead of Europe." (No. 542, male, Feb. 17, 1882. Writer's collection.)

I do not find the Carolina rail mentioned in any work to which I have referred as having been found in California, and take this opportunity to make known its possibly first occurrence.

Porzana carolina (Linn.), Sora.—Taken near Gilroy, Santa Clara county, Jan. 30, 1874. (No. 500, adult. Collection of D. S. Bryant.)

There is figured in Gould's "Monograph of the Trochilidae," the type and only specimen then known of *Selasphorus floressii*. I have just received a second example, shot by a boy near San Francisco, in May, 1885, which is a species new to the United States.

Selasphorus floressii (Loddiges). (No. 2,620, male. Writer's collection.) The appearance of the bird is strongly suggestive of a hybrid between the anna and rufous hummingbirds, but Mr. Ridgway, who identified the bird from my description, writes me that he is "rather inclined to consider it a distinct species."

Should additional specimens be taken they will prove of great interest.

WALTER E. BRYANT.

OAKLAND, Cal., June 9, 1886.

INOCULATION FOR SNAKE BITE.

THE following suggestions are made by Miss Catherine C. Hopley in a communication to the London *Globe*:

The success of M. Pasteur's treatment for hydrophobia will, or might, raise one more hope that the bite of the most venomous snakes may at last be combated. Inoculation for snake bite has, with very few exceptions, been barely acknowledged hitherto, and confined to the savage races. Strange that it should be so, while in this enlightened nineteenth century every means on earth within the range of science, excepting this, has apparently been tried in vain. But now that the success of inoculation for several other previously unmanageable maladies is so pronounced, the time may have arrived for attempts to be made with "attenuated" snake venom also. As is well known, some Oriental nations in long past ages practiced protective means from snake bite, assimilating their bodies with the venom by swallowing it, and also by feeding on the vipers. The power which the Psylli exercise over deadly vipers was attributed to this. They swallowed the venom, and also the flesh. The Arabs, Persians, Egyptians and African snake-charmers all used protective means; some may still do so, like the bushman of South Africa, to acquire immunity in handling deadly snakes. These protective measures among ancient and savage nations, and by the Indians of the Western world, have been too often described by writers of repute to call for recapitulation here. What has more to do with the present subject is inoculation, which has also been extensively practiced. The juices of certain native herbs, themselves powerful poisons, said to be "antidotal," are used also for external applications to the wound, and are injected under the skin for this purpose, and have been used by the Indians of both North and South America from our earliest knowledge of them. The juice of the famous *huaco* or *guaco* of tropical America is one of these, and was thought by Humboldt to impart to the body an odor repugnant to the serpents, as the American white ash, *Fraxinus americana* of the north, is death to the rattlesnake. Certain it is, that in all snake-infested countries, excepting India, the death-rate from their bite is comparatively insignificant. To the superstition and fatalism of the low caste Hindoos (and not only the very ignorant natives) must to a great extent be attributed their high death-rate. They take no rational means either to protect themselves from the bite, or to cure themselves when bitten, placing faith only in charms, incantations, and native quacks. Exactly ten years ago, when writing on this subject, and impressed by the fact that it should be left to savage races only to practice with success a safeguard so much to be desired, and when the conventional "20,000 per annum" dying of snake bite in India was greatly disturbing the public mind, I ventured to throw out the suggestion. "How would it be to try inoculation with some of the Hindoo plants on the natives, but first on some of the animals that are being bitten by thousands in the service of science? Should it be found successful, inoculation against cobra poison might be made compulsory in India, as it is for small-pox in England." (*Dublin University Magazine*,

March, 1876.) It would be well to inoculate a chicken or rabbit with the juice of the aristolochia or some other of the "antidotal" plants first, and then let the cobra bite it; the pain and terror suffered during the existing experiments would be only slightly aggravated, and with a possible favorable result. * * * * *

Both evils are inflicted by a tooth, but while the bite of a mad dog proceeds from a diseased state of the animal, conveying rabid saliva to the blood of the victim, the bite of a venomous snake conveys deadly saliva into the blood with lightning-like rapidity, the rabid saliva of the dog is weeks or months "incubating" its deadly power. Both have been said to be incurable, though the victims of both have frequently recovered, because in both cases the bite might not have been deep, and the patients may have had constitutional vigor to overcome the danger. Fear, feeble health, and nervous prostration have produced fatal results, after snake bite as after dog bite, when the patient otherwise might have recovered, because neither was the snake venomous nor the dog rabid. Pasteur affirms that terror and nervous prostration have sometimes induced symptoms that have been taken for rabies; and some ultratempere editors on "the other side" have set down to delirium tremens what a charitable friend has attributed to mad dog-ism. Cures and antidotes alike for snake bite and hydrophobia have been sought in vain, and baffled human wisdom from the earliest ages—for hydrophobia even more than for serpent venom; and now that a remedy for this dire malady seems well assured, may we not hope that a triumph may arrive for the other also, something that will at length reduce the death-rate in India from snake bite?

BEAR AND MOOSE QUERIES.

Editor Forest and Stream:

I would be very glad if some of the old hunters who read your paper would favor me with information on one or two questions that are not by any means elucidated in such natural histories as I can refer to.

What is the average and maximum recorded weight of the grizzly bear (*Ursus horribilis* Ord.)? One rarely hears an enthusiastic sportsman estimating the weight of the grizzly he recently saw or killed at much under 1,000 pounds. But whenever the scales have been brought in, so far as I can ascertain, it has been voted an immense bear that went over 500 pounds.

What is the maximum authentic recorded height at the shoulder of the moose (*Alces machilis* (Linné) Gray)? I should say that six feet is about the average height of a bull moose, but a hunter friend, a professional, who has killed a great many moose in the Nipissing region, rather surprised me with the following statement: "In October, 1880, Geo. Ross killed in Paxton township, Muskoka, a bull moose that measured 8 feet 2 inches at the shoulders, its antlers weighed 84 pounds and the beast made 800 pounds of clear meat. I saw and measured it myself immediately after it was killed. In the same month and in the same region of Ontario I myself killed a bull moose that was 7 feet 2 inches at the shoulders."

It is very difficult to know how far to credit these hunter statements, but it seems to me just possible that occasionally the moose may attain to such a great stature. A scientific friend totally discredits the statement because the dimensions given are far beyond the known limits of individual variation. But it must be remembered that the variation is in the direction of this animal's specialization; that is, for example, the chief specialization of the common mole (*Scalops aquaticus* (Linné) Coues), is its enormous hands, and they are by far more variable in their proportions than any other part of the animal's anatomy. So also the curlew (*Numericus longirostris* Wils.), its remarkable specialization and its most variable proportion is the length of the bill. Why, therefore, in this case, may not the moose be subject to extreme variation in the elongation of its limbs, which probably is its chief specialization.

However, whatever doubts may be cast on the above records, I have full faith in the honesty of the narrator, and am very sure that the mistake, if any, is due not to deliberate exaggeration, but rather to the baneful habit of trusting one's memory, that has, ere now, led the best-meaning of naturalists into lamentable error. ERNEST E. T. SETON.

New York, June 21, 1886.

BIRD NOTES.

DUTCHESS COUNTY, N. Y.—Of robins the county is full to such an extent that fruit growers complain bitterly of their depredations. Meadow larks are fairly numerous, though not abundant. But the rollicking song of the bobolink is seldom more heard. I saw none and only heard the one trill of a single bird. The beautiful orioles also are very rarely met with. This doubtless is in great measure due to the late fashion of ladies' hat decoration. But to their credit be it said, that through the widely pervading influence of the FOREST AND STREAM, aided by the numerous AUDUBON SOCIETIES, this cruel fashion has been almost entirely discarded. Whether our bright plumaged birds and songsters will ever again be as plenty as heretofore is problematical. There is one, our earliest and sweetest singers, that sings right on, rain or shine, all day long, that has escaped the demands of the milliner, owing to his modest plumage no doubt, and that is the song sparrow. Those I found almost everywhere, and I think they have largely increased of late years. What has become of the chattering martins? I have seen but one family this year. Thrushes, catbirds and the frisky little wren are now seldom seen. Is the miserable English sparrow responsible for their disappearance? J. H. D.

THE TOLEDO EAGLE.—East Toledo, June 14.—Editor Forest and Stream: The eagle hatched April 26 is seven weeks old to-day. It is about one-fourth the size of a full-grown eagle, and is fledging nicely and assuming a fine appearance. It still depends on the mother to pick its food in small pieces, which she puts in its mouth. While the old birds have white heads and white or straw-colored beaks, the young bird is black, with black head and jet black beak. A week ago to-day a gentleman who claims to know everything about birds tried to make friends with the eagles. He was warned to keep away from them; but he put his hand inside the cage, when the female jumped from the nest and put three talons through his right hand. He is here to-day with a very sore hand, and says he will never again try to make friends with the American eagle. When everything is quiet I go inside, clean out the cage and give them fresh water. They pay no attention to me, but if there is any body around I have no business inside the cage.—HENRY HULCE.

BOMBI.—The Central Park Menagerie has a new attraction in Bombi, a rhinoceros just imported. The beast is 11½ feet long and 5½ feet high; weight, 7,000 pounds. As he stands munching hay he appears to be about as high as a horse, one-third longer, and three times as thick through the body. His legs are short, immensely thick, and decidedly bowed; his neck and head are typical of immense power; his horn was sawed off years ago, but quite a stump remains. The armor of hide plates which protect his body seem to be several inches thick. His eyes are small, his mouth enormous, and his usual expression one of contemptuous indifference. Altogether he is a marvel of ugliness, toughness and strength. Even the heaviest of Barnum's elephants would probably have a sorry time of it in a battle with such a brute. Bombi was captured near the delta of the Ganges some ten years ago by a party of hunters, who shot the mother and captured the young one. For the last three years he has been in the collection of Hagenbach, the well-known dealer in wild beasts. The Park Commissioners paid \$5,000 for him.

CROWS AND MINNOWS.—Your correspondent "J. P. W." mentions seeing a crow apparently fishing on Richardson Lake the other day. I have witnessed the same thing there, but I have always explained it in this way: The fish taken by the crows are, in my belief, the dead eubs and minnows which float down from the works of the live-bait sportsmen. Such fish are always plentiful on the surface of that lake in the spring time, and I have often seen the gulls, and once or twice the crows, feeding on them. If "J. P. W." is the "J. P. W." I think he is, I should be very loth to question his opinion on any matter concerning the lake in question, for his experience there has been very extensive and he is a close observer of nature.—SPECIAL.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

IN THE OLD BACKWOODS.

WHEN I first started for the great virgin forest that many years ago robed with an almost unbroken sheet the northern part of Wisconsin, where deer were said to be abundant, the sweetness of anticipation was considerably reduced by anxiety to know what I was going to do with all my game. Familiar with the shotgun and nearly every kind of game upon which it is used, a ranger from childhood of the eastern woods and fields, with keen eyes for hidden squirrels and hares in their forms, a fair shot, too, with the rifle at the target, I quite naturally supposed that all I had to do to shoot deer was to get where the deer were. The results seemed a matter of course.

It was early in October that I reached a settler's cabin far in the depths of the "Big Woods" of Wisconsin; just at the beginning of a long spell of that Indian summer that the Northwest alone can show. A dream of sunlight flooded the woods, the winds were still, the leaves, all dry and crisp, covered the ground so that the scamper of a squirrel over them could be heard at a hundred yards.

"There's no use of huntin' now, the woods is too noisy," said my backwoods friend.

The words fell on my ear like those of an unknown tongue. Even had I comprehended them all the advice that the most experienced hunters in the world could have given could not have held me back. So early the next morning I turned my back upon the little clearing and was soon alone in the wilderness.

Scarcely half a mile from the house I began to find signs that even the most inexperienced eye can not fail to read aright. But one animal could make the narrow, sharp-toed tracks that in all directions were so plain upon the spots of bare ground, and in places had pressed dead leaves in the soft soil beneath. Cautiously I peered around, looked down the ranks of tree trunks, explored the green vistas among the bushes, that filled the more open places, and gazed long and earnestly around that amphitheater of the woods where all things fade into a blur of mingled form and color. Tall and trim was the basswood, and grandly solemn the old white oak. There was the dark, shaggy bark of the black oak, the smooth, dark gray shaft of the red oak, the maple all aflame above, and other ancient trees with leaves of brown, crimson and gold yet unshed. With brilliant scarlet the clustered head of the ginseng shone along the ground; there, too, were the purple berries of the fragrant spignet; ferns still green with life stood along the shady slopes; wild cherries glistened with intensity of jet, and wild plums of great size, some of golden hue, others of pink, looked temptingly at me. Yet nowhere was there anything that looked like a deer.

I listened for the sound of bounding hoofs that I had before heard before the hounds, the crash of brush, or the long-drawn snort or plaintive bleat of which I had read. Yet I heard only the drumming of the ruffed grouse, the jarring of leaves beneath the spring of the squirrel, the tattoo of the woodpecker on some high, dead limb, the harsh, jingling note of the bluejay, or the grating notes of the raven wheeling on high.

With step as quiet as thick-soled boots, dead leaves and abundance of dry twigs would permit, I moved along, winding through openings in brush and trying to avoid everything that could make a noise. Cautiously I crept over huge logs hollow at one end, covered with toadstools at the other, and dark and green beneath, only, perhaps, to see the ruffed grouse spread his banded tail, and roaring upward and onward, fade from sight; the gray squirrel scamper to his native tree, the black squirrel taking a sunbath on some outstretched limb, or both fleeing in terror from the little tyrant red squirrel. Yet ever bright before fancy's eye loomed a mighty buck with shining antlers of not less than "ten points," with broad chest and massive neck, glossy coat and great lustrous eyes, standing in a nice open place, broadside, of course—the veritable deer of the artist—distance about forty yards.

The further I went the more certain seemed the speedy realization of this ravishing ideal. For every where the signs of deer grew more plenty and more fresh; and suddenly I came upon a place beside a bush where a great buck had

pawed a square yard or more of ground clear of leaves and sticks. The damp, dark soil was laid bare, and in it were a score or more of large hoof tracks whose smooth indentations still shone with freshness. The bush—a thorn apple—was on that side all broken, scarred and frayed, and its bright little red apples were scattered upon the ground beneath. I had heard of the deer hooking and tearing the brush with their horns at this time of year, and as the sap still shone fresh upon the scratches on the limbs, I looked around in instant expectation and clutched the rifle with the fondest grip of hope. The rustling foot of a northern hare over the dead leaves as it sped away from the clump of blackberry bushes beyond as I advanced sent a tidal wave of ebills along my spine, and my hand trembled so that I could hardly have hit a barn without fastening myself inside and stopping up the knot holes.

Hours passed, yet that buck appeared not except in imagination's field, where every hour he grew larger, fatter and more numerously pronged, yet on I went with faith unclouded. I looked with contempt at the woodchuck that stopped at the mouth of his hole in the butt of some old tree to take a look at me before vanishing within; and even the porcupine which I had never before seen I allowed to feed undisturbed upon the topmost twigs of the lofty elm. I even felt some disdain for that charming bird, the ruffed grouse, that every few minutes burst with resounding wing from my path, or gazed calmly at me from the thorn apple or sloe bush where he was feeding, and for that lovely fish, the speckled trout, that flashed in every little brook I crossed or stooped to drink from. My heart was set upon deer, deer shot with a rifle and secured by still-hunting, and I was nearly blind to all the beauties of what were then the loveliest woods upon which the sun ever shone.

The sun well in the meridian, a growing feeling of vacaney within and a most inviting log finally convinced me that it was time for lunch. But just as I was about to sit down four deep indentations in the ground with fresh, fine soil and moist leaves scattered just ahead of them caught my eye. I stood for a moment as if petrified. One who has never been in such a position can little imagine the feelings of the tyro whose expectations have out-soared even his conceit when such a reality first breaks upon him with all its chilling intensity. I did not have to try the indentations with my fingers to see if they were hoof tracks. The case was distressingly plain, but I could not resist a look over the log for the preceding tracks. Just over it in a little patch of thin, low brush was an oval depression where the leaves and grass were flattened. The bottom of it was warm and it was about fifteen feet from the tracks on the other side of the log. I had heard much of "jumping a deer," but for the first time had an idea of what it generally means.

Without stopping to think how such a large animal as a deer could have thus taken the alarm and bounded away in such open woods without my seeing or hearing it, I started on the trail, looking keenly down every dark lane among the tree trunks, and giving at every flirt of a squirrel's tail or burst of a grouse a convulsive jerk of the rifle, the reaction of which gave me an ague for the next five minutes. But the tracks of the deer showed it still in full bound, now clearing fifteen now twenty feet at a spring, now going clear over a bush which could have been easily avoided, now skipping the trunk of a fallen tree that it would have been as easy to pass under.

Suddenly three or four new sets of tracks joined the first ones, and a moment's investigation showed that a doe and two fawns had started from a neighboring thicket and gone off with the other deer, alarmed, no doubt, by its running.

I hate to confess it, but I was actually verdant enough to think that my chances for a shot were now increased instead of diminished, and full of confidence I started on the trail. In about four hundred yards the length of the jump began to decrease and they suddenly ceased. Just at the end were a few faint tracks where the deer had turned half around and stood still for a moment. Bidding my struggling heart be still I looked cautiously around. I cannot resist a smile as I write it, but I really expected to see no less than four deer—all looking at me—in some open place, as I had so often seen them in pictures.

Instead of that my eye quickly caught some more freshly ploed up dirt in some brush about twenty feet away, and on went the trail again with longer jumps than before. And so I followed it mile after mile, finding plenty of places where the deer had stopped and turned around and then run on again with long jumps, until the sinking sun warned me home. Yet I saw no deer and heard no sound of bounding hoofs.

Day after day for about a week I roamed the woods with about the same results. Tracks of deer were everywhere. On the points of ridges, in little clumps of brush and in old windfalls were fresh beds of deer, often warm, with the tracks of long, leaping feet leading away from them. Once I heard the thump of feet upon the ground over a ridge, but by the time I got there I could see no signs of game except the soft, dark, moist earth and dead leaves scattered about by the sharp-toed feet of a descending deer. Along little creek bottoms where grass grew long and the wild cherries were rank, were places where the bears had rolled and played and fed, yet vainly I sought a glimpse of the shaggy coat. Here the old one had turned over a log to look for grubs, and there she and the eubs had been feeding upon the oak-clad ridges, where the acorns lay thick upon the ground. But, as with deer, my chances seemed in inverse proportion to the number of tracks I found.

Before I had the faintest glimpse of a deer, November came, and with it that radiant change which here is so much greater than in the East. Chilly were the days and cold enough the nights; when the sun shone at all it was with a wan, pale face; the wind sang through creaking trees and snowflakes rode the blasts. The woods, of late so spangled with color, seemed sorrowful and subdued. The ruffed grouse had nearly hushed his drum and the squirrel rarely appeared except during sunny noons. The jay was still heard in the oak where the acorns yet clung, the raven croaked from the lofty pine, the woodpecker beat his tattoo as before, and sometimes a buzzard was seen in the sycamore by the creek; but nearly all other birds were gone. The trees were now quite bare of leaves; the low bushes beneath were nearly the same, and in any direction I could see twice as far as before. The carpet of dried leaves and sticks was now softened down by heavy rains and made no such noise as before; and my thick-soled boots were now replaced by soft moccasins that made an almost noiseless step. What wonder then that all the strings of hope were at concert pitch as I again threaded the woods?

It was at the height of what hunters call "running time," the surest time they all say to kill a deer. "Now the merest

tyro can knock one over," say many. So often had I heard this and similar talk that I rather wished it were not "running time," for I felt no pride in doing anything that any tyro can do. For in spite of the tremendous lowering of conceit I still felt far above the tyro.

I now found tracks more abundant than before, which to my verdant brain meant, of course, that deer were much more plenty than before. Less than half a mile from the house I found them numerous and fresh, and with a thrill of satisfaction I cocked the rifle and looked around for something running. Down long vistas of dark and gray tree trunks my eye hopefully wandered; but nothing was running there. Up a long flat through which ran a little creek I saw tussocks of light-gray grass still green at the bottom, slopes all black and shiny with clusters of ripened berries, red haws and thorn-apples red with dense masses of fruit. The leaves were all off, and I could plainly see (so it seemed) two hundred yards or more through the thickest brush. The golden wild plums still hanging on the trees seemed brighter than ever, and so did the scarlet of the high bush cranberry. But there was a remarkable scarcity of anything running. On the other side the ground rolled away in short ridges, heavily clad with oak, with little patches of brush on their points and in the heads of the hollows between them. But all this was easily seen through (so it seemed), and all the running there done was by a red squirrel along a fallen tree in a hollow.

Having heard that creek bottoms were good places for deer I followed one for about half a mile. The quantity of tracks indorsed the principle which I had followed, but there was nothing running there but a weasel running over a log and a big hare making good time for the cover of a windfall. I began to feel that a glimpse of something even walking would not be a serious disappointment. Tracks were still plenty and fresh; everywhere were spots where the ground had been scraped and pawed or freshly plowed by plunging hoofs, plenty of bushes bent and torn and broken; plenty of lovely openings to shoot through; a vast amphitheater of lovely ground for something to run on; yet nothing running, walking, nor even standing.

"Only a fawn, eh," I was about to remark as my backwoods friend who preferred to hunt alone brought in one that evening. But I caught myself before it was too late. It suddenly occurred to me that that fawn would look immense if I had shot it.

That night it rained a little and in the morning there was a slow drizzle—a capital day to hunt. On the whole yesterday had not been a good day. It was too cold and the leaves and sticks were stiffer than they should be for success. To-day all was soft and silent under foot.

I was soon alone in the deep dark woods. They were wrapt in gloom and silence. No grouse boomed across my path; all the squirrels were still; the bluejay's tuneful squall was hushed, and even the ever busy woodpeckers seemed gone for ever. Nothing but the drip from the trees or the low breeze sighing through their tops. Nothing but cold wet tree trunks all around; dismal looking blackberry, currant and raspberry thickets, weary looking ferns and spiguet; all but the ginseng, whose scarlet head shone the brighter for being wet. No more inviting logs, no dry sunny slopes to rest on; and, to crown all, nothing running.

So wore on the day until about noon, when, in crossing a bit of low ground covered with fallen logs I saw a flash of white in the distance. It was in the furthest circle of trees, very small and very faint, but it brought my rifle in a twinkling from my shoulder. But by the time the rifle was down the white was gone. I could plainly (so it seemed) see everything around the place where it vanished. "It must have been fancy," I thought as I moved on, "or"—At my second step forward the white flipped again just over the distant line of brush, once, yes twice; the second time very faintly but unmistakably, and then all there was still. I went to the place where it disappeared as quickly as possible. There were the fresh tracks of descending hoofs, the soft, dark dirt and wet leaves torn up and scattered about at intervals of about fifteen feet. I gazed long and musingly. I had at last seen something running, or, to be accurate, the tail of something running.

On I went over ridges, across hollows, and along creek bottoms, mile after mile with clothes wet through; yet there was nothing running except an occasional drip from my hat down the back of my neck. But about half an hour before sunset I came to a sudden halt. About one hundred and fifty yards ahead of me was a small, dark looking animal moving over a ridge. It was low, angular and homely in shape; so utterly unlike the deer I had before seen before the bounds, that I might have taken it for a goat or even a hog had I not known there was nothing of the kind in these woods.

Nevertheless the rifle came off my shoulder and I started for the ridge just as the animal passed over it out of sight. Reaching the top of the ridge I looked cautiously over into the next hollow. There were huge fallen trees, the red berries of the prickly ash and the black bunches of the late "choke cherries" all shining in the wet, but no animal was there. As usual there were plenty of nice open places for a deer to stand in and, while I, as usual, was looking in them for a deer and neglecting all other places, there was suddenly a dim flicker of white on the dark horizon of the forest, gone before I could raise the rifle.

"And this is 'running time,'" I thought, as once more alone I stopped to muse on the uncertainties of life. Were all hunters liars? If not where were the deer that were now so tame? No mortal could walk much more quietly than I had walked, yet the only running I had seen was such as no mortal could stop with any rifle yet devised.

A faint sound along the ground cut short my meditations and brought my rifle to full cock at the same moment. In a second more the sound came full and clear, the unmistakable sound of trotting hoofs. Scarcely had I turned to look in its direction than there emerged from some thin brush along the ridge a dark animal on a slow trot. Its head was well down toward the ground, but upon it were a pair of massive horns with half a dozen times on each, and all pointed directly at me. And its distance was scarce fifty yards and that growing rapidly less.

As I raised the rifle—an old time double muzzleloader—and glanced along the sights, I had little time to be surprised; but into the little time I did have was condensed more genuine and joyful surprise than I had ever known before. I could scarcely realize it, but it was true, I hadn't a particle of the buck ague of which we read and hear so much. My nerves were charmingly calm, my hand most blissfully steady, and the sight I took on that coming deer would have sufficed to hit a hundred successive birds with a shotgun. I felt a lofty contempt for the rest of the universe as I saw the bright silver light glitter in line with the low, rakish-looking

A HOME MADE BREECHLOADER.

thing now less than thirty yards away, and pulled the trigger.

Bang went the rifle, and wondrous was the change. As if rising out of the smoke itself stood before me in a twinkling the deer of the artist. There were the great thick neck proudly erect, the big glossy body looming broadside, the fine pointed nose, the flaring ears turned full upon me, the deep, dark eyes full of inquiry and wonder, and over all the broad branching horns with points innumerable, all glittering in the sun, which was now shining from a clear place in the western horizon. There was a sight worth all the toil and patience and disappointment I had endured. And to crown my happiness, I was still delightfully cool, with nerves quite unruffled by my miss with the first barrel. What a supreme moment was that in which my eye again ran along that rifle and saw the silver shine this time upon the massive shoulder that was too big to miss!

But the next moment was infinitely more supreme, for as the smoke of the second barrel cleared away there stood that buck in exactly the same position, his large lustrous eyes looking as if they had not even winked. And there stood I with an empty muzzleloader and fingers benumbed with wet and cold. With the muzzleloading rifle passes away a peculiar experience in the hunter's life. It is somewhat to be regretted, for no hunter is finished without it. The man who has not loaded a muzzleloader with bare hands on a cold day with a deer gazing calmly at him within stone's throw until he gets the cap about half on the tube and leaving just about as it is half adjusted has missed something that all the rest of his hunting life can never supply.

To get one ball down seemed to take an age, and all that while the buck stood there like a statue, and growing ever larger to my excited eye. Just as the cap that I was about to put on dropped from my trembling fingers into the leaves, with a long-drawn "phew," the deer rose in a high bound and galloped away to one side with nearly half a yard, as it seemed, of white rising and falling over his glossy rump at every bound. By the time I got another cap ready I was once more alone, musing upon the new form of "buck ague" of which I had never heard—being too confident because of the game being too close. So intense were my musings upon this that I had to call in the aid of a log just behind me, for the weakness of despair had suddenly seized me in the knees, and my hands shook as if palsied.

"Saints defend us! Here he comes again!" I involuntarily exclaimed, as another deer, looking so much like the first that he seemed the same, came in sight half walking and half trotting, from almost the same place from which the other had come.

Bang went the rifle before I saw any sight upon it at all. Through the smoke there was a gentle undulation of soft gray for a few yards. Then it suddenly stopped in an opening among the trees—another statue even more graceful, if possible, than the last one had been. But it had none of the curiosity of the last one, and as I raised the rifle it turned again into a line of wavy gray, which disappeared over the trunk of a large fallen tree just as I turned the second barrel upon it and fired. In a moment more there was a farewell wave of white in the darkening circle of the furthest trees and once more I was alone.

But not long. For no sooner had I loaded the rifle and begun to feel a trifle composed than I was almost petrified with amazement at seeing another deer coming from the very place from which the others had come. Though I had before heard of several deer following each other at this time of year I had forgotten all about it; and the havoc wrought in my nerves by the sudden apparition was such that I decided to let it come closer than the others had come.

This one, too, was a buck, smaller than either of the others, but quite large enough to satisfy all that now remained of my former ambition. On he came only walking, but still moving fast, for the deer is a fast walker. I had plenty of time in which to collect myself, but found time having the very opposite effect from that desired. In a moment more the buck was passing me some twenty yards on one side, with head downward and quite unsuspecting of danger.

Intending to make sure of him I drew the sight of the rifle upon the very center of his body, I saw the silver shine this time. It danced all over the gray-coated side, but just as it shone for an instant about on the middle (as it seemed) I pulled the trigger. The smoke came back in my face, but when it cleared away there was no deer in sight. I rushed to the spot and found him stretched full length upon the ground, fat, glossy and stone dead.

It is the proper thing to act the child over the first deer, and I was about to indulge in a hurrah and a somersault when I was seized with a sudden sinking of the heart. I had just noticed the bullet hole and the collapse of pride was fearful. It was in the neck, some three inches from the butt of one ear, and just about three feet nine inches from the spot at which I fancied I was pulling the trigger.

T. S. VAN DYKE.

QUAIL IN DUTCHESS COUNTY, N. Y.—In an extended ride through Dutchess county last week, I was greatly pleased to hear the shrill whistle of Bob White ringing from so many meadows. It was a pleasant reminder of years long gone by. But as the fields are quite generally posted, their taking off in the fall is to be enjoyed but by the favored few. But even this is vastly better than their extinction by indiscriminate slaughter.—J. H. D.

ANOTHER BREECHLOADER.

EACH monthly issue of the Patent Office report contains many entries of patents granted on breechloaders. There seems to be a steady supply of them; but occasionally there is one which does not get into the official report, and of this class is the weapon represented in our cut. It is the handiwork of George M. Grant, of North Tunbridge, Vt., and shows what a boy will do when he makes up his mind in a certain direction. George is 14 years old and lives on a farm, just an ordinary New England homestead, with a great barn and a tool house, with its thousand and one odds and ends, old buckles and bits, ancient saws, sleighs and surcingle, queer bits of almost every conceivable sort of junk. George wanted a gun. There were squirrels to be knocked over, impudent little rascals, who whisked their tails in George's very face as though knowing that he had no gun to pop them with, nor any ready cash to buy one at the village store. Then there were woodchucks, equally brazen, and the young Vermonter was sure he could rid the place of the "varmints" if he only had a firearm of any sort. Then there were crows, too, and scores of things which could be blazed away at if there was only a gun to do it with.

The will was there, what of the way, which the old saying has it is always to be found in juxtaposition thereto? The way was in that pile of old junk in the corner of the barn. Poking it over, young Grant found an old Allen pistol barrel. So far good. Now how to use this so that it would enable him to use the .32-caliber cartridge which he found he could purchase so cheaply, for George was to have a breechloader. No muzzleloader for him. Not much. A portion of a discarded Newhouse trap supplied the spring, and then an old musket stock, which may have been carried by some relative who followed George's great namesake, and the young mechanic set to work. Carriage screws, bits of wire, lag screws and such wood as he could cut to purpose assisted him in building up the queer but effective contrivance our artist has so well pictured. The barrel, it will be seen, is held by an iron strap, evidently from the heel of a scythe, which slips on over the front and holds the muzzle end of the barrel in position; then the rear end of the barrel has inserted in it a bed screw. This has a slight motion through the screw eye, while the nut upon it prevents it going too far and at the same time acts as an effective stoppage to the discharge of gas, etc., rearward. The front end of this horizontal screw rests upon the cartridge head. Now how to give it a sharp blow so that the impact should ignite the fulminate. Here comes in the Newhouse trap spring. One end was made fast, the other was brought back, and the wire crosspiece put behind the small pin seen on the front edge of the weapon. An ordinary wooden button acted to liberate the retaining wire when aim had been taken. The free end of the spring rushing forward struck the long screw bolt, and this acting as a firing pin, started the cartridge and the bolt action weapon was discharged. To reload, it was necessary to slip off the front strap, when the removal of the barrel permitted the pushing out of the shell and the insertion of a fresh cartridge. It worked capitally, and the worthy bearer of a proud name was happy and the envy of his companions, while each night saw the precious piece safely tucked beneath his bed.

A drummer chanced that way, one of these pilgrims of commerce who leave no nook nor corner of the country unvisited. He saw the quaint weapon and very soon won the odd contrivance by the promise of a bright new store-made gun. No sooner had it reached the Winchester Arms Co. store here and been duly wondered at than the drummer who had caught it in his travels sent it to the FOREST AND STREAM with the following letters:

NEW YORK, May 7, 1886.—*Editor Forest and Stream:* This model (or whatever you call it) was made by George M. Grant, of North Tunbridge, Vermont. He was fourteen years old when he made it. When it came to our notice, Mr. W. W. Converse, president of our company, saw it, and thought that as the boy had shown so much ingenuity he should be rewarded, and we sent him one of our single shot rifles. I inclose you a copy of the letter which I have just received from him.—WINCHESTER REPEATING ARMS COMPANY (P. G. Sanford, Agent).

NORTH TUNBRIDGE, Vt., May 4, 1886.—*Winchester Arms Company:* Gentlemen, I received that rifle all right last night and was very much surprised and pleased. I have wished I had one like it a good many times. I shall prize it more than anything in this world. I never had such a costly present before. And, gentlemen, I thank you more than I can tell; whenever I look at it I shall think of you. Once more I thank you and close. I remain yours truly, GEORGE M. GRANT.

How the weapon came to be made was the question which we put to the lad, and his answer comes to complete the story of how pluck and brains were properly rewarded:

NORTH TUNBRIDGE, Vt., May 8, 1886.

Editor Forest and Stream:

I received your letter wishing to know all about that rifle I made little more than a year ago. I had a broken pistol that would not work. I got to thinking one day if I couldn't make a rifle out of it. At that time I had four .32 rim-fire cartridges. I tried one and found they would fit. Then I went to work, when I had time, to make it. I had no one to tell me nor any one to help me. I done it alone. I did not have to buy anything; I found enough on the farm for all I wanted. I worked a number of weeks on it before I got it to work to suit me. When I got it done I loaded it with a .32 rim-fire cartridge, and set up a mark six inches square, eight rods off, and fired. I hit it the first time. I fired a good deal after that and hit well. I have no cartridges now such as I used then. After awhile I lent it to a friend of mine and he let a gentleman have it who was stopping around here, and he carried it to New York. That is all I can think of to describe.

You can guess my surprise at receiving such a costly rifle as these gentlemen made me the present of. I shall think of them and thank them whenever I use it. I shall remember the Winchester Repeating Arms Company as free-hearted gentlemen, and prize the rifle they sent me more than anything I have got. I will close. I remain yours truly,

GEORGE M. GRANT.

"JUMPING DEER."

Editor Forest and Stream:

Being thoroughly familiar with the movements of the *Capreolus macrotis* when in motion, I wish to correct an error in the cuts given illustrative of the "Carberry Deer Hunt" in the FOREST AND STREAM of June 3. The "jumpers" do not fold or bend the legs as represented in the cuts; but let the legs hang as does a carpenter's work bench. Immediately before touching ground the knees bend forward and the hocks backward, and that instant the feet touch bottom, the legs are forcibly jerked straight, the forelegs giving the elevation and the hindlegs doing the propelling, all by that one sudden jerk. That a deer can jump the distance ascribed to these animals is not incredible, but that they do it without reaching out is little short of the marvelous. The track of a jump made by one of these short, though strong-legged creatures is a hole in the snow, all the feet going down near the same spot. The ears, head, neck and entire body retain a fixed appearance, while the whole form goes bowling along unlike anything else in nature. No dog can keep up, not even the view hound, if the deer runs nearly straight, and a horse—the best saddle-horse—loses gradually until the rider pulls him off. Two miles will sicken any horse carrying 160 pounds or upward in such chace. It is downright funny to ride beside a jumper on the prairie and watch him bound along like a rubber ball without seeming to lag; fact is he has himself set for a stand still, but appears incapable of overcoming a momentum which he received in the cove of brush that he was started from by the sniffling hounds or your comrade's horses.

Repeatedly from the saddle and from my snow shoes have I beheld this wingless thing really fly, in the "Carberry Sandhills" and elsewhere; and I have killed them too. Though much shorter-legged than the Virginia deer, they average a heavier weight. Does will reach 170 pounds, and bucks nearly 300. The "great rusty red beast charging through the brush" is very true to life. Mr. Seton's story reads like that of an honest man, and his perseverance is that of a true and enthusiastic sportsman. I assume that he never had the fortune of a clear and prolonged side view of the jumpers, else he would have rendered them standing, even in the air.

HURON.

A CALIFORNIA OUTING.

AWAY we go, leaving San Diego city at 4:30 P. M. one afternoon in February, bound on a duck hunt. Driving north four miles we pass through Old Town (the oldest white settlement in California), with its picturesque adobe ruins and majestic old palms towering far above the quiet deserted hacienda. We arrive at the San Diego River, turn sharply to the left, drive down the levee placed there to turn the river from its original channel (as it bid fair to fill up the channel of the Bay of San Diego), cross the river and find ourselves on the edge of a vast tideland covered with stubby tule and eel grass, intersected by innumerable sloughs, deceptive in depth, breadth, and generally covered with thousands of ducks which come in to feed with the flood tides. The marsh surrounds False Bay, a sheet of water three by six miles, very shallow, and with a very narrow entrance close to the famous mussel beds of our seaside resorts. The surface of the bay is, in season, literally covered with black brant, geese and ducks of every description, together with every variety of shore birds, from the great heron to the wee sandpiper, while the waters are filled with mullet, halibut, bass and myriads of sharks and sting rays, the latter sometimes growing to an immense size. I have seen one cast up dead on the beach measuring, as near as I could calculate, nearly seven feet across.

We located ourselves where the river tumbles off into a slough, making a fall of a couple of feet, and where the ducks were noted for coming to water.

It was a beautiful sunset. We were looking directly west, and the sun was just dipping its beams behind the low sand dunes; the sullen roar of the Pacific was brought to our ears just loud enough to make it musical. Before us for a number of miles was nothing to be seen but tules, and on the right the northern edge of the bay surrounded by low hills, the sky one mass of rose-colored clouds and edged with the fine gold of a gorgeous sunset. To the left, grand Point Loma, crowned by the lighthouse, loomed up majestic and somber, brought into added prominence by the lights of Old Town and the lights of the fishing fleet which anchor under its lee. Behind us is the beautiful Bay of San Diego, calm as a mirror, save where now and then a waterfowl disturbs its glassy surface, reflecting the lights from various shipping, and the thousands of city lights and the wide, white moon, just rising into view behind Mt. San Miguel. The air is soft and the whole situation so entrancing that I regret to break the quiet. Not a sound is heard save the melancholy *cak, cak, ka-a-a* of the rail buried deep in the tules, and the occasional long-drawn sigh from one of the dogs.

Still Merritt and I sat there, our guns apparently forgotten, our eyes bent seaward and our whole being evidently wrapt in a contemplation of nature's beauties. It was a beautiful sight—one will never forget, and if only a brace of old green-heads would—bang—thump—and "Fetch him here, Rowdy, good doggy. Look at this mallard," spoke up Merritt, as his dog proudly brought in as fine a specimen as I ever saw. But I hadn't time to look. The tide had been running in for several hours, and the ducks seemed to be all coming in at one time. In every direction could be seen band upon band of ducks all headed for the one goal, the mouth of the river, where we were awaiting them. The fun waged fast and furious. We became excited, stepped off into the sloughs two or three times, used up more shells in half an hour's work than I thought possible, and the dogs were simply frantic—one would start to heel with a bird, and thump would come a big duck almost on top of him.

The flight came in spurts. For ten minutes one wouldn't see a duck, and presto—whio-oo—swish—bang, bang, "Dead bird, fetch him here, you Rowdy; come in, Trix," bang, bang, and so it would go again for a full ten minutes or so, and then the flight would stop as suddenly as it began.

We ran out of shells about 9 o'clock, and proceeded to retrieve and hook up, and thus ended a most enjoyable little hunt.

A. B. PEARSON.

SAN DIEGO, California.

MONTANA'S CATTLE KINGS.

[Correspondence New York Times.]

WASHINGTON, June 20.—The report that Agent Williamson, of the Indian Office, has been disregarding the law or his duties by permitting the illegal occupation of Indian lands in Montana is doubted by Commissioner Atkins, who furnishes some of the facts concerning the lands alluded to in a recent issue of the FOREST AND STREAM. Agent Williamson was the personal appointment of Secretary Lamar, who had known him for 40 years. He has been known by Mr. Atkins for 50 years, and both Mr. Lamar and Mr. Atkins are prepared to vouch for his integrity in this matter, believing that nothing has been done that will not bear the strictest scrutiny.

The agreement made by the United States with the Crow Indians for a cession of the western part of their reservation provides in one section that in case the tribe consents to permit cattle to be driven across the reservation or grazed thereon, the Secretary of the Interior shall fix the price to be paid for the privilege of all income from such sources to be turned over to the tribe. When Agent Williamson took charge in December, 1885, he found a number of persons grazing cattle on the reservation, notably Briggs and Ellis, Ash and one Wilkerson, to whom he has been charged with issuing permits. The Indians had no objection to make to their presence on the grazing lands. Subsequently Briggs and Ash asked for renewals of their permits, and the Columbia Land and Cattle Company asked for the privilege of grazing a herd of 5,000 cattle in the northeast corner of the reservation, all agreeing to pay such a tax per head per annum as the department should fix, and agreeing to leave the reservation whenever they should be ordered to do so. On May 12 last these applications were referred to Agent Williamson to ascertain the wishes of the tribe and to recommend such a compensation as he might deem reasonable.

Mr. Williamson investigated the matter and reported to the department that the Indians had no objections to leasing the lands for grazing purposes, provided there was no interference with their farms. Mr. Williamson also reported that there were no Indians on the land asked for for grazing purposes, and reported that trespassers were on the ground from whom no revenue was received. Agent Williamson also reported that he considered the terms offered—50 cents per head—to be reasonable and satisfactory to the tribe and recommended that the permits asked for be granted. Under them from 8,000 to 10,000 head of cattle would be given pasturage. The Indian Department has not passed upon the question of these permits, but it is said to be probable that the Government will not grant them. It is said that the business of business men and McGee have asked for a similar grazing permit, but Mr. Williamson, to whom the matter was referred, has not reported on their application.

Relative to the statement that one Barry had grazed several thousand sheep on the reservation—he had asked in February last for permission to graze 3,000 sheep for three or four months, for which privilege he offered to pay 5 cents a head or \$150 for the lot, which terms the Government refused to accept. Nevertheless he grazed his sheep there and did not pay for the privilege.

With regard to Lowell, Nelson Storey and Dilworth, to whom the FOREST AND STREAM charges that permits have been granted, the Government has no information, nor has the department received applications for permits from them, though one McCormick, of Junction City, had recently applied for a permit to graze 1,000 head of cattle. In 1884 the Crows leased 1,500,000 acres of their reservation to Blake & Wilsch for grazing purposes for a period of ten years from June 1, 1885, at a rental of \$3,000 per annum, payable semi-annually in advance. It is possible, to the Government officials believe, that it is part of this land, leased by the Indians without the approval of the Indian Department, upon which the parties complained of by the FOREST AND STREAM are grazing their cattle, and that none of them hold permits granted by Mr. Williamson. There are supposed to be many of these unapproved leases, issued by the Crows to the cattle-men, of which the Government knows nothing, and it is known that part of the reservation is infested by trespassers who have no shadow of right upon the lands. Because of this last fact, Agent Williamson favors the granting of grazing permits, as he believes the parties who hold such permits would drive off the trespassers. To sustain the claim of the department that Agent Williamson would not grant grazing permits, as it has been charged he has done, the authorities point to a letter sent by him to R. B. Briggs, of Big Timber, Montana, under date of May 20 last, in response to his request for a renewal of his grazing permits, in which Agent Williamson says:

"I have been greatly annoyed from complaints of parties who have been trespassing on the reservation, and others who desire to have permits to graze cattle on the reserves as well as other privileges, that you are enjoying privileges which they can't understand. I therefore desire to be distinctly understood that all my actions are open to the inspection of the world, and I do nothing without the approval of the department at Washington, as these matters are of no profit whatever to me, but on the other hand, are of very great annoyance, besides taking my employees from the great and pressing service I have for them to perform here and sending them to look after matters of this kind."

In brief, then, the department denies, in behalf of its Crow Indian agent, the truth of the assertions of the FOREST AND STREAM relative to the illegal granting of grazing permits by Williamson, basing this denial upon a thorough knowledge of his probity, and a lack of any accurate information as to whether the Crow Reservation is used by the stockmen, either with or without permits, or under leases granted by the Crows without Government approval.

MINNESOTA GAME NOTES.—Ashby, Minn., June 17.—From present indications we are led to believe that prairie chickens will be unusually plentiful the coming season. Old birds were more numerous than usual during the spring months. There has been no rain nor thunder storms to injure the eggs or to destroy the hatch. Young birds are in fine condition at present writing. Ducks that hatch in this section of the county are also in excellent condition and plentiful. We have a good hotel, the Hotel Kittson, livery teams and experienced drivers can be had at reasonable prices. D. A. Lindley of New York, and George Smith of Chicago, with other friends, found this a very satisfactory place to shoot ducks last fall, killing from 100 to 200 red head ducks per day during their stay. M. A. Gilbert of Chicago, spent 30 days shooting here. The largest number of ducks killed in one day was 213, the smallest 46; his total killing was 2,760 ducks, principally redheads. This shooting is done in Christina Lake, three miles north of Ashby. Stationary blinds are built with brush, etc., from 200 to 300 yards out from the shore, large enough to cover a boat in which one or two men sit, placing 20 or 30 decoy ducks to lakeward from the blind. The places chosen to build the blinds are in the natural feeding place for the ducks. Many thousand ducks were killed in this way by sportsmen from all parts of the country. Col. John Wilson and his son B. M. Wilson of Chicago; Dr. A. Head, U. S. N., Hartford; L. C. Thomas, Columbia, Tenn.; J. L. Grandin, Tidoute, Pa., spent the last hunting season here with their families and many friends, who would stop for a day or two shooting. Mrs. J. L. Grandin made an excellent record at shooting both prairie chickens and ducks; she is very proud of her ability as a shot. Hundreds of the lovers of shooting make this their headquarters during shooting season, the most of them from St. Paul, Minneapolis and Stillwater. Among the most prominent are G. R. Finch, C. Seabury and J. Tarbox, St. Paul; Chas. Nelson, Senator Sabin and J. Castle, Stillwater; F. E. Daniels, C. H. Russell and John Hall, Minneapolis.—W. S. F.

PENNSYLVANIA NOTES.—Athens, Pa., June 14.—One day last week a farmer living about four miles east of here killed a bald eagle measuring seven feet from tip to tip; it was thirty-eight inches long and weighed nine pounds. When he fired only one shot hit it, breaking the end of the wing, and it came at him so fiercely that he was obliged to club it to protect himself. This is the first one killed near here in several years, and I mounted it for the G. A. R. post of this town, and they will place it in their rooms. Grouse have bred well, and last week a friend saw two fine coveys of young about the size of quails. He was also fortunate enough to shoot four mink at one shot that were living quite near them. I hope the bounty on minks, owls, weasels, etc., will so thin them out that grouse and quail will have a chance to breed without being molested.—P.

THE BOOMERANG.—Vicksburg, Miss.—Editor Forest and Stream: Noticing in FOREST AND STREAM of June 3, an article on the boomerang, in which Mr. Barnum is said to have pronounced it a myth, I copy for you the report of Charles Wilkes, Commander of the U. S. Exploring Expedition, on the above-named weapon. In speaking of the weapons of New South Wales the author says: "The most extraordinary is the boomerang. This is a flat stick three feet long and two inches wide by three-quarters of an inch thick, curved or crooked in the center, forming an obtuse angle. At first one would calculate it was a wooden sword very rudely and clumsily made; indeed, one of the early navigators took it for such. It is an implement used both for war and in the chase. In the hands of a native it is a missile efficient for both, and is made to describe some most extraordinary curves and movements. It is grasped at one end in the right hand, and is thrown sickle-wise, either upward into the air, or downward, so as to strike the ground some distance from the thrower. In the first case it flies with a rotary motion, as its shape would indicate; after ascending to a great height in the air, it suddenly returns in an elliptical orbit to a spot near its starting point. The natives in its use are enabled to strike objects which lie behind others with great precision, and to reach those near as if by a back stroke by throwing it at a particular angle. The diagram exhibits the curves of the angles of 22°, 45° and 65° respectively, which I have attained in making experiments with it. On throwing it downward on the ground, it rebounds in a straight line, pursuing a ricochet motion until it strikes the object at which it is thrown. Birds and small animals are killed with it and it is also used in killing ducks. The most singular curve described by it, is when thrown in the air above the angle of 45°, its flight is always then backward; and the native throws it standing with his back instead of his face to the object he is desirous of hitting. It is a favorite weapon with the natives and is frequently seen ingeniously carved.—D. M. P."

AN ADIRONDACK GUIDE'S NIGHT TRIP.—Sunday a telegram was received at Boonville for John W. Chisholm, of Boston, who was supposed to be on the Seventh Lake of the Fulton Chain, announcing the serious illness of his wife. The telegram was not sent until Tuesday morning from Boonville and as the case was an urgent one George Goodsell and James Kitts started in a rowboat from the Forge House to Seventh Lake at nearly dusk, the message having arrived there at about that time. The journey up the lake was made in a very fierce wind, and under a disadvantage owing to the darkness. Upon arriving at Seventh Lake, a distance of about sixteen miles from the Forge House, Guide Goodsell could find nothing of the party, and in almost total darkness returned to Hess camp, where it was learned that the party of which Mr. Chisholm was a member, had gone to Big Moose Lake, about eight miles from the camp. Nothing daunted the guide and his companion, and over lake and through the trail of the woods they continued, arriving at Big Moose Lake at about two o'clock in the morning, where they delivered their message. Mr. Chisholm at once accompanied them, started at daylight and reaching Boonville at about 5 P. M. of the same day, where he took the train for his home. Considering the roughness of the lake, the darkness and distance traveled, the carrying of the boat from lake to lake and other obstacles overcome, it was a trip which took pluck and perseverance. About forty miles were traveled by lake and carry, and most of it in darkness. Many of the Fulton Chain guides are made up of the right material and George Goodsell is among the number.—Boonville (N. Y.) Herald.

A SENSIBLE AGREEMENT.—Gainesville, Texas, June 16.—Editor Forest and Stream: The inclosed agreement looks strange, coming as it does from one of the best game districts in the State, but it will show which way the wind blows in Cooke county.—C. C. The agreement is as follows: In the absence of a law to protect game we hereby agree not to kill any prairie chickens before July 15 next, or quail before Sept. 1, and limit our bag of chickens in one day to the number opposite our names: (Signed) C. Chambers 12, F. A. Tyler, Jr. 12, J. B. Spragins 12, W. O. Dutton 12, J. M. Potter 12, C. C. Potter 12, J. M. Rowland 12, M. V. Cheatham 12, Joseph Cottraux 12, L. K. Hawkins 12, Burt Simpson 12, J. B. Turner 12, J. B. Morgan 12, B. S. Brooks 12, J. Means 12, J. C. Rollins 12, J. R. Stevens 12, M. H. Brown 12, H. D. Buck 12, A. L. Frick 12, R. E. Phillips 12, J. H. Garnett 12, S. D. Parkinson 12, Walter W. Hudson 12, J. T. Rowland 12, J. Z. Keel 12, E. P. Hill 12, C. O. Turner 12, E. P. Bonnar 12, Claude Weaver 12, Green Weaver 12, Geo. F. Peery 8, J. W. Phillips 12 (Gainesville, Texas, June 14, 1886).

KANSAS.—Cimarron, June 14.—I went to the buffalo, southwest of here, in November last; saw two bunches of three and six and killed a two-year old heifer; my companion killed a cow. I am going again in November and shall get meat or stay till I wear the prairie out traveling over it. They are scarce and wild as mustangs. Prairie chickens are nesting here for the first time this season. I am trying, with fair success, to keep them from being killed. Antelope are almost all driven south by the settlers who are setting up the country along the A. T. & S. F. R. R. They are abundant and tame one hundred and twenty-five mile south and southwest from Cimarron. We shall have a large time in November about Great Bend, Kan., coursing jack rabbits, at the meet of the National Coursing Club.—W. J. D.

AN ARDENT HOUNDING PROTECTOR.—The Boonville, N. Y., Herald gives this report of what will be done by one of the gentry whose cause the Herald espoused last winter: "The Sherman party report seeing many deer. At Beaver Lake they saw five at one time; but the preparations for destruction this season are formidable. At Indian Lake on the South Fork, a person who was last year suspected of doing a good deal of unlawful hounding, has erected a large camp and got in a thousand pounds of supplies. He intends to stay all the season, and in the fall to furnish illustrations of how to fill up the woods with deer by driving them with hounds, according to the plan adopted at the recent session of the Legislature."

IRONTON, Mo., June 19.—Quail wintered splendid. At present they are very plentiful, more so than usual. Turkey were numerous in the spring, and we have had a very dry season, which will help our fall shooting considerably. Squirrel are plentiful in the St. Francois River bottoms, about eight miles from here. Deer may yet be found within two miles of Ironton. Fishing was not good this spring; the season was too dry.—W. E. B.

JONATHAN DARLING, of Maine, has brought suit in the Massachusetts courts for alleged seizure of a box containing deer and caribou skins, heads and antlers, in the close season. Darling represents just the class of game butchers whom the protective laws are designed to restrict, and he is naturally the individual to raise a rumpus when his goods are seized.

CROW INDIANS IN THE PARK.—A recent dispatch from Fort Keogh, Mont., reports that small hunting bands of Crow Indians have been killing many game animals in the Yellowstone National Park. Col. Weir, Superintendent, a few days ago caught several of these hunting parties.

!!!—A supposed empty pistol in the hands of John Atkins, a 12 year-old boy of Pottsville, Pa., was accidentally discharged at a children's picnic while pointed directly at George Farquhar, aged 15. ??? ! ! !

KANSAS WOLVES.—An Easton (Kan.) man last week captured an old she wolf and seven young, for which he received \$24 bounty.

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.—*Adv.*

ONDAWA.

THE high and mossy mountains roll along
Wavelike, beside thee dressed in feathery green,
Whilst mighty equinox—a parent strong
Of myriad rivulets, with royal mien,
Head gray in cloud, o'er shades the varied scene!
Through dells and grots or festooned dreamy woods,
'Mid plains of emerald or solitudes
Dark with the crag, or from the canopy
Of leafy myst'ry, loud in childlike glee,
Thou fliest laughing, wild, tumultuous—free.

And from thy limpid deeps or cascade's whirl,
Or the translucent eddy's oily curl
Leaps the bejewelled trout! Thus richer far
Than all the mines of gold art thou, Oh Oudawa.

MANCHESTER, Vermont.

CAMPS OF THE KINGFISHERS.

XVI.

SINCE Jim and Knots had forgotten to wind up their "talk" of the day before, after breakfast they were off again in a boat for another hitch at it and another day with the bass. Knots had reconsidered all his well-laid plans and designs against the trout—a "mighty narrer escape" for the trout of Maybert's Creek from being wiped out of existence.

The fishing proved but little better than that of the day before, but we got enough to eat and a few for the neighbors. Either the bass had not yet taken a notion to feed after the storm, or had failed to find their haunts, and by Sunday night old Knots was growling in a mild way at the lack of sport, and even hinted that he would doubtless cut his visit a few days shorter than first intended, but old Dan and I had been out with him for a good many years and knew the symptoms; his stock of "festivities" was running low, and we could foretell the result.

Around the camp fire that evening Dan and I laid out a trip to the extreme head of the lake for next day, to see if the fishing would prove any better up that way, and after an early breakfast next morning we took the philosopher's boat, a light running cockle shell that had been sent over to him from home a few days before, and were half way to Alexander's point by the time the sun was well above the trees. We did not hook on a frog until we were above the point, and then we fished slowly along the incurring shore to another point nearly a mile above, without a solitary nibble. This was somewhat in the nature of a backset, but the old pelican and the skipper had encountered numerous small disappointments of the kind in the last score of years, and we did not mind it much.

A short distance below the point we met Meade, the boatman, who had brought Knots to camp, with a couple of anglers out from Traverse City for a day's fish. They were in a light yawl, Meade at the oars and the anglers trolling with rods instead of the usual handlines. They had no live bait, but had taken four or five pickerel and as many bass with spoons which was quite encouraging to them, but Dan and I could not quite figure out just the amount of our part of the encouragement.

At the point we found a bar or sunken reef reaching away out in the lake eight to twelve feet under water, along the lower side of which we fished carefully till it was lost in deep water, then turning we fished back on the upper side with equal care in glorious looking water for longsnouts or bass without a tightening of our lines to disturb our pulse. The signs had tailed us and not an abrasion marked the speckled coats of our frogs trailing idly astern as we took our way again up shore.

While yet a mile and a half from the head of the lake the wind rose suddenly, coming from a couple of points east of north and in a few minutes the whole lake as far as we could see was covered with whitecaps and the water too rough for our little boat and we were moved to go ashore and wait for the blow to go down, but after waiting nearly two hours with no sign of a lull we got in the boat and started back, pulling close along inshore to escape the full force of the blast. When we had worked back nearly a mile in this fashion, the little boat burying her bows in a wave every few feet with a bang that threatened to split her bottom, the fickle wind went down as suddenly as it had come up and in less than thirty minutes a gentle breeze was actually blowing from the opposite quarter or down the lake toward camp. To quote old Dick M., "there's nothin' of such a derogatory natur' as wind."

It was now rather late in the day to carry out our original plan, which was to make a circuit around the head of the lake and fish back on the east side and cross over to camp about dark. We had also intended to make a trip up Cedar Run, a stream coming in at the upper end of the lake from the southwest, which we had been told afforded some very good trout fishing. From where we landed to get out of the blow we could see the

edge of the dead cedar swamp through which it formerly flowed for nearly three miles before entering the lake, but now (I tell it to the neighbors told us) the stream had no current through the swamp, the channel, however, four and five feet in depth for more than two miles up, can be readily followed between the walls of leafless, dead trees, killed by the backwater, to near the outer edge of the deadening near the hills, whence it emerges from its hiding of living green.

Above the backwater for a mile or two, the Horton boys and the schoolmaster had told us were some "mighty nice holes" with good trout in them, which Dan and I have no reason to doubt, but somehow something kept turning up from day to day—mainly laziness—to prevent us from making another trip to verify it, and as Knots said, "we had only their unsupported word" as to the fine trout fishing to be had in Cedar Run.

However, I have thought it worth while to point out the stream to the brethren, that in case any of them wander that way they may at least drown a fat worm or two in its limpid waters, and if they happen to hook a "scrouger" they will be glad Uncle Dan and I didn't get to the creek that day, for that same big fellow would have been the very identical trout we were looking after.

Fishing slowly and patiently along on our way back we again ran across Meade and the two "spooners" a short distance above the sunken reef, just starting across the lake to fish down the other side to the sawmill, where they had left their team. The bottom of their boat was entirely covered with fish; long snouts of two to four pounds, and a fine lot of bass, the largest of which, Meade said, would "bustle six pounds," all taken with the spoon. Dan and I looked at each other and said nothing; but I have labored under the conviction ever since that each was longing for the other to kick a little common sense into him. Dan and I had plenty of spoones and trollers—in camp; we had forgotten to bring our "calamity boxes" along. Dan and I had plenty of speckled frogs in our buckets; Dan and I hadn't had a single, solitary sign of a symptom the whole day. Our spirits were crushed; our pride as anglers humbled and trailing in the dust (or water), and we turned our boat campward, as old Dave Edwards used to say, "a feelin' too dredded incendiary to express our prevarication."

KINGFISHER.

AMONG THE ALDERS.

IT rained quite hard on Tuesday night, and I knew well that the next morning would be a good one for trout. Then the day promised to be overcast with perhaps light showers toward noon. "This is the time," said I to myself, "and although I have suffered nearly all night with the toothache, I must not let such a morning pass."

It was with these reflections that I prepared myself for a start immediately after breakfast, and took my way over the hill and toward the "Low Meadow." I commenced fishing in the pasture lot when it was possible to cast a fly; but this state of things soon changed. Branches of black ash, yellow birch and occasionally a maple began to extend themselves across the stream, and now and then an alder bush (as it were to remind one of what I was coming to) seemed to take especial delight in growing just where it interfered with my east.

As yet I had only taken three or four fish, none of them large, however, nor even up to the medium size of a good brook trout. It occurred to me that they might be some of Dr. Fulmer's more recent stocking of the Dingman Creek, in his efforts to improve the streams of Pike county, Pa.

But now there is no chance for a fly, and if I will satisfy my hunger for trout or entertain my friends, I must resort to the unartistic method (as some think) of bait-fishing. I do this, not only with reluctance, but with fear. I have a borrowed rod, light and limber as a switch, good enough for fly-casting, (?) but from past experience I knew most embarrassing among the alders.

However, there is no help for it. I must have some trout. I have been longing for them. Like many others, since the spring opened, so the change of hooks is soon made and now I am ready. No I am not, for as I take up my rod I find the line entangled first on a root, then, as I loose this, upon a huckleberry bush, (the tall kind) and finally upon a branch that grows just over my head. But I loose it at length and I see the water running deep and swift by the trunk of an old tree that stands on my side of the stream. Just below it is a deep pool, completely covered by alders that spread themselves almost flat upon its surface and interlock on each side. "Here is a chance," I say, and with the utmost care drop my line into the running water. The hook floats down, down, almost to the very edge of the alders. I keep it on the top of the water just as I would a fly. Now I have a rise and I strike, forgetful of the branches above, below and behind me. I fail to fasten the hook where I intended to, and fifteen feet up stream I saw it whirling round and round a dried twig that sticks out from the side of a birch and the rod bends like an umbrella as I make an effort to recover the hook before it is really fast. It is of no use.

I have to lay the rod down and then get a stick and break off the twig. And now after a lot more of untangling the bait is in again. I wait as before, only this time the line is shortened and I remember how I am to strike. The hook has reached its old quarters and he secures it again. Now I have him and he is doing his best to get back under the alders. There is considerable flopping below me. It is no use though. The rod draws as well as gives. But how am I to land him? I have no net. I am doubtful if I could handle one even if I had it in this bush. We must tire him a little and then seize the line and lift him on the bank. My! how the branches do bother me, but he is landed at last. He is a half pounder and just as large a fish as I care to handle under present circumstances. I take another one here of six ounces weight. Now I have to make my way through the bushes for some yards. They are as thick as they can stand and there is a fallen tree in the way. What a time I have. The rod is pushed before me of course and I try to follow it. It catches sometimes and so does my foot. It is a good thing I think that my eyes are set well back in my head or they would catch too. Certainly my nose has had several scratches. However, by dint of care, by bending and turning, and picking my cap up when it is knocked off, I come to a place where a large tree has been cut down, and consequently where there is an opening in the alders. A nice place has to be passed through, where there is a "jam" in the stream, made by branches and sticks that have floated down against an old tree that has fallen across the creek. No doubt there are fine fish there, but it is impossible for me to get them. An axe must go before the rod. The alders are too thick and they are growing in the "jam," while the branches of a yellow birch covers the pool that lies below. Reluctantly I have to pass this

place. But now I have a chance again. And for once it is a good one. We can stand by this stump and let the line float down to the edge of the alders below. We do this and another fish rewards us. He will not weigh quite a half pound, and I swing him on land just as I used to when I was a boy. Meanwhile I had forgotten what was behind me, and over I go on my back close by the side of the stump. The fish and rod fly back among the brush, and when I have recovered myself I find the trout jumping and wriggling among the dead branches, while the tip of the rod is broken short off within six inches of the end.

And now a new difficulty arises. In my haste to get away I had forgotten to bring either thread or string. What shall I do? I must not be cheated out of my fun. There is only one thing to be done, and that is to take off the leader and cut a small piece from my new silk line. The splice is soon made and I am ready for another cast. This time I want to drop the bait by the side of an old log that I see a few inches under water. I make the effort, but some way or other I miss my calculation or perhaps the rod is to blame, and the hook goes a little too far. It is about to wind around an alder twig, when I jerk it back, and then it is fast just behind me on a birch sapling. This is pulled down, and after a few minutes spent in untangling again I am ready to throw in. This time I am even worse off than before. I see the hook is fast upon a branch that seems to be growing just above the surface. There is no unloosing this. It is fast, and the only thing to be done is to wade in and save my leader. This I do, frightening all the fish—if there are any—and feeling a dash of cold water as it goes down the leg of my boot.

But I go on. Now my cap is off and now my basket catenches. Now the end of my rod is fast, and now there is a midge in my eye that stings like fire. Then it seems as though all the spiders in the place had been spinning their webs just on a line of my nose, and I cannot stop for a moment before the black flies and mosquitoes settle on me. I am in a hole now, and the mud is more than half way to my knees. "Oh!" I say, as I rub my eye and a mosquito is piercing the first joint of my little finger, "how that thing does sting." This may be fun, I think within myself. I dare say it is for boys, but when they get to be as old as I am, they better content themselves with fewer fish and easier walking.

But I manage to get out of this place as I have out of many other difficult places, and I see before me quite a little reach of creek, where a few large trees grow along the bank, and the alders and huckleberry bushes are in the rear. Now I wipe the perspiration from my face, and after drawing a long sigh of relief, I began again. I must fish this place carefully. I do so, and not a fish rewards my efforts. On I go, and just below the reach I come to a hole. There two more are taken. They would weigh nearly half a pound each, and below this I got another. They are drawn up and seized by the hand. I see a nice place ahead and I am making my way to it. The swamp huckleberries and a low growth of alders and laurel intermingle here. They seem almost to be wedged in between each other. I think I am getting along nicely among them, when my foot catches and down I go. As I fall I think I hear something go tick at the end of my rod. I am right, too. The ferrule of the third joint is broken off. Keep out of alders, fellow fisherman. Let boys go in there with their short, stiff rods and supple joints.

Another piece of line comes into play now, and the appearance of my friend's rod is considerably changed. While I am making this splice I think the birds are silent. I do not recollect of hearing even those two old corks that had been drumming all the morning. It seemed to me that a good deal of the light of nature went out just at this time. The repairs are made at last, however, and although my heart is heavy and I have many misgivings as to my success, I still kept on, saying to myself, "I am bound to have some fish." And sure enough, but a few steps from the scene of this disaster I took another trout and then another. They were nice ones, too. Then there was a catching of the line again on the stream and its entanglement overhead, and I was all the time fearing that the splicing would give way. Two small fish had to be thrown back. For a little distance now I have quite open fishing. It was good for my poor rod that it was so. But this ceases again. I am coming to a shallow rapid, I see, where the water spreads out and then contracts below in quite a nice pool, and entirely surrounded by tall alder bushes. From where I stand to the foot of the rapids the alders cease and their place is supplied by trees of a larger growth. Consequently it was not very difficult to steer my crooked rod, so I soon made my way down.

At the foot of the rapids I lost a nice fish. I could not persuade him to try the bait a second time. I am standing in the water now close beside a large birch and trying to get my hook into the middle of the pool. Here the water runs quite rapidly but it is still on the side. With a straight rod there would have been no difficulty in making the cast that I wanted to, but now the matter is more perplexing. First the line fastened itself on a black alder burr, then a twig interfered with its running, then I touched the branches overhead with the tip. The cast was made at last, however, and I waited for the result. I did not have long to wait either. The moment that I succeeded in getting the hook where I wanted it I felt the fish. I knew as I struck that it was a good fish too. But I did not hook him, and my line brought up upon a dry twig only a few feet from where I stood. But the hook is in again; and this time I have him. And now I see the question is whether he shall be allowed to run back under the alders or come up stream. I feel the strain of a good sized fish, and I also feel my splice slip to one side on the rod. But I hold, and there is a flopping on the top of the water below, while as yet I cannot see what is making it. The fish is trying to shake himself free. I say making it. "He may break the rod, but not an inch of line will I give him." This flopping and diving continued for some minutes, bending the rod until the tip almost touched the alders. I am just about congratulating myself that he is going to give in when a sudden dart up stream reminds me that he is not prepared for that yet. He pauses about six feet from where I stand, just at the foot of the rapids. I can see his whole length and the bright spots upon his side. He is a good twelve inches long and as plump and well formed as a trout could be, and I have the satisfaction of knowing that he is well hooked. Now he goes down stream again with a rush and I feel my splicing slip again. But it holds, and again there is a flopping on the top of the water. He is getting tired, though. His struggles are not what they were at first. What he objects to most is my holding his nose out of the water. And I say to myself, "It is a shame to treat such a game fish in such a cruel manner." No doubt many a fisherman has felt the same compassion for his victim, and even regretted while he

rejoiced over his success. But now I must land him. He is pretty well exhausted. And the question is, where shall I attempt this landing? The low banks are quite steep here and the water runs close to them. Then they are covered with bushes. I look up the stream and there is nothing encouraging. Not one clear spot but at the foot of the birch near where I am standing. One of its roots dips straight into the water, and on the top of this is a patch of moss some foot and a half square. I decide to make this the landing place. The fish is drawn along gently. He is completely tired out, and just as he reaches the landing I seize the line and lift him on the moss. My hands are on him before he makes his final struggle, and he is killed.

Now I have to work my way out to the clearing that I have left. The alders here are too thick to penetrate, and I resolve to strike the stream again just a little further down. I do this and the first place I try brings me another good fish. The walking here is better too and my clumsy rod is more manageable. Now I am coming to a good hole I know. It is beneath a spreading ash and large laurel bush above it to screen me, and a chance to strike up stream without getting my line caught. My plans are soon made and I toss in. The hook scarcely reaches the place for which I intended it before I have a rise. I throw again and again I feel a tug. This time I am sure. No I am not. My line comes back to me and my leader is gone. It is but the work of a moment to put on a new leader and hook. They are all in my book dampened and ready for immediate use. But no more bites nor rises. I am quite through the alders and the sun has just come out. Thirteen trout are the result of the expedition and I hope after the bites and scratches are well for some better health. I cannot say that I will ever try the alders again. This time I think will suffice. Let younger men go there, though I am.

STILLABOY.

QUEBEC FISHERY LAWS.

FROM an official publication by the Department of Crown Lands, we extract the following relating to the fishery laws: The Confederation Act gave the Dominion Parliament power to pass laws for the regulation and protection of inland as well as other fisheries. The owners of land bordering on any non navigable river or lake, possesses the exclusive right to fish for salmon, trout, or any other fish in the waters in the front of his land, and may exercise that right or transfer it to another. The right of fishing in water in public, ungranted lands belongs to the Province, represented by the local government, by which it may be disposed or leased to private parties; and any person who fishes in such waters without authority to do so, may be prosecuted for trespass. All fishing, whether in private or public waters, must be done in accordance with the fishery law and regulations.

Salmon may be killed with rod, reel and fly only, from April 13 to August 31, but foul or unclean salmon shall not be killed at any time. No salmon or grilse of less weight shall be killed. Nets shall only be used in tidal waters. The minister, or any fishery officer, shall have power to define the tidal boundary of estuary fishing, and above the limit so laid down it is unlawful to fish for salmon except with rod and line, in the manner known as fly surface fishing. Except in the manner named, salmon shall not be fished for or killed by any artificial pass or salmon leap, nor in any pool where salmon spawn.

It is unlawful to fish for or catch any kind of trout (or "lunge") in any way whatever between the 1st of October and the 1st of January, and at no other time except by hook and line, in any inland lake, river or stream except in tidal waters. White-fish shall not be taken in any manner between Nov 19 and Dec 1, nor by means of any kind of seine between July 31 and Dec. 1.

Close seasons for bass, pike, pickerel (*doree*), maskinongé and other fish may be fixed by the Governor in Council to suit different localities. By the Federal regulations no person shall take these fish between April 15 and May 15.

It is obligatory upon any person who has no domicile in the Province of Quebec, and who desires to fish in the salmon rivers under control of the Province, to procure a permit or license to that effect from the Commissioner of Crown Lands before beginning to fish. Such license shall be granted upon the payment of a fee of \$10, and shall be valid until the close of the angling season of the year in which it is granted.

MINNESOTA TROUT STREAMS.

THE stranger taking in the surroundings of Duluth is continually crossing creeks that anywhere east of Ohio or north of the Lake Shore Railroad would be said to contain trout. Anglers coming from Northern New York are surprised and puzzled; Pennsylvanians are hard to convince, while Michiganders say they are the troutiest-looking creeks I've seen in many a long day. Why have they no trout in them? Yet they are devoid of such specimens as the soul of the angler delights in. Once in a while after the spring rains we quietly take a trip to one or two of them and bring home a few trout caught with the plebian worm. In vain the angler lays out fly after fly. They are not fly-hungry. The worm, larvæ and other grubs coming down streams in these warm freshets, fill these fresh-run trout until they are too lazy for anything and won't rise at a fly. Nothing draws them but a minnow. Thus far we have not stooped; it is necessary to draw the line somewhere. We prefer to draw it on minnows. If stooping is to conquer, we have thus far come away vanquished. A worm is low enough, yet we saw some trout weighing close to two pounds taken from a river I have before described in columns of FOREST AND STREAM; worms were not enticing to their palate; a fly skittered over them in vain, but the moment a minnow was pitched into the pool they all wanted it, and metaphorically were tumbling over one another in their anxiety to get on to that hook. What could an angler do but turn green with envy, shut his eyes to keep from longing for a string of trout, twenty of them, not one less than a pound and all caught with minnows, and yanked out with a 16-foot bamboo pole 1½ inches diameter at the butt. Can you blame any one for railing at such fate when not a trout, not even a nib, came to our hooks? I think our old Nestor, "Nessmuk," is O. K. The end justifies the means, and if trout won't come when you call them, tickle them with something else that they will bite.

Yet who is so gullible, so ready to jump at anything that smacks of trout as the simon pure trout angler. Let him hear of a creek, stream, or even a swamp through which a stream runs that contains trout, and he's off fishing. Reason stands no show with him; he has been bitten before and vowed all men are liars, especially trout liars, the biggest of all liars; but the empty creel reminds him of bygone days,

the reel giving out its slow click c-l-i-c-k as the line is carefully run through the fingers, the beautiful and neatly made flies so carefully arranged, and all of them the work of a woman's deft fingers. Appeal to the finer feeling of our semi-barbarous nature, and the hardness, the stern, unbending qualities, yes, the mistrustful yields, and under the fascination of the sweeping lithe wand that has cast out flies over many streams, we determine to go a-fishing. The shepherd king took back the wrathful saying "All men are liars," so we are inclined to kick ourselves and say some men are to be trusted, so we lay our plans for a fishing trip.

Often when laying out surveys for additions to this pushing young city of the Northwest, we come to a creek full of music, boiling, tumbling waters, rifts, rapids, cascades, falls, follow in rapid succession, some five feet high, some forty feet; in two miles they fall 200 feet, and over a granitic formation, and cold sparkling waters, though tinged with brown. We asked, "Have trout been caught in this creek?"

"Yes, good while ago; used to catch 'em when we fust kim here, but a'int sen any lately."

One day a friend came into the office full of news. "T, we have just found a new trout stream along the Herman-town pike." A few days later a buggy rattled out of town containing a Board of Trade man and the writer; struck into the road toward this creek said to be full of trout. The road was reported as good, but our horse sunk fetlock deep and the wheels almost to the hub. We reached the stream, and found it running through a swamp, but of cold water. A small bridge crosses the road, and from this looking down we saw forms of fishes on the rocky bottom, but what were they? A few minutes later we took the horse from the buggy, tied him up in the "brush," and put our fishing tackle in order. I dropped in a baited hook, and saw my worm going off at a great pace. I yanked, but struck air. My friend was watching, and instantly put in his bait, and as quickly struck, and ejaculated, "Why the creek is full of little cusses! What are they?" Our spirits jumped to boiling point, trout galore, visions of a full creel rose before us. He put in on the other side of the bridge, and while watching his line I struck a little wretch as long as my forefinger. My spirits tumbled to zero. I quietly took it off, dropped it into the creek again, and pushed into the brush without saying a word. The foliage was wet with the droppings from a pelting thunderstorm, and I was wet through in five minutes, but pushed on, finding fish all the time, and all of the same kind. My friend followed me for some minutes, until I heard him saying, "Why T, these are little chubs. The little brutes!" And we had come seven miles to indulge in a little chub fish, and for chubs not more than four inches long. Well! if that isn't cheap. I knew all the time, but was hugging myself with the idea he was not getting any bites, and was hoping against hope that one solitary trout would turn up to reward him, but nary trout! He took the fact as cool as a philosopher and said, "Never mind. We'll get our fun when we go out to Lester River one of these days."

He who indulges in fishing for a pastime gets used to disappointment; but the chub fishing has an element of fun in it. Some young men hearing that we had been to Drowsky's creeks, thought they could find trout in it, and hired a buggy team on Sunday morning, bled out and began fishing, they caught about fifty chubs. Somehow it leaked out that the chub cost them about \$3, and we enjoyed the laugh.

A recent visit to Lester River gave us a sight worth remembering. The river was full of "red horse," or red fin suckers, as some call them. The ebb and flow of this river often left the fish almost stranded on the boulder bottom. I waded in hoping to get some trout and could not raise a single one. I saw one, and though I fished well-known pools carefully I failed in getting a bite. These red fin suckers surged up and down stream in thousands, even running between my legs when wading. Brule River and other south shore streams are full of trout, one thousand fish were brought to Duluth by one party on a recent Sunday, from Brule River.

DULUTH, Minn.

W. DAVID TOMLIN.

SALMON FISHING.

I WANT to write you something about the salmon and trout fishing on the Miramichi River in comparison with fishing in the Western lakes and rivers. Notwithstanding the supply of fish in these last named waters is abundant and very valuable as a source of food to those living there, the real sport in catching the fish fail altogether when compared with the pleasure one experiences in landing the salmon and trout on the Miramichi River, New Brunswick. There are many different kinds of fish in the western waters, but those which are the most eagerly sought after and which are said to yield the greatest sport in catching are bass and pickerel. The whole apparatus used in taking these fish is of the clumsiest pattern, and the entire operation is much more like work than it is like sport or pleasure. Great heavy lines from two to three hundred feet in length, baited with such things as live frogs, minnows, spoon hooks or artificial minnows are dragged behind boats which are rowed at a pretty rapid rate to keep the bait from sinking to the bottom. The lines are held firmly in the hand till the weight of the fish on the hook apprizes the fisherman that it is time to pull in and then it is a steady drag, hand over hand, till the pickerel or bass, whichever of the two it may be, is pulled into the boat.

This sort of fishing is not by any means so enjoyable as one experiences while fishing for salmon or trout on the Miramichi River, in the beautiful pools of pure cool water for which this river is famous and which is the resort of these fish. Rods artistically made of the most elastic wood, with tips as fine as an ordinary knitting-needle, and fine light oiled silk lines, to which are attached the most delicate-looking casting lines and artificial flies made with the greatest care and neatness, are all absolutely necessary for salmon or trout fishing on the Miramichi. After the sportsman has secured all these, a great deal of skill is required in their use: To know how to cast the line the greatest distance so that the fly will fall lightly upon the water, scarcely breaking its surface, to hook the fish when he rises to the fly, to hold the rod just at the proper angle, to give line and to reel in the same when necessary, and, in short, the whole business, from beginning to end, is a very exciting sport, and requires no small degree of skill.

Nothing is more exciting to the sportsman than to hear the whirr of his reel as his line runs out with a fifteen or twenty pound salmon on his hook. Every motion of the fish has to be carefully watched. Sometimes a salmon when hooked will run out almost the entire length of the line without stopping; sometimes he will turn quickly and run almost back to the place where he first was hooked; again he will run down river, sometimes up, and often will jump four or five feet clear out of the water, showing his magnificent proportions and silvery-clad sides. Everything is very exciting and each movement of the fish must be carefully watched until finally, wearied out in vain endeavors to escape, he relinquishes further efforts and allows himself to be landed upon the shore. Any one having once experienced the pleasure of hooking and landing a salmon will never forget it. And when you have once landed a salmon you have something worth while being proud of, for he is surely the king of fishes and the most delicately flavored of all the entire catalogue of the finny tribe. And then again the scenery is so much finer and the air so much fresher and purer among the mountains and valleys on the Miramichi than on the low plains of the west.

On the smaller tributaries of the Miramichi, as we ascend the stream, above Borestown, there are some very beautiful natural falls, among which I might mention the cascade at Fall Brook, which is only a short distance above Borestown and only a few rods from the river. The waterfall is over a wall of rock more than one hundred feet high. About half way down the declivity the water strikes against a projecting rock and is dashed out in fine white spray, making it delightfully cool for quite a distance from where it strikes, no matter how warm the day may be elsewhere. On the opposite side of the river a short distance from Fall Brook we came upon Trout Brook with its very pretty double waterfalls, and continuing further up the stream we find many objects of interest. The woods of spruce and fir which skirt the banks of the stream in many places, impart health giving odors and afford ample shade from the sun in hot weather.

At the present rate of rapid transit I am inclined to believe the entire distance from New York to Borestown, N. B., can be gone over in about thirty-six or forty hours, and from Boston, Mass., in a much less time, and I cannot imagine how any more agreeable or pleasant time can be spent by gentlemen from these or other cities of the United States during the hot season than by spending a few weeks on the Miramichi River, salmon and trout fishing. The fishing begins in June and continues through July, August, and September, thus giving ample time for men of business to so arrange matters as best to suit them for an interval of pleasure.

D. McMILLARD.

AN OUTING FOR LAND-LOCKED SALMON

THE 6th of May finds Tom and I trolling for land-locked salmon in Sebago Lake, Maine. As we run across from the mouth of Songo River to Muddy River, I will take Tom, whose slow, steady stroke is the motive by which our Rangeley is propelled, closely watches his fourteen-ounce Bethabara bait rod, which lies conveniently at his side, the reel dropping below the edge of the thwart on which it rests, thus securing it against any sudden pull overboard in case of a strike; his reel, a center multiplier, holds in reserve about ten yards of line, the balance, fifty yards, being out.

I have set up my eight ounce "split" since leaving shore, and having secured my leader, a double one with two swivels, and added a light sinker, I am now engaged in putting on a smelt for bait, and a delicate operation it is for a novice. A 5-0 Aberdeen hook is to be started down the smelt's throat, and worked downward to come out just in front of the anal fin without having "hooked up" any of the side tissues. After one or two attempts this is accomplished, and taking hold of my line above the leader I drop the bait carefully overboard to note how it runs; it takes but a glance to see that it is a "spinner," which is quickly remedied by inserting the point of my penknife where the hook comes out of the smelt, and cutting toward the head in a straight line for a half an inch, thus allowing the bend of the hook to be outside of the bait.

I am now certain that it will run true and straight, but before I can drop it overboard again Tom's reel makes a loud call for attention and the instant he grasps the rod a splash is heard astern and a silver side shows for an instant and disappears. Tom and I change places and I glance at my watch, it is a quarter of eight, the fight promises to be a long one. His salmonship first tries a straightaway run, and finding himself checked makes a fine leap fully two feet out of water. "An eight pounder if an ounce," I exclaim. "Shall go you one better," says Tom, as he takes up line rapidly, for this time it is a run for the boat and I am obliged to take three or four strokes to keep the line taut. Finding himself again balked, the fish makes one more grand, angry leap and starts for the bottom with a suddenness that submerges the rod to its second joint, and somewhere about fifty feet below us he sulks, refusing to take or give line.

This continues for nearly half an hour, varied occasionally by a little shaking or yanking as Tom sends "a telephone over the line" as he calls it when he taps the rod with his fingers. But a change is taking place and slowly, very slowly, Tom reels in; the rod bends till its tip nearly touches the lake; but gradually the fish is giving in and a minute later, looking down through the calm, clear water, I can see first a broad tail appearing, then the whole fair outline of the salmon as he rests on his side, ten feet below us for an instant, and only that, for now ensues a series of maneuvers that tax Tom's skill, cool angler though he is, to the utmost, now calling for fifty feet to the right of us, now twenty feet more to the left, with a flying leap into the air and a dash toward the boat, a reputation of the same till nine leaps had been counted, and now he begins to circle slowly around near the surface, showing occasionally his side, and as I hold the landing net a little below the surface Tom leads the fish gently over it, then dropping his tip slightly, the salmon buries himself head first into its welcoming meshes and the "meat is ours." The watch says, eight minutes of nine; the scales says, just ten pounds; the tape measure says, twenty-seven inches long and seven inches deep; we say, the fairest of ten thousand. Two hours later I kill a six pounder and with it ends our luck for the day.

BLACK SPOT.

SEBAGO LAKE, June 7, 1886.

VERMONT TROUT FISHING.—Philadelphia, June 8.—Have just returned from a vacation to my old home in Rutland county, Vt. Found trout fishing good, filling basket with good-sized ones on several occasions. One was caught (not by writer) weighing 3 pounds 10 ounces, dressed, and one weighing 2 pounds 8 ounces. Fishing in Bomoseen not yet open of course. Plenty of pickerel were caught through the ice last winter, the largest weighing 19½ pounds. One mess of eleven weighed 107 pounds. If laws can be enforced against the nets and spears in spawning time there would be more of the fish; and as it is, large hauls are made in season with line. The landlocked salmon have not been heard from, but the "Swago" bass and pickerel make good sport for spoon or live-bait fishing.—NESHOBEE.

ENGLISH FLY-CASTING.

THE sixth *Fishing Gazette* Tournament was held June 5. The following report is taken from the *Fishing Gazette* of June 12:

The Richmond Piscatorial Society, and especially its chairman and leading spirit, Mr. A. J. Little, are to be heartily congratulated on the great success which attended their most complete and admirable arrangements for carrying out the Tournament last Saturday. The weather, which on the five previous occasions had always been bad, and sometimes worse than bad, was perfect; no more charming or appropriate spot could have been chosen, and we can assure Mr. W. Cunard that his kindness in placing his river-side grounds at Orleans House, Twickenham, at the disposal of the committee, earned the thanks not only of the committee, whose task was thus greatly simplified, but also of the whole angling fraternity.

When we say that there were considerably over a hundred competitors, from all parts of the country, it will be seen that the judges and the committee had their work cut out; but by arranging that two or three competitions should take place at the same time, the whole of the long programme was got through without a hitch—in fact, too much praise cannot be given to the gentlemen who officiated. In consequence of the absence of many anglers who intended to be present, but could not resist the attraction of that carnival of fly-fishing, the May Fly week, the fly-casting competitors were very few in number. The absence of Mr. P. D. Malloch, of Perth, was much regretted, as was also the fact that Major Traherne, although present, was unable from ill-health to compete. It was a very happy thought to combine punting matches with the other attractions of the Tournament; these contests were watched with great interest, and it must have been a revelation to many visitors to witness the wonderful expert manner in which some of the Thames professional fishermen can handle that, in unpracticed hands, most unwieldy and cumbersome thing, a Thames fishing punt. The struggle in the final heat was most exciting, Ned Andrews winning by five feet.

As regards the results, it will be seen from the complete list we give that while there were no phenomenal casts, the figures show some wonderfully good all-around work and some very close competition. A noteworthy fact was that Mr. Slater, of Newark, against a field of 19 competitors, most of them using the Thames style of casting, carried off the five guinea cup with a splendid cast of 177 ft. Sin.—i. e., 60 yards all but 4 in. from the reel, with a 2½ oz. weight. Before the competition he had in practice repeatedly thrown over 70 yards from the winch; but, as all who have tried it will acknowledge, it is one thing to throw in private and another in a public competition. As will be seen from the list, Messrs. Blamey, Powell, Foster, Martin, H. M. Little, Mayhew, Bentley, Larkins, all came to the front with some very fine casts; but, unless we are much mistaken, in no style of casting were the records beaten. In the fly-casting there was a nasty "fish-tail" wind against the competitors, and in nearly all the competitions the casts were made directly up stream, and every fly-fisher knows that this is the least favorable position of any for recovering a long line, as the stream drowns the line and brings it down on to you. We regret that in the switch-casting competition there was a complete difference of opinion between Mr. Kelson and Mr. Burn as to what constituted a switch. In a little preliminary practice which took place, Mr. Kelson declared that Mr. Burn was making a very pretty cast, but it was a true Spey cast and not an orthodox "switch." He maintained that the fly should never be lifted from the water in retrieving the line to make the switch; Mr. Burn, on the other hand, was equally certain that his switch was the pure breed. A sort of compromise was, after long contention, arrived at. As there was nothing to enable one to judge as to the distance of 6 ft. behind the competitors not being exceeded, it was agreed that no cast should count if the fly was returned past the edge of the platform on which the competitors stood, and to make it easy to decide this point, they stood some distance from the projecting end of the platform. It was hardly to be expected that a contest in which the competitors both considered their opponent's style wrong would lead to a satisfactory result. Mr. Kelson complained that Mr. Burn was doing the Spey cast all the time, and Mr. Burn complained that Mr. Kelson's line several times went behind him much beyond the 6-foot limit, although his fly did not pass the platform. We think, taking all things into consideration, the result, although unsatisfactory, was the only one that could have been arrived at; if the competition had been repeated any number of times, in each the loser would have protested. Mr. Burn's casts were very neatly made and much admired, and we are mistaken if Mr. Kelson's longest switch is not the best on record. It is evident that a clear definition of the switch will be necessary in future competitions. We heartily wish Mr. Nicolay had been present to see his prize competed for by Sir Randal Roberts and Mr. Kelson. The conditions were that the competitors should cast on the grass along a measured line a distance of at least 35 yards from the spot on which they stood, and that they make the same cast back again. A little diagram will best explain this:

They must cast first from A to B, and then from B to A. Both competitors easily exceeded the 35 yards, and Mr. Kelson threw over 40 yards—in fact, he made some far better casts than he had done in the previous salmon casting contests, the wind having almost died away.

It was not till after seven o'clock that the various events were brought to a close, and then followed the distribution of the prizes, at which Mr. Little presided in his usual genial manner. Subsequently, at a cold collation, Mr. Little proposed the health of "The Queen," and then that of "Mr. and Mrs. Cunard," mention being made of their kindness in granting the committee the use of the grounds. The Rev. George Sumner responded to the toast of "The Judges." The excellent management of the Richmond Piscatorial Society was commented on by Mr. Spreckley, and a cordial vote of thanks to the Society was acknowledged by Mr. Little. The services of Mr. Davis, the hon. secretary, who has been indefatigable in promoting the affair, were eulogized, and the health of "the Ladies," proposed by Sir Randal Roberts, and replied to by Mr. H. Clifford Tamen, terminated the proceedings.

Mr. Sage, of Twickenham, took instantaneous photos of competitions; but we very much regret to learn that all the instantaneous photographs of incidents in the animated scenes on the river and on the ground taken by him have been destroyed by fire in a rather mysterious manner.

RECORD OF THE COMPETITIONS.						
FLY-CASTING, TROUT, SINGLE-HANDED ROD.						
No. 1.—PROFESSIONAL.—1st prize, £3, three best casts; 2d, £2, second three best casts; 3d, £1, third three best casts. Judges, Sir R. H. Roberts, Bart., and Rev. George Sumner.

SPINNING BAIT-CASTING (ANY STYLE).

For accuracy in casting toward a fixed mark.

[The mark was placed about 35 yards from the competitors, the object being to cast the bait as near to it as possible.]

No. 11.—AMATEUR, 1½ oz.—First prize, three-piece glued fly-rod, William's tackle box, aggregate three nearest casts; second, Major Traherne's spinning rod, reel and line, six rod rests, aggregate next three nearest casts; third, Sage's photographs, C. H. Cook's line and rings, aggregate nearest cast. Judges, Messrs. T. R. Sachs, Thos. Huggett and J. F. Woodall. Rods, 14 feet and under:

Distance in Feet and Inches.

so admirably managed on Saturday at Twickenham by the Richmond Piscatorial Society, who this year relieved Mr. Marston of the management, to the primary programme of contests there are added musical performances by a military band, and a handing over of proceeds to worthy societies like the Thames Angling Preservation Society and the Anglers' Benevolent Society, elements of attractiveness are introduced not usually found in angling as a practical sport."

The *Standard* says: "Such a gathering of anglers from all parts of the kingdom has not been witnessed in the suburbs of London for many years, and it is certain that no previous tournament has awakened more interest or attracted a larger attendance."

MAINE ANGLING.

IT would be hard to imagine a more satisfactory trouting season than that of 1886 is proving to be. The opening of the season was remarkably early in eastern waters, and in consequence the first movement of sportsmen was light. But this has since been made up by a fuller exodus, if we may believe hotel and camp-keepers and stage drivers, who report a good trade. As to the catch of both trout and land-locked salmon, it is turning out simply wonderful, and is a most signal triumph, especially in Maine, for fish protection and propagation. It is a fact that more and more trout are being taken each year from the Androscoggin and Mooshead waters, and yet the supply is not exhausted. I have talked with a number of long-time visitants of these waters within a few days, and in almost every case they believe that from the same waters, under the same conditions, they can take as many trout as they could have done three or four years ago, and even more than eight or ten years ago, before the benefits of protection and propagation had begun to be realized. Now it is certain that, in the face of this reasoning, the quantity of trout taken each year has greatly increased. Besides the actual record of size shows a wonderful increase. It would actually seem that the trout in the Androscoggin waters have grown larger instead of smaller, as the excessive fishing they have passed through would seem to indicate. The record of two trout of over 10 pounds this spring, one or both of which the *FOREST AND STREAM* has already mentioned, would seem to leave no room for doubt as to the increasing size of these fish under protection. Commissioner Henry O. Stanley of Maine, evinces no surprise that such should be the case, though he, with his colleague, Mr. Stilwell, is much gratified at this early proof of the value of fish protection and breeding. These gentlemen remark that the large trout are now left to come to the hook, which formerly fell a prey to the net, the spear, and sometimes even the pitchfork, on the spawning beds in the fall.

More general satisfaction was never noted concerning the catch of trout among returned sportsmen than is the case this season. By the Andover route to the Androscoggin lakes, the guides and hotel keepers all mention this fact, while the same is especially true of the Phillips route. The fishermen appear to be satisfied. It is true that under wholesome instructions, such as the *FOREST AND STREAM* labors to promulgate, reasonable sportsmen are learning to be satisfied with fewer fish, but it is also true that there are more fish to be caught. The wonderful success of landlocked salmon, which has shown up for the first time this season, is certainly a triumph for fishculture which should forever silence all cavil. Accounts begin to come in of this fish being taken on the fly. I heard of one to-day, weighing six pounds, but I have not yet been able to authenticate the story.

SPECIAL.

TROUTING IN THE NORTHWEST.

THE "effete East" must surrender one more of its old time possessions to the young and vigorous West. The trouting of the Eastern States is now confined to a few points, and those almost fished out, while in many portions of the Northwest trout abound, and there are yet many streams where the fly of civilization has not found its way. Mr. George Lyman, who began his trout fishing in New York nearly three score and ten years ago, writes me from the Sioux River, near Ashland, Wis., that he is having "fairly good" sport, that he took thirty-one trout on a half mile of the stream, and being satisfied quit, as a true angler always does. This fishing for scores is one of the vices that the angler despises. It is an evil that is severely felt in the rapidly diminishing number of our game fish. The man who boasts of his hundreds per day and thousands per outing is a fish butcher and should be classed with the other cormorants.

Not far from the Sioux River is the Brule, and Mr. Lyman sends me a letter from his friend, Dr. Arthur Holbrook, of Milwaukee, describing some splendid sport. The Doctor landed two pound trout, the result of one cast, with a five-ounce rod. That may fairly be considered good sport and scientific fishing. The largest caught in two days fishing was two and a quarter pounds.

There are a number of other streams in the same vicinity where the lusty trout lurk, and many small lakes where bass and masacalone can be taken in large numbers. The region is also famed for its beautiful scenery. A sail among the Apostle Islands, at the mouth of Chequamegon Bay, Lake Superior, is one of the things no lover of nature should miss. And when good fishing, life-giving air, and the good things of life can be combined with it, there should be many annual visitors. The location is one easy of access. In addition to the lake steamers, floating palaces, which land at Ashland and Bayfield, there are several rail routes, three from Milwaukee: the Wisconsin Central; C. M. & St. P., and M. L. S. & W., the latter passing through the far famed Agogebic region. My next will, I hope, be from a point on some of the waters mentioned. JAP.

NEW ALBANY, Ind., June 16.

THE FLUTTERING FLY.—*Editor Forest and Stream:* In *FOREST AND STREAM* for June 10, I find a cut and description of a fly that Mr. Holberton is stated to have invented and that Mr. Imbrie has patented. In April or May, 1883, Messrs. D. & W. H. Foster, of Ashbourne, England, sons of the late David Foster, author of "The Scientific Angler," sent me flies tied exactly as the "fluttering fly" is represented in the cut above mentioned. I used these flies for trout fishing the season that they were received, and presented samples to angling friends. Mr. H. P. Wells may recall the fact that I showed him samples of these flies just about a year ago. The Messrs. Foster did not write of these flies as being new or strange, but merely included them with other flies without comment. How long they have been so fashioned in England previous to 1883 I have no means of knowing at present.—A. N. CHENEY (Glens Falls, N. Y.).

PROSPECT LAKE.

Editor Forest and Stream:

In former issues of your valuable paper you have invited correspondence as to good and convenient points for camping and fishing. I beg, therefore, to call the attention of parties who are in search of pure air—some 1,800 feet above tide water—pure, limpid, delicious water and rational sport, to this point. All such will be highly pleased and benefited. Big, or Prospect Lake, covers some eight or nine hundred acres, wooded all around, except two small spots; bottom and shores are rocky; the water is full of trout and pickerel; four years ago 5,000 salmon-trout spawn were put into it, and while none have yet been caught, there is evidence of their existence, and anglers who know how to fish for them will find rare sport. The location of the lake is in Pike county, Pa., six miles south of Hawley, Pa., reached by the Erie Railway and the Erie & Wyoming Railway. The banks of the lake present many delicious points for camping; those who prefer to be otherwise accommodated can find airy, clean rooms and good wholesome meals at very reasonable charges at the house of Mr. Wm. Aldridge, an intelligent bark miller, excellent good fellow and enthusiastic fisherman, who knows the lake for many years, has a number of boats, and will take all reasonable pains to show strangers the favorite points for fishing.

At present there are some mosquitoes here, but they never last over three weeks or so, and the writer speaks from experience when he says that Mrs. Aldridge fully understands how to keep her house clear of those enemies of mankind. The nights all summer long are deliciously cool.

Mr. Aldridge will haul parties with their outfits from Hawley, or they can obtain teams there. Any letters addressed to him at Tafton, Pike county, Pa., will reach him. Within a few days a hotel has been started on the banks of the water; but as the place is new and untried, it is premature to speak of its merits.

The writer addresses himself to those only who seek rational and reasonable sport; those who wish for catching big strings which they cannot use and go to waste are not wanted. It may here not be out of place to speak of a piece of vandalism which has here been perpetrated for some seasons past. Certain persons, claiming to come from the Blooming Grove Park, have been in the habit of catching bass four, five and six inches long, and instead of throwing them back have been in the habit of letting them die in the boats. There are too many persons interested in the lake to permit such wanton destruction to continue. A few persons have united to prevent it; and should the outrages be repeated this season, these fellows will get a taste of Pike county justice. "A word to the wise," etc. OUTER.

TAFTON, Pike County, Pa., June 14.

NEWFOUND LAKE.—The Bristol, N. H., *Enterprise* reports capital lake trout fishing in Newfoundland Lake, a sheet of water two miles from Bristol, which is three and a half hours ride from Boston. The editor says: "These fish have been speared in large numbers, contrary to law, when on the spawning beds, and this practice has been winked at by the public because it has been supposed they could be taken in no other way. The past week has, however, demonstrated the fact that the fish of this lake are just as ready to respond to the legitimate invitations of fishermen as are the fish of any other lake. Last week Major E. E. Bedec, of Boston, caught in Newfoundland Lake: Thursday 3, weighing 8, 10 and 15 pounds respectively; Friday 4 trout, 8, 9, 10 and 12 pounds, and 1 land-locked salmon, 15½ pounds; Tuesday 5 trout, 7, 8, 10 and 10½ pounds, and one land-locked salmon, 13 pounds. Elated, he telegraphed to Mr. Mark Hollingsworth, of Boston, his success, and yesterday these gentlemen caught four, which weighed 6, 7, 8 and 10 pounds respectively, or a total of 18½ pounds in 4 days. D. H. Sleeper and John S. Connor fished only a few hours yesterday, and caught two weighing 8 and 11 pounds; two gentlemen from Laconia caught two that weighed 7 and 9 pounds. Geo. H. Fowler has also caught the past week a land-locked salmon weighing 6½ pounds, and one trout weighing 8 pounds, and E. T. Pike a trout that weighed 8 pounds. The above makes a total of 245½ pounds of trout taken from this lake the past week, practically by four days fishing by the above named parties. Most of them were caught by trolling, though the finest ones were caught with a fly. The Bristol House, a first class hotel in this village, is only about two miles from the lake. There is abundant camping ground about the lake (which by the way is not surpassed in beauty by any lake in this State), and there are numerous farm houses about the lake where fishermen can be entertained. Mr. Chas. N. Drake lives near the lake, thoroughly understands these waters, and his services can doubtless be secured at any time. Mr. E. T. Pike lives near the fishing grounds, has accommodations for board, boats, and so understands where the fish may be found, and Dr. H. Sleeper and others have boats that can be hired at reasonable prices."

TROUT WATERS OF THE NEW YORK FOREST PRESERVE.—*Editor Forest and Stream:* In the most recent New York State trout law, published in *FOREST AND STREAM* June 10 last, the brook trout, brown trout and California trout season opens April 1, and closes September 1, "except in the counties included in the Forest Preserve, established by chap. 283 of the laws of 1885, where it shall not be lawful to catch or attempt to catch or kill, or expose for sale any speckled trout, brown trout and California trout save only from the first of May to the fifteenth day of September." Comparatively few people seem to understand which of the counties in the State are included in the Forest Preserve. Section 7 of the law above quoted says: "All the lands now owned or which may hereafter be acquired by the State of New York, within the counties of Clinton, excepting the towns of Altona and Dannemora, Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Saratoga, St. Lawrence, Warren, Washington, Greene, Ulster and Sullivan, shall constitute and be known as the Forest Preserve." This selection of counties will surprise some of the anglers who are in the habit of fishing the Catskill and more southern streams and have not read the law. In Jefferson county or Rensselaer county, where nature rarely prepares the streams for fly-fishing before May 1, the law permits fishing April 1, and in Ulster and Sullivan, which are earlier counties, the season opens by law May 1. One can fish one part of the Beaverkill a month earlier than another part, and at the close of the season the thing is reversed just fifteen days. It is well to paste the names of the counties constituting the Forest Preserve in one's hat, for no trout can be transported from the preserve except they are accompanied by their owner. This just lets the man out who buys trout when he can't catch them.—A. N. CHENEY.

FLY-FISHING FOR SHAD.—Holyoke, Mass., June 19.—*Editor Forest and Stream:* There is some improvement noticed in the shad fishing this week, on the strength of which some of the fishermen are indulging in a cigarette, and others are brushing up rusty and frayed tackle in hopes of having the rust and scales brushed off their own backs. A few good shad have been taken with the fly, and the prospect brightens for others to follow. The Silver Sheen and the Cloud is so small that we offer no inducements to those at a distance to try pot luck with us; why it is thus is hard to explain otherwise than the United States and the State Commissioners of Inland Fisheries have turned their backs completely to the city and town of Holyoke and South Hadley Falls, and unless there is a fight in prospect over the taking a few lamprey eels from a scare-crow on the north bank of the river, we never hear of them. It did not used to be so, a few years ago they were in the habit of coming often and farried late, their stay was interesting inasmuch that young shad were brought forth by the millions. Their count was instructive and reminded us of the way Pat C. divided the apples: "This is one for me, one for you, and one for me too, one for me, one for you, and one for me too," etc., until the depleted waters before unknown to shad life were filled with Connecticut river shad, and waters of Europe too, got their consignment of the gamy, toothsome South Hadley Falls *Alsea*. Alas, how changed, from the cold indifference of the authorities that be, Holyoke and South Hadley Falls now take their shad planked in the sun *via* peddler's cart, when at the same time both places above named, as well as Chicopee and Springfield, pay their taxes, consequently their *pro rata* share of appropriations for fishery purposes, and of which a fair share ought to be expended to maintain the fishing industries of South Hadley Falls.—THOMAS CHALMERS. P. S. The spasmodic efforts of a few days ago are over, cigarettes are abandoned for the old clay pipe, the tackle so admirably handled and cared for is placed back in the book, and the scales are left with us.—C.

VERMONT NOTES.—Post Mills, Vt.—The 15th of June was the opening day for black bass and pickerel fishing in this State. The largest string of pickerel ever taken from Fairlee Lake was caught here to-day, and shows what a few years of enforcing the laws against spearing, netting and illegal fishing will do. One party of two caught 35 pounds, another party 40 pounds, and one boy, thirteen years old, the son of Thos. H. Chubb the fishing rod manufacturer, caught alone and unaided 20 pounds in one-half day's fishing, each fish weighing from 2 to 2½ pounds. Many other parties caught from 10 to 20 pounds weight. The largest one caught weighed 4½ pounds, and many went from 2 pounds to 3 pounds each. As usual the boys tell big stories of the large ones lost that were bigger than any ever seen before. But very few bass were taken to-day, and but little fishing was done for them, as the day was cloudy and thought just right for pickerel. But the bass fishing bids fair to be first-class, as many have been seen around the shores this spring. The lake is well stocked with perch, which furnishes good food, and bass grow to enormous size, many caught weighing from 4 to 6½ pounds each. The bass as a general thing do not bite freely until about July; then we predict rare sport for the bass angler. The bass in the lake are all small-mouths, and are game from the word go. Fairlee Lake is a most beautiful sheet of water, about three miles in length and from one-half to one mile in width, of clear, cool water, and has fine feeding grounds in all parts of the lake for both bass and pickerel.—OMPOMPANOOSUC.

HARD LUCK.—Brainerd, Minn., June 19.—The trout fishers returned from Brule Tuesday evening, but they were not so heavily loaded with baggage as when they started out. The party was composed of Fred Stauley, J. L. Smith, F. M. Cable and A. A. Green. Their tent caught fire from some unknown cause the first day out and burned everything they took with them, including a photograph outfit, two fine guns, clothing, fishing tackle, provisions, cigars and other traps. This put rather a bad aspect on to things, but they were bound not to be driven home by fire and in three days' fishing afterward they hooked 1,100 trout, Mr. Green taking the bakery by capturing 518 of the number. In the burned tent were 300 loaded cartridges, and as soon as they got warmed up the fun began and for a half hour it sounded like a volley of artillery, and although there were many people in the vicinity no one dared to go near the fire to try and save anything on account of the shooting. The party is out \$300 by the accident, but Fred Stanley says he don't care for the outfit as long as Barney escaped unharmed.

FLY-TYING.—Athens, Pa., June 19.—"G. A. M." wants to know how to tie a fly. I take the hook in my left hand, and with waxed thread take a few turns around the hook; then I lay the tail on and tie that; next I take a piece of tinsel, four inches long, and tie the end of that on the tail; then I wind the thread back up the body to within a quarter of an inch of the shank. Now I take the stuff for the body and tie the end where the threads is, and wind toward the tinsel and one turn by it. Then I turn the tinsel back toward the point, and wind the body back up the shank to where I began within a quarter of an inch of the shank. That quarter of an inch I leave for hackle and wings. Now wind the tinsel up the body and tie; still keep the hook in left hand, at the shank; catch the tip of hackle in same hand and wind toward the end of shank. When you get enough on tie several times, and clip off the tip and stem. Now you can tie the wings on and shellac. The reason I wind the body once by the tinsel is that it never comes off when put on that way, and is original with me.—E. W. D.

POPULAR INTEREST IN ALASKA.—Very rapidly the public interest in our new possession increases, and scarcely a day passes that some journal or other does not print some scrap of information respecting this very interesting and remarkable territory. The New York *Times* of the 21st instant contains no less than three columns upon the subject, which are chiefly devoted to the possible discoveries that may result from the visit of an excursion party under Lieut. Schwatka, to be made to the St. Elias district during the present summer. Mr. St. Elias and its brotherhood of mountains lie some 300 miles northwest of Sitka, and are seldom visited by excursion steamers. They are among the highest on the continent. Mr. Hallock's book, entitled, "Our New Alaska; or, the Seward Purchase Vindicated," which will be presently forthcoming from this office, is replete with the fullest and most reliable information that can be at present obtained about Alaska, and orders for advance copies are being rapidly received. Its appearance at this time will be most opportune, though Mr. Hallock had prepared the bulk of his material prior to January last.

FOND DU LAC, Wis.—Mr. Harvey Durand has published in the *Reporter* the following card of protest against the trout hog: "I have planted in the waters of Fond du Lac and Green Lake counties during the past four years several hundred thousand brook trout. They were furnished by the Fish Commissioner of the State, and were placed in the streams for the public to take, and belong to any one who fishes for them; but in some places there is a disposition on the part of a few fish streams in detail for the special purpose of making what has been called a 'record.' I have only to say that this is not legitimate sport. A dozen trout on a string, for one person, is respectable, if they are of ordinary size, and are sufficient for any legitimate family; but to fish steadily from day to day, for the special purpose of 'beating the record,' and take large and small, is termed by sporting men 'fish piracy.' Of course this method will take the trout entirely from the streams in a very few days, and the work of the Fish Commissioner is nearly lost, for this year the trout will spawn for the first time in most of the streams; and I have only to say to the sporting men of Fond du Lac and Green Lake that I will furnish them the best fishing in Wisconsin if they will be reasonable when taking the fish and not be ambitious and angle merely to make a record. One thing more. It is against the law to take trout from the streams until after they are two years old, and then they are six inches long.—H. DURAND."

TOOK THE PRIZE.—Two of the FOREST AND STREAM compositors went down on a tug to the fishing banks, off Seabright, N. J., one day this week and covered themselves with glory, being high lines of the party. They took seventy-two fish. Among these was the biggest one taken, for catching which the angler took a prize of \$5.

ODD SALMON CAPTURE.—In the Penobscot River a handsome salmon was captured a few days since on a raft which came through the sluiceway in the dam, the fish being taken up as the raft emerged from its plunge into the river.

WELD POND, ME.—*Editor Forest and Stream:* I am not unacquainted with Weld Pond, and while much may be said in its favor it will hardly bear out the reputation given it in the article in your issue of May 20.—PHILADELPHIAN.

TRAPPE, Wis., June 17.—Three men were arrested some time ago for fishing for trout with dynamite. They were fined \$100 each and costs.—G. H.

THE ANGLER.

The angler to the brooklet hies;
Puts on his hook the tempting bait
Of wriggling worms or gaudy flies
And for the troutlet lies in wait.

Next day when by his friends besought
The nature of his luck to state,
He tells what heavy fish he caught,
And as before he lies in wait.

—Boston Courier.

Don't twist your neck off, but use Allen's bow-facing oars. Little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

Fishculture.

Address all communications to the Forest and Stream Publishing Co.

SALMON IN THE HUDSON.

Editor Forest and Stream:

That the salmon planted in the Hudson by the U. S. Fish Commission in 1882 have returned to the river is cause for rejoicing by the angler, but far more by the United States Fish Commission, that their effort to make a stream that is not a natural salmon river teem with this grand fish is about to bear fruit. It is a great triumph for fishculture, and all praise is due the U. S. Fish Commission for its latest success.

It must not be forgotten that the salmon recently taken in the Hudson is the first of the return from a small planting in 1882. In 1883, 200,000 fry of the *Salar* were planted in tributaries of the Upper Hudson. I have mislaid the report of the plant for 1884. In 1885, 270,000 fry were planted, besides 150 yearlings, and this year 20,000 were planted by the writer that were sent by Mr. Mather.

One correspondent in FOREST AND STREAM asks if the Legislature did not provide some years ago for a fishway in the Troy dam; and another states that he is under the impression that such was the case, but that the fishway never has been built. I think that Mr. Backus is mistaken about the fishway not being built, and Mr. Van Santvoord should certainly know. I crossed the railroad bridge at Troy on Saturday last, and saw what I have for some time supposed was the fishway, and saw what I also have supposed that it amounted to nothing for the purpose intended, as the chute did not reach the water below the dam and there was no water running over it.

The fishways at the Troy and Fort Miller dams were provided for in Chapter 555 of the laws of 1870, as follows: "It shall be the duty of the canal commissioners of this State to cause to be constructed and maintained in the State dams across the Hudson River at Troy and Fort Miller, in such a manner as not to injure the said dams, fishways, at least one foot in depth at the edge of the dams, and of proper width to allow all fish endeavoring to migrate to the waters of the said river above the dam to pass over the same. The said fishways shall be placed at an angle of not more than thirty degrees, and extend entirely to the running water below the dams, and they shall be protected on each side by a apron at least one foot in height to confine the waters therein. The said fishways shall be constructed under the supervision of the fish commissioners of the State. * * *

The trouble seems to me to be lack of water to flow over such a fishway during the dry season. Such water as passes the dams at this season flows or leaks through the dam rather than over it. Professor Baird, writing me of the fishways described in the above law, said: "I would suggest that it might be better to require that fishways should be built of such form and dimensions as may be approved by the State Fish Commissioners. As there may be modifications necessary for each locality, it is very hard to fix upon plans in a bill. * * *

As the location of each fishway is as important as the dimensions and angle on which it is built, it would be better to have some competent authority to approve, severally, the fishways proposed for each obstruction."

This, however, does not seem to be the plan of the Legislature, as the State fishways are all of the same pattern. In all probability the salmon that were deposited in the upper Hudson as fry, will return each year for four years to come, but if there is no way for them to reach the spawning ground, miles above the Troy dam, will they return to the Hudson the second time? I feel sure that FOREST AND STREAM will

urge upon the next Legislature the necessity of providing a way for the salmon to reach the waters of their babyhood, and while a fish chute may be made to answer at Troy, Mechanicville, Fort Miller, Fort Edward, Sandy Hill and Luzerne, a fishway or ladder will be required at Baker's Falls, just south of Sandy Hill; Palmers Falls in the town of Corinth, Saratoga county and possibly at Glens Falls.

I have just read an Associated Press dispatch with the caption, "Bad Outlook for Salmon," which says: "Seth Green alleges that the chances are very much against the successful propagation of salmon in the Hudson. Between 1873 and 1876 over 156,000 salmon fry were deposited in the river and 276,000 in the tributaries of Lake Ontario. Few were ever heard of and fewer taken. Mr. Green states further that the Hudson probably never was a salmon river."

The most charitable construction to put upon this prophecy is that the reporter has quoted Mr. Green incorrectly, or perhaps I should say he has not given a full report, for I do not wish to believe that Mr. Green deliberately concealed the fact that the 156,000 salmon fry from the Caledonia hatchery, which proved a failure, so far as stocking the Hudson is concerned, were the *quinnat*, or California salmon. The salmon that have returned to the Hudson and were captured at the Troy dam, in the face of his prophecy, were Penobscot salmon (*Salmu salar*) from a small plant, so small that I question whether the godfathers of the fry expected that six salmon from 10 to 14½ lbs. (which I believe is more than ever returned of the 156,000 California salmon planted in the Hudson, or the 90,000 and more planted in Long Island waters) would be captured in one week in the river to which they returned so punctually. If the despatch had said: "Mr. Green commends the promptness with which the Penobscot salmon have returned to the Hudson. Planted in 1882 they returned in 1886; two years in fresh water; two years in salt; it shows that they carried time tables, something the California salmon either forgot or lost," we would have known that Mr. Green rejoiced with others who are rejoicing at Prof. Baird's success with the *salar*, in spite of the failure of the *quinnat*. Prof. Baird does not claim that the Hudson was originally a salmon river; on the contrary he has said that investigation leads one to question whether it was ever a salmon stream, although occasionally a few stragglers have been taken in the Hudson and also in the Delaware. Prof. Goode argues that the "goodly store of salmon" seen by Hendrick Hudson in 1609 in the river that bears his name, could not have been weakfish, as some have urged; but he does not concede the claim of the English navigator.

Many reasons have been given why the California salmon have not returned to the rivers flowing into the Atlantic, in which they have been planted, and the one most generally accepted, I think, is that they return to the mouths of the rivers, and upon finding the water so much warmer than the snow-fed rivers of the Pacific slope they decline to enter. Livingston Stoue, in writing of the habits of the California salmon, says: "Those rivers which do not have their source in the melting snows have no spring run of salmon * * * it would appear that they, when adult, enter the streams whenever cold fresh water comes in contact with them in the sea."

When the California salmon were first brought east it was claimed that they were a more hardy fish than the *salar* and could endure greater change of temperature, but this seems not to have been a fact. Prof. Goode says of the Atlantic salmon: "The movements of the salmon are not so intimately related to the temperature of the water as those of many other species. They are not so sensitive to sudden changes and are capable of enduring a range of at least forty-five degrees. In this they resemble less the migratory fishes than the permanent residents of our fresh waters. * * * The breeding fish remain in the rivers during the season of greatest heat and greatest cold."

Mr. Atkins has kept the Penobscot salmon in his ponds at Bucksport (the salmon caught at Troy were sent from Bucksport to Long Island as ova), with the water 74 degrees at the bottom in midday. While there is no direct comparison made between the two species of salmon by the authorities I have quoted, it seems safe to imply that the *salar* will enter streams of higher temperature than will the *quinnat*. Leaving comparisons and implications out of the question, the Penobscot salmon have returned to the river and ascended it as far as possible until obstructions are removed, and the California salmon did not; at least I heard of but one, which was taken in a net in the lower Hudson, and one was also taken in the James River, but the James River fish was "identified as a California salmon by a fish dealer who was familiar with Atlantic salmon."

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Charles A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eight annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

DOG SHOWS.

July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

July 27 to 31.—Dog Show of the California Bench Show and Field Trials Club. E. Leavely, Superintendent, 436 Montgomery street, San Francisco, Cal.

Aug. 23, 25, 26 and 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. George H. Hill, Manager, P. O. Box 76, Cincinnati, O.

Sept. 8, 9 and 10.—Hornellsville, N. Y. Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville.

Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3810.

PARASITIC DISEASES OF DOGS.—I.

AS is well known to the majority of breeders and large owners, dogs suffer from a great number of diseases due to the presence of parasites. Of these none are so troublesome or dangerous to life as intestinal worms. One of the latest and highest authorities on the diseases of dogs says: "Probably no known disorder the dog is heir to is so destructive as intestinal worms, it being estimated by reliable authorities that at least three-fourths of the whole canine race are infected by the pest." Another eminent writer on parasites says: "It is remarkable to observe what a number of creatures, including man himself, are destined to play the rôle of intermediary bearer of the canine parasites

in the juvenile stages of development. It is this consideration which * * * renders the dog, in the matter of parasitism, far more important than any other domesticated animal." It is evident, therefore, how extremely important is the consideration of this subject, as not only many a dear friend and valuable pet may be saved by a thorough knowledge of the pathology of parasitism, but danger to other animals, including even man himself, may be so avoided.

One of the commonest parasites of the dog is the margined round worm, *Ascaris marginata*. To give you an idea of its prevalence it may be mentioned that out of 144 dogs dissected in Vienna for this purpose, 104 contained worms of this species. Probably 50 per cent. of all dogs contain round worms. The *Ascaris marginata* is probably identical with the *A. mystax* of the cat, with which the feline race is so largely infested. The male worm is from two to three inches in length, the females being just twice the average length of the males. This species somewhat resembles the earth worm. It is rounded in form and tapers toward both extremities. The mouth is triangular in form and situated terminally; on either side of the head there are wing-like appendages. Well developed male and female sexual organs are present, and the digestive canal is made up of gullet, stomach and intestine. The eggs of the variety *mystax* measure 1-510 of an inch in diameter. The round worm inhabits the small intestines, but from which situation they often migrate into the stomach, whence they are occasionally expelled by vomiting. They also wander to the large intestine, and are occasionally passed in the feces. In rare instances they have even passed up the liver duct into that organ, causing obstruction to the flow of bile and even abscess of the liver. It may also wander into the throat and nose, or even into the bronchial tubes, where its presence may cause fatal asphyxia.

The life history of this parasite has not yet been worked out to the full satisfaction of pathologists. It is certain, however, that the worms do not multiply within the body of their host. The female produces a vast number of eggs, these escape in the feces of the infested animal, and as the eggs have been hatched experimentally in mud and in dung, as well as in clear water, it is probable that the embryo parasites develop in such situations. They are then introduced into the bodies of fresh hosts through food or drinking water, or an animal might become infested by some of the embryos adhering to its coat and afterward introduced into the stomach by the dog licking itself. When taken into the intestine the embryos develop rapidly into mature round worms, and impregnation having taken place, produce eggs to infect fresh hosts. The ova retain their vitality for months, and may in various ways be transported for long distances. From certain clinical facts in relation to *Ascaris* disease, it is probable that particular conditions are necessary in the intestinal tract to insure the development of the embryos; the inflammatory conditions so common in puppies seeming to create a particularly suitable soil for the development of the larval worms. Most likely in a perfectly healthy and vigorous animal the embryos are unable to remain, and so are expelled per anum.

The symptoms caused by *Ascaris* parasites are sometimes obscure and at others prominent. The commonest signs are abdominal distension, colic, diarrhoea and vomiting. Emaciation, cough and a harsh, dry coat are less significant symptoms. Loss of power in the hind legs is frequent in puppies, and convulsions, chorea, and other nervous disturbances occasionally occur. The existence of *Ascaris* disease is usually easily diagnosed, if the infested dog be carefully watched, by observing the worms in the feces or vomited matters. We do not believe that even a very small number of round worms can be present in the intestine and not cause considerable derangement of the general health, and the importance of treating an infested dog cannot be overestimated if he is to retain his full vigor and usefulness.

The treatment necessary to cause the expulsion of round worms is sufficiently simple, but will, nevertheless, fail if the details are not carefully carried out. The remedies should always be given on an empty stomach after from six to thirty-six hours fasting, according to the age and condition of the dog and the medicine to be employed, and a dose of castor oil should be given three to eight hours before the vermifuge is administered. Santonine in one, two or three grain doses in proportion to the age of the animal is the most reliable drug. Santonine is a vermicide, killing but not expelling the round worms, and should be always followed by a brisk purgative, of which the best is castor oil. As the unbroken crystals of santonine are almost tasteless, they are easily taken and the dose may be given made up into a pill with butter or some similar ingredient. Turpentine is an efficient, but not a wholly safe remedy, half a dram may be given in obstinate cases; it may be mixed with castor oil, sweet oil, or given in milk. Pink root, especially the preparation known as the fluid extract of spigelia and senna, is valuable in the case of puppies; fifteen drops may be given to a four-weeks old puppy of the larger breeds in a spoonful of water. Old dogs may be given a full teaspoonful. "Ashmont" advises that the remedy should be given twice a day for three or four days, to be then followed by a full dose of castor oil; or one or two larger doses may be given on an empty stomach, to be followed by the oil. If the preparation with senna is given, a dose may be administered every four hours until purging takes place; no oil need then be given, the senna being a powerful cathartic. The administration of charcoal in small doses to puppies is to be recommended as a preventive and partial cure; in small doses it can do no harm and is an excellent "tonic" to the intestinal mucous membrane. An important point, only too often neglected, is the use of stimulating and tonic remedies after the expulsion of the worms; the health of the animal will generally be much reduced, and attention to the general health, nourishing food, regular exercise and the like, are especially needed.

In the prevention of infection by round worms extreme cleanliness is the surest method; clean drinking water, clean kennels, clean yards. Hot carbolized water should be freely used in the cleaning process, and all vomited or expelled worms should be killed with it, not merely swept away.

Among the several species of nematode worms liable to infest the dog, the cruel threadworm (*Filaria immitis*) is second only to the margined round worm in interest to the pathologist and the lover of dogs. True, it is an almost unknown parasite in this country; but as FOREST AND STREAM is read in most countries under the sun, this will reach the eyes of many whose valuable pets are liable at any time to suffer from the presence of this appropriately named cruel worm. This parasite is a thread-like nematode inhabiting the heart of dogs. It is found especially in China and Japan, but has been described as occurring in several other countries. This large species attains, according to Prof. Welch, a length of ten inches and a diameter at its thickest part of one-twentieth of an inch. The tail of the male *Filaria* is furnished with a transparent membrane or hood, which is supported upon eight oval papilliform rays, four on each side. The female, on examination under the microscope, is found to swarm with eggs and embryos in all stages of development; the larger eggs are 1-900 of an inch in length, while the embryos vary from 1-90 to 1-140 of an inch in length. In the heart of an English pointer born in China, who died of this disease, the *Filaria* were found in both ventricles and for some distance along the course of the aorta. The injurious and often fatal consequences of cruel *Filaria* infection are due to the mechanical effects produced by the presence of the parasites—blocking up the circulation, interfering with the heart's action and causing death.

The symptoms are very variable; a dog apparently in perfect health dying suddenly in a fit, or the unfortunate animal may linger for an indefinite time, after suffering excruciating agonies of pain.

As to the treatment, it is obvious that nothing can be done when once the worms are located in the heart, and should the

diagnosis be at all clear, the suffering brute should be relieved from pain by a friendly shot.

As to the general pathology of this disease, little definite is known; much work has been done on the subject, and various conclusions arrived at, but the evolution of the cruel *Filaria* is yet veiled in mist. The embryo parasite, after undergoing changes outside the body of their proper host, may be reintroduced through food, or drinking water, or the bites of insects. As no known entozoon normally completes its life cycle within the body of a single host, it is certain that the adult *Filaria* do not propagate threadworms within the body of their canine bearer.

The subject being one of such great interest, we would impress on all those interested in canine medicine the importance of making post mortem examinations of the hearts of dogs which die in tropical countries, and reporting their "finds," if any, and preserving the worms in dilute alcohol, to be subsequently submitted to an expert for study. Several other species of nematode worms occasionally infest the dog. *Spuroptera sanguinolenta* inhabits the mucous membrane and the walls of the gullet and stomach, sometimes causing by their presence angry tumors and ulcers. These microscopic parasites may occur in great numbers in a single host, but rarely seem to occasion any special symptoms. They are found with some frequency in European dogs.

The giant strongyle (*Eustrongylus gigas*) is sometimes found in dogs, but is fortunately rare. This most hideous parasite is by far the largest nematode known, the male measuring nearly a foot in length, and the female a full yard, while the breadth of the body reaches half an inch at the thickest part. It occurs in a variety of animals, being specially frequent in the American mink. The head is broadly obtuse, the mouth being supplied with six wart-like papillae. The tail of the male is furnished with a cup-shaped bursa destitute of rays. The vulva of the female is situated near the head in the ventral line. The eggs are oval and measure 1-300 of an inch in length. The embryo worms, after escaping from the body of their parent's host, by some means enter the bodies of certain fishes, the vast majority dying in the intermediate stages before a piscine host is reached, and become encysted beneath the peritoneal membrane. In this stage it has been described under the name of *Filaria cystica* by some of the older writers. If this cyst be ingested by an appropriate host, the cyst wall is digested, the inclosed parasite liberated, and it speedily develops into the great size already mentioned, after having migrated into the kidney of its suffering host, finally totally destroying that valuable organ. Eight of these gigantic worms have been obtained by Klein from the kidney of a wolf, but generally but one, two or three worms are present in a single host.

Apart from the very general statement that raw fish of certain species may be dangerous food for dogs, nothing can be advised in the way of prevention or medical treatment, our knowledge of the life history of the worm as yet not being complete. Fortunately the disease is very rare, though common in many fish-eating carnivora.

Should a satisfactory diagnosis of *Eustrongylus* disease be made by microscopical examination of the urine, the only treatment is to operate on the kidney—if but one, as is probable, be affected—cutting down on the organ, slicing it open, and extracting the parasites. The operation of even removing a kidney is not an excessively dangerous one in human surgery, and if performed by a skilled veterinarian under antiseptic precautions, probably nearly all the dogs operated upon could be saved.

Other round worms found in the dog, but too rarely to be of any clinical importance, are the wrinkled thread worm (*Trichostrongylus plicatus*), which inhabits the bladder; a strongyle infesting the intestine (*Doctymus tragoncephalus*—said to occur in two per cent. of all Danish dogs), and a whip worm (*Trichocephalus*) living in the cecum. *Trichina spiralis* is sometimes found in the muscles of dogs, and some three or four very rare species of *Filaria* have been described by authors as occurring in the canine race.

The above described parasites may be considered to be the only round worms of practical importance which attack the domestic dog.

R. W. S.

PHILADELPHIA, Pa.

THE MASTIFF TYPE.

Editor Forest and Stream:

The discussion called forth by the mastiff judging at New York demonstrates the great interest which the public take in this noble breed of dogs. It also shows that the decisions of Dr. Perry were followed with unusual interest, even by those not in this particular fancy.

The Westminster Kennel Club, in selecting Dr. Perry for judge, reflected to themselves the honor which they conferred. They were not trying a new man; they were giving a recognized authority an opportunity to place our leading mastiffs in what he believed to be their relative positions of merit. A man of this character, confident of his ability, takes his cue from no previous judge. He has decided opinions, not formed by reading dog show critiques, but brought to maturity through years of patient study and practical experience in breeding prize-winning mastiffs.

I admit that breeding of dogs in itself would not necessarily make a man a competent judge of them. One of our best judges has never bred a mastiff, while the man who has given least satisfaction in the ring is one of the oldest breeders. A man can own dogs yet never study them. It is unfortunate that some of our mastiff breeders and exhibitors know so little about the breed, and it is still more deplorable that they prefer to remain in their blissful ignorance. These men take their kennel as a type and judge all dogs over the model they own. Should you differ with them and attempt to point out the faults of their animals they attribute your efforts to jealousy. The motives prompting a lover of the breed to speak frankly are honorable, and are just to the dogs though they may appear severe. The owners of dogs unjustly condemned can rest assured that sooner or later their animals will get their proper places. In the long run justice comes to all. Why just criticism should make enemies I cannot say, but I know it to be a fact that one of the best judges in this country has made innumerable enemies simply because he told the truth about the animals he criticised.

"He did not keep to type" has been the stereotyped phrase in a couple of articles I have read upon Dr. Perry's judging at New York. Why? Because, say these same articles, Ilford Caution did not win first prize. I have already said in print, "Ilford Caution lacks expression and character; his upper jaw is too short; his muzzle is not square, as the nose recedes, giving him a sour, bulldog expression, the very fault we must avoid in our mastiffs, but which has been brought about by the intense desire for short muzzles. He is weak in hindlegs, and the lack of muscular tissue is noticeable." Caution's muzzle lacks squareness; it forms, not a right angle, but an acute angle. The bulldog "lay back" is a positive malformation, and is more objectionable, to my thinking, than the "hound muzzle," which a dog may have and yet keep the characteristic mastiff expression. Mr. Wynn, who has brought the mastiff head into such prominence that a dog with a fine head, but no limbs, could win easily, must admit that the shortness of Caution's upper jaw is more than even he anticipated or would wish.

Mr. Wade calls attention to Mr. Hanbury placing Prince Regent over Crown Prince. Many able men believe with Mr. Hanbury, that the bulldog type which Crown Prince and Ilford Caution represent is not the correct type, although just now it may be the more fashionable in England. We are not ultra-fashionable in this country and you will notice that our most popular judges give due consideration to heavy limbs, a fine body and legs that can be used for walking.

Dr. Perry, by his awards, calls our attention to size in the mastiff. A small dog can hardly be long-headed, leggy and cow-hocked, while a large dog will naturally tend that way. Prizes are given undersized dogs like Homer, rather than a dog of good size and general excellence, like Boss. Again Boss deserves more credit for his good limbs than Dread, who is badly cow-hocked, yet a judge has made the astonishing blunder of placing the latter over the former. This is what you may call bad judging, because there can be no possible reason for such an unjust decision. As I said before, the wronged dog was soon given his proper place, subsequent judges giving Dread vhc. and he, after which he was withdrawn from the bench.

We may not have many competent judges, but still we have some, enough to prevent bench show committees from making mistakes, if they keep before them a list including the names of Mason, Mortimer, Watson, Exley, Naylor, Wade, Porter and Dr. Perry. These judges will not blindly follow the Wynn standard, which gives such undue prominence to the head. Their records show their opinions of deformed animals, no encouragement being given to cripples, they are soon missed from the bench. A pointer's nose is a most important feature, but without good limbs to carry him over the ground, his nose would be of little use, and so it is with the mastiff, a grand head is greatly to be desired, but if the animal cannot use his limbs he is useless and not even ornamental.

The Western people are now the best customers for mastiffs, and the type they desire is the same which Eastern breeders will try to perfect. They want size, bone, muscle and courage. Give them these requisites and they will not quarrel about the extra inch on the end of the nose.

"Ashmont" has suggested, in a contemporary, that we formulate a standard which will suit the requirements of the animals in this country. He calls the A. K. C.'s attention to his suggestion. I like the idea of an acknowledged standard; but hope it will be kept out of the hands of the slow moving A. K. C., which it appears can no longer raise a quorum. Look at the immense amount of time and labor they have expended upon a couple of protests, out of which nothing has yet come. No, if we mean real work and business, let us keep away from the A. K. C.

The American members of the Old English Mastiff Club should take the matter up. The English club would no doubt assist. A committee chosen from the authorities I have given above would very quickly settle the question, whether the American mastiff should be an active dog or a cripple.

I hope those interested in the breed will see the necessity of coming to an immediate and thorough understanding as to what is the desirable type of the dog. I am satisfied that the hearty co-operation of all mastiff lovers can be secured if those whom we consider authorities will only make the move.

I have just noticed the following paragraph in the report of the New York show to the London Field: "It certainly seems strange that American breeders are not able to produce a good-looking dog, and that all the prize winners are imported animals." Had this misinforming critic visited more than one dog show this spring, he would have seen mastiffs bred by "Ashmont" win first prizes at Pittsburgh, Cleveland, St. Louis and Indianapolis. This fact will go far to prove that Dr. Perry is not only a judge of dogs, but that he is breeding the kind which our best judges pick out for prize winners.

VICTOR M. HALDEMAN.

A GIFT TO GUIDO.—Memphis, Tenn.—*Editor Forest and Stream:* In March, 1885, I had a dog on snipe in Grand Prairie, Ark., with my valued friend, honest John Davidson, the wily Scot and stainless judge. For a while he worked a trim, wiry, eager and affectionate orange and white setter bitch named Merwin, a cross of his old native stock on the imported English blood. When she shot away like an arrow from a steel cross-bow, I thought it was the spurt burst of speed of the wire edge, but her obedience, turns, bounding pace and noble carriage of head and merriest tail action I ever saw, charmed me like a new revelation. Merwin, in action, is the distilled essence of the poetry of motion, a delight to see. Wishing to buy a scion of this strain as a rare and very valuable acquisition, John said, "wait a wee," so after a year's waiting a lovely pair of Merwin's babies have reached me, snow white, with black, drooping ears, both boys, and have been christened Walter Scott and Robert Bruce. I confidently look for Merwin's sons to be among field dogs what Lexington was among horses and Bobbie Burns among poets, incomparable and peerless, the sire being equal. And they were gifts! none were ever more valued.—W. A. WHEATLEY.

IMPORTANT SALE OF DOGS.—Mr. Chas H. Mason informs us that he has decided to retire upon his laurels and that in future he will not exhibit at dog shows, and that his entire kennel will be sold. We are somewhat surprised at this decision, as Mr. Mason has been uniformly successful as an exhibitor and doubtless has won more prizes since 1880, his first appearance here, than any other exhibitor in this country. We are still more surprised that he should dispose of Beaufort, as he is undoubtedly the best pointer in America if not in the world. We have no doubt that the majority of exhibitors will share the hope that he will reconsider his decision and that in the future as in the past he will be seen well to the front with a string of good dogs.

THE WAX TREATMENT.—*Editor Forest and Stream:* A neighbor has given me the following invaluable cure for distemper; he tried it on a dog that he says was apparently dead, and what was his surprise to see him walking about quite well the next morning. He showed me the dog to prove his statement. The remedy is a simple one: Take a little shoe-maker's wax, put it on the end of the dog's nose and he will quickly recover. Another esteemed friend informs me that the first litter of pups are liable to go mad and therefore should be drowned. He actually did drown a fine litter of collie pups last year for this very reason.—V. M. H.

DEATH OF BELLISSIMA.—Lancaster, June 15.—*Editor Forest and Stream:* On Saturday last I had the misfortune to lose my celebrated bull bitch Bellissima. She died while whelping. She had thirteen pups, the largest litter, I think, on record for one of her breed. Her loss is great. I not only feel that I have lost one of the best bulldogs in the world, but a faithful and affectionate friend.—JOHN E. THAYER.

THE MANITOBA FIELD TRIALS.—The field trials of the Manitoba Field Trials Club will commence on Sep. 21 with the annual Derby for pointers and setters whelped on or after Jan. 1, 1885; entries close July 1. There will also be an all-aged stake for which valuable prizes will be offered. Blanks may be had by addressing Chas. A. Boxer, Secretary, Box 282, Winnipeg, Manitoba.

SAN FRANCISCO DOG SHOW.—The California Bench Show and Field Trial Club will hold a dog show at San Francisco July 27, 28, 29, 30 and 31, in Platt's Hall. Entry blanks can be obtained by addressing the Superintendent, Mr. E. Leavely, 433 Montgomery street, San Francisco, Cal. Mr. Charles H. Mason has been invited to judge the classes.

NASO OF KIPPING.—Westminster Kennel Club, Babylon, L. I. N. Y., June 25.—*Editor Forest and Stream:* Our new purchases, Naso of Kipping and Glaucia, arrived in good condition per steamship Holland of the National line.—JAS. MORTIMER, Supt.

THE AMERICAN SPANIEL CLUB.—Mr. J. F. Kirk, the president of the American Spaniel Club, has appointed as secretary of the club Mr. A. C. Wilmerding, Bergen Point, N. J.

KENNEL NOTES.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Lady Mac. By Coffin, Zimmer & Co., Glens Falls, N. Y., for stone fawn, black points, mastiff bitch, whelped Nov. 23, 1885, by McMahon (A. K. R. 550) out of Lady Nevil (A. K. R. 3123).

Bob Nix. By C. R. Wakefield, Baltimore, Md., for liver and white pointer dog, whelped Nov. 5, 1885, by Joker, Jr. (Beaufort—Nymph) out of Lady Mac (Faust—Gertrude).

Cut-foot. By Max Wenzel, Hoboken, N. J., for red Irish setter dog, whelped March 10, 1885, by Chief (Berkley—Duck) out of Fashion (Arlington—Flora).

Flash and Rush. By W. R. Gifford, Skowhegan, Me., for red Irish setter dogs, whelped March 22, 1885, by Tim (Biz)—Hazel out of Florid (Chief—Becky).

Blue Cap III. Madcap, Mabel, Harebell and Blue Bell II. By Coffin, Zimmer & Co., Glens Falls, N. Y., for two white, black and tan beagle dogs and three bitches, whelped April 29, 1886, by Blue Cap II. (Blue Cap—Blue Bell) out of Constance (A. K. R. 2912).

Dido, Luca and Doe. By John G. Tod, Harrisburg, Tex., for two red Irish setter dogs and one bitch, whelped April 29, 1886, by Rufus (Campton Rufus)—Clara out of Flame (Von—Flora).

Paris, Jr. The sire of Paris, Jr., is Count Gladson instead of Count Gladstone, as was published June 10.

BRED.

Notes must be sent on the Prepared Blanks.

Nell—Glen. F. Miner's (Haverhill, Mass.) Irish setter bitch Nell (Nipe—Nelly) to H. Flint's Glen (Glencho—Lady Edith), May 7.

Ruby—Glen. F. Miner's (Haverhill, Mass.) Irish setter bitch Ruby to H. Flint's Glen (Glencho—Lady Edith), May 10.

Sal—Glen. J. Ford's (Haverhill, Mass.) Irish setter bitch Sal to H. Flint's Glen (Glencho—Lady Edith).

Little—Boss. Coffin, Zimmer & Co.'s (Glens Falls, N. Y.) English mastiff bitch Little (A. K. R. 2931) to J. L. Winchell's Boss (A. K. R. 3214), June 7.

Belle Valentine—Prince Leopold. Coffin, Zimmer & Co.'s (Glens Falls, N. Y.) Belle Valentine to their Prince Leopold (Mount Lion II.—Beauty II.), June 11.

Hecle—Prince Leopold. Coffin, Zimmer & Co.'s (Glens Falls, N. Y.) St. Bernard bitch Hecle (Chamounix—Nameless) to their Prince Leopold (Mount Lion II.—Beauty II.), May 22.

Nell Gwynn—Prince Leopold. Coffin, Zimmer & Co.'s (Glens Falls, N. Y.) St. Bernard bitch Nell Gwynn (champion Trojan—Evelino) to their Prince Leopold (Mount Lion II.—Beauty II.), May 23.

Lady Athol—Apollo. J. S. Sheppard's (New York) rough-coated St. Bernard bitch Lady Athol (Cadwallader—Cora) to W. W. Tucker's Apollo (Medor—Bliss), June 10.

Dido II.—Bonnie. J. S. Sheppard's (New York) rough-coated St. Bernard bitch Dido II. (Cooper's Barry—Dido) to E. R. Hearn's champion Bonivar (Souldan—Myzar), May 26.

Pluck—Dugdale Jock. F. Hoey's (Long Branch, N. J.) fox-terrier bitch Pluck (Dudley Crash—Caval) to Mr. Powell's Dugdale Jock (Dugdale Joe—Hazard II.), May 23.

Bessie—Premier. J. E. Fuller's (Essex, Mass.) English setter bitch Bessie (A. K. R. 3276) to D. A. Goodwin, Jr.'s Premier (Dashing Monarch—Armida), June 11.

Laone—Apollo. Geo. W. Schenk's (Burlington, Ia.) smooth St. Bernard bitch Laone (A. K. R. 2116) to W. W. Tucker's Apollo (Medor—Bliss), May 26.

Bella—Rigi. Geo. W. Schenk's (Burlington, Ia.) smooth St. Bernard bitch Bella (Alp II.—Alma) to W. W. Tucker's Rigi (Apollo—Bernice), May 8.

May B.—Gus Bondhu. D. A. Goodwin's (Newport, Mass.) English setter bitch May B. to A. M. Tucker's Gus Bondhu, May 20.

WHELPS.

Notes must be sent on the Prepared Blanks.

Constance. Coffin Zimmer & Co.'s (Glens Falls, N. Y.) beagle bitch Constance (A. K. R. 2912), April 29, eight (four dogs), by their Blue Cap II. (Blue Cap—Blue Bell).

Zitta. F. F. Harris's (Portland, Me.) pointer bitch Zitta (A. K. R. 1358), June 10, ten (five dogs), by Graphic Kennels' Graphic (A. K. R. 2411).

Judy. H. B. Brackett's (Littleton, N. H.) bull-terrier bitch Judy (A. K. R. 3318), June 12, five (three dogs), by J. W. Newman's Hector (A. K. R. 3318).

Richmond Jewel. Fred Hoey's (Long Branch, N. J.) fox-terrier bitch Richmond Jewel (Corinthian—York Jess), June 12, four (two dogs), by Kelly & Hoey's Shovel (Spades—Roseleaf).

Peep o' Day. Glencoe Collie Kennels' (East Bethlehem, Pa.) collie bitch Peep o' Day (A. K. R. 3353), March 20, five dogs, by owner's Scot Free (A. K. R. 3633).

Judith. Glencoe Collie Kennels' (East Bethlehem, Pa.) English bobtail sheep-dog bitch Judith (A. K. R. 3164), June 13, seven (five dogs), by owner's Sir Lucifer (A. K. R. 3678).

Zula. Glencoe Collie Kennels' (East Bethlehem, Pa.) collie bitch Zula (A. K. R. 3363), May 19, two (one dog), by James Lindsay's Strephon (A. K. R. 2730).

Bo Peep. A. M. Tucker's (Charlestown, Mass.) English setter bitch Bo Peep, June 11, nine (five dogs), by his Gus Bondhu.

SALES.

Notes must be sent on the Prepared Blanks.

Sank. Red Irish setter dog, whelped April, 1884, by Dan out of Ruby, by Max Wenzel, Hoboken, N. J., to J. Fisher S. Banks, New York city.

Blue Cap III. White, black and tan beagle dog, whelped April 29, 1886, by Blue Cap II. out of Constance, by Coffin, Zimmer & Co., Glens Falls, N. Y., to Fred. D. Howland, Sandy Hill, N. Y.

Laone. One-year-old Orange and white St. Bernard bitch, whelped 1885, by Chamounix out of Nameless, by Coffin, Zimmer & Co., Glens Falls, N. Y., to Geo. W. Scheuk, Burlington, Iowa.

Blue Bell II. White, black and tan and blue ticked beagle bitch, whelped April 29, 1886, by Blue Cap II. out of Constance, by Coffin, Zimmer & Co., Glens Falls, N. Y., to Fred. D. Howland, Sandy Hill, N. Y.

Dick Ranger. C. Liver and white pointer dog, whelped Jan. 20, 1886, by Ranger Croxteth out of Trux Royal, by S. B. Dilley, Rosendale, Wis., to W. J. Wilkie, Modesto, Cal.

RANGE AND GALLERY.

MASSACHUSETTS RIFLE ASSOCIATION.

BOSTON, June 17.—The annual spring meeting of the Massachusetts Rifle Association began to-day at Walnut Hill. There was a crowd of riflemen present, and they had a tough time fighting a tricky wind, blowing from 6 to 8 o'clock. The militia was well represented. The scores:

Boston Herald Cup Match.									
C M Jewell.....	63	59	60	61-243	A Clark (mil.).....	50	48	47	50-195
R Reed.....	63	58	59	243	A Clark.....	51	47	45	50-193

Second match, Massachusetts target, 200yds. off-hand, prizes divided by highest scores, possible 120 points:

C Heinel, Sr.....	11	9	10	7	11	10	11	7	11-98
U Fuller.....	10	9	12	10	10	10	11	11	95
W H Haines.....	10	9	10	9	12	8	8	9	94
T Jones.....	9	10	10	8	11	11	11	7	93
R Miller.....	7	2	11	12	11	7	8	10	90
H A Heinel.....	11	9	7	8	10	8	9	9	84
J Newman.....	9	9	7	7	8	9	9	9	78
W A Bacon.....	8	8	6	11	10	5	9	7	77
H Simpson.....	8	8	8	12	6	4	5	10	73
S J Newman.....	9	9	7	7	7	12	5	8	64

Third match same as at the second. There was only one tie, which, being decided, the prizes were awarded as follows: T. Jones first, C. Heinel, Sr., second, U. Fuller third, R. Miller fourth. Possibly 60 points:

T Jones, R. S.....	8	10	9	11	9-47	H A Heinel, Win.....	10	8	4	3-34
C Heinel, Sr., R. S.....	6	11	10	9	10-46	H Simpson, Bal.....	8	6	6	7-33
U Fuller, Win.....	8	11	8	10	45	S J Newman, R. S.....	8	6	8	8-30
R Miller, R. S.....	8	11	7	11	45	J E Newman, R. S.....	7	0	9	8-24
W A Bacon, R. S.....	7	5	8	10	37					

NEW ORLEANS, June 13.—Score of the Stevens and Miller rifle teams made to-day at the range of the Louisiana Gun Club on Poland street:

Stevens's Team.					Miller's Team.				
C C Heyl.....	229	F D Charbonnet.....	180						
F Daubert.....	230	Ben Schauder.....	270						
A Steiner.....	268	F De Gaurier.....	250						
E J Leonard.....	265	C Alberts.....	189						
Louis Sport.....	253	D Gardner.....	245						
Capt C C Julier.....	284-1520	Capt H Miller.....	230-1379						

NEWARK, June 19.—The 100 shot match, which was to have been shot between Hayes and Dorrier to-day, was postponed to next Saturday.

William Hayes, of this city, scored 72 out of a possible 75 on a half-inch center at the Washington Schuetzen-Fest on the 17th, winning first prize.

ARMY TEAMS.—The contest for places on the Division of the Missouri Rifle Team will take place at Fort Leavenworth, beginning Sept. 13. The competitions in the Division of the Pacific open at the Presidio Range, San Francisco, Cal., on Sept. 5. The Department of Dakota matches will take place at Fort Snelling, Minn., on Aug. 21.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE LEAVENWORTH TOURNAMENT.

THIS tournament was held June 1, 2, 3 on the Government reservation adjoining the city, and was in every respect the finest ever held in the West. Perfect harmony prevailed throughout, under the able management of Col. Moonlight and W. C. Hinman. Many special prizes were awarded, and among them the FOREST AND STREAM for one year, kindly offered by the Publishing Company. O. M. Judy, of Coffeyville, Kans., was the winner of this prize. There were present the best shots of Kansas, Missouri and Iowa, and among them C. W. Lidd, of Des Moines, who twice recently defeated Mr. Sice, of Jacksonville, Ill. Mr. Budd waived any claims for special prizes which would have fallen to his lot. The management desire to thank the FOREST AND STREAM, and herewith submits the matches and scores:

Shoot No. 1.—At 10 Macomber birds, 18yds. rise. First money won by C. W. Budd, second divided between Abercrombie and Judy, third between Keating and T. Hayson, fourth to Hinton:									
Moonlight.....	1110110010	6	Hinton.....	1110110111	7				
Erhart.....	1110110111	6	Keating.....	1110110110	6				
Abercrombie.....	1110110110	8	Middlewartz.....	1110110111	6

CALIFORNIA, June 6.—The pigeon shooting tournament at Elk Grove to-day was very interesting, and together secured a record of the best shots of the State. After two pool shoots, the main match, for prizes of \$100, \$75 and \$50, respectively, was commenced, and resulted as follows, Bassford's tenth bird falling dead out of bounds: Parrott, Sacramento..... 0111111110110111—17
F. Bassford, Yacaville..... 1111111101111111—19
Routier, Routier's Station..... 11111011011011010—15
Fay, San Francisco..... 1111111101111111—19
Burnett, San Francisco..... 1111111101111111—18
Haas, San Francisco..... 1111111101110111—18
Durr, Eld Grove..... 10111011011101001—14
Rickso, San Francisco..... 01111100110111010—11
Robinson, San Francisco..... 1111111111111111—20
Tebbtis, Sacramento..... 11111001101001011—13
Pedler, Sacramento..... 01011011011111010—14
R. Coons, Norris Grant..... 1110111110111111—18
Clemance, San Francisco..... 0111111000111111—16
Hastuerther, Sacramento..... 01111111011010101—15
Robinson got first money, and Bassford and Fay divided second.

ST. PAUL, Minn., June 11.—At this week's shoot of the St. Paul Gun Club, Chandler won both the Macomber and club badges. The scores of the several contestants were: Macomber badge, 15 metal birds: Chandler 14, Olson 13, Pilster 12, Cummings 11, Wilson 11, M. F. Kennedy 11, Dux 9, Engles 9, Paul 8, Blakely 8, Remington 8, Amos 5.

Club Badge—Ten singles and 5 pairs Peoria blackbirds:
Chandler..... 8 9-17 Remington..... 5 6-11
Wilson..... 9 8-17 Engles..... 5 6-11
Olson..... 8 8-16 Kennedy..... 5 6-11
Paul..... 7 9-16 Cummings..... 8 3-11
Pilster..... 9 8-15 Denslow..... 4 4-8
Myers..... 8 6-14 Adams..... 5w
Blake..... 8 4-12 Amos..... 3w
Dux..... 4 8-12

DAYTON, O., June 7.—The Dayton Rod and Gun Club held a clay bird shoot to-day with the following results: First match, ten singles: Winters 8, Keifer 8, Huffman 8, Buntin 7, Gardner 3. Second match, ten singles: Gardner 8, Al. Ohmer 8, Winters 4, Keifer 7, Buntin 3, H. Scherly 3. Third match, ten singles, five doubles: Buntin 17, 4, Ohmer 13, Gardner 12, Winters 11. Fourth match, ten singles: Buntin 8, Al. Ohmer 7, Keifer 5.

TRAPPE, Wis., June 16.—A shooting club has been organized in Grand Rapids and Centralia; following are the officers: President, P. Ward; Vice-President, Chas. Briere; Treasurer, A. Hasbrouck; Secretary, J. G. Love; Committee, Geo. Aysford and W. T. Jones. The club has for its objects the protection and preservation of game, particularly the prairie chickens, and glass ball shooting at such times as are most convenient and congenial to its members.—G. II.

SARATOGA, June 15.—The following scores were made by the Gun Club at Macomber metal birds yesterday:
H. M. Levenson, Jr..... 101110001-6
Gerard Hull..... 10101010-5
Ward..... 10101010-5
E. C. Clark..... 01100010-3

TOPSHAM, Me., June 17.—Regular shoot of Riverside Club on club grounds. There being but few members present, the match was at 25 birds for the three club badges:
W. R. Tate..... 010111001000000101000-8
A. Q. Gould..... 0101011101101111111-21
A. E. Hall..... 1101100111101000010101-15
S. A. Alexander..... 1101111111010000001111-16

NATIONAL GUN ASSOCIATION.—The following letter was written in answer to one from a target manufacturer, complaining of the bad treatment of the National Gun Association as a subscriber to the stock of the Association.—Macon, Ga., June 18, 1886.
Dear Sir:—Replying to yours of the 15th inst., I am sorry to hear, Mr. Ridge, I would call your attention to the fact that the Association in all applications for tournaments under its auspices by any of its members, has not the authority nor will it undertake to dictate to the club organizing such tournaments, their programme, except in the use of inanimate targets, the manufacturers of which are not stockholders. This is the only authority the Association can or will assume. Any dictation beyond this would be manifestly unjust, and presumptuous to the gentlemen arranging these tournaments. They are enjoined to know what will be attractive and entertaining to those they expect to attend, and most advantageous to themselves. The Association cannot and will not champion any special target, but will leave its members to select for themselves, after placing at their disposal all targets of such manufacturers as have complied with the requirements of the Association, to wit: to subscribe to twenty shares of stock payable in their targets at jobbers' prices. Under the present management the Association has faithfully carried out this contract with all such target manufacturers, your statement to the contrary notwithstanding. Your targets have been on the ground and in the hands of the managers of every tournament under the auspices of the Association since you became a member as a target manufacturer, and such will be the case with every manufacturer who does subscribe. Your charge "that your interest has not been unblissedly looked after" is without foundation and untrue, as the facts above will show. We have something over five hundred of your targets on hand, but if you have moved them as you state, and will finish your subscription by sending them to the Association, we will hold the old ones subject to your orders and send out the new ones. I do not question your assertion "that you have done considerable for the Association," and would like you to continue in the good work, but cannot accept your proposition to pay for goods sent out as a stock subscription, and allow you to return the stock. We prefer a full compliance of the contract on your part, as we have on ours. Respectfully, MATT R. FREEMAN, Vice-Pres. and Gen. Mgr., N. G. A.

ALLEN'S bow-facing oars can be attached to any boat in 5 minutes. Try them. Little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

Yachting.

THE JUNE REGATTAS AT NEW YORK.

THE promised competition of the four new boats has given a special interest to regatta week this year, it being generally expected that they would give their first trial at that time, as they have done. After seeing the three contests, unsatisfactory as they were, it is impossible to look back even a very few years at the old and noisy feeling very strongly how much yachting has been advanced, and how very far the cracks of to-day are from the old time favorites of a few years since. Several of the latter here sailed during the past week without attracting any special notice, nor was there any reason for their appearance or performance why they should. A new order prevails, a new standard of size and beauty, and their day is over.

Of course the chief interest centers in the large single-stickers, while the large schooners, especially in the East, claim a part of it. The 70ft. class is small this year, Bedouin and the rebuilt Gracie being the chief competitors. Bedouin has had a new mast since last season, a much needed improvement, her copper has been partly renewed, and, like Galatea, she carries a lighter boom and laced mainsail. Her performance has certainly been far above that of '85 and more like the previous year, when she swept the field. The race she sailed on Thursday, though hardly noticed in the daily papers, was a wonderful piece of work, and though she gained on Priscilla at times

by luck, she fairly won her place beside her by good sailing. Priscilla went very fast at many times during the day, but Bedouin, 25ft. shorter, was never far from her. On Saturday she fared worse with the rear division, and was not in with the big ones, but taking the two days, and with a liberal allowance for flukes, she has left her class, Gracie, Fanny and Thetis, miles astern. Gracie is certainly greatly improved in looks, but thus far little can be said of her speed, as she has been beaten by Thetis twice, and compared with the pack in the three races, has by no means done well. However, she is virtually a new boat, and when in shape may justify the expense of her alterations, though we doubt it very much. Fanny sailed a race on Thursday, the first for two years, and in her wind and water only served to show how easily a good cutter of 17ft. less length and less than half her beam, can heat the old type of sloop in light weather. Her day as a racer has passed away, and there were more of the tribe in last week's races that can go on the same list.

From the tone of the daily papers, as well as some whose judgment should be of a little more value, one would have supposed last fall that the "cutter craze" had come to an untimely end, and that the voice of the "cutter fiend" would be heard no more in the land, while an era of so-called American boats would follow. Leaving out the four big boats, all cutter rigged, and three with lead keels, it still seems as though the cutter was a pretty lively corpse, and apt to give trouble yet to some of the volunteer mourners who wept crocodile tears over Venesta's last race.

Certainly Bedouin has opened the season with a boom in her class, outstriking it so far that times are hardly worth taking. She was simply ahead, the rest nowhere, while she played with all but Priscilla on Thursday. This is a good deal, but not all nor half of it. What she has done speaks in a measure for beam, but there is a narrow boat still to be heard from, one of the narrowest of her kind. Undoubtedly the honors of last week belong to one boat, though one may look in vain for any mention of it in the daily papers of New York and Boston, except a few brief notices and a line in the tables of times. No big type and her times call attention to her work, but to any one who reads the times carefully it speaks for itself, thus:

	Tuesday.	Thursday.	Saturday.
Clara.....	7 16 37	6 32 42	7 31 19
Thetis.....	7 17 55	6 47 39	
Gracie.....	7 13 59	6 46 09	7 55 18
Fanny.....		6 46 28	
Athlon.....	7 28 49	7 03 12	withdrew.
Thistle.....	8 08 24		
Bertie.....	35 10	Not timed.	
Cinderella.....	35 10	6 49 48	7 45 35
Vivid.....	8 31 36		
Roamer.....	7 34 56		
Daphne.....	8 10 45	7 09 16	7 49 19
Whiteway.....		Not timed.	
Regina.....		Not timed.	Not timed

These are the elapsed times, and it must be remembered that Thetis, Gracie and Fanny are from 11 to 17ft. longer and twice as wide as Clara, and the corrected times would show a more decided favor, while they would reduce a little the time of some of the others, but the result is near enough. Here are ten sloops, among them the fastest we have, aggregating 23 starts in the series of three races in light weather, and beaten in even time, irrespective of size, in every case but one, by the narrowest cutter we have yet had here, and in this one case the cutter wins by a big margin on time allowance.

With such an average as this there can be no claim for flukes, as the chances of the 3 days were 33 to 3 against them, but if the above is not conclusive there are 2 more wins to add, that at La Graphe and the S. C. Y. C. on May 31. Not only has Clara proved herself far and away faster than any of the old boats, but she has beaten five times this season, besides one scrub race not on record, the very promising boat of the new centerboard keel type, Cinderella, the handsomest of the class yet built. A study of the above table will show pretty conclusively that for speed the centerboard sloop must go or rather has gone. It may be a very nice boat to go sailing in, with a fine large cockpit and nice cabin house to sit on, but when racing is considered—and all these boats are or once were racers—their shortcomings are too numerous and too radical to be made good by silver bottoms and lead keels at the eleventh hour. Whether or no Galatea is a match for the newer type remains to be seen; she has not yet fulfilled the hopes of her friends this season, and is still behind Irex, but these races can have little bearing on the case of Clara vs. the sloops. She has beaten them all, large and small, good and bad, in their own waters, and thus far has shown herself much more than a match for the newest and best, Cinderella.

Taken in detail, the work of the four large boats was neither satisfactory nor conclusive, but considering the whole series of three races, they may be summed up about as follows: Mayflower has suffered some from canoes which we note elsewhere, but she has done some very fast sailing, and we look upon her as the coming one of the quartette. Puritan has not been as well sailed as usual, but has had the best luck of the week from flukes. In new hands she will probably be below last year's form, though the boat is as good as ever. Priscilla, on the contrary, has been vastly improved in hull and rig, and has shown the value of such improvement, as well as of her owner's care and skill in the way she has sailed in every race, and bids fair to take second place this year. Atlantic thus far is a failure, her shortcomings to windward being very evident, and while there is much room for improvement in her crew it is doubtful whether the boat will be improved to an extent that will put her on a level with the others. Her best work has been off the wind thus far, but we have not seen her in a blow, and her performance in the slight tumble of Tuesday near the lights, when Priscilla crossed her bows, argues badly for her speed in a seaway. She is now at Mumm's for a general alteration, lighter spars, probably a shifting aft of her mast and the stopping of a serious leak in her hull. The others will meet on Tuesday next at Marblehead, when a better opportunity for a trial will be given than has yet occurred, should there be any weather, as the course is on the open sea.

NEW YORK Y. C., JUNE 17.

The second great race of Regatta week was served as badly as the first, as far as weather goes, while it was no more of a real test, than the first. The breeze was in spite of all fluking. With 37 entries there were enough good boats in each class to make an interesting fight, and nothing was lacking but wind. Boston was well represented in the entries with five yachts, three of them the finest in their class. The entries were as follows:

	Sailing Length.	Time Allowance.
Dauntless.....	Caldwell H. Colt..... 112 00	Allows
Gitana.....	William F. Weld..... 107 06	6 37
Republic.....	Wright Duryea..... 96 23	7 01
Fortuna.....	H. S. Hovey..... 94 50	7 13
Speranza.....	H. W. Colender..... 81 33	14 11
Montauk.....	John E. Brooks..... 94 06	Allows
Ruth.....	Henry Marquand..... 90 43	1 39
Grayling.....	Latham A. Fish..... 83 38	5 51

WINDY CLASS SLOOPS.
Atlantic..... William Ziegler..... 87 83
Priscilla..... A. Cass Canfield..... 86 31
Puritan..... John M. Forbes..... 85 45
Mayflower..... Charles J. Paine..... 83 85

SECOND CLASS SLOOPS.
Gracie..... Joseph P. Earle..... 71 62
Bedouin..... Archibald Rogers..... 71 45
Fanny..... William R. Travers..... 69 70
Thetis..... Henry Bryant..... 66 63

THIRD CLASS SLOOPS.
Whiteway..... George F. Randolph..... 57 50
Vivid..... Thornton N. Motley..... 56 48
Athlon..... Dr. J. C. Barron..... 56 11
Cinderella..... William E. Iselin..... 55 48
Clara..... G. M. Edwards..... 55 15
Regina..... Charles Sweet..... 54 38
Daphne..... J. Rogers Maxwell..... 50 60
Bertie..... Frederick Gallatin..... 49 74

FOURTH CLASS SLOOPS.
Espirito..... Richard B. Hartsborne..... 47 08
Bedouin is entered in second class, but a remeasurement proves that she is less than two inches over the class limit of 70ft. as made last spring, so that she is really in the class with the big boats, where she was not intended to go, but we were her grand sailing all day seems fairly to put her. The matter has not been brought before the club yet, but will probably be settled by placing her in class 2, in which event she takes first prize in her class, while Priscilla wins in class 1. The race was over the usual course of the N. Y. Y. C., from the judges' boat, anchored off Owl's Head, Long Island shore, about one-quarter of a mile south of buoy No. 18, and a mark

at Fort Lafayette, inshore from the tugboat; thence (keeping outside of Fort Lafayette) to buoy No. 10, passing south of it and north of buoy No. 5, off the point of Sandy Hook, to and around Sandy Hook Lightship, turning it from north and east, and then returning over the same course to the westward of the home stakeboat, which will be anchored abreast of and to the eastward of buoy No. 15. All yachts must pass to the eastward of west bank buoys Nos. 9, 11, 13 and 15, both going and returning.

In case the judges' boat, from any cause, is not back at the finishing line in time to act as stakeboat, yachts will pass between a stakeboat flying the club flag anchored there and buoy No. 15.

The usual prizes were offered in each class. Espirito being the only boat in the fourth class, entered the third at the minimum measurement to make a race.

The morning was cool and cloudy with a S.W. wind, but by 10 A. M. the sun was shining. The Luckenbach was at the start at 10:40 with Messrs. E. Chase, A. M. Woodcock and J. T. Robinson, of the regatta committee on board. When the whistle blew at 10:50 there was but a light southerly wind coming in the Narrows, while the tide had been ebbing for a short time. Half a mile above the line was Mayflower, looking very handsome and hard to distinguish from Puritan, half as far off to the northwest. Near the east end of the line were Clara, Daphne and Gaviota, and as the whistle blew at 11 A. M. the little cutter shot across, after standing along the line for some distance awaiting the signal. The fleet went over in two lines, one led by Clara, rounding close to the stakeboat at the east end, with Espirito after her, while the others, headed by Thetis and Puritan, came from out in the middle of the upper bay, turning short around the Luckenbach and crossing on starboard tack. As Puritan went over Bedouin passed between her and the tug, then Priscilla, Gitana, Republic, Dauntless, Grayling and Fortuna, followed by Whiteway. Mayflower and Atlantic were still above, but the latter came down very close to the tug on starboard tack, while Mayflower crossed near the middle of the line, near Gaviota. The times were:

Clara.....	11 09 27	Fortuna.....	11 05 09
Thetis.....	11 09 23	Whiteway.....	11 05 12
Bedouin.....	11 01 58	Regina.....	11 05 24
Puritan.....	11 01 52	Bertie.....	11 05 34
Bedouin.....	11 01 58	Grayling.....	11 05 31
Daphne.....	11 02 32	Republic.....	11 06 12
Priscilla.....	11 03 04	Atlantic.....	11 06 50
Cinderella.....	11 03 12	Mayflower.....	11 07 51
Vivid.....	11 03 12	Gaviota.....	11 07 52
Fanny.....	11 04 23	Ruth.....	11 08 39
Gracie.....	11 04 33	Montauk.....	11 08 42
Gitana.....	11 04 33	Speranza.....	11 09 00
Athlon.....	11 04 34		

Clara was first boat and began to get to windward in the light breeze, with her special rival, Cinderella, 1/4 mile to leeward. The latter soon made a cast in toward Fort Hamilton, but most of the fleet went down on port tack, with a fleet of vessels of all sizes from the Grand Republic and Atlanta down to the little canoe Guenn, following them. At 11:45, off Norton's Point, Clara led, with Bedouin next, both far to windward, then Thetis, Gracie and Fanny, with Espirito well over to the middle of the Bay. The wind held light, but it was astonishing to see Clara, off for buoy 10 and far to windward all the time, in fact, she stood up so far as to lose first place at the buoy to Bedouin, passing even with Priscilla on the latter's weather. All but Clara were carrying jibtopsails at the buoy. All passed No. 10 on port tack, luffing around buoy 8 1/2 as follows:

Bedouin.....	12 33 50	Fanny.....	12 50 25
Priscilla.....	12 40 20	Atlantic.....	12 53 50
Clara.....	12 41 20	Espirito.....	12 54 30
Cinderella.....	12 43 50	Bertie.....	12 55 25
Mayflower.....	12 44 00	Fortuna.....	12 56 15
Thetis.....	12 45 05	Vivid.....	12 56 20
Puritan.....	12 45 40	Montauk.....	12 57 55
Gracie.....	12 47 07	Grayling.....	12 58 10
Daphne.....	12 49 12	Whiteway.....	12 59 40
Athlon.....	12 50 05	Gitana.....	1 00 30

Gracie had to make an extra tack to weather No. 10, and Puritan and some others only got by through some very sharp luffing.

At 1:20 all were outside in a good breeze bound for Sandy Hook Lightship on the starboard tack, Bedouin and Priscilla to windward and a mile ahead of Mayflower, then Puritan, next Clara half a mile astern of the latter, then Thetis, another half mile back, with Cinderella following, then Gracie, Fanny, Atlantic and Daphne. At 1:35 both Cinderella and Fanny lowered their jibtopsails, Atlantic, Puritan and Clara having then been within half a mile of Thetis and Gracie held to theirs. Clara and Cinderella had also come down to working topsails.

Priscilla was first at the lightship, luffing round and setting balloon-jibtopsail, while Bedouin came next, with balloon foresail and balloon jibtopsail set. The times were not taken accurately, as the tug ran in with the leaders, but were approximately as follows:

Priscilla.....	1 39 30	Puritan.....	1 53 00
Bedouin.....	1 42 45	Atlantic.....	1 59 50
Mayflower.....	1 50 00	Clara.....	2 04 00

When the leaders were off the Scotland a heavy rain squall struck them from N. W., but Priscilla held on to her canvas and stood on through it, finally lowering clubtopsail, while Bedouin took in her balloon foresail. At 2:10 a calm followed, Priscilla feeling it first and lying idly off the Hook, while Bedouin still worked up with a little wind. Both now stood over to the east on port tack, sailing very slowly, while the rain hid all the others. Mayflower had been seen to take in her kites when the squall struck. It was 3:40 when Priscilla passed in by the Hook on starboard tack, with clubtopsail and jibtopsail set, and at 3:43 she went on port tack for Buoy 8 1/2. It was just at this time that a snap forward gave notice that something was wrong, which proved to be due to the failure of a pin in her bobstay shackle, the bobstay dropping under her forefoot. For a time nothing could be done save to ease the headsails, but the bowsprit of yellow pine stood the strain nobly. At last the bobstay was fished up and a tackle clapped on, but no balloon jibtopsail was set. Bedouin was some distance astern at the Hook, and as the others were made out in her wake it was seen that the Atlantic had come to the front in the squall, passing within half a mile of Puritan and Mayflower. Just how it was done could not be seen in the rain, but from being 100m. astern of Mayflower at the ship she had so bettered her place in the squalls and calms as to be far ahead of her at the Hook. Beside her was a white yacht, soon discovered to be Puritan, while a little to leeward of the latter a small triangle of hempen canvas showed up, the blooming Clara again, miles ahead of her own class, and also of all the class above except Bedouin.

Up the Bay came the Dauntless, the former with spinmaker to port as she came in the Hook, but the iron boat carried no big sails on her bowsprit, though a balloon jibtopsail was being hoisted, her had the bowsprit been able to carry it. She finished about 5min. ahead of Bedouin. Atlantic came up with clubtopsail, balloon jibtopsail and spinmaker all drawing, the latter stayed forward on port side, with Puritan next and then Clara. The finish of the others was devoid of any interest. The wind at the finish was very light from S. E. Gaviota was passed down the Bay coming up in sorry guise, her mainboom broken directly below the gaff end, her mainsail badly torn and starboard spreader gone. The mainsail was tied about the broken boom end so that the leech was vertical, while her ensign was set on the jackstaff. She came alongside the tug and entered a protest against the Republic for fouling her while she was on starboard and the schooner on port tacks. Fortuna wins in her class, Grayling in hers, Bedouin, as we have stated, really wins in first class, with Thetis in second, Clara in third, beating Cinderella 18m. 27s. The full times were:

The race was very well managed on the part of the committee, and as usual with the New York Club, the tug was so handled as to give the best view of the race. It is becoming a serious question to those who attend all the races as to what can be done with the average steamboat man, and also the "give her a toot" tends in the clubs, in the matter of whistling. Every time a boat passed a buoy, though she may be last of the lot, whistles are held open and tooted in a manner that is perfectly deafening, and that adds much to the confusion and possibilities of some accident, as nothing can be heard. In

HULL Y. C. OPENING REGATTA, JUNE 19.

THE Hull Y. C. sailed its first regatta of the season on June 19, in a good S. E. wind and pleasant weather. There were 18 entries in the 6 classes, but 2 Crusader and No Name, were ruled out, having professional crews. The courses sailed were as follows: First and second classes—Across the line between the judges' yacht and flagboat, leaving judges' yacht on starboard, through Hull Gut, then leaving Toddy Rock and Point Allerton buoys on starboard, to Harding's bell buoy, leaving it on port, around Martin's ledge buoy, leaving it on port, then leaving Shag rocks on starboard and Toddy Rock on port, to and across line between judges' yacht and flagboat. Distance, 11 miles; limit of time, 4 hours.

Third class—Across line between judges' yacht and flagboat, leaving judges' yacht on port, around Black Bush Buoy No. 1 (half a mile south of starting line), through the west gut, around Wreck Buoy (off west end of Pettick's Island), leaving it on starboard, around Wilson's Rock buoy, leaving it on starboard, through Hull Gut, to and across line between judges' yacht and flagboat. Distance, 6 miles; limit of time, 3 hours.

Fourth and fifth classes—Across line between judges' yacht and flag boat, leaving judges' yacht on port, around Hull Yacht Club barrel (off northwest end of Bunkin Island), leaving it on starboard, around Hull Yacht Club barrel (off Harry's rocks, near Prince Head), leaving it on starboard, around Hull Yacht Club barrel (off northwest end of Bunkin Island), leaving it on starboard, around Hull Yacht Club barrel (off Harry's rocks, near Prince's Head), leaving it on starboard to and across line between judges' yacht and flag boat. Distance 6 miles, limit of time 3 hours.

At 3:06 the first gun was fired and at 3:30 the first and second classes were started, Atlanta going over first with Nimbus second and Carmen third. Five minutes later the third class, led by Posey with Sea Bird second, crossed the line, and at 3:35 came class 4, with Dr. Weid's new boat leading, then Crusader, Thistle, Myrtle and Letta. At 3:40 came Rocket, Pogonias and Imogen.

Nimbus and Atlanta each had a walkover, Carmen broke her gaff and withdrew. After leading for a while Posey was overhauled and finally passed by Sea Bird. Thistle led the fourth class and Letta sailed over. The full times were:

Rocket, H. M. Faxon.....	17.00	1 36 53	1 10 19
Pogonias, P. C. Pearson.....	17.00	1 36 53	1 10 19

The result in class 3 cannot be decided until Thistle is remeasured. The other prize pennants were won as follows: Nimbus, Atlanta, Sea Bird, Letta and Rocket. The judges were: B. W. Rowell, chairman, J. B. Forsyth, Otis A. Ruggles and Peleg Aborn.

DORCHESTER Y. C. 94th REGATTA, JUNE 17.

THE Dorchester Y. C. sailed a very successful regatta on June 17, 40 yachts entering. As the club had selected the same date as the N. Y. Y. C. Theirs was not present, while her rivals, Stranger and Huron, elected to stay at home and race rather than try their fortunes in New York, so that the interest was divided. A light S. W. wind blew all day, freshening at times into a good sailing breeze. The classes were 40ft. and over, 28 to 40ft., 21 to 28ft. Some small boats entered at a rating of 21ft. in order to get in. The courses were for the first and second classes, from a starting line, leaving Shag rocks on the port, out buoy off Pig rocks, on port, Halfway rock on starboard, around Graves' whistling buoy on starboard, thence to starting line. Distance 30 miles; limit of time, six hours. For third class from starting point off Nahant, leaving Winthrop bar buoy on port, Graves' whistling buoy on port to starting line. Distance, 10 miles; time limit, 3½ hours.

Four large yachts entered in the first class, Stranger, Huron and the schooners Gevalia and Meta. The first whistle blew at 11:55 with a second at 12:10 and a starting signal at 12:15 for first and second classes. Huron went off with a good lead, but Stranger was bothered by the small fry. As soon as she was clear of them, however, she closed up and passed Huron, finally leading her a long distance at the finish. Meta won easily in the second class keels and Nimbus in second class centerboards. Atlanta won in her class and Echo in hers. Fearless and Black Cloud were in collision and a protest ensued. The times were:

FIRST CLASS.

Vera, J. G. Farrell.....	31.00	Withdrew.	
Fearless, F. G. O'Connell.....	31.05	Withdrew.	

Stranger wins a solid silver pitcher, value \$75; Nimbus, \$30; Violet, \$30; Maud, \$30; Zeolus, \$30; Atlanta, \$35; Black Cloud, \$35, subject to protest; Echo, \$25; Lizzie F. Daly, \$15. The judges were Coolidge Barard, L. N. Clark, W. B. McClellan, Erastus Willard and A. J. Clark.

CRUISE OF THE COOT.

XXIV.

THE exit from North River into Albemarle Sound is through a narrow fairway, leaving the North River screw pile light on the starboard hand. The least water shown on the chart is 6½ ft. From 7 to 8 can usually be counted on, especially if the wind has been in the south for some time. There are no tides in the Sound, but the wind has an appreciable effect in driving out or piling up the water, its influence being noticeable in an hour or two. During the winter the prevailing winds are from the northward and fair for vessels bound southward into Pamlico through Croatan Sound. But when the Coot reached these latitudes the southerly winds had already set in and were blowing with great force five days out of six. This made a cruise up the northern shore of Albemarle a rough undertaking, as a heavy sea was continually pouring in on the beach and up the broad rivers which had to serve as harbors. In general the sea always runs east or west in the Sound, owing to the conformation of the land. A moderate wind is enough to raise a great commotion, and that almost instantly with the first puffs, the waves being very short and steep, breaking with a violent onward thrust in the shoal basin of 12 to 18 feet forming the pent up Sound. To a small boat this was very trying. The inflowing rivers forming the only accessible harbors varied from two to three miles in width

and fifteen in length. They had to be ascended to the head for protection. The Sound itself is fifty miles long, twelve miles wide at the eastern extremity, choking up gradually to four at the head, where the Chowan River, two miles wide, continues far inland, taking a northerly course. The bottom is very even at about 15 ft. with shoals and ledges of hard sand lining the shores. In the rivers from 6 ft. to 10 ft. can be traversed. The banks are low and thickly wooded with ash, poplar, pine, gum, cypress and some oak. Portions of the land are swampy and known as "poquosin." Back of the wooded fringe the country is open and taken up in farms to a much greater extent than would appear from a run along the beach. Cotton, corn, rice, truck and lumber are the staples and tobacco is not to be tried. The water of the Sound is slightly brackish, but not salt enough to staid oysters to thrive. Fishing is, however, pursued on a large scale, shad and herring being caught in marketable quantities, and sea trout, sturgeon, big-mouthed bass, perch, mullet, snuffish and sheepshead are caught in less quantity. Some of the fisheries are on a large scale, involving an investment of \$10,000 in nets, boats and buildings. In good seasons, such as the last, the profits are large, reaching \$5,000, or 50 per cent. Other years will show a heavy loss, so the business is something of a gamble. The daily expenses of the larger establishments amount to over \$100. Their nets are immense and costly, and in trawling, and it is a wonder how they can be faked or bighted down in great quantities. When not in use they are used for drying fish. Every day they are carried out in flatboats, being paid out over the stern in a large circle. Steam engines ashore then haul them into the "battery" on the beach, where the fish are dumped, cleaned and salted down or packed in ice in barrels. Schooners "run" these to the nearest point of rail or steamboat connection, from which the catch is shipped at once to Northern markets, chiefly Baltimore and New York. The ice is imported by the cargo from Maine, unless a severe winter affords a home supply. Smaller fish, such as the herring, are hauled by horse power or by crabs manned by lusty Africans. On a lesser scale the proprietor sets a number of pound nets with long "leads" from the shore and puts up his catch in shanties or clubs together with friends who jointly support a packing house. There are also agents from Northern dealers who buy the fish on the spot and attend to the shipping, but the natives are learning the ropes and prefer to ship themselves direct to the commission houses of large cities, as they realize better prices. In Pamlico Sound shad are the most common, and each man for himself. The shad are strung to a line of poles in the last days of February, and allowed to remain until April, when they are taken up. The catch is ferried ashore in small boats and canoes. Upon the proceeds of this semblance of labor the natives live all the rest of the year in comparative ease and idleness, only scratching an acre or two for corn, peas and potatoes, and occasionally organizing expeditions against the festive clam and almost extinct terrapin. Herrings are beneath notice, and oysters are not worth their while for the small fish, but the oyster beach. The proceeds of the seine fishery amount from \$500 to \$800 per outfit. The nets and appliances are worth about \$150. In Beaufort waters menhaden are netted in large quantities, and the villainous oil factory has become an institution.

Oyster planting has been tried with success, though the attempts have not yet been serious with the exception of the beds of Long Shoal Bay and Far Creek in Pamlico, started by Messrs. Grant & Lamb, of Elizabeth City, and the well-known groves of oysters in Beaufort, started by Messrs. Watson and Co. of the same place. Seed can be had in unlimited quantity from the native beds, and it only needs a little northern thrift to make oyster culture one of the largest sources of revenue to the inhabitants of the eastern portion of the Sounds, wherever suitable bottom can be found. Hundreds of acres of native oysters lie bare at low water around Beaufort Harbor, and immense quantities can be tugged in Pamlico about Wysocking and Long Shoal. There are also large reefs in Roanoke Sound. Though of inferior quality, transplanting to more favorable ground will see them in great numbers and at a profit. The laws of Carolina permit taking up ten acres of ground in any one county. I came across one sloop from the Chesapeake, bound for Broad Creek in the mouth of the Neuse with a load of seed taken off Long Shoal.

Upon asking the natives of Stumpy Point Bay why they did not profit by the opportunities at their very door without leaving the chance to strangers, I received no explanation except a shrug of the shoulders. Life is so easy in those highly favored regions that contentment is a prohibitive and no one seems to better his lot, being content to jor along in the paths cut out by their forefathers. When the fishery and crops fail, the people are in sore straits, though they never want for food as long as oysters, clams, turtles and game hold out. With industry they might not only lay by for a rainy day, but amass a respectable fortune, which they now let slip through their fingers. Terrapin, the large sizes of which bring \$1 on the spot, have become well nigh extinct, so the Legislature of the State has passed a protective measure, prohibiting their catch under penalty of \$100. This opens up some prospect for the future. "But why don't you start a terrapin farm and breed them yourselves. There would be a great deal of money in it." The natives said there would be a fortune in it right there in a certain pond well suited to the purpose. "Why don't you stoek the pond?" No answer but the usual shrug of the shoulders. Around Stumpy Point there is a fine range for a thousand head of cattle, but the worthy denizens of the point rest content with a few cows and helters, and when they want a little cash sell a heifer or two to help out their modest housekeeping. Poultry and eggs they have none to spare, despite their facilities, and corn they buy from a store, twenty miles away. They even sent aboard the Coot for beef and potatoes to keep life in a sick man of the community. Not even fresh water could be got, although a cucumber pump would have supplied an endless flow.

Brackish water from the shoal holes in the top soil is the limit of enterprise in many a place, though it must be said that the medicinal property of a deep brackish water is to be despised, and no part of the reason for the remarkably good health which prevails in swampy lands, where you would look for a reign of fever and debility. It is the custom with hasty travelers to pronounce against the salubrity of the marshy lands which line the North Carolina sounds and to conclude from the appearance of things that malignant fevers must be very prevalent. The reverse is the case. No healthier climate can be found, and no more robust people exist than the fishing and farming population of the Sounds. Castles within the reach of salt water, toward the head of Albemarle Sound, in the Roanoke bottom, where the water is fresh, fevers are common enough, but of such a mild type that people make light of the trouble and certainly show no outward signs of suffering. There is more just ground for complaint right in the vicinity of New York, on Long Island Sound and on the banks of the Hudson than in the low lands of the old North State. Such places as Stumpy Point Bay, Long Shoal, Croatan, Elizabeth and Beaufort are notoriously healthy, and the people live to great age.

Another misconception concerning these regions is commonly current in the North. It is assumed that civilization is a backward state, the inhabitants semi-barbarous, and an expedition to these parts much like an exploration of Central Africa or the jungles of East India; and persons who have cruised down this way have done much to perpetuate the misapprehension. The shores are usually lined with a fringe of swamp and marsh, anything but inviting and a barrier to a deep penetration of the interior.

The Coot, having poked her nose up all the rivers and into all the holes of both Albemarle and Pamlico, has had a much better chance for observation than the hasty cruisers who cut across the sounds in two or three days and obtain very superficial information. I found the inhabitants as a whole equal in every respect to those following like pursuits on the shores of Long Island and Connecticut. Among the better classes, the landed gentry, if they may be so termed, or the store-keeping aristocracy of the towns and villages, the parlors also hold good with like classes in the North. Indeed, the superiority in point of intelligence, manners and public spirit, is with those of the South, where the native element with its intuitive perceptions has not yet been swamped by the dregs imported from abroad. Even the "man and brother" held his head well up, could converse fluently on all local topics and read as well. The denizens of the "banks," as the strip of land facing the Atlantic is called, were particularly bright and to be met with all over the sounds with their little schooners as the common carriers of the region. The Schooners are scarce and the meanest speak without provincial accent. One explanation of this not over common proficiency is the tenacity with which generation after generation has perpetuated the training of the first settlers who were of the English gentry of the times. It is not intended to cover the whole South with these remarks but simply that portion I visited in the Coot. Two sins I can throw up to the inhabitants—a want of thrift, the spirit of money getting is properly said, and a total disregard for the second sin, but which turned out to be a failing, but I fear the second one is too deeply ingrained to be readily uprooted.

TORONTO Y. C.—A race for centerboards of 5 tons and under was sailed on June 12 over the third class course of the club on Toronto Bay, starting at 3 P. M. The yachts being Mischief, Iris, Meteor, Mole and Pilot. The wind was east and spinners were carried on the Mischief and Pilot, while the others were carried on the Meteor and Mole. Mischief, 3:16:30; Iris, 3:17:10; Meteor, 3:17:50; Mole, 3:33:30; Pilot, 3:19:20. On the next leg Meteor lost a block and withdrew, the others were timed, Mischief, 5:56:20; Meteor, 3:57; Iris, 3:58. Out to the Gap the wind was ahead and Iris took the lead, the times at the Gap buoy being: Iris, 4:48:20; Mischief, 4:49:20; Meteor, 4:49:25. The last leg was down wind, Iris still leading and finishing thus: Iris, 5:02:20; Mischief, 5:04:10; Meteor, 5:04:15. Mischief wins first prize, \$12, on time allowance, beating Iris by 32 seconds. Iris takes second money, \$8, and Meteor third prize, \$5.

WEST LYNN Y. C. REGATTA.—This club sailed a race on June 19 in a very light wind, 13 yachts entering in the 3 classes of 20 to 27 ft. W. L., 17 to 20 ft. and 12 to 17 ft. The times were:

FIRST CLASS.			
	Elapsed.	Corrected.	
Blanche, Richard Hobbs.....	1 28 47	53 20	
Laura, Edward Wyman.....	1 30 50	58 41	
Lark, Sproule & Burrill.....	1 30 20	58 41	
Nordeck, Brown, Walsh & Co.....	1 30 50	59 38	
Contest, Charles Morton.....	1 24 00	1 04 54	
SECOND CLASS.			
Flying Yankee, Sawyer & Rich.....	1 15 05	54 45	
Alice L., P. Lynch.....	1 17 00	56 30	
Inez, Goodrich Bros.....	1 12 12	57 02	
THIRD CLASS.

Florence, J. White.....	1 28 55	1 11 03	
Annie E., G. Parker.....	1 35 10	1 17 50	

The prizes were \$10 and \$5 in each class. The judges were M. H. Pratt, J. E. Eldred, H. A. Hanson. Regatta Committee, Commodore George A. Goodridge, Vice Commodore E. F. Rich, Fleet Captain, William R. Hunt, Walter S. Sawyer, William Sproule, P. S. Rilemont, T. M. Alley, James Lawson, William E. Walsh, S. V. Mansfield.

SANDY BAY Y. C. JUNE 19.—The third race for the Cunningham Cup was sailed on June 19 off Squam over the following course, starting between judges' yacht and stone pier, thence to and between "Squam" and Essex, leaving black buoy, leaving on starboard, to boat, sailing north northeast, leaving on starboard, then was repeated, coming between "Squam" buoys, and finish between judges' boat and stone pier.

The wind was fresh from the south. The times were as follows:			
	Length.	Elapsed.	Corrected.

BUFFALO Y. C. ANNUAL REGATTA.—The Buffalo Y. C. sailed a very successful regatta on June 12, eight yachts competing. The entries were Alarm, Lily R., Jewett, Sylvia and Vera in first class, Turk, Arrow and Curlew in second class. The allowance was 3/4 in. per foot. The start was made at 2:30, the yachts going over as follows: Alarm, 2:24:10; Lily R., 2:24:25; Turk, 2:24:35; Arrow, 2:24:55; Curlew, 2:25:40. Alarm led at first buoy, with Jewett and Arrow next. At 3 P. M. Alarm was 3/4 mile ahead, with Jewett, Arrow, Vera, Sylvia, Turk, Curlew and Lily R. in order. Half an hour later the wind fell and the calm lasted for an hour. At 3:58:10 Alarm finished the first half of the course and catching a breeze half an hour later she finished the race at 5:05:15. It was 5:04 when Vera finished her first round, with Sylvia, Lily R., Curlew, Jewett, Turk and Arrow in order. With most of the last round was sailed in better time, Vera finished at 6:00:10. The elapsed times were:

Alarm..... 2 41 05 Curlew..... 3 40 56

Vera..... 3 36 00 Turk..... 3 42 10

Sylvia..... 3 39 41 Jewett..... 3 45 28

Alarm wins first prize, a pair of marine glasses. Two protests have to be decided before the other prizes are awarded.

LAKE ERIE.—The second annual regatta of the Inter-Lake Y. R. A. will be held on Lake St. Clair on July 5 and 6, following which the squadron cruise to Put-in-Bay will take place. The following programme for the week has been arranged: Sunday, July 4, reception committee of the M. Y. C. will meet yachts arriving from Lake Erie ports, at the mouth of Detroit River. Tugs will be provided to take yachts to M. Y. C. anchorage. Monday, July 5, Inter-Lake Yachting Association races on Lake St. Clair, start from off Grosbe Point at 10:30 A. M. Second, fourth and fifth class yachts will compete. Tuesday, July 6, Inter-Lake Yacht Association races, over same course, starting at 10:30 A. M. First and third class yachts will compete. Wednesday, July 7, review of all yachts of the Association by Com Geo. W. Gardner and staff, 9:00 A. M. Start for cruise to Put-in-Bay Islands 10:00 A. M. Friday, July 9, squadron cruise among Put-in-Bay Islands. Saturday, July 10, breaking up of meet. The regatta committee of the Association are: Messrs. R. Scott, Secretary (C. Y. Y.), Nat. J. Clegg (M. Y. C.), T. Huntley (O. Y. C.), J. H. Hepburn (T. Y. C.), G. H. Beebe (P. B. Y. A.). The officers for 1886 are: Hon. G. W. Gardner, Commodore; H. C. Hart, Vice-Commodore; A. W. Machee, Rear-Commodore; J. S. Williams, Secretary and Treasurer; Dr. A. E. Claypool, Fleet Surgeon; E. P. Day, Measurer; George Gascoyne, Assistant Measurer; George H. Ketchum, Surveyor.

AMERICAN Y. C. CRUISE AND REGATTA.—The programme for the races and cruise of the American Y. C. next month is as follows: One of the Iron Steamboat Company's boats will accompany the yachts. The third annual regatta of the club will take place on Thursday, July 15, over the club course, from Larchmont to New London. In addition to the commodore's cup, which will be awarded to the yacht making the shortest time over the course, trophies of time allowance per cup will be competed for in the different classes. On Friday, July 16, two cups will be competed for by yachts and launches not exceeding 50 ft. on waterline, in the run from New London to Shelter Island. In the afternoon of the same day, at Shelter Island, there will be cutter, gig and dingy races for badges and also for the Buteinan challenge cup for cutters, now held by James A. Baker, Esq. The respective prizes offered are open to all steam yachts enrolled in any yacht club, and owners, whether members of the American Y. C. or not, are requested to enter their yachts as soon as possible by notifying the chairman of the regatta committee, Mr. George W. Hall, 115 Broadway, or Mr. Thomas Manning, secretary, 53 Beaver street, New York.

YAWLS IN NEW YORK WATERS.—The full British yawl rig is a decided novelty in American waters. Cythera being, we believe, the first one to visit New York. She now lies off Staten Island, and has been seen, at anchor and under way, during the past week. Her handsome sheer, high sides and shipshape look have won favorable comments from almost all who have seen her. Near by her is anchored a similar vessel, an English yawl, Xarifa, lately arrived from England via Madeira and the West Indies, after a very pleasant cruise, having left England in March. Her owner, Mr. Ames, with several friends, is on board. She is, for not, we requested to enter their yachts as soon as possible by notifying the chairman of the regatta committee, Mr. George W. Hall, 115 Broadway, or Mr. Thomas Manning, secretary, 53 Beaver street, New York.

DELVIN.—Clara has already made a reputation here for "young Will Fife," the third of the name so well-known among the successful builders of the north country, but beside her there are now here two others of the same family which promise to add to the fame of their designer. In the Tompkinsville basin is the 10-tonner Uldia, owned by Mr. E. M. Padeiford, just fitted out after her trip across, while beside her lies a smaller sister, Delvin, owned by Mr. M. Roosevelt Schuyler. The latter, which arrived in the City of Rome, is 38 ft. 7 in. L. W. L., 5 ft. 6 in. beam, and 6 ft. 2 in. draft, with 881 sq. ft. in lower sails. In 1884, her first year, she took 13 firsts and 2 seconds out of 17 starts. Last year she only raced during the first of the season, being beaten by Doris. She will sail here under the Larchmont burgee.

SEAWANHAKA Y. C. Y.—The fourth regular meeting of the S. C. Y. C. will be held at Delmonico's on June 25, at 8 P. M. The following gentlemen are proposed for membership: Messrs. R. B. Roosevelt, Jr., R. B. Hartstorn, Wendell Goodwin, M. Morris Howland, H. M. Appleton, Thos. J. Russell, J. M. Clark, W. Lloyd Jeffries and B. Spaulding de Garmaida.

BEVERLEY Y. C. 107TH AND 108TH REGATTAS.—On July 3 the B. Y. C. will sail its 107th regatta, an open sweepstakes for all cutboats, off Monument Beach, starting at 4 P. M. The entrance fee is \$2. On July 5, the 108th regatta, a first race for the Buzzard's Bay championship, will be started. It will be open to club yachts only.

EAST RIVER Y. C. JUNE 21.—The seventh annual regatta of the E. R. Y. C. was sailed on Monday, 30 yachts starting in a light southerly wind, the course being the Gangway buoy. The winners were Fly, Maud M., Lydia F., Thetis, Pirate and Loue Star.</

Canoeing.

Secretaries of canoe clubs are requested to send to **FOREST AND STREAM** their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to **FOREST AND STREAM** their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

Mohican Races every Thursday through the season.
 June 20—N. Y. C. C., 2d Race Commodore's Trophy.
 July 2-5—N. Y. C. C., Trials International Races.
 July 8-24—W. A. C. A. Meet, Lake Erie.
 July 10—Brooklyn C. C., Paddling Race.
 July 10—N. Y. C. C., 3d Race Commodore's Trophy.
 July 21—N. Y. C. C., 4th Race Commodore's Trophy.
 Aug. 7—N. Y. C. C., 5th Race Commodore's Trophy.
 Aug. 7—Brooklyn C. C., Paddling Race.
 Aug. 19-27—A. C. A. Meet, Grindstone Island.
 Aug. 21—Lake St. Annual.
 Sept. 4—Brooklyn C. C., Paddling Race.
 Sept. 4—N. Y. C. C., International Cup Races.
 Sept. 11—N. Y. C. C., 6th Race Commodore's Trophy.
 Sept. 18—Brooklyn C. C., Sailing Races.
 Sept. 25—Brooklyn C. C., Challenge Cup.
 Sept. 25—N. Y. C. C., 7th Race Commodore's Trophy.
 Oct. 2—N. Y. C. C., Fall Regatta.

A SUMMER'S SAIL.

OUT of the dusty city and its cares

Bear me, my bonny boat,
 Beneath the azure canopy of heaven,
 Where fleecy cloudlets float.

Where fresh sea breezes whisper in mine ear,
 Adown the echoing strand,
 And laughing wavelets fling their diamond shower
 Upon the golden sand.

How sweet to listen to the ocean's voice,
 Singing its ceaseless lay,
 And watch the white-winged vessels speeding on
 Across the spilt way.

And sailing on sweet memories of the past
 Blend with the summer wind,
 And present cares of life for once are left
 In tancy far behind.

F. G.

THE HUDSON RIVER MEET.

CODDINGTON'S DOCK, the scene of the Hudson River spring meet of 1896, was well chosen and admirably adapted for a canoe camp. Here the river is wide and the hills not so high as to make squally winds. The beach is all that could be desired with camping sites on the hill in the shade or on the sandy beach. The first campers, the Dock Rats, of Newburgh, arrived Friday night, coming to Rondout by steamer Mary Powell (Captain Anderson, of the Powell, is an active member of the Rondout C. C.) and paddling up to camp, five miles away, under convoy of three R. C. C. canoers the same evening.

Saturday morning dawned bright and fair with a lively breeze from the south, bringing with it Tramp (Stevens), of New York, who had harbored at Rhinecliff the night before. During the morning the Shattucks arrived from the north, having run by the camp at two bells in the morning watch. Presumably the watch on the tug-lant focle was asleep, and booms being off the port the man at the wheel did not see the camp as he passed by. They made land a mile north and beat back Saturday morning in time for breakfast. Later the Mohicans arrived via Barrytown and also Captain Ruggles, of Rochester. Saturday was agreeably passed in getting up tents, overhauling gear and grub chests, and in the afternoon the sailing races were out for a tussle. A number took a sail over to Barrytown, two miles away, for ship stores, with a quivering breeze, a delightful run and an exciting beat back. By evening the camp was completely settled and looked like a miniature Grindstone, for the point somewhat resembles that renowned canoeing ground. On the south side, which is open, were the Albany, Newburgh and New York men, on the north shore the Shattucks, and on the ridge between the Rondout club and on the extreme end were the headquarters.

Sunday was quietly spent. The fresh breeze from the south lured out the sailing devotees, and the broad river was dotted with sails, Tramp with her 4ft. storm lug sail only did some remarkable windward work. Slippery Thetis flashed in and out here and there, and Peggy, Grant Edgar's new boat, flitted about under a cloud of sail, presided over by the doughty Dock Rat.

Two new boats by new builders are here and so are their respective builders, Iris of Ruggles built excites the envy of the cultured eye by her fine lines and a future of glory is predicted for her. Caro, by

Buckhout, the son of the ice yacht builder of Poughkeepsie, shows herself worthy of notice and consideration and looks as if there was no end to her capabilities in a seaway. During the afternoon a shower swept the river and caught a number unprepared. Thetis and Caro were far away from camp to the south, so took shelter with a shad fisherman, and after the blow and rain had a little skirmish to see who would get home first, Thetis came in first, but Caro is a good boat just the same.

In the evening the camp-fire melodies were interrupted by a terrific shower and the campers were wooed to sleep by the patter of the rain on their canvas tents.

The races were set down for Monday, and in the early hours of the morning heads were protruding from tent openings inspecting the weather and taking notes of the prospect for wind. No one was disappointed in the wind, it was out from the north and coming butt end first.

The Regatta Committee had settled upon seven races, the first to start at 9:30, providing the committee had breakfasted and washed up their dishes at that hour. They did not come to time, and it was 10 A. M. before the first race, Class A, sailing, was called. Won by Peggy, Grant E. Edgar; Helena, Grant Van Dusen, second.

Commodore Bartlett, of Newburgh, had arrived previous to the race and acted as judges' boat and life-saving station, lending assistance to four capsized mariners.

II.—Class B, Sailing—Won by Caro, Grant Van Dusen; Peggy, Grant E. Edgar, second.

Before this race and at the start the wind was heavy and a high sea running. Thetis, Tramp and Iris went out under storm sails, otherwise the result might have been different.

III.—Novice Sailing—Won by Mystic, W. A. Stephens.

IV.—Consulting Sailing—Won by Thetis, B. M. Wackerhagen.

V.—Paddling, Class 2—Won by canoe—J. Hand.

VI.—Paddling, Class 4—Won by Mystic, W. A. Stephens.

VII.—Paddling, Tandem—Won by J. S. Poynter and Grant Van Dusen in Nike.

During the three days meet the wind was all that could be desired, the water not too lumpy, and the temperature just right. Fifty men with thirty-five canoes camped during the three days, and though there was a good hotel just over the river at Barrytown, not a member of the camp took a meal that he did not assist in some way in preparing.

After the races a general moving took place. The little village of canvas quickly disappeared, and like the Arab, the canoeist quickly folded his tent, but not like him did he quietly steal away, but amid the din of steam whistles, the toot of horns, and to the tune "We part to meet again" the Mohicans paddled to Rondout to ship their canoes the following day by steamer.

The Shattucks departed by special steamer for Sing Sing, and the Dockrats by Commodore Bartlett's steam yacht for Newburgh, and when night had settled down scarce one was left to tell the tale.

THE NEW NAUTILUS AND PEARL.

THE coming international races have directed the attention of American canoeists to the boats which will come from the other side to meet ours, and the victories of the new Nautilus have excited much curiosity here, as nothing has been known of her lines or details. We have just received the fifth edition of Mr. Dixon Kemp's "Yacht and Boat Sailing," in which, with other new matter relating to canoes, are two plates of the new Nautilus, with sketches of rudder and other details. The new boat is a marked departure from previous models, and especially from her immediate predecessors of the name. Her dimensions are: Length, 14ft. 6in.; L. W. L., 14ft. 3in.; beam, 33in.; depth at gunwale, 12½in.; sheer at bow, 8½in.; at 5½in. The extreme draft, 7in., is at a point less than 5ft. from the stem, while at the stern the draft is only 2½in. the keel raking up. The trunk begins 2ft. 6in. from bow and ends 6ft. 6in., so that the board, a single plate of 56 pounds, is very far forward. The metal drop rudder is very large and of a novel form. The floor is quite flat and the sides flare very little. The hull contains five water-tight compartments, three being entered by hatches from the deck. The sail plan shows two balance lugs, 70 and 15ft., many of the details of rigging being novel and very ingenious. All cleats for the mainsail are on a small forehatch, fitted also with a folding tray for the slack lines, all being detached from the canoe and made up with the sail in stowing. The following description of the new Pearl is given by her owner in the *Field* of June 5.

The new Pearl, to compete in the international races of the American Canoe Association and the N. Y. C. C., is now being built by R. J. Turk, Kingston. I mention this to afford any one desirous of seeing the mode of construction adopted in these little boats, an opportunity of doing so to the best advantage. Like last year's Pearl, the present one is founded on the lines of the 1882 Pearl, published in "Yacht and Boat Sailing," with some slight alterations. As stated in "Yacht and Boat Sailing," the 1882 Pearl had a rising floor in order that she might carry a ballast to advantage in the matches of the Thames Sailing Club and the T. V. S. C., where no shifting ballast is allowed. The present canoe, being designed solely to compete in canoe races with shifting ballast, has 1in. less dead rise than the 1882 model. The 1882 boat was 14ft. long, and the 1885 was 14ft. 6in., the extra length being obtained by spacing the same moulds further apart in equal proportions. In the canoe now building the 14ft. 6in. length is obtained by throwing the extra 6in. entirely into the middle of the boat, the first mould each side of midships being spaced 9in. from the midship mould, all the other moulds being spaced 6in. apart. The water lines in the fore and aft bodies of the new canoe are therefore the same as in the 1882 model, but the midship body is longer. As most of the races are sailed in narrow smooth waters, the after centerplate, which is chiefly useful to steady the boat in a seaway, has been omitted, and the area of the fore centerplate proportionately increased. The new boat should be closer watered than the last, and quicker in stays, but not so good for rough water cruising, in which the after plate is very useful.

The boat is framed with alternate sawn and bent timbers spaced 6in.; the sawn timbers are cut from natural oak crooks, 1in. moulded and ½in. sided. The steamed timbers are of ash, ½in. moulded, ½in. sided. The bilge is further strengthened with a piece of oak 2in. wide by ½in. thick, turned round between each frame. There are four ribbons ½in. by ½in. cedar from end to end; these are let into the sawn frames, but the bent timbers are let into the ribbons. All this framing is set up before planing is commenced, so the design is accurately carried out. The plank up to the 6in. level amidships and the 7in. level at bow and stern, is of oak 1½in. thick in three widths; the topsides of 3-16in. cedar. The keelson is cut away for 15in. amidships, and the ballast well-constructed as in the 1882 boat.

The leading dimensions are: Length, 14ft. 6in.; beam, 2ft. 8½in.; depth, gunwale amidships to rabbet-line, 14in.; sheer forward, 4ft. ½in.; aft, 3in.; round of deck at fore end of well, 2in.; well, 12in. The wide at fore-end, 16in. at widest part; flap side-decks, 7in. wide. The rabbet-line is straight for a length of 9ft., and is cambered for 2ft. 9in. at bow and stern, the camber being more than in any previous Pearl.

The design has been carried out with the utmost care and exactitude by the builder, Mr. R. J. Turk, leaving nothing to be desired in these respects, and it is a great satisfaction to see the work so thoroughly well done.

[We may mention that we saw this canoe in frame last Saturday, and thought it one of the cleverest specimens of the shipwright's craft we had ever seen.—*En. Field.*]

TORONTO C. C. CHALLENGE CUP.—The combined paddling and sailing challenge cup of the Toronto C. C. was raced for on June 12 at 3 o'clock. The wind was light, but the race throughout was very exciting and closely contested. Of the five entries four were new canoes that had not competed against each other before (all having been built during the winter) and considerable speculation was indulged in as to which model was the fastest. The Boreas and Yanewah have 50 pound boards, the Mac and Maggie 15 pound plates and the Una a wooden one. The following is the order of the finish:

Owner.	Canoe.	Mainsail.
1. Will G. McKendrick.	Mac.	73 sq. ft.
2. Com. H. Neilson.	Boreas.	95 sq. ft.
3. D. Byron Jacques.	Yanewah.	95 sq. ft.
4. W. A. Leys.	Maggie.	75 sq. ft.
5. Colin Fraser.	Una.	75 sq. ft.

In a scrub sailing race held after the combined, Boreas came in a winner by about a quarter of a mile in a 4 mile course, Yanewah finishing second. The club will offer a novices trophy for those who have never sailed a canoe before this year.—WILL G. MCKENDRICK, Secretary T. C. C.

ESSEX B. AND C. C. REGATTA.—This club will hold their first spring regatta off their club house, north of the Erie R.R. bridge over the Passaic River, Newark, on June 26, starting at 2 P. M. The programme includes a paddling race for classes III. and IV., a sailing race for all classes, a tandem paddling race, a sailing race for canvas canoes, a hand paddling race, an upset race and tub race. The races are open to members of all canoe clubs, and the races will be under A. C. A. rules. The committee are Messrs. George O. Totten, Wm. H. Hillier and A. W. Evenden.

NEWBURG B. & C. C. The canoeists of Newburgh held their first outing on June 19, when a party of 27, including a number of ladies, in ten canoes and row boats, left the clubhouse at 4 P. M. and were towed by the steamer Alice to Clark's Dock, where supper was prepared. The party rowed and paddled home by moonlight, arriving at 10 P. M.

A. C. A. MEMBERSHIP.—The following candidates have been proposed: John E. Plummer, New York; W. A. Borden, Rochester, N. Y.; W. R. Huntington, Rome, N. Y.; E. R. Perry, Albany, N. Y.; W. D. Frothingham, Albany, N. Y.; E. J. Wheeler, Albany, N. Y.; W. Wheeler, Albany, N. Y.; E. K. Cassidy, Albany, N. Y.

THE A. C. A. TROPHY subscriptions to date are as follows: F. J. Baxter, \$1; S. J. Banus, \$1; Chas. F. Earle, \$5.15; Frank M. Sinclair, \$1; P. D. Shiras, \$1; Geo. Bura, \$1. Previously acknowledged, \$225. Total to date, \$235.15. Wm. Whitlock, Chairman, 37 West Twenty-second street, N. Y.

CRUISES IN CONNECTICUT.—Mr. E. J. Pope, Box 784, Ansonia, Conn., would like to correspond with other Connecticut canoeists.

EVERY pair of Allen's bow-facing oars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

G. D. S.—See last issue for Massachusetts game law.

W. H. L.—You will do well to read Dr. Henshall's "Book of the Black Bass."

W. H. S., Troy, N. Y.—We believe that there is no law in this State protecting the English sparrow.

WATT.—You will find bass, perch, pickerel and muskallonge, grouse (ruffed and pinnated) and wild fowl, in season.

AMATEUR RIFLE SHOT.—Kindly inform me if there are moose, deer and fur-bearing animals in the north woods of Canada. Ans. Yes.

H. B.—The arms are well made and give good satisfaction. Send to the manufacturers who will supply illustrated catalogues of the different styles and calibers.

BAY BIRD RESORT WANTED.—I am anxious to find some good locality for bay bird shooting. Would like to spend August in some nice family, board reasonable. Can you give me an address? Nothing fancy, just clean, simple fare.—S. D., Troy, N. Y.

E. S. C., Nebraska.—1. We have heard it well spoken of. 2. Should prefer a double-barreled gun. 3. There are half a dozen or more different makes, any one of which will last you a lifetime and your son after you. 4. They are advertised in our advertising pages, and can be had from any dealer.

B. H. F., Canada.—1. See mosquito preventive recipe in our last issue. 2. The rifle you have ought to answer the purpose. A gamebird might remedy the fault you name. The other rifle would be suitable. 3. Trap shooting is good practice for field shooting, but nothing but actual experience in the field can make you expert there.

J. C. W., Paterson, N. J.—1. Which is the most killing fly for brook trout and black bass at this season of the year? 2. Also, which do you consider the best bait for chub? Ans. 1. There is no such fly; all are more or less good at different times of the day and on different waters. The best fly of yesterday is often refused to-day. 2. Worms and grasshoppers.

J. H. M., Newark, N. J.—Is there any known rule to determine the crook of a gun stock—that is, to come up to the shoulder properly on the line of sight? I am going to order a gun and want to start understandingly. Ans. You should by experiment with different guns determine what drop of stock best suits you, i. e., enables you to catch the center of rib quickly with your eye. Then lay a straight-edge on the rib, extending it back, and measure distance from straightedge down to top of stock.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and, when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

HANNAFORD VENTILATED BOOT CO.
79 Milk Street, Boston.

The English "Fishing Gazette."

Devoted to angling, river, lake and sea fishing, and fishculture.

Every Saturday, 16 pages, folio, price 2d. Volume XI. commenced with number 429 for July 11, 1885.

Editor—R. B. MARSTON
Sent direct from the office for any portion of a year at the above rate. U. S. postage stamps can be remitted, or money order payable to Sampson, Low, Marston & Co., the proprietors.

Contains special articles on all fresh and salt water fish and fishing; reports of the state of the rivers; reports from angling clubs; fishculture and natural history; where to fish; angling notes and queries; angling exchange column; notices of fishing tackle, books, &c., and other features.

A copy of the current number can be had (post free by sending six cents in stamps to R. B. Marston, the FISHING GAZETTE office, 12 and 13, Fetter-lane, London.

The FISHING GAZETTE circulates extensively among anglers and country gentlemen in all parts of the Empire.

"There is a large public interest in fishing. . . . An excellent class organ."—World.

"One of the best authorities on these and kindred subjects."—Truth.

"A brighter and gayer little paper is not published."—Mayfair.

The FISHING GAZETTE is quoted by the Times and all the best papers.

One of the best mediums for

ADVERTISEMENTS

of fishing tackle makers, fishcultivists, hotels and fishing quarters, whisky, waterproof fishing goods, cigars and tobacco, books of angling, and all other requirements of anglers; also for all general advertisements addressed to a well-to-do class in all parts of the country and abroad.

Office—12 and 13, Fetter-lane London

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.
Made simply with boiling water or milk. Sold only in half pound tins by Grocers, labelled thus: JAMES EPPS & CO., Homoeopathic Chemists, London, England.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 86 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

For Sale.

Province of Quebec PUBLIC NOTICE.

LEASES OF THE ANGLING PRIVILEGES pertaining to the ungranted lands bordering on a few Salmon Rivers on the north and south sides of the River and Gulf of St. Lawrence, and a number of lakes situated for the most part along the line of the Quebec & Lake St. John Railway, will be offered to public competition, at the Department of Crown Lands, Quebec, on

Wednesday, 30th June next, 1886,
At Eleven o'clock A. M.

A list of said Rivers and Lakes is published in the *Quebec Official Gazette* of this date.

Department of Crown Lands,
Quebec, May 29, 1886.
May 29, 1886.

FOR SALE.

HOPE ISLAND, in Narragansett Bay, containing about 100 acres, located eight miles from Newport on the line of steamers' direct course to Providence. Standing high, commands a view of every point of interest in the bay. Good house, barn, workshop, lodge, henneries, abundance of good water and a wharf costing \$3,000 are some of the improvements. A perfect resting place for a tired gentleman or lady, or desirable headquarters for a yacht club or site for a hotel, every room would have a water frontage. Splendid grounds for private fox hunting. Fishing excellent and spring and fall sea fowl shooting unsurpassed on the coast; but the island should be kept a gentleman's private residence. Will be sold at a fair price on easy terms.

ABOLISH SPRING SHOOTING.

THE sentiment against the spring killing of migratory game birds on their way north to their breeding grounds is just now on the increase. The depletion of game has had the natural effect of turning the eyes of reflective gunners to the several causes of scarcity, and the custom of spring shooting cannot but be recognized as among the most important of preventible agencies. The folly of shooting birds in the spring has perhaps been clearly enough recognized, but the practice has been defended and perpetuated by those who reason that the supply will last long enough for their own pleasure, and as for the condition of affairs after them, that is the lookout of the next generation. It has been the spirit of going in for fun while it lasts.

At the meeting of the New York Association at Rochester last week the society passed resolutions directing one of its committees to seek the legal prohibition of spring shooting in this State. An attempt to secure such a law has several times been made at Albany, but unwise counsels have so far prevailed. If the State Association should take the work up in earnest it ought to put such a law on the books at the next session of the Legislature.

THE NATIONAL PARK RAILROAD JOB.

THE debate in the Senate on the bill granting a right of way to the Cinnabar & Clark's Fork Railroad Company is given on another page. It is instructive reading. The considerations advanced by Senator Vest in opposition to the bill are unanswerable. He denounces the enterprise as a covert first step toward gaining admittance to the Park and gridironing it with passenger railroads; points out that this will result in the destruction of the Park as a national possession of the people, and warns the Senate of the national calamities certain to follow the destruction of the forests on the headwaters of the Missouri.

These arguments cannot be refuted. But they can be ignored; and the lobby, so strenuously engaged in laboring for the railroad people, may succeed in putting the bill through the Senate. Members who share Mr. Butler's extremely myopic view of the Park may feel themselves the less responsible to public sentiment on such a question as this, because, unfortunately, the public is ignorant of the inter-

ests at stake, and does not comprehend the national injury contemplated by the bill.

The proposition of Mr. Butler, that his constituents are not concerned in the protection of the Park against the schemers who would ruin it, is entirely mistaken. The citizens of every State in the Union are concerned in this. The Park is national, not less in fact than in name. The whole nation is benefited by the possession and maintenance of such a region of natural wonders and beauties set apart for a public pleasure ground. It is a possession of permanent value, from which future generations, as well as the present one, will receive benefit; and it is the height of presumption for any man to rise up in the Senate of the United States and say that because his constituents—meaning his individual political cronies—are not contemplating a pleasure trip this summer to the Park, the Senate will do well to hand it over to the greedy grasp of scheming railroad speculators.

THE WOODCOCK SEASON.

LAST year, it will be remembered, owing to the cold weather and late spring, the woodcock did not go as far north as usual in their migration, but sought breeding grounds in lower latitudes. The result was an unusual supply of home-bred birds in covers where formerly the shooting was confined for the most part to flight birds.

It is the belief of many close students of the woodcocks ways that on their return north in the spring, the birds repair to the particular localities where they were bred, and nest there. In confirmation of this theory it has been noticed this season that many of these grounds where the birds bred in unusual numbers last year have again been frequented by them, and so for a second time the supply of home-bred birds is larger than customary. This fact should go far toward demonstrating the economic folly of summer shooting.

July woodcock are delicious as table delicacies. That is all that can be said in their favor as legitimate game. For other reasons they should be protected at that time. The season's birds are not fully grown and have not attained maturity of strength. They are found in the vicinity of the nesting grounds, and the broods are usually together. It is then no difficult feat to destroy the whole brood. In New Jersey and other States where July shooting is permitted, most of the birds bagged are young. Only a few of the birds escape to return to these grounds again to breed. Were the birds unmolested at this time they would in August and September separate, moult, and in the beginning of October, being then full grown, new feathered and strong of wing, return to the vicinity of their breeding and afford the best of all woodcock shooting, that of October. There is not the July certainty of destruction about the pursuit then. The number of birds that escape is much larger. And when they come back in the following spring they repair to the same grounds again, and there nest. In a country where woodcock breed, if the shooting be confined to autumn, the supply will be maintained, and good shooting may be had year after year, an occasional very dry season of course proving the exception.

This is not theory. It is actual demonstrated fact, coming within the experience of more than one of the readers of these lines.

Common sense demands the abolition of summer woodcock shooting just as clearly as the abolition of all spring shooting.

POLLUTING NEW YORK HARBOR.—It is very gratifying to learn that at last some measures have been taken to stop the evil of dumping all sorts of refuse in the harbor and there is a prospect that action will be taken against the great oil works which drain "sludge acid" into the water and ruin the oyster beds and the fishing grounds. Formerly the shores of Staten Island and of Long Island Sound abounded in fish which came in to feed on the crabs and other food. The sludge acid has banished the food and the fish come no more. Mr. J. W. Mersereau, who was recently appointed by Commissioner Blackford to watch and protect the oyster beds, has arrested several employees of the street cleaning department for dumping garbage in Long Island Sound, contrary to law. The captain of the dumping scows was held in \$1,000 and four scowmen in \$250 each to answer before the next Grand Jury of Westchester county. We hope to record some early action taken against the Standard Oil Company, which has been a great offender.

THE CINCINNATI DOCTOR, who has been striving to climb into a perch of newspaper notoriety by a labored defense of the milliner bird butchers, has been effectually answered by the committee of the Natural History Society of that city.

CONVERTING A DYNAMITER.

A LETTER was received at the New York post office the other day, addressed "To Some Dealer in Fishing Tackle, New York." Most of the post office employees are fishermen or gunners; they all read the FOREST AND STREAM and know where to go for their fishing kits. The letter was duly delivered to one of the large firms, and being opened, read as follows:

UTICA May 23d 1886.

DEAR SIRS.—As I would like the address of some firm that handled all kinds of Fishing Tackles I take this way to introduce myself. Now as to the things I would like I would say that they are Torpedoes for to use in Deep water for catching Fish now if this letter falls in to the hands of a firm that Handles those Torpedoes I would ask that you Please and send me your Prices of the same and I will try and favor you in some way hoping to here from this letter soon Remain yours

F. M. HOUSBROOKER.

UTICA Venango Co PA.

Notwithstanding that their stock would fit out a thousand ordinary anglers with every conceivable and inconceivable style of lure and device, the firm had none of the violent "tackle" longed for by Mr. Housbrooker. They sent him instead a catalogue of their goods, hoping that he might be induced to try legitimate methods of taking fish with approved tackle, and thus having proved the merits of artistic angling, put away his yearning for piscatory earthquakes. The result of this missionary enterprise will be awaited with interest. If these New York tackle dealers demonstrate the feasibility of converting a thundering Jupiter of a dynamiter into a gentle devotee of the quiet pursuit of fly-fishing, it will be a genuine triumph of sentiment over brute instinct. But the heart of a dynamiter is stony ground.

THE LAKE GEORGE ISLANDS.—A pretty piece of pretentious audacity has been brought to public notice by the New York Forest Commissioners. Of the numerous islands on Lake George, said to be one for every day in the year, fourteen are private property, having been sold by the State. The rest all belong to the State, and individuals have no claim upon them. But many of these public islands have been seized upon by squatters, who have in some instances erected handsome cottages upon them; and year after year with a high hand and amazing assurance they warn off intruders under threats of prosecution for trespass. When the bill creating the Forest Commission was under discussion, the Lake George island squatters attempted a surreptitious amendment exempting their little prizes from the commission's control.

MASSACHUSETTS RUFFED GROUSE.—The ruffed grouse is the chief game bird of Massachusetts. The proper protection of this game is of more importance there than that of any other single species. The new law is a great improvement on the old statute in securing for the grouse total immunity from lawful snaring. The old law provided that snarers might practice their art on their own lands; and the effect was that snaring was carried on without restriction, and whole covers were completely cleaned out. The close season was extended a month, to Oct. 1, but this excellent provision is in part nullified by the open woodcock season, which includes August and September. The August woodcock market-shooters will shoot chicken grouse; no excuse should be given these gunners to be out with their guns before October.

THE OHIO FISH AND GAME COMMISSIONERS announce that they propose the rigid enforcement of the laws and prosecution of offenders. The Legislature, at its last session, very wisely set apart an appropriation for the purpose, and the officials are therefore in a position to do something. One by one the several States are learning that the natural wealth possessed in the creatures of the woods and waters is worth caring for and maintaining. The recognition of this principle comes none too soon. At the last session of the Massachusetts Legislature, the fish commissioners of that State were made game commissioners also.

THE CROW RESERVE.—If the Interior Department does not propose to content itself with the combined admission and denial of the charges recently contained in these columns, it is to be hoped that it will make a more searching investigation than is to be had by simply communicating with its agent, Williamson. An honest special detective, going to the Crows themselves, would gather the truth, especially if, instead of confining himself to the coffee-coolers loafing about the agency, he should interview such representative and leading chiefs as Plenticious, Bobtail Crow, Bear Wolf, Spotted Horse and Deaf Bull, and such talkers as Crow Davis.

DAYS WITH THE BARMECIDE CLUB.

VII.

HOW looked the morning? Good-natured and good-humored, and all the surroundings helped on the good feeling. The leaves were whispering soft nothings to each other, the lake was smiling, the brook was laughing and a moving mosaic of sunlight and shadow was naughtily playing hide and seek on Sunday morning. The morning sun coming like a caress edged the light clouds with gold and spread a soft warm color over the mountains. Down from the hills and through the woodland draws, through the tamarack swamp and pungent odors of the forest, came the breeze, brisk and bracing; out on the lake it hurried furrowing it with silver crowned ripples, which patted the lily pads as they scurried inshore.

A likely morning for fishing, but surrounded with these mighty harmonies, this perfect blending of all that is gracious in nature, a diapason of delight, a benediction, the club wet no line this Sabbath day. That person who rejoices in the great blessing of love for angling has a great debt to pay and he can at least devote one day in the week toward paying for the favor granted him when he was imbued with the spirit of the gentle angler and became a brother of those who love the swaying rod. To none is vouchsafed a richer largeness of blessings, and the Giver of all this, perfect and bountiful in His love and wisdom, asks only that you think and thank.

There is a satisfaction in feeling you have done right, even if the world at large gives you no credit for it. "Take my advice and let the trout alone on a Sunday and become fishers of thought, drawing bright and good things out of the depths of memory. They will rise to your cast with great freedom and take hold strongly, and it is a pleasure to land them, and once secure they become an enjoyable possession."

How brightly rises the genial face of the dear old friend who gave me my first lesson in fly-casting. Through the shadowy mists of the intervening years I can see the friend of my boyhood days. We were old cronies, though he was thirty years my senior. How well I remember that long ago afternoon, when he gave me my first lesson. That is something which is not yet lost in the vistas of the past. All the attendant minutiae are indelibly impressed on my mind. It was a June Saturday when I was a youngster in my teens. I had brought with me to the woods a Mitchell rod, and my mentor taught me to get out about thirty feet of line in tolerably good form. I was clever with my hands and that helped me wonderfully in timing and handling my rod, and I soon found that the secret of success lay in the back cast. I caught the knack wonderfully quick, as naturally as an Irishman takes to politics, and two hours before dark rowed to a long shallow in the lake and quietly anchored. Twenty-five feet of line was about all that was necessary for me to cast before a pound trout was hooked to the red ibis stretcher. How gingerly I handled him, for my confidence in the light rod was not the greatest, but it soon increased as the rod responded seemingly of its own volition to all demands upon it and killed its first trout like an old veteran.

Cast after cast was immediately rewarded; sometimes the stretcher fly, sometimes the grizzly king dropper and occasionally both at once were fastened to the feeding trout; and I was so rapidly improving my methods that by dark, when I pulled up anchor and rowed back to the cabin with about twenty trout averaging over a pound each, I had abjured the slimy anglerworm and the disgusting grub. I have never had better angling than on that long ago June afternoon, when I met my maiden feather, and under the tuition of that worthy master was initiated into the mysteries and beauties of the higher art and more graceful practice with the lighter rod. I discarded the heavy pole forever. Main strength gave way to science, though there may be strength behind the plant rod and plenty too, but I had learned to achieve greater results with a less expenditure of muscle. There was a cabin full of anglers at the lake, and all of them, save my teacher, disciples of the heavy bait-rod, and to most of them my success was a revelation, and if there was an element of slaughter in my youthful attempt it has long since been eliminated. I know that the next morning I was anxious to be out on the lake, but my good master said, "No, sonny, don't tempt fortune to-day. She was very good to you yesterday. Wait until to-morrow."

"I have a very vivid recollection," says Roy, "of the last Sunday's fishing that ever I indulged in; but as I caught nothing but a wet jacket and a hungry stomach, the recording angel ought to blot it out, for I sincerely repented at the time and have never been a backslider. Two of us were in the woods at Pine Lake, where we had been having indifferent luck, and one Sunday morning we proposed trying G. Lake to see if we could better our fortune. So after a very early breakfast we started. G. Lake, if I remember correctly, is only about a mile and a half from Pine, and we were soon there, where we found rafts and paddles in good order, and we were at once busy with our rods, that is, busy casting. We fished faithfully all that day, trying all the flies in our books, throwing over every well-known and likely spot; but apparently the fish entertained different opinions regarding the question of taking hold, and not one trout did we see that blessed day. About an hour before sunset we concluded to return to Pine Lake. We had had no dinner, as the lakes being so near we had expected to be back to camp in time for a late dinner, but had overstayed, hoping for a chance of fortune. We came ashore and struck out on a blazed trail. I knew it was the right one, for I had been over it a score of times; but after going a mile or so we came to a little lake. We both looked it over carefully and agreed that it was not Pine Lake, for it was to all appearances not quarter the size of Pine. There was nothing to do but get back to G. as quickly as possible, for darkness was rapidly coming on. We ran all the way back and commenced another search for the Pine Lake trail. It commenced to sprinkle. Dark hurrying clouds were gathering and twining themselves around the treetops on the summits of the mountains and soon everything was cradled in the blackest of black.

"Fortunately there was a shanty close by, with wood enough for a night's fire cut and piled up near it, so we were not so badly off as we might have been. We were to make a night of it anyhow, and in spite of the rain we soon had a roaring fire. Rain, lightning, thunder—don't speak of it, please. A bright flash, a deep roar, and the tempest broke in all its fury. Peal after peal in quick succession rolled through the sky and shook the mountains, while the rain came down

with resistless persistency as though night had kept its dampness, its noise, its cold, its darkness for our amusement. We hauled part of our fire into the shanty, and passed the night principally in trying to dodge the drops which came through the leaky roof. This was anything but pleasant even had we to take the exercise on full stomachs; but going to bed—bed did I say?—dinnerless and supperless, only aggravated matters. However, those nights have an ending, the same as others, and those dark clouds have their silver linings and some of them even more valuable linings, for to see the golden belt in the eastern horizon one would little imagine that the previous night could have been guilty of the dark proceedings we had witnessed.

It was a sunny Monday morning, and we were out early searching for the correct trail and congratulating ourselves on the immense breakfast we would have in about an hour; but somehow we couldn't find the trail, though for four or five hours we searched diligently and carefully. There were more blazes in those woods, Horatio, than even the little hatchet of truthful George ever dreamed of. They were thick as leaves in Vallumbrosa (I believe that's the place), but we had lost faith in their guiding us out of our present difficulties. We adjourned to the shanty and held a council of war to decide on future operations. We had a little luncheon of scenery, the forest, the lake and the mountain, with a little tender blue sky thrown in by way of dessert. We could feast our eyes anyhow. We concluded that the only way now for us was to follow the outlet of the lake and see where it would carry us. We thought it must run into the West Canada Creek, and if it did we were all right if we could stand the tramp, of the length of which we had very little idea. We started down the outlet, and of all rough tramps I have ever experienced that was far and away the roughest. I doubt if many persons had at that time been over the same ground. It didn't look as though mortal had ever pressed foot in the same. You could feel the solitude, you could see it—good substantial, solitude, which might have been cut into blocks and sold in noisy towns at good prices.

"The uncertainty of our venture was in addition to our condition doubly tedious, and my companion was fast losing strength, and his stops and rests became dangerously frequent and often. I had to arouse him with encouraging words and vigorous shakings. We reached the West Canada Creek into which the outlet emptied and then we knew where we were, several miles above Becraft's. A long walk under the circumstances, but it was good to be able to locate ourselves again and that thought refreshed us wonderfully. We made Becraft's just at supper time, as though nothing had happened, told a plausible story to account for our unexpected appearance, washed and leisurely took our places at the supper table. But how we ate and slept that night. I was never more tired than I was all the next day, and I resolved then and there that my Sunday fishing was a thing of the past, a resolution which I have faithfully kept. I suppose I would have been lost any other day just the same, but it happened fortunately on Sunday and I have treasured the adventure as a lesson and a warning. I was never fully satisfied that the lake we found was not Pine, but I have never been in that part of the country since.

THE AUDUBON SOCIETY.

Editor Forest and Stream:

Feeling that public opinion is being awakened to a realization of the evils arising from the fearful destruction of our birds to satisfy the demands of fashion, depraved appetites; and while we deplore the too evident decrease in numbers of our song birds, the depopulating of our heronries, the alarming destruction of the eggs of sea birds for food, and the inhuman destroying of every nest and egg within reach of the merciless urchin who is seized with the egg-collecting fever, we are at the same time conscious that we, as taxidermists, are looked upon with disfavor.

But we desire to vindicate ourselves, and as representative taxidermists of the largest establishment of the kind in this country—Ward's Museum—we believe we at the same time express the wishes of every true taxidermist, every honest lover of the art, when we express it as our desire that the wholesale slaughter of birds (for other than strictly scientific purposes) be discouraged in every way possible.

We heartily favor the bird laws as proposed by the American Ornithologists' Union's committee, and shall do all in our power to further the protection of our birds.

Editor Forest and Stream:

The last Audubon meeting of our college year was held this week, and I thought you might be interested in learning the result of our spring's work.

You know that our society was organized in March, and the outline of the work we then proposed for ourselves has been given in the FOREST AND STREAM, so that you are familiar with the general character of our society, and know that we have been going upon the theory that a knowledge of the birds themselves would be one of the most effectual checks upon their destruction for the justification of vanity. Mr. John Burroughs was present at one of our first meetings and spent several days with us, inaugurating our field work by a succession of early candle-light as well as midday walks to the favorite bird haunts of the region. The size of the classes that met with him probably did more to confirm the distrust of our feathered friends than to suggest to them any sympathetic Audubon interest, but Mr. Burroughs' love of the birds acted as an inspiration, and as soon as he left, the field work committee began its work in earnest by dividing the observers into squads of from six to ten, apparently, much to the relief of the birds. At first each girl went out only twice a week, but soon the interest became so great and the size of the sections swelled so rapidly that the original committee of four trained nine others as a sub-committee to assist them, thus enabling every one to go out as many times a week as desirable, and what we found most essential, reducing the sections to three or six. The work has been carried on in this way for two months and the result is eminently satisfactory to all concerned.

Migration blanks issued by the Division of Economic Ornithology of the Agricultural Department were distributed at the outset and have been used for the collection of notes made in the field. Of the eighty-nine members of the society, over fifty have done field work, and twenty-three have filled out the migration blanks or given in their notes in some other form.

The data collected in this way has been collated, and the results will be sent to the Department of Agriculture, duplicates of all notes being kept in the annals of the society for reference in future years.

Seventy-six species of birds have been observed, and fifty-six nests, of twenty-two species, have been found. Other interesting notes have been made on the songs of birds, on flowers, and on other natural phenomena, while the study of the birds has brought them much nearer to the lives and sympathies of us all.

The work of Audubon proselyting has formed an important part of the society work, and we trust that our influence has not been unavailing.

We have distributed 1,050 circulars on the subject of bird protection, 100 in the Northampton High School, 480 in the departments in Washington, and the rest among families and friends scattered throughout the States from San Francisco to Boston.

One of our most energetic workers has gone to San Francisco for the summer vacation, and promises to do good work there. Another one has started an Audubon Society in Kansas, and still another claims forty converts from the Bureau of Engraving and Printing in Washington, while a great many have induced individual friends to give up their feathers.

On the whole we feel very much encouraged. We have done far better than we had hoped to in this short time, and the interest promises to be permanent.

At our last meeting Mr. Burroughs was made an honorary member of our society, and we hope to get new inspiration from him and from other bird lovers next year.

Blank schedules have been distributed to the observers for use during the summer months, and when college opens in the fall we hope to add new names to the society, and also new birds to our lists as the result of the summer's work, and to take up our work together with renewed enthusiasm.

F. A. M.

SMITH COLLEGE, Northampton, Mass., June 19.

A matter presents itself at this time which, in view of the strenuous efforts made (and as a rule sensibly) to protect our song and some other birds, calls for consideration. I refer to the depredations of robins (*Turdus migratorius*) on the cherry trees about here. Out of ten trees that a while ago were loaded with promising fruit, not one tree but that has suffered. Eight of them have been about stripped of fine black hearts. The only tree having anything of consequence left on it is the one close by the house. Fluttering strings, rags, and even a bell fixed so as to ring when a breeze moves the limbs, are of no avail. Even if you throw a fire cracker into a tree it only sends them off for a time. I am glad to see the birds protected, and I am not at all prejudiced; but in this case I think the robin ought to be forcibly invited to let these cherries alone. Perhaps the originators of the AUDUBON SOCIETY or some of its members can suggest a remedy. I do not like monopolies.

X. Y. Z.

SALEM, MASS.

On complaint of James Anderson, agent of the Massachusetts Society for the Prevention of Cruelty to Animals for the four western counties of the commonwealth, Lewis and Darwin Merrill, of Shelburne Falls, were yesterday arraigned before Justice Greene, at Greenfield, for shooting robins, and were each fined \$20 and costs, a total of \$58.58. This is the initial movement of the Society under the provisions of the bird law just passed, which imposes a penalty of \$10 and costs for each robin killed.—*Boston Herald*, June 24.

"The ladies of Paris," says the *St. James's Gazette*, "tired of wearing dead birds, are now spending fabulous sums in procuring all sorts of creeping things—such as spiders, beetles, etc.—with which to adorn their hair and dresses. It seems the idea originated with Mme. Judic, who during her tour in 'the Golden South Americas,' was presented by a deputation of feminine admirers in Brazil with a 'brace' or 'pair' or 'couple'—we are not sure of the technical term for two insects—of Brazilian beetles, or 'gold bugs'; which, it appears, can be trained, and are tethered by thin gold chains to a hair-pin, and are allowed to wander about her head at their own sweet wills. The idea of ladies adorning themselves with living insects is hardly original. Not to go as far back as the Egyptians and Etruscans, we ourselves remember seeing in the Brazils a party of ladies who, having captured a number of fire-flies, inclosed them in long tubes of muslin, with which they trimmed the front of their dresses. The effect in a garden after dark was quite as pretty as the electric lights which the 'Iolanthe' fairies wore at the Savoy. If Mme. Judic's beetles could speak, they would probably say, with Piscal, 'Fashion is a tyrant from which nothing frees us.' In the meantime they are the subject of much comment in Paris; for, as Pope said in a famous epigram, 'Ladies will talk of what runs in their head.'"

BARN OWL IN OHIO.—*Editor Forest and Stream*: I had the good fortune to secure a fine adult female barn owl (*Strix pratineola*, Bonap.), brought to me by a farmer who shot it from the top of a high oak tree. This is the first instance of its occurrence in Northern Ohio, only five or six specimens being recorded in the State, and those over in the southern part. The first owl of this kind I ever saw was alive, in a Cleveland bird store, labeled "monkey owl." The gentleman in charge was very indignant when I informed him of his mistake in the name. He told me that it was a new kind of owl of which I knew nothing. I have often thought since that the name was very appropriate, as the owl does really resemble that animal about the face and eyes. The Cleveland specimen came from Florida.—A. HALL, (East Rockfort, O., June 19).

A SINGULAR EGG.—This morning we had a singular egg for breakfast. It was nothing less than one egg with another inside of it. The egg was poached and when the cook came to break it a smaller egg fell out of the larger one. The smaller one was about the size of a pigeon's—or perhaps a little larger—with a very thin shell. My desire was to preserve it, but I found that it had been cracked in breaking the egg that inclosed it. I might say that the larger egg was supposed to be a double yolked one, and as an honored guest I was to enjoy the two yolks. But instead of the usual two yolks there was the smaller egg. The smaller one was without a yolk.—A. H. G.

SWIFTS, HUMMING BIRDS AND GOAT-SUCKERS.

Editor Forest and Stream:

A month or so ago I published in the Proceedings of the Zoological Society of London, a paper illustrated by a number of plates and woodcuts, treating of the osteology of swifts, humming birds and goatsuckers. My studies of the osseous system of these several forms has led me to believe that they stand sadly in need of a reclassification, as well as still more exhaustive researches into their structure. Much that I saw in the organization of swifts compelled me to adopt the surmise of Huxley, presented as many years ago, that these birds would be found to be some day nothing more than profoundly modified swallows, and having no more affinity with the humming birds than these latter.

In the paper referred to, I proposed that the humming bird be awarded an order by themselves, as the order *Trochilidae*, and further, that the goatsuckers or nightjars be similarly dealt with, being grouped in an order *Caprimulgidae*.

Now such a hold has the notion gained upon some minds that the humming birds and swifts are in some way related to each other, that my preliminary attempts in the P. Z. S. to throw additional light upon this important subject, have not been fully convincing. Consequently I have determined to write another paper upon this subject, setting forth the complete structure of all these forms, and such related ones as should be compared with them.

To effect this it is highly essential, of course, that I should be amply supplied with material and alcohol specimens of the forms in question. At present I am in a poor locality to secure this, a fact which has impelled me to seek your assistance and the advantages offered through a request published in your widely circulated columns. By my own efforts I have gotten together alcoholic specimens of the following birds: 1. *Progne subis* (purple martin). 2. *Petrochelidon lunifrons* (cliff swallow). 3. *Chelidon erythrogaster* (burn swallow). 4. *Tachycineta thalassina* (violet-green swallow). 5. *Micropterus melanoleucus* (white-throated swift). 6. *Chordeiles texensis* (Texas night hawk). My present desiderata are: 1. Any of the humming birds (two or three specimens of each species). 2. *Chaturapelia* (common chimney swift). 3. *Chaturapelia* (Vaux's swift). 4. *Cypseloides niger* (black swift and particularly desirable). 5. Any of the trogons. 5. Any of the goatsuckers (except the night hawks, but the common whippoorwill I need very much, as well as the chuck-will's-widow). 7. The bank swallow (much needed). Should this letter meet the eyes of any of your many readers who are in a position and willing to assist me in this matter it may be done in the following manner. To prevent the undue duplication of material and expense I would be thankful to such persons to drop me a postal card, saying first that they can supply such and such birds. To this I can answer either by letter or telegraph.

My present address is Fort Wingate, New Mexico, and Mr. Robert Ridgway, of the Smithsonian Institution, has also promised to send me such material as may come to his hands of the kind specified, so if it be more convenient, in certain cases, to send it to him, it will be forwarded to me when occasion offers.

The smallest size screw-top preserving jar of glass is the best receptacle to send small specimens of birds in by all odds. This should contain strong alcohol in sufficient quantity to completely cover the contents; then it should be packed in a suitable box, surrounded with paper and sent to my address by express. Three or four specimens of each species are sufficient, provided they are not badly shot. If both sexes are represented so much the better.

I will gladly meet the expenses of transportation and collecting, and especially desire that the collector tag the specimens, giving date, name of collector or donor, sex, locality and name of specimens. In cases where the material is donated, I will invariably acknowledge my indebtedness in full in the forthcoming work.

Should this meet the eye of the editor of the *London Field*, I will be very thankful to him if he will briefly notice my desiderata in this direction, as there are many continental types, as *Cypseloides apus* and others, which would add greatly to the breadth and scope of my paper, and largely enhance its generalizations.

R. W. SHUFELDT.

FORT WINGATE, New Mexico, June 18, 1886.

THE HISS OF THE GROUSE.

IT SEEMS a little strange that none of the writers on the ruffed grouse speak of one peculiar habit of the cock bird in the breeding season. Neither Wilson, Bird, Hallock nor any of the encyclopedias mention the singular hissing that the cock grouse seems to practice as part of his love making, and it is barely possible that it may have escaped general observation. During the latter part of April and the first half of May I was greatly interested in watching the actions of a male grouse in my neighborhood, and for the first time in my life had my attention called to this peculiarity. It is apparently on the approach of the hen that this demonstration is made, and when she appears in sight the cock sidles down from the log on which he has been strutting with tail and ruff spread and wings drooping, and as he comes near the object of his attention extends his head horizontally and on a level with his back (which has the appearance of being slightly arched), and begins to roll his head from side to side with a slow but gradually accelerated movement, accompanying each turn or roll with a distinct separate hiss, the whole ending after ten or twelve such sounds with a prolonged hiss twice the length of the others. At the close of his sibilations he makes a semi-circular sweep of three or four feet, which brings him closer to the "air one." There is probably nothing which approximates these sounds in movement and character (of course not in volume) as the escaping steam from a locomotive just pulling out from a station, and yet the likeness is only approximate.

When this sexual paroxysm subsides it seems to be followed by a corresponding period of depression and languor. I have seen this same cock bird after such a promenading and hissing, sit crouched upon the ground whining like a motherless puppy, and apparently in the most dejected and disconsolate condition. Possibly I am writing of what is familiar to every hunter and woodman, but if so, it seems a little strange that none of the books speak of it.

JAY BEBE.

A BIT OF FOLK LORE.—Central Lake, Mich., June 23.—Editor Forest and Stream: The other evening I heard the note of a whippoorwill. I thought, but was not positive, that I had never before heard it in northern Michigan, and asked the "oldest inhabitant" who stood near, if it was not very unusual to hear one of these birds hereabouts? He replied that it was, but said that he had heard them before,

and added that it had been told him that any person who on hearing the whippoorwill should immediately remove his coat, and put it on again wrong side out, keeping it thus until the cry of the bird had ceased, should receive whatever he had wished for meanwhile. The old man did not turn his coat, and perhaps his negligence in that respect may account for the exceeding rustiness of the garment. These little scraps of folk-lore are often of interest, especially to students in that line, and I have thought that this might be worth the space it would occupy in the FOREST AND STREAM.

—KELPIE.

MOOSE IN THE ADIRONDACKS.—We have received information of the killing, last October, of a young bull moose, weight about 350 pounds, in the Long Lake region, just north of Long Lake.

BOMBI, the \$5,000, 7,000lb. rhinoceros of Central Park, died last Saturday, of pneumonia. The FOREST AND STREAM bears are still vigorous and healthy, cunning, intellectual and attractive.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

THE PARK RAILROAD BILL.

ON motion of Mr. Butler, of South Carolina, Senate bill 980 granting right of way to the Cinnabar and Clark's Fork Railroad Company through the Yellowstone National Park, was taken up by the Senate June 2. The discussion on it given below is extracted from the *Congressional Record*. The bill was reported from the Committee on Territories with an amendment, to strike out all after the enacting clause and to insert:

That a right of way is hereby granted the Cinnabar and Clark's Fork Railroad Company, a corporation duly organized under the laws of the Territory of Montana, across such portions of the northern border of the Yellowstone National Park as may be necessary to reach, by the nearest practicable route from Cinnabar, the Clark's Fork mining district, in said Territory of Montana, by the way of the Yellowstone River to its junction with the Snake River, thence by the way of said Snake River to the Soda Butte Creek, thence by said creek to the Clark's Fork mining district, upon such location as may be approved by the Secretary of the Interior, subject to the provisions of the act of Congress entitled "An act granting to railroads the right of way through the public lands of the United States," approved March 3, 1875. Said right of way hereby granted shall be restricted to such limits as are absolutely essential for the road-bed and slopes of cuts and fills, except at such points, not nearer than 10 miles from each other, as may be designated by said railroad company for station buildings, depots, side-tracks, turnouts and water stations, at which points the right of way shall be limited to the actual site for said houses, and the limitation for side-tracks or switches shall not exceed in width 60 feet, to cover all trackways, and a length of 500 feet; that the structure erected by said railroad company within the park shall not in any instance include machine shops, repair shops, supply stations, hotels, restaurants, eating-houses, stores, or any building except a depot, including a telegraph or telephone office, a building for station agent, and one building for section hands, and said right of way and location for depot grounds shall not in any instance include objects designated as natural curiosities, or matters of interest to tourists, or be surrounded or inclosed by fences, walls, or hedges that shall obstruct the view of any continuous object, or bar the passage to them of pedestrians or vehicles, and no rights of any kind shall vest in said railroad company in or to any part of the right of way herein provided for until plans therefor, made upon actual surveys for the definite location of said railroad, and including the points for station building, depots, side-tracks, turnouts and water stations, shall be filed with the Secretary of the Interior, and be duly approved by him. No timber or other materials to be used in the construction of said railroad, shall be cut or taken from any portion of the Yellowstone National Park, except such as may be cut or taken without the right of way hereby granted; and the grants hereby made are limited so as not to include any coal or other mineral found on said right of way; nor shall said company, or its successors, use the property given hereby for any purpose except in the construction and operation of a railroad.

SEC. 2. That none of the shares of capital stock of the corporation herein named, shall be transferable until at least 50 per cent. of the par value thereof, shall have been paid in cash. No bonds shall be issued or mortgaged without the assent of the stockholders of said corporation in an amount exceeding one-half of the sum which its president, treasurer, and chief engineer shall certify, and a check to the treasurer of the Territory of Montana, has been actually expended, at the time of the issue of such bonds, upon the railroad to be constructed; and any false swearing in the matter shall be perjury. The whole amount of bonds outstanding at any one time shall not exceed one-half of the actual cost of the construction and equipment of such railroad. The provisions of this section relating to the transfer of stock and the issue of bonds, shall be applicable to any corporation to which the corporation named in this act shall convey, or attempt to convey, its franchises, or rights, or property, prior to the final completion of said road.

SEC. 3. That all charges for transportation of either freight or passengers over said railroad shall be reasonable, and without discrimination as to persons, shippers, or consignees. No rebates or drawbacks of any kind or nature shall be allowed, directly or indirectly to any patron of the railroad, nor shippers or consignees. At any station on the line of said railroad, and as to these and all kindred matters, Congress reserves the right to make all necessary regulations as to said railroad, in considerations of this grant, as well as to alter or amend this act.

SEC. 4. That if said railroad shall not be constructed and in running order within three years from and after the passage of this act, the right of way hereby granted shall therefore be forfeited, and this condition is expressly understood to be a condition precedent as to all rights granted hereby; and in case of a breach of the conditions of this section, all rights granted hereby shall revert to the United States by operation of this provision, without the necessity of any action by Congress; provided, That the grant hereby shall not be held or construed as exclusive, so as to prevent the allowance of the following grants and concessions along the valley or route adopted under this act, under such grants and concessions as Congress may make and provide and the courts equitably administer.

MR. VEST.—Mr. President, if I can secure the attention of the Senate for a very few moments I should like to give my reasons, and very earnestly, why this bill should not become a law.

To those Senators, if there be any such here, who believe that the Yellowstone Park should be destroyed and cease to exist I have no argument to make. I am very well aware that it is popular to assert in this country that nothing should exist in which there is not money, and any one who proposes to preserve the great National Park in its original grandeur and beauty, and to preserve the game, which has almost ceased to exist upon this continent, is taunted with æstheticism and is sneered at as behind the proper spirit and ideas of the age.

I am not a-hamed for myself to say that my life has been largely devoted to field sports, that I have lived a large portion of my time in the woods and forests and mountains and upon the rivers of the great West. I know whereof I speak when I say to-day, without any other interest or motive under heaven than that of an American citizen and

Senator, that the construction of this railroad is the destruction of that park. To those who think that Mammoth Cave should be turned into a subterranean storehouse for mercantile purposes, that the Falls of Niagara should be used for their water power to turn a mill, that the wonderful geysers of the Yellowstone Park should be devoted to laundry purposes and leased out to Chinamen in order to wash out dirty linen, to such persons I have and can have no argument and no appeal to make. But to those who sympathize with me in the purpose to preserve one spot at least on this continent from the rush and greed and avarice of the age, one spot where nature shall exist as it was originally, in which the great game, the elk and the bison and the black-tail deer, shall always be found for our children and our children's children, to such Senators I now appeal most earnestly against this bill.

I know, Mr. President, that it is said this railroad is necessary in order to reach mines. I shall not stop to discuss the value of those mines because, like all mining property, their value is prospective and in the future. They may amount to a great deal and they may amount to nothing, with the chances largely in favor of the latter proposition. I solemnly assert my opinion, based upon close observation and without prejudice, that this railroad is not proposed to be built to reach any mines, that it is not intended for any such purpose, and I propose to show, if not by actual demonstration at least by probable facts, that my assertion is correct.

These mines are represented to be of large value; thousands of dollars it is said are invested in them; and what proof have we presented here from the stockholders of these mining companies that the proposed route through the Park is the only practicable line to the North Pacific Railroad? I call attention to the fact and I defy contradiction when I say, in the presence of the enormous valuation upon this mining property, with thousands of tons of ore, as General Anderson says, dumped out already waiting for the cars to carry it to the reduction works in Montana, with stock companies organized for working the mines, that no preliminary survey has ever been made of any route of these mines. Only a few hundred dollars would have been necessary to make this survey; and yet with this enormous mining property upon their hands these gentlemen have not seen fit or proper to make a survey, for it would be ridiculous to argue that they had not the means to make these preliminary surveys in order to ascertain by what route they could most cheaply and rapidly approach this property.

There are three routes proposed. One of them is the Boulder route outside of the Park, which is perfectly practicable. I have here the letter of an engineer officer, who has been over every foot of it, declaring that the road can be built. It is a little further, a little longer distance, but entirely practicable; and this officer, as will be seen by his letter, traveled over the whole Boulder route, not one foot of which is inside of the Yellowstone National Park.

But without preliminary surveys, a thing unheard of in such an enterprise, a bill is presented here session after session and pressed upon Congress to run this railroad up the Yellowstone River to the east fork of that river, and then up Soda Butte Creek, going through the loveliest portion of the Yellowstone National Park, and the only portion, as I shall show by evidence beyond question, in which the game congregates during the winter months. In the summer the large game of the Yellowstone can go where they please without let or hindrance; but in the winter they come into this identical region, the loveliest portion, as I have said, of that great Park on the Yellowstone River and Soda Butte Creek, and there and there only they have a range during those winter months in which the range is most necessary to them.

Why have the projectors of this enterprise had no preliminary survey of the route made? Why is it that they do not bring to Congress the best proof that the nature of the case is susceptible of?—the reports of engineers, from practical observation, who can testify to Congress that this is the cheapest and most practicable route between Cinnabar and the Clark's Fork mines?

MR. BUTLER.—I should like to ask the Senator from Missouri a question, if he will yield to me.

MR. VEST.—Certainly.

MR. BUTLER.—I ask him if in his experience he has ever known a survey to have been made before a charter has been secured?

MR. VEST.—This is a case in which the whole argument turns upon whether a charter shall be granted upon this particular route or not. If there were a proposition here for a charter between certain points on the most practicable route, there would be something pertinent in the inquiry of the Senator from South Carolina; but here is a proposition fixing the route, and that is the remarkable fact to which I point to-day. They do not want a survey; they do not propose to have one, because perhaps a survey would defeat their object, which is to get into the Yellowstone National Park, not to get to these mines, but to run up this valley of the Yellowstone, up to Soda Butte Springs, the most wonderful springs in the country, at which point they propose to build a depot. The real purpose is to construct a railroad to carry passengers, not ore. There is the money in this enterprise, and not in going to the mines, in which they say they have already ore dumped out ready for transportation. I know whereof I speak from personal observation. I have been in that park and traveled over this identical territory, and I am as thoroughly convinced of the truth of what I say as if it were a mathematical proposition.

I know great exertions have been made to pass this bill. I know that a former officer of the Interior Department has been lobbying Congress three sessions to pass it, and he is here again for the same purpose. I know that Senators, myself included, have been attacked and besmirched in the public press, and we have been branded by the assertion that we were the tools of the Northern Pacific Railroad. I assert here to-day, using only such language as this presence admits, that the assertion that I have any other object, direct or indirect, than that which is proper to a citizen of this country, and a Senator representing a sovereign State, is so utterly and infamously false that the wretch who makes it is unworthy of credence from any gentleman. No man connected with the Northern Pacific Railroad Company has ever approached me or dared to do so. If the Northern Pacific Railroad has any interest in this matter, it is to construct this road because it is a branch running directly to their main line. How could the Northern Pacific Railroad have any other interest?

I speak only in the way of conjecture, because I assert that no agent, no officer, no one connected with that road has ever approached me in any way. I mention this not from any personal feeling, for I know that when any public man stands in the way of one of these speculative enterprises the

first thing is to cajole him or buy him, and if that can not be done the next thing is to destroy him. I do not expect to be personally exempt from the ordinary fate of public life, and I mention this only to emphasize my statement that these extraordinary means to pass this most extraordinary bill with a route already fixed upon the face of it, come and come alone from the idea that they want not to carry out the ore from these mines but to carry passengers into the Park.

Mr. President, I said, and I said it deliberately, that the construction of this railroad meant the destruction of that park, and I repeat it distinctly. I do not mean to say, that the construction of this railroad will immediately frighten away all the game from the park and burn the forests and close up the geysers hermetically, but I do mean to say that the construction of this or any other railroad within its territorial limits breaks down the purpose and object for which that park was created and it ceases to be a park.

The original idea was that this National Park should remain in original condition exempt from the ordinary mercantile and commercial interests of this great country. Once let in this railroad, the agent of commerce, and you destroy the park. Afterward the number of railroads that go into the park amounts simply to nothing, for the idea upon which the park was based will have been destroyed and destroyed forever. If this railroad be constructed in the most beautiful portion of the park, it will be a very few months until another bill will be proposed to construct a railroad from Green River upon the Union Pacific up to Lewis Lake and connecting with the Northern Pacific. Three years ago when I passed on horseback along this route the survey had been made up to the park, and I saw the pegs which the engineers had driven for the projected road of which I now speak. A bill was pending here in the last Congress for the construction of this road by Lewis Lake, pressed I do not know in what interest, but I very much suspect in the same interest as the bill now pending before this body. Construct this road and then road after road will demand admission from every direction into the Yellowstone Park, and that is the end of the idea upon which it was originally organized.

Mr. President, I shall indulge in no rhetoric in speaking of the wonderful scenery, of the geysers, of the Yellowstone Falls. I shall leave that to others if they see proper to address the Senate on a subject which admits of the largest amount of descriptive power without going beyond the truth. But leaving aside the æsthetic idea of a park for the people, for the preservation of the great game of this continent, and appealing only to the mercenary idea, let me say to the Senate that the construction of this railroad means the destruction of the timber upon the headwaters of the Missouri River, thereby affecting the whole Southern country to the mouth of the Mississippi. It goes without saying that the existence of those forests to-day is the most potent agency toward preventing overflows in the lower and Southern country. The forests in their primeval condition, with their ferns and mosses and leaves and verdure, absorb the heavy and enormous rains which periodically fall in that portion of our country and prevent their sweeping down over a bald surface until they press to satiety the lower rivers and cause the overflows which are so destructive to property in some of the Southern States.

Mr. VORHEES—May I ask the Senator what is the proposed length of this road in the Park?

Mr. VEST—There is no survey, as I have said; but the accounts as to distance differ. My own personal knowledge leads me to say that this road will run from 60 to 65 miles inside the National Park. The Senator from South Carolina [Mr. Butler] says no. Here is the evidence so complete and conclusive that no human being can doubt it. Here is the testimony of General Sheridan and of Mr. W. Hallett Phillips and an officer of the Geological Survey, Mr. Hague, all of whom make substantially the same statement.

It has been said—and I will read these statements at leisure if any Senator desires to hear them or I will have them read—it has been said by some of these witnesses that the distance is 46 to 50 miles; but I assert from what I know of the country between Cinnabar, on the route proposed, up the Yellowstone River, and then up the East Fork, and then up Soda Butte Creek to the Clark's Fork mines, that it is nearer 65 than 46 miles.

Mr. INGALLS—Do you mean 65 miles south of the northern boundary?

Mr. VEST—I mean 65 miles on this proposed route.

Mr. INGALLS—Not 65 miles south of the northern boundary of the Park.

Mr. VEST—No; the most extreme point south of the northern boundary is about 11 miles; that is, a direct line from the northern boundary of the Park to the most extreme point on this proposed route; but I am speaking now of the longitudinal distance from where it enters the Park on the north, near Cinnabar, which is the terminus of the branch of the Northern Pacific Railroad nearest the Park, up the Yellowstone River to its eastern fork and the Soda Butte Creek to the Clark's Fork mines. That I say is 65 miles or in that vicinity.

Mr. VORHEES—I do not wish to interrupt the Senator, but as this subject is somewhat new to me I should like to have his comment on this part of the report accompanying the bill. The report says:

This company was organized under the laws of the Territory of Montana to construct a railroad from Cinnabar, the terminus of the Livingston branch of the Northern Pacific Railroad, on the Yellowstone River, about five miles north of the northern boundary of the Park, to reach Clark's Forks mining district, in Southern Montana, lying a few miles north of the northeast corner of the Park.

Each end of this road, according to this report, is outside the Park.

Mr. VEST—That is true. But if the Senator from Indiana will simply look at the map of the Yellowstone Park which I have here, and which has the railway marked on it, he will see exactly where that route runs.

For General Sherman I have very great regard, and however much we may differ from him in regard to his conclusions, he is always frank and honest in their utterance. When General Sherman was in the Park, the year before I was there the first time, he came to the conclusion that the game could never be preserved in that Park, and that the idea that the great game of this country, the bison, the elk, and the black tail deer, could be preserved at all was simply Utopian and ideal; but to one who has been accustomed to field sports and the habits of game it is not difficult to conceive how a preserve could be created, with even imperfect guardianship, which would very soon induce the large game to congregate there and consider themselves safe from all assault. Instinct far surpasses intellect when we consider the wonderful intelligence of animals in selecting localities in which they are safe from the pursuit of the huntsman.

Let there be, as there has been upon the Potomac River, a preserve like that of the Woodmont Club, with 10,000 acres

of land only, and with only three gamekeepers. In less than eighteen months after that preserve was created the deer from all the adjacent mountains, finding this a comparatively safe refuge, when started from their covers immediately made this preserve the objective point, until to-day there are more deer found upon that 10,000 acres, I undertake to say, than on any other 10,000 acres in the Eastern States.

Now, let me read, if the Senator pleases, while upon this idea, a letter coming from a practical hunter and woodsman whose opinion and testimony is worth all the rhetoric and all the appeals that may be made in this Chamber within the next five hours. When in the Yellowstone Park I made the acquaintance of Mr. Hofer, one of those men fast disappearing now from the frontier, who live in the forest—men who, like Daniel Boone and Kenton, when their cattle mingled with those of a neighbor twenty-five miles distant, thought the towns and cities were encroaching upon the domain which they loved so well, and immediately moved further west. This man Hofer lives in the mountains. He knows by instinct almost equal to that of the animals themselves their habits. Here is his testimony in regard to the result of even the imperfect guardianship which we have been enabled under an act of Congress to put over this splendid park. Mark you, it is a part of 3,300 square miles, with such rivers and mountains and lakes and waterfalls, to say nothing of the wonderful geysers, as the whole world beside does not furnish. Mr. Hofer, writing to Mr. Hallett Phillips, says, speaking of the proposed railroad:

The country which they propose to go through is about all the ground that is used as a winter range or feeding ground for elk, bison and antelope within the limits of the Park. If it is cut off and a railroad run through, you may as well kill off the game at once, for it will be driven off. The idea that teams, etc., frighten off the game is foolish. All winter elk have fed in sight and close to the wagon road. I have the Government stock now on the east fork of Gardner. Often the elk come down among the mules and horses and feed with them. All winter elk, antelope and mountain sheep have been with our stock. It is the shooting and loud noises that scare off the game. A thousand teams would be hauling freight to Cook all winter and the game never leave on their account; so long as they do not shoot at them, so long will the game have no fear of teams. It is in winter that the game wants to be protected. In summer they can go anywhere, but in winter there is only a small portion of the Park where they can stay. The railroad would take that from them. I have been here long enough to know how it will work. All of you who are interested in the Park know it only in summer. You should know that the snow is so deep in winter, through the Park, that game must come out to live.

He then shows that the country through which the railroad would penetrate is the only locality where the game comes out to feed. He concludes by saying that the objection to a railroad across the Snow Mountains on account of the depth of snow, is untenable, that all the narrow gauge railroads in Colorado run through more snow than ever falls in the Snow Mountains; the snowfall in Colorado being from five to ten feet more.

Mr. President, that letter may be roughly written, but it comes from a huntsman, a man who has lived in those mountains for years, who has had charge of the Government stock during the last winter, who testifies now that the elk and the antelope and the bison and the deer come down to feed with his stock. That is worth all the declarations of these speculators that could be piled on these tables until they reached the ceiling.

It is said here that the wagon-roads scare off the game. Under the present administration in that Park the game has increased and more than doubled within the last two years, a change for the better which is almost beyond description. But now if this railroad is constructed all that has been done for the preservation of the game goes for nothing. Every Senator who has been in the vicinity of that Park or within its territorial limits knows that for twelve and fourteen and fifteen months at a time not one single drop of rain falls.

In traveling on horseback from the Union Pacific to the Northern Pacific Railroad, as I did three years ago, we traveled for days over fallen timbers, intertwined, thrown there by the fires which originated from a single spark, perhaps from the carelessness of some camper or hunter who had left his camp-fire burning and gone on his next day's journey. During these terrible seasons of drought the forests become like tinder and a single spark starts a conflagration which destroys hundreds of miles of magnificent timber. Is it necessary for me to call the attention of the Senate to the danger that would be a thousand times multiplied by the construction of a railroad through such a country as that?

Mark you, sir, this proposed route goes up the Yellowstone River, through the most beautiful forests in that whole park. It is almost impossible now, with ten assistant superintendents, all mountaineers, to keep the fires from destroying all the timber on the headwaters of the Missouri and Columbia rivers. Now are we, without a preliminary survey, under the influence—I will not say the influence, but under the persistent labor of these speculators and their attorneys—to put this railroad through that park, have this timber destroyed, and give up the idea on which the park was originally constructed, and for what? Upon the assertion that they desire to reach some undeveloped mines of enormous wealth, according to their statement, and yet they are not willing to furnish fifteen hundred or two thousand dollars with which to make a survey of a route to them. I must be excused if I doubt the statement that they desire to carry out the ore; I must be excused if I further doubt the statement that there is no other route by which they can reach those mines. I have here a letter from Lieutenant Bailey, of the United States Army:

HEADQUARTERS FIFTH UNITED STATES INFANTRY,
Fort Keogh, Mont., May 31, 1884.
SENATOR—I am in receipt of a letter from Colonel Gregory, of General Sheridan's staff, informing me that you are interested in affairs concerning the Yellowstone Park and desirous of obtaining information relative to the practicability of building a railroad from the Northern Pacific Railroad into Cook City [which is the Clark's Fork mining district] by way of Boulder Creek. [That does not touch the Yellowstone Park at all.] In reply thereto I have the honor to inform you that in the fall of 1878 I marched up that creek to near its head with wagons and had scouts made from my camp to the head of the creek. From recollection—my notes having been lost or destroyed—I am of the opinion that a railroad can be built up Boulder Creek to its head and that a pass can be found over the divide through which it would be practicable to build a railroad. After crossing the divide by skirting along the foot of the mountains, a gradual descent into Cook City can be obtained. From about 6 miles above the Natural Bridge dense timber will be encountered on Boulder Creek, but a roadway could easily be opened and the timber utilized in many ways.

My opinion is based not only upon my own observations and the reports of my scouts, but also upon the statement of my guide, who had hunted through that region for years, that if it became necessary for me to go into the Park by that route, he could take me there by crossing the divide at the head of Boulder Creek, and then down either Hell Roaring or Soda Butte Creek, the latter affording the most easy passage of the two. I was informed before going into Boulder Creek, by men who claimed to have a thorough knowledge of the Snow Mountains, that there were only two passes over them, one by Boulder Creek, the other by Clark's Fork, and the passes shown on the accompanying map confirm their statements. I return herewith the map sent me by Colonel Gregory with my proposed route marked thereon in red ink. If more definite and accurate in-

formation is desired, I am willing to make a survey of the route. Trusting that information contained herein may be of service to you, I am, Senator, your obedient servant, H. K. BAILEY.

First Lieutenant and Adjutant, Fifth Infantry.
HON. GEORGE G. VEST, United States Senate Chamber, Washington, D. C.

There is the statement of an Army officer who has been over the Boulder route, and who says it is practicable for the construction of a railroad. But, Mr. President, there is a feature in this bill to which I ask the attention of the Senate.

Mr. ALLISON—May I ask the Senator a question before he proceeds further?

Mr. VEST—Certainly.

Mr. ALLISON—I ask whether this bill is recommended either by the Interior Department or War Department?

Mr. VEST—It is not; and upon the contrary the Secretary of the Interior has laid before the Senate in a report here, which covers every detail of this measure, his opposition to it and his reason for that opposition.

I am authorized to say that the Secretary of War is opposed to it, and the commanding General of the Army, General Sheridan, who is familiar with that country and has been over it time and time again, is also opposed to it, and his letter is here before the Senate.

Mr. BUTLER—I think it should be stated in that connection that the present Secretary of the Interior as a Senator and a member of the Committee on Railroads reported in favor of this identical bill.

Mr. ALLISON—I see by the original act that the Secretary of the Interior is charged with the control and care of this park.

Mr. VEST—He is. The Secretary of the Interior has control of this park under the law.

In reply to the Senator from South Carolina [Mr. Butler] I have simply to remark that while the Secretary of the Interior was a member of that committee as a Senator, I undertake to say now, for I have it from him, that he knew nothing about this bill, that he paid no attention to it, that there were personal and family circumstances then existing which prevented his attention to it.

Mr. BUTLER—I am only governed by the record.

Mr. VEST—I will explain that record, and I put against that record the official statement of the Secretary of the Interior to-day, when he is acting as Secretary of the Interior, and by virtue of that office is custodian of this park. He opposes this measure in every way possible. I undertake to say that every man who knows anything of the park and is interested in its preservation is opposed to it. Mr. W. Hallett Phillips, who was sent there as agent of the Interior Department, gives his reasons in opposition to it. Mr. Hague, whom I met in the park as a member of the Geological Survey, gives his reasons at length against it. The park superintendent is against it; and old Jack Barronet, the father of the guides in the West, has written me in opposition to this railroad. I stand here to-day and say from my own personal knowledge of that country and of the Park that the construction of this railroad is absolutely the destruction of the Park itself.

Now, Mr. President, a few words as to the extraordinary provisions of this bill. Section 4 provides:

That if said road shall not be constructed and in running order within three years from and after the passage of this act, the right of way hereby granted shall thereupon be forfeited, and this condition is expressly understood to be a condition precedent as to all rights granted hereby; and in case of a breach of the condition of this section, all rights granted hereby shall revert to the United States by operation of this provision, without the necessity of any action by Congress: *Provided*, That the grant hereby shall not be held or construed as exclusive, so as to prevent the allowance of the locating other roads along the valley or route adopted under this act, under such grants and regulations as Congress may make and provide and the courts equitably administer.

Why is that provision put in this bill? Why was it necessary to suggest that other roads might be constructed along this same river? Why is the idea sedulously inculcated in this provision of the bill that this shall not be the only railroad that goes into the Park?

As I said before, there was a bill pending here in the last Congress for the construction of a road from Green River on the Union Pacific up by Lewis Lake to Cinnabar. That bill has not been presented at this session. It is held in abeyance and reserve; but just so soon as the present bill is enacted into a law, this other set of speculators will come to Congress and we are stopped from denying them the right to enter the Park because we have given the privilege to the gentlemen now asking it. If we once break up the idea of this being a Park exclusively, that is the end of the act of 1873, and for myself I have no more concern with that Park or anything pertaining to it.

Mr. President, I have spoken earnestly. I have no interest in this matter except as a citizen and a Senator. I have no feeling except the feeling of one who knows the truth of what he says and desires to impress it upon his fellow Senators. I impute no motive other than a proper one to anybody. Indignantly repudiate the aspersion of any improper motive to myself.

I do not propose to urge upon the Senate that they shall interfere with the commerce of the country, that they shall break up the great railroad system of the country in order to preserve the wild game of the West, or in order to preserve the geysers and lakes and waterfalls and mountains of that wonderful region.

I do not believe this railroad is necessary. I believe it is certain that the real purpose is not put upon the face of this bill. It was said two years ago when this bill was first brought here that they were willing to put a provision in it, and the then Commissioner of Railroads, who was a stockholder in the mines, stated to various Senators, myself included, that they were willing to put in a provision, that nothing but freight should be carried upon the cars of this projected company. But, sir, the bill is changed; it now provides for freight and passengers, with depots at each ten miles. It proposes to run to the Soda Butte Springs, the most wonderful mineral springs in the whole of the Western States and Territories. It is a passenger road. The idea is to get into the Park, and then when the main line is constructed up the Yellowstone River it follows as a corollary, as a logical sequence, that branches are to be constructed and run down the geysers, to the Yellowstone Lake, and to the falls of the Yellowstone.

Once put a railroad of that sort in the Park, and I for one will vote to throw the whole park into the public domain and let the first and fastest man enter Old Faithful for laundry purposes and take the great falls of the Yellowstone for a mill. I would not give one farthing for that Park if this bill become a law. I would not entertain the idea of wasting one hour of my time hereafter upon the Park if this legislation is once had and this entering step is once taken by this Congress.

Mr. BUTLER—Mr. President, I am very sorry that I can

not sympathize entirely with my friend, the honorable Senator from Missouri, in the esthetic view he takes of this case.

Mr. VEST—I am past that word "esthetic."
Mr. BUTLER—I say it with all respect. Of course while I have great admiration and respect for that Senator, I do not sympathize with him. He has had the good fortune to have hunted in that great Park of the West, and fished in its streams and enjoyed its magnificent scenery. I have never had that opportunity, and, as my friend from Mississippi [Mr. George] says, very few of my constituents will ever have that opportunity, and I do not know but that about the best disposition which can be made of that Park would be to do as my friend has suggested, throw it open for settlement under the land laws of the United States. I think perhaps that would be about as well as anything else. I agree entirely with General Sherman about that, whose letter I will read. I know nothing about this railroad bill except such information as I have acquired by reason of my position upon the Committee on Territories. The bill came to the Committee on Territories, why, I confess I do not understand. It had before had the unanimous report of the Railroad Committee of this body, and I suppose I may refer to the other House, because their report is before us, and it has had a unanimous report from the committee of the House.

At this point the debate was interrupted by the receipt of messages from the President, and was not resumed.

HOW LONG CAN FOXES RUN?

Editor Forest and Stream:

Your correspondent from Massachusetts says that he never saw a hound that could catch one of their foxes in 20 hours, and that his pack has run them for 30 hours without a catch. I agree with "Red Eye," of Virginia, that no hound ever ran 48 hours; it is beyond the endurance of any dog to run that long. They may what we call trail a fox as long as that; just follow the foot scent.

Last season I visited a friend some 20 miles away for a fox hunt. The night I reached his place was a beautiful bright night, and he insisted we should have a run that night. We struck a track about 9 o'clock (now remember I do not say we started the fox). The fox was a gray one out hunting. In 30 minutes after we struck the track I knew that the fox had heard the dogs, and did not intend for them to get a run on him. They trailed him all night and until about 10 o'clock the next day. I saw him about this time, and he looked like a fox just started. One of our sweeping dogs, Mait, swept and struck within two hundred yards of the fox. His deep, powerful tongue soon called the pack to him, and in 20 minutes the fox was dead. I can kill a red fox with my pack much quicker than I can a gray. They reach too far over a gray in his dodges; so lose time and give him a chance to put in some of his tricks. If the gentleman of Massachusetts thinks one of his foxes can't be caught in 20 minutes let him send one down, and will give the fox a range of the country for a week so as to get the best running ground, and if our dogs don't kill him in four hours I will make him a present of a pair of our best dogs.

I myself have had an experience with hounds for over 20 years, and never owned or saw a hound that could run more than 8 hours without checks and losses. I should like to know where the gentleman gets his authority that Col. Tucker has the fastest hounds in the South. It has not been my experience that they are fast, neither do I think any one says so except Col. Tucker himself. HOUNDING.

PINE VIEW, Va.

NEW JERSEY WOODCOCK.

Editor Forest and Stream:

I hope that you will not consider me annoying, but your compilations of the game laws and your reply in your personal column to my inquiry a week or two ago in regard to the legality of shooting woodcock on the first day of July has called forth the inclosed remarks which appeared in the Bridgeton Evening News of Saturday, July 25.

I find upon looking up the revised game laws that in 1881 the following act was passed:

"That from and after the passage of this act, no person shall kill, take or expose for sale, or have unlawfully in his or her possession after the same has been killed, any woodcock except only between the first day of July and the first day of August and between the last day of September and the sixteenth day of December." If your views are in any way modified by this I hope it will call forth a prominent reply in the columns of your paper and you may possibly be the means of preventing a lawsuit which will undoubtedly occur if any woodcock are shot on the first day of July in this section of New Jersey. Hoping that none of our sportsmen will involve themselves in a legal difficulty, I remain,

DAVID R. STREETS.

BRIDGETON, N. J., June 26.

MUZZLE vs. BREECH.

Editor Forest and Stream:

I notice a great mistake in my article in the turkey shoot in your columns (April 8, 1886), which I wish to correct. It arose from an error in copying it for the press, and as it has called out some criticism on my muzzleloader shooting I wish to set matters right. My rifle in that article stands credited with shooting but 175 yds., which is in fact less than one-half the distance I shot it. It was the breechloaders which shot 175 yds., their longest range, while my muzzleloader shot 385 yds.; neither of these distances were measured, but were so estimated on the ground. I think I shot about 80 rods, but have placed it at 75 rods. The breechloaders, be it remembered, did not get a single turkey for dinner at 175 yds., but they did get one after it was moved up nearer to them two or three times. Poor turkey, if he could have reasoned he would have seen in these move-ups his end approaching at some time. The breechloaders also got four turkeys at 50 yds. by shooting at their heads, but I took no stock in this kind of shooting—it would have been murder indeed to the turkeys to have had my rifle shot at them at this distance. To repeat, it stands thus:

1. Muzzleloader, 70 rods, 385 yds, killed 4 turkeys.
4. Breechloaders, 32 rods, 175 yds., killed 1 turkey, moved up.
4. Breechloaders, same guns, 50 yds., killed 4 turkeys.
Total killed, 9, of which I got 4 out of 20 shots with my strange rifle, and most of these shots were "feelers" among the feathers to find the center of these birds of the "order turkey shoot," "genus crow," "form flaxseed." The two long ranges not being given made it more difficult to adjust the rifles on their bodies, and it never will be known how long the breechloaders would have been at this if that turkey had remained 175 yds. away only. My rifle brought out the feathers 14 times in all, and if I had not been ruled out on killing the fourth turkey I think my turkey meat after that last shot would have stood me in about two cents per pound, a discount the turkey man did not care to engage in; so he ruled me and my "old Betsy" sweepstakes out of the ring and play. All right! Not unusual!! As previously stated, the breechloaders did the most shooting. They commenced early and banged away till late. They showed most admirable pluck considering the difficulties they encountered in getting turkeys.

The trouble was they had come to the shoot with the wrong kind of rifles—rifles that shot very weak from shooting too little powder and ponderous bolts of lead, thereby imparting to the bullets but a

slow velocity, thereby producing an unusual high curve or trajectory, thereby, when used as hunting rifles, shooting over and missing most of the game at an 1 along mid-range, and under and missing all of it beyond the point blank range. They also scatter their bullets more or less widely.

These great faults (and others) make them generally poor hunting rifles, especially for all small game, and poor rifles for close shooting. I refer more particularly to American made breechloaders and their ammunition, the rifles are issued from the factories. The English rifles do some better—they use more powder and get flatter curves. All of these things have been demonstrated and proven time and again by Major Merrill and his experiments, by "P." and his experiments, also by others, and then came your own invaluable trial of hunting rifles last fall, which completely sealed the whole affair. So what is the use of me to spend any more words, or for the few who are at interest in these rifles and the ammunition, to longer "kick against the pricks." We are told it is hard to do so.

And now comes, in our April 22 number, J. T. Clapp, who offers his criticism on my article and says: "I myself cling to extreme accuracy and value any rifle according to its accuracy." This is excellent doctrine indeed! Here we agree; let us both stick to these sentiments and show it by the rifle we carry. The "crowing efforts," says he, "of killing or wounding four turkeys, any rest (32), thirty-two rods distant, by shooting twenty shots, is by no means wonderful." He is right. Nor is it "wonderful" that the breechloaders could not get a single turkey at this distance. It often happens thus, or nearly so, and it often happens, as in this case, to say the breechloaders were not "good ones." Here we again agree; they were not good ones, as is usual, and so they got but little meat. He will now learn that I killed my turkeys (not "wounded" them) at 385 yds., if not over. This reminds me of the old spelling book fable which reads: "And if, and if, said the farmer, that alters the case." "Just set Just so!" as Solon Shingle would say. And what does Mr. Clapp think of the shooting now? It is not "wonderful" to him, we presume, but explain how it is in regard to "the missing breechloaders" there is there no "wonder" there? As for myself, I do not claim my shooting to be wonderful. No, very far from it; but it was very good considering this was the first time I had tried my rifle at this new business. "Old Betsy" did first-rate, you see.

He refers "to a person about to buy a rifle," to such I would say that my shooting on this occasion suggests in the strongest language that there is much more "worth having" or possessing in the muzzleloader that kills the game, than the breechloader which misses it. The proof of the pudding is in the eating; and the proof of the good turkey rifle is in the turkey it brings in from the turkey shoot, to make up the family roast. Just so; and it is the same thing in the woods and on a hunt. The steady shooting rifle crows the camp with abundant food and this imparts much joy, while the unsteady weak shooting one leaves it comparatively in emptiness and grief. Use a good muzzleloader, and for all kinds of game you will always be crowned with the very best possible success considering all the circumstances of shooting.

"Why," says he, "at a range in a small country town a few miles from here, where nothing else is used but breechloaders, they shoot eighty rods at chickens, not old hens, and hit them too, and more than four out of twenty shots." Query, how many days old were these chickens? Why not be more humane and shoot at the egg itself? Query, what becomes of these "chickens, not old hens," after one of these long breechloader bullets, of the young ramrod "order," and a little less than two inches long passes through them? With light and small shot it is not too much left of the small turkeys; then how as to the "chickens, not old hens"? Were their wings in circles of flesh, or only scattered fragments of sinews and feathers?

"That club," says he, "uses Sharps, Whitney and Remington rifles without producing a gyratory motion to their bullets." This, if so, is "wonderful." But he is in error and it is time he found it out. Proof, study well the report of FOREST AND STREAM, made on a trial of hunting rifles last September and October, where these three makes of rifles were carefully tested from well selected specimens. This report may be had for fifty cents by addressing the Forest and Stream Publishing Co., 39 Park Row, New York, and every novice with the rifle should certainly have it, and indeed all old rifle shooters should have it also. Especially should rifle makers have it and profit by its useful lessons. If not satisfied with this proof, then make careful experiments with these rifles by shooting them, say 200 yds., through successive screens, aligned 25 yds. apart along the range, and then work out and plot the shots, both vertically and horizontally. If your rifle is a careful and correct one, you will soon find out that these rifles do impart gyratory motion or less a gyratory flight to the bullet, and this too when shooting the long bullets from the shell. And the short conoidal hunting bullet shall be shot from the shell they will fly much worse still, and the gyratory flight will be more marked and of course the shots more scattering than with the long bolt bullet.

I leave others to explain why these things are so, and now comes up, after many long years of trial, the question, can these evils be remedied? If yes, proceed to it at once and due notice to the public a good strong and steady shooting rifle, and it will be satisfied with it, as it was with the good muzzleloader before fashion and folly set it aside for the new style of rifle. The public are getting very tired of these, as hunting rifles generally, and it only now wants a few bold and disinterested leaders to forsake them for the masses to follow them, and with a high glee at that.

I presume Mr. Clapp has never used and thoroughly tested a good muzzleloader, and, but a very few rifle shooters of this generation have done so, and they are entirely ignorant of what they can do, and what for a century they did before they were run down, ridiculed and advertised almost out of sight by monopolists, their agents and followers. The tyros of to-day's shooting should, in my humble opinion, remain silent for a time on the rifle, but in the meantime try to learn the facts in regard to them from others of more experience and knowledge, and after they shall have learned both sides of this question and know their lessons well, then will be the proper time for them to write, and then their next assured and certain readers will appreciate their writings. Let such now learn that the late trial of FOREST AND STREAM has, under existing conditions, settled and sealed one question of great merit as between the muzzleloader and breechloader rifle, and vastly in favor of the former. The question was, which of these two types of rifles make the flattest curve or lowest trajectory?

As a very flat trajectory is the result of great velocity to the bullet, and vice versa, a high trajectory is the result of slow velocity to the bullet. The question under another form is, which type of rifles sends its bullet the swiftest and therefore the straightest, provided the rifle shoots steady?

As a swift bullet is indicative of great power and force in the rifle, to penetrate, paralyze and kill. The question under a third form virtually was, which type of rifles shoots the swiftest, strongest and straightest, and which, therefore, makes the best hunting rifle under this test.

The answer, you see, came at each shot and every trial throughout from Alpha to Omega, from the beginning to the end, in favor of the old, true and much honored muzzleloader. Then bow to great merit.

Proof. See the "Tabulated Summary of Trajectory Test," in the pamphlet report of FOREST AND STREAM's trial at the Creedmoor range, Sept. 26-Oct. 10, 1885. There were in all thirty-one breechloaders presented by the best makers and tested at this trial; also one English-made breechloader, presented indirectly by Mr. Bland, the hunter; and two American muzzleloaders. Behold the general result.

1. Thomas Bland & Sons' English double express, .45-cal. breechloader, beat (and very badly, too) the 31 American breechloaders. It shot strong, very strong, and almost equal to the two muzzleloaders.
2. But Bland's muzzleloader beat Bland's rifle about 15 per cent. at mid range in a 300 yds. trajectory, and also all the 31 American breechloaders, and very, very badly, too, to wit: From 39 per cent. as the English-made breechloader, up to 343 per cent. as the most (Stevens' hunter's pet, .32-cal., No. 25). (Special—Trajectory No. 21a, Whitney, being abnormal, is not regarded.)
3. Merrill's muzzleloader also beat Bland's rifle (very slightly) and all the 31 breechloaders at 50 yds. in a 100 yds. range, very, very badly (and Bland's slightly), to wit: It beat the 31 American breechloaders all the way from 38 per cent. as the least, up to 278 per cent. as the most.

4. Summary: The two muzzleloaders individually beat all (32) the breechloaders individually from the beginning to the end of the trial, most wonderful.

To say they "beat them very, very badly" does not fully express it. The American rifles were, in sporting language, more than "distanced," every one of them was left behind in speed, "way out of sight" in fact, as the relative heights (inversely as the velocities) of the trajectories prove. What more on this score can possibly be asked of the muzzleloaders? Pray tell us what more and it will respond? If the trial had been for steady shooting and close target, I feel warranted in saying that my own experience, as well as the marks that are made by the editor in FOREST AND STREAM as well as in the pamphlet, that the beat of the muzzleloaders in steady shooting, as against the average of all the 31 breechloaders, would have been much greater than the great beat in flat curves, and not much short of 500 per cent. beat on a general average for the 31 rifles, 300 yds. range, and 250 per cent. for the 100 yds. range.

NAPOLÉON MERRILL.

ALLEN's bow-facing ears can be attached to any boat in 5 minutes. Try them. Little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

MASSACHUSETTS.—Salem, June 23.—Woodcock are reported by several parties as doing well, and I think partridges ought to be fairly plenty. Peeps, ringnecks and some summer yellowlegs, ought to be along in the course of a couple of weeks.—X. Y. Z.

FAIRFIELD, Nebraska, June 5.—The quail in this section of Nebraska, and probably in the State generally, were almost all killed off by last winter's severe cold and abundant snow.—F. M. W.

AN OUTING ON NICKATOUS.

THE months of anticipation from May to September had at last passed away, and our time had come. The preparations which had been going on for several weeks were completed, and the boxes containing provisions, blankets and tent, with personal luggage, had been checked for Enfield, Maine.

Our party consisted of three, one lady and two gentlemen. Without a northeast storm was raging, but within the comfortable, lighted car, we gave ourselves up to the feeling of perfect satisfaction, which can come only with a release from the business and home duties of the past year, and the beginning of the fulfillment of the plans for a fortnight in the woods, which had been in view for several months. Especially was this true with the lady, for this was to be her first experience in camp life.

We were pleasantly surprised to find among our fellow passengers several whom we had met before on our fishing excursions, and therefore the hour or two before we turned in was agreeably spent in recalling reminiscences of former trips, and in indulging in speculations of coming days. Arriving at the country station at 8 o'clock in the morning, we were ready for the ten mile ride. The morning was bright and clear; the atmosphere keen and bracing; the roads in fine condition after the recent storm, and our ride over the hills, giving us fine views of scenery, distant mountains with beautiful lakes nestled at their feet, was full of the keenest enjoyment. Now and then, old Katahdin lifted his head away in the north, and to the west, the range of hills which lay over toward Monson and Blanchard. Bright bits of color from the changing maples added beauty to the scene, and it was all too soon that we drew up before the comfortable hotel, kept by mine host Page.

Monday dawned muggy and rainy, but with that uncertainty which is always perplexing. If you decide to start it is sure to rain; but on the contrary, if you decide to stay it will certainly clear, just too late. Our baggage was loaded, with the two canoes lashed over all, and we followed in a lighter wagon later. Not many miles had been covered before the clouds disappeared and the sun came out bright and warm.

Our route after a few miles changed into a rough tote road, used only by the lumbermen in winter to cart in supplies. Rough was no word for it; over rocks and trees, into deep mud holes we plunged, until it seemed as if every bone in our body was out of joint, and walking was much less fatiguing than riding. Reaching Gilman's at last—the only frame building for miles around—we found our guides had loaded our baggage and canoes on a jumper and were ready for a three-mile carry to the river above the falls. After a half hour's rest and a light lunch we followed over a fair carry, all the way through beautiful pine woods and the forest primeval. The river was reached none too soon, our canoes launched and baggage loaded as only those experienced men of the craft know how. It is surprising how much can be stowed away in a canoe—boxes of provisions, bales of blankets, tent, axe, fishing rods, nets, etc., and yet room for the guide and two passengers to each canoe. A comfortable seat, raised slightly from the bottom of the canoe, had been arranged for my wife. At length all was ready, and taking our paddles against the strong current, we headed up stream. It was simply delightful! The constantly changing scene which every turn of the river brought to view; the brilliant coloring of the maples on the shore touched by the sinking sun; the deep dark green of the forest, and not a sound to break the stillness except as our voices sounded over the water. On we paddled, occasionally coming to the rapids, when all was excitement, as we chose the deep channels and pulled the birches against the rushing water. An hour brought us to the lake, and carrying round the dam at the outlet, we launched upon Nickatous Lake, one of the prettiest sheets of water I have ever seen.

Now we must take strong, deep strokes with our paddles, for daylight is fast passing, and camp must be pitched and made ready for night. Two miles up the lake we found a convenient camp ground, in a sheltered inlet from the shore of which a tote road had been cut, used in winter to haul logs to the water's edge. Upon high ground, one hundred feet from the shore, was a small clearing surrounded by heavy timber, out of sight from the lake, yet commanding a view up and down for several miles.

Here we pitched our tent, started our camp fire, gathered browse for our beds, and had supper under way just in time, for the daylight had gone, darkness had come, and by the light of our camp-fire we ate our first supper in camp. What a world of suggestion in that expression! How it brings to the mind of each camper thoughts of the pleasantest hours of one's life.

Such appetites! The slice of bacon done just to a turn, the boiled potatoes so mealy that their jackets drop off, the hot biscuit, and the cup of tea, and finally the buckwheat cakes with maple syrup to top off. All better than one's own mother could make. We actually look at our supplies in alarm, and wonder if they will hold out.

Supper over and cleared away, the fir bows laid thick for beds, everything made snug, and we are ready to sit around our fire and lay our plans for the morrow and listen to a story or two from our guides. It does not take long to get acquainted with Willis—droll fellow. He provokes many a peel of laughter with his odd expressions and funny stories, and the genial warmth of the fire (for the night is cool) is pleasant. But we have had a hard day's work, conversation

at last lags, and we are in readiness to turn. Our tent is eight feet square, three foot wall, arranged with a curtain running full length, and from peak to floor. Spreading first our rubber blankets to keep out the dampness, then getting into our blanket bags, drawing up our heavy woolen blankets over us, we soon fall asleep, and Camp Sanford is in silence.

Of the days that followed it would be nearly impossible to speak in detail. The memory now is one delightful whole, yet there are incidents which are engraved on our minds as pictures never to be effaced; and during the long winter months, while our rods and camp kit are carefully packed away, the recollection of these days and nights under canvas comes back with realistic pleasure.

Of our guides, a word: The older one, on whom rested the greater responsibility, was a quiet, steady fellow about thirty-three years old, a man of family, who for several winters had been in charge of lumber camps, and was also active on the "drive" in the spring. A man of muscle, who could handle a canoe well in a heavy sea and was quick to choose the best places in running the rapids, a good cook, a first-rate shot, as our table frequently testified, and a man not often to be second in reaching the heart of a large hemlock. In his honor was our wangan named Camp Sanford. Willis was his opposite in many respects—quick, agile, impulsive—one of those lucky fellows likely at any time to get into a scrape, yet always coming out right side up; quick to learn, willing to work and worth his price any day for the fun he would make, always good-natured, looking on the bright side and not often caught napping. His hearty "Well boys, this is a pretty good day for eatin'," as he held up a good string of trout, the result of a morning's catch; or passed his plate for the fourth time to be helped to griddle cakes, will be long remembered. The pleasure he took in looking over our fly-books and the readiness with which he learned the names of our flies until he knew by heart the professor, silver doctor, toodle bug, etc., drew forth from him before our trip was ended, the characteristic remark, "Well now, boys, I'll bet a dollar that I know the names of more flies than any man in Maine, north of Oldtown."

We were fortunate in our weather, having no rain of consequence; the days warm and sunny, and the nights cool, but made bright and beautiful by the light of the harvest moon. Our table was well supplied with the good things carried from Boston, supplemented by the trout and partridges we were successful in bagging. On one occasion when taking a long paddle on the lake, we landed upon a small island completely covered with buckberry bushes, hanging full with the large and luscious fruit. At this we were surprised, it then being later than the middle of September. Wild cranberries, too, were found, but in such condition that our store of sugar was largely reduced to make them palatable.

Our neighbors were few and far between, one or two camps, perhaps, besides our own on this lake twelve miles in length, and occasionally we saw a canoe or heard a rifle shot echoing among the hills. We were isolated from the world, and not a paper or a letter could reach us; and not until ten days after all bets on the Puritan-Genesta race had been paid did we learn of the result. It came to us from a party of Boston gentlemen, whom we met just at dusk one evening on their way to camp, and our first question was, "Who beat in the race?" The answer came back, "The Puritan, by thirty seconds." And then on that lonely lake in the wilds of Maine, three hearty cheers were given for the Boston boat.

In fishing, we had the traditional fisherman's luck. On some days whipping the streams patiently for hours without a rise, and again rewarded by seeing the trout leap from the water for the favorite fly, and our rods bend almost to the double in his efforts to escape. We caught enough, however, for the full supply of our table, and as we are among those who know when they have had enough, we were content. To us the evenings round the camp-fire are one of the pleasantest episodes of open-air life. What more delightful, after a hard day's work, than to lounge around the fire, and watch the flames creep in and out among the logs, the crackling of the sticks and the sparks as they fly upward driven by the wind? What more picturesque than to go a short distance into the deep forest and look down upon the camp, brilliantly lighted by the huge fire leaping ten feet into air, and all around the quiet stillness of the forest, and not a sound save the hooting of an owl or the laughing of a loon away out on the lake? These are the times when the cup of happiness seems full to overflowing, when the cares of business or the quotations of the stock room cease to interest.

Thus the days passed, so full that the daylight was not long enough for all we wished to do, but each surely bringing us to the hour when we must break camp. It came at length. After striking camp and loading the canoes we started on our run of over sixty miles down the river. This took three days. At times our course lay through dead water, the river winding in and out through the forest; at times we ran the rapids, when it required all our skill and exertion to keep the birch from upsetting, and from being dashed against the rocks; again through broad intervals, as we drew nearer civilization, and the occasional farm house on the river bank showed all too plainly, that our vacation trip for '85 was nearing its end. At last the town of Passadunk came into view, we paddled to the shore by the railroad bridge, exchanged our camp suits for those more presentable, shook hands with our guides, and soon were on the train for Boston.

Why is it that so few ladies go with their husbands and brothers to the woods? Why should they not join in the pleasures of camp life and gain the benefit to health which comes with the complete change and life in the open air? In our judgment, if one is well provided with a suitable outfit, and pays a due regard to the laws of health, the risk from exposure is reduced to a minimum, and we venture the prediction that with the increased interest which is now taken in out-of-door sports, the time is not far distant when it will be a common event for ladies to join in the pleasures to be found in the forest and stream.

E. S.

BROOKLINE, MASS.

LAKE MELISSA.

Editor Forest and Stream:

Who says fish? I do, and hundreds of them. Black bass, wall eyed pike and gigantic pickerel. A party of us, seven ambitious, embryo fishermen, are camped here, under the shade of the graceful basswood.

Commodiously housed in a good wall tent, we can bid defiance to diurnal storms, and regale ourselves the while in the friendly "seven up" or "raise you one," when we are not yanking the sportive fish from their aqueous element.

We came here from Castleton, D. T., filled with wild expectations of voluminous prey, and our wishes have been more than realized, for to say that this is the "paradise of piscators" is drawing it mild.

On our arrival here, after the "stake-out" and a hearty dinner, our first thought and action was to capture minnows for our bait, and finding them plenty in one of the small connecting streams between the lake and another (Lake Sally), we soon netted a good complement and essayed our victims. Hardly had a line been cast, when "first blood" is heard from one boat and quickly followed by the cry "it is a bass," and such fun. The supple rod bends to the sudden strain, and with anxious eyes all watch the combat. Hurrah! he's landed, and a beauty he is. In quick succession the other rods have their own duty to perform, and ere long all the other boats are well stocked with prime fish of various kinds.

A friendly dispute begins between two occupants of different boats, and high in air is held aloft an eight-pound pickerel. "Show a better if you can," yells its excited captor, and up goes its counterpart. I believe it was decided that they were twins.

We have been here three days, and each a repetition of the other. Uninterrupted success, and we can tally two hundred and fifty as fine fish as ever graced a table.

The accommodations for visitors and sportsmen at Detroit are unexceptionable, and at the boat house near the village is a nice assortment of boats for hire. Be cautious whom you employ as boatmen, and select those who have a reputation for a close mouth and can live on good plain food and drink, without resorting to fire water. A. T. BOND.

DETROIT, MICH., June 17.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICH.—XVII.

AFTER the first feeling of discomfort had passed off we joked and laughed—not "voriferously," however—at our forgetfulness in leaving our trolling gear in camp, and rowed carelessly along, not caring much whether the fish preferred a glittering sham to the toothsome flesh of a speckled frog or not, for to catch fish is not quite all the good there is to be found in going a-fishing.

Dan had "set" his rod between one of the rails supporting the thwart and the side of the boat, and was contentedly puffing at his pipe as he sat facing the bow, when, as we drew near the sunken reef, "whiz, bi-z-z," went the click of his reel with a burst of music that fairly took our breath, and as the old pelican swung his half paralyzed old right leg over the seat, following it with the good left one, so as to face the way the line was running and grabbed the rod, I stopped the boat and gave her sternway, looking then to see a great fight, for no common fish would raise a commotion like that.

But for the first time in all our varied experience of many years together, the old veteran of many hard fought battles lost his head, and actually forgot what he was doing or how to do it. He forgot to hook his neck-strap in the screw eye in the rod, which would have given him a chance to handle the reel with his one good hand; he forgot to let the line run while he took time to do this "hooking up"—without which he can't handle a fish at all of any size—and just held on to the rod like grim death, grasping the reel in such a way that it couldn't turn till the fish, which was pulling like a horse, came so very near taking him over the stern of the boat, that I dropped the oars to reach for him and prevent a catastrophe, in the shape of a good sousing in the lake.

A great surge of the fish, which now had the rod pulled down straight with the tightened line (a new F. braided linen) however, saved Dan a ducking and me the pleasure of fishing him out.

As I got up to step aft and get hold of him and take the rod from his hand, it flew back over his head, and the sudden release of the mighty strain "disturbed his equilibrium," as old Dick expresses it, and he tumbled backward off the seat, flat on his back, in the bottom of the boat. (A fact.)

With the "skipper" it was either laugh or "bust," and I let off a quiet, very circumpect, and decorous chuckle as I picked the old pelican up and replaced him on the seat, a feat requiring not much of an effort, as he only weighs in the neighborhood of ninety-eight pounds.

I handed him his rod, which I had caught and laid forward when he took the tumble, and as he recovered his pipe from the bottom of the boat, he said in his quiet way, but with a "can't-do-the-ease-justice" sort of a look in his old eyes, "Hickory, nothin' makes me so mad as that," and whether this referred to the chuckle that was still "a agitatin' o' my frame," the tumble, or the loss of the fish, I have never had the hardihood since to try to find out.

The line was reeled up to find the hook, a big, strong, No. 17 salmon trout, broken off below the barb, and the sudden ending of the fight and Dan's defeat was accounted for.

We were satisfied it was a "scrouser," but whether pickerel, bass or maskalonge we were unable to make out; bass from the "bustle" he developed, but then we "almost always invariably" as old Dick figures it, lose our biggest fish. The old fishhawk owned up squarely that he had lost his head and was bewildered by the sudden dash of the fish that he never once thought what a reel was made for, but it was too late now to hunt up excuses for his temporary lack of sense, and he was only glad that I was cheated of the pleasure of fishing him out of the lake.

A new hook was tied on and baited with the choicest frog in the buckets, and we pulled along the upper side of the reef out to deep water where a turn was made up lake to make a circuit of a hundred yards or so and come back over the same water where the calamity had overtaken us. As we neared the reef again I struck a fish, which, if not quite so big as the one Dan had lost, was strong enough to break loose after a short, fierce struggle, and then the old pelican just sat there and chuckled himself into a mild "conniption."

We fished around in the vicinity over ten acres of water for half an hour longer without another strike. It was clearly our unlucky day; we could not catch fish even when they were in the humor to be caught, and we headed for camp, trusting that another day would bring better luck.

At Alexander's Point we crossed over to fish past the point, near the mouth of Maybert's Creek, for we did not like to go in without a scale; but here too our unlucky streak followed us, and we pulled down to the point at the old log road and across to camp in the gloaming of the evening without once having had occasion to use our stringers.

Here another backset awaited us. Old Ben met us at the landing with the information that "old Knots had skipped the ranch an' gone down to 'Cootereye's to stay all night an' hev an early start in the mornin' fur the down boat at Sutton's Bay."

It was clearly a case of too many girls for his peace of mind, or a sudden drought in the matter of "festivities," the latter most likely the moving cause, for old Ben said, "the ole feller looked mighty nigh fagged out, an' I reckon he's gone down to look over ole 'Cootereye's cellar an' hist in a 'rejuvenater' er two."

We saw no more of him till we got home, but our good wishes went with him, and we missed him too, for a better comrade never "fit musketers or rashed with a soggy flap-jack" in a fisher's camp than old Knots. KINGFISHER.

DESTRUCTION OF WEAKFISH.

Editor Forest and Stream:

I learn that one of the crew employed on one of the numerous steam fishing vessels engaged in so called mossbunker fishing in the waters adjacent to our harbor, casually related to a crowd of open-mouthed admirers the facts of a big catch they had met with within the past ten days, just outside Sandy Hook Point. They surrounded with their murderous purse net an immense school of weakfish, on which they were busily employed the greater part of twenty-four hours transferring to their tenders or sailing vessels and the result of their labors must have been over 200 tons of fish. After taking their fish to New York they found that there was no sale for such a quantity, and after disposing of what were in the best condition, the balance were taken to the fish factories to be converted into fertilizer.

Such ruthless destruction of our food fishes is the cause of the scarcity we hear so universally complained of as existing in our waters. It is a crying shame that such work is going on, day in and day out, and a disgrace that a stop cannot be put upon such operations. The fish, when caught in such numbers, roughly handled and thrown in great bulk together, soon become soft and unfit for food. This is particularly so with weakfish, which at this season of the year are coming on our coast full of spawn. To destroy them in vast numbers, as evidenced by this relation, is only to help on the gradual extinction of the species which has grown each year more apparent to those who, when time and opportunity serve, are happy to drop a line in waters where in years gone by glorious fun and success awaited them, but now, alas, the memories of departed days are too often the only reward for their endeavors.

We hope the time will soon come when the attention of our legislators will be given to means to prevent this wholesale destruction. If not given we must make up our minds that angling with rod and reel in New York harbor will be a joy of the past.

AN ANGLER FOR OVER 35 YEARS IN NEW YORK HARBOR.

MURDERING BABY TROUT.

Editor Forest and Stream:

Your old-time correspondent "Piseco" and I are here in the wilds of Hamilton county, N. Y., fishing the east branch of the West Canada Creek and Wilmot Lake in a miserable easterly storm which has now, June 25, lasted three days without the slightest indication of ever stopping. I have neither time nor inclination to tell you of our mighty deeds nor how I yelled to "Piseco" to "give him line" and his reply of "not a blessed inch," but I do want to make a remark or two on the subject of killing baby trout, and if you think that this is of more interest than a recital of our sport and of the big ones lost then I will defer the latter until I can substitute paper for birch bark.

Age is said to bring wisdom, and this trip has opened my eyes to an evil of long standing, which I have read about but never before realized. The laws of New York have for some years forbidden the killing of brook trout under six inches in length, and, as your attentive readers know, this clause was omitted for some reason in the amended act of last winter. I have read the various adverse criticisms on this omission which have appeared in your columns, but have been totally indifferent to the six-inch law. To me it appeared like legislating that a man may not marry his grandmother; in other words, it forbid a wrong act which few would ever commit. My fishing experience covers several years, a few States and Territories, and two continents, yet never did I see a man kill fingerlings, and hope that I never shall. I have heard men talk of it and praise the table qualities of three-inch trout, but thought it an abnormal taste, and therefore an uncommon one. On such occasions I have answered in a tone of levity that the babies would be be-ter served as an omelet, but conversation with men on this trip has shown me that the killing of baby trout is, in this region at least, a crying sin. It is a sin toward which I never have been tempted and am not inclined, after having learned how to do it. Law or no law, I have put back all trout under six inches, without thinking that it was a sacrifice for the general good, but in the same spirit in which I would release a swallow accidentally taken as the fly was in the air, or a bit of useless weed hooked. As a member of the Ieththophagous Club, which eats everything that comes from the water, whether lizard, fish or snail, I would have been insulted to have a platter of six-inch baby trout set before me. Heretofore I have thought this baby murder to be an occasional crime, but am amazed at its extent in the southern Adirondaeks. I knew a man in Wisconsin who was said to do this thing and he was pointed out by a friend as a man to avoid and I looked at him as a being who was curiously depraved.

Before giving any instances I wish to say: As an angler I am favored with many kind invitations to fish in waters of clubs and of private persons. As a fishculturist in charge of one of the stations of the New York Fish Commission, many applications for trout fry come in the mail from strangers. Now should any of these baby killers have an idea of asking me to fish with them or to stock their ponds, I beg that they will save their postage. I despise and loathe their practices and do not wish for their acquaintance.

A gentleman of Little Falls, in whom we can trust, says that he spent some days this month at Griff Evans's, at the junction of the east and west branches of the West Canada Creek, some four or five miles west of Moorehouseville, in Hamilton county, N. Y., and that men there practiced baby

LAND-LOCKED SALMON, SEBAGO LAKE.—Bill Hodgkins, the well-known guide, reports visiting the fishing grounds in Sebago Lake May 31, and boating three salmon, a total weight of 80 pounds. The Portland Transcript of June 16 reports: "Friday, two Portland gentlemen fishing at the outlet of Sebago Lake caught four salmon and a dozen speckled trout." Last summer several salmon (L L) were taken in the Presumpscot River on flies. Brown hackle for artificial, and "mud fly" for natural, proved the most aggravating. With the increase of fish it looks as if our salmon season would not long be restricted to the first two or three weeks after the ice leaves the lakes.—BLACK SPOT.

killing to a great extent. One man came in with fifty-seven pounds of trout and none were over seven inches in length! Another had thirteen pounds of the same kind. At Ed. Wilkinson's a man brought in a creel full of babies and showed them exultingly. Mr. Stimpson, of the Mountain Home, told me that a man calling himself a sportsman wanted to know where he could go and catch babies, but got no information. Mr. F. A. Walters, superintendent of the Adirondack hatchery, writes me that "a party of three took in Long Pond (near the Sarabacs) in six hours on Wednesday last, June 23, 257 brook trout and left part of them on the shore to spoil." Yet we must stock the streams for the trout hog as well as for decent men. FRED MATHER.

MOUNTAIN HOME, June 26.

MASSACHUSETTS ASSOCIATION.

THE last regular meeting of the Massachusetts Fish and Game Protective Association for this season was held at the Parker House June 23, President Samuels presiding, and though many regular attendants are now on their annual pilgrimages to the rivers and forests of Maine, still over thirty responded to the call. The usual routine business was transacted, and three new members were elected. The committee on fisheries reported the following resolution, which was ordered sent to the Senate at Washington:

To the Honorable Senate of the United States of America:

The petition of the undersigned members of the Massachusetts Fish and Game Protective Association humbly represents that said society has paid much attention to the habits and preservation of the salt-water fish frequenting these coasts, and represents that the increase of the mackerel on the coasts of the United States would be greatly promoted were the custom of taking them in seines during the spawning season broken up by law prohibiting their sale during that season. They also represent that the practice of spring seining tends to obstruct the passage of the fish over shoals, and causes them to seek the waters of the British Provinces. The spawning is substantially over by the middle of June, and from that time the fish begin to improve in condition. Your petitioners think the objections made in some localities to a close season are not tenable. These seiners pursue the fish as soon as they appear on the coast near the capes of Virginia and Delaware, and the greater part of the mackerel are taken by Maine and Massachusetts fishermen, who, by a large majority, are in favor of protective measures. The vessels are fitted out to take the fish at any distance from home ports wherever they may be found, the effort following the fish throughout their migrations until they strike off to sea in the late autumn. They are much more profitable as articles of commerce, after the spawning season than before, because of their better quality as food.

Your petitioners are of opinion that a close season is a matter of public and general importance, as it would tend to supply the market with a good instead of a poor article of food. They are aware it is an experiment, and they humbly petition that Congress will establish a close season of some months' duration, that it may, by actual observation, be determined whether an important improvement will not result to the mackerel fishery from such a law, and will ever pray.

HENRY J. THAYER, Sec'y. EDWARD A. SAMUELS, Pres't.

The latter portion of the evening was employed in discussing the new game law enacted by the Legislature, and the following resolution was adopted:

Resolved, That, in the opinion of this Association, the law for the protection of game and other birds, recently enacted by the Massachusetts Legislature, is woefully inadequate to secure their protection, and while the association will labor for its enforcement while it remains upon the statute books, it will also endeavor to secure its improvement.

THE FLUTTERING FLY.—New York, June 25.—*Editor Forest and Stream:* In answer to your correspondent on the subject of my patent fluttering fly, I would say that when about a year ago I invented this fly, although I had been engaged in the fishing tackle business ten years, and twenty-five years a fly-fisherman, I had never seen or heard of a fly tied in that manner. Still, being anxious to make sure that it was new, I showed it to a number of prominent anglers, American, Canadian and English, but none had ever seen or heard of it. I also consulted all the prominent works on angling, both English and American, that I had access to, and failed to find any mention of such a fly. Still, allowing your correspondent's statement (which the public must understand comes from a rival in business) to stand, it would not affect the validity of the patent in this country.—W. HOLBERTON.

Editor Forest and Stream: In June, 1876, I was angling on Twin Rock Lake, near Morehouseville, Hamilton county, N. Y. Giles B. Craft was with me, and we had excellent sport with the trout. One of the flies I used was something like the "fluttering" fly illustrated in FOREST AND STREAM of June 10. It was made by one of the best fly-tiers I ever knew, Robert Perrie, of Utica, N. Y. It was a hackle reversed, and its hooking qualities were first class. I do not think Mr. Perrie claimed to have originated it, but of that I am not sure.—MILLARD (Cheyenne, Wyo.).

SHAD AND PUMPKINS.—Seneca Falls, N. Y., June 15.—*Editor Forest and Stream:* Is it not somewhat singular that Washington Irving, who was so close an observer of nature and its various phenomena, should commit the error of placing "broiled shad" before the guests at Myhrer Van Tassel's quilting frolic, as duly set forth in the veracious chronicle of the "Legend of Sleepy Hollow"? The story recites that Ichabod Crane rode forth to this historical supper, when "the yellow pumpkins were turning up their fair, round bellies to the sun," through "fragrant buckwheat fields," etc., obviously a time of the year when this toothsome fish is out of season, at least in these later degenerate days, when they are no longer a dainty after midsummer, and, in fact, have deserted the river for their mysterious ocean home. What is the present extreme upper limit in the Hudson attained by the shad on its annual migration? When a boy, living near Sandy Hill, I have seen large numbers drawn from below Baker's Falls, which point was then a barrier to their further upward progress.—L. G. S.

THE RANGELEYS.—Bethel, Maine, June 26.—Major Lovejoy and wife arrived here from their annual spring trip to Richardson and Rangeley Lakes. They had, as usual, fine fishing, and say it was still better than last year. They brought home 10 trout, total 51 pounds, and 6 trout, total 32 pounds. The largest fish, 8 pounds 9 ounces, was caught June 5 by Mrs. L. on an 8½-ounce split bamboo rod. This is the largest brook trout ever taken by a lady angler. The dimensions were: length, 26½ in.; width, 2½ in.; depth, 7½ in.—F. H. L.

ST. LAWRENCE MUSKALONGE FISHING.—Ex-Assemblyman Robert A. Livingston came from his island in Alexandria Bay last week with one of the largest muskalonge that has been seen in this city for a long time. The fish, which was caught off the dock of Mr. Livingston's island, in the shoal water between it and Judge Donohue's island, measured nearly five feet in length, and weighed a few ounces less than twenty-five pounds. It was caught with an ordinary trolling line.

MAINE ITEMS.—About seventy seven salmon have been taken at the dam at Bangor since the fishing began a few weeks ago... Last week a New Yorker caught a trout weighing twelve pounds, at Haines Landing, near Mooselucmeguntic House, Rangeley... About 25,000 landlocked salmon from the Weld hatchery have been placed in the inlet brook at Lake Auburn. The young salmon were transported without the loss of a single fish.—*Belfast Journal*.

ANTRIM COUNTY ASSOCIATION.—At a recent meeting of the Antrim County, Mich., Fish and Game Protective Association, the following vice-presidents were elected for their respective townships: Banks, L. M. Kanagy; Elk Rapids, J. P. Brand; Forest Home, T. D. Austin; Helena, R. W. Coy; Jordan, F. M. Severance; Mancelona, Peter Jackson; Milton, Alex. Campbell; Star, D. E. Lozier; Torch Lake, J. W. Pearl; Warner, J. D. Rodger.

"WOODCRAFT."—Orchard Lake, Mass., June 7.—"Woodcraft" is all that is claimed for it, and more too; everything is practical, and all explanations are very clear. It would be hard to find the woodman who could not gain some new wrinkles by reading it, while for the "youngster" it is the most complete guide I have ever read. Every outer should find a corner for it in his knapsack or pack basket.—C. B. B.

FROGS FOR BAIT.—Indianapolis, Ind., June 22.—Will you ask the "Kingfisher" how he catches his frogs for bait? The average Indiana frog is too "soon" for me, and eludes all my efforts to corral him in a bucket.—HOOSIER.

EVERY PAIR of Allen's bow facing oars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

Fishculture.

Address all communications to the Forest and Stream Publishing Co.

THE AMERICAN FISHERIES SOCIETY.

[Discussion following the paper of Mr. John H. Bissell, entitled "Fishculture a Practical Art," published in FOREST AND STREAM, May 20, 1886.]

THE CHAIRMAN.—Gentlemen, you have heard this exceedingly interesting paper of Mr. Bissell's, and we all know it opens up for our consideration one of the most important questions that will ever come up before this Society, and I think that perhaps some of you will be ready to discuss the subject. I am sure we shall be very glad, all of us, to hear any difference of opinion which may exist in regard to it. There is no doubt about the importance of the subject. The time is now given to any remarks by anybody.

MR. BARTLETT.—Mr. Booth is present and he is probably as well posted on this subject as any one. I would like to hear from him for one.

THE CHAIRMAN.—It is suggested that Mr. Booth, representing the fisheries side of the question, be heard.

MR. A. BOOTH.—Mr. Chairman and Gentlemen, I am pleased to say anything at all times, when I am able to contribute any information by my experience. The elaborate paper which has just been read is a little beyond my comprehension, especially as I could only hear a part of it. If it was not too much to ask the gentleman, I would like to ask the number of pounds of fish and the number of fish that he stated in his paper were caught in the State of Michigan.

MR. BISSELL.—This is the first time I have ever been asked that question when I have been able to answer it. I have been before the Legislature and have been asked how many fish were caught, and I said I did not know; I have been asked what the fisheries were worth, and I said I did not know; and the reason I did not know was that the Legislature has never given me money enough to find out. This year the Michigan Fish Commission thought it was so important to find out about the actual condition of the fisheries of their different lakes, that they have skinned out of their very meager appropriations just about one thousand dollars to get this information. I can tell in a moment exactly what Mr. Booth wants to know. We employed last fall Mr. Lyman A. Brandt, a gentleman residing in Detroit, a very intelligent man and a man who had served two terms in the Legislature, and who had been last year on the Fish Committee of the House, and he began operations I think early in September. He visited almost the entire coast of Michigan; he interviewed every single fisherman he could find, and made notes of just what all of the fishermen had to say about their catch, about their investments, and about their methods. These blanks which had been prepared, blank forms of returns, were given to the different fishermen and they were asked to report, and the reports which they returned to the Fishery office at Detroit, were compared very carefully by Mr. Brandt with the notes he had made around the lakes, and that is the basis of my statement. There were 427 fishermen who reported, who made returns. In those returns the number of pound nets given was 983; number of gill nets was 24,270; that is, over 1,400,000 fathoms; the number of seines was 57; and the number of fykes 220; the number of steam tugs in use is 66; sail boats 318; pound boats 232; skiffs 137, a total of 753 boats.

Reports have not been received of the fall catch—127 pound nets, 140,000 fathoms of gill nets, 52 fykes, and 4 seines. Returns from 427 fishermen shows their total catch to have been as follows during the year 1885: Whitefish 7,994,459 pounds, the average price per pound being 4½ cents; of lake trout 4,531,573 pounds, the average price per pound being 2½ cents. The weight of herring was 4,568,135 pounds, the average price being 1½ cents; pickerel 876,899 pounds; sturgeon 617,449 pounds; black bass 35,000 pounds, and other kinds 3,151,435 pounds. Mr. Brandt explains in a note that the number of pounds classified as pickerel and sturgeon is not reliable as going to show the extent of the catch of those species, for the reason that fishermen in making returns in many cases included their catch of those fish under the head of "other kind"—sturgeon not having been designated as one of the classes of fish to be reported upon. The total value, as given by the reports themselves was \$673,893.45. Now in addition to the returns made as above stated, there are these 127 pound nets that Mr. Brandt knew about himself, but which were not reported upon. Approximating the catch of these upon the basis of what other nets of like kind have caught in the immediate vicinity, we have as a result in pounds, 18,054,000 pounds of those additional nets. In addition to this, one firm in Detroit whose returns have not been furnished up to the first of March, has caught at least 1,000,000, and ten combined firms return as having purchased from fishermen who have made no return, and whose catches have not been computed above or reported in any way, a total of 1,172,000 pounds. Taking this result and the figures before me, we have as a careful estimate of the total catch of the State of Michigan in the lake fisheries, a grand total of 26,351,875 pounds, nearly 13,190 tons, which at the average price of 8 cents per pound, about what the fishermen receive, would realize a value of \$791,456.25.

This report of Mr. Brandt's I have brought with me, thinking very likely some of the gentlemen from the other fisheries might want to inquire about it. I would read it, but it is quite long. There are 35 pages of it. But I will leave it on

the secretary's desk, and it will be at the disposal of any gentleman who wishes to inquire about it.

MR. CLARK.—Speaking of this report, I would say for the benefit of the gentlemen here, that the United States Fish Commission undertook last fall to do the same work, and did do it that the Michigan fishermen did, but the United States Fish Commission included the whole lake coast from Duluth to the St. Lawrence River, and that report will undoubtedly be out some time within the year. Of course we could have made the same figures, and gotten the same statistics as to the whole lakes, but under the government way of doing business we are not allowed to do so.

MR. BOOTH.—What I wanted to get at, gentlemen, is this: There are 26,000,000 pounds of fish caught and used from the waters of the State of Michigan. The question is—I suppose we are meeting here to see which is the best way to perpetuate and increase these great results, for the purpose of producing fish in a cheaper form and more plentiful than they are now—now there is 26,000,000 pounds of fish, as I understand the aggregate, caught and furnished for food in the waters of the State of Michigan, or in the lakes; now then to police that 2,000 miles which I understand is the mileage front of the waters of the State of Michigan, what would it cost as compared to the cost of propagation to replenish those fish by artificial process? I understand you, in each of your small hatcheries—small compared to what they could be—you could put in 30,000,000 to 50,000,000 of fish. If those fish average 3 pounds apiece, divide the 26,000,000 by 3 and it gives over 8,000,000 of fish. Wouldn't it be cheaper to artificially hatch those fish and put them in—even to be destroyed in the manner you speak of now—rather than go to the great expense of policing the entire 2,000 miles so as to watch the meshes, the kind of nets and the times of year that they catch those fish, and make fines and collect the licenses? I have thought over this matter a great deal, whether it might be done by legislation and policing. There is a great deal of injustice done, and certainly a great many dollars unnecessarily expended, and not as large results as from the reproduction by artificial propagation, and these fish being placed back in the waters from which they were originally taken.

I remember some years ago meeting Prof. Baird in New York; we were talking over fish matters, and he stated he believed it would be much cheaper to artificially propagate fish in the waters than it would be to police, and I believe it.

In the Columbia River, in which I have an interest, we have a great many salmon caught there, caught every year, and in the aggregate these last three or four years, the same number of pounds has been caught last year as there was caught three or four years ago. Some years ago we endeavored to artificially propagate fish by having hatcheries there and placing them back again, but for lack of outside means and outside help the thing was abandoned. We find that we have got a great many more fish than we used to have, and on the Sacramento River some 15 years ago, I put up a cannery. There were not sufficient there to run that single cannery. The United States Fish Commission started their hatchery on the McCollum river, and the State of California, by some agreement made with the United States Commission, agreed to put in a certain percentage of small fish in the McCollum river, which is tributary to the Sacramento, and the result of the catch these last few years, within five years, is annually more than it had been from the one cannery, which could not be supported by getting sufficient fish to put up in cans in the market, and we have now 22 canneries, and it is increasing. The percentage I cannot tell, but I should think about a thousand fold from artificial propagation. That is one of the best practical results of artificial propagation that I know of. We have a close season there, and it is with great difficulty we can get the fishermen to cease fishing at the close of the season. It has done a great deal of good, and there isn't many fish caught in those seasons. The result of all this is that the artificial propagation has given us as I tell you, a thousand fold more fish, in my opinion, at one-sixteenth the amount of cost, that it would be to police the waters to see that the proper sized meshes were used, and the proper time observed. Now I think that would apply thoroughly to the waters of Lake Michigan, and also to the other large lakes. We have 20,000,000 pounds of fish caught, according to the statement, which represents 8,000,000 of fish. Now what would it cost to put those 8,000,000 fish into the water as compared with the policing? Not only that, but you have the natural propagation of fish, which will amount to a great deal. I can't exactly say how much. I am thoroughly convinced unless something is done, either by policing or increased propagation of fish, it will be in the times of our lives—younger men than I am—when we shall see whitefish—which I consider one of the most delicate which we can find in this or any other water—will be as scarce as brook trout are to-day. I have been dealing in fish 35 years in the city of Chicago. We used to go out here to the town now called South Chicago, and begin fishing there early in the spring with two seines, and we would catch all the fish that the city of Chicago and its surrounding country required. The waters being shallow there and becoming warmer, the fish would go naturally into deeper water. We would then go north to Waukegan, Kenosha, Milwaukee, and Milwaukee was the furthest north we got any fresh fish for our market, and in the city of Milwaukee to-day, where they used to go out with sail boats with 12 or 13 nets and bring in all the fish that was required, all that they could carry in their sail boats, we now have four little steam tugs of moderate size, and those will not gather as many fish to-day as the smallest sail boat would 25 years ago. At the commencement of this season, in 1886, we have only six nets engaged there. We used to get about two-thirds whitefish and one-third trout. We have had probably about 25 nets since the ice has passed away, and I think I do not exaggerate when I say that in those 25 we haven't had 25 pounds of white fish. It is all going to trout. We used to make the meshes of such size, that we would only catch that size which would be most liked by the people who used them, or two or three or four pounds. Now they are resorting to the plan of using a fish which they never used to touch. They didn't catch the large fish, and the small ones were allowed to propagate. We are catching the large ones now by hooks and line. The fish are not really in the market.

I don't wish to take up your time by giving "the secrets of our prison house," which is perhaps not entertaining to you, but I mention these as the facts, the practical results, and I am inclined to think unless something is done by the Legislature or by the people or by the Government for the propagation of these fish, it will be only a very few years when we will find you will not be able to get enough whitefish for your table, or at such prices that you can use them.

We had, from going to Milwaukee, to go still further north, and we gradually picked up these various towns, Two Rivers, Manitowoc, Green Bay, Escanaba, Maistee, Mackinaw, and that is the last; that is the end on Lake Michigan. That is the extreme northern point now that we have to rely upon for the most of the fish for this market and the surrounding country. Then we had to extend our business and go to St. Paul, Minneapolis, Duluth and those places north, on Lake Superior, where the railroads had reached, and we are gradually taking out fish from the waters there and putting nothing back, with the exception of these few that have been put in by the States of Minnesota and Michigan, and we now have to run to Manitow, where they had some considerable protection of their fish. I am now building a boat, which, when I started, I didn't ever expect to be worth money enough to buy or own such a boat. I have now in my possession nine steamers which we are using for catching, running these long distances, fast steamers, to gather the fish and supply the people of this city and surrounding cities; but it seems to me it is all wrong to allow this large industry to pass away when so little money is required to perpetuate this immense food supply in

the shape of fish. Our great prairies west of here, which we considered useless a few years ago, are dotted all over with cattle, which I suppose you have observed. These prairies were considered worthless a short time ago, and here we are supplying beef, not only to the city of Chicago and the State of Illinois and the United States, but to the whole world. Now, we have just as good a chance to supply fish. I suppose not to the world, but for these United States—although we might be antagonistic to the beef and hog product of this country—by producing fish very cheap. I think we can produce fish for one-eighth of the amount of money that they produce their beef and their pork for, or certainly at a moiety of the cost to do it. (Applause.)

THE CHAIRMAN—No doubt we are all exceedingly interested in all that Mr. Booth has to say on this subject. It is very pertinent to the subject, and I have no doubt all are interested in it as much as I am.

MR. FAIRBANK—I am sorry to say I have been engaged with another appointment all day which delayed me, and I was not able to be here before. I hardly know what the subject of your discussions has been up to this time. I am exceedingly interested in the whole question, and have looked forward to this meeting with a great deal of interest and shall participate in it with great pleasure, and I will be glad to add anything to it that I can from the result of my observations. I gathered from what Mr. Booth says that you were talking of the propagation of whitefish, and of their gradual decrease, which is a fact that we here are all painfully aware of, and those who have interested themselves in the subject and have looked into it are almost unanimous in the opinion which he expresses, that this supply of fish can only be maintained by artificial propagation either by the States adjoining the lakes or by the Federal Government, or by both. My own opinion is that the Federal Government should expend in the great lakes a much larger amount of the appropriations which Congress gives them annually for the propagation of fish in the lakes—a very much larger proportion than is now expended, and very much less, in my opinion, should be expended on scientific researches upon the sea coast, for which now very much the largest proportion is expended yearly. I have not the report with me at present, but I should say that at least seventy-five per cent. of the money appropriated annually by Congress for the use of the United States Fisheries is expended in scientific researches, which add, of course, very largely to the collection of the Smithsonian Institute and to the scientific knowledge of the country, but very little to the increase of the food fishes of the country. They have done a large work, a great deal of work in the propagation of shad, but that has been to a limited extent, so far as the appropriation of money goes, if my recollection serves me right. Now, we have got this meeting west, and I hope the western men will look into that subject a little more carefully. I say, I have not done it, and the statement I make is merely from memory, of the amount expended. I say seventy-five per cent. Do you remember, Mr. Booth, the amount of the appropriation annually for the Fish Commission?

MR. BOOTH—No, I do not.

MR. FAIRBANK—But at all events the amount so expended is small enough to command the attention of those interested in the subject, and I do not think you can do any better work here in the meeting of this Association than to look pretty fully into that subject. That the whitefish can be increased and the supply kept up by propagation there is no question in my mind whatever. The percentage of eggs saved or fry hatched and put into the waters in a condition to take care of themselves is so very much larger than that hatched in the natural way that it is almost fabulous, and we have had so many instances like the one Mr. Booth refers to on the McClelland River, showing the practicability and effectiveness of it, that it does not admit of discussion any longer. It is a mere matter of fact. The question for us to discuss is whether we shall take those facts as we have them, and apply the knowledge we have got and so increase the food supply. The amount of money appropriated by the Government is exceedingly small compared with the magnitude of the interest, and we should all endeavor to make that appropriation very much larger. There is no question in my mind about the feasibility and of the necessity for the general Government to take hold of the matter on these lakes. They regulate their navigation; they hold the control of the waters in all ways, and the benefits to be derived go to the nation, toward the cheapening of the supply of food in the Western country. By doing that they cheapen the supply in the Eastern country, because, if we have an abundance here we don't draw from them, therefore we don't advance the price there; so the benefits accrue to the whole people. It is not a sectional affair at all. But I did not get up this afternoon prepared and with the idea of making any extended remarks on the subject, but this has occurred to me. I am very glad to see a good attendance, and while it is not a mass meeting, the men that are here are here for the purpose of considering this subject, and are interested in it, and they show their earnestness and their interest by coming here, and I am sure much good will come of it.

MR. MATHER—With regard to the U. S. Fish Commission I will say: It is a popular error that it was created for the purpose of fishculture. The fact is that the act of Congress which called it into being distinctly stated that it was for the purpose of examining into the causes of the decrease of the food fishes of the Atlantic coast, I do not pretend to give the exact wording, but nothing is more certain than that scientific investigation and not reproduction was aimed at in the original bill. Fishculture has been taken up as a side issue, and while I heartily approve of it, I wish to say at the same time that it was not and is not the end and sole aim of the Commission. The fisheries industries is a broad question, and is so treated by the U. S. Commission, and as Americans we should be equally interested in the causes which render the mackerel scarce in Maine and Massachusetts, the whitefish rare in the Great Lakes, and the salmon infrequent on the Pacific slope. The work of the U. S. Fish Commission under the direction of Professor Baird has been the greatest and grandest work in this line in the world, and the reports issued cover more ground than any similar works ever issued, and are sought for in all lands. I have so often explained to this Society that fishculture is not the only duty of the Commission, and, in fact, is but a minor part of what is defined as the objects for which it was created, that I hope I may be pardoned for repeating it, and I only do so now because of an apparent misapprehension that the Commissioner was not doing his full duty in propagating fishes, especially in the Great Lakes. When it is fairly understood that the original act of Congress meant investigation, scientific investigation, then the case will be clearly understood, and it will be seen that Prof. Baird is carrying out a grand plan of which fishculture is an important, though not the only important part.

[TO BE CONTINUED.]

THE HUDSON FISHWAYS.—Editor Forest and Stream: The new fishways for the tributaries of the Hudson, which were mentioned a few weeks ago as having been authorized by the Legislature to be built, I hope will be constructed in the most thorough manner. I have not seen a copy of the bill, and therefore cannot say whether they will be constructed under the supervision of the Commissioners of Fisheries or not, or whether the Commissioners are to be consulted in regard to the choice of the plans. I incline to think, however, that they are not, from the fact that the Engineers' Division of the New York State Canals seems to be in charge of this matter. There are very few fishway experts in the country, and it will injure the prospects of having fishways on all the State streams if these are not only properly constructed, but properly situated as well. To accomplish this needs a thorough study of the details by some com-

petent expert before the construction is begun, in order that there may be no chance for error. It is also important that these structures should be made efficient and that false notions of economy should not intervene and impair their usefulness. It is not at all difficult to construct a fishway which will readily pass salmon, and some other fishes, but it is more difficult to construct one which shall be induced to enter, even though they pass up readily after once attempting to go up. It may well be questioned if the engineers of the New York State canals are familiar with the building of fishways, no matter how great their other acquisitions may be, and I hope that before the contracts are given out some practical builder of fishways will be employed to select the proper sites for the structures. This would be an assurance that the chance of error in location would be reduced to a minimum. With these fish passes properly made, and in good working order, it will not be difficult to obtain appropriations for further work in this direction, and therefore I hope that efforts will be made to have these made in the best manner in order that they may serve as models.—H.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Charles A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

DOG SHOWS.

July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

July 27 to 31.—Dog Show of the California Bench Show and Field Trials Club. E. Leavely, Superintendent, 436 Montgomery street, San Francisco, Cal.

Aug. 24, 25, 26 and 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. George H. Hill, Manager, P. O. Box 76, Cincinnati, O.

Sept. 8, 9 and 10.—Hornellsville, N. Y. Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville.

Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3810.

PARASITIC DISEASES OF DOGS—II.

IMPORTANT as are the diseases caused by Imbricoid worms in the dog, the canine *cestodes* or tapeworms are of even greater interest, alike to the dog owner and the pathologist. Although less numerous than the *nematodes* described in the first paper of this series, the part played by these parasites in the economy of life, as regards the propagation of parasitic diseases among animals, is of the first importance.

The cucurmerine tapeworm (*Tenia cucurmerina*) is found in from 40 to 70 per cent. of all dogs, and is by far the most common canine tapeworm. It is a small, almost transparent cestode, measuring from 10 to 30 in. in length. The body is much elongated and composed of many segments, each segment being in reality a separate individual, joining together a sort of colony of mothers and daughters, which are all produced primarily from the parent head by a process of "budding," each segment springing from the one before it, but all adhere to each other, and are attached to the larva head or scolex. There is no alimentary canal, the creature subsisting by absorbing nutriment through its skin. The mature or terminal joints are much elongated and narrowed at both ends, and each joint is provided with two reproductive papillae, one on each side of the margin. The head is furnished with suckers, by which it adheres to the intestinal mucous membrane, the intestines of the dog being its proper habitat.

The manner in which this parasite obtains entrance into the body of the dog has been thoroughly demonstrated by numerous experiments by many observers. The mature terminal segments, which contain ripe eggs, are passed per anum, and frequently sticking to the hair of the dog, the contained eggs are deposited on the coat. The common dog louse (*Trichodectes latens*) for some reason eats these eggs readily, which then speedily hatch within its body and a minute embryo provided with six hooks escapes. With these hooks it bores into the body cavity of the louse, and imbeds itself in the tissues, there becoming encysted and transformed into a microscopic *Cysticercus*, or "louse meale." The way in which a dog will gnaw and lick a louse or flea bite is well-known to all, and in this way "measles" lice are introduced into the canine intestinal canal. Here the louse parasite is digested and the minute *Cysticercus* set free, which, penetrating to the intestine, attaches itself and develops into the mature form of *T. cucurmerina*, the terminal segments of which again produce eggs. We have thus the very interesting phenomenon of an animal carrying the immature form of one of its internal parasites on its own body embedded within the tissues of an external parasite. Truly,

"Big fleas have little fleas

Upon their backs to bite 'em;

And little fleas have lesser fleas,

And so ad infinitum!"

As the lice are easily passed on from the coat of one animal to another, a single intestinal tape worm of this species may infect a large number of dogs, and an entire pack or kennel will usually suffer at once if one infected dog be introduced.

The prevention of cucurmerine tania disease is far more important than its cure; the method will at once suggest itself, beware of the *Trichodectes*, and when under treatment or otherwise the tapeworms are expelled they should be destroyed by fire or boiling water. The general considerations of cleanliness, etc., will also at once suggest themselves as efficient aids. The treatment for this disease will be discussed under that proper for tapeworm infection due to other species.

The largest and most formidable tapeworm inhabiting the dog is the margined tapeworm (*Tenia marginata*). It reaches a length of eight feet, but is more commonly but five or six feet long. It is a rather abundant species, being found in 25 per cent. of all full grown English dogs, and is not at all uncommon in this country. The larval form or *cysticercus* of this species is found in the sheep, and is known as the slender-necked hydatid, the neck being narrow and much elongated; the entire *cysticercus* is about the size of a large cherry. The head of this *tania* is armed with hooks arrayed in a double crown and also with suckers, which taken together, with the great size of the worm, serve to identify it.

The way in which the larva are introduced into the intestine of the dog is by the animal eating raw and infected mutton, and the sheep take in the eggs of the *tania* in drinking water or from eating green food, to which some of the passed ova of this parasite chance to adhere, an infected dog constantly sowing the ripe eggs everywhere. The infested ova soon hatch, the embryo emerges and bores its way to a convenient resting place within the body of its herbivorous host, and there remains encysted until devoured by some hungry dog.

The so-called "gid tapeworm" (*Tenia cœnurus*) is one of the most important parasites of the canine race, especially from the stock raiser's standpoint; the *cysticercus* or immature *tania* being the cause of a most serious and deadly disease of the sheep, and even of man himself. In the mature condition, as found in the intestine of the dog and wolf, the gid tapeworm measures from twenty to fifty inches in length. So closely does it resemble in this stage the *Tenia serrata* to be described below that a detailed account of its structure is not called for. Fortunately it is not by any means a common species, being found in less than five per cent. of English dogs, and in a yet smaller number of American animals; among well bred and well cared for dogs it is yet rarer. In Iceland Krabbe tells us that this hideous parasite is found in eighteen per cent. of all the native dogs. The gid tapeworm gains entrance to the body by the animal eating the raw brains of sheep affected with hydatid of the brain, "gid disease," or "sturdy." The pathology of this disease we must now consider. Animals harboring a mature hydatid tapeworm in the intestines are constantly passing the ripe eggs per anum, these may adhere to the hair around the anus, and should the dog enter a pond, stream or drinking trough they are washed off and float in the water. Should now a herbivorous animal swallow one or more of these eggs while drinking, or in any other way, the ovum immediately hatches, and a minute embryo of a somewhat oval shape, having one end of its body armed with sharp cutting hooks, emerges. With its hooklets the embryo bores its way through the tissues until it reaches the brain of its miserable host. Here it becomes surrounded by a wall derived from the tissues of its bearer, and now a most wonderful succession of phenomena appear. The embryo increases in size, the hooks are cast, and the outer wall develops into a rather thick skin. Other changes take place, until the parasite consists of a simple spherical bag filled with a milk-white fluid, the size is about that of a plump hazelnut. There now appear upon the outer surface of this "vesicular worm" numerous depressions, from three hundred to more than a thousand in number, these gradually elongate inward like the finger of a glove. Hooklets and suckers now develop on each "glove finger," and each finally becomes a perfect scolex or gid tapeworm head. Great suffering, wild delirium and often death, in spite of all treatment, are the results of these metamorphoses in the unfortunate ruminant. Should the animal die, as is most likely, or be killed, and the head thrown out where dogs can get at it, it will certainly be eaten, and should one of the cysts above described be swallowed, the sack wall is at once digested and the heads become free, and enter the intestine along with food. Here they fasten themselves by their hooks, and rapidly each develops into a mature gid tapeworm. As the cysts are usually more or less injured by the teeth, fortunately only a few instead of many hundreds of uninjured heads are introduced, but we may have a thousand descendants from a single egg!

The importance of eradicating this fearful disease can hardly be exaggerated, and the means of so doing are evident. Never allow dogs to eat butcher's offal; treat carefully any canine tapeworm disease, and utterly destroy the passed parasites. And to the stock raiser belongs the duty of burning the heads of all sheep dead of hydatid of the brain disease, and of keeping strange dogs of all sorts off his sheep ranges, lest they harbor gid tania, and may spread the fatal eggs over the grazing ground.

Greyhounds, harriers and beagles, which are occasionally allowed to eat the entrails of hares and rabbits, are frequently infested by the *Tenia serrata*. The parasite usually measures two or three feet in length; it is one of the armed tapeworms, the head being provided with a formidable crown of hooks. The suckers and long pointed body of all the typical species of tapeworm are well illustrated in the parasite; its size and armed head serve to distinguish it from other common species. *T. serrata* is derived from the *cysticercus* so commonly found in the peritoneum of hares and rabbits. In conducting various investigations we have made post mortem examinations of hundreds of rabbits and hares, and have found these cysts in nearly one-half of all the *Leporidae* examined. The cysts average the size of a hazelnut, and should one be swallowed by a dog, the cyst wall is, as usual, digested, and the *tania* head is set free to begin its metamorphoses and egg production within the intestines. Rabbits are infested by eating grass on which the eggs—which are being constantly given off by an infected dog—have chanced to lodge, the usual six-hooked embryo emerging from the egg when hatched, boring through the tissues, and establishing itself in the peritoneum, there to remain encysted until swallowed by some carnivorous animal which is making a meal of its long-eared bearer.

Nothing could be simpler than the prevention of infection by this *tania*. If dogs are never allowed to eat uncooked hare or rabbit, they will certainly not suffer from the invasions of this species of parasite. The importance of speedily curing any dog of *tania* disease and destroying the passed parasites is evident.

The symptoms caused by tapeworms of various species in the dog are by no means positive or diagnostic. Disturbances of digestion, nutrition in general, and symptoms referable to the nervous system are common. Emaciation without obvious cause, and in spite of a voracious appetite, always suggests the presence of parasites; the finding of segments in the feces is of course positive evidence of the presence of worms, and should always be looked for when a dog is believed to be suffering from *tania* disease. The administration of one of the milder vermifuges is justifiable for the purposes of diagnosis, as the segments of some species are rarely passed spontaneously. After the administration of the medicine the feces must be watched for a day or two for worms. By placing the excreta in a shallow vessel of water, preferably one of dark color, as an ordinary red glazed terra cotta dish, as the *tania* segments can then be seen much more easily, and breaking them up with a small stick the examination is easily and thoroughly made.

The treatment of tape worm diseases in dogs is fairly satisfactory, but it must be remembered that unless the "head" or scolex is expelled the parasite will be speedily reproduced. The most scientific method is to carefully examine the passages for the heads after the administration of vermifuges. The animal should be prepared for treatment by being fed only on a small amount of broth for twenty-four or thirty-six hours. A full dose of castor oil should also be administered at least twelve hours before the vermifuge is given.

Among the most valuable remedies for tapeworm infection in the dog are areca nut, brayera or koso, male fern, kameela, turpentine and chloroform. Areca nut is usually given in doses of one dram, the nut being simply grated and then made into a bolus with butter or lard. The dose of the dried brayera flowers (koso) is two or three drams; it is given in a cupful of warm water, in which the flowers may first be allowed to macerate for a quarter of an hour. Male fern may be given in the form of the extract or oleoresin; in the case of the latter for a setter is ten or fifteen drops, given in gelatin capsules or well beaten up with a raw egg. Kameela is not as valuable as many other remedies; the dose of the powdered drug is one-half or one dram for a greyhound or harrier. Chloroform is a most efficient, but somewhat dangerous, remedy; it should only be used when other drugs have failed.

MASTIFF DOG "BOSS"—The property of Mr. J. L. Winchell, Fair Haven, Vt.

and under the immediate eye of a skilled veterinary surgeon. If the bowels do not move within three hours after the administration of any anthelmintic, a full dose of castor oil should be given.

The after treatment consists in the giving of only broths and milk as food for a day or two; often tonic treatment and careful attention to exercising and general health will be required after the expulsion of tapeworms to bring the dog up to perfect health.

Tapeworm infection is a disease of adult life, puppies but seldom having access to butchers' offal or the like. They may, however, suffer extensively from the cucurbitine species, and the importance of having breeding bitches free from lice at once suggests itself.

The prevention of tænia infection has been treated of at length when speaking of the different species. R. W. S.

MASTIFF JUDGING.

Editor Forest and Stream:

I gladly exchange "logic" for a more congenial subject and return to a sober discussion of what mastiffs really are. In the way of reply to your comments I have only this to say: I never saw Prussian Princess move, but I once saw her standing up in her stall and I am certain that in the matter of hindquarters, hocks, etc., the only question between her and Rosalind is, which one is the worst. When Mr. Dalziel judged them at New York Rosalind was lame, and I don't see how Prussian Princess could have moved worse. What I started out to prove was, that it is a mistake that the real authorities in England are such devotees of head as to pass over as trifling, such defects as weak loins, straight hocks, small size, or general worthlessness. I think I fairly proved this in the case of Mr. Hanbury in his placing of Crown Prince and Prince Regent, and in this connection I would suggest that Mr. Hanbury shares with Mr. Wynn in the distinction of being the most pronounced advocate of head, and his Rajah was the great fount from which came the present over-development in this direction, and what are called the Hanbury mastiffs are the extreme of head qualities, but mark you, Mr. Hanbury, by his official acts as judge, put the seal of condemnation on general defects.

Then take Mr. Wynn: Nearly (if not quite) ten years since he raised the same howl at Bristol, England, that Dr. Perry did at New York, by putting Beau over The Shah. Mastiff men had gotten into the fashion of falling down at the feet of The Shah, as though he were unbeatable, but Mr. Wynn was sufficiently convinced of his standing as an authority, to judge them as he saw fit, and although there was a howl over it, fanciers such as Hanbury, Nichols, etc., gradually came round to Mr. Wynn's way of thinking, and the public saw that The Shah could be, and was, fairly beaten, and that by the exemplar of a good "all round" dog; and The Shah stock had a heavy fall in consequence. Then there was that wondrous headed puppy, King Cole, that Mr. Wynn said exceeded any matured dog he had ever seen, yet he was bad enough to go back to second under Mr. Wynn, and I have grave doubts if he was as bad as some of the winners we have had. Again and again I would ask, if a receding muzzle can be a square one? and if we do not stick to the plain intent of a standard, what is the use of one? The cry is raised every now and then "Give us a new standard that our judges may know what to judge by." What in the world is the use of that, when they will not stick to the obvious meaning of the standards we have? One distinguished English breeder, who has bred dogs that sold at \$750 when not a year old, admitted to me "We need fresh blood, and a fresh departure; but what can we do? We must breed the dogs that our judges will put first;" and the judge says "We must give prizes to the type our leading breeders want." The whole thing looked very much like "My partner, Mr. Jorkins," in "David Copperfield." I, for one, vote to secure some compliance with the standard we have before we try our hands at another.

It is a suicidal mistake in judging to confound a dog's breeding capacities with his show qualities, and I cannot but think that much of the confusion arises from judges going beyond their sphere in this matter. There was Griffin, the sire of Rajah, who was so palsied that he could not be photographed; would it be held that such a specimen should win because he had proved his capacities as a stud dog?

Take what "Zollus" said in *Land and Water*, which you reproduced July 9, 1885, and let every judge and breeder weigh it. The whole article is the most exhaustive on breeding (and incidentally on judging) that I know of, and every breeder and

judge should commit its teaching to memory: "But all the contraries and difficulties of breeding weigh nothing (or at least, should not) with the judge who awards prizes at a show, for if he acts as a man of honor, he is bound to award the prizes (to the best of his ability) to the specimen approaching nearest all round to the standard, and any consideration as to what dogs are likely to be the most useful for improving or preserving the breed, etc., is quite foreign to his commission and simply opening a way for the judge to please his own fancies, and virtually amounts to morally swindling the public."

Listen to what Mr. Wynn says on page 218 of his "History of the Mastiff": "The scale of points may give the reader a more general idea of the correct figure of a well reared, typical mastiff, but such essentials as activity and symmetry, combined with a typical head, a well formed, long, low body and generally heavy animal, should never be lost sight of, either to obtain color, vast height, or grand head with deformed body and weak limbs, or a well grown body with defective head, plainly departing from the true type, which, if the reader has not thoroughly learned from the historical facts which I have laid before his or her notice, I feel it will be a hopeless task to enlighten them."

Then read the standard as amended, that Mr. Wynn appends to this history, and note that every change he has made from the old one is in the direction of adding goodness all over, and remembering that Mr. Wynn is *par excellence* the enthusiast on head among English fanciers, ask yourself if our judges have been right in giving wretched snub-nosed cripples, or contemptible little dwarfs the premier positions? Of course, this presupposes that you have a copy of Mr. Wynn's book, if you have not, send to FOREST AND STREAM for one at once, or resign any consideration or right to have any opinion as to mastiffs. A mastiff man who has not read the book, hasn't got out of his primer, and until he grounds himself in the first principles of mastiff lore, ought not to speak out in meeting. I hope that I may be permitted to add that I have received fully a dozen letters from mastiff men, all supporting the position I have taken on this matter.

Mr. Haldeman's list of mastiff judges has two very important omissions. One is that of Mr. W. H. Lee, of Boston, Mass., long the owner of Old Turk (Turk II., A.K.R. 222) and the importer of Ilford Cromwell. It was Mr. Lee's concurrence that Ilford Caution was the best mastiff in the country, that encouraged me to stick to my view of it in the face of much ridicule. The other is Mr. Chas. E. Wallack. Mr. Lee, I am afraid, is too busy a man to judge, but a Boston man who wants an opinion on a mastiff has not far to go, and it will be a disappointment if Mr. Wallack does not officiate next year. W. WADE.

HULTON, Pa., June 18, 1886.

A ST. BERNARD CLUB.

A MEETING will soon be called for the purpose of forming a St. Bernard Club. All who are interested in the breed should at once communicate with Mr. W. W. Tucker, 84 Broad street, New York, who has consented to take charge of the preliminary arrangements. We have no doubt that with the material at hand, an association of the fanciers of the breed will accomplish much of good, and it is to be hoped that every lover of the magnificent animal will lend their influence to make the proposed movement a complete success.

THE ENGLISH FIELD TRIALS.—In our issue of May 20 we published a summary of the English Field Trials which was compiled from an English paper. The report was incomplete as to the Acton Reginald Stakes. According to the *Kent Gazette* the winners were: D. R. Scratton's liver and white bitch Hero, 5yrs. (Bang—Hebe), won first in pointers and prize for best of either breed; J. L. Anthony's liver and white bitch Lass of Bow (Graphic—Chinax) won second in pointers, and A. F. Heywood-Lonsdale's black and white dog Jovial, 3yrs. (Baron—Joan), won first in setters, and M. A. Richards' black, white and tan bitch Rose, 3yrs. (Diamond—Minnie), won second.

THE AMERICAN MASTIFF CLUB was organized at a meeting held in this city June 23. The officers are: R. L. Belnap, President; H. Mead, E. Dudley and E. H. Moore, Vice-Presidents; E. H. Belnap, H. Mead, E. Dudley, E. H. Moore, R. H. Derby, C. R. Colwell, W. P. Stephenson, F. T. Winchester, E. F. Bowditch, C. E. Shaw, Executive Committee. The secretary is R. H. Derby, 9 West Thirty-fifth street, New York.

BOSS.

THE mastiff dog Boss, owned by Mr. J. L. Winchell, Fair Haven, Vt., was whelped July 20, 1884. His sire, imported Zulu, was by champion Colonel out of champion Diana. His dam, Monmouth Meg, was by champion Salisbury and out of Tigress II. (champion Colonel—Lufra). His winnings are very high com., puppy class, New York, 1885; second, Boston and New York, 1886.

"HISTORY OF THE MASTIFF,"*

THE "History of the Mastiff" by Mr. M. B. Wynn, will be gladly welcomed by all lovers of the breed. The author has made careful research among the records of the distant past and culled therefrom a mass of dog lore that is astonishing. The book is replete with quotations from the writings of the ancients, both inspired and profane, as well as from those of authors of modern times. Mr. Wynn has extended his researches far back in the antediluvian ages, and although he does not tell us in so many words that the mastiff was coeval with the megatherium or with the ichthyosaurus, he gives him or his prototypes a place so far back in the remote ages of antiquity that one can almost imagine a primitive Crown Prince in pre-historic time waging indiscriminate and bloody warfare upon the formidable edentate and more dreadful saurian. The chapters devoted to the mastiff of modern times will be found very interesting and well worth the careful study of the breeder.

In writing of mastiff type Mr. Wynn says: "In all animals, and even in the races of man, the most distinctive feature determining species and variety is the skull, from which the skilled anatomist can readily determine the habits, and consequently general form of the animal to which it belongs. For the conformation of the skull containing the brain, is formed either primarily or most gradually from the continued habits the animal is adapted and subjected to, and is modified but gradually through forced change or suspension of habit. The form of the body is concomitant with that of the cranium; therefore, on examining the skull of an animal, it is not difficult in most cases to pronounce what will be the form of the carcass and limbs; nay, *ex pede Herculem*, inasmuch if a fairly skilled anatomist has but a portion of the skull to guide him he can form a fairly correct idea what the remainder must have been like, and concomitantly that of the body also. To the mastiff, or as it is sometimes incorrectly and pedantically termed, the molossian group, belong the mastiff, its stunted and exaggerated confrere the bulldog, and the dwarfed and still more artificially exaggerated pug dog. All these groups contain conformity of type, diametrically opposite to breeds like the hound, greyhound, or spaniel; although infusion of the blood of other species and circumstances, especially the ignorance and caprice of man, may more or less modify or intensify the characteristics."

"In the mastiff group the muzzle is markedly short, the cranium elevated, the superior maxillary is wide and ponderous, the zygomatic arch is strongly developed and widely divergent, the frontal bone is very thick and wide, the temporal bones are strongly developed, the lower maxillary is thick and massive, widely divergent and convex, turning up and naturally inclined to overshutting the upper jaw. This is a point that dog fanciers have contended and quarreled about with as much fury and little more reason than their dogs themselves will over a bone; and it is labor thrown away to try and teach the obstinate and wilfully ignorant that nature intended the teeth of some animals to overshut, while those of others to be level or undershot, so as to fit them best for their respective habit. All dogs of the mastiff or baiting kind should certainly be what is termed undershot, and if, setting prejudice and ignorance aside, any one will only take the trouble to investigate the matter in a naturalist's point of view, for example, by examining the mouth of the ordinary fresh-water pike, they will see that fluvial bulldog is considerably undershot, in order to enable it to seize and hold more securely its prey."

"Here we see nature left to itself instructing us, if we have but the sense to learn. The foregoing characteristics of the mastiff group show that their natural habit is that of broad,

*The "History of the Mastiff," gathered from sculpture, pottery, carvings, paintings and engravings, also from various authors with remarks on the same, by M. B. Wynn, honorary secretary and treasurer of the late Mastiff Club, and breeder and exhibitor of many prize mastiffs. For sale by the Forest and Stream Publishing Co. Price \$2.50.

WARWICK DOG SHOW.

thick-set, powerful animals, deriving their food naturally more from bold attack of larger animals, and tearing the flesh from and gnawing the bones of dead carcasses than on their speed or hunting powers. Their limbs are characteristically short and stoic, with powerful muscles to move such powerful short levers. * * * All mastiffs should be more or less heavily wrinkled about the face, the ears pendulous and having a certain amount of dewlap; the ears, although they should not be set so low as in the hound and should be free from any folding, need not be so small as the fancy dictates. * * * A round, medium-sized or even thick, heavy ear, is not at variance with purity of mastiff type, and when the face is heavily wrinkled, dewlap pronounced and lips characteristically pendulous, the ear will generally be larger and have more leather about it than modern fancy dictates. Of late years the pendulosity of the lips is a characteristic that has been lost sight of by the majority of breeders; in fact, some who set themselves up for judges, have condemned this oft-mentioned characteristic of the race, which has been very much lost through the introduction of verteral blood through the boarhound cross. The stern in the mastiff need not necessarily be carried down, as the modern fancy dictates, for, although a decided improvement, we see in the Assyrian sculptures the tail crooked over the back, the same in the Tibetan and in the older pictures of the English mastiff. * * * The coat of the mastiff varies greatly according to climate and housing, and sooner marks the country the animal belongs to. The colors vary, and formerly the breed ran all colors. It will readily be seen mere height is at variance with the true type; weight and general massiveness being far truer characteristics."

A BIG RAFT OF DOGS.

THE New York Sun of June 24 reports: "Sergeant Darcy of the Long Island City police was aroused from a reverie on Tuesday evening by a medley of yelps and howls outside the door of Police Headquarters. A moment later a queer, elderly little woman burst on his vision, and he rubbed his eyes to make sure that what he saw was not the baseless fabric of a nightmare. The presence of Policemen Conroy and Dunn reassured the Sergeant. Following the queer little woman were thirteen dogs, of several different sizes, muzzled and unmuzzled, attached to a stout cord which she held in her right hand. On one arm she carried a watering can and on her other arm two satchels. Her left hand was engaged, also, holding a bag and an apronful of yelps and squeals that added to the intermittent howling of the thirteen dogs on the string.

"The little woman dumped out the contents of her apron upon the floor. They were six pups, and the thirteen dogs immediately surrounded them. Then she turned the bag upside down and ten more chunky little fellows, with eyes fast shut, rolled out and over one another like a lot of rubber balls. Barks and howls and yelps were as thick as mosquitoes in Jersey for a minute or so. When the little woman had got things calmed down she made herself sure that the animals were all there. She then told the Sergeant that she wanted lodgings for herself and bench show.

"She said she was Loretta Whitman and that she had just come from Boston. The infant dogs, she said, had come into the world on the way. She had missed the train for Eastport, L. I., whither she intended to go and dispose of the pack of setters, for such she declared the pack to be. The Sergeant suggested that she should take the pack to a livery stable. She said she thought the station house would be the safest place for the animals, and she offered to pay for their lodging. The sergeant finally consented to allow the dogs to remain in the corridor without pay, and when he learned that she was going to stay with the dogs he offered to rig her up a bed. She refused his offer and slept all night in a chair with the dogs surrounding her. She remained in the station until noon yesterday, when she put the pups away in bags and apron and started for the Long Island Railroad depot, followed by Policeman White and the thirteen grown dogs on a string. The depot master attempted to put her out of the waiting room, but she stayed there all the same. She said she would pay passenger rates for her dogs if it was necessary. She dropped the bag in her excitement, and it began moving around like a new kind of animal without head or legs. In grabbing for the bag she spilled the six pups out of her apron. They all began to cry and then all the big dogs began to howl. She was soon mistress of the situation again, however, and then she resumed negotiations with the Long Island Railroad Company. The depot master told her that her dogs could go in the freight car for \$7.25; but she would not have them go that way. She finally chartered a baggage car, and thus at 3½ o'clock started for Eastport in the car with her setters."

The New York Times, of June 25, throws additional light on the case:

"Long Island City talked about nothing yesterday except the strange Loutta J. Whitman and her tribe of twenty-nine dogs, which created a profound sensation Tuesday night, and afforded widespread amusement on the following day. About seven weeks ago Dennis McMahon, a lawyer, of No. 261 Broadway, was informed by a former neighbor that a strange-looking woman, accompanied by a number of dogs, had been making inquiries about him in Morrisania, where he formerly lived. Mr. McMahon was somewhat surprised, but soon dismissed the matter from his mind. One evening a few days later, while he was taking his ease at home, his son told him that a queer woman, with a lot of dogs, wanted to see him. Mr. McMahon could not remember any female acquaintance who was largely addicted to dogs, but he decided to see the woman.

"He found at the door a slender woman, not very young, but not ill-looking. She was surrounded by thirteen dogs. She looked hungry, as did the dogs. Mr. McMahon, being a practical philanthropist, took the woman and the dogs into his house and fed the lot. He learned that his principal guest was Loutta J. Whitman, the daughter of a woman who some years before had been employed at his summer home in Southern Vermont. The mother was somewhat demented, but had proved herself a faithful servant. Loutta had heard of Mr. and Mrs. McMahon from her mother, and had determined to visit them. Neither Mr. McMahon nor his wife were willing to turn the woman out of doors, so they had comfortable quarters prepared for her and her dogs. The next day Loutta assisted in the household duties, and proved herself very useful. She was an intelligent woman, but on the dog question she was evidently a little off.

"Mrs. McMahon determined to keep the women and get rid of the dogs, but she was soon convinced that Rachel weeping for her children would be a cheerful person in comparison with Loutta J. Whitman weeping for her dogs. Mr. McMahon and his wife strove to put up with the dogs, but the latter became unruly. They arose early in the morning and howled and then sat up late at night and howled. This annoyed Mr. McMahon. They had the impudence to bark at their benefactor in his own house. Mr. McMahon said this was unkind. Finally the barking of the tribe gave birth to a litter of nine pups. Mr. McMahon said this was past endurance.

"He told the dog-loving Loutta that the dogs must go, either with or without her, as she might elect. She wept and said that she could not part with her family. Mr. McMahon gave her \$5 and told her she could go to a little place of his near Eastport, Long Island, and live there with her dogs. On Tuesday Loutta and her caravan set out for Eastport, where they are probably now enjoying themselves. Mr. McMahon says that when Loutta left his house he took a census of her dogs and found the sum total to be thirteen more or less grown animals and nine blind pups, and he does not know how she managed to swell the number to twenty-nine on her way to Long Island City.

THE fourth annual exhibition of sporting and non-sporting dogs was held at Warwick on April 28, 29 and 30, in the large exhibition hall belonging to the society. This year the total entry amounted to over 1,600, which is the largest exhibition we have attended, and taking the quality of exhibits into consideration, the best show we have seen. Yet in a number of instances some of the varieties were not equal in merit to some other shows which have been held; for instance the pointers and setters were not equal to what we have seen at Birmingham and other shows, while the quality of the St. Bernards and collies were quite beyond the average. The building is the best adapted for a dog show we know of, with plenty of ground for exercise, and as it is only a three days' show, with a very obliging committee, who allowed all exhibitors at a distance from Warwick to leave on the last day at an early hour to enable them to get home the same night or, in the case of Scotch and Irish exhibitors, early the following morning, we never heard exhibitors express so much satisfaction with the management of any show; and we believe, from the feeling of all classes of exhibitors, the Warwick show is likely to hold its present position as the best show in England and the most popular with exhibitors. There was on the day previous to the opening of the show some attempt at holding bloodhound trials, which we are sorry to say resulted practically in a failure.

The judging was carried on in nine judging rings, under canvas, in the grounds attached to the building, and some of the classes were judged in the open, so that with so many classes judged at once it was difficult to see half that was going on. However, as the person leading each dog had a card with the official number of the dog attached to the front of his coat, we found it a great assistance, and think if other societies would make a similar arrangement they would be conferring a great boon to the press and the public. Messrs. Spratts were as usual intrusted to look after the exhibits, and everything necessary to their comfort was done in the firm's best style.

The judges were: Mr. Beaufoy, bloodhounds and mastiffs; Mr. Gresham, St. Bernards; Mr. Farquharson, Newfoundland; Mr. Groom, Great Danes; Mr. Jackson, bulldogs and black and tan terriers; Mr. Lort, deerhounds, greyhounds, pointers, setters, retrievers, Scotch terriers, beagles, harriers, Airedales and otherhounds; Messrs. Dockrell and Mercer, collies; Mr. Redmond, smooth fox-terriers; Mr. Field, wire-haired fox-terriers, Irish terriers and old English terriers; Mr. Lane, Dandie Dinmonts, Dalmatians, Bedlingtons, Skyes, foreign dogs and selling class; Mr. Jones, basset hounds and dachshunds; Mr. Sheffield, pugs; Mr. Whiskin, Welsh terriers; Mr. Percival, bull-terriers, white English terriers, poodles, Pomeranians, Blenheim, King Charles spaniels and toys; Messrs. Willets, spaniels.

As usual bloodhounds were the first on the list, and good classes. The young dog Cromwell, which won at the last Crystal Palace show, won in the open dog class. His pedigree and history has been pretty well before the public. Cromwell is no doubt one of the most typical of hounds, but small. His sister was first in the open bitch class. She is also small, but typical.

St. Bernards were the feature of the show. Bayard and Save, in the challenge class for dogs, the latter not for competition, so the former won, and he seems to have taken a new lease of life and here looked better than we have seen him for years. Ilfreda, looking remarkably fresh and well, had no opponent in the next class. However, she afterwards won the 100-guinea cup for best bitch in the show, and we think correctly, being larger, more level, better made and a better mover than La Mascotte, the winner in the open bitch class. In open dogs, rough-coated, first went to that grand young dog Duke of Marlborough, who was looking better than we have seen him. He is a grand, large, up-standing dog with good feet and legs, moves well, is good in head and expression with the best of color and coat. Next came Hesper, a puppy just under 12 months. He is certainly one of the best we have seen, and we consider him a much better dog at the age than Pimlimmon. We would prefer him to have a better carriage of tail. He shows great quality in head, has immense size, good body, color and coat with straight legs and good feet, and stands a good thirty-four inches high (some say thirty-five inches). Should he go on well we look forward to see him upset many of our best dogs if not all of them. Next came Pout, a wonderful bodied dog possessing great bone and most typical head, but rather light in color, large in ear and standing much lower than the other winners. Fourth, Sailor, sire of the young dog Hesper, is a good bodied dog with a good coat and very good in head, he is not quite strong enough in pasterns and lacks color on body, owing to which he has reserve Macgregor might have been placed over him. Sir Henry, who first made his appearance at the field in the puppy class, and for which his owner ran at £200, was we think fairly beaten. Yet he is a long way over the average, being good in coat, color, size, bone and but for a rather fine muzzle equal to any. He is by Save ex the well known Bessie II. Tempest, who, is small in face and large in ear, wants large muzzle and would be improved if darker in color. In bitch class first went to the well known brindle and white La Mascotte, upon this occasion looking her very best. Her coat, color and condition could not be better. Maitia possesses good bone and is of good type. Gloriana, who did so well at the St. Bernard Club show came third here, but we expect to see her much further forward before long. Fourth went to Bernadine, the Birmingham winner, looking well; she is of good color and coat and just right in bone. In rough-coated dog puppies first went to Hesper, second in open class, and next to him came another remarkably large fine young dog, Prince Battenberg, but not so good in face as the winner. In bitch puppies we liked the bc. Princess Battenberg, who is too small in head and muzzle, but well made, with the best of feet and legs, good body and good coat of a rich orange brindle with good markings. The winner in this class is the winner at London, Carmelito, a grand bitch, but too long in face. Pleona, second, has a better type of head than the winner and rather the most bone, but is not so large. The smooth variety contained some good specimens some of which were rather rough in coat, Victor Emanuel was absent. As a class they were not equal to the rough specimens, which seem to be the most popular.

In the challenge class for mastiffs King Canute was not for competition, so the strife lay between Maximilian and Montgomery, the latter winning owing to type of head. This dog has continued to improve, and on this occasion looked better than we have ever seen him. In the challenge class for bitches Cambrian Princess, with a litter of puppies on her, looked remarkably well and, we think, correctly beat Griselda, who is a really good bitch. She might be better in head. Only three bitches were shown, a poor lot. The winner was the best, and we admired his color more than anything else. In open dogs, any color, Beaufort, a good first, afterwards beat Montgomery for the challenge cup. Iford Chancellor has a good head, good feet and legs, but possesses thoroughness to an extraordinary degree. Victor Hugo is larger than the winners, but plain in head and not possessing the same character. Imperial Chancellor, we suppose, by measurement would about beat any in the class; but taken altogether he is outclassed, being quite too long in face and bad behind. In bitches Lady Clare won, being shorter in face and more typical than Princess Ida, second prize, who is just large enough in ear and stands higher on the leg than the winner. Rosa Bonheur, rather dull in color, is large of ear and small in size. The Princess, who reserve, has a smutty-colored face and light eye, but is typical and moderate in size. Lady Isabel was entered, but absent. In puppies, dogs and bitches, first went to a large, strong young dog, Minting, by Maximilian ex Cambrian Princess. Iford Chancellor, second in open class,

coming second, while Charley Wood, brother to Minting, run the second prize winner very close. Mr. Wilkins's young dogs are good in size, the winner showing the most bone and skull. Charley Wood also possesses considerable quality and bone, with the best movements of the pair. Rosa, who and reserve, is good in bone and body; good in head, but too light in mask, with very large ears, and is too light in color. In the novice class there was nothing particularly good. Some of the winners were in the open classes.

In deerhounds Bevis I., looking, upon this occasion, as fresh as a two-year old, beat Clansman in the challenge class. Mr. Lort, evidently going for quality, and we may say he very consistently carried out his ideas through the other classes, as he went for dogs with style and symmetry in preference to size and substance. The puppy classes were small. The winner in dog puppies may develop into a good one, should he not get a set back.

The bulldog challenge class contained three, but the fight lay principally between Grabber and Rustic King, the former winning. We hold an opinion in favor of Rustic King, yet we admit there is room for two opinions; they are both good dogs. Grabber is better in ears, shoulders and stern, while Rustic King is best in turn up, stop, skull and bone. However, we could not agree with the judge later on when he placed the small-sized British Monarch over Rustic King for a special. Queen Mab won in bitches and the challenge cup for best bitch, while Grabber won the challenge cup for the best dog. British Monarch won a special prize for being the next best to the winner of the challenge prize.

Bull-terriers contained nothing special. Trentham Dutch, in the absence of Queen of the May, won in the challenge class. He is a real good made dog, but his head is rather coarse. In the next class Young Pharaoh won and is now growing into a good dog. Bonny Princess made a good second. The next class was very moderate. We preferred Magnet II. to any in the class.

In white English terriers Leading Star, unnoticed, was the best in the class.

Basset hounds were a good collection, and as usual Mr. Jones gave general satisfaction. Mr. Wyndham Carter had a good entry, but we found seven of them marked absent.

Pointers, as a collection, were only moderate, not up to Birmingham form. In the open dog class the young dog Naso of Upton won easily, being a good way ahead of anything in the class. We have reported upon him before. In the bitch class the winner, Devon Fan, is a good one all through, except her head, which is too short, but she is good in body, feet and legs and general character; her condition might have been better.

In the challenge class for English setters there were only two. Count Howard, looking well, won easily. We have always spoken well of this dog and, bar his being small, we think him about the best all round we know. In the open class Prince Rupert, the Birmingham winner, won. This dog has had a very up and down career since his first appearance at Birmingham. He is rather leggy and his feet light be better, yet when in condition, he is a dog possessing a good deal of quality. Cobalt, second prize, is too heavy in head. Sir Talton, he., bar being small, was about the best setter in the class. The winning bitch is only moderate. Her coat is rather curly. She was catalogued at £20, more than her value we think. Second prize is too small. Black and tan setters were a bad lot. In puppies equal first went to Ulverston Don and Yankee Chief, the former rather leggy, the latter a good made one, full of style, might possess more quality in head and ears. He was claimed by a well-known fancier who considers him a bargain at £20. The Palace winner, Eden Rock, getting the hare.

Nellie, shown in high condition, won in the challenge class for Irish setters. In open dogs Grouse XIII. (the dog we noticed at the Palace where he had slipped his collar and was trying his utmost to get it on again) was first; he is plain in head, good in body, legs and feet, with good coat, color and style. Second went to Lismore, a fair dog, lacking in style and not showing enough liberty and galloping qualities that are so characteristic of the true Irish setter. We think Rory, he., might have been a step higher. Bitches were a very nice, level lot, Irish Kate, the Birmingham winner, coming second. She is full of quality but small. Muffet and Mrs. Evison-anon might have been given the. The winner in the puppy class is promising and may render a good account of himself again. Mr. Wilson's team of Irish setters won the team prize, with Mr. Shirley's retrievers getting the reserve number.

In the challenge class for Irish water spaniels we found Lady and Hilda again, but on this occasion the property of Capt. Thomas. Lady won; we always fancied Young Hilda as best. In the open class, dogs and bitches, Capt. Thomas won first and second with two specimens above the average of what is going these days, and the class was also better all through.

In the challenge class for Clumber spaniels, Psycho, now about ten years old, won, and he is, in our opinion, the best type of Clumber going. Second went to Boss II., who is plain. We preferred Tower, who is looking rather seedy. In the open class Home's Honesty won well. He is good in head, low on the legs, with a good body which might be longer. We thought the same gentleman's Hotpot, equal third, the second best, being of the correct type, but not properly furnished at present. His coat and feather was rather better than the winner's. In the bitch class we could not follow the judge, but the class was very poor. Bar being small, we thought Lady Gaunt, unnoticed, the best type of Clumber.

In the challenge class for Sussex or liver we preferred Guy to Bachelor III., who won. In the next class Don Giovanni is light in eye and coarse. Bridford Laddie, first, is long and low. Bridford Dalia, equal second, was the best in the class. Maubert, he., is another good one. In the next class Rustle is shown in body. First went to Bridford Naomi, the best we have seen for years.

In challenge class for Clumber spaniels, Psycho, now about ten years old, won, and he is, in our opinion, the best type of Clumber going. Second went to Boss II., who is plain. We preferred Tower, who is looking rather seedy. In the open class Home's Honesty won well. He is good in head, low on the legs, with a good body which might be longer. We thought the same gentleman's Hotpot, equal third, the second best, being of the correct type, but not properly furnished at present. His coat and feather was rather better than the winner's. In the bitch class we could not follow the judge, but the class was very poor. Bar being small, we thought Lady Gaunt, unnoticed, the best type of Clumber.

In the bitch class we could not follow the judge, but the class was very poor. Bar being small, we thought Lady Gaunt, unnoticed, the best type of Clumber.

Fox, Peggy winning in the bitch class. In the next class for open dogs black and tan, black, tan and white and black saddle with tan markings, track, third prize, a black and tan, is bad in head. His price was reduced from \$20 to \$6. We don't think there was a customer for him. Westminster, first, and Fleck Master, second, are good all-round dogs, but possess no more merit than we expected to find in Warwick winners. In bitches Sweet Posey is fairly described by her name, being a very handsome young bitch; too small. Bleat, vhc. reserve, is a good stamp and good in coat, but also small. A great many in this class were marked absent. In the next open class for dogs, color sable and white, etc., Cairn, vhc. is good and typical with good frill. Julius Caesar, light in bone. First went to The Squire, well-known, and here we fancied he looked better than at the Crystal Palace. Rowe, who got the reserve number, is of the same type. Bonaparte, vhc. is a good stamp, a bifle heavy in ear, but good in head, coat, body, legs and feet; he seemed to have a twitching in one of his hindquarters. Be-cot, third, is straight behind and his tail is carried too high. Paramount, fourth, we liked very much; he is just light enough in bone. In bitches first went to Blue Ruin quite easy, the others being a good way behind. In dog puppies the winner is small. Second is better, but has prick ears. In bitch puppies there was little to choose between the winners. In the next class for dog puppies the winner is a very good one with plenty of coat and good body, Julius Caesar making a good second.

In the fox-terrier challenge class for dogs, Regent, first, is just a bit leggy. In bitches, Rosebloom, by Regent, won over Safety and Richmond Nettle. Rosebloom and Safety are both on the weed side. Nettle is rather woolly in coat. In the open dog class, first went to Veni, a good terrier with plenty of bone and quality and good in coat; we considered him the best terrier in the show. Belmont Scorchers, second, is all white; he is very level made but a good way behind the winner. Toaster, fourth, is another good dog; his eyes are rather prominent. In bitches, Venilia, by Veni, won and had a great many admirers, yet we could not look upon her as a good one, being quite too fine, and although she possesses quality. It was too our mind too much greyhound quality. We preferred Lyndhurst Vixen, second, or Rosem cry, fourth, to the winner. There were a great many indifferent specimens entered in this class not for competition, and we believe many of them were sold by auction afterward. In dog puppies, Baby Baffler, the winner at the Palace, was well to the front in a large but moderate class. The winner in the bitch class also won in bitch puppies and novice class. Wire-haired fox-terriers were a grand collection, the awards giving pretty general satisfaction. We thought the vhc. and reserve dog Brittle might have been a notch higher up. In the challenge class for black and tan terriers, Viscountess beat Sir Frederick. Owing to the condition of Sir Frederick we think the decision correct, but we consider Sir Frederick best when in form. The open classes were moderate and not up to a good average collection.

In the pug challenge class first went to a good bitch. She would be better with more wrinkle and color in face. Open dogs, Grappy, third, is of good stamp but carried his tongue out. Beau won well. He is good in head and color. He also had his tongue out. In open bitches, first went to Ducie, who is much improved since we saw her first at Birmingham, and is developing into a good bitch, good in ears, head and general make up. She also won in bitch puppies.

In the challenge class for King Charles spaniels Jumbo II. had practically a walkover. In open class, dogs and bitches, first and second were much the best. Olivette was not in the best of coat. In Blenheim's, the Earl of Chester, now the property of Mrs. Forster, won easy. He is of a good size and a well built dog.

In toy terriers first went to that grand little Yorkshire Queen of Yorkshire, and second to a moderate black and tan, another Yorkshire coming third.

On the second day of the show Mr. Taylor sold by auction the well known kennel of prize dogs belonging to Mr. De Trafford. Mr. Maxwell purchasing the wire-haired fox-terrier bitches Barton Wonder and Barton Marvel, and got them at a very reasonable price, the two for about 100 guineas. Some of the others brought good prices, while we believe several of the sporting dogs were not sold.

A full list of the awards will be published in the *American Kennel Register*. This report should have appeared before but was unavoidably crowded out.]

PEDIGREE WANTED.—Bangor, Me.—*Editor Forest and Stream:* I wish to change the name of my black and white setter dog Foreman to Boy, formerly Count Berwick, to Fraud. He was sent to me when a pup by Mr. A. J. Calahan, of New Haven, Conn., in part payment for Jolly Nell, which I sold him. I was to have a pup the first time bred. He wrote me the pup was by Foreman out of Jolly Nell, whelped June 14, 1885, name Count Berwick. I sold him to Mr. D. A. Goodwin, Newburyport, Mass., who this spring sold him to Dr. Hayward, of Taunton, Mass. Soon after Mr. Calahan wrote Dr. Hayward not to register him as a Foreman—Jolly Nell. As a natural consequence the dog has been returned to me. If any of the many readers of this paper can give me the dog's true pedigree, they will oblige H. W. DUGGIN.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.
Adonis. Andy, Ajax, Adele, Alpha, Alice, Actress, Aimee. By Vic for liver, white and tan English and Gordon setter bitch, whelped March 8, 1886, by Snap (Kent-Flora) out of Belle (Spot-Bella).
Royal Sport. By L. M. Motley, Danville, Va., for black, white, tan and blue-ton English setter dog, whelped Sept. 16, 1885, by Dash (ing Rover) (Dashing Rover—Lizze) out of his Old Gold (A.K.R. 2165).
Queen Dido II. By J. L. Mod y, Danville, Va., for blue-bellon English setter bitch, whelped March 22, 1886, by Bonaparte (Royal Bue—Monjeska) out of Queen Dido (Bake—Doo).
Planet. By J. L. Motley, Danville, Va., for lemon belon English setter dog, whelped April 13, 1886, by Dashing Royal (Dashing Rover Lizze) out of his Little Kate (Dash II.—Katy Dido).
Apollonia (formerly Tony). By Hospice Kennels, Arlington, N. J., for tawny and white st. Bernard bitch, whelped Oct. 14, 1884, by Apollo (Medor—Bliss) out of Beruice (Medor—Diana).
Duke. By Capt. Wm. J. McLevey, Brooklyn, N. Y., for black cocker spaniel dog, whelped March 9, 1886, by Obo II. (A.K.R. 432) out of Topsy B. (A.K.R. 3317).
Poey. By Dr. W. W. Smith, Brooklyn, N. Y., for black cocker spaniel dog, whelped March 9, 1886, by Obo II. (A.K.R. 432) out of Topsy B. (A.K.R. 3317).
Royal Gift and Fairy. By L. Gardner, Mt. Vernon, N. Y., for white and liver pointer dog and white bitch, whelped April 24, 1886, by Bull's Eye (Medor—Diana) out of Folly (Medor—Rita Croxte h).
Rox Obo. By C. L. Hopkins, Norwich, Conn., for black cocker spaniel dog, whelped March 24, 1886, by Obo II. (A.K.R. 432) out of Darkie (A.K.R. 250).
Fairy Bird of Syracuse. By H. B. Rathbone, Syracuse, N. Y., for liver, white and tan English and Gordon setter bitch, whelped March 8, 1886, by Snap (Kent-Flora) out of Belle (Spot-Bella).
Princess Molly. By T. Mullis, Syracuse, N. Y., for white and black English and Gordon setter bitch, whelped March 8, 1886, by Snap (Kent-Flora) out of Belle (Spot-Bella).
Ro, at Turk. By D. P. Howard, Syracuse, N. Y., for liver, white and tan English and Gordon setter dog, whelped March 8, 1886, by Snap (Kent-Flora) out of Belle (Spot-Bella).
Spot III. By W. Foley, Syracuse, N. Y., for black, white and tan

English and Gordon setter dog, whelped March 8, 1886, by Snap (Kent-Flora) out of Belle (Spot-Bella).

BRED.

Notes must be sent on the Prepared Blanks.
Apia June—Duty. H. J. Clapham's (Flemingville, N. Y.) smooth-coated St. Bernard bitch, whelped April 27, 1886, by Obo II. (A.K.R. 432) out of Topsy B. (A.K.R. 3317).
Blackie III—Obo II. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel Blackie III. (A.K.R. 432) to his champion Obo II. (A.K.R. 432), June 15.
Dinah—Obo II. J. W. Kelly's (Woodstock, Can.) cocker spaniel Dinah to J. P. Willey's champion Obo II. (A.K.R. 432), May 14.
Helena—Black Pete. W. O. Partridge's (Boston, Mass.) cocker spaniel champion Helena (A.K.R. 654) to J. P. Willey's champion Black Pete (A.K.R. 3070), May 13.
Oxyx—Black Pete. F. L. Weston's (Boston, Mass.) black spaniel Oxyx (A.K.R. 3175) to J. P. Willey's champion Black Pete (A.K.R. 3071), May 18.
Bessie C—Black Pete. P. Cullen's (Salmon Falls, N. H.) cocker spaniel Bessie C. (A.K.R. 3145) to J. P. Willey's champion Black Pete (A.K.R. 3071), May 21.
Daisy W—Black Pete. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel Daisy W. (A.K.R. 3073) to his champion Black Pete (A.K.R. 3071), June 1.
Beauty W—Black Pete. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel Beauty W. (A.K.R. 1472) to his champion Black Pete (A.K.R. 3071), June 17.
Apollonia (formerly Tony)—Obo. Hospice Kennels' (Arlington, N. J.) st. Bernard bitch, whelped (formerly Tony) (Apollo—Bernice) to her Obo (A.K.R. 432), June 21.
Bertie—Tannym. Fred Bollett's (Brooklyn, N. Y.) pointer Bertie (A.K.S.B. 2288) to F. R. Hitchcock's Tannym (Tory—Moonstone), May 16.
Darkie—Obo II. Patrick Cullen's (Salmon Falls, N. H.) cocker spaniel Darkie (A.K.R. 250) to J. P. Willey's Obo II. (A.K.R. 432), Jan. 18.
Froncess—Apollo. Buena Vista Kennels' (Kensico Station, N. Y.) st. Bernard bitch, whelped Barry—Mont Cents) to W. W. Tucker's Apollo (Medor—Bliss), June 1.
Stella—Apollo. Buena Vista Kennels' (Kensico Station, N. Y.) st. Bernard bitch (Thor—Agusta) to W. W. Tucker's Apollo (Medor—Bliss), June 8.
Lady Athol—Apollo. J. S. Sheppard (New York) st. Bernard Lady Athol (Cadwallader—Cara) to W. W. Tucker's Apollo (Medor—Bliss), June 11.
Norah—Apollo. Geo. Von Skall's (New York) st. Bernard Norah (A.K.R. 700) to W. W. Tucker's Apollo (Medor—Bliss), June 4.
Diana—Kigi. W. W. Tucker's (New York) st. Bernard Diana to his Kigi (Apollo—Bernice), June 4.

WHELPS.

Notes must be sent on the Prepared Blanks.
Queen Bess. Progressive Kennels' (Flatbush, L. I.) mastiff Queen Bess, June 22, eight (two dogs), by owner, Lulu II. (A.K.R. 2143).
June—Duty. Fr. aggressive Kennels' (Flatbush, L. I.) st. Bernard bitch, whelped June 22, by owner's Duty (Sirius—Thor).
Miss Obo II. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel Miss Obo II. (A.K.R. 2191), June 6, four (two dogs), by his champion Black Pete (A.K.R. 3071).
Winnie. W. J. Furness's (Ogdensburg, N. Y.) black cocker Fannie (Sam—Supp), June 14, five (four dogs), by his Ranger (Blanchard's Yarra—Alle).
Black Dora. Chas. F. Hamilton's (Philadelphia, Pa.) cocker spaniel Black Dora (A.K.R. 3679), June 18, five (four dogs), by American Cocker Kennels' King Coal (A.K.R. 3355). One dog and bitch since dead.
Darkie—Obo II. P. Cullen's (Salmon Falls, N. H.) cocker spaniel Darkie (A.K.R. 250), March 24, six (five dogs), by J. P. Willey's champion Obo II. (A.K.R. 432).

SALES.

Notes must be sent on the Prepared Blanks.
Monarch—Old Gold whelp. Lemon and white English setter bitch, whelped April 22, 1886, by J. L. Motley, Danville, Va., to E. Schoolfield, same place.
Theron. Black cocker spaniel dog, whelped March 9, 1886, by Obo II. (A.K.R. 432) out of Topsy B. (A.K.R. 3317), by Fred Bollett, Brooklyn, N. Y., to Chas. X. Wallace, same place.
Rox Obo. Black cocker spaniel dog, whelped March 24, 1886, by Obo II. (A.K.R. 432) out of Darkie (A.K.R. 250), by Patrick Cullen, Salmon Falls, N. H., to C. L. Hopkins, Norwich, Conn.
Duty. Orange tawny and white smooth-coated St. Bernard dog, whelped Oct. 27, 1884, by Sirius out of Thoa, by H. J. Clapham, Flemingville, N. Y., to L. Brandeis, Flatbush, L. I.
Apia June. Tawny and white smooth-coated St. Bernard bitch, whelped Dec. 27, 1884, by Don II. out of Alma II., by H. J. Clapham, Flemingville, N. Y., to L. Brandeis, Flatbush, L. I.
Girolo. (A.K.R. 1006) Orange tawny and white smooth-coated St. Bernard bitch, whelped July 29, 1884, by H. J. Clapham, Flemingville, N. Y., to L. Brandeis, Flatbush, L. I.
Lady Athol. Orange tawny and white smooth-coated St. Bernard bitch, whelped March 14, 1886, by Duty out of Orgar, by H. J. Clapham, Flemingville, N. Y., to L. Brandeis, Flatbush, L. I.
Undine. Orange tawny and white smooth-coated St. Bernard bitch, whelped April 27, 1886, by Duty out of Girolo (A.K.R. 1006) by H. J. Clapham, Flemingville, N. Y., to L. Brandeis, Flatbush, L. I.

PRESENTATIONS.

Duke. Black cocker spaniel dog, whelped March 9, 1886, by Obo II. (A.K.R. 432) out of Topsy B. (A.K.R. 3317), by Dr. W. W. Smith, Brooklyn, N. Y., to Capt. Wm. J. McLevey, same place.
Woodcock. (A.K.R. 3784). White, chestnut and tan English setter dog, whelped Dec. 14, 1885, by L. Gardner, Mt. Vernon, N. Y., to Adolph Saider, Dayton, O.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

J. W. E., Cohoes.—My pointer has a sore on her shoulder, the hair has fallen off. It looks raw and is spreading. A friend of mine has a sister which broke out the same way, and ran at the nose, and finally she appeared to be blind in one eye. Ans. Give your dog five drops of Fowler's solution of arsenic three times daily. Wash the sore with nit and morning with warm water and castile soap and dress with balsam of Peru ointment.

M. H., Philadelphia.—I find my puppies have flies and am using on them fly powder, and, as I always do, a disinfectant in my kennel. Is there any liquid preparation I could safely use for six weeks old collie puppies that would heal the irritation or pimples and kill the vermin at the same time? Would it be safe, while they have the pimples, to pass a fine comb wet with kerosene through the hair? Ans. Put a half grain of corrosive sublimate to eight ounces of water for a wash. Do not use the comb and kerosene.

G. S. D., Philadelphia.—I have a spaniel pup (King Charles and cocker) who is a little crazy. She appears to be sick at her stomach all the time. The matter she throws off is white slime, always after eating. Has been so about six weeks. Have treated her for worms with fluid extract spigelia and senna, but without benefit. She has had several fits, only severe on one occasion, and those I attribute to excitement, as I had her on the street the first day and she was very much excited previous to attack. She has had inward fits on two occasions since. She does not get any meat. Diet consists of milk, egg, oatmeal and boiled rice. She slobbers continually and gets very fat. Her case is six months old. Can you give me this statement-out of the case suggest a remedy? Ans. We should say that your bitch suffers from chronic gastritis. The causes are very numerous. The treatment is dietetic and medicinal. Give as little food as possible and in a concentrated form. Give milk with lime water, Valerian's beef extract or Liebig's. Once daily give a little tender raw meat finely minced and mixed with the white of an egg. For medicine, give one drop of Fowler's solution of arsenic three times daily mixed in milk. The trouble may have something to do with the evolution of the sexual system, in which case she will outgrow it. Report results.

AMONG THE NORTHERN LAKES of Wisconsin, Minnesota and Iowa, are hundreds of delightful places where one can pass the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely rejuvenated. Each recurring season brings to Oconomowoc, Waukegan, Beaver Dam, Frontenac, Okoboji, Munieka, White Bear and innumerable other charming localities with romantic names, thousands of our best people whose winter homes are on either side of Mason and Dixon's line. Elegance and comfort at a moderate cost can be readily obtained. A list of summer homes with all necessary information pertaining thereto is being distributed by the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—Adv.

Rifle and Trap Shooting.

RANGE AND GALLERY.

WILMINGTON RIFLE CLUB.—Owing to the drizzling rain there was a small attendance at the last matches. Massachusetts target, 200 yds., off-hand:

H A Heinel.....	8	11	11	10	12-52	H R Seeds.....	8	10	8	7	9-42
W C Seeds.....	9	3	10	9	11-47	J E C Seeds.....	8	7	8	11	7-41
J Newman.....	11	11	9	8	5-44	U Fuller.....	10	4	8	10	9-41
W A Bacon.....	9	10	9	5	10-43	I W Seeds.....	9	8	9	7	7-40
C Heinel Sr.....	8	6	9	8	11-42	H Simpson.....	5	7	6	7	6-31
S J Newman.....	9	9	10	8	6-42						

Conditions were the same as before. There was but one tie, which, being decided, the prizes were awarded as follows: First, S. J. Newman; second, Howard Simpson; third, Harry A. Heinel; fourth, J. Newman; fifth, Charles Heinel, Sr. The total score is as follows, out of a possible 130 points:

S J Newman	9	11	12	6	7	8	11	8	9	10	91
H Simpson	11	10	10	9	10	9	7	4	8	9	87
H A Heibel	7	9	8	7	9	11	11	6	9	10	87
J S Newman	12	5	9	6	7	9	9	7	10	7	83
C Heibel, Sr	8	7	9	10	7	7	10	8	9	8	82
W A Bacon	6	10	6	2	8	0	7	11	8	9	77
H B Seeds	8	9	4	9	7	8	6	8	9	7	76
A C Seeds	9	9	6	8	5	4	8	10	7	10	76
U Fuller	10	6	7	9	11	4	10	2	9	7	75
I W Seeds	5	2	6	11	4	6	9	4	7	6	63

The conditions at the third match were the same. After deciding the ties the prizes were awarded as follows: First, Harry A. Heinel; second, S. J. Newman; third, Charles Heinel, Sr.; fourth, U. Fuller; fifth, Wm. A. Bacon. The following is the score in full out of a possible 130 points:

H A H-luel	9	9	11	11	10-50	H B Seeds.....	7	9	7	8	10-41
S J Newman	11	9	6	11	10 47	I W Seeds	10	9	6	8	4-37
C Heinel, Sr.....	11	6	9	8	9-43	J E Newman	5	5	6	8	3 32
U fuller.....	9	9	7	11	5-41	H Simpson.....	4	3	0	2	8-17
W A Bacon.....	6	5	9	11	10-41						

COOPERSTOWN, N. Y., June 24.—Pioneer Rifle Teams at their first shoot at the range west of the village. For the first time, the scores were very fair, as many of the men had never shot at a target before. It is the first of a series of shoots for a silver pitcher to be won three times. The target used at this match was the Human target with 8 in. bullseye, 330 yds. with rest:

Paul T Brady	5	4	3	5	4	8	7	4	5	2-47
Bryan M-Case	0	3	10	6	5	4	4	5	5	3-45
Chan Ball	1	4	0	4	5	2	5	3	4	2-30
Walter Beadle	3	10	5	9	5	8	5	9	8	6-68
Geo Van Horn	4	4	4	5	3	6	8	3	7	2-46
Jesse Johnston	4	10	5	5	3	5	6	7	5	8-60
James Tucker	4	7	3	4	5	10	3	10	8	8-88
John Bealey	5	6	5	4	8	4	6	7	4	6-55
David H Gregory	19	0	2	0	1	0	0	0	0	0-13

Mr. Gregory's rifle was a very light one, and he shot more for sport than for a score. Next match July 1, at 50yds, on a Creedmoor target.

Mr. Gregory's rifle was very light, and he shot most sport than for a score. Next match July 1, at 500 yds. on a Creedmoor target.

NEWARK, June 26.—The rifle match at Union Hill to-day between Wm. Hayes of this city, and M. Dorrer, of the Zethor Rifle Club of New York, resulted in a victory for Dorrer, by a score of 2,178 to 2,145 for Hayes.

THOMASTON, Conn., June 19.—Splendid light, a light 3 o'clock wind:

E. Thomas	5	9	9	10	7	7	5	10	7	10	79
F. A. Perkins	5	8	5	9	9	10	8	10	6	4	74
G. A. Lemmon	8	9	8	6	6	4	8	9	7	8	73
W. H. Dunbar	7	6	6	10	5	10	6	7	6	7	70

June 26.—A bright light with a gusty, tricky wind, veering from 4 to 10 o'clock, were the weather conditions at our shoot this afternoon:

G. A. Lemmon	10	6	8	9	8	6	6	7	74
E. Thomas	10	6	8	9	8	6	6	7	74
H. L. Sulist	8	7	7	6	9	6	5	10	39
F. A. Perkins	7	7	9	4	8	7	6	5	45
G. P. North	8	7	6	4	8	5	5	4	60
C. F. Williams	9	8	6	5	7	4	7	3	80

BOSTON, June 26.—A large number of riflemen were out at the Saturday matches at Walnut Hill range. The wind was unfavorable. The range will be open on July 5, and the current matches will close on that day. Private Lincoln Grant, Company D, First Corps Cadets, has won the second medal in the 500 yds. military match on scores of 1045. O. M. Jewett won the special prize offered for the highest score without handicap in the spring meeting.

Decimal Off-Hand Match.

	28. Beverly, Club, Nahant.

EASTERN Y. C.

[By Telegraph to the Forest and Stream.]

BOSTON, June 29.—The regatta of the Eastern Y. C. at Marblehead to-day was a most successful one, wind and weather being favorable for a real test of the craft. There was a whole sail breeze all day. The great event was the contest of the three sloops, Puritan, Priscilla and Mayflower, twice over the 15 mile course. The yachts crossed the line as follows: Priscilla, 12:08; Puritan, 12:12; Mayflower, 12:14:30. Wind over starboard quarter to southerly stakeboat, which was rounded as follows: Priscilla, 12:35:20; Puritan, 12:39:30; Mayflower, 12:39:50.

With wind slightly abate the beam, on the reach to the northern stakeboat, the three rounded the mark as follows: Priscilla, 1:06:45; Mayflower, 1:07:23; Puritan, 1:07:46. On the beat to windward to starting stakeboat the Puritan worked ahead, the boats rounding as follows: Puritan, 1:32:50; Priscilla, 1:33:40; Mayflower, 1:35:25. The southern stakeboat was rounded the second time as follows: Puritan, 2:00:15; Priscilla, 2:01:18; Mayflower, 2:04:34; the northern stakeboat, Puritan, 2:47:45; Priscilla, 2:48:35; Mayflower, 2:51:47. The homeline was crossed as follows: Puritan, 3:23:00; Priscilla, 3:36:30; Mayflower, 3:37:00.

The official summary of the race gives the record:

	Actual.	Allowance.	Corrected.
Puritan.....	3:24 50	1 50	3:23 00
Priscilla.....	3:30 05	1 08	3:28 57

COLUMBIA Y. C. 19TH REGATTA.

THE Columbia Y. C. held a very successful regatta on June 21, being favored with a good breeze all day. The course of the club is a peculiar one, but possesses a great advantage in that it is within view of the club house and Riverside drive, so no steamer was needed. From the club house the yachts sail up the river to a mark boat on the east shore, thence across to a mark boat on the west shore, thence directly across the river, turning the home mark, thence out around the second mark, and down diagonally across the river to a mark below the house on the east shore, and then up to the start where they finish. All but Class E went over this course twice. The many sides give a variety of courses and insure some windward work with every wind. The crews were limited to one man per 4 ft. of length and sailing master, the latter being a club member. The allowance was 14 min. per foot. Besides the regular prizes a champion pennant was given to the best elapsed time. The wind was from S. to S. E. during the day, blowing nicely in the afternoon. The summary was as follows:

	Start.	Finish.	Elapsed.	Corrected.
Emma & Alice.....	11 02 15	2 10 54	3 08 39	3 06 39
Eldiva.....	11 00 31	Disabied.

Hallie.....	11 05 15
Viola.....	11 07 54

In Class A Emma & Alice wins class prize and champion pennant for fastest time over the course. Henry Gray wins in Class B, Unit in Class C, Henry Fisher in Class D, and in Class E the A. W. Frankie. Eldiva carried away her topmast. The judges were: Ex-Com. A. J. Prime, Yonkers Y. C. Com. Henry Andrus, Manhattan Y. C., and Mr. S. N. Simonson. The regatta committee were: Chas. Dietz, A. M. Everett, Charles T. Whits, Win J. Greacen and Louis D. Urban. During the day the house was open to the lady friends of the club, a number of whom were present.

KNICKERBOCKER Y. C. CRUISE.—The K. Y. C. will start on July 3 for short cruise, the rendezvous being at City Island. A meeting will be held on board the flagship to decide on the course for the 4th and 5th. The club will start on a longer cruise on July 17 at 4 P. M., returning on July 27.

BOSTON Y. C. REGATTA, JUNE 23.

THE first of the two champion cup regattas of the Boston Y. C. was sailed on June 23. For two seasons the Pfaff Cup has been raced for, Edna winning two, and Kitty, Froile and Seabird each one, of the three required to hold it. This year, in addition, two new silver cups are offered by Vice Com. John B. Meer, one for schooners and one for first-class sloops, two wins being needed to hold either cup. The classes and prizes are as follows:

First Class—Schooners.—Measuring 33ft. and more sailing length. Yachts 30ft. and under 33ft. may sail in this class by calling themselves 33ft. sailing length. The prize is a solid silver champion cup, presented by Vice-Com. John B. Meer; a second prize of \$20 will be given. No prize will be given any yacht that has not defeated a competitor. Mr. J. L. Stebbins, the well-known photographer, will present each of the first class cup winners a large photograph of his yacht as a special prize.

First Class—Sloops.—Measuring 33ft. and more sailing length. Yachts 30ft. and under 33ft. may sail in this class by calling themselves 33ft. sailing length. The prize is a solid silver champion cup, presented by Vice-Com. John B. Meer; a second prize of \$20 will be given.

Second class—under thirty-three feet, sailing length. The prize is the solid silver champion cup, presented by Commodore Pfaff. In addition, a second prize of \$10.

The course for first class was from off the club house through the Narrows, leaving Sound Point beacon on port; Spectacle Island, Nix's Mate bell-buoy, Gallop's Island, George's Island and buoy No. 7, east of George's Island, on starboard; Toddy Rocks buoy and Point Allerton buoy on starboard; Harding's bell-buoy, whistling buoy off the Graves, Egg Rock and Ram Head buoy, on the port; Rawn Bay buoys on the starboard; Sound Point beacon on starboard, Spectacle Island on the port to the judges' boat, passing between it and the flag-boat. For second class, from off the club house, through the Narrows, leaving Sound Point beacon on the port; Spectacle Island, Nix's Mate bell-buoy, Gallop's Island, George's Island, buoy No. 7, Toddy Rocks buoy, and Point Allerton buoy on the starboard; Harding's bell-buoy on the port; Point Allerton buoy, Toddy Rocks buoy and buoy No. 7 on the port; through the Narrows, leaving George's Island, Gallop's Island, Nix's Mate bell-buoy on the port; Sound Point beacon on the starboard; Spectacle Island on the port to the judges' boat, passing between it and the flag-boat.

The start was called for 10:30 A. M., all yachts to have head sails lowered. Anchored near Thompkins Island were Eva, Echo, Kitty and Majel, of the second class, outside were Shadow and Nimbus, and still further out were Adrienne and Gevalia. The wind was very light from the east. Adrienne led for a time, but was finally passed by Gevalia. For a time Shadow was second boat, but Adrienne passed her; she beat Nimbus badly, however. Majel led her class, but took the ground near Sound Point Beacon, lying there from 11:23 to 11:39. Eva led home under spinnaker. The full times were:

	Length.	Elapsed.	Corrected.
Gevalia, George M. Winslow.....	58.05	4 55 52	4 15 30
Adrienne, C. B. Lancaster.....	65.04	4 57 14	4 23 17
FIRST CLASS SCHOONS.			
Shadow, Dr. John Bryant.....	34.10	5 02 58	4 04 18
Nimbus, J. K. Souther.....	34.05	5 31 22	4 31 57
SECOND CLASS SCHOONS.			
Eva, Daniel Sargent.....	33.00	4 14 20	3 24 44
Echo, E. L. Burwell.....	34.09	4 31 02	3 39 16
Kitty, E. H. Tarbell.....	34.01 1/2	4 33 30	3 40 27
Majel, W. H. Wilkinson.....	27.04 1/2	4 35 46	3 43 22

Gevalia wins a leg for one Meer's cup and Shadow for the other. Eva wins a leg for the Pfaff cup and Echo wins second prize, \$10. Kitty claims a remeasurement, but it will not affect the result. Seabird and Froile being sold forfeit their wins for the Pfaff cup. The second race will be sailed on July 22. The regatta committee were Messrs. J. P. Phinney, John A. Stetson, S. L. Jordan, Geo. R. Howe and W. L. Welman. The judges were Messrs. Thos. Dean, Eber Denton and Coolidge Barraud.

EAST RIVER Y. C. SEVENTH REGATTA.

ON June 21 the E. R. Y. C. sailed its seventh regatta over a course to and around Gangway Buoy, starting and finishing off Pottery Beach, Greenpoint. At 11:30 A. M. twenty yachts started, with a flood tide and a light south wind, which blew fresher as the day advanced. The times at the outer mark were:

In Class A Fly, the Irish hooker built by Driscoll three years since, a deep-keel boat; Class B, Maud M.; Class C, Lydia F.; Class D, Thetis; Class E, Pirate; Class F, Lone Star. Julia lost her topmast. The judges were Messrs. E. E. Brown, J. D. Smallfield and Aloysius Lamb. The Cygnus followed the race with the guests of the club.

THE PILGRIM CHALLENGED.

BY DR. W. H. WINSLOW.

WE dropped anchor in Sabbath Day Harbor at noon one pleasant day in September, and after a ramble around the little village and over the autumn-tinted bluff of this Islesboro summer resort, returned aboard to cook dinner. A boat came off from shore above the wharf, where a sloop of some local reputation for speed was lying, and the three occupants inspected the Pilgrim, stern and bow, and with much interest, asking many questions meanwhile. They had never seen anything just like her in those waters, and wished to know if she was "one of them cutters that the yachtsmen were talking so much about." They were particularly struck by the long overhang and sharp, triangular stern, and were very much astonished to learn that she carried 3,300 pounds of iron keel and 1,100 pounds of moulded iron inside for "ballast."

"Kin she sail any?" asked the coxswain, whom I recognized as the clerk of the hotel, taking a careful look at the mainsail, which had been left up for shade.

"Yes, if she has breeze enough," I replied. "She manages to knife along a little in a calm, but she delights in a howler, and we are very much pleased with the supply in Penobscot Bay."

The cockpit and cabin were cluttered up with dishes and grub and, as we did not invite our interlocutors aboard, they soon pulled around the end of the wharf and left us to our dinner. While the two ladies were washing up and stowing away the dishes, my land lubber of a brother-in-law, who knows more of calico measuring and codfish weighing about his store than he did concerning a boat, called my attention to the sloop we had seen coming around the point. She stood out into the bay, then made a board by us, hovered around in a suspicious manner and seemed in no hurry to go anywhere. She had mainsail, jib and jibtop sail set, and as my crew before mentioned hauled up our anchor the gallant fellows took in and stowed the jibtop sail, thus matching our jib and mainsail, all I wished to carry in the puff northwester that was blowing, when I had ladies aboard.

The stranger was a keel sloop about 25 ft. long, 10 ft. beam and 3 ft. draft. She had a light topmast, a tall mast set with a good spread of canvas, a large cockpit and small cockpit, and a yachlike appearance and no tender to hold her back. Our 12 ft. cedar boat behind us was the only thing that gave her any advantage over us. The Pilgrim filled away and went quietly along the shore of the island, with the wind upon the starboard quarter, and the stranger shaped a parallel course with a rather stronger breeze, as she was about a cable's length further off shore and upon our port quarter.

We recognized that it was a challenge to a race, but we were too much interested in the pretty cottages, the bold, pine-covered headlands and the beautiful coves of the shore to pay particular attention to the sailing, and when we had reached Hugh's Head, that barred our progress four miles from our starting point, the sloop had crept up almost upon our beam, and it was evident that she was faster than the Pilgrim with a boat in tow, and a free sailer before the wind.

Then the cutter was turned around, the boom jibed and the sheets trimmed flat down for a course along the island and home. The sloop went past, and I thought she did not wish to race after all. The next moment she trimmed in sheets, went square across our stern and made a rapid run with the wind a little free in toward the shore till she was upon our weather quarter, when she went about and struck a parallel course with us, having gained by the Yankee trick about quarter of a mile the weather gauge of us. Now the contest became interesting. The wind had been freshening as the sun went down, and the strong puffs from the northwest heeled the Pilgrim to her rail, and she edged up into it and shot ahead like an arrow. The crew laid himself down flat alongside of the house, racing in style, the ladies sat down in the bottom of the cockpit, and I braced my feet against the lee side of the cockpit, managed the tiller and kept the jib sheet ready to let go if necessary. Several times I eased it a little, as the water rolled along the lee scuppers in a torrent of foam, just to quiet the ladies, who thought the cockpit staving and the water were getting a little too well acquainted, but I hauled in again immediately with a shiver of the mainsail and then looked over to see my opponent almost upon her beam ends, the mainsail flapping and the jib heaving and shaking. We were both carrying too much sail, but I knew we could stand it, and the stranger was not going to set an example. So we bowled along up the eastern channel, the Pilgrim hugging the wind and shore so closely I was obliged to slacken sheets and keep off a little to avoid projecting reefs, the stranger doing nobly, but slowly and surely sagging to leeward until she was first astern, then upon our lee quarter, and far away from us.

When we had run ten miles and were off Dye's Head, above Castine, the sloop was ast our beam and more than a mile to leeward, while the little Pilgrim was dancing away toward Belfast and eating up to the very wind's eye with her joyous excursions. Then all doubt of the effort of the stranger to test speed vanished, for she tacked ship, payed off sheets, and shaped her course for her starting place, while we yelled "Good-bye," swung caps and handkerchiefs, held out a rope for a tow, and indulged in those antics and congratulations so dear to the victorious. We had beaten the crack sloop of the island, hampered by a tow and hindered in our weather course by proximity to rocks and reefs.

This was a square race between two types of boats, and the result proved their best and worst points. The wide, shallow was fast before the wind and made great leeway on the wind; the deep, narrow boat showed fair speed before the wind, and held her place and worked to windward like a sea gull.

CORINTHIAN Y. C.—Fifth regatta, first championship, June 26, 1886. Wind strong W. S. W., course first and second classes, 10 miles; third class, 6 miles. Courses were Nos. 1 and 3 of the regular club courses:

THE BERTHON FOLDING BOATS.

THE BERTHON boats are well known to persons familiar with English yachting and nautical matters, but only a few have found their way to this country. The boats have been manufactured for over ten years, and more than 6,000 are in use in all climates, of sizes ranging from large ship's boats to the little 7 ft. dinghy. The company has a large factory in operation in the pretty little town of Runcy, in Hampshire, about fifteen miles from Southampton, under the charge of the inventor of the boats, Rev. E. L. BERTHON, Vicar of Romsey, who divides his attention between his factory and the care of a large parish with a beautiful old Abbey Church. The Rev. Mr. BERTHON is a great admirer of Yankee mechanical skill, and his work bears close resemblance to our best examples of lightness and strength, while combining with these qualities the best English ideas of thoroughness. The large workshop of the company are at 50 Holborn Viaduct, London, the chairman of the company being Lord Dunsany, and directors Capt. Price, R. N., M. P., Col. Colclough and Rev. E. L. BERTHON.

The design of the inventor was not to make a boat which should be lighter than a wooden boat of same size, nor one which would come to pieces and rack into a trunk, but to provide a boat which, while in every respect as strong, safe, well-shaped, capacious, fast and durable as a wooden boat, should possess the possibility of such close stowage that it need not encumber the deck of a vessel. The BERTHON boat consists of a framework of longitudinal members, covered inside and out with waterproofed canvas. When folded it occupies its original length, but only one-fifth of its original width, and can be laid flat again to the rail, or on the deck or cabin roof of a vessel. It can be opened and launched within half a minute. It will stand any weather, will last forever, and is as buoyant and handy as a duck. The keel, stem and sternpost are permanent, while the gunwale and three ribs on each side are hinged from the top of stem and sternpost, and when the boat folds these drop down against the

keel like the leaves of a book when closing. The ribs are thin but several inches deep, leaving a space between inner and outer skin which, being divided off by the ribs, furnishes eight absolutely watertight compartments capable of floating the boat when the latter is full of water, also rendering the puncture of the skin in any one place of little consequence. Each rib is also the keel, stem and sternpost and gunwale, it is composite, being built up of thin strips of Canadian elm, steamed, bent and riveted through, making a permanent, stiff but elastic curve. There are no transverse ribs, but a bottom board, jointed longitudinally down the middle and hinged to two ribs, covers the bottom. The ribs on each side extend from this board up under the gunwale and hold the boat open. They are rapidly set up and clamped.

The skins are of the best long flax canvas, carefully water-proofed and covered with a flexible paint. Cracking or peeling is unknown. As to their durability, the agents in New York have an 18 ft. boat which has been in active use on board a merchant vessel for over seven years, and is as good and serviceable as when new. This boat was used at a trial in January last at the Brooklyn Navy Yard. She was swung from the davits, opened, lowered with a few men, then a crew of fifteen men boarded her and pulled around the basin. This test was ordered by the navy department and was held before a board of officers appointed to examine the boats. This board has made a most favorable report, and recommends the boats highly. The boats can be easily and rapidly repaired. A rent in canvas can be quickly sewed up or patched, and when painted with the special preparation is as good as new. The excellence of the boats in extremes of climate is shown by the facts that Capt. Sir G. Nares had several with his Arctic expedition, and large numbers are in use in India and Central Africa. As to their seaworthiness, in September, 1882, Capt. Harvey, R. N., with a crew of four hands, sailed a 25 ft. BERTHON boat from Cape Finisterre to the Scilly Islands and thence up the channel to Southampton, a distance in all of 700 miles, in six days sailing. All H. M. I. can transport, several steamer lines, and nearly all the torpedoes of Great Britain and the Continent are equipped with BERTHON boats. A great number of styles and sizes are made. After the ship's boats come the yacht dinghies, especially recommended for small yachts and steam launches, which find a wooden tender a great nuisance. Many of these dinghies are fitted with centerboard and mast and sail to step in forward thwart. The shooting and fishing boats are made lighter and less bulky. They claim to excel all others in strength and carrying power. The BERTHON decked canoe is an ingenious little craft. The 10 ft. canoe folds into 4 ft. width, and can be carried in a small strap. It has a very elegant appearance when opened up, and is an excellent sailer, fast and safe in rough water. They are sure to become popular in this country. The Canadian canoe is a special style for inland waters. They are of single skin, very light, and made on lines of the Indian canoes.

It is claimed by the BERTHON Company that their boats have no rivals for sea service, and that they practically monopolize the field in that direction. They have taken a long line of high awards at exhibitions since 1875 down to the London Fisheries in 1883, they were awarded the highest prizes over all competitors, beating two gold medals and the special prize for the best portable boat. The company has lately established an agency in New York at 35 Broadway, where several of their boats may be seen, among them a yacht dinghy of small size.

LLOYD'S YACHT REGISTER.—This valuable book appears this year in a still greater size than before, the regular lists being fuller and more complete; while several interesting and valuable tables have been added. The most important of these gives tonnage, description and nationality of all the yachts on the register, a total of 3,849 vessels of 167,343 tons. Of these 607 are steam and 2,942 are sailing craft, the tonnage of the former being 36,407 and of the latter 80,530. Great Britain claims 778 steam yachts, 494 being of wood; and 2,156 sailing yachts, 213 being of wood. Only a few American yachts are included in the list. Another similar table gives a list of yachts owned in various countries. A list has also been added of yacht-classified according to their tonnage, which gives some interesting figures. The largest private yacht is the *Alva*, now building for Mr. Vanderbilt, 1,238 tons, while the next is also an American, the *Bretagne*, 1,172 tons, built at Baltimore for Mr. Leon Fay. The third is the Norwegian, *Mr. Astor*, 939 tons, then *Amoy*, Mr. Stewart, a Scotch yacht of 812 tons, then Mr. Bennett's *Namouna*, of 740 tons. All these are steamers, but the largest sailing yacht is also an American, *Ambassador*, 498 tons, while the old *Sappho* comes next at 392 tons. Another new list is that of builders and designers, with names and tonnage of yachts built by them. The book is bound and printed in the same handsome style as usual, and is in every way a credit to the great society which it represents. Now that the Y. R. A. has added that length in the tables as well as the draft of the yachts, should add that length in the tables as well as the draft of the yachts. Length from stem to stern post on deck, the dimension given conveys no idea of the size of a boat, as waterline length does, and similarly depth of hold shows little as to draft of water, and these latter figures are the ones that yachtsmen need.

HULL Y. C.—A special meeting will be held on July 3, at which the following propositions will be discussed: To build a club house, and to buy or hire land for that purpose, and to raise money therefor by the issue of bonds or otherwise, or to renew the lease of the present club house; to hold meetings of the members of said club monthly or of other, especially during the summer season; to amend Art. 3 of the by-laws by striking out the word "five" in the second line and inserting the word "ten," so that the annual assessment shall be \$10 after the first year, or otherwise amending said by-laws; to take such measures as may seem best to strengthen and aid the financial interests of the club; to amend Art. 6 of the by-laws of the club by allowing the privileges of the club, except the right to vote, to persons under 21 years of age, upon application and election in the manner provided with respect to members; to amend sailing regulation No. 4 by striking out therefrom the words "this rule applies only to yachts under 20 ft. sailing length," or by striking out the words "20 ft." and substituting therefor "25 ft.," or by striking out said regulation No. 4 and substituting therefor the words "no prize will be given to a boat sailed by a professional," or otherwise amending said by-laws; to amend sailing regulation No. 25 by striking out therefrom the word "one-third" and substituting therefor the word "one-fifth," to conform to the rule as to sailing length adopted by the New England Yacht Racing Association and by other yacht clubs.

THE ALTERATIONS IN THE ATLANTIC.—The new Atlantic is now in her old berth at Mumm's Basin, where she has been stripped in preparation for some radical alterations in her rig. The yacht has leaked badly ever since she was launched, and an effort will be made to find the leak and stop it. It may be necessary to haul her out and remove her carboards, but the leak is now thought to be in the vertical seam of the keel logs. It seems not improbable, in view of the manner in which the lead was cast, that the trouble is about the bolts. These, of 1 1/2 in. diameter, were driven through the keel logs and the lead, 35 tons and about 35 ft. long, was all melted and poured about them as quickly as could be done, the whole operation occupying only half a day, so that the entire mass was heated through at one time. No provision was made for the contraction of the huge tower, which would be about 3 in. in length and of practically irresistible force, so it seems probable that the bolts have been drawn through the wood, making the holes larger and of oval form, and admitting water readily. The mast will be shifted aft (ala Priscilla) as far as the trunk will permit, some 2 ft.; the two forward mainmasts on each side will be removed and one of each be added about the two remaining ones, so that there will be three instead of four on a side. The boom will be replaced by a lighter one of white pine and the gaff and forestay will be reduced in diameter, while the weight aloft will be lessened as much as possible. The headstays will have to be re-cut, the jistay will be moved in 2 ft. and the extra stay will probably be dispensed with entirely. When the alterations are completed she will be ballasted to her painted waterline and tried again in that trim.

OSHKOSH Y. C.—At the annual meeting of the Oshkosh Yacht Club, held June 19, the following officers were elected for the ensuing year: Commodore, C. H. Folker; Vice-Commodore, J. A. Dickinson; Fleet Captain, Henry F. Meyer; Measurer, S. P. Garey; Secretary, H. T. Griffith; Treasurer, Frank H. Hill; Regatta Committee, Robt. Brand, chairman; H. P. Griffith, P. H. Hillard. The annual regatta was set for Aug. 14, and the commodore's cruise for July 15, 16, 17, and on the 17th will occur the annual race for the Folker Challenge Cup. Several new members were elected, and the outlook now indicates a renewed activity in yachting. The club has a fine sheet of water, 30 miles long by 12 wide, and the shores are one continuation of fine camping grounds, while there is hardly a lake in the country in which there is a larger variety of good fishing, black and rock bass being in the majority. About six miles from the city, and near the shore, is an island known as Island Park, which is fitted up with club house, hotel, and all the necessities for an enjoyable time. The club would be happy to have yachtsmen bring their boats here, and find for themselves the merits of our boats, both the sailing and steam yachts. Regattas for sailing yachts are sailed under the Sewanahka rules. The Folker Cup is a fine silvered gold cup, 30 in. high, and is a perpetual prize to be sailed for annually at the commodore's cruise. For the annual regatta, Aug. 14, the prizes have not been secured further than the champion pennant, but either money prizes or a fine cup will be put up.

NEW YORK Y. C. PRIZES.—An official measurement of Redoubt makes her 70 ft. 17 in. on the line, or 17 ft. above her class limit. In view of the fact that she was never intended to race in the large class and properly belongs to the 70 ft. class, and with the consent of the owners of the others in that class, she has been awarded the second class prize and will henceforth sail in that class. It must be remembered that she gains nothing by this, as her time allowance is based on her actual length, 70 ft. 17 in., and she is only classed with the others as 70 ft. The other prizes awarded were: In the keel schooner class—*Fortuna*, Capt. Henry S. Hovey, Eastern Y. C.; second class schooner—*Priscilla*, Capt. C. A. Webb, Atlantic Y. C.; first class sloops—*Priscilla*, Capt. C. A. Webb, Atlantic Y. C.; second class sloops and cutters—*Belouin*, ex Com. A. Chibald Rogers, Sewanahka Y. C.; third class sloops and cutters—*Clara*, Mr. Charles Sweet, N. Y. C.

NEW STEAM LAUNCHES.—Chas. P. Willard & Co., of Chicago, who make a specialty of fast steam launches, have recently shipped to J. R. Purchase, Minneapolis, Minn., for use on Lake Minnetonka, a 31 ft. launch with vertical boiler, 6 x 8 high speed engine and 30 wheel, and to Geo. E. & Chas. A. Willard, of Boston, a 25 ft. launch with vertical boiler, and 45 x 55 engine for use on the Mounoughela River. They have in process of construction, among other work, a 45 ft. launch for Messrs. E. & J. C. Covert, of Farmer Village, N. Y., for use on Cayuga Lake. Messrs. Willard & Co. believe in ample power, where high speed is the desideratum, and some of their launches now in progress develop over 10 indicated horse power for each ton of displacement of the hull.

NEW YORK TO MARBLEHEAD.—On June 22 both Mayflower and Puritan arrived at their moorings at Boston, the two sailing in company from Sand's Point, which they left about 2 P. M. on June 22. *Mayflower* was passed at 6 A. M. on the 23d by the *Boston*, and *Udida* have also gone to Cape Cod. On Friday *Priscilla*, towed up the harbor with Com. Canfield on board, Mr. Tams joined her at Whitestone and she made sail for Boston. Cythera is also cruising to the eastward, and only little *Delvin* is left about New York. If any of the sloops have ventured around Cape Cod it has been done very quietly, and they have not yet been reported. *Clara* has been out at Beverly for cleaning. *Udida* will sail her first race in America on Tuesday.

COOPER'S POINT CORINTHIAN Y. C.—The second series of races of the Cooper's Point Corinthian Y. C. took place on June 15. The *Nereus*, first class, wins the club flag twice. The B. G. Wilkins, second class, wins the champion flag twice. The Charles Anderson, second class, wins the commodore's flag first time. Each flag has to be won three consecutive times to make the possession permanent.

SEAWANAHKA Y. C.—No quorum was present at the regular meeting on Friday night, as the commodore, secretary and most of the yacht owners were off for Boston. The matter of a squadron cruise will be decided later on.

NEW HAVEN Y. C. REGATTA.—The race of the New Haven Y. C. was started on June 23, but failed for lack of wind. It was late when the boats drifted in, and no times were taken.

Don't twist your neck off, but use Allen's bow-facing oars. Little catalogue free. Fred A. Allen, Moundville, Ill.—Ad.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their local waters, logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

Mohican Races every Thursday through the season.

SAIL FOR "FOREST AND STREAM" CRUISER.

ONLY three forms of sail are in common use in American waters, the boom and gaff, the leg of mutton or sharpie, and the spinnaker, and of these the former is by far the most common. In spite of its serious disadvantages, and the fact that there are many better rigs, it has held its own for many years, and is still as popular. Within a half dozen years the canoe men have given to the world a number of new rigs, either of new design or adopted from abroad, and in this point of good and efficient sail, these new sailors are far ahead of the older boat-sailing experts with far more experience. Chief among the new fangled ideas of the canoeists is the balance lug, an English adaptation of a Chinese sail, now extensively used in this country and applicable to all small boats.

This sail has been chosen for the FOREST AND STREAM cruiser, and as far as tried has worked very successfully. It is to be remembered that during the winter an account was given by a correspondent of a trial of the lug and its failure, followed by a substitution for it of a boom and gaff sail and jib, with better results. An investigation of this particular case indicates that the sail in question was far from perfect, and very poorly rigged, and that it failed under the conditions will surprise no one who has sailed small boats.

Of course the first requisite in going to windward is a taut luff, as with a shoal boom much better to go to windward or reef, while there are fewer luffs. The requisites for such a sail are different from a boom and gaff sail, as in the former there is much more room to stand and work halliards and lines; there are usually more to help, and the mast is always kept standing. In a small boat the sail must hoist and lower easily, surely and quickly; it must be readily removed from the mast for storage or in rowing, and it must be so placed as to balance properly in connection with the keel or centerboard. All of these particulars a sail can be better than a boom and gaff sail, a yawl, a yawl and a boom, and other small craft, than the boom and gaff. The former has no mast rings to jam in hoisting and lowering, as they are always liable to do; it can be quickly removed from the mast; the latter is stepped much further from the bow, keeping the weight and being easily reached and unstepped, while before the wind the sail is not all on one side of the mast and boat, but a large portion is so placed as to help balance the outer end.

The sail shown is for the 16 ft. cruiser, and is made of yacht drill, 16 oz., double breasted, the lights running parallel with the upper portion of the leech. The gear is rigged as follows: The boom, 2 in. greatest diameter, is 14 ft. long, to allow for stretch, and is lashed to the foot of the sail, the latter having about 3 in. roach or rounding. A single brass block (d) is lashed to the outer end of the sheet (f). Just abreast of the mast is lashed a snaphook. As the greatest strain on the boom is at this point, it is stiffened by a lacing batten (l) of oak, 1 1/2 in. square at middle and tapering to ends, the length being 2 ft. This batten is lashed to the boom by four lashings of fine line, and adds materially to the strength, while lighter and less clumsy than an enlargement of the fore end of boom would be.

The head of the sail is cut with a round of 9 in., 1 in. p-r foot, for the following reason: A straight stick, like a yard, is very elastic, even if of considerable size, and will bend greatly at the ends. If, however, it be curved in the first place, it soon requires more force to bend it further. The principle is well shown in the common bow, which is curved in the first place, and then requires a heavy pull to bend it. Another important advantage follows this form: the yard or bow is first curved in a vertical plane and held there by the sail. Now with this tension on it, it resists powerfully any lateral strain that would throw the peak to leeward. This is aided by the peculiar cut of the sail. The yard is brought far down the luff and a large part of its length is forward of the mast. When the luff is properly set up a very strong leverage is put on the yard, holding the head well to windward. The sail is square in shape, and this form gives the maximum area with a minimum amount of boom and yard. The clew is cut off, as will be seen, as a shortening of the yard by a foot or so lessens the area but little. Two battens are placed in the sail as shown, with reef points, and a hand reef may be added, such as has been described previously in our columns for canoes. It will be simpler to run the hand reef to a clear on boom instead of on deck, as a man can stand up readily in a large boat, and can reach the boom near the fore port, and the hand reef must be hoisted, consequently the line will be to his hand, and the hand reef will be hoisted through a sheave at the masthead, thence through a snaphook near mast, and is lashed on one of two cleats on deck at the fore end of well. In its upper end a snap or gaff-pail hook is spliced, and on the mast is a 4 in. gal. iron or brass ring (a) bent into oval form, about 3 1/2 x 4 1/2 in. It must be large enough to slide readily without danger of jamming. The halliard is passed through the strap on yard and two hooked to the ring. When hauled taut the yard is always held in to the mast, whether full sail or reefed is carried.

A lug sail can hardly be set taut by a halliard, but a tack tackle must be employed, and a very powerful one is rigged as follows. On the mast is another ring to which is lashed a brass block (d). On deck is a deck pulley at p-r side of mast. The tack line (b) is made fast to the deck about the pulley, the end is rove up and forward through the block (d) thence down and aft through deck pulley to cleat at fore end of well. In setting sail the mast is stepped, hook on boom is snapped into the eye of block (d), the two parrels on the bottom are slipped, the halliard is passed from aft forward through the strap on yard and hooked to upper ring (c); then the sail is hoisted as high as possible, after which, when the halliard is belayed, the tack is hauled down until the sail is perfectly flat. In reefing or lowering it is best to start the tack first, then when the halliard is set up the tack is hardened down again.

A toppinglift (e) is thus fitted: The line is double, running from masthead down each side of sail and splicing into one just below boom, leaving enough slack to lower the latter. On the boom is a fairlead (c) lashed fast, and through this the toppinglift is rove, thence to a cleat on boom. It may thus be easily reared for a pull at any time, even with boom hard off. In hoisting or reefing the toppinglift should take the weight of the boom always.

In removing the sail the end is cast off and the lift remains on the mast. In setting sail the latter is first dropped into the light of the toppinglift, the fore end of spars are hooked at p-r side of mast. The lift is made taut, and all is ready for hoisting.

On each batten a parrel is made fast, to hold the sail to the mast on the starboard tack. There are small lines about 2 1/2 ft. long, the fore ends fast to the battens, while the after ends are tied or hooked into rings lashed to the battens.

The sheet in a small boat is always a trouble, wherever it may be made fast it is always in the way. The plan adopted in the present sail is perhaps as good as any. The sheet runs through (g) on boom and an eye splice is worked at each end. On deck are three cleats, one (g) just abaft the rudderhead, and the others (h) on each side of well. When on the wind the after eye of sheet is hooked over the after cleat (g) while the sheet is held in the hand or belayed to one of the forward cleats; or if desirable the eye may hook over one of the latter. When the boom is off the sheet is cast off from the cleat and its whole length is used, the eye at the end preventing it from unreeving from the block. By this method as may be seen, the sheet is required, while a good purchase may be had when on the wind and the sheet can always be arranged to be out of the way of the sailor.

Fixed as described the sail will be found a very effective one, and once accustomed to it there is no difficulty in handling it quickly, while it is much less troublesome and cumbersome than a main-sail and jib. If for any reason the latter must be used it can be fitted on a stay, the luff of the sail being cut down as much as possible, so as to allow room for the jib, but in almost all small boats the single sail will be found best.

BAYONNE C. C. FIFTH ANNUAL REGATTA.—On July 5 this club will hold their fifth annual regatta on Newark Bay. The races are open to all, and members of neighboring clubs are invited to enter. The races are as follows: 1. Sailing. 2. Sailing g. paddling. 3. Double paddling, junior. 4. Double paddling, senior. 5. Single paddling, junior. 6. Single paddling, senior. 7. Standing paddling. 8. Hand paddling. 9. Upset. 10. Tub race. Suitable prizes awarded to winners. A place has been provided for any who wish to leave their boats to Bayonne before the 5th or may wish to leave them after that date until the 10th. A place will be most convenient for their removal, which they may have a full view of the races. First race to start at 10 A. M. sharp. Committee: Robert Peebles, T. B. Collins, Ed. R. Smith. Those intending to take part will please send entries on or before the 3d to Ed. R. Smith, Com. B. C. C., Box 49, Bayonne, N. J.

"FOREST AND STREAM" CRUISER—SAIL PLAN.

A DOCKRAT OUTING.

THE Newburgh Canoe and Boating Association held their first outing of the season on Friday, 18th ult. Originally set down for the previous day, a postponement on account of inclement weather caused a depletion of numbers and instead of thirty or more participants, only twenty-two members and lady friends enjoyed the occasion. The Commodore was there with Scylla, the Vice with Ripple, the Captain with Mahel, and Jennie, Daddy, Calloo, Iolas and Peggy each with full cargo of passengers and freight and all dressed out in their gala day bunting. Starting at 4:30 P. M. against a strong head wind and tide, they had made but small progress when one of their many friends in the person of genial Capt. Boh Minerley overhauled them with his handsome tug Alice, and generously offered a tow, which was accepted and soon the boats and canoes were strung out in tandem, howling along at a rate that put oarsmen and paddlers to blush. The distance to the chosen spot was soon run over and as the lines were cast off, Capt. Boh steamed away followed by a rousing cheer from his debtors. It was a go-as-you-please scramble for the sandy beach that lay along one side of the little cove and soon the keels of the little craft grated on the sand, passengers and crew jumped ashore, cushions, shawls, etc., were arranged most comfortably for luxuriant lounging. Sundry boxes, baskets, pails, etc., were arranged by some while others, wandering through the adjacent woods and fields, gathered quantities of field daisies and other wild flowers, which were carried away as trophies of the occasion. Later a general charge was made upon the aforesaid boxes, baskets, etc., and every one felt better after it was over, and then the smokers were permitted to enjoy the solace of their pipes, and Dan lit the little fire of chips and drift that gradually, as the shadows of the night fell around, became the camp-fire of several huge logs, around which the merry party enjoyed its genial warmth and passed the time with music and song, laughter and glee.

Meanwhile the various skippers had made ready for a start at any time. Lamps were fixed and lighted, and everything made shipshape and handy. At 9 o'clock the sweet strains of "Home, Sweet Home," rose upon the air. Shortly after all were afloat, and in close column slowly made way southward, while song after song awakened many an echo from the shore. Shortly after the brightening, glowing light around the crown of the old North Beacon told of the coming moon, and then the bright orb rose in all its full beauty, and lit up by its dreamy light and in enjoyment of nature's loveliness our first outing ended.

HAL.

The first of a series of races by the Newburgh Boating and Canoe Association came off June 24. The start was made from opposite the boat house, and the course was up the river to the stakeboat, which

was anchored off Gillies's dock at Balmville, the distance from the boat house to the stakeboat being $1\frac{1}{2}$ miles. There was a large number of ladies and gentlemen friends of the members of the Association on the dock and along the shore watching the contest.

The sailing race took place first. It was divided into two classes. The first was for boats, and in this there were five entries. The second class was for canoes, and in this there were three entries. The boats were the Jennie, sailed by Harvey Marvel; the Scylla, Commodore William E. Bartlett; Mabel, N. S. Smith; Ripple, owned by Jas. T. Van Dalfsen, but sailed by Fred. Bartlett; Billy H., William T. Hilton. The canoes entered in the second class were the Peggy, sailed by Grant E. Edgar, Jr.; Iolas, William Van Dalfsen; Calloo, H. A. Harrison.

At 4 o'clock, the boats and canoes being in readiness, the signal was given by firing a gun, and the start was made. The Calloo got off leading, followed by the Billy H., the Mabel coming close after and the Iolas in her wake. Then came the Peggy, Ripple, Scylla and Jennie, all off on a port tack. The Iolas overhauled the Calloo, and they drew away from all the others. The Scylla and Ripple made the best windward work and nothing. The Iolas was the first to turn the stakeboat, followed by the Scylla, Calloo, Ripple, Peggy, Jennie, Mabel and Billy H. On the run home before the wind the Iolas and Peggy ran away from the fleet, the latter setting a spinnaker and overhauling the Iolas. Near the finish the Mabel also set a large spinnaker and cut clear away from the Scylla, Ripple, Jennie and Calloo, the four latter coming in unheeded, the Billy H. far behind.

There was but little wind for the sailing race, and it was only just a remove from a drifting affair. Owing to a misunderstanding as to whether the race was to be sailed in one hour and thirty minutes or two hours, the regatta committee have reserved their decision in regard to the matter, as but one of the craft sailing, and that a canoe, sailed it in the specified time.

The result by the corrected time is as follows: Boats (first class)—Jennie, 1h. 33m. 37s.; Scylla, 1h. 42m. 37s.; Mabel, 1h. 38m.; Ripple, 1h. 42m. 28s.; Billy H. did not finish. Canoes (second class)—Peggy, 1h. 27m. 35s.; Iolas, 1h. 31m. 1s.; Calloo, 1h. 44m.

The rowing race, distance half a mile, came next, with five entries. The first prize was won by the Scylla, rowed by H. A. and F. W. Bartlett, in 1m. 29s.; and the second prize by the Ripple, rowed by Commodore William E. Bartlett and Vice-Commodore James T. Van Dalfsen, in 4m. 43s.

The tandem paddling race followed, there being three entries. The first prize was won by the Peggy, paddled by Nathan S. Smith and Grant E. Edgar, Jr., in 4m. 23s.; and the second prize by the Day Dream, paddled by C. D. Robinson and F. W. Bartlett. The Calloo starved, but at the first stroke the paddle of H. A. Harrison was broken and the boat obliged to withdraw from the race.

The whole race was well managed and carried out with much enthusiasm, and gave the greatest satisfaction to all the participants and the numerous friends who were present watching the efforts of the contestants. The little misunderstanding in regard to the time in which the sailing race was to be sailed was of but trifling moment, and will be arranged without doubt to the satisfaction of all by the Regatta Committee.

ESSEX C. C.

A VERY successful regatta of the Essex C. C. was held off the club house on the Passaic River, Saturday, June 26. The weather was fine and a large number of the friends of the club were on hand and a very pleasant afternoon was spent. The course was 1 mile for the paddling races and $1\frac{1}{2}$ mile for the sailing races. The first event was a paddling race for canoes, any class, with the following entries: Schuyler, Ianthe C. C.; Burling, Ianthe C. C.; Thorne, Essex C. C. Schuyler took the lead at the start and won easily. The second race was a paddling race for canoes over 25in. beam. Five canoes started in this race: Messrs. Totten, Hesse, Hilbert, Stern and Evenden, all of the Essex club. This was a very close race and was won by Stern, with Hesse second. A hand paddling race came next and was very amusing. Messrs. Totten, Scott and Cox, of the Essex, and Burling and Schuyler, of the Ianthe club, entered. Totten and Schuyler closely contested this race for first place, which was awarded to Totten by the referee.

The next race was the chief event of the day, a sailing race, with the following starters: Totten, Daisy; Stern, Mermaid; Cox, Harle; Hilbert, Chemann; Murphy, Nilo; Thorne, Onward; Dr. E. F. Cox, Siren (Hudson C. C.). There were first and second prizes and an additional prize for the canvas canoe that first crossed the line. The wind at the start was very light, and continued so until the turning buoy was reached, where a succession of strong puffs came from the southwest and the canoes had all they wanted in the beat home. A very close and pretty race was the result, and the Daisy went over the line first, with the Chemann and Siren a very close second and third.

Five crews started in the next race, a tandem paddling race: Hesse and Schultz, Stern and Thorne, Cox and Totten, Schuyler and Dorland, Murphy and Burling. Won by Schuyler and Dorland of the Ianthe Club, with Hesse and Schultz, of the Essex Club, second.

The last race was an upset race, and Murphy, Cox, Schuyler and Evenden contested, distance was 500 yds. and Cox won. The prizes were thus distributed: A gold medal and a handsome canoe lantern for first and second in the sailing race. A very pretty banner to Dr. Cox, the winner in the canvas canoe class. A pair of paddles for each of the crew in the tandem race, and a handsome banner for the winners in the other races.

THE TRIAL RACES.

THE three trial races to select competitors to meet the English canoeists, who are to attempt, in September, to capture the New York Canoe Club International Challenge Cup, are to be sailed on Saturday the 3d and Monday the 5th of this month.

These races are open to all active members of regularly organized canoe clubs in the United States.

The first race will be called on Saturday at 3:30 o'clock P. M., and will be sailed over the regular New York Canoe Club course which is as follows: Starting from an imaginary line drawn from the inner corner of the club house bulkhead to a stake boat, and sailing down the bay, to and around a mark off the house of the Clifton Rowing Club, thence to and around channel buoy No. 18 off Bay Ridge, and thence return to point of starting, a distance of six miles. All turning stakes will be marked by the club flag, a red white and red barge.

The second race will be called promptly at 10 o'clock in the morning of Monday, the 5th, and will be sailed two miles to windward and return to point of starting, or two miles to leeward and return.

The third race will be called at 2:30 o'clock Monday afternoon, and will be sailed over the club course. In this last race there shall be but six competitors, who will be selected by the judges from among the best men in the two preceding races.

The conditions governing American contestants in the International races and previously published, are as follows:

11. The representatives of the holders of the cup shall be selected after a series of trial races, open to all members of canoe clubs in the United States. The Regatta Committee of the club holding the cup shall have the right to select the competitors for the International races, irrespective of the results of the trial races.

12. Should the cup be won by the American contestants in the international races: First, an active member of the club holding the cup must score one victory to entitle that club to retain it. Second, if a member (or members) of any other club wins two races, his club will hold the cup. Third, should the two decisive races be won by members of clubs, neither being the holder of the cup, a subsequent race shall be sailed as soon as practicable after the international races, between these two competitors, to determine which shall hold it.

Entries for these trial races have already been made by so many of the crack racing men of the leading canoe clubs of the country, that they promise to be the most interesting and hard fought contests of the kind ever witnessed, and all canoeists are cordially invited to be present.

Entries can be made to the regatta committee, at the club house, to within an hour of the time of calling either the first or second race.

COM. C. K. MUNROE,
R. B. BURCHARD, } Regatta Committee N. Y. C. C.
C. L. NORTON, }

BROOKLYN C. C., JUNE 26.

THE race was for the challenge cup of the Brooklyn C. C. The cup was last won by M. V. Brown, of the Minx. J. F. Newman, commodore of the city, had challenged for the cup, and half a dozen of the club members had manned their craft to take chances of capturing it. The club house was filled with the sound of preparations early in the afternoon, but the heavy squall and shower that came up put a stop to the proceedings for awhile. Then the sun shone forth again and the mosquito fleet set sail.

The race was twice over a triangular course, a total of three miles. The wind was light at the start and the little craft slipped along with a slow and stately motion, like so many penny men-of-war, carrying the pride and honor of a Lilliputian nation. The shapely Gany-mede forged over the line first with "Tom." Budington's feet stowed away in the forecastle, his head and shoulders only showing over the gunwale. She slipped along as if propelled by auxiliary mosquito power and gained perceptibly on her pursuers. Next came Commo-

dore Newman in the Sunbeam with a life-preserver and a dozen bags of birdshot for ballast. The Kelpie came third, with R. G. Blake for cook and captain bold. Close on his heels was the invincible "Mart" Brokaw in the Minx, followed by the Guenn, whose helm was in the firm grasp of Vice-Commodore Whitlock, who has the reputation of being able to cut closer to a turning stake than any other canoe man living. The saucy little Tip-top, with her turn up nose and her zebra stripes danced along with Robert Wilkin aboard, and the Edna, Captain Balmanno, brought up the rear.

Gradually the little sails faded into the distance in the direction of the first turning buoy. They rounded it in the following order: Whitlock, Budington, Blake, Wilkin, Balmanno, Newman, Brokaw. The breeze had freshened and sent the Guenn to the front. It was a beat to windward for the second buoy, which was rounded by Whitlock, Budington, Newman and Blake. All the others had carried away something and were disabled. The third side of the triangle brought the wind right abeam, and by that time it was blowing a little gale. The canoes spun along like so many water witches. Whitlock rounded the third buoy in good shape and stretched away on the second lap. Budington carried away his steering gear and concluded to quit. The Sunbeam jibed in a heavy breeze and sea, fouled her boom, and was bottom side up in about two seconds, with Skipper Newman in the loving embrace of his life-preserver. Whitlock only finished, winning the cup. The rest were towed in, some bottom side up and others half full of water. When they were all safe in the harbor the breeze dropped to a calm again.

TORONTO C. C. RACES.—On June 19 three races took place, the sailing challenge cup, novices trophy, the two sailing together, and the paddling challenge cup. The entries in the sailing races were the Mac, W. G. McKendrick; Alouette, Wm. Leys; Boreas, Hugh Neilson; Kate, Colin Fraser; Wanda, W. H. P. Weston; Sapphire, J. W. Bridgeman; Firefly, W. Cooke; Madge, Chas. Baird, and an unnamed canoe, A. Shaw. Messrs. Shaw, Baird, Leys, Weston and Cooke are novices. The Mac won the cup, and has been challenged to sail on July 10. Alouette, a new Rushton canoe, won the novice trophy. The entries in the paddling race were: Alouette, Leys, winner; Mac, McKendrick, and Wanda, Weston.

ALBANY BI-CENTENNIAL REGATTA.—There will be canoe sailing races at Albany, on Monday, July 19, at 3 P. M., on the occasion of the celebration of the two hundredth anniversary of the founding of the city. A handsome piece of plate and flags are offered as prizes and all canoeists are invited to compete therefor. Entries will be made in writing to the chairman of the committee before noon of July 19. A. C. A. rules to govern. The races will be under the auspices of the Mohican C. C., who will welcome most cordially all A. C. A. brethren who may visit the city and compete in the races.—ROBERT SHAW OLIVER, GEO. H. THACHER, JR., R. W. GIBSON.

THE CHALLENGE CUP.—New York, June 26, 1886.—*Editor Forest and Stream:* I beg to acknowledge as follows, further contributions to the A. C. A. International Challenge Cup: Jas. G. Knap, Ogdensburg, N. Y., \$1; E. D. Wetmore, Warren, Pa., \$1. Previously acknowledged, \$235.15. Total to date, \$237.15.—WM. WHITLOCK, Chairman (87 West 24th Street, N. Y.).

A. C. A. PROGRAMME.—The programmes for 1886 have been sent out in the form of a neat circular, as was done last year. Commodore Rathbun calls attention to an error in the classification, Rule 1, on page 10—Class B, in which the limit of length should be 17ft. and not 16, as printed.

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.—*Ad.*

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

H. T. B., Hamilton Club.—Neither.

W. G. S., Maryland, Md.—Train oil is whale oil procured by boiling the blubber or fat.

Z., Yonkers, N. Y.—A little white is admissible on the breast of the red Irish setter. The coat grows dark with age.

G. H. P., Middletown, Conn.—The New York woodcock season will open Aug. 1. We cannot advise you as to the locality named.

S. E. B., Boston.—Only a very few deer are left in Massachusetts. They are protected at all times, the penalty for hunting, chasing or killing one being \$100.

W. N. S., Winchester, Ind.—If you will send your name, we will take pleasure in giving you such assistance as is in our power. It is quite impossible for us to correctly address communications to persons whose names we do not know.

ANGLER.—Where can I find trout streams within fifty miles of New York? Ans. As you no doubt mean streams which are open for free fishing we cannot promise you many fish within that distance. Try Baldwin's, Long Island; Newton, N. J.; Milford, Bushkill or Shohola, Pa.

W. O. W., Charlottesville, Va.—It is possible that the black bass may occasionally eat its own species, but, as a rule, it prefers soft-finned fishes, minnows, etc., flies, worms and insect larvae. It is safe to say that the bass does not eat its own kind to any great extent, and we do not remember to have seen a small black bass taken from the stomach of a large one, as is often seen in the case of the pike or pickerel.

C. A., Cambridge, Mass.—1. Could you kindly inform me of the real distinction, if any exists, between a lake and brook trout. 2. Is it possible that there can be lake trout on the Nepisquit, 70 miles from mouth, in very quick water? 3. Has a prize been offered by you for a brook trout of 5 pounds or over? Ans. 1. By "lake trout" we understand the "togue" of New England, the "lunge" of Canada and Maine, the "salmon trout" of Western New York, and the "Mackinaw trout" of Mich., the *Salvelinus namaycush* of science. By "brook trout" is meant the *Salvelinus fontinalis*, also called speckled trout, mountain trout, etc. 2. No. 3. No.

A citizen of Arrowsmith, Ill., recently captured two young mockingbirds and put them into a cage and hung it on the outside of the house, where the mother bird fed them until one day last week, when a meadow sparrow whipped her away and has since taken maternal care of the little fellows, feeding them as her own.—*Chicago Times.*

A man in Lawrence, Kan., has been arrested for burglary. He attempted to prove an alibi by declaring that he had been out fishing, and he couldn't produce any fish and was held for trial. Here is a state of things. A string of fish absolutely necessary to prove that a man has been fishing! This is against all precedent.—*Kansas City Journal.*

In a garden at Caledonia, N. Y., a bed of flowers has been laid out, twenty-two feet long, to represent a huge trout. The gills, fins and eyes are represented by different colored flowers.

The Fluttering Fly.

PATENTED MAY 4, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

- 1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.
- 2d—The fish is almost certain to be hooked if it touches the fly.
- 3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.
- 4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will still be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, seem the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it."

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, repairs and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

Made simply with boiling water or milk. Sold only in half pound tins by Grocers, labeled thus: JAMES EPPS & CO., Homoeopathic Chemists, London, England.

MANUFACTURED BY

The Strong Fire Arms Co.,

NEW HAVEN, CONN., U. S. A.

FOR SALE AT

BOSTON: CHAS. C. HUTCHINSON, 136 Commercial st. NEW YORK: SHELTON BRASS HARDWARE CO., 177 Lake st. CHICAGO: All the leading dealers in Sporting and Yachting Goods.

C. B. WILKINSON,

8 John St., near Broadway, N. Y.

MANUFACTURING JEWELER,

Medals and Badges

A SPECIALTY.

Special designs furnished on applica-
tion free of charge.

Yachting Goods.

JOHN HARVEY, M. I. N. A.,

Naval Architect.

241 West Fourteenth St., N. Y.

All classes of steam and sailing yachts designed and building superintended. Estimates and specifications. Designer of Volante, Sea Belle, Miranda, Alexandra, Catarina, etc., in England. Oriva, Bedouin, Wenonah, Ileen, Surf, Wanda, etc., in America.

J. M. SAWYER & SON,

YACHT SAIL MAKERS,

(ESTABLISHED 1852.)

84 & 85 South Street, New York.

Sails, awnings and canvas fittings of every kind. This firm confine themselves exclusively to making yacht sails of every description, and can therefore give sail plans with estimates on the most reasonable terms. Particular attention given to racing sails. All work guaranteed.

New York and Eastern

YACHT AGENCY,

A. CARY SMITH, 51 West Tenth Street, New York. BURGESS BROTHERS, 13 Exchange Place, Boston. Yachts and vessels of all kinds sold, purchased and chartered. Special attention given to building, repairs and alterations. Surveys and inspections made. Designs and estimates furnished. A large number of first-class yachts now for sale.

For Sale.—The English cutter DAISY.

WASSERSPORT.

SPECIALLY DEVOTED TO

Rowing and Yachting.

APPEARS WEEKLY ON THURSDAY.

Price: 4.50 Marks (\$1.06) per quarter; 17 Marks (\$4) per year, postage prepaid.

Sample copies to be obtained from the publishers of the FOREST AND STREAM.

To avoid errors, the amount of subscription should be enclosed by letter in American postage stamps, postal orders or by draft on German bank. Publication office of WASSERSPORT.

CARL OTTO.

Berlin, S. W., 12, Zimmerstrasse 24, Germany.

Yachts and Canoes For Sale.

Steam Yachts Specially Offered For Sale.

Iron steam yacht, 104x25x12 1/2, speed 14 knots. Iron steam yacht, 185x24x12, speed 16 1/2 knots. New steel steam yacht, 170x23 1/2x10 1/2, speed 13 1/2 k. Wooden steam yacht, 100x16x8, speed 13 knots. Cabin steam yacht, 42x9x3 1/2, speed 12 miles. Steam Yachts and Launches of all sizes for Racing, Cruising, Fishing and Hunting Purpose. FIELD & YOUNG, Steam Vessel Brokers and Marine Engineers, 6 State Street, New York.

Hunting Boats, Sneak Boxes, Cruising Canoes.

Built to order after the most approved models. Correspondence solicited and prices given on application. B. W. DAVENPORT, Ashland, Wis.

FOR SALE.—A 14x30 CANOE, CENTERBOARD, 70 ft. sails, paddles, etc.; is light and has had light usage. Will sell at a bargain. Also a 7x5 shore boat (new). Address CANOE, P. O. Box 432, Hartford, Conn.

Wanted.

WANTED.—A MARRIED COUPLE TO KEEP house for two single gentlemen in South Carolina, the man to thoroughly understand training sporting dogs and preparing same for field trials, the woman to be competent to do all household work, a plain cook and scrupulously clean. References required. Address SOUTH CAROLINA, Forest and Stream office j617,4c

COPIES WANTED.—JAN. 4, 11, 18 and 25. FEB. 1, 8, 15, 22 and 29. MARCH 5, 12, 19, 26 and 31. 1883; FEB. 7 and 14, MARCH 5, 12, 19, 26 and 31, 1884. We are short of these issues, and would be obliged if any of our readers having one or all of these numbers that they do not want will send to Forest and Stream Pub. Co., 39 Park Row, New York City. mar26,1f

WANTED.

Bear, Buffalo, Deer, Wolves, Foxes, Spotted Cats, Civit Cats, Lynx, Panthers, Antelope, Otter, Beavers and other animals and birds of all kinds. Address D. H. TALBOT, Sioux City, Ia.

For Sale.

FOR SALE.

HOPE ISLAND, in Narragansett Bay, containing about 100 acres, located eight miles from Newport on the line of steamers' direct course to Providence. Standing high, commands a view of every point of interest in the bay. Good house, barn, workshop, lodge, henneries, abundance of good water and a wharf costing \$3,000 are some of the improvements. A perfect resting place for a tired gentleman or lady, or desirable headquarters for a yacht club or site for a hotel, every room would have a water frontage. Splendid grounds for private fox hunting. Fishing excellent and spring and fall sea fowl shooting unsurpassed on the coast; but the island should be kept a gentleman's private residence. Will be sold at a fair price on easy terms.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, JULY 8, 1886.

VOL. XXVI.—No. 24.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications.

ANSWERS TO CORRESPONDENTS.

CONCERNING CONSISTENCY.

THE AUDUBON SOCIETY for the protection of birds was founded by the FOREST AND STREAM, a sportsmen's journal. That is the alleged paradox which in this present year of grace is vexing the souls of certain more or less well-meaning men and women. The editor of an obscure religious paper in Chicago is grieved because a letter received by him from this office relating to the AUDUBON SOCIETY was written on a sheet of paper bearing at its head the pictured rod and gun—implements of bird destruction. A Cincinnati doctor, who has entered the lists as the champion knight of befeathered Dulcineas, wants people to go on killing song birds because the AUDUBON SOCIETY was founded by a journal devoted to the interests of a class of men who shoot birds for sport; and the good doctor is also apprehensive lest the wicked journal should actually be given some credit by the public because of these bird protective undertakings.

The worthy individuals are unduly perturbing their spirits in this warm July weather. There is nothing inconsistent in the attitude of FOREST AND STREAM toward song bird destruction. It represents the general sentiment of sportsmen.

Simply because a man pursues and kills game birds and animals which, so far as we may reason from analogy, were created expressly for men to hunt and kill, it does not follow that he is bent on the foolish and wicked extermination of other birds which were created to gladden the world with their beauty and song and to wage their warfare upon the noxious insect hosts. As a matter of fact, the average sportsman recognizes more fully than the average non-shooting man, the economic value of such birds as the AUDUBON SOCIETY is concerned with. The sportsman, through his clubs and journals, has secured many of the best bird protective laws now in force, and he has secured them, too, in the face of stupid opposition and in spite of the lethargic indifference of just such individuals as are now fault finding because the Audubon movement was not put in motion by themselves.

It is always easier to stand out one side and carp and

whine than to put one's own shoulder to the wheel; and after a thing has been done in one way it is always easy to gain passing notoriety by loudly proclaiming that it might have been done better in some other way.

The friends of song bird protection invite the co-operation of all sincere workers in the cause. They ask for honest, united, and, if honest and united, effective working together for the common end.

To ask that there should be absolute unanimity of opinion among those who are honestly concerned for the success of the campaign against the song bird feather fashion would be seeking too much from human nature. Differences, misunderstandings and dissensions have been the attendants of every laudable public movement. The cause of the American Colonies was hampered year after year by the want of harmony between the American representatives in Paris. But Lee and Deane and Franklin were patriots, and, though they could not understand each other and worked at cross purposes, all had at heart the interest of the Colonies. It is to be hoped that the several individuals who have criticised the AUDUBON SOCIETY because of its origin in this office are sincerely interested in securing the objects sought by the Society; and more than this, it is already an established certainty that the movement, critics or no critics, is a successful one.

CELEBRATING THE FOURTH.

A PART from the barbaric noise inseparable from the occasion, the distinguishing and suggestive feature of the Fourth of July has come to be the variety of outdoor sports on that day, and the numbers of people who, as participants or spectators, are interested in them. The bare catalogue of these pastimes discloses the place open-air amusements occupy in the public taste. First and foremost, of course, were the base ball matches innumerable, witnessed by hundreds of thousands of spectators; with lacrosse, cricket and lawn tennis matches; Scottish and athletic games; rowing, yachting and canoeing regattas; horse races and bicycle races; polo; whippet racings; rifle and trap-shooting matches; each engaging its special share of public attention and demanding full reports in the morning papers of the next day. The anglers were out in force, and July woodcock shooters sweltered in the covers.

The old style of celebrating the national holiday is gradually giving away. In its observance of the day society may be divided into two classes, the first of those who try to get away from the noise and heat, and pass the hours in quiet; and the other of those who seek amusement. The latter is rapidly learning that more satisfaction is to be derived from some form of outdoor sport, than in the aimless methods of celebrating once in vogue, when a big crowd and a big noise, with a spice of patriotic spread-eagleism, furnished the regular programme. The day as a holiday gives more satisfaction because of these regularly organized forms of entertainment. It is more of an event to look forward to.

There are not wanting those who decry the new form of holiday, and who would restore the patriotic programme of earlier days with orations and public reading of the Declaration of Independence. It cannot be said, however, that the Fourth does not accomplish its purpose, even though there be no such formal public recognition of the event it commemorates. The day, even though wholly given over to sensible forms of amusement, has an educational influence of incalculable value, and its influence is to stimulate patriotism none the less, though the direct appeal to that sentiment once so common be now omitted.

A YACHT RACING CLASSIFICATION.

ON another page we touch on the question of classification, a subject that is made still more emphatic in the race at Larchmont this week. Here the classes are based on sailing length, namely, a length taken parallel with the load waterline and at a certain distance above it. By this rule Cinderella and Clara, 52 and 53 feet waterline, are classed with Gracie, Bedouin and Fanny of 70 feet load waterline. Uliida, 42 feet load waterline, goes in with Athlon, 51 feet load waterline, a boat of double her beam. As it happened, none of the 70 feet class were in, and Uliida was too late to enter formally, so the evils were of no great consequence for the time. They suffice, however, to prove the imperative need of a concerted and intelligent action on the part of the leading clubs. There may be some excuse in the past for the growth of such a faulty and unjust state of affairs, but its continuance is little credit to the enterprise and intelligence of American yacht clubs.

A CONSIDERATION OF DOLLARS AND CENTS.

THE woodcock season in the vicinity of Saratoga and Newport and other great pleasure resorts opens in June. This is in conflict with the general laws of the States, but the average landlord of a big hotel is beyond, outside of and above the law. His back door is always open to the furtive or brazen entrance of the market shooter, and his guests eat what is set before them and pay the bill. Public sentiment in the neighborhood of summer resorts is made by the hotel keepers; if the hotel wants June woodcock, the general sentiment is that June woodcock are quite the correct thing. The birds have been potted in the vicinity of Saratoga this year, and are now pretty well exterminated.

In Rhode Island there are many square miles of cove admirably adapted to ruffed grouse. Were the birds given anything approximating a fair chance the State would afford the best grouse shooting in the country. But the covers are depleted by the market-shooters. Woodcock shooting is in order in July; and the multitude and variety of game birds that pass muster as woodcock at the hotel back door are not by any means limited to the species usually recognized as game. These market-hunters kill almost every feathered creature that comes in their way, robins, thrushes, and whatever flies. They cut down great numbers of chicken grouse, and by this constant slaughter of immature birds for the hotel kitchen the grouse covers are made lean and barren by the time decent and law-abiding citizens are ready to go shooting.

If spring and summer shooting could be done away with thoroughly and universally, the supply of legitimate game in legitimate season would furnish a permanent source of pleasure to sportsmen and of revenue to the citizens of the State. The annual profit from birds killed out of season and covertly smuggled into hotel back doors, does not equal one-hundredth part of the revenue these same birds would bring if preserved for sportsmen who would pay stage fares, board bills, guide fees and other expenses for the privilege of shooting game in season.

JUNE DEER FLOATING.

A SUGGESTIVE communication is printed in our Game Bag and Gun columns, where a Keene Valley, New York, correspondent cites the case of a local great man who has been floating for deer in June. This is a typical case of the corpulent and lazy nabob, who finds it in his power to use indebted employees as tools in his illicit sport. There are many such men in the Adirondacks; they are hotel keepers upon whose nod depend the fortune of guides and oarsmen; or manufacturers who conceive that when they hire men to work for them they may also demand of them complicity in violating the game laws.

These men have about had their day. Their extraordinary position of defiance to the legal restrictions upon shooting and fishing cannot be maintained in the face of the new sentiment forming in many localities in the North Woods. An encouraging sign of the growth of such a sentiment is afforded in the formation of guides' associations for the enforcement of the game laws and the punishment of offenders, be they big or little. Such insubordination on the part of guides naturally provokes the choler of many of the hotel keepers, who toady to the local great man as well as to city guests in quest of June venison. The landlords announce that as retaliatory measures they will prevent the law-abiding club members from obtaining employment as guides. Such tactics may be temporarily successful; but if the guides have pluck enough to fight the contest through to the end, they will be supported by visitors and in time by the hotel keepers themselves.

It happens in the present instance that the June floater is one of the persons active in securing the repeal of the New York hounding law last spring. The advocates of the repeal, it will be remembered, made a great deal of noise over the enormity of the abuses attendant upon floating. This June floater is a fair specimen of the hounding advocates; his June floating is a fair sample of the actual practice of the hounders who harangued the loudest and longest against deer floating.

"GALLI MULES" are included in the birds not protected in New York by one of the new laws. The galli mule is a woeome fowl and ought to have fared less harshly at the hands of the Albany politicians.

BETS are not decided by the FOREST AND STREAM. It is taken for granted that those who bet will have intelligence to determine the winner and loser without taxing the ingenuity of newspaper men.

DAYS WITH THE BARMECIDE CLUB.

VIII.

FOR several days there had been a soft dampness which portended rain. The new moon, with its southeast end sticking down so a powder horn could not have been hung on it, was what the old-fashioned farmers of the Mohawk Valley would have called a wet moon. And the rain came. A thoroughly bad day, where everything out of doors is dismal and all the comfort one can find is inside the shanty, has its place in the angler's calendar. There might be too many of them, enough to make the thing monotonous, but when they happen along not too frequently, they add a wonderful variety to the charms of forest life. They give outers a rare chance to become acquainted, for they must become intimate, being housed up in a seven by nine house or thereabout for so many hours. It is generally much pleasanter to hear the patter of the rain upon the shingles, than upon the broad bark roof. There is the faint sense of security in the one, and the constant fear of a dripping down your neck in the other, so look carefully to the bark roof in pleasant days, and do not have to chalk up one against the glorious life in the woods the first time some rain cloud strikes a mountain peak and springs a leak. We encountered one of those days, but as we were here first, we made it welcome with our most cordial greetings.

Drizzle, drizzle, driz,
O'er forest and plain.
Scatter thy wetness
Gent, gentle rain,

While the pipe, the song and story go round and round. The pipe is a success. The songs by cracked voices, oh, shades of Malibran and Mario, are mixed irredeemably, and we are thankful when they are finished. The stories, like angling and hunting stories of the present day, are probably truthful, which is their only redeeming quality.

Nature is poetry and truth in these latter days, and the angler living so near to her cannot help if he imbibes and inhales great draughts of that truth which has finally become the distinguishing characteristic of those who go to the brook side with six-ounce rods—the same more or less. He may not inherit this love of truth, but he acquires it. It has come slowly, but the day for exaggeration has passed. The angler has been cornered and smoked out too often to dare undergo the process again. There is a class of those who go fishing, but they are not anglers, but rather pot-hunters, who would stretch veracity to the breaking point and then break it; and whose statements are to be trusted, as Thackeray would say, about as much as a schoolmistress's letter or a church yard epitaph.

Says Glen while recharging his pipe, "This is just such a morning as I remember once in Arkansas. It was a dripping kind of a morning when I started out from camp on a deer hunt. The underbrush and second growth which grew very thick, were covered with the night's dew and morning drizzle, and they had a provoking way of slapping and switching me from my ankles to my head, paying most attention to my face. I had proceeded a mile perhaps, when up jumped a magnificent six-prong buck and put away all too suddenly for me to fire, but now I was assured that my morning hunt would not be barren of results as I found that the trail he left was easily to be followed, and after half an hour I saw him ahead of me resting beneath a clump of bushes. He was unaware of my presence and I brought my rifle up for a careful aim. Closing my left eye I found I could see nothing as I attempted to peer along the barrel. I dropped the piece, winked four or five times and sighted again with the same result. Putting my hand to my face I found that my right eye was gone. Immediately retracing my steps a quarter of a mile, there was my eye hanging on a bush glistening and sparkling and winking at me as naturally as could be. I placed it in its socket and returned again to the deer. With the finding of my eye I became overconfident, arguing that trailing the deer when one of my eyes was missing and successfully locating him, was now a feat simple enough with both my eyes in their proper places, and carelessly coming upon him he struck out with the speed of lightning. I fired and away he sped down the winding trail. But he had received his death wounds, for when I came up with him and examined the lordly fellow, I found he had been shot through four times, having actually outrun the bullet and meeting it each time as the crooked trail crossed the straight course of the bullet. Don't you understand? this way," says Glen, taking a dead coal and making the following diagram on the smooth side of a piece of bark:

MAN A B C D E

"The straight line is the course of the bullet, the crooked line is the track down which the deer ran. A is where he was when he received the first lead, and B C D are where the deer followed the trail and met the bullet. E is where he finally fell and died."

"I'll give you a turkey story," says Roy, the facts of which as related to me occurred on the Big Muddy in Southern Illinois, and well worthy of the Yahoos of the American Egypt, and quite equal to any of the remarkable catches of the silver hook fishermen in the stalls of the public market. Of course,

I cannot tell how the truth may be,
I say the tale as 'twas told to me.

"A party of four or five were hunting on the Big Muddy in (I think) Jackson county, and making their headquarters with one of the Hill brothers. They had met with varying success, and all of them had killed ducks, geese and swan, and all but Doctor G. had killed one or more wild turkeys. The doctor was bound, as events proved, to either kill a turkey or have the credit of so doing.

"Pete Hill came in early one morning with a large fine turkey. No one had seen him with it but the doctor, and he bribed Pete to give him a chance to shoot it over again. The next morning Pete was to leave early with the turkey, shin up a certain tree where he could hide himself from the rest of the party, and at a given signal from the doctor who was then to fire, to drop the turkey to the ground. Part of the scheme worked first-rate. The doctor hunted over the grounds apparently very carefully until he approached Pete's tree. When the signal was given, the doctor fired and down

came the turkey. All excitement, the doctor ran to it, closely followed by another of the party, but the cat was out of the bag, for the turkey's legs were tied together with Pete's red bandanna handkerchief, and the doctor's companions inspected the tree closely enough to find Pete who had then to come down. He was ignorant of the doctor's predicament until he saw the red handkerchief which he had used for convenience in carrying the turkey, but had forgotten to take it off. Baudanna was a name which still clings to the doctor."

"That was surely a pretty bad break, but fortunately it ended without loss of life and must have been a good lesson to the doctor. Though entirely different in every respect, it somehow reminds me of a story I heard about a Missourian, who was visiting friends in Posey county, Indiana. They, to make his stay as pleasant as possible, got up all kinds of entertainments for his benefit, and among others was a coon hunt. The night selected was a moonlight one, and before starting the hunters partook of several straight and mixed. The natives, accustomed to the particular brand of whisky, seemed well able to resist its effects, but not so the Missourian, who was taken in, which however was not strikingly apparent until they were to cross a stream which ran through the woods. The home boys led the way, most of them jumping it clean, as it was quite a narrow stream, while a few touched the water on the opposite side. The visitor came to the water's edge and refused the jump, but seeing what he supposed was a fallen tree across it, he made an effort to walk the shadow of a large tree which stood behind him. 'Old Mis—hic—sou forever. He don't have to tumble into stream where lie there is a log to walk on him.' The first step put a damper on his confidence. 'Old Mis—hic—sou forever, Mis—hic—kersplash.' The boys fished him out none the worse for his ducking. In fact it did him good. 'I'd have got over all right if the bark hadn't slipped,' he exclaimed, and he was none the wiser regarding the substance and shadow of that tree."

"It's your turn, guide. Give us a fish story now."

"To tell you the truth, gentlemen, I never told a lie in my life."

"It does not necessarily follow that one must lie to tell a fish story."

"Such being the case, I'll tell you a second-handed one, and if it is not true no blame or charge of falsehood can attach to me, besides, as most fish stories have to do with large fish, this one deals in small ones, which is also a point in its favor. It was related in my hearing by Judge Frunch, better known by his friends as Bill. The judge was as well known for his strict veracity off the bench as he was respected for his legal acumen when presiding in a court of justice. It appears that some years ago, when the present system of cheese making was introduced in the central counties of New York, a factory was established in the town of New Hartford, and the farmers around either brought or had their milk taken there daily and credited to them. This was before the lactometer had been invented or at least before this certain factory had commenced its use. The consequence was that there was some cheating, for the quantity of cheese was not in average proportion to the quantity of milk credited to the different farmers. It was quite a difficult matter to detect any one adulterating their milk, but finally one was cornered in a very curious way. This farmer was Deacon Page. There was discovered one morning in the cans of milk from his farm several small fish, which the deacon was called upon to account for. 'Why I'll tell you all about that. Yesterday my cows broke through the pasture fence and drank in the Saquoit creek, a ways above Mr. Richardson's mill dam, and must have swallowed some of the fish. It is strange my hired girl didn't notice it when she was milking, I'll speak to her about it.'

"Did I ever relate to you," said Storm, "the adventure my grandfather had with the bullhead in the Mohawk River near the old Utica base ball grounds. No? Well, some morning when we get up a little earlier than usual, I'll try and tell it. It's a long story and needs an early start in the day."

MILLARD.

CHEYNE, WY.

HUNTERBERG CASTLE.

THE day of this history was the Fourth of July; the scene, a beautiful valley in Middle Park, Colorado. In the early morning, in remembrance of the nation's natal day, a pole was raised, the stars and stripes were flung aloft, cheers were given, a short address was delivered, and thus the ever-glorious was celebrated by a little gathering of strangers far out in the Rockies. There was no booming of cannon, no ringing of bells, no popping crackers, no bursting of bombs, nothing but simple recognitions of the day, hearty observance as far as circumstances permitted, and the solemn attention of the glorious mountains.

Immediately after the patriotic ceremony the assemblage of prospectors, travelers and hunters separated, going their different ways, and in a short time the camp was as silent as the abode of Reflection. My comrade wanted to do some trout fishing, and as there was only a stout bass rod besides my own trout rod, I turned the latter over to him, and saddling my pony, determined to spend the day hunting and rambling.

The course taken led me to a mountain six or eight miles southeast which, in the mellow distance, looked like the capitol of some undiscovered country. Viewing it as I rode was a matter of increasing interest, and though a grouse with a large brood of little chicks in one place, two small coyotes playing like puppies in another, and flocks of sage chickens attracted passing notice, the mountain loomed more grandly as I slowly neared it and held studied attention. From the midst of great wings, steep roofs and many pinnacles, rose a principal dome and two smaller ones, where there were columns and pillars and doorways, and vertical and horizontal seams like the lines of masonry in a real structure. With the figure once established, further study brought out more striking semblances and apparent proofs of the genuineness of the building. How could a mountain have a dome of such wonderful harmony in size and proportions? How could chance place two smaller towers equidistant from the center, and arrange terraces and steps and architectural embellishments? It certainly is the ruin of some temple of the sun, some amphitheatre or forum of an ancient people. I'll just go on and investigate, and then inform the Director of the Geological Survey of my great discovery. By the right and privilege of discoverer I'll name it Hunterberg Castle, or the Sportsman's Pantheon, or the Anglermere Coliseum, something grand, something to commemorate and give even greater renown to the world-wide fraternity of good fellows.

While gazing and giving rein to fancy and conning names

from which to select the most suitable for the magnificent structure, a prosaic sneeze broke in upon my illusion and also brought to his feet a large gray wolf, not thirty steps away. He was crouched in the grass near the trail eating a rabbit when the nasal explosion aroused him. Trotting off a few yards he stopped sullenly to take in the cause of the disturbance, licking his chops the while and showing his teeth as if he had a mind to resent the encroachment upon his domain. The pony had stopped of his own impulse, and without hesitation I took a snap shot. The wolf leaped convulsively, turned a somersault and fell dead, the bullet having furrowed his skull. Dismounting, I examined the breast to see if the skin was worth taking off as a trophy and found the hair thin and full of fleas. There were still some throbs of waning life, muscular twitchings about the savage mouth, and wavelike tremors along the back, then the once sly and merciless prowler stretched out limp and lifeless, and I left him a prey to his own.

A half hour's ride brought me to a smooth slope of trituated rock terminating at the base of the capitol. Distance, I found, gave the pile much of its architectural uniformity, though even yet a bold outline, distinctness of profile and breadth of elevation enabled me in fancy to make a temple or teocallis of imposing grandeur. In front of the main dome were minor towers and buttresses, the spaces between partly filled with masses of rock, the debris of geological ages, among which were many small pine and cedar trees. About six hundred yards from the more solid portions of my castle, among fragments and projections, I caught sight of a mountain sheep, poised on one of the tower-like formations, as if it were a statue on a pedestal. I had before seen these sure-footed climbers in similar positions, but had never had an opportunity of getting near enough for a shot. I now resolved to get that sheep, not considering fully at the moment that it is easy enough to pass a resolution, but very often quite another matter to carry one into full force and effect. Still it is a good thing to resolve if one does not thunder too much in the index.

As the wary animals cannot be approached from below, as they frequently spend some time very patiently watching the frantic and fruitless efforts of the hunter to get into shooting distance, and as this one seemed to be looking down on me with disdainful emotion, I concluded to resort to subtle strategy and make the effort to circumvent him by going round the back way. A half mile to the right there was a long sloping ridge, with scattered dead and living pine and cedar trees on it, and great detached rocks, which, it appeared, would furnish a good approach clear to the upper base of the dome, where I could certainly get close to the game.

Turning the pony's head I put him on the gallop to the place where the ascent was to begin. The ridge was not steep, and I urged the pony on as fast as he could go without making too much noise, and in due time reached the upper portion of the slope, perhaps four or five hundred yards back of the rocks where the sheep was seen. There I tied my steed with the lariat and went on foot.

There was much to interest any one in the mazes of rocks and trees, in the magnificent scenery that lay about me, where the silence was as impressive as the mountains were sublime, and I was half inclined to let the sheep go and study the universe. Near the broad front of my Hunterberg Castle, looking northwest, and not far from the pedestal where the sheep was supposed to be, was an immense split in the gray granite, one of the doorways I saw from the valley, into which I went stealthily, stepping upon a wide mantel or architrave that provided comparatively easy passage to the outer side. Going slowly, scanning the projections and cornices beyond as they came in view, barely moving as I reached the free opening, the sheep suddenly came into my line of vision, leaping from a point of rock to a small flat surface that brought him into clear range. I was stooping low, and for a few moments remained so, breathless, motionless as the rock by my side, then cautiously raised the rifle and fired. A million echoes and reverberations awoke the wild solitudes, hammering the walls where I stood, and then flying like affrighted spectres to more and more distant and safer nooks and crannies. The sheep sprang forward with such life-like effort I thought the bullet had missed. But the leap was followed by a thump which meant that feet and horns had lost their cunning, and that a still and dismembered form was down there somewhere.

The next task was to recover the game. From my lofty outlook it could not be seen, but passages and pathways were visible, made by wild animals, and all about were ugly-looking crevices and cavernous openings. To reach these it was necessary to retrace my steps almost to the point where the sheep was first discovered. Relative positions of rocks and trees were noted, the "marking down" method of the hunter, and then the return was in order. Before starting, however, I could not resist stopping a few minutes to look out upon the grand scenery on three sides of the mountain observatory. I could see the vapor rising from the Hot Springs miles away, and right and left of that point get bright glimpses of Grand River, the water hidden in places by forests and cañons, and then again flashing and dancing in the sunlight, as if a mountain of silver had been melted by subterranean fires, and the gleaming metal escaping from nature's crucible, was filling the tortuous valley. In every direction were great mountain tops reaching to heaven, capped with black rocks and glistening snow, here an open and there a figure of immaculate beauty to which imagination could give form and feature in boundless fancy. One of the images of snow seemed in the distance like a regal form lying in state, its robes sparkling with jewels, as if it were the bier of a princess stopped in mid air—

"Half dust, half deity, alike unfit
To sink or soar."

The figure was strikingly beautiful, and I thought as I gazed, if the Itzaccibual of Mexico, the woman in white of the Aztecs, is more beautiful than that, it is worthy its renown, and worth the journey to see it.

I was loth to leave the high veranda. The beautiful sweeps of alpine scenery, the regal mountains in their robes of white and purple, the flowery meadows, the shining river and many small streams hurrying to it, the dark green forests, the columns of smoke here and there like incense from sylvan altars, made pictures of enchanting beauty.

"My mother earth!
And thou fresh-breaking day, and you, ye mountains,
Why are ye beautiful?"

Awaiting reply let us return to our mutton. Approaching the pony he neighed a welcome and manifested unusual pleasure. In truth it was lonesome up there, and I didn't wonder at the horse's gratification on being assured that his fidelity was not betrayed.

Let me say that a degree of faith must be taxed in this abstract and brief chronicle. It cannot be helped. I did not find that sheep. It was not because I did not shoot well, that was all right, but circumstances interfered. Reaching the vicinity of the base where I thought the sheep was lying, the pony pricked up his ears, planted his forefeet decidedly, and stopped suddenly as if something terrible had arrested his attention. At the first glance I could see nothing. On the instant, however, a huge cinnamon bear rose on his hind legs to an immense height, ten or fifteen feet, it seemed, before it stopped getting up, and not more than seventy five yards away. His tapering face, open mouth, outreaching arms, and limp, hanging paws, were exceedingly distinct in the brief view I had of *Ursus horribilis*, variety cinnamonous. As he reached full altitude the pony, who had never seen a cinnamon bear before, uttered a wild snort, whirled excitedly, nearly pitching me out of the saddle, and went down that slope with amazing energy. We would have made a good acting charade of General Putnam at Horseneck escaping from the British. This time it was a bear. I was a careful, but rather passive rider, giving the pony all the rein he wanted and uttering no words of discouragement.

Of course I know this doesn't sound well. How much grander and more dramatic it would be to write that the pony was brought about with fierce determination, urged onward to within a few feet of the bear, careful aim taken and a bullet lodged in the vicious animal's brain, and a few other verbal shakes of sheet iron thunder. But nothing of the kind occurred. The flight continued. At the distance of a half mile, not hearing the crash of breaking limbs or tumbling of rocks behind me, I tightened rein, and induced the pony to stop, just a moment. Looking back I saw bruin still in position, like a huge Stoughton bottle, apparently wondering what was the matter with the party on horseback. He had stood up to see who was coming to call on him, and was an indifferent spectator at the subsequent proceedings.

At the camp an imprudent narration of the adventure caused some merriment, and raised some doubts as to whether the sheep was killed.

"Why didn't you work your way round to the other side and get your game?" said one.

"With that bear standing there ready for a row! Hardly. Besides, the pony was too timid."

"Was it a black bear or a cinnamon?"

"Is a black bear fifteen feet high?"

"No; not fair measurement and chained to a post."

"Well, then, this was a cinnamon."

Then one of the men said I had acted wisely. No one man should get himself into a disagreement with a cinnamon bear. It takes two good shots, that is two fellows that understand the business. Each man must stand his ground whenever they get a bear started; one must hold steady till the critter comes up to strike, mouth open, claws out, and blaze away into his mouth, if possible. If that doesn't fetch him, the other man puts a ball under the bear's arm, and cinnamon gets his medicine.

This explanation was entirely satisfactory to me, and I dropped the subject without supplementary statement.

Although the day's excursion was a disappointment, I turn to its recollection with unfeigned pleasure. The first impression of the temple-like form of the mountain, or Hunterberg Castle, cannot be effaced; the sheep is still poised on his airy pedestal as first I saw him; the grand panorama of mountains is ever subject to call, and the animated, perhaps melodramatic dissolving view down that slope, awakens emotions, and revives the wit and humor of the camp quite as vividly as it did on that memorable Fourth away out in the Rockies. JEROME BURNETT.

THE MAGALLOWAY OF TO-DAY.

THE changes wrought by the lumbermen on the Magalloway River during the past three years have been so great that if a person who went from Azischoos Falls to Parmachene Lake during the season of 1883 were to go over the same route this year would be astonished at the great change in the general appearance of the country. In the fall of 1883 the Berlin Mills Lumber Company began operations in Parkertown (which extends from below the Narrows to the head of the meadows on both sides of the river), and put into the woods a crew of about 250 men, and that season cut about 10,000,000 feet of lumber. Their long landings on both sides of the river from the foot of Emery's Misery to lower Metalluk Pond, gave it a desolate appearance, which was supplemented by a tornado and a fire that swept over about a thousand acres of land at the Narrows the following summer. The next season's operations were on a somewhat larger scale, and timber was cut on both sides of the river nearly to the foot of the meadows. The following fall the company still further extended their operations and put in about twenty camps and employed about 400 men, and their landings now reach from Azischoos Falls to the head of the meadows, so now all the primeval forest left below Parmachene is from the foot of the lake to the head of the meadows. If they should extend their operations up the river one more season the picturesque beauty of the Magalloway will be one of the things of the past.

For quite a number of years that has been one of the best localities for large game in this region. Moose were not uncommon and some were killed every season. One was killed at the meadows in 1884 that weighed 1100 pounds. Caribou were found quite plenty by those who knew where to look for them. There is a large caribou bog lying within a few miles of Azischoos Mountain. Deer were very plenty and in winter herds of from half a dozen to ten or fifteen were not uncommonly seen, and as late as the fall of 1883 a herd of seventeen yarded within one and a half miles of the Narrows. The snow was deep that season and they nearly all disappeared before spring. A logging crew of fourteen men were camped near by; they made one quarter of beef last them all winter and they never were stinted for fresh meat. Perhaps that had nothing to do with the disappearance of the deer. Munn Wornell, a Maine fish and game warden, came to Brown's farm, inquired if any deer had been killed or any fish caught, went fishing himself two or three days, and then in the language of a well-remembered writer, "marched back again." I don't know but the lumber men have just as much right to kill and use deer during the winter as guides and sportsmen have to kill them in close season in summer, and use one or two meals and throw the remainder of the carcass in the river to be wasted and taint the air for rods around. This winter the snow has not been so deep but what they could take care of themselves and very few have been killed this winter.

The old hunters used to say that if deer ever became

plenty here again the wolves would follow them. Their predictions seem to be verified, for several have been seen and tracked on the Magalloway this winter. One came into a yard near George Waters's camp and was seen by several of the men. It has been quite a number of years since wolves were plenty, but their time is short if wolves in both hair and "sheep's clothing" get after them.

Fur is quite scarce around here now. It has been persistently hunted ever since John Danforth came to this region, and now it is a rare thing to find a beaver; and mink and sable are also scarce. Fisher and otter are very seldom seen and even now a bob cat is something of a rarity.

The trout fishing has changed also, for now fish can be caught only at certain places on the river, when formerly they could be caught almost anywhere. Last summer a friend of mine was at Little Boy's Falls, above Parmachene, and where a few years ago he could catch plenty of fish of from one to three pounds, and had taken one weighing over five pounds, the largest one taken this trip weighed less than a pound. I caught one on my last trip up the river in September, below the lake, that weighed five pounds two ounces, and my companion took the mate to it in less than five minutes after that weighed a trifle over four pounds. The season before my largest fish weighed six and a half pounds. But very few trout are taken above Azischoos nowadays as large as that. Those would not be considered very large brook trout by anglers who have caught nine and ten-pounders at Rangeley, but perhaps they might be called very good ones by parties who have fished the same waters two weeks at a time and caught nothing that would weigh over a pound.

No pickerel have as yet been seen above Azischoos, but they go up as far as the foot of the falls at Clark's, though they are not as plenty there as formerly, and it is to be hoped that they will disappear entirely from those waters. It is also to be hoped that no one will try to help the matter by stocking the waters with black bass, for if they do it will be only a short time before you will find bass at Little Boy's Falls and Rump Pond.

This paper will give your readers some idea of the changes going on in the Magalloway country, and perhaps save somebody a good deal of disappointment who might expect to find it just about the same as when they were there a few years ago. S. J. G.

DOMESTICATION OF THE BUFFALO.

Editor Forest and Stream:

Most of your readers are aware that Mr. Hornaday, the taxidermist of the National Museum, was sent out this spring to procure, if possible, a few skins of the American buffalo (*Bison americanus*) to be mounted for the museum. Recently Mr. Hornaday returned, practically empty-handed. The melancholy interpretation of this fact is that the buffalo at last has gone forever. These facts, I say, are pretty well known to most of your readers, and to these it will be, I believe, a glad surprise to know that this magnificent species is not doomed to extermination after all.

The small herd of domesticated buffaloes kept by Mr. Bedson at Stony Mountain, Manitoba, has contrived to thrive and multiply and the four calves of 1878 are now represented by 18 bulls, 25 cows and 18 calves; these, I learn from a recent article in *Science*, are to become the stock of a Manitoban company for the breeding of buffaloes. The great value of the buffalo is now fully recognized, and the various ways in which its physical powers and material products are to be turned to account are set forth at some length in an article by the writer, published in Transaction No. 23, of the Historical and Scientific Society of Manitoba, 1886, entitled "The Mammals of Manitoba." When this was written the fate of the buffalo was trembling in the balance and I took the opportunity of urging its claims on our attention as an animal that would be an invaluable addition to the stock yard. Since then the matter has been pretty thoroughly advertised among the Manitoban business men and projects of domestication favorably received. And I am sure that now all who are interested either in the stock farm or the chase, will be glad to learn that after all the buffalo has not "gone forever," and since it is proposed to introduce the species on the prairie ranches of the North, it is not unlikely that ere many years have gone we may once again see the American bison feeding and clothing a nation and darkening with its thousands the boundless plains of the West.

ERNEST E. T. SETON.

NEW YORK, June 20, 1886.

W. T. Hornaday, chief taxidermist of the United States National Museum at Washington, was in the city yesterday visiting friends. Mr. Hornaday has just returned from Montana and other portions of the West, where an effort was made to secure for preservation some specimens of the buffalo, which is rapidly disappearing. To a *Herald* reporter Mr. Hornaday yesterday made the following statement: "On the 3d of May a party consisting of George H. Hedley of Medina, an assistant and myself left Washington for Montana in search of buffalo skins and skeletons for preservation in the National Museum. We arrived in Montana about the 10th of May, and until the time we left, June 15th, we were continually on the lookout for the object of our search. We were told that it would be impossible to find buffaloes there, but after diligent search for a number of days we were fortunate in securing two large bulls and a fine calf. The latter was captured alive with the lasso and was sent immediately to Washington. The skins of the bulls were found to be almost worthless for the purpose intended, as the animals are now shedding their thick coats of hair. The skeletons, however, were sent to Washington. Buffaloes are very scarce and few people know of any in the West. In Montana there are probably twenty-five buffaloes and in other Territories there are even less than that number. In Yellowstone Park, however, where animals are not allowed to be killed, there are about 200 buffaloes and 5,000 elk. A fine of \$50 and six months imprisonment is imposed for violating the law in this matter. Small herds of buffaloes are reported to be in the British possessions, but the species are rapidly becoming extinct. In October I shall go West again, prepared to secure at least twenty-five skins and skeletons. In case Mr. Hedley does not accompany me in October, Henry L. Ward, son of Professor Ward of this city, will go

out with me. This work should have been done some years ago, when the plains were frequented by the buffalo. Vast herds of cattle are now seen in place of buffaloes. Large quantities of buffalo bones are being collected and are shipped to Eastern factories for the manufacture of fertilizing material." Mr. Hornaday left for Washington last evening.—*Rochester Herald*.

TWO HINTS IN TAXIDERMY.

MANY who have had occasion to make bird skins in the field have regretted the sorry condition the specimen presented when unpacked at home, owing chiefly to doubled and twisted necks. And those who have made exchanges know that occasionally a bird gets a broken neck even when carefully packed and perfectly dry at starting.

The skins made by some collectors are invariably weak in the neck from using slender rolls of cotton. Having soon noticed this defect in even my own specimens, I substituted for the cotton a hard roll of oakum which extended from the mouth nearly or quite to the tail. Of course every one uses, or ought to use, a stout wire or long sliver of wood for the necks of large birds, hawks, ducks, herons, etc., but it is only in reference to small birds that I wish to call attention. In making skins of birds the size of sparrows and warblers I began using matches with sufficient cotton twisted around to make the neck of the required size. I have since adopted the use of hard-wood toothpicks, and have already used several hundred with quite satisfactory results. Cover the wood with cotton by a dexterous twist of the fingers. Insert this in the skin, letting it extend from the mouth nearly or quite to the tail. With the bird lying on the back the bill may be made to point slightly upward, as it should in a well-made skin, by allowing the neck to rest on the back, placing all or nearly all the filling over it.

In my opinion the best skin is made in a modification of the two extremes, with the bill neither in a line with the back nor pointing upward at a right angle to the back, except in case of owls, etc. An angle of forty-five degrees or less is suitable for most small birds. For a robin a single toothpick is scarcely long enough, and for such specimens I use two toothpicks, letting the flat ends overlap, the cotton will hold them together.

A bird skin made in this way may be picked up by the bill with impunity and in transportation the neck will not be damaged.

I used this method on a recent trip to Mexico, and my specimens were transported, some of them when they were scarcely dry, several miles down a steep mountain trail on the backs of bronco mules, and received rougher treatment than usually falls to the lot of even field skins, and yet there was not one broken neck among over two hundred skins.

The second point which I wish to bring to the notice of naturalists is the use of absorbent cotton in the field. A spot of blood that has formed on and among the feathers may be scraped off with a knife blade, and then if absorbent cotton is used, the place will be so effectually cleaned as to need, with most birds, no after treatment; at any rate, nothing more than a little corn meal before commencing to skin the bird.

This cotton possesses great advantages over ordinary cotton batting, and is better to use than plaster, corn meal or sand, which would form a cake not easily removed from some parts of a bird without pulling feathers out or going to the trouble of moistening it. W. E. B.

OAKLAND, Cal., June 24, 1886.

THE AUDUBON SOCIETY.

A Garden City, Kansas, correspondent, commenting on the Florida man's queer notion of killing off the mocking-birds because they eat strawberries, says: "If Sam J. Kinard, of Waldo, Fla., could be transported from his shady nook in Florida to these vast, treeless prairies, destitute almost of feathered songsters, how his heart would leap for joy at the sound of the first note of his much-despised mockingbird, just as the writer's did lately on discovering that the sweet-noted, restless, chirping robin redbreast and Sam's nightingale had actually found their way this far west, and were visitors, if not residents. I was born in the woods of Ohio, where the scarcity of song birds is not known, and in a region where small fruits and berries are the farmer's main sustenance and his pride to protect, and where, too, it is not an uncommon thing to see the birds feeding from one stake while the pickers gather their share from another; and there seems to be enough for both. It was with a thrill of pleasure that I discovered a mockingbird here only last week, hopping about in the few stunted trees that are scattered about the city, and how he makes the welkin ring.—BUDG.

A Rutherford, N. J., observer estimates the work of a band of four boys in that town in 1885 to have been the destruction of between seven and eight hundred birds' eggs and nearly five hundred old birds.

The observant *Orillia Packot* says that "this summer, humming birds are few and arrived quite late. Can it be that the lessening in number of the little beauties is caused by the freaks of fashion in ladies' attire?" There is not a doubt about it, and as our able contemporary has joined the AUDUBON SOCIETY, he cannot do better than exert the influence of his journal in disabusing the fair sex of a craze that carries such carnage into the ranks of the beautiful birds of our woods.

A Westerville, O., correspondent says: "I feel a deep interest in the welfare of the birds, and have beheld with astonishment their unwarrantable destruction. I discovered that in this community about thirty young boys were engaged in the work of destroying birds' eggs, or rather gathering and shipping them to a taxidermist of Geneva, N. Y. I found upon investigation that they had gathered no less than 14,000 eggs, and I immediately, through our local newspaper, made a complete exposure of who they were, and which resulted in putting a stop to the business.—M."

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—2 red bellied squirrels (*Sciurus auroreogaster*), 2 yellow-winged sugar birds (*Cereba cyanea*), and 4 crowned pigeons (*Goura coronata*). Presented—1 opossum and 10 young (*Didelphys virginianus*), 1 screech owl (*Scops asio*), 2 alligators (*Alligator mississippiensis*), 1 Gila monster (*Heloderma suspectum*), and 50 horned lizards (*Phrynosoma cornutum*). Born in Garden—2 fallow deer (*Cervus dama*), 3 elk (*Cervus canadensis*), 2 buffalo (*Bison americanus*), 1 Virginia deer (*Cervus virginianus*), and 6 red-headed ducks (*Fuligula ferina americana*).

MEN HAVE NO RIGHT to expose their families to the risk of being thrown helpless on the world when they can prevent it at small cost by taking a policy in THE TRAVELERS, of Hartford, Conn.—Adv.

MOOSE MEASUREMENTS.

Editor Forest and Stream:

One of your correspondents asks about the height of moose. I measured five bull moose in the last three years, a majority of which I killed, and found their height to be 6 feet 10 inches, 6 feet 8½ inches, 6 feet 6 inches, 6 feet 6 inches, 6 feet 1 inch. In each instance I measured the height from the shoulder and by simply straightening the leg, where bent at the knee and turning up its hoof so as to measure from its tread, as if the animal were standing. I was interested in getting accurate measurements and these can be relied on. If I had made one of my Indians pull on the foreleg as hard as he could, and then had measured from the point of the hoof to the top of the hair on the back, I could have added a few inches no doubt, but my stories about game or fish are not based on practices of that kind. I took a good many other measurements of these moose, but only give the particular one as to which inquiry was made. I express no opinion as to how high moose grow, because I am not competent to do so, nor would I place any reliance on simple statements of such Indians as I have had hunting with me, as to the dimensions of moose, unless I could verify them by measuring myself, or getting other good evidence. When I killed one 6 feet 6 inches, Aleck said, "I tell you, you don't get one much bigger than that, eh?" When we got one next year 6 feet 10 inches, he said, "I tell you he's a big one, for sure." The measurements I have show a proportion between the height, etc., and the size of the track, and applying that to the tracks I have seen, made by moose as yet unseen, I can imagine that there are old bulls considerably larger than the largest I have yet measured. What your correspondent wants, however, is facts, and that is what I have given in the measurements. No doubt others can give more.

CECIL CLAY.

WASHINGTON, D. C., July 5, 1886.

NEW YORK SONG BIRDS.

CHAP. 427. An Act for the preservation of song and wild birds. Passed May 20, 1886. The people of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. No person in any of the counties of this State, shall kill, wound, trap, net, snare, catch with bird lime, or with any similar substance, poison or drug, any bird of song or any linnet, blue bird, yellow hammer, yellow bird, thrush, woodpecker, cat bird, pewee, swallow, martin, bluejay, oriole, killee, snow bird, grass bird, gull, bobolink, phoebe bird, humming bird, wren, robin, meadow lark or starling, or any wild bird, other than a game bird. Nor shall any person purchase, or have in possession, or have for sale any such song or wild bird, or any part thereof, after the same has been killed. For the purpose of this act the following only shall be considered game birds: the Anatidae, commonly known as swans, geese, brant, and river and sea ducks; the Rallidae, commonly known as rails, coots, mud-hens and gallinules; the Limicolae, commonly known as shore birds, plovers, snipe, woodcock, sand pipers, tattlers, and curlews; the Gallinae, commonly known as wild turkeys, grouse, prairie chickens, pheasants, partridges and quail.

§ 2. No person shall take or needlessly destroy the nest or eggs of any song or wild bird.

§ 3. Section one and two of this act shall not apply to any person holding a certificate giving the right to take birds, and their nest and eggs, for scientific purposes, as provided for in section four of this act.

§ 4. Certificates may be granted by any incorporated society of natural history in the State, through such persons or officers as said society may designate, to any properly accredited person of the age of eighteen years or upward, permitting the holder thereof to collect birds, their nests or eggs, for strictly scientific purposes only. In order to obtain such certificate, the applicant for the same must present to the person or persons having the power to grant said certificates, written testimonials from two well known scientific men, testifying to the good character and fitness of said applicant to be intrusted to such privilege; must pay to said persons or officers one dollar to defray the necessary expenses attending the granting of such certificates; and must file with such persons or officers a properly executed bond, in the sum of two hundred dollars, signed by two well known citizens of the State as sureties. This bond shall be forfeited to the State, and the certificate become void, upon proof that the holder of such a certificate has killed any bird, or taken the nest or eggs of any bird, for other than the purposes named in section three and four of this act, and shall be further subject for each such offense to the penalties provided therefor in section one and two of this act.

§ 5. The certificate authorized by this act shall be in force for one year only from the date of their issue, and shall not be transferable.

§ 6. The English or European house-sparrow (*Passer domesticus*) is not included among the birds protected by this act.

§ 7. Any person or persons violating any of the provisions of this act shall be deemed guilty of a misdemeanor, punishable by imprisonment in the county jail or penitentiary, of not less than five or more than thirty days, or to a fine of not less than ten or more than fifty dollars, or both, at the discretion of the court.

§ 8. In all actions for the recovery of penalties under this act, one half of the recovery shall belong to the plaintiff, and the remainder shall be paid to the county treasurer of the county where the offense is committed, except if the offense be committed in the city and county of New York, the remaining one-half shall be paid to the chamberlain of said city.

§ 9. All acts or parts of acts inconsistent with, or contrary to the provisions of this act, are hereby repealed.

§ 10. This act shall take effect immediately.

HABITS OF MOUNTAIN SHEEP.—Yellowstone National Park.—*Editor Forest and Stream:* One of the Park guides, who cared for the Geological Survey party's horses in Cinnabar Basin, National Park, last winter, says that from their camp the mountain sheep were seen almost every day all winter; and he tells me he went from the Springs here down to the Basin on the 10th of May, and on that day he saw a flock of sheep and three lambs, and the next day the party caught a young elk. He says they spoke about the lambs as being the first that had been seen; and so from that I take it that from the 5th to the 10th of May is about the time of their birth. My informant says that the summer and winter ranges of the sheep are not different, except that they may range wider in summer than in winter. They stay on the east and south sides of the ranges the most when undisturbed in winter. In summer they are generally found on the higher benches or mesas of the hills and on all sides. Their food is mostly bunch grass and the mountain clover. The quadruped that is their greatest enemy is the mountain lion. They are also subject to a kind of scab disease that is very bad occasionally.—OLD FAITHFUL.

PROGRESS AT WASHINGTON.—In the Senate, June 10, 1886, Senator Warner Miller, of New York, introduced an amendment to the Agricultural Appropriation bill creating in the Department of Agriculture an independent "Division of Economic Ornithology and Mammalogy, for the promotion of economic ornithology and mammalogy; an investigation of the food habits, distribution and migrations of North American birds and mammals in relation to agriculture, horticulture and forestry." The amendment passed both Houses of Congress June 29. It has received the President's signature and is now a law. Dr. C. H. Merriam has been appointed Chief of the Division of Economic Ornithology, and Prof. Walter B. Barrows, Assistant.

KINGSNAKE AND ADDER.—While crossing the Grand Prairie of Arkansas in the latter part of April, my attention was called to what seemed to be an immense coil of snakes lying in the grass apparently lifeless. My companion and I were surprised to find it one kingsnake in the act of swallowing another snake. After killing the kingsnake we separated them with little difficulty. The one the kingsnake had killed we found to be a species of the adder, commonly known as the blowsnake. Very little difference could be noticed in the size of the two snakes, but the kingsnake was somewhat longer than the adder. A farmer said that when the snakes were first observed the kingsnake had wrapped himself about the body of his unfortunate victim and had his teeth imbedded in its neck. It would writhe and twist and try to get away, but its antagonist would only loosen this hold to get a fresher one nearer its head. The kingsnake finally succeeded in getting his victim by the head and commenced slowly to swallow it. The battle was now about over and he gradually loosened his hold from around its body and swallowed the entire snake.—L. JAY (De Witt, Ark.).

ROBINS AND CHERRIES.—In your last issue "X. Y. Z." complains bitterly of the depredation of robins in his cherry trees. If he will suspend a mounted hawk with wings spread in his orchard, or will put stuffed cats in the branches of the trees, moving them from day to day, the loss of cherries by birds will be likely to decrease.—C. H. M.

A PROPOSED DESERATION.

THE proposition to authorize the Cinnabar and Clark's Fork Railroad Company to enter the Yellowstone National Park with their tracks is again before Congress. It is one of those jobs which, like the Tehuantepec ship railway or the Cowden outlet for the Mississippi, is alluring enough to keep appetite and effort spurred despite discouragement and obstacle. It has already been repulsed under circumstances that would have definitely disposed of any commonplace enterprise of good repute and legitimate purpose, but it contains the vitality of plunder, and it survives the grave.

Everybody is familiar with the scheme of the National Park. The beautiful and grand valley of the Yellowstone River has been by act of Congress reserved for the use of the people, set aside as public property which shall under no circumstances be opened to private speculation—kept, as it were against the day when population shall have overrun the country, and when a magnificent tract such as the Park will be of a value beyond computation. By the terms of the act creating this reservation the people are promised that the valley shall be kept in a state of nature, sacred against the invasion of settlers, its grandeur unspotted, its beauty unsmirched. And as the people have grown accustomed to the idea, and learned to realize all that it promises to them and to posterity, the National Park has taken a strong hold upon them, and established itself firmly in their approbation.

Against this universal public sentiment, as against the more clearly defined and explicitly expressed opposition of every official of the government in any way connected with the Park, the Cinnabar and Clark's Fork Railroad Company are obstinately and resolutely pressing their job on Congress. It is not pretended that any result of the very smallest national importance is involved. No one has yet come forward with effrontery enough to suggest that public interests will be promoted, however infinitesimally, by the construction of the railway in question. On the contrary, it is understood on all sides that the measure is being pressed solely in behalf of this railroad corporation, and with exclusive reference to the enrichment of a few speculators at the expense of the people of the United States. The passage of the bill will violate all the essential features of the plan on which the National Park was originally ordained. It will destroy, and permanently, every prospect of usefulness for the Park, and will amount, practically, to giving it to this private corporation as the reward of its stubborn importunity.

As matters now stand, the Park is one of our national ornaments, the resort of tourists and sightseers from every quarter of the world, the refuge for the big game which is being so rapidly exterminated elsewhere, the nucleus of a future benefit that cannot now be measured. Every year attaches the people more deeply to a scheme which every year becomes better understood and the realization of which is steadily growing more tangible and definite. And this is the state of things the Cinnabar and Clark's Fork Railway Company propose to destroy. They ask the privilege of invading the Park with their tracks, establishing shops and station houses wherever they see fit, and aspire generally to nullify the whole plan of the national reservation and rob the people of all the great benefits involved.

It seems incredible that they should be able to find in the Congress of the United States one member willing to incur the odium of complicity in such a flagrant and indefensible job. It is impossible that they can find in Congress enough supporters to materialize this riotous dream of spoliation.—*New York Star.*

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

OPEN SEASONS.

DATES BETWEEN WHICH IT IS LAWFUL TO TAKE FISH AND GAME.

Arkansas.

Deer, Sept. 1-Feb. 1. Wild turkey, Sept. 1-May 1. Pinnated grouse, prairie chicken, Sept. 1-Feb. 1. Quail, Virginia partridge, Oct. 1-March 1.

British Columbia.

Deer, elk, reindeer, caribou, hare, Sept. 1-Jan. 10. Grouse, partridge, prairie fowl, quail, snipe, robin, meadow lark, Sept. 1-Feb. 1. Wild duck, Sept. 1-March 1. Pheasant protected to Sept. 1, 1886.

California.

Quail, partridge, grouse, rail, Oct. 1-March 1. Doves, June 1-Jan. 1. Male deer or buck, July 1-Nov. 1. Antelope, elk, mountain sheep, female deer protected at all times. Speckled trout, salmon trout, any variety of trout, April 1-Nov. 1. Salmon, Oct. 1-Aug. 3.

Canada—New Brunswick.

Moose, caribou, deer, Aug. 1-Feb. 1. Lawful number killed by one person or hunting party, three moose, five caribou, five deer. Use of dogs forbidden. Partridges, Sept. 20-Dec. 1; exportation forbidden. Snipe, wood duck, Sept. 20-Dec. 1; exportation forbidden. Black duck, woodcock, teal, Sept. 1-May 15. Non-residents must take out license (fee \$20), at office Chief Game Com., J. de Wolfe Spurr, St. John, N. B.

Canada—Ontario.

Deer, elk, moose, reindeer, caribou, Oct. 15-Dec. 15; may not be killed for exportation. Grouse, pheasant, prairie fowl, partridge, Sept. 1-Jan. 1. Quail protected to 1888; wild turkey, to 1889. Woodcock, Aug. 15-Jan. 1. Snipe, rail, golden plover, Sept. 1-Jan. 1. Swan, goose, Sept. 1-May 1. Ducks and all other water fowl Sept. 1-Jan. 1. Hares, Sept. 1-March 15.

Salmon trout, whitefish, Dec. 1-Nov. 10. Fresh-water herring, Dec. 1-Oct. 15. Speckled brook, river trout, May 1-Sept. 15. Bass, maskinonge, June 15-April 15. Picherel, doré, May 15-April 15.

Canada—Quebec.

Moose, deer, Sept. 1-Feb. 1 (female moose protected until Oct. 15, 1888). Caribou, Sept. 1-March 1. Hares, Sept. 1-March 1. Woodcock, snipe, Sept. 1-Feb. 1. Wild ducks, teal, Sept. 1-May 1. Grouse, partridge, Sept. 1-Feb. 1. Non-residents must take out license from Commissioner of Crown Lands. Exports of deer, wild turkey and quail forbidden. Fishing seasons same as in Ontario.

Colorado.

Elk, deer, buffalo or bison, Oct. 15-Jan. 1. Mountain sheep protected to 1895. Partridge, pheasant, prairie hen, prairie chicken and grouse, Oct. 1-Nov. 15.

Connecticut.

Ruffed grouse, quail, woodcock, Oct. 1-Jan. 1. Wildfowl, Sept. 1-May 1. Sora, rail, Sept. 1-Jan. 1. Trout, April 1-July 1.

Florida.

This State has no game law.

Maine.

Moose, deer and caribou, Oct. 1-Jan. 1 (forbidden to hunt with dogs, unlawful for one person to take more than one moose, two caribou, or three deer in one season. Mink, beaver, sable, otter, fisher, muskrat, Oct. 15-May 1. Woodcock, dusky, black or other sea duck, Sept. 1-May 1; law does not apply to sea-coast. Ruffed grouse (partridge), woodcock, Sept. 1-Dec. 1. Pinnated grouse, Sept. 1-Jan. 1. Woodcock and ruffed grouse may be killed only for consumption within the State.

Salmon, July 15-Sept. 15; angling within 100yds. fishway, dam or millrace forbidden. Smelts, April 1-Oct. 1. Black bass, Oswego bass, white perch, July 1-April 1. Landlocked salmon, trout, togue, May 1-Oct. 1; in St. Croix River and tributaries, May 1-Sept. 15; during February, March and April lawful for citizens to take "and convey the same to their homes, but not otherwise." Unlawful to take landlocked salmon less than 9in. length, or trout less than 5in.; or take or transport more than 50lbs. landlocked salmon or trout or both. Unlawful to take these fish in Kennebec, Molychunkamunk, Cuscutic, Mooselucmagantic and Welokenabecook lakes and tributaries, between Feb. 1 and May 1; unlawful in said waters to use spawn bait in September. Unlawful to take trout or landlocked salmon in the Rangeley stream between the mouth of Kennebec stream and Howard's dam from July 1 to May 1, or at the South Bog stream from July 1 to May 1, or in the Bemis stream from July 1 to May 1, or in the Cuscutic stream from July 1 to May 1, or in the Kennebec stream between the foot of its first falls, near its junction with the Rangeley stream and the upper falls at the outlet of Kennebec Lake, from Sept. 1 to May 1. Commissioners of Fisheries and Game: E. M. Stilwell, Bangor; H. O. Stanley, Dixfield.

Manitoba.

Deer, cabri, or antelope, elk or wapiti, moose, reindeer or caribou, Oct. 1-Jan. 1. Ruffed grouse, pheasants, partridges, prairie chickens, Sept. 1-Jan. 1. Woodcock, plover, snipe and sandpiper, Aug. 1-Jan. 1. All kinds of wild duck, sea duck, pigeon, teal, wild swan, or wild goose, except the variety of wild goose commonly known as the snow goose or the wavy, Aug. 15-May 1. Otter, fisher or pekan, beaver, muskrat and sable, Oct. 1-May 15. Mink and marten, Nov. 1-April 15. Exportation of game forbidden.

Massachusetts.

Woodcock, pinnated grouse, Aug. 1-Jan. 1. Ruffed grouse, partridge, Oct. 1-Jan. 1. Quail, Oct. 15-Jan. 1. Wood duck, summer duck, black duck, teal, any of the duck species, Sept. 1-April 15. Plover, snipe, sandpiper, rail, shore, marsh or beach birds, July 15-May 1. Wild pigeon, gull, tern, Oct. 1-May 15. Gray squirrel, hare, rabbit, Sept. 1-March 1. Deer protected at all seasons.

Speckled trout, lake trout, landlocked salmon, April 1-Sept. 1. Salmon, May 1-Aug. 1. Black bass, July 1-Dec. 1. Smelt, June 1-March 15.

Michigan.

Deer in Lower Peninsula, Oct. 1-Dec. 1; Upper Peninsula, Aug. 15-Nov. 15. Elk protected to 1889. Ruffed grouse, Sept. 1-Jan. 1. Quail, Nov. 1-Jan. 1. Woodcock, Aug. 1-Jan. 1. Pinnated grouse, Sept. 4-Nov. 1. Wild turkey, Oct. 1-Jan. 1. Wildfowl, Sept. 1-May 1 (Wood, mallard, teal and gray ducks, Sept. 1-Jan. 1). Snipe, Sept. 1-May 1. Exportation of deer, ruffed grouse, quail, prairie chicken, wild turkey, forbidden. Trout, May 1-Sept. 1. Grayling, June 1-Nov. 1.

New Hampshire.

Plover, yellowlegs, sandpipers, ducks, rails, Feb. 1-Aug. 1. Ducks on sea coast may be shot in February, March and April. Woodcock, ruffed grouse, partridge, quail, Sept. 1-Jan. 1. Deer, moose, caribou, Sept. 1-Dec. 1. Raccoon, gray squirrel, Sept. 1-Jan. 1. Hares, rabbits, muskrats, Sept. 1-April 1.

Landlocked salmon, speckled trout, May 1-Sept. 30. Lake trout (taken with hook and line), Jan. 1-Sept. 30. Pike-perch, white perch, July 1-May 1. Black bass, June 15-April 30. Muskallonge, pickerel, pike, grayling, June 1-April 1.

New Jersey.

As given by New Jersey Game and Fish Protective Society: Ruffed grouse, Oct. 31-Dec. 31. Quail, Oct. 31-Dec. 31. Woodcock, July 1-Aug. 1 and Sept. 30-Dec. 10. Prairie chicken, Oct. 15-Dec. 1. Upland plover, July 31-Jan. 1. Summer duck, Aug. 31-Jan. 1. Reed bird, marsh hen, Aug. 25-Dec. 1. Rail bird, months of Sept., Oct. and Nov. Gray, black, fox squirrel, Aug. 31-Jan. 1. Rabbit, Oct. 31-Dec. 31.

Salmon trout, last day of Feb.-Oct. 1. Brook trout, last day of Feb.-Oct. 1. Black or Oswego bass, May 31-Nov. 1.

Non-residents must take out license. New Jersey Fish and Game Protective Society has jurisdiction over entire State; fee, \$2; secretary, Wm. L. Force, Plainfield. N. J. Or, non-residents to shoot or fish in Camden, Gloucester, Atlantic, Salem, Cumberland and Cape May counties, may obtain membership certificate of West Jersey Game Protective Society; fee, \$5 first year, \$2 annually thereafter; secretary, William T. Miller, 106 Market street, Camden, N. J.

New York.

Deer, Aug. 15-Nov. 1. Dogging permitted, Sept. 1-Oct. 5, except in St. Lawrence and Delaware counties. One person may kill only three deer; may transport one carcass. Deer in Suffolk and Queens counties protected to 1891. Hare, rabbit, Nov. 1-Feb. 1. Black, gray squirrel, Aug. 1-Feb. 1; in Dutchess county, Sept. 1-Feb. 1. Wild duck, goose, brant, Sept. 1-May 1; in Long Island waters, Oct. 1-May 1; in Chautauque county, Sept. 1-Feb. 1. Bay snipe, sandpiper, shore bird, plover, in Queens and Suffolk counties, July 10-Jan. 10. Rail bird, meadow hen, in Queens and Suffolk counties, Sept. 1-Jan. 1; in Columbia county, Sept. 1-Dec. 1. Quail, Nov. 1-Jan. 1; in Columbia county, Nov. 1-Dec. 1. Ruffed grouse, partridge, Sept. 1-Jan. 1; in Suffolk and Queens counties, Nov. 1-Jan. 1; in Columbia county, Sept. 1-Dec. 1. Woodcock, Aug. 1-Jan. 1; in Oneida, Delaware and Dutchess counties, Sept. 1-Jan. 1; Columbia county, Sept. 1-Dec. 1. Robins, meadow lark, starling, Oct. 1-Jan. 1. Non-residents must take out license from justice of peace to shoot game in Richmond county (Staten Island).

Trout (speckled, California, brown, salmon), landlocked salmon, April 1-Sept. 1; in Forest Preserve, Adirondacks

etc., speckled, brown, California trout, May 1-Sept. 15; salmon trout, landlocked salmon, May 1-Oct. 1. Black bass, Oswego bass, muscalonge, June 1-Jan. 1. Black bass in Columbia county, Lake Mahopac, Schroon Lake and River, Paradox Lake, Friends Lake, July 1-Jan. 1; in Lake George, Brant Lake, July 20-Jan. 1. Black bass, muscalonge, in St. Lawrence, Clyde, Seneca and Oswego rivers, lakes Erie, Ontario and Conesus, and Niagara River above the Falls, May 20-Jan. 1. Lawful weight black bass, $\frac{1}{2}$ pound; lawful length, 8 inches. In Lake George waters, bullheads, July 1-April 1; pickerel, June 15-Feb. 15.

Ohio.

Quail, prairie chicken, Nov. 10-Jan. 1. Wild turkey, Nov. 1-Jan. 14. Ruffed grouse, pheasant, blue-winged teal, Sept. 1-Dec. 31. Mallard, wood duck, other wild duck, April 11-Aug. 30; between Sept. 1-April 1 no killing permitted on Sunday. Monday and Tuesday of each week. Woodcock, July 4-Dec. 31. Turtle dove, Aug. 2-Dec. 31. Squirrel, June 2-Dec. 31. Rabbit, Oct. 2-Jan. 31. Deer, Oct. 16-Nov. 19. Dates are inclusive.

Texas.

Deer, June 1-Dec. 1. Wild turkey, Sept. 15-May 15. Ruffed grouse, July 31-March 1. Quail, Sept. 1-March 1.

Utah.

Quail, partridge, grouse, Aug. 15-March 15. Wild ducks, Sept. 15-April 15. Quail and other imported game protected to 1887. Deer, Sept. 1-Dec. 1. Campers in the mountains may in July and August kill sufficient of the males to supply themselves with food in camp. Elk, antelope, mountain sheep, protected to 1890.

Trout, June 15-March 15; lawful size, 6in.

Vermont.

Deer protected to 1890. Quail, ruffed grouse, Sept. 1-Feb. 1. Woodcock, Aug. 15-Feb. 1. Wild geese and ducks, Sept. 1-May 1. Exportation forbidden.

Washington Territory.

Deer, elk, moose, mountain sheep, Aug. 15-Jan. 1. Wild-fowl, Aug. 15-April 1. Prairie chicken, sage hen, Aug. 15-Jan. 1. Grouse, pheasant, quail or partridge, Aug. 1-Jan. 1.

TRANSPLANTING QUAIL.

Editor Forest and Stream:

Several years ago myself and brother bought in the New York market three dozen live quail in January and sent them to our old home in Connecticut, placing them in charge of a friend competent to care for them, to be kept till the cold, rough weather was over and then liberated. They were kept confined till early in March, only one dying, while the rest were all healthy and in good condition, when they were taken out and let loose, a pair in a place, in localities affording excellent cover and feeding ground. We expected to have a few days shooting the succeeding fall, but on taking our annual trip to the old stamping ground and working thoroughly the entire section where the birds had been placed, we did not find a single quail. We were told that the birds had frequently been heard calling early in May, but after that time they were neither heard nor seen. Is it probable that they returned to the country from which they were captured? I do not know whether the birds we purchased were from the South or West.

This being my only experience in this line, I have often wondered what became of the birds. I think now, perhaps, a mistake was made in assuming the responsibility of mating the birds; it might have been better to have turned them loose in a body and allowed them to have "managed their domestic affairs in their own way."

Will others who have tried similar experiments with this lively game bird tell us of their success through the pages of FOREST AND STREAM? Was the effort to introduce the Mesina quail in this country an entire failure? A.

DAKOTA GAME AND RESORTS.

Editor Forest and Stream:

My last letter to you has awakened a great interest in Dakota. Letters are pouring in every day, and the questions are so varied and numerous I must beg to reply to the majority in a letter to you. I have written to many sportsmen personally in the last week and if all come to Dakota to hunt who have said they would next fall, there will be news for the FOREST AND STREAM.

The best time for prairie chickens is the latter part of August. Then as but few would come for less than a two weeks' hunt they can have goose and duck hunting; and as the deer law expires on the first of September, they can vary the sport as much as may please them. Board is \$5 per week. Horse hire reasonable. Shooting is to be had in all directions from this city. You cannot start out in any direction without finding prairie chicken shooting and goose and duck shooting. Deer within three miles of us. One of my friends was in from the country on Saturday; he lives up the river six miles, and as I have stated before, there is brush and timber skirting the river; he told me he had not seen so many deer at this time of year in the five years he had lived here as he has seen in the last week or two. He told me he could walk out any evening or morning and see them walking around. But if any one thinks he can come out and shoot them without an effort he will "get left." I have gone up there evening after evening and have seen from two to six in an evening, but could not get them. I am not a professional. But any one coming here can go up there, stop with a farmer, and by going down to the timber evening and morning can have fine sport. They will find geese on the sandbars of the river by the thousands, affording splendid rifle shooting from the brush; and by going into a grainfield and digging a pit they can have rare sport. You can get decoys here at twenty cents, unpainted. Better bring one dozen with you. Duck decoys are not needed.

To the young men writing me who want sport and business, I would say you should have some capital in coming to a new country. With one thousand dollars, with pluck, and it takes pluck (and a willingness to rough it) any one can become the possessor of a good farm. There are no business openings for clerks, as all western towns have a big supply of young men. To come cheap, get a round trip "land seekers' ticket;" if not sooner, at Chicago.

For bear, elk, deer, antelope, mountain sheep, etc., you must go further west. On the mountains south of the National Park is the best place. We will give all a warm welcome at Bismarck, the capitol of Dakota, and will do all we can to make your stay pleasant and will send you where you can find game. W. H. WILLIAMSON.

BISMARCK, Dakota.

MR. GRIFFIN SMITH, of Longmont, Colo., claims to have shot a mountain lion on the Little Thompson which measured nine feet from the end of its nose to the tip of its tail,

ON A RUNWAY.

ON the old dirt road that runs down from Minden to Conshata Chute along the eastern borders of Lake Bistenau, in Northwest Louisiana, twelve miles from Minden and one mile and a half from where the road crosses Brushy Bayou, at the foot of the old mill dam, and just as you reach the high lands ascending from the bottoms through which flows the bayou, lived, in 1862, and still lives for aught I know, Green Mays, one of the greatest hunters of the Southwest.

A man of powerful frame, of untiring energy, passionately fond of the wild sports of the woods, he had settled here, in the midst of an extensive forest abounding in wild game, for the enjoyment of the great passion of his life. He had made no bad selection of a home suited to his tastes. Around him stretched an almost unbroken forest, where the antlered monarchs paid court to the meek-eyed does in undisturbed security. A mile back from his house flowed the waters of Brushy Bayou, filled with jack and bass and other fish, where he could, after a few hours' sport with rod and line and hook, supply his table with a luxury a king might envy; while two miles distant, nestled among the hills, was Lake Bistenau, a very paradise for wildfowl, whence might be heard in the still mornings the distant honk, honk of the wild geese, inviting the sportsman to their own destruction.

Well do I remember when, just twenty-four years ago, I traveled that road for the first time. I can almost see the flock of green-headed mallards sporting themselves in the shallow water at the foot of the old deserted and broken milldam, just above the ford, as we approached the bayou on our way down from Minden. Oh! how I wanted a gun. I was young then and had inherited a love for sport. I did the best I could with a little .22 caliber Smith & Wesson parlor pistol, the most formidable weapon we could muster, but I did no harm to the ducks, other than to cause them to seek other haunts for their aquatic sports. A mile and a half beyond on the brow of a hill we came to a comparatively new settlement. The dwelling, built of hewn logs, the stables, the cabins, the fences all bore a new and neat appearance. What attracted my attention most was a tree that stood just outside the gate, between the road and the house, that formed a sort of rack, upon which were piled the horns of many a noble buck. They were the trophies of the hunt, which the great hunter had captured and out of which he had created a monument to his prowess. It needed no one to tell us that this was the home of a great hunter. But I was on a mission of business and not pleasure and we passed on to our destination, about eight miles further down the road. The occupation of Nashville just at this time by the Federal forces gave an unexpected turn to events, so far as I was concerned, and caused me to prolong my visit to this country just four years longer than I at first contemplated. But I was disposed to make the best of the situation, and can now look back to many a day of royal sport enjoyed during that time.

A few days before Christmas, I received an invitation from Mr. Green Mays to join him in a Christmas deer hunt. I was a novice then in deer driving, my previous experience in hunting being limited to the pursuit of smaller game. Of course I accepted the invitation. On Christmas eve I rode up to the gate of the great Nimrod, whose wonderful skill in the chase had given him a fame far and near. He was expecting me and came out to welcome me with the genial hospitality of a veteran hunter. His hounds had been rested a few days for the occasion, and joined in the welcome extended to me by their master in a chorus of deep-mouthed bayings, as if they understood full well the import of my coming. Nothing opens the way to the friendship and confidence of a pack of deerhounds so readily and quickly as the possession of a gun and a hunting horn. They recognize in them at once the symbols of the chase. That night, before a roaring wood fire in the wide-mouthed fireplace, we discussed the pleasures of the chase. My host entertained me with many an incident from his own experience, and with the wonderful exploits of Charlie, a splendid specimen of the black and tan deerhound and his favorite of the pack, and when the hour for retiring came, I went to sleep to dream of a wild and incongruous mixture of antlered bucks, screeching wildcats and baying hounds.

By daylight the next morning we were through with breakfast and by sunrise we were in the saddle, with the eager hounds around us, and off for the haunts of the game. A neighboring hunter had been notified and was promptly on hand to take part in the hunt. My experience in the chase was very limited. A few years before I had enjoyed the pleasure of a camp hunt with some skillful hunters in South Alabama, but only got one chance to shoot at a deer. I boldly laid claim, however, to exemption from the initiation act, a ceremony customary among the old deer hunters of the Southwest and enjoyed very greatly by all except the victim. When a young hunter kills his first deer he must be "blooded" to entitle him to be recognized as a sportsman. If unsuspicious, the older hunters make him believe that his assistance is very important in skinning and dressing the deer he has killed. He is put to hold a leg or some important part while the dressing is going on, and while his attention is thus engaged, one of the hunters with bloody hands wipes them over his face, and this is the signal for a burst of merriment. It is useless to be offended, and he soon recognizes the situation and makes the most of it.

Mr. Mays had assured me that he could put me at a stand where he could and would run a deer within a few feet of me and that if I did not kill it, it would be my own fault. Though poorly equipped for the purpose, I felt confident I could do the shooting, if I only had a chance. Guns were scarce in that region at that time, and I had to content myself with an awkward old blunderbuss, with a home-made stock, so heavy and cumbersome that I could scarcely wield it at all. It was the best to be had. Arriving at our destination, I was told to stand at a certain spot, and there I was left, with the assurance that a deer would be certain to come out at that place.

Left alone in the forest I stood around for a time and directly began to get tired of the monotony. I saw no reason why a deer should come to that particular spot more than anywhere else, and I seriously doubted whether he would. The unbroken woods extended all around as far as I could see, and one place looked to me as favorable as another. I saw a log about thirty or forty yards away that was much more tempting to me than standing in that place. I concluded the deer was just as apt to come where the log was as where I was. I saw no sensible reason why he should not. And then the log offered a good seat and I had none where I was. Furthermore, I concluded the log was in shooting distance, anyway, if the deer should really prove to be so very fastidious as to be satisfied with no other place

than the one where I was told to stand, and off to the log I went. A few minutes later I heard the distant note of a hound. Was that one of our dogs? Was he really going to get up a deer and was that deer going to come out where I was? It looked very improbable. But listen, I hear the hound again, and this time he is joined by another. Still another joined in the cry and they seem to be coming nearer. I get restless now. Maybe that deer is coming. I look at my old blunderbuss and my heart begins to thump loud enough to be heard. Nearer and nearer come the dogs. Now they are all in full cry. I can hardly hold myself still. I hear a rustle in the leaves at the bottom of the elevation on which I was told to stand, and in a moment more a beautiful yearling deer, fat and slick and blue, emerges in graceful bounds from the thick undergrowth, coming directly up the hill and straight on a line to the spot where the old hunter told me to stand. A few feet behind it comes another, and then another. With what exquisite grace in easy bounds they glide along. The dogs are still a good distance behind and they are not badly frightened yet. Little do they suspect that my old blunderbuss is waiting to belch forth fire and smoke and lead for their destruction. On they come. My! if I had only staid where Mr. Mays told me. Three in a line. What a shot I would have had. It is too late now. The leader has reached the very spot where I was told to stand. I raise my gun and fire. Headlong to the ground plunges the leader. The others, started by the report, dart by like a flash of light. I fire my second barrel at their vanishing forms as they disappear in the bushes. Well, I have killed one at any rate, and I rise to go to the place where it fell only to find no deer. In blank amazement I look around. There is the place where it fell, but no deer is visible in any direction. I can scarcely credit the evidence of my own senses, so confident was I that I had killed the deer. The hounds had passed in the meantime like a whirlwind on the track of the now thoroughly frightened deer.

In the midst of my dilemma Mr. Mays rode up out of the drive and asked me what I had done. I told him and pointed to the place, plainly visible, where the deer had fallen. With the knowledge of an expert in such matters, he remarked: "Your deer is not far off," and with these reassuring words rode in the direction the deer had taken. In a few minutes, from near the spot where I had last caught a glimpse of their rapidly disappearing forms, I heard his pleasant voice announcing "Here's your deer." The sensation produced by this announcement can better be imagined than described. In a moment my feelings of disappointment were gone, and in less time than it takes to write these words, I was standing over the first deer I had ever bagged in the full realization and enjoyment of that wonderful and indescribable sensation of exaltation, the result of a thousand commingling emotions of pleasure that comes only to the young and ardent hunter, and to him but once, and that is when he stands beside the prostrate form of his first deer. H. E. JONES.

NASHVILLE, TENN.

JUNE DEER FLOATING.

Editor Forest and Stream:

The fishing about here has been unusually good so far this season, the trout running larger and more of them, and not the least good thing about it is that it has convinced the natives that it is a good thing to have protection. Two years ago for the first time in this section, a number of the streams and ponds were restocked, and last season the six-inch limit was very generally observed, and the gain is so apparent that the guides are anxious now to have the law observed more strictly. And most of them regret that the hounding bill was repealed. They see that if protecting the trout results so well, perhaps the deer would survive the loss of a few hounds. There is one man in this place who used to be a good still-hunter and thought it the manly way to hunt. But he has grown older and developed a "bay-window," and consequently cannot travel the woods as easily as in the old days, and finds it much easier to have the deer driven to him. He has a business in which he can employ a good many men. Most of them are constantly in his debt, and therefore will do his bidding, and are ready to "put out the dogs" for him in season or out. He used his influence to get the hounding bill repealed, but laughs at the stupidity of the legislators to be fooled by the arguments that were presented to them last winter. But he is now at the lakes, the Ausable, with two others, floating for deer in June.

A number of the guides, Le Grand Hale, Braman, Charley Beede, Ed. Phelps, the three Turnbull boys, Frank Parker and one or two more have organized a club for the protection of game, and have men now out watching the above-named party, and hope to get evidence to convict some of them. The hotelkeepers, or some of them, are very much opposed to the movement, and say they will do all they can to prevent members of the club from getting work as guides. But I think most sportsmen will have intelligence enough to employ them in preference to lawbreakers. The club secured the conviction of a number for fishing on Sunday recently. They are doing a good work and should have the help of all who care to fish or hunt. I hope that you will not give up the fight against hounds. Let us have that law again, and let it come to stay next time.

There is no opportunity to buy FOREST AND STREAM here, and I can't do without it. Send me a bill for a year's subscription, and I will remit. X.

KEENE VALLEY, Essex County, N. Y., June 30.

[Such efforts on the part of Adirondack guides should be encouraged. Upon the conviction and punishment of the June deer floater, the Forest and Stream Publishing Company will pay into the treasury of the club \$25.]

SOUTHERN QUAIL GROUNDS.—Elizabethtown, Tenn., June 21.—This beautiful little town lies in the forks of the Watauga and Doe rivers, close up in the great Smoky Mountains. Quail are abundant; no end to them. Stopping as we have been in towns of from fifteen hundred to four thousand inhabitants, it has been a surprise to me to hear the notes of Bob White almost every waking hour for the past two months, and on our drives to see them as they rise by the roadside and once or twice in the garden. Where is this, do you ask? Anywhere along the Western & Atlantic Railway from Marietta, Ga., to Dalton, Ga., and from there along the line of the East Tenn., Va. & Ga. Railway to Johnson City. Elizabethtown is said by knowing ones to have the best bass fishing in the South, and we are told that within twenty miles of here is as fine trout fishing as any one need ask. We hope to try it, and then to be able to tell your readers how the bass fishing compares with the St. Clair Flats, Kelley's Island and the Potomac, and how the trout fishing will compare with our Northern streams.—V. A. T.

THE PRAIRIE CHICKENS.

Editor Forest and Stream:

While raking hay this week I ran over the nest of a prairie chicken. She was just hatching; had eleven that were able to get out of the nest and skulk, and one that was wet. She fluttered around on the ground with her feathers ruffled and tried to get me to follow. On my next round she appeared as a male, with head and tail up, and walked into the grass as if she did not have any claim on the peepers. After dinner I went back and re had removed all the young but the helpless one. That she had killed, I suppose; anyway, it had its skull crushed. A queer freak of a mother. I agree with "M. H.," of Champaign, that the law ought to be changed from Aug. 15 to Sept. 15. They would be grown by that date and would all fly up at once, and the duke could not bag the whole covey. WALTERS.

SHEFFIELD, Ill.

Editor Forest and Stream:

I have never seen so many young chickens, and many of them are half grown and more. W.

BISMARCK, Dak.

Editor Forest and Stream:

Sept. 1 is still the legal time to commence killing prairie chickens in Iowa, and it is to be hoped that the law will be better observed than it was last season. The weather has been everything that could be desired for hatching. Unfortunately a good deal of the prairie grass was not burned until May, which destroyed a great many eggs; but there are still enough left to afford good shooting if let alone until they are ripe. A covey of fifteen is the largest number I have seen together yet. I heard the shrill call of Bob White to-day, it being the second quail I have ever seen in this little prairie village. I see a solitary woodcock every summer, never varying forty rods from the spot where I first saw three years ago. It must be the same bird, and I think I shall eat him this year if he puts in an appearance. RAND.

LATIMER, Franklin County, June 30.

HOW LONG CAN FOXHOUNDS RUN?

IN reply to "Hounding," of Virginia, I would like to say that one of those sweeping dogs he mentions that don't follow the track, but grab on when they get a hot scent and then dry up, are generally here in Massachusetts swept off the earth as good for nothing. We want one or a pair of dogs to take their trail in the morning, start their fox and follow him till shot or holed, and only a first-class dog will do it; no sweeper nor grabber can do it alone; perhaps twenty or thirty of these sweepers might, but it looks to me a little more sportsmanlike to swindle one out of his life with a charge of shot with only one or a pair of dogs to follow him. If "Hounding," of Pine View, will visit me next November I should be heartily glad to see him and a pair of his best hounds, and when he has proved them able to catch an old dog fox, I will be glad to acknowledge it through the columns of FOREST AND STREAM, and he can if he so pleases sell his dogs for a good price here.

As for Col. Tucker's dogs, I mentioned them as representative Southern hounds. I noticed them spoken of and recommended in FOREST AND STREAM, and I think from the pair I had of him that they are a well bred hound, though I think they have been bred-in too much. But if I were out of bounds and was going to start a good pack I would send to him and get one or two of his bitches and breed them to a good Northern dog.

In my opinion the difference is not so much in the bounds as in the kind of ground they have to run over. Take following like Monadnock Mountain, and a fox can run for miles there on bare granite ledges; and until I see a fox caught I shall not believe it can be done. The Myopia Club have a big pack of the best hounds that money will buy, English hounds I think they are, and I often read of their meets; but I have never happened to see an account of their catching a wild fox, though they will mutton a little young one that some farmers boys have had tied up all summer to get a couple of dollars for it in the fall.

I hope some of our abler hunters will write you on this subject. H. C. NEWELL.

ASHBURNHAM, MASS.

HUNTING RIFLE SIGHTS.

Editor Forest and Stream:

I have intended for some time to say a few words on the subject of hunting sights, but have waited, hoping that some one of more experience would do it for me. Perhaps if I start the subject some one will take it up and finish it more ably than I can.

Your trajectory test has given all your readers the advantage of knowing what different rifles will do, and if we could have a good argument on the sight question through your columns I think it would help many a young hunter to decide what is best. My own experience is that most hunting rifles, as they come from the factory, are not sighted to perfection by any means, and that open sights of any pattern are only reliable when used by the coolest of old hands. In quick shooting, shooting in dim light or at a dim object, it is extremely hard to draw just the right amount of front sight every time. More than half the misses that I have made at game were made by not having a plain view of the front sight because the notch blurred, or from drawing too coarse when in haste. With a peep sight all this is avoided. You cannot draw too coarse, and if you will use a large aperture, say one-tenth of an inch, you will never have any trouble in finding game through it. Many people think that a peep sight must be made with a very small aperture to be accurate, but this is a fallacy. The light is stronger in the center of the aperture than near the rim, and for that reason the eye finds the center. It is very hard to convince some people of this, because in aiming the aperture looks so large and they can see so much ground around the target and so much of the barrel.

The only reason that peep sights have not been used for general hunting is because they have been made with too small apertures, the effect being to darken the mark too much. The common peep sight put on target rifles is of little use in hunting, as one can never find the game through it; but if the peep hole is reamed out to one-tenth of an inch it will be found to be the quickest sight that can be used. I prefer the Lyman sight to any other because it is so small, compact; but as far as the sight itself goes, I should think that any tang peep would do as well. The plan advised by Mr. Van Dyke would be excellent if the stopping place was put at point blank.

I think that a bead front sight is much better than the cone-shaped ones now put on all hunting rifles. An open bead, such as is made by Mr. Wm. Lyman, is the best I have seen. The end of the bead being tipped with ivory, shows well on any object except pure white. Ivory, moreover, does not shine or glitter in bright sunlight. A sight of white (?) metal is so nearly the color of a deer that it does not show on one's body at all on a cloudy day. A black sight shows well on game in a good light, but if used with an open rear sight it does not give contrast enough, and therefore gets lost in the notch. With a peep rear sight it does very well, but is not near so good as ivory.

The globe sight is a bead sight almost as old as rifles, but it is not of much use in hunting, as it is too hard to find game through it.

I have very freely used the ideas and even the exact language of Mr. Lyman, Mr. Van Dyke and others, and I ought to add several lines of quotation marks to be distributed through the letter. C. L. S.

PORT CLARK, TEXAS.

Editor Forest and Stream:

Now that the trajectory test as given by FOREST AND STREAM has passed and time elapsed for all to have given its record sufficient study to enable one to make a choice out of all the different makes and styles of arm most suitable for each hunter in bagging his game, whether it be on the Western plain or secreted in dense thickets of the Eastern States, I may suggest for the benefit of the latter class, that one essential point must ever be kept in mind, *i. e.*, that their guns are usually sighted for only fifty yards instead of two hundred. One may look upon the record and feel proud that he is the owner of a gun that makes a trajectory of only eight or ten inches at two hundred yards, and flatter himself that any deer showing up to him within that distance is bound to get hit. If a deer could be made to sit deliberately erect upon its haunches like a woodchuck while the hunter took his own time to hunt a dead rest for his gun, the probability is that the deer would receive a wound some two or three feet below the point aimed at. But few such chances, however, are likely to occur to most of men in a lifetime. One-half of the game will be shot within the fifty yards, and a large percentage of the rest seen will come within seventy-five or one hundred yards, so that the sights set at fifty are about the best that can be had for all-around shooting. One may chance to see a deer at two hundred yards or more across some hollow or in very open woods. If so, the distance and a correct elevation over its back of some two or three feet—according to the intervening space—will constitute the only chance of a successful hit.

A board one by three feet, set up horizontally two feet above the ground, at one, two and three hundred yards to fire at off-hand occasionally through the open season, will be found to afford good practice. A few shots at each with stationary sights, no matter whether the rifle carries forty, seventy-five or one hundred grains of powder, will fully satisfy most of hunters that good engineering, even with an inferior weapon, will secure more game than the best of guns in the hands of a novice. CAP LOCK.

FREWSBURG, N. Y.

BEARS IN COLORADO.—Berthoud, Col., June 21.—Two weeks ago Mr. O. E. Rhodes, a young man who is herding my cattle some thirty miles up in the mountain, killed a large female cinnamon bear. While out on his horse looking after the cattle he discovered her down the mountain rooting over stones after ants. He left his horse and boots, so as to make as little noise as possible, and with his .40-90 Ballard crept softly down through the rocks and trees to within about 100 yards of her. At this time she had got up on her hind feet and was scratching the bark off of a small pine tree, as you have seen a cat do. He gave her a shot plump through the heart. And yet she got down and started off, and it was only after giving her three more shots and having his dog knocked some thirty feet down the mountain that he secured the old lady. She was large, but poor. He loaded her on his pony from a boulder and then the pony got the wind of her and ran away, got fast in an aspen thicket, and finally arrived safe at the cabin. Mr. Rhodes says that bear sign is plenty. Blacktail deer are also plenty; he says he could kill one or more any day if he wanted to.—ELK.

MUZZLE VS. BREECH.—Jamestown, N. Y., July 3.—*Editor Forest and Stream:* I wish to call the attention of Mr. Napoleon Merrill to the fact that in your test of hunting rifles there was not a muzzleloading hunting rifle in the contest, the nearest to it being the one fired at the 100 yard range, and that one was beaten in regularity of bullet flight, *i. e.*, in accuracy, by twenty-seven of the thirty-three breech-loaders in competition. At 200 yards the muzzleloader target rifle, with all the appliances of a target rifle, beat all of the breechloading hunting rifles in the regularity of shooting, the nearest one to it being the Maynard .40-cal., which was just four-thousandths of an inch behind the Romer muzzleloader, the difference in elevation at 100 yards of the five shots being: Romer, .292; Maynard, .296; difference, .004 of an inch. The work of the breechloader is selling it.—H. BURNS.

PRINCE LEOPOLDO AUGUSTO, of Brazil, who is a midshipman on the Brazilian sloop Almirante Barroso, now in New York harbor, went woodcock shooting in New Jersey last Thursday. The party went to Fanwood, where they secured the services of Robert Walpole as guide. The day's bag for three guns consisted of eighteen woodcock, one hawk and a mud turtle, which the Prince took back to the ship with him.

WHAT GAME WAS BENJAMIN AFTER IN JUNE?—A late issue of the *Utica, N. Y., Observer* reports: "While Benjamin Hartman, of Oriskany, was out shooting birds with several companions yesterday morning, about two miles above Oriskany, he chanced to be near a tramp when the gun accidentally went off. The charge of shot passed through the foot of the tramp, injuring it very badly."

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.—*Adv.*

AMONG THE NORTHERN LAKES of Wisconsin, Minnesota and Iowa, are hundreds of delightful places where one can spend the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely rejuvenated. Each recurring season brings to Oconomowoc, Waukesha, Beaver Dam, Frontenac, Okoboji, Minnetonka, White Bear and innumerable other charming localities with romantic names, thousands of our best people whose winter homes are on either side of Mason and Dixon's line. Elegance and comfort at a moderate cost can be readily obtained. A list of summer homes with all necessary information pertaining thereto is being distributed by the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—*Adv.*

Sea and River Fishing.

A HUNT FOR A TROUT STREAM IN ALASKA.

A LITTLE more than a year ago, April 9, 1885, there appeared a communication in the FOREST AND STREAM over the signature of "Reel Plate," of a wonderful catch of trout in a stream near Wrangell, Alaska. In our work of surveying this year we have used this place as our headquarters. Shortly after our arrival from the south I began to make inquiries as to the location of this trout stream, that I too might have a taste of the sport. Not that trout streams are scarce in Alaska, but I love to verify for myself what I read from others. I have taken seventy-five trout of an afternoon from a stream on Prince of Wales Island, and I have taken thirty from one pool on Revillagigedo Island without moving except to take the fish from the hook. All of these were caught with the fly, too, but the sport was tame compared with that which I am about to describe. One party, who came here with the army of occupation and has been here ever since, told me that "it was down there, this side of that mountain, where the Wachusett's officers went to fish." He pointed to a mountain, south of Wrangell, which slopes down to a point projecting into Zimovia Strait, and distant about five miles in a straight line. One day last month a companion and I went there but did not find the stream. The walk around by way of the rocky beach was more than five miles, and we were tired enough to take the boat that had been left for us before we got half way back.

Next, a stream was reported on the mainland opposite Wrangell Island, which looked promising and might be the one we were looking for. One Sunday we pulled over there about ten miles. There could not be a better stream for trout than the one we found there, broad, rapid, full of deep pools and dark holes, but somehow we could not lure them either by bait or by fly. Again we had our pains (muscular) for our sport. There is an unusual amount of snow on the mountains this season, and here the high mountains are close to the coast. The melting snow has kept the streams swollen, and this may be the reason for the trout not biting on the mainland.

We next interviewed a missionary who has been here a number of years, and who can enjoy a day's sport with the rod and gun as well as looking after the welfare of the natives. He did not know where the Wachusett's officers fished, but he could tell us where there was a good trout stream; "just beyond that point of land to the south." Why, that is the direction we took the first time, only we searched this side of it. Another stream had been reported on Etolin Island, on the opposite side of the strait from Wrangell Island, but I concluded to try the missionary's stream first.

This time I got a lift in one of the steam launches that had worked down that way. The third was the lucky time. Whether it be the one that "Reel Plate" fished in or not, I do not know; but, like the missionary, I know it contains good fishing. It is a roaring, tumbling, leaping stream, less than a mile long, with a beautiful little lake at its head as a feeder. I was landed at its mouth about mid-day, and scrambled along its banks, over rocks and through the thick underbrush and fallen trees until I came to the lake, which I reached about 1 o'clock. There is one plant in the undergrowth of this country which I heartily detest, and it is called the "devil's club." It branches from the roots and grows up in a straight stem five to six feet high, bearing a tuft of leaves at the top. Its whole length is as thickly beset with spines as it can be, and these are so brittle that they break off in the flesh whenever they touch one; and touch one they will, however careful he may be to avoid them. The stem is as elastic as a stick of rubber, and springs up and bounds back when one least expects it. I have made up my mind if I should fall not to grasp this plant to save myself. The disagreeable occupation of picking these thorns out of my flesh has followed every outing I have taken in this country. Now that I have vented my spite on it I will go on with my fishing.

I made a few casts in the outlet of the lake, but got no rise. The day was bright and warm and the lake unruined. I then fished down stream, and captured twenty-one fish before I reached its mouth. Once I took a double, weighing ten and fourteen ounces. The three largest weighed two pounds and four ounces, and the whole catch five pounds. I had only time to hurry over the stream once, for the boat was to be along to pick me up about 5 o'clock, and the time for the best fishing was lost. When I got on board the vessel the sight of my string of beauties excited others, and we made arrangement to visit the stream on the morrow.

The party this time was composed of three. We went in a small boat, and the distance to be pulled was eleven miles in a straight line. The day was cloudy, with occasional rainy spells. We had covered about five miles of the distance when it began to blow in strong puffs directly ahead, the sea became choppy, and we had a strong tide against us. We were obliged to haul up on shore, secure our boat, and trudge the remaining distance on foot. We arrived at the stream about the same time as on the preceding day, and hurriedly whipped the stream to the lake outlet, but got nothing on the way. All the conditions were favorable for good fishing—a clouded sky and a slight breeze just ruffling the surface of the lake. This was the finest afternoon's sport I have had in Alaska, and I have had many, this being my second season up here. The fish ran good sized, and were game enough to satisfy any angler. They rose greedily to the flies, and three times I landed doubles. I captured twenty-five in about an hour and a half's fishing, and one of my companions caught eleven. The third was a novice in the art of fly-fishing and did not get a rise. He whose score was eleven hooked probably more than I did, but he was unfortunate in landing them, and finally broke his rod by getting his line entangled in some bushes at his back. Our combined catch averaged about a half a pound to the fish; the largest did not exceed a pound. As on the preceding day, we lost the best hours for fishing in the evening.

I have noticed that all the trout caught in the lakes of this region have the black spots brighter and larger and more evenly distributed over the body on a golden background. The "golden iridescence" is only occasionally seen on those taken in the streams; the ground color is silvery, and the spots are smaller on the belly and more scattering. All of our catch were destitute of the purple streak along the sides of the body. I think the name of "cut-throat" trout given to this fish by Mr. Charles Hallock preferable to the old one of "rainbow" trout. The dash of scarlet on

either side of the throat is always present and very suggestive of a cut-throat. I wish "Reel-Plate" and also "Piseco" had been with us to see how Alaskan trout take the fly. From the *Alaskan*, a newspaper published in Sitka, I see the following in the issue of Feb. 20, 1886. It is a reprint from "Fishing with the Fly," in which the article on the salmon and trout of Alaska was furnished by "Piseco." "A fly they would not rise to," writing of *Salmo purpuratus*. "I can also inform 'Piseco' that I have had the salmon trout rise to the fly, which he says, 'this the trout, while in Alaska, fails to do.' I used only two flies this afternoon, a 'hare's ear' for tail fly and a 'gray palmer' for dropper. The fish, I think, showed a slight preference for the 'hare's ear.' We did not take the numbers that 'Reel-Plate' records, but I venture to remark that we had as much sport; and I have a good many days of such sport ahead of me before the run of salmon blocks up the streams. T. H. S.

WRANGELL, Alaska, June 8, 1886.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—XVIII.

THE next day was Bob's birthday, and as a birthday is not an every-day affair, it was resolved to give Miss "Brown Eyes" a good send-off into her seventeenth year in the shape of a picnic, to be given under the management of the "Jones Family," across the lake at the "North Pole Spring."

Jim and I had discovered this spring while wandering around on our first unsuccessful hunt for Maybert's Creek, and, as we afterward learned, it is only about five rods from the creek, at the end of an old shingle cutter's road leading off from the main road, and about three-quarters of a mile from the lake.

I note this spring because it is the best one anywhere along the lake or near it, and if any thirsty brother ever chances along the road near this little trout spring it will pay him, if it be a hot July or August day, to trudge down to it and slake his thirst with a draught of as pure, sparkling, ice-cold water as ever welled up from the bosom of Mother Earth. Then, when he has covered about half the distance back to the road, it will pay him to trudge back again and do it all over, for it is a rare spring.

Hyperboler was cleeted master of ceremonies, and by 10 o'clock a big lunch and all the party, except the skipper, who was indisposed, were off across the water for the spring and a good time.

As old Dan can handle a rod with more comfort than he can the demoralized old right leg on a three-quarter-mile walk, and as there was no conveyance at hand to take him to the spring and as old Hickory was laid up in camp for repairs (I have carried the old fishhawk on my back on more occasions than one to a desired spot he could not reach alone, where he wanted to sit and fish), he and Muller spent the day fishing till the picnic broke up in the evening with somewhat better results than had attended us the day before.

When all were back in camp the birthday festivities wound up with a supper by candle light, and I venture that if Miss Bob's days lengthen even into the serene and yellow leaf she will pass no pleasanter or happier birthday than she did there in the Michigan North Woods, surrounded by her new made friends, "the Joneses."

As I lay awake a while that night after the camp was at rest I tried to figure out the reason for the indifferent sport we had been having, and could arrive at no conclusion other than we had been paying too much attention to camp comforts; we had been sleeping too late in the mornings and fishing during the wrong hours of the day.

Before daylight in the morning I was out and half a mile down shore in a boat, without having disturbed the slumbers of the girls or caused a break in the rhythm of Muller's sonorous snore, and long before smoke curled out of the stovepipes at camp as a token that the philosopher was still alive, I was a mile and a half down and across the lake among a small school of bass that were biting as if they wanted to make up for lost time. Now and then, too, a longnout took a notion to try the temper of the old rod, but always with disastrous results—a stroke of the gaff and a whack of the club ending the controversy in one round. Then at last the goggle-eyes began tampering with the frog, and it was time to reel up and lay the rod in the boat, for as Ben says, "if there's anything that makes a feller mad it's them durned red-eyed sunfish a nibblin' an' a twitchin' at yer bait when ye ain't a fishin' fur 'em."

I was back in camp by 9 o'clock for a late breakfast, with a string of fish that was good for weak eyes; and when they had been duly inspected the whole family resolved to be on the water by daylight next morning to beat James Mackerel's record. Ben was so fired up at sight of the string of fish that he took a boat and "ole quintsence" and started out after breakfast to "see if he could hev a little fun on his own hook," but after three or four hours' absence he came back with a long visage and no fish, not even a goggle-eye.

As he leaned his rod up against the popple some one fired the regulation "what luck Ben?" at him, to start him to ease his mind of its load of disappointment. "The' aint nary fish aween here an' the sawmill," he answered solemnly, "fur I rowed plum' up there an' back, an' my frog jest a draggin' behind till the spots is all wore off it, an' I didn't get a cussed bite. I could ketch as many as that in a hoss trough," and he reached for a camp stool, on which he balanced himself with one leg swung over the other, scraped a match, and was soon lost in a cloud of solace from the briar root.

Next morning with all the good resolutions as to early rising, old Ben was the only one out before daybreak, and going over to call Bob, who had promised to go along if he would awake her, they were soon ready, and as they left the landing I heard him say, "Now, Bob, ef there's anything in airly fishin' yer uncle'll show ye how to ketch 'em," and then the regular dip of the oars shortly took them out of hearing, past the point a couple of hundred yards below.

None of the rest had energy enough to get out, and the sun was well up before the camp was astir. When breakfast was ready an hour or two later and the mists had lifted from the water, they were discovered quietly fishing in the first little bay below camp, and the breakfast call on a frying pan soon brought them in hungry and happy. "Look at them fellers, will ye?" said Hyper, as he dragged a fine string of fish to the edge of the water, twisting and flopping and throwing spray over him in small showers, "when Bob an' me go a-fishin', we go a-fishin', an' don't ye forget it; hey! Bob?" But Bob had found the breakfast table, where she was distracting the philosopher with orders, and trying to convince the other girls that her appetite was failing her. It

turned out that Bob had taken ten of the thirteen bass brought in, and Ben had besides taken a pickerel and two "red eyes," but he didn't step quite so high over the achievement as he did when he "ketched James Mackerel's trout."

The old cowboy said in explaining how Bob came to lay him out, "I'd a felt kinder mean to beat my own niece a-fishin', so I jest fished most o' the time without ary bait on my hook an' she a-thinkin' all the time that I was a doin' my level best;" but Ben was used to wriggling out of tight places in fish stories, and it was not to be expected that he would be caught napping in an easy case like this. Bob was highly pleased over her catch, but was content after the first experience to let some of the others do the early rising, while she found sport enough in late evening fishing, which, after all, was good enough to satisfy any reasonable angler.

We had at last, however, struck the key to the sport—early morning fishing—and those who could muster resolution to be out and on the water before sun-up were sure to return before the forenoon was half gone with more fish than we could possibly use, and our neighbors were kept busy "sortin' in bones" during the rest of our stay.

So the days passed on toward the end of our vacation, each full of its own pleasures and happiness without a cloud to mar the good feeling of the camp, and it was with many regrets that we looked forward to the breaking up of the happy family to go back to the noise and bustle and drudgery of the old life. We, the "old fellers," were getting young again and we hated to break off and take a backset for another year.

There were some days left yet and each one was worth a whole month on the farm, in the sanctorium, or in the office, whether we fished early or fished late or fished not at all; each one was to be enjoyed as though it were to be the last.

The next morning some of us were awake before day for an early start, but on getting out, a fog so white and dense covered lake and land that it was impossible to see the "henhery" from our tents, and we could barely distinguish the outlines of the kitchen fly not more than a couple of rods away. The philosopher was roused out to get breakfast while we studied over this unlooked-for "category;" and soon the girls were awake and came flitting over, one and two at a time, like shadowy spectres out of the surrounding mist, to huddle around the glowing stoves and wonder if this were a sign of another change of weather. Everything exposed was dripping with moisture, and the prospect was not a cheerful one for early sport; but Jim and Ben concluded that they could find their way to a certain strip of promising water above Horton's Bay, where they had made up their minds the night before they wanted to fish, and when Ben had once "set his head" to go they were soon ready and off. They were cautioned as they pulled away from the landing to follow the "synopsis"—as old Dick M. says—of the shore and bay, and keep the line of bulrushes in reach of the oar, lest they get lost in the fog and fail to reach the spot they were searching for, but Ben said, "Shucks! I reckon I kin row straight across to the pint up yander, an' then we kin find the place slicker 'n grease." Two strokes of the oars hid them in the bank of fog, and we saw no more of them till it lifted, near the middle of the forenoon. The others of us had not "set our heads to go a-fishin'," and we decided to stay in camp till the sun drove the mists from the water.

When the fog lifted so we could see under it up and down the lake, Jim and Ben were in plain sight fishing patiently in the little bay below camp (the point they started for was in exactly the opposite direction, just where we knew there was a big stake driven into the bottom a few rods from shore, and a lively *elagto furios*, performed by the philosopher on the canvased frying pan roof brought them in camp with the mists and hungry, but with the finest lot of fish that had yet been taken. It was rather a puzzling "coincidence" how they came to be below camp when they had started out to do their fishing above, but Ben told about it after he had taken the edge off his appetite at the breakfast table.

"Ye see, when we started out I headed the boat straight fur the pint above an' kep' on a rovin' till I'd ha' bet we was nigh onto five mile from camp an' still no pint in sight nor nothin' else but fog so durned thick that several times we stuck fast in it an' had to back out an' go 'round where it wasn't quite so thick, an' I reckon this must ha' thrown us out o' our course. Curious how thick fog'll git when there's nothin' to hinder it, an' " blinking furiously as he swallowed a mouthful of "bilin' hot" coffee, "it's surprisin' how long coffee'll keep red hot in a tin cup."

Coming back to his bearings again: "Then I concluded to pull in to shore without lettin' on to Jim an' feel along till we came to the place where we wanted to fish, which I'd know by a stake stuck in the bottom near the bulrushes, but I might as well hev started to find the North Pole, fur we couldn't see more'n ten foot from the boat nary way, an' after pullin' a spell longer I stopped to study over the pints o' the compass, an' Jim said he reckoned we was lost. After exchangin' views fur a minit er two we found out that we'd both bin unanimous on this pint fur some time, but we was ashamed to holler to you fellers at camp to find out our bearin's fur fear ye'd laugh at us. Jest then we heerd a cow-bell an' we concluded to pull in toward it till we struck the rushes an' fish along at memorandum, like that feller ole Dan tells about, till the fog went off an' we could find out about where we was. We hadn't gone more'n ten rod till the boat scraped agin somethin', an' lookin' round there was a stake a stickin' up about two foot out o' the water, an' we jest tied the boat to it an' went to fishin' as unconcerned as ef it was the very place we'd been a huntin' fur. Talk about fish a bilin'! Ef you'd a bin there, James Mackerel, you'd a got ten year younger in less'n half an hour. First Jim an' then me an' then both would be a strivin' with a bass, an' it wasn't long till we had the stringer half full, an' the fun was jest too satisfyin' fur the Joneses, fur they wasn't used to it. A little more o' that coffee, Al, ef ye please," as he passed his cup across the table, "an' Jim, I'll thank ye to wait them fish this way while they're hot, fur ef there's anything that makes a feller hungry it's fishin' in a fog before breckfast."

"About the time we was a wishin' fur another fish stringer, the fog begun to git thinner an' raise up so we could see the shore, an' direct'y we saw a barn an' then a house a little ways back of it, but nary one of us could make out that we ever seen 'em before, an' then we wondered which way it was to camp."

"Yes," now chipped in Jim, who had been too busy making up for lost time to do any talking, "the longer we looked at that house and barn the more confused we were as to our whereabouts, and we finally agreed that we were just nowhere. As we sat there trying to study it all out, Ben said, 'There's a lot o' tents down by the water'—we hadn't noticed them before—'must be some more campers, I reckon, but what's the matter with that American flag a haugin' down

that pole? our own camp, by the jumpin' jehossafat!' and then it all flashed into our empty pates instantly; there were Horton's barn and house, and the familiar fields and the camp, all looking as natural as life, and just then some one touched off the frying-pan, and here we are, but we don't want any more early fishing in a fog, even if we catch a string of fish as long as the boat."

A few mornings after we were treated to another fog even heavier, but the experience of Ben and Jim had made us wise and no one ventured to explore its mysteries outside of a convenient hail.

(TO BE CONTINUED.)

THE MUDDY POTOMAC.

THE anglers in this part of the domain are in a state of chronic despair. Most of the time since the latter part of April the water in the Potomac River and tributaries has been as roily as the muddy Missouri, and now, when much preparation had been made for an outing on the Fourth, there is a deluvian down-pour, and the jig is up again. Good fishing was had during two or three weeks in April, but since then and all through spawning time hardly a fin has been taken. This has probably been fortunate for the fishes, as they were certainly not disturbed while nesting.

You ably advocate the abolishment of spring shooting; would it not also be well for all concerned to discontinue spring fishing? I think it would. Large numbers of bass and other game fishes are taken in the spring just before and during spawning time, and the streams are thereby robbed of vast numbers that would come in the order of nature. We all angle in the spring. It would be hard to forego the pleasure; but would it not be wiser?

There has usually been fine sport catching striped bass with the fly near Little Falls, and in the tributary streams between this place and salt water, but this season was a blank on account of the condition of the water. There will be excellent black bass fishing in the Potomac in the fall, provided the water is clear, and persons wishing good sport can confidently seek it at any point on the river from the mountains to tide water.

J. C. B.

WASHINGTON, July 2.

TROUT AND BEARS.

I ARRIVED at Rawley Springs, in Rockingham county, Virginia, at nightfall on yesterday, June 29, and found the excitement of the hour to be a 16½ inch trout killed by Mr. Pearson, the resident superintendent of the Springs property, in Dry River, about a half a mile from the hotel.

This morning, while a small company of guests were watching the curious gambols of a small boy, a Newfoundland dog and a pair of bear cubs of about fifty pounds' weight, a stalwart mountaineer galloped into the midst of us astride of a mountain nag, calling for the loan of an axe, saying that he had killed a large bear and had two cubs treed about a mile up the river. Thereupon an adjournment was had to the new scene of action and these cubs also captured.

The bear excitement being over, this afternoon I got out my tackle and went down the river to try the trout. In a short time I killed six very fine ones, and I hooked but returned to the water divers fingerlings. I found the killing fly to be coachman as I tie it, and typical professor. "A coachman" is a fly with a red body, tipped with black, black wings and tail, of a reddish, blackish red. I found the same fly to kill best here last year. The afternoon I killed a very large trout on a Coachman fly and as follows: Body yellow, head yellow, tail red, wings, wing covers of golden-winged woodpecker. This is a very pretty fly not down in the official catalogue. Tied on a No. 3 spout, this same fly sometimes kills bass better than some of the regulation sorts.

The rod I used this afternoon is one I made last year of the bois d'arc, or so called Osage orange wood, which I think superior to any rod I have ever handled. I have found it to be an admirable working rod in bass fishing, but never tried it before on trout. I have no doubt in my own mind that this is by far the best wood in the world for rods. It is little heavier than red cedar, excessively strong and tough with more pliancy and spring than any other wood. The color is a beautiful orange, requiring no stain, receiving the highest polish and curving beautifully. I have rods of ash and lancewood, of bethabara and hornbeam and cedar, and have tried every known material for tips, and I would choose a bois d'arc rod over and above all other known material. The rod I have is rather short, only nine and a half feet; I prefer a rod of ten and a half feet, and I see no sort of occasion for having one rod for bass and a different one for trout. I think everything in excess of ten and a half feet is in the way in a trout or bass rod, under ten feet they begin to get too short. Nevertheless I have a cedar and hornbeam rod only eight and a half feet long I made about twelve years ago and with which I sometimes cast a bait à la Henshall and often use also as a fly-rod on difficult water to cast over. I have killed many bass and trout with it at long range.

RAWLEY SPRINGS, VA.

M. G. ELLZEY, M. D.

"THE FLUTTERING FLY."—Editor *Forest and Stream*: Mr. Holberton's letter anent the fluttering fly in the last issue of *FOREST AND STREAM* contains a gratuitous charge which strikes me as unparalleled for assurance in so far as it relates to the writer. He says: "Still, allowing your correspondent's statement (which, the public must understand, comes from a rival in the business) to stand," etc. I am the correspondent referred to, and by "business" I suppose he means the fishing tackle business. If I am correct in my conception of the term, the public must understand nothing of the sort, provided it cares a sou about the matter; for by so doing it would understand what is absolutely and unqualifiedly untrue. While I have sometimes wished that my place was inside rather than outside the counter of a tackle shop, I am not, nor have I ever been, engaged in the fishing tackle business, either in its manufacture or its sale, directly or indirectly. If it is parliamentary, I would like to suggest to Mr. Holberton that in the future he confine himself to plain facts and avoid drifting into the realms of pure fiction.—A. N. CHENEY (Glens Falls, N. Y.).

As additional evidence that the fluttering fly is not so well-known abroad as your correspondent has intimated, I copy this sentence from an order received by Messrs. Abbey & Imbrie, from England: "I see by *Scientific American* at you are agents of Mr. Wakeman Holberton's patented trout and black bass flies. I inclose you P. O. order, and will feel obliged if you will send me a few snitable for trout, and if I find them successful in catching English trout, I will recommend them to my friends."—W. HOLBERTON.

CAMP OF THE BIG SIX.

TUESDAY morning at four o'clock the six, with two dude visitors, left Athens, Pa., for Fair Haven, with all the camp outfit necessary, and some things that were superfluous. The reader must please bear in mind that the whole six are crack fly-fishermen, and several are almost experts at casting the fly. On going to the company ground, which was some half mile up the bay, two of the boys caught twelve bass, then came the pitching of the tent and putting things in trim for the coming four days. About four o'clock two boats started out and cast along the shore; by supper time we had over seventy bass, rockers and black, biggest percentage rockers. Black, Ruben Wood, and Montreal flies were the favorites for the black bass. The modocks appeared fond of any fly we had on; and we often took two and sometimes three at a cast, one on every hook, but strange as it may appear most of the big black bass got away. I have noticed the same thing with other fishermen.

The second day in camp was quite cloudy with a high wind, and it looked like a good bass day. At the place we expected to take the most black bass we did not get a rise. This was out in the lake. We fished faithfully all day; only scored nine black bass for the boat I was in. At Blind Lodus, which is several miles from Fair Haven, we saw a big seine on the fence drying. We also saw one gill net which we got our flies fast in, and I am sorry to say we had to cut the net in two to get our flies loose. While we were doing the cutting we saw a native on the bluff watching us. He did not say anything or we would have invited him to help us. After a hard pull we arrived in camp and found that the other boys had not done much fishing.

The third day we all got up at four o'clock and made up our minds to slaughter bass by the wholesale, but this day like the preceding one was dark and cloudy and bid fair to rain. Nick and Frank made a small wager as to which boat would get the most bass before they returned to camp. You may be sure we all fished for all we were worth. One party went down near the lighthouse, and when it began to rain they got in a boat house. We were over on the west shore and got quite well soaked, but we kept on grinding just the same. Finally we went down to the light house and saw the other boat; they were casting their level best and had two more bass than we had. We were not discouraged by any means. The other boat then left us and came over to the east shore, while we fished along the breakwaters with poor success. Then a big fog came sweeping down the lake. By the time we were through lunch the other boat had vanished in the fog. After spending some time we started for the east shore, and while crossing discovered another gill net. It was a long one and at the end there was a big fyke net with short wings on it, and the gill net struck the center of the fyke, so they could run the fish in from both ways. This fyke we could not raise out of the water, so we cut the fyke loose from the gill net. For the benefit of the owner, we'll say we carved the balance of the net so it will not hold fish again. It would be a good idea if every fisherman would serve all nets the same way. It may be lawful to set nets in New York State; but as we all live in Pennsylvania we forgot and supposed we were in our native wilds. By the time we got to the shore it began raining quite hard again, so we ran the boat ashore, turned it over and crawled under. We were none too soon as it came down in torrents, in the course of half an hour it ceased raining, and we went at it again with better success. We caught three, then started for camp to find the other boat had been in and gone out again. They had caught thirty-two, which was the exact number we had. When they came in again they had scored six more and claimed the wager, but we "kicked" so the wager was withdrawn. The next morning we broke camp and set out for home.

ONE OF THE SIX.

CAMP MEDICINE CHEST.—"Kingfisher" writes of camp medicine supplies: "The following is an excellent remedy in case of cramps, colic and ailments of like nature:

Tinct. Zingib. 1 aa 3 es.
Tinct. Menth. pip. 1 aa 3 es.
Spts. Vin. Gal. q. s.
Mix. Sig. Take at once.

Rendered into plain camp language this would sound like: Mix a good strong dose of Jamaica ginger, essence of peppermint and brandy or other spirits enough to taste good, down it and await results. If the pain is not relieved, repeat with a milder dose at the end of a half hour or so. To above formula add five to fifteen drops of Tinct. Opil if you have it. It is too, I believe, equally as efficacious without as with the spirit. I have tried it both ways. Here is another formula that may serve outers a good turn when they most need it, in case of diarrhoea induced by a change of water or diet:

Tinct. Catechu 1 aa 3 es.
" Cardamom Comp. 1 aa 3 es.
" Opil Camp. 1 aa 3 es.
Spiced Syrup Rhubarb 1 aa 3 es.
Mix. Dose. A teaspoonful to a tablespoonful as required two or three times a day.

Then, if you have a few dozen $\frac{1}{2}$ or $\frac{1}{4}$ -grain podophyllin pills, a box of Seidlitz powders and a few sections of court plaster, you are supplied with remedies for all the ills an ordinary camp will fall heir to.—KINGFISHER."

SUSPENSION BRIDGE, N. Y., July 2.—Inclosed I send you clipping from Collingwood, Ont., *Weekly Enterprise*. The editor is a fisherman and would not tell a lie. The clipping reads: "Messrs. Frank Nettleton, Will Begg, Jas. Stone, W. W. Nettleton and W. Watts were out at the river fishing on the first of the week, and while trolling near the mouth succeeded in catching an immense muskellunge. It took the combined efforts of F. Nettleton and Begg to haul the huge fish into the boat. They brought their prize to town and placed it on exhibition at Stone's hotel. The fish measured 6 feet three inches and weighed 128 pounds. It was the largest caught for some years in these waters."

THIS IS VOUCHERED FOR BY THE CORRESPONDENT WHO SENDS IT.—Reading Centre, N. Y.—A novel mode of fishing has been employed by a resident of Penn Yan, N. Y., who some time ago, while out rowing in Keuka Lake, had occasion to bend over the side of the boat. No sooner had his face come in close proximity with the water when his nose was seized by a large pickerel. The possessor of this delicate organ having resisted his antagonist, he succeeded in landing him in the boat and rowed ashore, proud of both wound and fish. This is not what is generally known as a "fish story," but an actual case of live bait fishing.—A. T. GIESNER.

THE BIGGEST BROOK TROUT.—We have to record the capture of a brook trout weighing 12½ pounds, by Mr. J. Frederic Grote, of 114 East Fourteenth street, New York city, in Mooselucmagentic Lake, Maine, on June 11. The fish was a female, and Mr. Grote kept it in a car for one week, when it died. It was weighed several times at the Mooselucmagentic House, in presence of Mr. John Schultz, of Philadelphia, and the proprietors, Messrs. Crosby & Twomey. It was 26½ inches long, 17½ in girth, 7½ deep and was 4 inches thick through the back. The guide was Jerry Ellis, and they were trolling with a live minnow in 40 feet of water with a 7½-ounce bass trolling rod. The trout was brought to New York and shown to Mr. Blackford, who decided that it was a *fontinalis*. It had been proposed to send it to the Smithsonian Institution to have a plaster cast made of it, but there were doubts as to its standing the journey as it was beginning to soften. It is now in the hands of Mr. Wallace, the taxidermist, and will shortly be on exhibition at Mr. Grote's place of business. We believe this to be the largest brook trout yet recorded.

MAINE SPECIAL SALMON LAWS.—Trout and salmon fishers are having a good time this season. Landlocked salmon are being caught in Cathume Lake. One weighing six pounds was caught in Denny's River on a salmon fly last week. Cathume Lake empties into Denny's River. Poachers have ruined Denny's River for salmon. This is one of the best rivers in Eastern Maine for salmon, but it is under a special law, which means, in Maine, no law at all. If our commissioners had it under State law it would be fine in a few years. All the special laws for salmon streams in Maine should be abolished at once. It is proved in every case that towns and corporations will not protect. Let this thing be fixed next winter. There is a big scramble for the last lobster, herring and mackerel.—H. (Machias, Me., June 28).

DYNAMITING TROUT.—A gentleman who has recently returned from Chatham, N. H., reports that some mean specimens of human beings have made use of explosives in Mountain Pond, and that "its shores are wind-rowed with small dead trout, suckers, etc." A party (from Maine, we are sorry to say) who camped there about June 10 are suspected. The matter, our informant tells us, is in the hands of the proper authorities and is to be vigorously pushed. We hope the perpetrators of this meanest of all mean ways of poaching will get the full length of the law.—BLACK SPOT (Sebago Lake, June 28).

MAINE WATERS.—North Bridgton, Me.—The black bass season in Maine opened July 1. The prospect for fishing in Long and Highland Lakes, Bridgton, was never better. A New York party have boats engaged on both lakes during the opening week. Our bass fishing attracts more attention each year, situated as we are at the head of the Sebago Lake route, one of the most charming steamboat trips in New England, and in the midst of beautiful drives and fine scenery our location is especially inviting to those seeking rest from the hurry and bustle of city life.—J. C. M.

NEW RICHMOND, Que., July 2.—The salmon fishing, which has been hitherto very poor on the neighboring rivers, has much improved of late. Lord and Lady Lansdowne, who have been camping out on the Cascapedia, have made several fine catches. Mr. R. G. Dun, of New York, fishing in the same stream yesterday, caught a salmon weighing fifty-one pounds, which he has shipped to the Merchants' Club of New York.

THE HUNSTON PRESERVATIVE CO., New Haven, Conn.—Gentlemen: Being a habitual fisherman, and having caught some due specimens of trout, (on the farm of Charles Parker) one of which weighed over two pounds, I had a desire to preserve them in order to show them to the many callers at my office, and procuring some "Vandine" at your works, I treated three of them, and I am pleased to report, that after exhibiting them in my office for four weeks, I then sent them to a friend in Waterbury, where two weeks later I saw the fish, and found them still sound and good, with no indications of decay. It is a wonderful thing, and one of the most importance in the commissary outfit for sportsmen and tourists.—FRED A. DURANT (Durant Hotel, New Haven, Conn.).—Adv.

ALLEN'S bow-facing oars can be attached to any boat in 5 minutes. Try them. Little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

Fishculture.

Address all communications to the Forest and Stream Publishing Co.

THE AMERICAN FISHERIES SOCIETY.

[Discussion following the paper of Mr. John H. Bissell, entitled "Fishculture a Practical Art," published in FOREST AND STREAM, May 20, 1886.]

MR. BOOTH—I would like to state for the benefit of some of the gentlemen here, to show the enormous results to be derived from fishculture, that at the cannery I am interested in on the Columbia River, in the State of Oregon, they pack 600,000 cases of salmon per annum. It is worth four to five dollars a case on the ground. Now you can readily see that is \$3,000,000. It takes three fish to the case. That is less than 2,000,000 of fish. Now the salmon there produce, I understand, from 15,000 to 20,000 fry, so you can readily see it doesn't take many salmon to re-supply by artificial propagation the salmon that are taken from that river to produce \$3,000,000 per annum. In other words, we catch 3,000,000 of fish which produce \$3,000,000, and they can be replaced by artificial propagation for at least \$10,000 in money. Now if there is anything in this world you can speak of that will produce so much for so little investment I should like to know it.

MR. BISSELL—Mr. Booth has spoken about the comparative cost of policing and artificial propagation. It is a very comprehensive subject, and I have stated in outline in my paper just what my conclusions are, drawn from a great many facts and a great deal of thought and consideration of the subject. It is true that artificial propagation, if carried on on a proper scale, can be done very cheaply. I made some figures for presentation to the committee by our register two years ago, and if I remember rightly it was something like this: That if we produced about three hundred millions of whitefish in the way that we were then and are now doing it, that the cost per thousand fish planted in the lakes wherever they were to be planted would be about one-third of a cent per thousand. I think it was that—one-third of a cent, or less, per thousand. After you get over a hundred millions you begin to scale down the average very rapidly. Even if it were a cent a thousand, I think that the cost of proper policing, inspection and regulation of the fisheries will not cost what Mr. Booth seems to indicate. We asked the last Legislature to give us \$15,000 for two years' work. That was on a careful estimate of what we could get an inspector and probably four or five wardens for. It will not be necessary to police the entire 2,000 miles of coast

to prevent the use of nets of improper size if we have the power of inspection. If we could go to Mr. Booth's packing house, if our inspector could go there with ample authority and power to seize and confiscate all fish that were under one pound in weight, then Mr. Booth would not buy those fish any more. It would not be necessary for us to go a thousand miles to prevent all interment on the coast if we could go to the market and inspect there. That is one way. Another way is when the nets are being made up, we could inspect the nets and seize those which were under the size. At other thing I indicated in my paper was about forming a healthy state of public opinion. We have taken some pains in reference to that, and in the latter part of February or early in March we succeeded in securing a meeting of representative fishermen of Detroit. I think there were something over fifty fishermen present. That meeting went so far as to perfect an organization which I hope will be permanent among fishermen for the discussion of useful knowledge and practical good sense with reference to the purposes and the objects, and this work among the fishermen will go as far as anything else towards the enforcement of the law. I doubt if among the three or four hundred fishermen in Michigan with whom we have been in communication the last year, there are half a dozen that would not be prosecuted if we had reasonable laws to regulate the fisheries; so that the cost of police power exercised with reference to the fisheries I think is very slight, and the importance of preventing the capture of small fish is not by any means an insignificant part of rearing marketable fish in great numbers. A single man with a pound net, such as I know of near the straits of Mackinaw, where he couldn't find any net with a mesh that was small enough, he used sacking for the back of his pound net so nothing could get through. Such a man as that might destroy a quarter or a tenth of the product of one of our large hatcheries.

There is another thing in that connection. I say these fishers must be licensed, not only as a part of the exercise of police power, but to protect the citizens of the State. Now, it would not be fair if the State of Illinois were spending fifteen to twenty thousand dollars to stock the shores of Illinois and Michigan with whitefish for my friend Dewey to come over here and catch all those fish and ship them to Toledo and Cleveland; neither is it right that the people of Illinois and of the city of Chicago should be fed with fish which we have planted in the waters of Michigan. Now, for that reason I want the fisheries of Michigan to be licensed. I want a regulation which will prevent Mr. Booth from coming into our territory and catching our fish unless he pays a license. I know Mr. Booth will do it. He would be very glad for the right to use good fishing ground, just as any of us gentlemen would be very glad to pay for the right to fish in a pond where we knew there were three-pound trout in great numbers. Now, when we get to that point, the fees that will result from a very reasonable and very low license, our fishing will not only pay all the cost of regulation and inspection, but it will pay all the cost of hatching and planting as many as Mr. Booth thinks we ought to plant in Lake Michigan. It will pay for hatching and planting six or eight times the fifty millions that we are now hatching.

One other thing has been alluded to and that is the question of what the United States Government should do. I said in my paper very briefly that the question of the regulation of the fisheries was officially settled. It has been settled for more than thirty years, although it has not been generally understood. The United States Supreme Court has passed definitely and finally on that question. The regulation of the fisheries of each State out to the State border is a matter of municipal regulation, a matter of State legislation. That is so even in tide water. In the State of Maryland they passed a law preventing the dredging for oysters and the State officers have seized a boat that was doing that, a vessel which was chartered and which was registered in the United States Customs office at Baltimore. She was replevined from the State constable who seized and condemned her, and under which proceeding she had been sold. That case went from the Supreme Court of Maryland to the Supreme Court of the United States. Benjamin Curtis being the justice who gave the opinion, said that the condemnation was right, that it was within the police power of the State to regulate fisheries of that State to the State border, and it was not a matter for the United States Government to interfere with, yet it was in tide water, and notwithstanding the vessel was one which was registered in the United States Customs office, and although the United States Government had the right to regulate the navigation of those waters, the control of the fisheries was within the police power of the State. At a meeting of the Commissioners held in October, 1883, at Detroit, this subject was very fully examined and presented to the meeting by the Attorney General of the State of Michigan very clearly and forcibly. That I regard as entirely final.

There is one other thing I want to speak of that Mr. Fairbank referred to, and that is the work of the United States Fish Commission. Now, if any gentleman will take the pains to examine the law under which the United States Fish Commission is constituted, he will see that the sole purpose of the creation of that commission was to procure scientific researches with reference to the fishes, the fisheries and the food supply, and see what the causes of the decrease were. It was also deemed proper under the definition of that law to undertake experiments in artificial propagation, but it was not the purpose of the United States Fish Commission to stock the waters of the United States. The procuring of information by scientific research, which we could get in no other way, has been admirably done by the United States Fish Commission. The planting of whitefish in the Great Lakes and the propagation of shad have only been incidental to the work of the United States Fish Commission. It was directed that under that law and the provisions to carry out that law that they should make experiments in artificial propagation, and because, in the course of their experiments, they were able at very slight increased cost, to get more eggs than they wanted for that purpose, it was thought to be perfectly right to return the fully developed eggs, young fry, to the waters where they were taken from, and also to plant some of the young whitefish in interior lakes where they did not exist, to see if they could not be propagated there; but it is not the purpose of the United States, and it is not the business of the United States Government, as I contend, to plant our own waters. That is our own business. The waters are ours; they are under our own control; they are just as much a part of the State as is the land of the State, and it is the business of the State, therefore, to see that its public waters, which are its only domain left, should be properly cultivated and properly used.

MR. BOOTH—I must beg to differ with my friend with reference to the amount of the cost of policing and propagation. From his own figures, and the most exaggerated estimate of the cost of propagation of whitefish or trout, it would be about one cent a thousand if we have gathered twenty-four millions of pounds, in other words, eight millions of fish. Now, at one cent a thousand, how much is that? It is about \$800. It seems to me that is very much the cheapest way of reproducing the fish in these lakes. You could scarcely hire one man for less than \$500 a year. I thoroughly indorse his ideas for exacting a license fee from any and everybody, from every man engaged in catching fish in the waters of the State of Michigan or Illinois or anywhere else. I believe that is a great source of revenue. I don't want to ask the United States Government to assist one dollar in this matter. I think the people that are making their money out of catching these fish are perfectly willing to pay a license for the privilege of doing so. I have a great many nets and a great many boats, and I am perfectly willing to pay a license if that amount is spent for the reproduction of the fish. These small meshes—you say they have put in canvas to catch them—I would allow them

to use canvas if they please to catch them. How long would it be if you put in fish at one cent a thousand in the waters—these small fish are comparatively worthless—before they would increase the size of the mesh and they would catch nothing but the big fish? It would be only four or five years before you would be willing to reduce the size of the net. There are a few unscrupulous men, I am sorry to say, belonging to the business I am connected with that would use those small meshes, but they are few. If there is any way you can reach them, you have my indorsement to do so.

Mr. BISSELL—They are all in Wisconsin.

Mr. BOOTH—Well, Wisconsin has not got so much territory to fish in as the State of Michigan. We tried that on the Columbia River. There was a law passed in the State of Oregon licensing every boat at so much a piece, and every fisherman. I think it was \$10 for a boat and \$5 for a fisherman, to the fishermen who fished with a boat. The law was passed and they collected the license and they agreed to spend the amount of money they collected to the propagation of salmon in that river, and one of these foreign Knights of Labor or communists—or other classical name, I don't know what they were—he discovered in his great learning that it was unconstitutional. We were getting along nicely and everybody was paying his little license, and he thought it was unconstitutional. Well, he refused to pay and we sued him and got a judgment against him and went up to the last court, and it was declared unconstitutional. Now, we may strike such a thing as that. I don't think the people of the State of Illinois or Wisconsin or Michigan would resort to such a course. I think they would be perfectly willing to pay a license; but I must say I think the cheapest way we can reproduce our fish is by artificial propagation, and not with this vast amount—I think you say it will take eight or ten thousand a year—for policing, and it will be only a few years before you accomplish all which you now seek to attain.

Mr. FAIRBANK—I want to say one word on the subject of the general Government taking hold of the thing. I understand Mr. Bissell to state the purport of the law as it exists, and also the expenditures of the money that are made. Now, a considerable amount of money has been expended in artificial propagation—more in shad than anything else—and I can see no reason why it is not a subject that the general Government should take up and spend money upon. There is an injustice in the State of Ohio, for instance, spending money in hatching shad and depositing them in the Ohio River, when they go down the river and are caught all the way down the river. Louisville, for instance, would spread her nets and take the fish propagated by Ohio, and the fish that Michigan propagates Illinois will catch, for whitefish migrate, and so they do in all the waters; and it is an expenditure from which all the people would reap an equal benefit, and an expenditure purely within the scope of the general Government to take hold of. I want to see the present law amended. I want to see some action on the part of parties interested in this matter with our representatives, to have some legislation on the subject, and some new restrictions put upon the appropriations. The scope of the United States Fish Commission, their labors and their work, have been very much enlarged since the passage of the first bill, since the appointment of the first commissioner. There is only one commissioner. There should be more than one commissioner. There should be three or five commissioners, representing the different interests. A larger amount of money should be appropriated, and the work and scope of the commission should be very much enlarged. That is the idea I want to get before the meeting.

Mr. CLARK—In regard to this question—speaking as Mr. Bissell did in his paper in regard to showing results to the people and to his legislature and other legislatures, I wish to say to you who were present last spring when this paper—this poorly gotten up paper—was presented by myself, you will remember I gave you some facts in regard to what we could show that artificial propagation and planting of whitefish had done in the great lakes, and why I claimed it must be due to that, because it had shown quicker in that than in any other way. The figures I gave you to show it. They show there that there was some 65,000,000 or 70,000,000 of whitefish that had been planted up to a certain date in 1882 in Lake Erie. From all the facts we could learn in our gathering statistics a year ago last fall it showed they were on the increase there. These fishermen say so here in the lower end of the lake, but not in the upper end of the lake. That goes to show again that whitefish do migrate; that the whitefish planted in the Detroit River by the State of Michigan and in the upper end of the lake by the United States Fish Commission show the increase more in the lower end of the lake. It goes to show your fish migrate. Now the fish that are hatched by the Michigan Commission are caught down in Erie, Pa. Is that right to do that?

Mr. BISSELL—I would like to ask if whitefish are migratory to the extent it is claimed, why they don't migrate back to the grounds that have been once fished in Lake Michigan?

Whereupon, upon motion duly seconded, the convention adjourned until 10:30 o'clock A. M., to-morrow, Wednesday, April 14, at the same place.

THE MACKEREL SEASON.

THE position taken by the Massachusetts Fish and Game Protective Association in regard to the protection of mackerel during the spawning season, as set forth in its memorial to Congress, adopted at the last meeting of the society, is an important one; but yet it is likely to meet with considerable opposition from the owners of vessels and those interested in the mackerel fishery. Since a measure involving the principles in the petition has already passed the House of Representatives, the petition of the Association is addressed to the Senate.

There are some points concerning this early mackerel fishing which it may be interesting to note. In the first place the mackerel taken previous to July 1 are inferior in quality and of small size. But very few which will grade above No. 3 are ever taken previous to that date. Such mackerel have to be sold at from \$3 to \$5 per barrel, where good-sized fish and fish out of the poor condition necessarily the result of breeding, should bring from \$6 to \$10 per barrel. Then again the catch is remarkably uncertain. Indeed, so true is this that in the opinion of those best posted in regard to the fishing business, the result of the entire labors of the New England mackerel fleet up to July 1 for the past ten years has been a failure. Now and then a fortunate vessel gets into New York early with "a trip of fresh mackerel," and money is made. But such cases are the exception.

Secretary Wilcox, formerly of the Boston Fish Bureau, but now of the American Fish Bureau of Gloucester, was seen the other day, and his views noted on the subject. Said he: "The attempt to take mackerel previous to July 1 is worse than a lottery, and the entire result is always a loss. The vessels of the New England fleet would be much better off if they never left their wharves to go for mackerel previous to very late in June or July 1." The value of the mackerel to the New England fleet per annum is not less than \$2,000,000, and yet it is plain to any one familiar with the trade that not above \$100,000 of this value in salt mackerel is taken previous to July 1. In fresh mackerel, a very small matter when compared with the worth of salt mackerel to the trade to the country, now and then a vessel makes a success and wins a prize in this fisherman's lottery, but the blanks outnumber the prizes a hundred to one.

Again, if it is true, as it begins to be thoroughly demonstrated in the art of fish propagation, that the adult fish, led by an unerring instinct, invariably returns to the scene of its birthplace to breed, then the result of this early seining of mackerel is plain—the utter driving them from our coast.

Indeed there are plenty of thinking men, thoroughly conversant with the fishing business, and who have given the subject a good deal of thought, who are convinced that this early fishing for mackerel with seines is a most prolific cause of the departure of mackerel from our coast. It is certainly admitted by all that larger and fatter mackerel would result to the trade were the early seining stopped. But it is understood that the Fulton Market fresh fish trade is to oppose the passage of the anti-early-seining bill in the Senate and it may be defeated.

This market interest is the worst enemy to fish and game protective measures. It is also understood that the "Boston" fresh fish trade is inimical to the measure. What means a dollar to the market dealer must not be touched by legislation; be the value of fish and game protection never so great to the rest of the world. The right to buy and sell at all seasons regardless of results is being fought for with all the force money can buy, and all the foolish sentiment about the sacred rights of trade that can be gathered up with which to frighten the mawkish legislator. The spawning is over by the last of June, and the mackerel then begins to improve in condition as well as size, but the fresh fish dealer is not willing to wait. He must have his prey at all seasons not absolutely prohibited by an edict of nature which cannot be overcome. SPECIAL.

SALMON IN THE HUDSON.

THE captures of adult salmon in the Hudson, already recorded in our columns, are very encouraging. The most doubting of "Thomas" must admit that these fish are the result of the plant of 1882 by Prof. Baird. In former times an occasional stray salmon has been taken in this river, but it has been at intervals of some years. Now, however, we have authentic accounts of four adult fish having been captured and others seen just at the time when they naturally would be looked for after the first planting. In former experiments in the Hudson, we think that only the quinnat salmon of the Pacific coast were planted, and these fish have failed to return to waters on the Atlantic slope. The salmon put in the Hudson by Prof. Baird since 1882 have all been of the Atlantic species, the *Salmo salar*, from the rivers of Maine, and there is positive proof that the trout streams of Warren county, New York, afford them food during their early life. Last October we reported the capture of yearlings from Clendon Brook, and now we are permitted to publish the following letter to the Superintendent of the Long Island Hatchery, where the fish are brought to life:

GLENS FALLS, N. Y., June 19, 1886.—Mr. Fred Mather: This morning's mail should deliver to you a couple of young salmon. Yesterday editor Harris, of the Glens Falls Republican, and I went out to try for trout, and our labors ended at Clendon Brook. I fished the brook but a short time, for fifty salmon would rise to one trout, and I did not wish to run the risk of injuring the salmon. Every pool or "hole" contained them, they were on the riffles, in fact, they were everywhere. They are so much brighter colored when seen in the water than the trout that they are easily distinguished. I injured two and therefore kept them, and just had time last night after I returned to get them in the midnight mail. You will see that they are in good condition, better even than those I sent last year. At four months younger they seem fully as large as the sample I sent last October, and they are certainly fatter. I think you will call these pretty fair yearlings. I caught one that was a little more than seven inches long, and the one I sent you was six, which is about the size of last year's plant that I saw. The plant of 1884 seem to have all gone to sea.—A. N. CHENEY.

[We have seen the specimens sent, and they are exceedingly plump and well fed. The fact that adults have returned from the light plantings of 1882 shows that they will push through the impure waters of the lower Hudson, as the shad do, and seek the spawning grounds above. The tributaries of the upper river are all that can be desired as salmon nurseries, and we hope to see this good work go on until "Hudson River salmon" are quoted in the market, and anglers are to be seen whipping the pools above Troy if the proposed fishways are properly built.]

THE TROY DAM FISHWAY.—Glens Falls, N. Y., June 30.—Editor Forest and Stream: Correspondents of FOREST AND STREAM recently questioned the existence of a fishway in the dam at Troy; and in commenting thereon I stated that I had supposed that the law providing for a fishway had been complied with, and the chute now to be seen in the dam was the result. This evening I notice that Superintendent of Public Works Shanahan "has completed the repairs to the old fishway in the State dam at Troy." This seems to settle the question of the fishway's existence, and let us trust that it permits the salmon, lately known to have returned to the Hudson, to ascend another stage on their long journey to the headwaters of the river and their spawning ground. If the other obstacles are as speedily removed, Hudson River salmon may in a few years become as well known as Hudson River shad.—A. N. CHENEY.

CARP CULTURISTS are to have a special journal to be called the *Journal of Pisciculture and Rural Hydraulics*. It will be edited by Mr. Milton P. Pierce, and published by the Rural Publishing Co., of Philadelphia, under the patronage of the American Carp Cultural Association.

ALLEN'S bow-facing oars, \$8 per pair. Fred A. Allen, Monmouth, Ill.—Adv.

FIXTURES.

FIELD TRIALS.

- Sept. 21.—Field Trials of the Manitoba Field Trials Club. Charles A. Boxer, Secretary, Box 282, Winnipeg.
- Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.
- Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.
- Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.
- Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

DOG SHOWS.

- July 30, 21, 22 and 23.—Milwaukee Dog Show. John D. Oleott, Manager, Milwaukee, Wis.
- July 27 to 31.—Dog Show of the California Bench Show and Field Trials Club. E. Leavelly, Superintendent, 436 Montgomery street, San Francisco, Cal.
- Aug. 24, 25, 26 and 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. George H. Hill, Manager, P. O. Box 78, Cincinnati, O.
- Sept. 8, 9 and 10.—Hornellsville, N. Y. Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville.
- Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3810.

PARASITIC DISEASES IN DOGS.—III.

THERE is occasionally found in the dog a very small tape-worm, producing but few symptoms in its canine host, but so deadly are the ravages of the larval form of this parasite in other animals, that a full understanding of its life history is most important to the dog owner and stock-raiser. The common hydatid tapeworm (*Tenia echinococcus*) in its adult condition attains a length of $\frac{1}{4}$ inch; it is composed of but four segments, thus differing greatly from the tenia in general. The head is armed with a pointed rostellum and a double crown of hooks, there being from thirty to forty hooklets. There are four suckers, behind which the head segment is much elongated, forming the so-called "neck." The final segment when mature equals in length the three exterior ones taken together. The reproductive papilla is situated on the margin of this segment or proglottis somewhat below the central line. This minute cestode inhabits the intestinal canal of the dog and wolf, probably causing but trifling inconvenience to its canine bearer, but a dog infected by hydatid tapeworms represents a sort of center of dangerous and often fatal disease to the herbivorous animals and man.

An animal harboring one of these tenia is continually passing the mature eggs per anum, great numbers being given off by the adult parasite. The eggs are diffused through water, especially by diseased dogs swimming through it, so washing off the ova which have adhered to the hair around the anus; they also adhere to fruits and vegetables, and in one way or another are scattered broadcast. Should one or more of the ova be swallowed by any herbivorous animal, a most wonderful series of developmental phenomena take place. The egg hatches, and from it emerges a minute embryo, which is provided with the usual six cestode hooks. This larva now bores its way to a suitable site within the body of its host—the lungs and liver being the favorite situations. The embryo now somewhat slowly develops into a spherical vesicle, and these now bud from the inner wall of this cyst "daughter vesicles," and from these again "granddaughter cysts" may be again produced by "budding."

Germination or "budding" consists in the outgrowth of "buds" or *gemmae* from the integument or interior of an animal. Speaking generally, these "buds," after acquiring more or less likeness to the parental stock, may either remain attached to the parent or become separated and begin an independent existence. Budding is well illustrated by the little *Aphis* or plant louse, curious ova-like masses budding here from the interior layer. This process is thought to cause monstrosities, such as double heads, etc., in the higher animals by some authorities; it is the usual mode of reproduction of certain of the lowest animals, as *Hydra*.

On the walls of all these hydatid cysts above described, minute pocket-like sacks are developed, and in these sacks or "brood capsules" *echinococcus* heads are formed, sometimes as many as twelve heads being found in each brood capsule, and the capsules may be almost innumerable from one embryo hatched from one ingested *echinococcus* egg.

All hydatid cysts are full of fluid, which, when not altered by inflammatory change, is clear, opalescent, and of neutral reaction to test paper, it is destitute of albumen, but rich in sodium chloride and often contains grape sugar and inositol.

The *echinococcus* heads or *scelices*, let us say from an ox, present the following characters: They measure about 1-80 inch in length, the body is divided by an hourglass-like constriction, the anterior portion being armed with rostellum and hooks.

Should any part of an hydatid cyst containing one or more brood capsules be swallowed by a dog or wolf—as often happens when dogs have access to butcher's offal—the cyst walls are digested, and the heads set free. These soon attach themselves, and rapidly develop into adult tapeworms within the alimentary tract, and the cycle of development goes on, the tenia again producing eggs, to again cause hydatid disease in some unfortunate ruminant or in man himself.

As fully twenty-five per cent. of all human victims of *echinococcus* disease die from its ravages, and as it is a very fatal disease among domestic ruminants, the importance of this parasite is very great. There are few reliable statistics in regard to its prevalence among dogs, the cestode being of such small size that the most careful observer may miss it even when several are present in the intestines of the dog under dissection. The highest authorities state that this tenia occurs in at least one per cent. of all English and American dogs; in Australia it is quite common, and in Ireland it is reported as being exceedingly abundant, quite a percentage of the human population and many domestic animals succumbing to *echinococcus* disease. Hydatids are found in all species of our domestic herbivora, although fortunately but rarely, and it is therefore evident how easily dogs may become infected by eating raw butcher's offal.

It is sufficient here to say that hydatid disease in man is not excessively rare in the United States, and is a most dangerous and intractable affection. Among our domestic herbivora the disease is a most serious cause of loss of condition, and often proves fatal.

Hydatid cysts may cause death in man or animals by mechanical pressure on vital organs, or by ulcerating or bursting into the body cavity or into almost any of the organs of the body, even the pericardium or heart membrane may be ruptured, speedy death from pericarditis usually following. The symptoms caused by the adult form of this parasite in the dog are of the vaguest character; ill health without assignable cause and without the presence of larger tenia, is suggestive of the presence of this tapeworm. An absolute diagnosis, positive or negative, can only be made by examining the faeces with the microscope for eggs—an obviously troublesome and generally impracticable procedure. If a dog is known to have had access to butcher's offal, even though no segments of larger tenia can be discovered in the faeces some weeks after, an appropriate anthelmintic is indicated if the animal present disturbances of nutrition and the nervous system without any other form of disease to account for it. The *Tenia echinococcus* is easily dislodged, and the treatment is to be conducted in precisely the same manner as was pointed out in speaking of the more common forms of canine tapeworms. The importance of disinfecting the faeces and the kennels with boiling carbolic water, or the like, is self-evident when a dog has been found to harbor this cestode.

Of the very large and interesting class of parasites belonging to the *trematoda* there are but two species which ordinarily select the canine race for their bearers. The conjoined fluke (*Distoma conjunctum*) was first discovered by Cobbold in the liver ducts of an American red fox, in which situation it had given rise to inflammation and the consequent formation of abscesses. Its average size was about one-fourth of an inch in length.

This species has since been found to be common among dogs in India. The dog fluke is clothed with minute spines, which occur abundantly on its outer surface. Although the average length is but one-quarter of an inch, specimens one-half of an inch in length have been found. The eggs are oblong, narrowed at the anterior pole and are furnished with a sort of lid to facilitate the escape of the embryo when hatched. The conjoined fluke has also been found in man in India and has occasionally been the cause of death, as in a case reported by Professor McConnell.

The symptoms caused by the presence of this fluke in the bile ducts are those of inflammation of the liver (*hepatitis*)—jaundice, high fever, tenderness on pressure over the hepatic region, and at times enlargement of that organ. The systemic symptoms may be very profound. The prognosis of both acute and chronic hepatitis in the dog from any cause is very unfavorable, the acute form, whether parasitic or otherwise, usually proving fatal.

But little if anything can be done for this affection; tonics, stimulants and nourishing food with possibly a mustard plaster

or mustard poultice over the region of the liver are indicated. Opium to allay pain may be required; the dose must at first be small and gradually increased as the symptoms demand; the dose of the sulphate of morphia for a foxhound or pointer is from 1-12 to 1/2 of a grain, to be repeated as often as necessary.

It is very important that dogs dying of hepatitis, especially in tropical countries, should be "posted," and the liver carefully examined for flukes; the parasites being preserved if found, and the lesions produced noted. More knowledge on this subject is much needed by comparative pathologists and veterinarians.

The winged fluke of the dog (*Holostoma alatum*) is of but little clinical importance. It inhabits the small intestines and is rare.

The development of the *trematoda* is even more complex than that of the hydatid tapeworms. The life history of the conjoined fluke has not yet been fully demonstrated, but doubtless it closely resembles the other flukes in its metamorphoses.

The *Distoma migrans*, found in the snipe and curlew, has perhaps been the most fully studied of any of the flukes. The *Distoma* produces eggs of an oval shape, from which hatch free-swimming, ciliated embryos. The embryos show as soon as hatched the rudiments of the *redia* form, which is produced in the interior of the organism by "budding." This larva finally loses its cilia and becomes a simple *redia* or germ sack. This form is provided with a mouth, gullet and digestive sac; it lives attached as a parasite to the bodies of certain water snails (*Paludina*). In the body cavity of the *redia* now appear numerous vesicles, and these rapidly develop into new larval forms known as *cercariae*. They finally burst through the wall of the *redia* and emerge as free-swimming forms.

The cercaria form has a long tail with lateral membranous expansions, with which it swims after the manner of a tadpole. After a short existence as a free swimming organism this cercaria or larval *Distoma* bores its way into the body of a water snail. The tail now drops off, and the body becomes surrounded with a structureless cyst wall; here the larva remains quiescent until introduced into a new and appropriate host. When a snail thus infested is swallowed by a water bird, the cyst wall is digested and the embryo is set free within the alimentary canal of the bird. Sexual organs now rapidly develop within the parasite, and it soon becomes a mature *Distoma migrans*, and again produces eggs to propagate its many-formed race.

Several generations of *redia* occur in some species of *trematoda*. A consideration of the zoological history of the canine *trematoda* concludes this sketch of the *entozoa* of the domestic dog. A few exceedingly rare or doubtful forms have not here been mentioned, notably the several species and varieties of pit-headed tapeworms (*Bothriocephalus*) which are occasionally found in dogs; the *B. latius* is probably the only species found in English and American dogs. The latter species attains the length of twenty-five feet and is introduced into the intestinal canal by eating raw fish which contain the cysticercus of this parasite. Only the *entozoa* of clinical importance have been described at length in these papers.

Our knowledge of many species is still very deficient, and the importance to comparative as well as human medicine of making post mortem examinations of animals possibly dead of parasitic disease and experimental studies is very great.

In my next paper the external parasites of the dog will be fully discussed and described.

R. W. S.

A FRAUDULENT MEDAL.

Editor Forest and Stream:

A very glaring fraud has lately come under my notice. The late Pittsburgh show offered silver medals as second prize in several classes. I recently had one of these analyzed, and it contains no silver whatever, being principally tin and lead! This is the most palpable, outrageous fraud I have yet met with. To offer a silver medal which would be worth probably \$3.50, and give a pewter one worth two cents, is abominable. The recipient of this particular medal had to pay 35 cents expressage on two cents worth of metal. Of course the society may be a victim and may have paid for real silver medals; but in that case they owe it to themselves and their exhibitors to bring the swindler to justice and get the real thing. If they are not the victim, then I am sorry to say that somebody is in a very unenviable position. I may say that I am convinced that some of the committee will be as much surprised at this disclosure as you will be. That you may have the evidence of your eyes on this matter, I send you the medal in question.

W. WADE.

HULTON, Pa., June 26.

[We have examined the medal sent us by Mr. Wade, as well as others sent us by winners at Pittsburgh, and find them all alike. The metal of which they are made is very similar to pewter. It consists of lead, tin, zinc, with a slight trace of copper.]

A SINGULAR INCIDENT.—Editor Forest and Stream: I had a little experience with my house dogs this evening which struck me as rather curious. My cocker bitch Dottie Stubbs has been boycotted for a season, and to-day was brought into the house for the first time in four weeks. During her absence we have placed in the library a red foxskin, mounted as a mat. She immediately took her position beside it and guards it most carefully, never taking her eyes from it if one of the other dogs comes into the room. My black cocker Jobo and she have always been great friends; but it is no use, if he shows his head in the room there is trouble. Thinking it might be a dislike for Jobo, I let two setters in. Every hair stood on end, and I saw prospects of a fight in the near future; so I let them out again. While I am writing this letter she is lying beside the mat, with one eye on the black dog in my easy chair. If she lay on the skin, I should think she was jealous of her bed; but she never steps on it. I once owned a cocker bitch that took a pair of beagle pups under her care and would allow no dog near them. But this is my first experience with a common mat. Is it because of its resemblance to a dog? I wonder if any of your readers have had a like experience.—C. S. D. (Warren, R. I.).

THE MILWAUKEE DOG SHOW.—Milwaukee, Wis., July 1.—Editor Forest and Stream: Entries for the Milwaukee bench show are coming in apace. They close on the 10th inst. The secretary requests residents to send in their entries at once, in order to avoid the inevitable rush after July 5. Milwaukee is noted for having the best class of non-sporting dogs of any city in the West. A fine special prize has been contributed to the club to be awarded to the best pit bull-terrier, Class 104. This class will be judged by a resident of Milwaukee. Great praise is due to Mr. John D. Olcott for his admirable management of our last bench show, as well as for his efforts in engineering the coming one. Mr. Olcott is never so happy as when ministering to the enjoyment of others, and he has made sacrifices of time and money in getting up and conducting those popular shows, which entitle him to the gratitude of all who love and admire that most faithful of all animals—the dog.—M. J. EGAN.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

Diox, Philadelphia.—A pointer pup has a very ugly looking skin over his face. The eye is red close in and gradually turning to white; it is the same in both eyes. Ans. Drop a few drops of solution of zinc sulphate in the eye (strength, two grains to ounce of water) each morning. If not well in a week write again.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Jefferson, Gold Medal, Viceroy, East Lake Beauty, Red Stocking and East Lake Flora. By Geo. Gillivan, West Jefferson, O., for pups, two dogs and four bitches, whelped April 20, 1886, by Bradford Ruby out of Flossy (A.K.R. 2250).

Tinfol, Gold Nugget, East Lake Lilly and Pride of East Lake. By Geo. Gillivan, West Jefferson, O., for pups, two dogs and two bitches, whelped May 29, 1886, by Treasure (A.K.R. 472) out of Peggie (A.K.R. 1804).

Toney and Lillie. By Frank F. Dole, New Haven, Conn., for white bull-terriers, dog and bitch, whelped May 23, 1886, by Count (A.K.R. 3178) out of White Violet (A.K.R. 3799).

WILMINGTON, Del., June 30.—The weekly club matches were held by the Wilmington Rifle Club at Schutzen Park this afternoon. Conditions at the first match were: Massachusetts target, 200yds., off-hand and prizes divided by highest scores. There being no ties, the prizes were quickly awarded as follows: The full score is as follows, out of a possible 120 points:

C Heinel, Sr.	11	10	7	9	12	8	9	7	8	11	—92
U Fuller	13	10	7	8	12	11	8	9	10	12	—90
W F Seeds	10	8	9	6	9	11	9	8	5	11	—86
R Miller	8	11	6	11	5	8	10	8	9	8	—84
J Newman	4	9	6	10	10	6	8	8	9	12	—82
H Simpson	5	12	2	11	9	6	8	9	8	9	—80
W A Bacon	8	2	10	7	6	4	11	9	10	12	—79
S J Newman	9	10	11	6	10	0	10	4	—	4	—72

At the second match the Hunan or Standard American target was used for the first time by the club and gave general satisfaction; otherwise the conditions were the same as at first match. The following is the full score out of a possible 100 points:

C Heinel, Sr.	10	4	9	6	7	8	10	7	7	6	—74
R Miller	5	7	6	8	5	7	7	5	5	10	—65
U Fuller	9	9	7	5	5	7	5	5	3	6	—61
H Simpson	9	7	3	6	7	4	7	3	3	7	—56
W F Seeds	6	5	3	10	7	5	7	3	3	3	—54
J Newman	4	4	5	7	3	3	4	8	9	50	—
W A Bacon	5	4	2	7	7	3	3	3	7	5	—48
S J Newman	3	6	4	0	4	5	9	4	3	5	—44

Conditions at third match same as at second. There was but one tie, which being decided, the prizes were awarded as follows: First to William F. Seeds, second to Robert Miller, third to U. Fuller, and fourth to Howard Simpson. The following is the score out of a possible 50 points:

W. F. Seeds	9	10	4	6	—35
R. Miller	9	7	5	6	—31
U. Fuller	5	7	3	8	—21
H. Simpson	3	8	4	6	—30

THE HAYES DORRILL MATCH.—Editor Forest and Stream: Sir—On Saturday last there was shot at Union Hill, N. J., a friendly match of 100 shots each, 200 yards range, ring target, between Messrs. William Hayes, of Newark, and M. Dorrier, of the Zettler Rifle Club of New York, the result of which, as published, does great injustice, I think, to one of the fairest and most gentlemanly amateur riflemen in the country; and in common fairness to the defeated I beg for space to state a few—thus far unpublished—facts bearing on the affair. They are, briefly, as follows: On arriving on the ground prepared to shoot, Mr. Hayes discovered that with the equipment he had brought he would be compelled to shoot against the wind, with a bullet of .32-caliber and 160 grains, against Mr. Dorrier's .33-caliber Ballard with nearly 300 grains of lead, and at once stated that he was badly handicapped under the circumstances, if the wind held in the same quarter, as his shots would not hold their elevation and direction with the bullet and charge of powder he was provided with so well as Dorrier's heavier bullet and charge. And before a shot was fired a mutual agreement was made between the competitors, with friends of each man present as witnesses, that the loser of the match should have the privilege of naming and claiming three other matches, one at Union Hill, one at Newark, and the third to be shot on a neutral range. Under this agreement the match was shot, and resulted in a victory for Mr. Dorrier by a score of 2173 against 2145 by Hayes. Immediately after the shooting Mr. Dorrier stated that he would never again shoot anything in an individual match, and completely and emphatically repudiated the terms of his agreement. As it was a case in which from the previous records of the men—Mr. Hayes had everything to lose and nothing to gain, while Mr. Dorrier could lose nothing but gain everything, I think nothing further need be said as to the standing, among fair-minded riflemen, of one who would, to put it mildly, take such an unfair advantage of an accident which favored him.—Justice.

BOSTON, July 3.—The attendance at Walnut Hill was smaller than usual to-day. The weather conditions were poor for good scores, and many were left unfinished. Mr. Reed made a fine score of 89 decimal and clean count Creedmoor. All shooting at 500yds.

Decimal Off hand Match.

R. Reed, C.	9	8	9	9	19	8	10	—89

CREEDMOOR, July 5.—There was good weather for shooting to-day. The qualification and champion marksmen's classes were opened at 8:30 A. M., and from that time until 5:30 P. M. shooters fired away without intermission. John Klein, who won the champion medal last year and who conducts the hotel at the range this year is also an enthusiast at rifle shooting, said that the showing of the day proved that rifle practice was growing more and more popular and that experts were increasing. There were over 500 competitors. The spectators numbered nearly a thousand, and among them were a hundred or more ladies. Besides the winners, whose names are given herewith, twenty-six shooters scored 40 or over in the champion marksmen's class. Sergeant Stuart, by having second in the score, won the first cash prizes which amounted to nearly \$15. The winners were:

Lieut. C. C. Walker, 14th Reg.	23	22	43	Total
Sergt T. Stuart, 6th Reg.	23	21	44	
Sergt H. B. Thompson, 7th Reg.	21	22	43	
Private C. A. Jones, 7th Reg.	21	22	43	
Private B. D. Drake, 7th Reg.	21	21	42	
Private J. N. A. Croix, 14th Reg.	21	21	42	
Private F. M. Rogers, 14th Reg.	21	21	42	
Sergt E. A. Anderson, 14th Reg.	21	21	42	

BOSTON, July 1.—The attendance at the Walnut Hill range to-day was fair. The wind proved tricky and blew from all quarters. L. Grant, at 500yds., made 48 and 49. Following are the records of the day:

W Charles, C..	9	8	6	9	8	10	10	10	8	7—85
C B Edwards, A.....	10	9	8	7	9	7	8	9	8	10—85

THE CREEDMOOR MEETING.—The final meeting of the National Rifle Association will take place on the Creedmoor range Sept. 13 to 18, inclusive. Sixteen matches are on the programme and a liberal prize list will be provided.

SPRINGFIELD, Mass., July 6.—The 14th annual festival and tournament of the N. R. Rifle Association under the auspices of the Springfield Schutzen Verein, opened at Riverside Grove range to-day. It will remain open until Friday evening. The gathering of riflemen from all parts of the country is very large; \$1,500 in cash prizes is offered, and matches have been arranged for all manner of arms.

CHATHAM, N. Y.—A rifle club has been organized here with prospects of a lively season before the butts. The officers of the club are: A. J. Clark, President; J. W. Darrow, Secretary; C. M. Harmon, Treasurer.

R. H. K. Norwich, Conn.—I contemplate a pedestrian trip through the Berkshire Hills to Lake George and down the Hudson. Be so kind as to tell me how to keep my feet in condition, how to prepare them for the tramp and on the route how to treat blisters, inflammation and soreness? Ans. Prepare by a course of baths in strong salt-water. Be careful to have shoes that fit perfectly, shaped to the foot, neither too large nor too small; this is important. Wear woolen stockings. Blisters may be drawn and then filled with glycerine; for chafing use some of the standard liniments, as Pond's extract, pain killer, etc.; rest and give chance to heal, and remove the cause.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW DORP, N. Y., June 29.—Regular match of the Emerald Gun Club at live pigeons, ground traps, 21, 25 and 30yds. rise, 60yds. bound, shot under above club rules, four prizes:

G. Hudson, 30	0111111101	—7	T. J. O'Seikei, 21	0010101001	—4

Alzirus Brown	01101010010101	7	W. R. Dean	01111001111101	11

In the sweepstake shooting the events and winners were:

Fourth—5 pigeons, 18 entries: Davis, Dean, Whitaker.
Fifth—5 blue rocks, 15 entries: Smith and Davis first, Kenneron, Rugg.

Sixth—4 pairs doubles, 12 entries: Dean, Smith and Peckham, Kenneron.
Seventh—5 blue rocks, 11 entries: Whittaker and Stone, Swan, Kenneron.

Eighth—3 pairs doubles, 11 entries: Smith and Whittaker first, Stone, Rugg.
Ninth—6 Macombers: Whittaker and Kenneron first, Rugg and Dean second, Keuney.

Tenth—1 clay pigeons: McAleer, Whittaker and Goodell second, Dean and Stone third.

GALVESTON, Tex., June 22.—A \$500 prize having been offered by the managers of the interstate drill for the shooting tournament to take place here during the drill, has led to the organization of two new gun clubs. One of these clubs, the Oleander Club, is composed of some very excellent material and the following score of their shoot to-day will show that the older organized clubs will have to look well to their laurels. The shoot was 10 single birds, 18yds. rise, 2 double birds and 1 single bird, 15yds. rise, and another match at 10 single birds, 18yds. rise. The following was the score of single and double birds:

H. L. Hurd	0011011111	01	01	101100010	—14
R. K. Lee	0101111101	10	00	11111000	—16
W. B. Peacock	0111111101	10	01	10110010	—11
H. P. Brown	0000010100	00	00	10111011	—12
A. Bonnot	0100110110	10	01	01110000	—14
C. Hasler	0100100100	10	10	10101000	—11
C. S. Faby	0110101011	01	01	11111111	—19
B. Smith	0100100101	01	01	10000000	—7
Both of the Galveston clubs are practicing daily for the big shoot in August.					

SACRAMENTO, Cal., June 20.—The Forester Gun Club held its regular monthly medal shoot to-day, shooting at 30yds., Hurlingham rules, and the following scores were made:

J. W. Todd	0111111111	—10	F. F. Tebbets	0110101111	—11
H. Eckhardt	0111111111	—11	J. Gerber	0110111111	—11
George Watson	0111111111	—12	W. E. Gerber	0110111111	—11
H. Gerber	0110111111	—14	O. M. Miller	0110111100	—8
F. Ruhstaller	0100110101	—7	J. A. Keener	0110111111	—10

HARTFORD, Conn., July 3.—Cult Hammerless Gun Club shoot to-day was as follows, 15 blue rocks, 18yds.:

Day Were as rowdys, 15 birds rock,	(Syds.)				
E. A. Folsom	01111111111111	—13	O. B. Treat	00011000100111	—7

WITH a view to inducing some of the English canoeists to visit America this year, and to secure a trial between the best boats of each country, the New York C. C. late last season offered a cup for international competitions in sailing races, and invited foreign canoeists generally to challenge for it. The first challenge received was from the Royal C. C. of England, the oldest canoe club in the world, including in its name some of the most expert sailors and designers of the day. Of these, Messrs. W. Baden-Powell, E. B. and A. H. Tredwen, have been named by the R. C. C. as its representatives, and will visit New York next month on their way to the meet, returning in September to race for the cup. The latter, a cut of which we publish by courtesy of the *American Canoe Company*, is a pitcher of silver, made by the Gorham Manufacturing Company, New York, from a design by the artist, John D. Gould, and is named in honor of the Indian in character, as the most appropriate representative of American canoeing; the form following closely that of the ancient Indian pottery. In order to make the races of national rather than local interest, it was determined to select competitors to the number of the challengers, from the great body of the American canoeists, and to this end the States of New Jersey and New York, a series of letters to this effect being sent to the clubs, are invited to send representatives, the defenders of the cup being afterward selected by the regatta committee.

Off the boats over the	C. K. Munroe.....	New York C. C.
Nethla.....	C. B. Vaux.....	New York C. C.
Lassie.....	B. H. Nadal.....	New York C. C.
Sea Urchin.....	H. O. Bailey.....	New York C. C.
Surge.....	H. T. Sinclair.....	Brooklyn C. C.
Guenn.....	Grant Edgar, Jr.....	Newburgh C. C.

Peggy was near the end and in the light from south. Guenn led over the course, winning easily. The times were: Guenn, 5:41:30; Nethla, 6:00:30; Lassie, 6:14:30; Peggy, 6:17.

Natbla	C. K. Munroe	New York C. C.
Las-ie	C. B. Vaux	New York C. C.
Tramp	C. J. Stevens	New York C. C.
Sea Urchin	B. H. Nadai	New York C. C.
Perry	Grant Edgar, Jr.	Newburgh C. C.
Ventricle	G. J. Jones	Hartford C. C.
Syph	E. Knappe	Springfield C. C.
Gluck	J. B. Bowles	Springfield C. C.
Pecowsic	E. H. Barney	Springfield C. C.
Blanche	Paul Butler	Vesper Club
Yvonne	W. Whitlock	Brooklyn C. C.
	H. T. Slack	Brooklyn C. C.

The latter two arrived after the race had started at 11:23 A. M., but were timed at 11:43 for Yvonne and 11:44 for Gueanu. The fleet worked close in shore out of the tide as far as Milton. Wadsworth they were out of sight. The boats were crowded with spectators. The gunnery was very good. The wind was light, but free, coming home. Blanche, a very handsome canoe of Spanish cedar, lost her mast at the start, breaking it off short at the deck. Gluck also broke her rudder head and withdrew. The times were: Entrance, winner, 1:30; Lash, 1:36; Gueanu, Peggy, 1:40; Yvonne, 1:46; Lechman, 1:56; 30; Lash, 1:59; Netla 1:40; 30; Yvonne 1:40; Trauer, 1:49.

After a lunch in the club house, the fleet mustered at 2:38 for a new race, this time around Buoy 18, then down with the ebb tide against a whole sail breeze, to the Clifton mark and home, the reverse of Saturday's course. Sylph, Gluck and Sea Urchin did not start. Venture and Lassie took the lead, turning Buoy 18 close together. Venture's windward work was very pretty, the two leaders sailing close by the side of each other. Venture's crew, especially the helmsman, were very smart and leewardward work was very good. Venture turned the Clifton mark first, but on the run home Lassie passed her, winning the race. The times were: Lassie 52:00, Venture 52:30, Peggy 55:00, Blanche 55:00, Yvonne 57:00, Guenue 1:00:30, Nethla 1:02:30. Pecowisc broke a rudder line and gave up. Tramp did not finish. Pecowisc is fitted with a fishtail rudder, a thin flexible blade of brass, rigidly fitted to the sternpost, and a thin, either side, taking a fair curve, by means of which the boat can turn to either side, taking a very long deck stroke. The defenders of the cup will be masters and leg-overs. The races will be held some time in September next. Messrs. Norton, Burchard and Rogers were the regatta committee for the three races, which were very well conducted in every way without the delay and confusion that is so common.

WEIGHT OF CENTERBOARDS.—Will some of the canoeists who are accurately informed on the subject, please tell through the FOREST AND STREAM how much weight it would add to a canoe to put in a four-section Atwood board 20in. long, each section 5in. wide; also added weight of same if 2in. long? Second, the race added weight for a Goodrich board 30x34in.? Third, did you add weight for a wide keel canoe? Fourth, did you add weight for the lightest standard patterns of boards mentioned, including trucks, bolts and all fittings. —LANEGBI.

VESPER BOAT CLUB REGATTA.—On June 29 the Vesper Boat Club, of Lowell, held their ninth annual regatta over the club course on the Merrimac River, opposite Middlesex. Beside the rowing races, a tandem paddling race took place, between E. S. Sherman and C. F. Nichols, and Paul Butler and Howard Gray. The latter team led at first, but soon fell back, Messrs. Sherman and Nichols winning by two lengths. The distance, $\frac{1}{2}$ mile with turn, was made in 5m. 25s.

There was a strong wind from N.W., making it a dead give to windward down Teddington Reach in lumpy water. Nautilus was first over the line, closely followed by Pearl, and both being under snug canvas. Nautilus sailing without a mizzen. Nautilus launched a windward wave, and Pearl, who was a little behind, was steering on a beam reach, and was fished rapidly. Sabrina soon weathered Catspaw, but the latter kept ahead of Akara. After rounding the buoy, Nautilus shook out a reef and set twizzen, and Pearl tried whole sail for the run up. Sabrina indulging in a spinnaker. No change took place in the relative positions of the canoes to the finish; but if it were not for the fact that Pearl, who was a little behind, was steering on a beam reach, and was fished rapidly, the results of the first round would have been different. The time of the first round was:

—*Field*, June 19. The annual regatta was sailed on June 26.

MOHICAN C. C. RACES.—Thursday, June 17.—Championship race, postponed twice on account of lack of wind. Marlon B. holds pennant until 1st event, Thursday, June 24.—Sixty-foot limit race, 1st event, Entries, seniors: Thetis, P. M. Wackerhagen, 56ft; Annie O., H. L. Thomas, 54ft.; Marlon B., R. S. Oliver, 57ft. Juniors: Arno, O. C. Cushman, 57ft.; — M. S. Smith, 58ft.; Mermaid, L. J. Prince, 55ft.; Chingachgook, W. Wheeler, 56ft. Wind light and variable. Canoes got away together and for the first quarter kept up an almost perfect alignment. The wind began to die away and for the remainder of the race was very variable. The boats were now getting slowly ahead and the tide began to run with fair lead, Marlon B. a good second, and Annie O. next; Arno and Chingachgook rounding together, — and Mermaid next. The beat home was a long drifting match. Thetis won easily in one hour and a half; Marlon B. second. Chingachgook managed to outpoint Arno and came in a good third, thereby winning the junior blue pennant from the former. Arno fourth, Annie O. fifth; others not taken as it was too late. The 2nd event, 40-foot limit race, postponed on account of the lack of wind. The Vesper was unsatisfactory for the last of the week. The 3rd event, 40-foot limit race, postponed on account of the lack of wind. The Vesper was unsatisfactory three times it becomes the property of P. M. Wackerhagen. The cup has been sailed for eight times, and has the name of each winner inscribed thereon. A new race will be substituted for the 60ft. limit. What with the Susquehanna trip and the Sunday cruises, the Upper Hudson and the cruise to Grindstone, the Turkeys got a good benefit out of their visit to the Potomac. They got a good amount of visitors of the Potomac, a beautiful week, and will give them a good time if they will enter, and a good time whether or not.—MARLON B.

On Thursday, July 1, Junior Race; prize, a senior pennant; open to all, but juniors only eligible for prizes. Entries: Juniors—Arno, H. C. Cushman; Mermaid, L. J. Prince; Chingachgook, Wm. Wheeler. Seniors—Vesper, R. W. Gibson; Marion B., R. S. Oliver. There would have been more contestants, but the canoes had been shipped away to the Upper Hudson for a cruise. The wind was light and the first half mile the seniors drew ahead; but the crew of the Vesper, disgusted with the light wind, deserted the side of the twin ship and withdrew from the race. Then he jumped overboard and enjoyed a swim, leaving the Marion B. to push on alone. The latter turned the buoy with a long lead and finished at home flag at 7:05. Meanwhile the juniors kept in a bunch and rounded the light stake together, the Chingachgook inside and the Arno and Mermaid close by. The sail home to windward was a drifting match and a tedious affair, and was not completed until 7:30. The Arno and Mermaid were the victors. Wm. Wheeler now flies the senior regatta pennant, and his name is placed on the roll with Gibson, Wacker, Hagen, Thomas, Thacher and Oliver. The bulk of the Turtles are of for a three days' cruise on the Upper Hudson and other waters.—MARION B.

A. C. A. MEMBERSHIP.—Applications for membership have been received from the following: W. R. Burling, Newark, N. J.; William Scott, Ottawa, Canada; Harry F. McKendrick, Galt, Canada; E. A. Gardner, Seattle, Wash. Ter.; John T. P. Wright, Halifax, N. S.; C. J. Bonsfield, Bay City, Mich.

HALLOCK'S "ALASKA."—Mr. Charles Hallock, who is well known as an experienced traveler, and who has thoroughly studied Alaska and its resources, is about to issue an illustrated work, now on the presses of the Forest and Stream Publishing Co. It is entitled "Our New Alaska; or, the Seward Purchase Vindicated." The glowing account of the country from the pen of Mr. A. F. Swinford, who has so long identified with our most important iron ore interests, have contributed towards a general interest in the trade, and have served to pave the way for Mr. Hallock's work among what we hope will be some a large constituency.—*The Iron Age*, June 24.

Address all communications to the Forest and Stream Publishing Co.

There are still many clubs not represented below, and some of the dates in the table are not official. We ask the aid of club secretaries and others in completing and correcting the list:

THE 107th regatta. The first open sweepstakes was sailed at Monument Beach, July 3, in a moderate breeze, W. by S. at start, gradually shifting to S. by E.

In the first class, last year's champion, Surprise, was conspicuous by her absence; but the new Mollie, Hanley's latest, was on hand to fill her place.

The Vice-Commodore was first over the line, and was not passed, though close pressed by Creep, a new and large boat from Mattapoisett.

In second class Superior and Crawl, both new boats, made a close race, while in third class last year's rivals, Petrel and Fannie, had it nip and tuck. Summary as below:

FIRST CLASS.			
	Sailing length.	Actual.	Corrected.
Creep, E. C. Stratton.....	50.05	2 24 58	2 17 35
Mattie, Vice, Com. Stockton.....	28.10	2 25 83	2 16 30
Quisset, R. B. Hiller.....	39.06	3 32 42	3 24 27
Mabel, S. H. Perry.....	27.04	3 34 53	3 24 26
Mollie, J. Hill.....	37.00	3 35 14	3 24 25
Cuttyhunk, T. Aiken, Jr.....	39.08	3 35 49	2 27 44

SECOND CLASS.			
Superior, Wm. Phinney.....	37.00	2 30 28	2 19 44
Crawf, J. E. Hiller.....	26.04	2 30 38	2 19 05
Harold, L. E. Perry.....	24 07 14	2 39 42	2 26 08

THIRD CLASS.		
Fannie, F. W. Sargent.....	53 10	1 36 49
Petrel, G. H. Richards.....	30 07	1 34 47
Dolly, A. S. Hardy.....	32 98	1 54 09

Judges—G. A. Goddard and W. Lloyd Jeffries, Judges' yacht,		1 51 16

The 108th regatta, the first of the season for the Buzzard's Bay pennant, was sailed off Monument Beach in a very strong S.S.W. wind. Mattie astonished every one by beating Surprise in her own weather; the latter being a little slow in shaking out her second reef at the start.

In second class Lestris and Mr. Curry's new boat made a very close race, the latter coming home free under two reefs, while Lestris had shaken all of hers out.

In third class Fannie avenged her defeat of the third on Petrel, the latter being shorthanded and unable to shake out her reef coming home. Summary as below:

FIRST CLASS.			
	Length.	Actual.	Corrected
Mattie, Vice-Com. Stockton.....	28.10	1 54 26	1 45 32
Surprise, Jas. M. Codmay.....	27.03	1 57 50	1 47 17
Myth, Thos. Parsons.....	27.04	1 58 53	1 48 26
Violet, G. H. Richards et al.....	27.06	2 06 54	1 56 33

SECOND CLASS.			
Lestris, Joshua Crane.....	24.02	2 11 22	1 57 15
————, Curry.....	25. 9	2 11 25	1 58 20?

THIRD CLASS.			
Fannie, F. W. Sargent.....	23 10	1 26 55	1 17 00
Dolly, A. S. Hardy.....	22.08	2 29 48	1 18 49
Petrel, G. H. Richards.....	20.07	1 30 17	1 17 14
Marysue Lawrence Stockton.....	21 11	1 35 06	1 23 25

Subject to the measurement of Mr. Curry's new boat prizes go as follows: First prizes and legs for pennants to Mattie, Lettris and Fannie. Second prizes to Petrel and Surprise. Myth is protested against for breaking the rule about Corinthian skippers.

BLUE WITH A GOLD CASTLE.

THE following yachts of the New Jersey Y. C. started on a short cruise down the Bay, Saturday afternoon, July 3: Wayward, Capt. W. H. Dilworth and Fred Beltz, owners; catamaran Duplex

Vice Com. H. F. Ogden; Letitia, Louis Kayser; Growler; J. & J. Bell Eagle Wing, John Burliton, and George B. Deane, R. L. Dumbacher. The squadron got under way at 2 P. M. with a light breeze from southwest, tide, last of the ebb. Flood tide was met in the Narrows and after the fleet reached out by buoy 16 the wind died completely out, and all made the best of their way to an anchorage inside of Norton's point. A start was made at about 8 o'clock Sunday morning from the anchorage, and the yachts reached out by Norton's Point against the flood tide and a light southwest wind. Shortly after passing the point the flagship Wayward and the Growler made an interesting light bout, the flagship finally passing through the lee of the Growler, owing to the superior drawing of the former's jibtop sail. The Growler stood on down to the beach a while longer and then stood off toward the Hook. The Wayward holding her reach for about fifteen minutes longer when she went about and shaped her course for the Highlands and Sea Bright, getting out lines for bluefish. This was freshened perceptibly in reaching across here, and the jibtop sail was taken in off the Romer, and off the Highlands her gafftopsail was clewed up.

was clear and up. The Wayward stood on below Sea Bright and went about and stood up, getting out her spinnaker. Off the Scotland the Atlantic and Graying were met, the former being about three-quarters of a mile on the latter's weather bow. The Graying was footing with the Atlantic, but the latter seemed to be laying a point and a half higher. An anchorage was made at the steamboat dock inside the Hook at 6 o'clock, where a large fleet of yachts were found anchored and among them being the sloop Nirvana, the Duplex and Deane going on up the New Haven clubs; the Growler, others anchoring with the flagship Suresbury to Thompson's, Mr. T. H. had of the Atlantic and the main sails were exchanged between the Nirvana and Wayward. After a sail outside the Hook the squadron finally started home at 2 P. M., the Wayward picking up her moorings at 6 o'clock and the Eagle Wing about five minutes later, all getting in before 6 o'clock.

In the sail up, the Atlantic and Grayling were met beating out to the Hook, the former being about a minute and a half ahead. In the reach out, while the Grayling seemed to foot equally as fast as the Atlantic, she did not point up with her, there being the same difference in the wind on the two boats. The wind on Sunday the Grayling seemed to go down the weather of the Atlantic, going out from under the lee of the Atlantic having her balloon jibtopsail set. So it would seem that, while the Atlantic beats Grayling to windward, off the wind the Grayling is equally fast.

MAYFLOWER.

EASTERN Y. C. 16TH REGATTA, JUNE 29.

THE race of last week at Boston brought to an end one of the most interesting series of races that has taken place in the history of our yachting; races that derive a special importance from the fact that they mark plainly the great changes that have taken place in American yachting, and still further, from the indications which they give of its future. While the weather in the three earlier races at New York was not favorable to a thorough estimate of the qualities of the boats, that of June 29 left nothing to be desired in that respect; while, of the four served to emphasize some important points that claim the attention of all.

The first of these concerns most the past history of yachting, the yachts of yesterday, now noticeable chiefly from their absence. In the 4 races a total of 59 yachts competed, making 93 starts in all; 42 yachts with 71 entries being single stick vessels. Excluding the 4 new yachts as a special class, and considering only the classes which have existed for years here, we find 33 yachts with 57 starts in the 4 races. Of these only 23 were of the old centerboard type, 4 of them having lead keels; 4 were of the new centerboard lead keel type, 5 were keel sloops of mixed models, and 6 were thorough cutters. The entries of these boats were: Old sloops 33, 6 first prizes; new type 8, 2 firsts; mixed keels 5, no prizes; cutters 11, 8 firsts. The figures in tabular form are as follows:

Old Sloops. New Type. Mixed Keels. Cutters. Total.				
Number of yachts.....	23	4	5	38
Entries.....	23	8	5	36
Prizes, 1sts and 2ds.....	9	3	—	12
Prizes, 1sts.....	6	2	—	8

The list of sloops is increased by some small boats entered in one or two races.

The above table tells its own lesson without any comment; the races were the representative ones of the section which has always been the leading one in American yachting. The boats which once comprised the entire fleet have now actually passed away, their figure but poorly in the entries and worse in the wins, and the prizes go to expatriated British yachts or their fellows of American build, while to the latter also is largely due the interest in the races, the onus of the work falling on a few of them.

The conclusions which follow these facts, however, must be modified by a second and most important feature of the races, the advent of a new class in our regular club regattas. In every race the performances of these new boats have dwarfed entirely all other features; the large schooners have been completely overlooked; and some wonderful work in the smaller classes has attracted no comment nor attention, all the interest concentrating in Puritan, Priscilla, Mayflower and Atlantic. Of course this interest is largely due to the success of the class representative last fall in the Cup race; a success which has awakened a national pride, not only among yachtsmen, but among people of all classes, and in the most remote inland sections; while it has also excited to a degree previously unknown, the friendly rivalry between our two great yachting centers, New York and Boston.

These yachts have proved very fast indeed, a quality which, above all others, must commend them to racing yachtsmen, while in beauty and imposing appearance they ask no odds from the largest of the schooners. What is to be their future is an unknown and important problem that at this moment cannot be answered. It seemed last year as though when the special purpose for which they were built existed no longer, they would be converted into schooners, owing to the increased handiness and lessened cost of running. Since then, however, two new ones have been built, the old ones have found single owners instead of the syndicates that originally built them, and their advantages have become apparent. The mere possession of one is in itself a distinction, the room is such as to make life aboard very much more comfortable than in the old 70ft. class; as racers they are very fast and far ahead of the schooners, and it seems probable that the new first class will become a permanent institution. They are the leading feature of the yachting of to-day, and already have exercised a visible influence on design and construction in this country.

Much as we are concerned with the present, a far more important subject of study for all friends of our great national sport is the future of American yachting and especially the coming new national type. It is beyond dispute that the boats of even five or six years since, to say nothing of the older ones, have had their day. They have virtually disappeared, and with them the false and mischievous theories on which they were constructed; and now the question is, What shall succeed them? A year ago it seemed probable that the extreme English cutter would come into general favor here to a greater degree than any other type. Had Genesta won—and we know that she was beaten by a very small margin in the race which really decided for the time the possession of the Cup—we not only would have built narrow cutters, but with that characteristic tendency to go to greater extremes than any one else has done, we should have built cutters longer, narrower and deeper than any of the real articles. That such boats, whatever excellence they might have possessed in point of speed and safety, would suit the general want is hardly probable. The conditions here differ too much from those which have produced the extreme cutter abroad, and tried by these conditions the type would probably in time have given place to something better suited to local requirements.

Puritan won by a minute and a half, cutter stock fell and no cut-

ters have since been built here. The new boats of the season have, as was to be expected, followed very closely the victorious boat, the two most noticeable examples being Cinderella in New York and the new Vandal in Boston. Let us see what this new type really is. First and foremost it has the centerboard, a thoroughly American feature; but this board works through a distinctly marked keel, projecting some distance below the hull proper, and this keel is of lead. Of these features, form and material, the latter is peculiar to English practice, and the former has always been the exception here and the rule in England. Again, these boats possess the beam that is a characteristic of American as distinguished from English practice, though this beam is less than it was a few years since and promises to decrease still more. This, it is true, is a great difference, a Mayflower of 38ft. and a Galatea of 15ft. on the same length; but to offset this the rig of these new boats is taken bodily from the pure cutter type except as to the two minor details, a laced mainsail and a fixed bowsprit. Two of the four boats have indeed followed to a certain extent the proportions of the sloop rig only to change for the cutter, in one case with a very marked improvement, the other not having yet been tried. In depth, draft and displacement the new type has nothing in common with the ancient flatrons, but leans strongly toward the same narrow cutter, approaching nearer all the time.

This, then, is the boat hailed in some quarters as a representative of American ideas; a boat derived mainly from a thorough study of English, not American practice and theory, untrammelled by the rule which has put British designers under such a handicap. No doubt the type has much to recommend it, no doubt but that it is well adapted to our wants, but the battle was not fought out to a close

last September, and there is plenty of fight still left in the narrow cutter before she is driven from our waters. Genesta was beaten, Galatea may be, but to-day, when the first craze after a novelty has well worn off, the cutters are holding the leading places in our races and taking the prizes from all but the big four. This year they already claim half the wins. Bedouin promises to rival her string of 1884, 8 firsts to 9 starts, while Clara has proved simply a marvel to all who have watched her racing. Narrowest of the narrow, deeper than any, she has sailed eight races this season and won eight firsts, leaving all her class far behind at the finish and cutting in ahead of most of the class above. In view of the success of even this one boat of the type, its possibilities for speed must be admitted, and speed will always be at a premium here. These two types, then, the narrow keel cutter built under the Y. R. A. rule, and the wide centerboard cutter built outside of such a rule, are pitted against each other, the only part left to the American sloop being to blunder about the courses and get in the way of the real competitors; what will be the result of the contest?

Just here may be noted a curious point that has never been commented on. In the past a man largely shaped his yachting by the boats at his command. Except in the large schooner class where keels were sometimes found there was no boat to be had here but a shoal, wide centerboard yacht of light displacement and badly canvassed and ballasted. Provided with this boat he soon found the limit within which it was not too dangerous, and carefully kept within that boundary, except in a very few instances. How is it to-day? The modern yachtsman has a range of vessels offered to him that are suited to all purposes, the shoal sharpie for Florida, the medium boat for our ordinary harbors, the newer and deeper type for racing and a wider range of cruising, and the cutter of moderate beam, like Bedouin or narrower, like the Clara, for holder flights seaward. The difference is easily seen, of old the yachting was made to fit one type of yacht; to-day a dozen varieties of vessels offer a choice of any kind of yachting, while the yachtsman has been trained to exercise thought and judgment in the selection of a boat for his special ends. One result must follow this, that no single type will be adopted to the exclusion of all others, but that several will flourish side by side, varying from each other as much as the Great South Bay and the sounds and passages of Florida do from the broad Atlantic. Of these types the leading ones for many a day will in all probability be either like Puritan, or a keel cutter of greater beam than is permissible under the English rule.

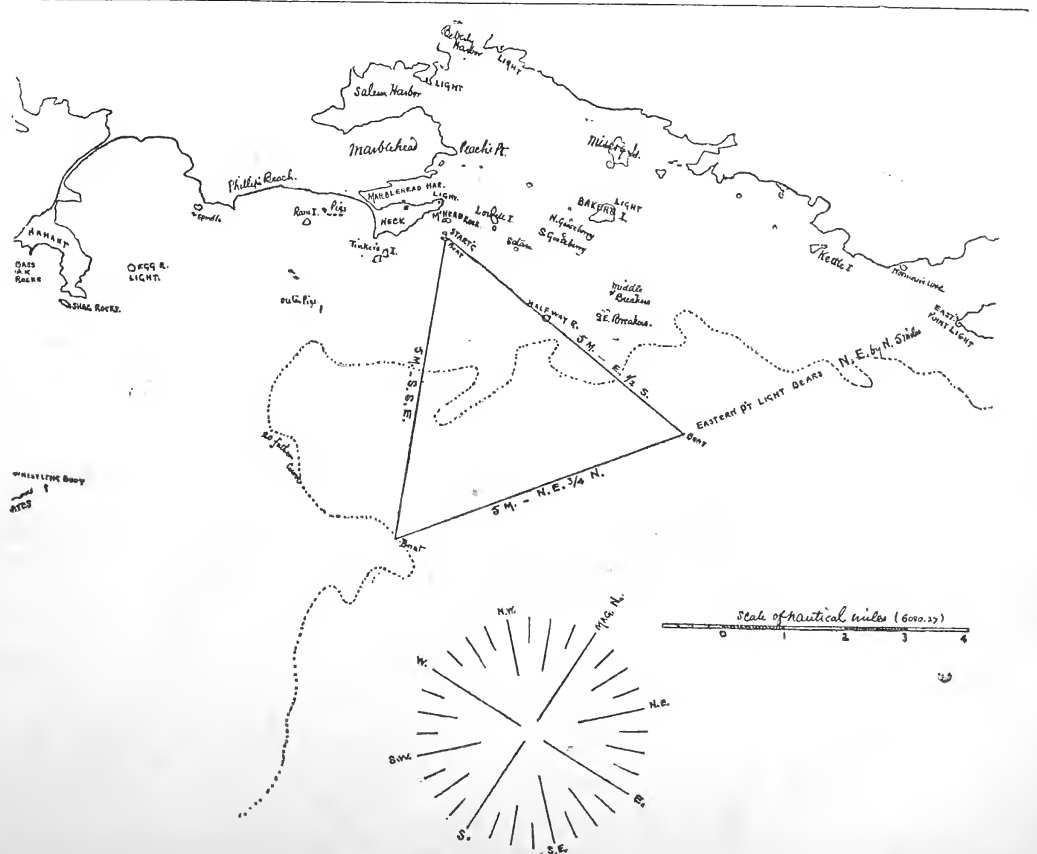

Intimately connected with the future of yachting is a subject that has been brought up more prominently than ever before in the late races; that of a racing classification. Let it be understood, first and foremost, that an agitation of this subject is not throwing another stone into the now comparatively quiet waters of the time allowance question. No such disturbance is intended and none will ensue. American yacht clubs may follow the charmingly insane methods of time allowance and measurement that have long been dear to too many of them, and at the same time may join in an effort to establish a sensible system of division into classes according to waterline length, the allowance between various yachts in each class not being in the least affected. Never before has the subject been brought so prominently into notice as in these races, and especially in that of last week.

The classification in each of our clubs has grown up in a desultory way, entirely independent of any scientific or reasonable basis. Certain sizes of yachts have become popular in each club and the classes have followed the accidental grouping. In time, as yachts were added, they were built for one of these classes, and as long as no interclub contests arose there was no trouble. Following the impulse given to yachting of late years, open races have become much more common, and the boats of one club may be found in the races of half a dozen others in a season. Now, no two are likely to have the same system of classification, as is well instanced in the four large clubs in question. The New York has heretofore divided its single stick yachts as follows: 55ft. and over under 55ft., and not under 45ft.; under 45ft. The Seawanhaka has followed these classes, adding two: 35ft. and less than 45; under 35ft. The Atlantic has 60ft. and over; 50ft. and under 60ft.; 42ft. and under 50ft.; 35ft. and under 42ft.; 30ft. and under 35ft.; 26ft. and under 30ft.; under 26ft. In the Eastern Y. C. it is 55ft. or over; 40ft. and under 55ft.; 30ft. and under 40ft. Now a new class has claimed a place, and to meet it the New Y. C. has established a class of 70ft. and over, just bringing in a yacht which has no place in the class, and narrowly escaping a serious difficulty; the S. C. Y. C. have made their limit 71ft., an odd figure, to suit the same yacht; the E. Y. C. have gone up to 75ft., while the A. Y. C. simply offered an extra prize for a special class.

The fault of such a lack of system are readily seen where yachts may be built to class in one club and then wish to race in another, while the shortcomings of the individual methods were well shown in the E. Y. C., where Uluda, a 10-tonner of 42ft., was matched with Clara, a 30-tonner of 55ft. At no previous time has the subject attained to such importance, which must increase from year to year; and at no time in the future can a change be made so readily and with so little friction as now. Our yachts are of all sizes, while just at present the fleet of actual racers is very small. Year by year as new yachts are built in each club the difficulty of changing becomes greater. The subject is far too important a one to do justice to here, but we leave it to the consideration of yachtsmen, promising to take it up at an early date in a more thorough manner.

Passing from a general consideration of the subject to the last race of the series one point of difference between this race and its predecessors is very plain as far as the large yachts are concerned. In the three races at New York the times showed little, the results were not conclusive and a careful analysis of the race was necessary to any fair estimate of the yachts. At Boston all was different, a slashing breeze sent them flying over a course that was perfectly fair to all, and no study of details is necessary to reach a definite conclusion.

To Puritan must undoubtedly be awarded the first place on account of her splendid work; Mayflower did very well at times and fully bore out our opinion that she will ultimately prove the fastest of the four. Priscilla sailed very fast, steaming over the first two

MAP OF E. Y. C. COURSE.

logs in the van of the fleet, carrying sail well and making a good show all day; but once on the wind she was not in it with Puritan, and it does not seem that she ever will be. Both she and her antagonists were well sailed all day, the wind was the same to all, and there was no fluking; but on the wind Puritan left her fairly and squarely, making up in a few tacks the long distance she had lost.

After the fluky winds and provoking calms of New York, Marblehead breezes were very welcome to the yachtsmen, while the place had much to recommend it. A beautiful harbor where hundreds of yachts may lie unmolested by trading craft, an open course within half a mile of its mouth, the neighboring bays for small yacht sailing, and in place of the garbage and oil-polluted waters of New York, a clear, green tide that shows the keels of the deepest boats clearly. Add to this a picturesque shore, lined with handsome summer cottages perched on the rocks, from which latter a view of the course may be had, a handsome club house and good water for the deepest boats almost up to the shore, and the place makes a perfect yachtsman's paradise.

Here on Monday were gathered a fleet of yachts of all sizes and rigs, from the huge Ambassador down to little Shona. Among the schooners were Gitana, Fortuna, Mohican, Dautless, Meta, Adrienne, Intrepid, Una, Marion Wentworth, Tempest, Fearless, Alice and Tioga, with a number of smaller ones. Priscilla lay at anchor near the middle of the harbor, Mayflower came in at evening and dropped hook alongside, Puritan followed and took a berth further out and nearer the Neck shore. Stranger came over from the Beverly and laid near Mayflower, while Bedouin remained at her usual anchorage off Beverly. Boston turned out a large fleet, though there was little fight in them and few entered. Huron, Thetis, Active, Addie, Volante, Shadow, Rondina, Maud, Hera, Imperia, North Star, Lapwing, Alga, Fad, Saracen, Nimbus, Azir, were all in the harbor on Monday. New York sent a small but select fleet, Priscilla, Bedouin, Clara and Uldia, all first in their classes at home.

New York was once supposed to be the home of the sloop, but she has to depend for her proper representation abroad almost entirely on the cutter tribe, large and small. Clara and Uldia sailed around from New York to Marblehead, sailed the race, the former winning as a matter of course, and then topped booms for New York again, to be in at Larchmont on Monday, a performance hardly worthy of comment when performed by a cutter, but what a grand hurrah there would be if a small New York sloop had tried such a lengthy voyage merely for one race.

A new course was laid out this year that brought dismay to the hearts of masters and crews, a triangle with five mile sides, two rounds to make the thirty-mile course. Handling spinnakers and balloon jibtopsails over five-mile legs in a good breeze is no fun, however useful and necessary the drill may be, and there was some grumbling at first, but once away the work was not so hard as they had feared. The course was a triangle, with the starting stakeboat at one angle, about a third of a mile south-southeast from Marblehead Rock; thence to a boat moored five miles east half south, directly in the range of Half-way Rock; thence to a boat or tug moored five miles southwest three fourths south from this eastern mark and five miles south-southeast from the starting stakeboat.

This course was to be sailed twice over by all but the smallest class, which was to make but one round; the direction in which the yachts were to start being governed by the wind. The prizes offered were: First class schooners, \$250; second class schooners, \$120; third class schooners, \$50; first class sloops, \$250; second class sloops, \$150; third class sloops, \$75; fourth class sloops, \$50. The entries were:

FIRST CLASS SCHOONERS.			
	Sailing Length.	Allows.	
Mohican, K. H. D. Burnham	104.50		
Gitana, K. W. F. Weld	96.23	2 35	
Fortuna, K. H. S. Hovey	94.50	3 23	
SECOND CLASS SCHOONERS.			
Alice, K. W. L. Lockhart	78.60	8 45	
Meta, C. B. A. Lawrence	64.21	8 45	
Gevalia, K. G. M. Winslow	60.00	12 41	
FIRST CLASS SLOOPS.			
Mayflower, C. B. C. J. Faine	87.83	1 08	
Priscilla, C. B. C. J. Faine	85.45	1 58	
Puritan, C. B. J. Malcolm Forbes	83.85	1 58	
SECOND CLASS SLOOPS.			
Bedouin, K. Archibald Rogers	71.45	3 11	
Huron, K. William Gray, Jr.	66.20	3 31	
Stranger, K. George H. Warren	65.80	3 31	
Thetis, C. B. Henry Bryant	65.50	3 51	
THIRD CLASS SLOOPS.			
Active, C. B. Charles Kenney	54.80		
Clara, K. Charles Scott	54.28		
Uldia, K. E. M. Padelford	43.00	11 45	
SECOND CLASS SLOOPS.			
Shona, K. C. H. Tweed	35.23		

The entries in the old classes are but meager, and the field is left almost undisputed to the cutters and keel boats. Only 5 centerboards to 12 keels, and of the former 3 had lead keels in addition to their boards. Boston is noted for its large yacht fleet, especially under 50ft., but here in the principal races of the year no home boats turn out to do battle with the visiting cutters. For several years the leading yachts have been closely watched on the South side, and races in British waters have been familiar, by name and reputation, with Americans are thoroughly familiar with the Scotch side, and Shona, in the reports of our home races, and to see Clara under the blue ensign and Uldia flying the Royal Thames burgee in the midst of the fleet of American yachts. A man has to turn round and shake himself and to stop for a moment to think whether this is really the rocky coast of New England or some little loch on the Scotch coast, where these northern flyers originally came. The lack of entries is a most embarrassing subject with the working members of our clubs, whose labors are often in vain, and a remedy may probably be found in the classification alluded to. The state of the case at present is far from encouraging. With their boasted supremacy threatened by narrow invaders, the whole fleet, wide keels and wider centerboards, should have turned out, instead of which they left to one boat, the Active, the defense of their cause.

The weather of Tuesday was of the best, clear, not too warm for June, a bright sky, smooth water, and a light, rattling breeze from the west, no fog, zephyr, but a blast that stretched the canvas and tried the gear in a way that has not been done before this season. The direction of the course was over the southerly leg first, a broad reach, then with booms further off over starboard quarters; and a dead hammer to windward on the last leg. The programme for the start was as follows:

At 11, or 30m. before starting, a flag, bearing the number of the course to be sailed, will be hoisted on the Kew-Forest Committee steamer.

At 11:30, a warning signal five minutes before start by lowering a numbered flag, hoisting a blue flag and blowing a whistle.

At 11:30, start of first class schooners and sloops by lowering the blue flag and blowing a long whistle. Five minutes time limit for this class to start.

At 11:35, a short whistle for limit of time for first class to start.

At 11:40, start of the second class schooners and sloops, and also warning to third and fourth classes by lowering blue flag (hoisted one minute previously) and blowing a whistle.

At 11:45, start of the remaining yachts by lowering a blue flag (hoisted one minute before) and blowing the whistle.

All but the first class yachts shall start from the signal for their respective classes, and no time limit will be allowed. Their time will be taken from the signal of their class. In case of delay in the first signal the same intervals will be allowed.

The starting line was awkwardly placed, making it very difficult to cross at the start and finish, and in the water were made worse by the behavior of many of the yachts which attended. Scores of these came in one day, and many anchored about the line in utter disregard of the racers, refusing to move when requested. The matter is bad enough in New York, but the conduct of some of these small yachts was a disgrace to their owners.

With the big races now common some legislation has become necessary, and one or more public boats with full authority to clear the water, in obedience to a signal from the judges' boat she put back, and lost several minutes in working into position, throwing her well astern. The times of the start were:

Priscilla	12 07 25	Gevalia	12 17 30
Gitana	12 08 17	Meta	12 18 02
Fortuna	12 09 22	Stranger	12 18 41

Mohican	12 09 33	Alice	12 19 03
Puritan	12 11 35	Clara	12 20 03
Mayflower	12 12 06	Shona	12 20 52
Bedouin	12 15 00	Active	12 22 02
Huron	12 15 53	Uldia	12 25 00
Thetis	12 17 01		

The five-mile leg was made in quick time, the fleet in a long string, Priscilla leading the group, and Mayflower, but for form and style the latter finally. Mayflower gained on Puritan. The order at the first mark was: Gitana, Priscilla, Fortuna, Mohican, Puritan, Mayflower, Huron, Thetis, Bedouin, Stranger. Gitana tried a spinnaker to port, but soon took it in, while Priscilla had her boom ready but did not set the canvas on it. With booms over starboard quarters they still held the pace, Priscilla pulling up through Gitana's weather and again leading until it seemed as if she would be first at second mark, but Gitana cut her out at the last moment. A pretty fight followed between the two white ones, ending by Mayflower going to windward of Puritan and leading her for a time. The times at the second mark, when the fleet hauled on the wind, were:

Gitana	1 03 18	Bedouin	1 21 02
Priscilla	1 04 06	Meta	1 21 06
Fortuna	1 04 48	Stranger	1 21 42
Mohican	1 07 23	Gevalia	1 22 10
Mayflower	1 08 02	Clara	Not timed.
Gitana	1 10 25	Uldia	Not timed.
Huron	1 15 57	Uldia	Not timed.
Alice	1 20 07	Shona	Not timed.
Thetis	1 20 10		

Over the ten miles then sailed the elapsed times were: Mayflower 55:56, Priscilla 56:41 and Puritan 56:50. Thus Mayflower had really sailed fastest, but Priscilla had proved much stiffer, carrying her kites well when the other had heeled badly at times and shown herself to be a boat of more wind resistance. A pretty fight followed between the two white ones, ending by Mayflower going to windward of Puritan and leading her for a time. The times at the second mark, when the fleet hauled on the wind, were:

Gitana	1 03 18	Bedouin	1 21 02
Priscilla	1 04 06	Meta	1 21 06
Fortuna	1 04 48	Stranger	1 21 42
Mohican	1 07 23	Gevalia	1 22 10
Mayflower	1 08 02	Clara	Not timed.
Gitana	1 10 25	Uldia	Not timed.
Huron	1 15 57	Uldia	Not timed.
Alice	1 20 07	Shona	Not timed.
Thetis	1 20 10		

A comparison of times on the five-mile beat shows plainly the ability of Puritan and also the great superiority in such work of the singlestickers over the schooners. The elapsed times were:

Puritan	1 53 27	Thetis	2 21 56
Priscilla	1 55 16	Clara	2 26 23
Mayflower	1 57 07	Gevalia	2 32 40
Fortuna	2 01 45	Meta	2 31 15
Gitana	2 10 35	Active	Not timed.
Mohican	2 14 28	Alice	Not timed.
Bedouin	2 15 42	Uldia	Not timed.
Stranger	2 18 58		

Tous, taking account of superior size, the schooners are beaten, taking the average of the three boats in each class, 15 minutes in five miles. The gain of Puritan over her fellows is a fair one, made on even sailing and with no perceptible fluking.

Down the fourth leg the positions did not change; the yachts were not timed at the lower turn and only a few at the lee mark, as follows:

Puritan	2 46 35	Fortuna	2 55 45
Priscilla	2 49 05	Gitana	3 06 38
Mayflower	2 52 24		

Again the boats came by the wind for a final bout, this time Puritan well ahead and gaining. Mayflower again took in topsail and soon after she hauled her topmast, with a benefit that was at once apparent. Puritan followed, while Priscilla lost some time before hers was properly lowered, costing her a little distance. Puritan led toward Beverly on port tack and went to windward. Mayflower made the first cast to starboard tack, going on port tack soon after toward Beverly. At 3:11 Priscilla tacked, but Mayflower held on and a short time afterward crossed her bows. Priscilla now made a long leg in toward Beverly, apparently far astern of Mayflower, the latter working shorter legs on a more direct course, but when the black boat finally came up for the line it was seen that she would lead the race, taking ahead of her just at this line and going on ahead. The other boats came in slowly, Fortuna still ahead in her class. Gitana beat Alice and Meta, Bedouin, Clara and Shona taking the prizes in their classes. After the big boats finished it was a sight to see the mosquito fleet scuttling off for home before nightfall, dozens of white sails in all directions. The only serious mishap of the day was the capsizing of a centerboard boat and the drowning of four men near the finish. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Puritan	12 10 00	3 31 50	3 24 50	3 23 00
Mayflower	12 10 00	3 38 35	3 28 35	3 28 35
Priscilla	12 07 25	3 37 30	3 30 05	3 28 57
Fortuna	12 09 32	3 48 20	3 38 48	3 35 25
Gitana	12 03 17	4 03 15	3 54 58	3 52 23
Mohican	12 09 33	4 18 48	4 09 15	4 09 15

	Start.	Finish.	Elapsed.	Corrected.
Gevalia	12 15 00	4 40 20	4 25 20	4 25 20
Alice	12 15 00	5 00 50	4 45 50	4 45 50
Bedouin	12 15 00	4 06 40	3 51 40	3 51 40

Uldia	12 20 00	5 15 35	4 55 35	4 43 50

	Start.	Finish.	Elapsed.	Corrected.
Shona	12 20 03	3 06 31	2 46 30	2 43 30

Huron withdrew in consequence of an accident, as noted.

The table above requires little explanation. Puritan won her victory by honest work to windward, and while Priscilla has the legs of her down wind, she cannot make up on the weather work sufficiently to come in winner. In Crocker's hands Puritan is undoubtedly as good as ever. Priscilla has been wonderfully improved since last year, as shown not only in the work she does, but in the way she does it, and as a very fast boat. After her work last week, however, it looks as though she had reached almost the limit of her speed under such conditions, and as if her place in the future would be after, not before, Puritan. No small part of her success this year lies with her owner, and he will evidently get all the speed out of her iron bottom that it is capable of, and may yet surprise us all; but we must wait for the future.

Gitana, with her new bow, is going better, but still is unable to take better than second place alongside of Fortuna. The latter was handled well all day and added still further to her fame as a racer. In second class Gevalia won with ease from her two competitors.

Huron was doing well when her bobsayr was killed and crippled her. Thetis was in the hands of her skipper, Bryant being on board of Puritan, and he devoted himself mainly to showing how much sail she could carry rather than how fast she could go. Bedouin wins her third prize this year and is sailing far better than last season. Stranger, too, shows a great improvement in her new rig, making a good race, though handicapped by an error of others at the start.

Active came to grief aloft, but probably lost little by it in the strong wind. At any rate, she held on and sailed a good race, though not a winner. Clara led the class of course, but Captain Barr's skillful handling, and though she was poorly provided with opponents, she came sufficiently near the class above to show her real speed. Uldia

was far too small for the class and had no place in it, but went in a true sporting spirit, and the same took Shona over the course alone, none of the Boston cracks showing up to give the little stranger a race. Her crew are made to fit her beam, young Charles Barr, brother of Clara's skipper, and John Junior, son of the latter, a young sailor man of twelve years, who promises some day to make a worthy successor to his father.

Of course the pattern for imposing appearance must go to such yachts as Fortuna and Mayflower, but for form and style the little black lead pencil, as some call her, can hold her own with any. With a boat of moderate proportions beauty of form is obtained with comparative ease, but given an extreme length of 40ft., and a beam of little over 5ft., on which to build a boat at once fast and handsome, and the task is far different. A look at any of our fastest cutters will show this, as in spite of other red-eming features in looks, they all show the flat side and many a heavy bilge low down. With Shona it is not so, but her narrow sides are beautifully rounded and her long counter is as delicately shaped as a black marble statue, every curve and contour showing the hand of an artist as well as a successful designer.

After the races most of the yachts anchored in Marblehead Harbor, Puritan sailing for Boston. Mayflower left next morning, Priscilla followed later, bound for a short cruise; in the afternoon Clara and Uldia weighed for the return trip, and the quiet old town settled down to its wonted business of rowing dories and driving shoe pegs as though it had never wakened from its monotonous round to go wild for a day over a yacht race.

BOSTON CITY REGATTA, JULY 5.

A LARGE fleet of yachts sailed in the annual city regatta on Monday, in a good easterly breeze, the start being made in a dense fog. Stranger, Shadow, Lapwing, won easily in their classes, the finish being closer with the smaller boats. The keel cutter Lapwing, 35x10x7ft., beats the keel sloop Azir, 33x13x8ft., over half an hour, while cutter Aeolus pushed the latter closely. In the third class four keel boats, Banneret, Lizzie F. Daly, Echo and Kitty were the leaders, the two former beating all the centerboard boats. The times were:

LARCHMONT Y. C. SPRING REGATTA, JULY 5.

YACHT clubs, and especially their regatta committees, will find much food for reflection in the list of 50 entries, which places the seventh annual regatta of the Larchmont Y. C. ahead of older and larger clubs this season. This may be due, to a certain extent, to the small boats of the club's home fleet; but further than this, a glance at the list will show the presence of a number of fast yachts gathered from about New York and the Sound and making a very respectable showing for the club. In the matter of entries this year, the Atlantic Y. C. stands next to the Larchmont, which fact suggests the idea that the division of classes has something to do with it.

CLASS A.	Length.	Allows.	Length.	Allows.
Speranza.....	85.04
Nirvana.....
CLASS B.				
Clio.....	70.08 1/2	4 45
Triton.....	62.00	4 45

Nymph.....	29.00	4 16
Mona.....

The measurements given are the lengths on a line parallel to the water and 2 per cent. of waterline length above it. Money prizes were offered in all classes, beside the Connor Cup for Class C, the Gould Cup for Classes 1 and 2, and two money prizes of \$50, each for best elapsed time in the latter classes. There was no wind in the morning, and it was 1:30 before a light S.W. breeze sprang up, and the start was ordered. The club courses, No. 1. and II., of 22 and 17 miles, were sailed, the latter by Classes 3 to 5. The first signal was given at 1:37, and at 1:42 the fleet was started, going off very evenly as follows:

Impulse.....	1 42 32	Daphne.....	1 45 57
La Perichole.....	1 42 36	Zoe.....	1 45 59
Crocodile.....	1 43 51	Carrie.....	1 46 03
Arab.....	1 43 01	Santapogue.....	1 46 12
Gracie T.....	1 43 07	Elk.....	1 46 25
Clio.....	1 43 08	Triton.....	1 46 32
Clara.....	1 43 17	Surf.....	1 46 37
Cinderella.....	1 43 27	Athlon.....	1 46 30
Sharpe.....	1 43 30	Lotus.....	1 46 30
Madeline.....	1 43 36	Cruiser.....	1 46 45
Adelle.....	1 43 40	Nahli.....	1 47 14
Dolphin.....	1 43 48	Mona.....	1 47 22
Lurline.....	1 43 52	Idleran.....	1 47 25
Mariota.....	1 43 55	Speranza.....	1 48 08
Amazon.....	1 44 10	Lorna.....	1 48 05
Nymph.....	1 44 12	Brenda.....	1 48 20
Rival.....	1 44 20	Fairy.....	1 48 35
Norah.....	1 44 21	Mimic.....	1 48 58
Leona.....	1 44 25	Vision.....	1 49 02
Reverie.....	1 44 31	Stranger.....	1 49 12
Ananda.....	1 44 45	Sirene.....	1 49 32

Volusia.....	1 45 09	Nirvana.....	1 50 14
Moll Pitcher.....	1 45 46	Brahmin.....	1 50 48

Out to Execution the wind was ahead, Clara, Cinderella and Daphne led, turning as follows:

Clara.....	2 13 04	Leona.....	2 30 01
Cinderella.....	2 16 30	Nahli.....	2 30 18
Daphne.....	2 17 39	Amazon.....	2 30 33
Rival.....	2 20 05	Cruiser.....	2 31 29
Crocodile.....	2 21 37	Impulse.....	2 31 32
Athlon.....	2 22 29	Mona.....	2 31 42
Adelle.....	2 24 01	Idleran.....	2 32 26
Ananda.....	2 24 31	Carrie.....	2 32 44
Mariota.....	2 25 21	Vixen.....	2 33 08
La Perichole.....	2 26 33	Stranger.....	2 33 30
Volusia.....	2 26 50	Sharpe.....	2 34 55
Nymph.....	2 27 35	Santapogue.....	2 35 07
Triton.....	2 27 40	Mimic.....	2 35 33
Surf.....	2 27 59	Moll Pitcher.....	2 35 45
Idleran.....	2 28 23	Zelda.....	2 35 50
Speranza.....	2 28 32	Madeline.....	2 36 00
Sirene.....	2 28 43	Nirvana.....	2 36 30
Arab.....	2 30 00

The next leg, to Matinick Point, was a reach, and those who set spinners only lost time. Clara still led, of course, only she and two others being timed at the mark:

Clara.....	3 05 00	Daphne.....	3 10 20
Cinderella.....	3 08 42

Part of the fleet now made for Captain's Island, the small fry leading for home more directly. The wind now fell a little and came from the south for a time. Going back to its old quarter spinners were set to port for the last part of the leg. The times at Captain's Island were:

Clara.....	4 13 10	Triton.....	4 31 00
Cinderella.....	4 28 36	Speranza.....	4 37 21
Daphne.....	4 34 44	Mariota.....	4 38 17
Leona.....	4 36 05	Surf.....	4 40 13
Crocodile.....	4 36 22	Nirvana.....	4 42 30
Athlon.....	4 36 21	Mona.....	4 43 55
Rival.....	4 37 00

From here was a beat in a light breeze, Clara still leading to Execution and a run home. The full times were:

CLASS A.—SCHOONERS 15 FEET AND OVER.	Start.	Finish.	Elapsed.	Corrected.

Sharpe.....	1 43 30	Not timed.

The winners are: Class A, Speranza; Class B, Triton; Class C, Clara; Class D, Cinderella; Class E, Daphne; Class F, Athlon; Class G, 38s.; Class H, Crocodile; Class I, Rival; Class J, Volusia; Class K, Stranger; Class L, 54s.; Class M, Zoe; Class N, 54s.; Class O, Ananda; Class P, Nahli; Class Q, 12s.; Class R, Fairy; Class S, Moll Pitcher; Class T, 59m.; Class U, La Perichole; Class V, 29s.; Class W, Cruiser; Class X, Zelda; Class Y, 25m.; Class Z, 28s. Clara wins a class prize and the Connor Cup; Daphne wins the Gould Cup and Crocodile a special cup in her class. Udida arrived too late to start, but sailed after the fleet finishing, with them.

A SONG OF THE SEA.

THE hardy mariner whose cheek has been tanned by the sultry breath of the simoon, who has beheld the great sea serpent in his native wilds, and who perhaps has succumbed for days before the fury of the sirocco, is often prone to depreciate the dangers of the fresh-water sailor. The following beautiful poem shows, however, that the lake navigator is exposed to no lesser perils than his brother of the boundless ocean. While in some respects it may be inferior to the more celebrated sea poems, it is second to none in force of expression, in vivid description, and the logical conclusion of its moral; while it loses nothing in dramatic effect from being written in the beautiful *patois* of Longfellow's (and Rice's) heroine, the language of the Canadian French:

'Twas one dark night on Lac St. Pierre,
The wind was "low," "blow," "valow,"
When the crew of de wood skow Jule La Plant
Got scare and run below.

For de wind she's blow like hurricane,
Bimeby she's blow some more,
When de skow buss up on Lac St. Pierre,
One-half mile from de shore.

De captain she's walk on de front deck,
She's walk on de hind deck, too;
She's call de crew from up the hule,
She call de cook, also.

De cook he's name was Rosa,
He's come from Moreal,
Was chambermaid on a lumber barge
Out dat big Lachine Canal.

De wind she's blow from nor, eass, wess,
De sou wind she's blow, too,
When Rosa say, "Oh! captain,
Whatever shall I do?"

De captain she's throw de hank,
But still that skow she drift,
For de crew he can't pass on dat shore
Because he lose dat skiff.

De night was dark, like one black cat,
De waves run high and fass,
When de captain take poor Rosa
And lash her to de mass.

When de captain put on de life preserv
And he jump into de Lac,
And he say "Good-bye, my Rosa, dear,
I go down for your sake."

Next morning, very hearily,
About half-past two, three, four,
De captain, cook and wood skow
Lay corpses on dat shore.

For de wind he's blow like hurricane,
Pretty soon she's blow some more,
For dat skow buss up on Lac St. Pierre,
One-half mile from de shore.

MORAL.

Now, all good wood skow sailor mans,
Take warning by dat storm,
And go and marry one nice French girl,
And live on one good farm.

Den de wind she may blow like hurricane,
And 'spose she's blow some more,
You shan't be drowned on Lac St. Pierre,
So long you stop on shore.

"LOYALTY" ON DECK AGAIN.

Editor Forest and Stream:

The regatta of the Eastern Y. C. on the 29th was a most successful affair, and with the lessons taught will long be remembered by every lover of a yacht, and it is to be regretted that we lack over the entries and mark the decadence of the once famous American centerboard sloop and note the hold that English ideas have taken on the minds of American yachtsmen through our lack of original ideas. Out of 11 single-stickers we had 3 mongrels, 6 cutters, 5 of them English, and 2 centerboard sloops, Active and Priscilla.

The result of this race shows conclusively that in the big single-stickers it was as much in the crew as it was in the vessel, as has been repeatedly shown before, and that the victory of Puritan over Priscilla and Mayflower was due to the superior handling of Puritan by the crew of the famous Shadow.

The performance of Mayflower is a practical illustration of a yacht overloaded with canvas, and with such handling we need not be surprised at the result. In Priscilla we had another illustration of poor judgment in regard to canvas. At the start, with mainsail, clubtop-sail, forestaysail, jib and jibtopsail, Priscilla led across the line by a large margin, while Puritan with mainsail, working topsail, forestaysail, jib and jibtopsail (note the difference of the spread of the two), cut down the lead of Priscilla two-thirds after sailing the first ten miles.

Over the same distance on the second time around, the Priscilla had reduced her canvas to the same sails as Puritan and was holding her own. What does this show, not that Priscilla was not as stiff as the Puritan, but that she can and did carry her sail and that to her detriment in the first part of the race. In windward work the Priscilla seemed lost, appeared to hold a good wind but seemed to sail by the head. This may be accounted for by the ballast in its location or the loy tendency arising from too much of it, or the distribution of the driving power. Under the clubtop-sail and mainsail in a fair breeze the head sails appear to balance right for windward work but with the working topsail in a strong breeze there appears to be too much head sail, a trifling reduction in-board would be beneficial. An error in judgment shown in the Priscilla in the first windward leg of the course in standing too far on after rounding the northernmost stake boat, she having the ebb tide of ship channel on her weather bow and on the opposite tack was compelled to cross it, but on the last windward leg of the course—at slack water—this tack proved an advantage. However, it has been practically demonstrated that in a ten knot breeze an American centerboard sloop with her ballast inside can stand up and carry sail with any cutter or mongrel that can be produced, and the Priscilla with a few trifling alterations in sails and ballast and good handling will again show to the front and maintain the superiority of the American sloop.

[Our correspondent seems to have overlooked entirely the fact that Priscilla was changed practically from the sloop to cutter rig, and has been greatly improved thereby; while the alterations in her forefoot and stempost follow the same direction, and it is not improbable that she will soon receive an outside lead keel.]

ATLANTIC.—The alterations in the Atlantic have been completed and the leak stopped, and on Saturday she hauled out of the Basin. On Sunday and Monday she was outside the Hook in company with Grayling, and is said to perform much better. Her ballast has been increased and she is trimmed down more by the stern. Her mast has been shifted aft 19in., and one shroud on each side has been removed, leaving three. A white pine boom of less weight has been fitted, and the topmast is 1in. less in diameter, while a block has been removed from the gaff and a single one put in place of a double at the masthead; so that the weight above deck has been reduced greatly. The mast now rakes considerably aft.

CRUISE OF THE KNICKERBOCKER Y. C.

ON Saturday, July 3, at 7 P. M. a gun from the flagship Flash sent the fleet away. The start was by no means an animated one, as the breeze was "up and down the mast." The tide was fortunately running flood, however, and with a little tugging at the oars the following yachts managed to start: Flash, Gil Blas, Rover, Supervisor, Nanita, Rosetta A. A. Wacondah, Hornet, Florence, Melvina. By dint of hard rowing the Flash got to City Island at 11:30 P. M., followed shortly by the Gil Blas and others.

July 4 dawned fairly, but with no prospects of a breeze. At 10:20 the fleet started, favored by a very gentle breeze from N.E. Nanita, Rover, Melvina, Supervisor and some others took the Connecticut shore for the run to Indian Harbor, and the wind shifting to the southward, were not so well favored as Wacondah, Gil Blas and Flash, who chose the Long Island shore. At about 2:30 P. M. the wind was from the southward and very light. The Gil Blas, famous for this kind of work, sailed very fast. Wacondah anchored first in Indian Harbor at 4 P. M.; Gil Blas, second, at 4:15; Elephant, which joined the fleet off Cow Bay, third, and Flash fourth.

July 5.—At 4 A. M. one of the Hornet's crew, Mr. Van Horn, stepped on deck, and slipping overboard was drowned, in spite of several of the crew jumping overboard to save him. Just how it happened is a mystery, as he was alone at the time, and his cry for help was heard too. The event cast a gloom over the fleet it was impossible to shake off. The day opened foggy with a very light air from S. At 10 A. M. the fleet was sent away on their homeward journey. The Gil Blas went to the fore, followed by Nanita and Rover. After a rather weary sail the Gil Blas reached the club house at 5:27 P. M., giving the fleet a beating they will not soon forget. Rover arrived at 7:02, Rosetta A. 7:15, Nanita, which had sailed west, at 7:18, and Melvina at 7:40. The rest of the fleet were left astern with but little prospects for more wind.

HULL Y. C. REGATTA.—The race of the Hull Y. C. on July 3 was sailed in a light S.E. wind, the times being as follows:

FIRST CLASS.

SOUTH BOSTON Y. C.—The second championship race of the South Boston Y. C. was sailed on June 26 in a N.W. wind that brought several of the small craft to grief. The courses were 11, 8 and 6 miles of first, second, third and fourth classes, as on May 31. The start was made on time, the first class going over at 3:30, second 3:35, third 3:40 and fourth 3:45. The times were:

FIRST CLASS.		
Violet, H. J. McKee.....	Elapsed. 2 00 18	Corrected. 1 34 13
SECOND CLASS—KEELS.		
Dorcas, L. W. H. Lyman.....	1 45 36	1 22 30

Flora Lee, D. H. Lincoln.....	1 17 07	0 51 12
Victor, C. A. Borden.....	1 25 18	1 59 29

GREAT HEAD Y. C.—The first pennant race of the Great Head Y. C. was sailed on June 26, but was postponed to June 27, the date set for the first championship, so both were sailed at the same time. The course was from judges' boat to spar buoy on the northwest corner of Apple Island, leaving it on port, to buoy No. 6 in Lower Middle, leaving that on port, and return to judges' boat. A reefing breeze from S.W. was waiting for the yachts at 5:30 P.M. and the third class did not venture out. The times were:

FIRST CLASS.		
Fancy, sloop, P. Flag.....	Start. 5 30 18	Finish. 6 31 30
Frya, sloop, N. E. Turner.....	5 32 22	6 33 07
Frolic, sloop, L. K. Billings.....	5 36 35	6 30 07
Nellie D., cat, E. Dixon.....	5 36 48	6 34 45

SECOND CLASS.

Dora, cat, E. Nevins.....	5 40 30	6 45 05
Corat, cat, H. Belcher.....	5 40 25	6 42 10
Fury, cat, J. E. Putnam.....	5 40 30	6 48 05
Annie, J. H. Mitchell.....	5 40 30
Ariel, yawl, C. B. Belcher.....	5 40 30

Fancy and Corat take each a pennant and a leg for the championship.

TORONTO RACES, JUNE 26.—The sealed handicap for yachts of the Toronto and Royal Canadian clubs was sailed in a good N.W. breeze, with the following starters: Yolande, schooner, R. C. Y. C.; Verve, cutter, R. C. Y. C.; Mollie, sloop, T. Y. C.; Cygnat, sloop, T. Y. C.; Rivet, cutter, T. Y. C.; Aileen, cutter, R. C. Y. C.; Escape, cutter, T. Y. C. The course was from T. Y. C. club house across the bay to a buoy moored to the east of the R. C. Y. C. club house, thence out of the western channel to bell buoy, thence easterly three miles, southwesterly three miles, thence northwesterly to bell buoy, and through the western channel to finish off T. Y. C. club house, 15 miles. The handicap, made up by the committee, Messrs. Arnoldi, Jones, Duggan and Armstrong, was sealed up at 1 P.M. When opened it was as follows: Aileen allows Cygnat 7 minutes, Verve 15, Rivet 20, Escape 45, Yolande 50, and Mollie 70 minutes. At 1:30 the preparatory gun was fired, at 1:55 the starting gun, and at 2 P.M. the handicap. The boats went over well in the order above. At the first turn the times were: Verve, 3:10:00; Cygnat, 2:10:40; Yolande, 2:10:55; Aileen, 2:11:00; Rivet, 2:11:25; Mollie, 2:13:30. Escape, 2:13:30. Boat in up the next leg Aileen pulled up to first place, all being timed thus: Aileen, 2:50:15; Verve, 2:58:30; Cygnat, 2:59:00; Rivet, 2:59:45; Escape, 3:02:00. On the next leg, a reach, Cygnat made up a good distance, the times being: Aileen, 3:14:00; Cygnat, 3:17:00; Verve, 3:19:50; Rivet, 3:21:00; Escape, 3:31:40. The times at the last two buoys were not taken. The times were:

Finish.		
Aileen.....	5 12 00	3 12 00
Cygnat.....	5 17 30	3 17 30
Verve.....	5 24 30	3 24 30
Rivet.....	5 29 15	3 29 15
Escape.....	5 50 20	3 50 20
Yolande.....	6 15 40	4 15 40
Mollie.....	7 11 30	5 11 30

Mr. Dickson was starter and timekeeper.

KEELS IN LONG ISLAND SOUND.—That the cutters should win over open courses is bad enough, but now they have the audacity to go even further and to carry the war into Africa; actually invading the sacred shrub of water whose shoal narrows and light summer breezes have stood for so long as the chief *raison d'être* for the old keel of Clara in a way that probably astonished their denizens, while Uldia was not far behind. The performance of the latter is even more wonderful than Clara's. Arriving from Boston at the start after the fleet were well away, she sailed over the course, overhauling the leaders, and being timed at Captain's Island as tenth boat, only 10 min. astern of Cinderella, 5 min. astern of Daphne and less than 2 min. from Crocodile and Aileen. In the Knickerbocker Y. C. cruise, about the same time and place, the keel sloop Gl Bias, built by Kirby, astonished the flat-footed ones by running away from them in light weather, while near her was the little "Windward" model, Nineta, cruising boat of 18 ft. and over 5 ft. draft, that finished among the leaders. Truly it was a bad day for "our boats," "our weather" and "our water."

SANDY BAY Y. C. REGATTA, JULY 5.—The winners in the Sandy Bay Y. C. regatta were: Special class—Lottie, 2:33:44; first, Petrel, 2:30:28; second, Lochiel, 2:38:34; fourth, Owl, sail over.

SOUTHERN Y. C.—A race was sailed on June 22 at New Orleans, between the Edith and Yolande, the former winning in 56 min., with Yolande 3 min. astern.

A CAPTAIN IN SKIRTS.—A little woman walked into the office of the steamboat inspectors the other day and astonished those "grave and reverend signors" by remarking that she wanted a license to command a steamboat. It seems that James Coons, who lives in Harlem, owns a little steam launch called the Elizabeth, in which he is accustomed to cruise about the waters of the Bay and the East River. He is always accompanied by his wife, Mary E. Coons, who applied for the license. He is an engineer and attends to the mechanical part of the outfit, while his wife, who is experienced in yachting, steers the craft. The law says that each steam pleasure boat shall have a licensed master and engineer. As Mr. Coons was already chief engineer Mrs. Coons considered that she ought to be captain. So she applied to the inspectors for a license. When the inspectors had recovered from their surprise they consulted the law and found that there was nothing to prevent a license being issued to a woman. Besides the same thing had been done in the case of a woman who now commands a Mississippi steamboat. Having arrived at the conclusion that Mrs. Coons was eligible they proceeded to put her through the regulation nautical catechism. "Could she box the compass?" She could and did. "Did she know the rules of the road?" She gave the rules of the road. As she only wanted a special license to command a steam launch on the waters of New York Bay and the East River the rest of the examination was not severe. Then, as she promised not to swear at the crew and to deal gently with the chief engineer, the license was made out and Mrs. Coons became the second licensed captain of the female persuasion in the world. Mrs. Coons assumed command of her ship immediately and was received with due honors as she came over the side. She will doubtless be a strict disciplinarian, and any attempt at mutiny on the part of the chief engineer will be promptly and severely punished.—*N. Y. Tribune, May 20.*

A LITTLE TOO PREVIOUS.—Since its mistake over a year since in dubbing the Puritan a brick sloop, the New York Herald has adhered persistently to the same line in regard to matters Bostonian, only stopping to throw up its hat and join the general hurrah for Puritan when popular opinion made it necessary last fall. With two New York boats in the field this year it has kept up the old song, and after Priscilla's victory in the New York race it sang a little louder than ever. The past two weeks, however, have put a different face on affairs, and the strong winds of last Tuesday have compelled this fair and impartial journal to reduce sail and take a new course, which it does in the following graceful manner. If it were only a slip on the part of a member of the staff it would be all very well, but remembering the whole tenor of the paper for a year or more, it seems a little hard to make a scapegoat of a comparatively innocent person. The article we refer to is entitled "Boston Yachtsmen Have a Right to be Proud," and reads as follows: "In an editorial comment on the yacht race of June 17, written with more zeal than discretion or good taste, the writer remarked: 'What Priscilla did yesterday she can do again to-morrow. Let us hear no more idle Boston chatter about her being a failure.' We should be sorry if these words, which, by inadvertence, were allowed to slip into our columns, should be taken to reflect the true sentiments of the Herald or of New York yachtsmen. It would undoubtedly be agreeable to us, as New Yorkers, to have a New York boat selected to defend the America Cup; and it is equally natural and proper that the Bostonians should show a pride in the fine performances of their Boston phantom. As for the 'idle chatter,' we are not aware that the Eastern yachtsmen have chattered, in fact, we think a good many wise old-thumb philosophers hereabouts have been doing most of the chattering."

THE SAILING OF GALATEA.—On June 27 Galatea left Portsmouth on her voyage to America. Lieut. Henn and his wife both being on board. She will proceed direct to Boston and Marblehead, and remain there for some time. In her last race, Galatea discarded her new laced mainsail and carried the sail and heavier boom used last year. She will come over with racing mast on end, easy canvas, her topmast, boom and racing sails coming by steamer. At this time of year the passage should be a pleasant one, and we may see her here inside of a month. While not yet up to the standard of Ilex, she has proved to be a very fast boat, and there is no reason to suppose that even if beaten her friends in America need be ashamed of her. Mr. Webb will be here soon by steamer, and will probably take up his residence permanently in New York.

METEOR AND LOANDO.—Mr. A. E. Bateman, of New York, has sold the Loando, late Promise, to Mr. Thomas Watt, and has purchased the steamer Meteor, designed and built by Mr. Bliven to demonstrate the possibility of a five-day Atlantic steamer. It will be remembered that she proved an utter failure and was taken to Boston, new engines being put in by Goss & Sawyer, of Bath, Me. Mr. Bateman will fit her up as a yacht. She has been taken to City Island for repairs.

OUT OF THE FRINGING PAN INTO THE FIRE.—When here on General Mr. Bayne Webb was sorely annoyed by mosquitoes, slugs and and reporters, which he classed pretty much in the same category of nuisances, and these he proposes to avoid by going to Marblehead. He may dodge the first two, but when the Boston scribbles beat down on him in tugs with transparencies and flying banners, and loaded with carrier pigeons, he will sigh for the retiring modesty and hushing humility which distinguishes the craft in New York.

CLUB CRUISES.—The Eastern Y. C. will rendezvous at Marblehead on July 9, for a cruise to the eastward. On July 3, the Knickerbocker, Jersey City, Newark and Oswego started on short cruises.

A NEW STEEL SCHOONER.—Mr. A. Cary Smith has designed a steel schooner, which is now being built by Harlan & Hollingsworth. She is 80 ft. below waterline, 21 ft. beam and draws 7 ft. She is built under Mr. Smith's supervision, and will be completed by fall.

NEW ROCHELLE Y. C.—An entertainment in aid of the New Rochelle Y. C. was given at New Rochelle on June 26. Messrs. J. H. Kyles, E. Nash, Chas. Stevenson, Miss Madeline Lucette and others knew, both as singers and sailors, taking part.

SAILING RACES AT SCITUATE.—Seventeen boats entered the sailing race of Monday at Scituate, sailing in a very light E. wind. An unnamed boat, sailed by Dennis Quinn, won, with Champion second. John MacDonald won a rowing race in dories.

YOSEMITE.—Mr. W. E. Connor, former owner of the Utopiana, now Oneida, has leased the Yosemite of the assignees of John Roach, for the season. She will race in the A. Y. C. regatta this month.

INTERLAKE Y. R. A.—The round of the Interlake Y. R. A. began on Monday at Lake St. Clair with the regatta of the Michigan Y. C. The wind was so light that no race was made.

CORONET.—Last week the large schooner Coronet, lately completed for Mr. Bush, sailed for England with the owner and his wife and a party of friends on board.

HARLEM Y. C.—The race of this club was postponed on account of the weather to July 7.

HILDEGARD.—Mr. Oelrichs has sold his sloop Hildegard, formerly Niantic, to Mr. Bergen, of Brooklyn.

EVERY pair of Allen's bow facing oars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. S. W., Victoria, Tex.—Such a change would leave you a good shooting weapon, though as a rule any arm is at its best as originally made.

F. L. W., Calicoon.—1. You will perhaps find Farrow's "How I Became a Crack Shot" suited to your purpose, as well as anything on the subject. 2. Boats are launched stern first.

C., Washington.—1. What is the open season for moose in Quebec? 2. Any license fee for non-resident? 3. What is the open season for moose in Ontario? 4. Any license fee for non-resident? Ans. For open seasons see lists in Game, Bag and Gun Department. There is a license fee in Quebec, but not in Ontario.

R. W. McL., Chillicothe, O.—I desire to spend the last week of August and the month of September with my wife (who is hardly recovered from a severe attack of pneumonia) at some pleasant and beautiful resort, where good fishing or hunting (or both) may be had during that period. It was apparently called as it allowed me to pick it up. It lived two days, but it would not eat anything and bad nothing in its crop when I skinned it. Ans. The duck is a male specimen of the *Harelda glacialis*, long-tailed duck, old-wife, south-southerly, or old squaw. It is common on the coast, and is found on the Great Lakes and other inland waters. Your other query will be answered later.

A. H. Look, Hartford, Conn., Ind.—A duck skin which I would like to have identified. None of my sportsmen friends can tell me the species. I found it in the spring of 1885, one morning when the snow was a foot deep. It was apparently a male, as it allowed me to pick it up. It lived two days, but it would not eat anything and bad nothing in its crop when I skinned it. Ans. The duck is a male specimen of the *Harelda glacialis*, long-tailed duck, old-wife, south-southerly, or old squaw. It is common on the coast, and is found on the Great Lakes and other inland waters. Your other query will be answered later.

THE MANITOBA EMIGRANT.—Mr. J. A. Carman, of Winnipeg, Manitoba, has sent us the first number of a neatly printed journal or magazine called the *Emigrant*, which is well filled with statistical matter and current notes of much service to intending settlers and of special interest to persons who have not been already informed of the remarkable progress and present condition of that valuable section of the Canadian Dominion. Mr. Carman intends to devote a department of his paper to the natural history of the country, and the information which he will be able to collect will doubtless be of value to science and the interests of sport. The *Emigrant* is a 16 page journal of very neat typographical appearance. Price, \$1 per year.

L. G. C., Columbus, O.—At our last badge contest a decision was rendered by our captain which has caused some controversy among our members, and we will esteem it a favor if you will give us your judgment as to the proper thing to do. There have been done under the circumstances, which were briefly as follows: The shooting was stopped by rain during the last round of 5, or after all the contestants had shot at 15 birds, and all but 8 had completed their full score of 20, but among those who had not yet finished it was possible for one man to tie for the badge in Class A, and for one man to win the one in Class B. Our special badge rules say that each contestant shall shoot at 20 birds, making no provision for the shoot being necessarily stopped at any time during its progress. Our captain declared "no contest," and that the present holders of the badges shall hold them till the next regular shoot." Exceptions have been taken to this ruling, some claiming that the badges should have been awarded from the highest scores at the end of even innings, which in this case would have been at the end of the 15, others that they should have been taken into the hands of the captain there to remain till some one had won them under the rules. If there is any general rule among sportsmen which would cover this point will you kindly refer us to it. Ans. The ruling of the captain was correct; it was no shoot.

The "gentleman" (?) who has so kindly undertaken to board my pointer dog (Don) gratis will, I fear, gain nothing by his kindness, but will be prosecuted with the full power of the law if discovered.—*Advertisement in the Fort Worth (Texas) Gazette.*

A boy down at San Juan gained an enviable religious reputation by committing to memory 1,000 verses of the Bible, and was rewarded by the present of a shotgun. His reputation was somewhat smirched, however, when four days after he shot his grandmother in the right leg.—*San Francisco Alta.*

A wild goose exhibited so much curiosity about Watchman Hendrickson's lantern at Asbury Park one night last week that he determined to try to kill it. Setting his lantern down near the edge of the water, he produced a stick and watched for developments. The goose waddled up to the lantern and was so intent on watching the flame that Hendrickson crept up and killed it with the stick. At least such is the story related by the Asbury Park Journal.

In front of a dwelling house on West 5th street yesterday afternoon an elderly woman stood talking excitedly with a neighbor and ringing her hands distractedly. Both appeared very much agitated, apparently over the presence of a robin perched on the street fence. Presently one of them made alarming demonstrations at the bird as if to frighten it away, but the redbreast gave a hop, skip, and jump along the fence, tilted its head sideways in derision or defiance, and refused to go. Then the woman gesticulated more energetically, pointing from the bird to the house, and curious passers-by lingered to learn the meaning of their singular behavior. This is what troubled them: The robin, doubtless for some good reason of his own which he could not explain if he would, had been trying for an hour or more to gain admittance through a window to the upper story of the house. The mere fact of a robin trying to break and enter a two-story dwelling was not alarming, but the fact that a woman was lying dangerously ill in that house gave the incident appalling significance. The woman was fixed in the conviction that the robin's action was a harbinger of death; hence the woe.—*Erie (Pa.) Dispatch.*

Send for our new catalogue, 320 large pages, over 5,000 illustrations of all sporting goods, covers printed in 15 colors, sent by mail for 25 cents.

PECK & SNYDER, 126 Nassau St., N. Y.

The Fluttering Fly.

PATENTED MAY 4, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.
2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will still be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American:—"When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream:—" * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler:—"There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, seem the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it."

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row.

GRATEFUL—COMFORTING. EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which will save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette*.

Made simply with boiling water or milk. Sold only in half-pound tins by Grocers, labelled thus: JAMES EPPS & CO., Homoeopathic Chemists, London, England.

39 Park Row, New York.

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

tion free of charge.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

HILLSIDE KENNELS,

LANCASTER, MASS.

THE IMMENSE ROUGH-COATED ST. BERNARD CHAMPION

OTHO

(A.K.R. 489). Orange tawny, perfect blaze and collar, other white markings correct; double dew claws. Born August, 1882. This celebrated dog stands 33½ in. full at shoulders, weighs 188 lbs. (Jan. 30, 1886), has a grand, massive head, immense bone, and is perfect in disposition. "Otho is conceded to be the best fronted St. Bernard in the country."—*American Kennel Register*, June, 1885. "Otho is one of the grandest fronted dogs we have ever seen. His head is a study and his forearm we have never seen surpassed. He is also an immense upstanding dog."—*Forest and Stream*, Oct. 30, 1884.

Fee \$50. Approved bitches only. Cabinet photos, 50 cents. Imported stock for sale. Also puppies sired by Otho. THE HOSPICE KENNELS. Importers and Breeders of Thoroughbred St. Bernards, Arlington, N. J.

In the Stud.**The "Boss" in Stud.**

Services limited to ten approved bitches, at \$50 each. A. K. R. 2218. His ancestors all champion and show dogs. As a stud dog he cannot be excelled, his get being being very large and finely marked.

Boss' Record.—Vhc, at New York in 1885, as a puppy. In 1886, 2d prize N. E. K. Club at Boston. He also took 2d prize in open class and special prize as the best American bred mastiff at the Westminster K. C. N. York, 1886.

Boss is a large dog, weighing upward of 180 lbs.; is good in skull, with grand body, legs, feet and bone.—*Am. Field*, April 8, 1886.

In mastiffs there was but one new one of any pretension and that was Boss. He possesses length of body with great substance, and is perfectly sound in limbs.—*Sporting Life*, March 31, 1886.

A few choice pups of great promise for sale, sired by Boss out of equally grand females, with best pedigree and markings.

Also a pair of Great Danes, 5 mos. old, marked alike white and blue; great beauties. Pair \$50; others from \$15 to \$30 each.

J. L. WINCHELL,
Fair Haven, Vermont.

	ANSWERS TO CORRESPONDENTS.

YELLOWSTONE PARK MATTERS.

IT seems probable that neither Senator Vest's bill for the better government of the Yellowstone Park nor the bill authorizing the building of a railway through the Park will receive the serious attention of Congress during the present session. We shall have to wait with what patience we can for that body to do its plain duty by the people. In the meantime a larger number of people are constantly becoming acquainted with the needs of the Park, and a wider interest is being felt in its proper protection.

The new hotel company is putting up several buildings at various points of interest, and the Northern Pacific Railroad has purchased, as we announced at the time, the Mammoth Hot Springs Hotel, which has been overhauled and put in good order.

There seem to be some hitches in the conduct of matters in regard to the hotels. It will be remembered that last spring Ellwood E. Thorne, of New York, purchased for the Northern Pacific R. R. Co. the large hotel at the Hot Springs. This is said to have been turned over to the new corporation afterward formed, called the Yellowstone Park Association, the management of which consists of Mr. Charles Gibson, of St. Louis, and a number of gentlemen who are interested in the N. P. R. R., the latter corporation being represented by Mr. H. C. Davis, Assistant General Passenger Agent of the road. The present quarrel in the association is not clearly explained by any of the dispatches which we have received. One account is as follows:

"The new association purchased the present hotels at the lower and upper Geyser Basins, which they refitted and refurnished, opening them on June 15. Mr. Thorne came up from New York three weeks ago to look after the property and found that the new association had control. Mr. Thorne and President Harris, who are old friends, were together a few days ago and the rumor was current that Mr. Harris backed Thorne in the matter, while General Manager Oakes, Traffic Manager Hannaford and Passenger Agent Fee stood by Gibson and Davis. Mr. Thorne cannot get hold of his property and the case may be carried to the courts for adjustment. Superintendent Wear, of the Park, telegraphed the Secretary of the Interior at Washington to sustain the

Northern Pacific in the matter, but Mr. Wear received a reply instructing him to hold himself free from the case."

NEW YORK HARBOR.

NOW that the general government has followed the State of New York in providing for the protection of the harbor of New York city we hope for a return of our game fishes after natural deposits have covered the foul sludge acid which now lines the bottom, or after it has been rendered harmless by age. On Monday last the Senate passed Warner Miller's bill to prevent obstructive and injurious deposits within the harbor and adjacent waters of New York city by dumping or otherwise, and to punish and prevent such offenses and making other provisions.

This is a most excellent bill, for it makes the placing, discharging or depositing by any process, or in any manner, of refuse, dirt, ashes, cinders, mud, sand, dredgings, sludge acid, or any other matter of any kind other than that flowing from streets, sewers and passing therefrom in a liquid state in the tidal waters of the harbor of New York or its adjacent or tributary waters a misdemeanor punishable by a fine of not less than \$250 nor more than \$2,500 and imprisonment not less than thirty days nor more than one year or both. The same punishment added to a revocation of license is provided for a vessel towing a load of such prohibited matter. The commissioners of the harbor are to prescribe the limits within which deposits are to be made.

This bill, aided by the one put through the State Legislature last winter by Mr. Doyle to protect the oyster beds from the evils of dumped refuse and chemicals, will tend to keep the mouth of the Hudson cleaner, and must eventually make it a resort for the species of fish which formerly came into it in great numbers but have abandoned it of late years because of its vile flavor and the absence of food on its sticky bottom. Senator Miller's bill was introduced mainly in the interests of commerce, because of the filling of the channel, but it will interest anglers as well, and we have personal knowledge that the Senator is a lover of the gentle art; though we regret to say he is not sound on game law observance.

AMERICAN STEAM YACHTS.

WHILE the main interest this season naturally centers in the large sailing yachts, the steam fleet is by no means neglected, and under the care of the American Y. C. sport is steadily growing. To-day the third annual regatta and cruise of the club begins, with a turnout of yachts that does great credit to this young but powerful organization, and the success of last year is likely to be repeated. A notable feature of the past winter was the number of steam yachts which were rebuilt and improved. Until a very recent date the American steam yacht of moderate size was more apt to inspire wonder than admiration in the beholder, the chief feature being a total absence of style, and while the standard as yet is not up to the mark, it is far higher, and constantly improving. The American steam yacht fleet leads all others in the possession of the largest vessels, and is unsurpassed in the matter of elegant equipment, but in the medium and smaller classes there is room for a vast improvement both in design and in the engineering department. Of skill in design and execution we have plenty, our engineers and mechanics are second to none, and with a demand once manifested for a steam yacht of shipshape proportions and finish, it will be met as quickly and completely as that for a larger class of sailing yachts has been.

KEELS IN LIGHT WINDS.—The yacht races thus far this season show that we have by no means arrived at the bottom of the keel question as yet, and that the possibilities of this class, unhampered by extreme narrow beam or a pure length rule, are likely to surprise even the most sanguine keel boat advocates. The work of the small keels in Eastern waters is throwing some light on the question, and latest results will bear careful study. At Marblehead on Saturday the two keel cutters, Vera and Mona, beat the centerboard cats 10 minutes, in a breeze so light that the larger classes could not finish.

THE WIMBLEDON RIFLE MEETING opened this week. The prizes aggregate \$60,000. That sum will be divided up into small portions by the time it finds its way into the pockets of the winners, for there are scores of contestants. Without a large prize list no range can draw well. Creedmoor ought to be endowed with funds sufficient to warrant an attractive lot of prizes.

AN ACT TO AMEND AN ACT TO AMEND AN ACT TO AMEND AN ACT.—Had the last New York Legislature had a week or two more of useful existence it might have added to the rigmarole which introduces some of its laws; perhaps it might even have reconsidered its hounding law. In several instances this wise body enacted one law and then set about providing the proper remedy by straightway enacting another measure repealing its own act and substituting something else in place. Thus the trout law was taken up for revision, and a particularly stupid bill passed April 13; on May 25 following, the Legislature crawled out by another bill correcting some of the ignorant blunders in the act of April 13, but perpetrating a gross outrage with respect to the fingerlings. Another piece of double back-action, self-correcting legislation was the black bass law. One bill was passed February 9. This was amended and corrected and patched up by a second piece of tinkering on May 20, which is in the title explained to be "An act to amend . . . an act to amend . . . an act to amend . . . an act." This is legislation in the fourth degree. It requires long training in the interpretation of complex and intricate verbiage to determine what such patched-up laws actually mean.

A RIGHTEOUS JUDGMENT.—A Long Island doctor, who showed his skill with the pistol by shooting a tin can atop the head of a companion, and banged away until he not only riddled the can but killed the man, was last week convicted of manslaughter in the second degree. The lawyer for the defense made the curious plea that the marksman was so expert that he was certain of hitting the mark aimed at, and there was consequently no folly in his shooting as he did. No man in this world is so skilled with firearms and so sure of hitting the mark as to be warranted in shooting at tin cans and apples and potatoes on the head of man or woman or child. In this particular case the fallacy of the defendant's argument was demonstrated by the fact that the bullet intended for the can did miss the mark and penetrate instead the brain of the man. There are a number of pistol and rifle shots in this country who give stage exhibitions of their skill by shooting at objects placed on the head of a human being. Every once in a while the papers report a case of death caused by the practice. There are laws enough to forbid such exhibitions, but they are not often enforced; nor are the shooters who cause such death hung as numerously as they should be.

JULY is one of the months in which is demonstrated the strength of the sporting instinct. Men who, under ordinary circumstances, take every precaution to keep cool and comfortable in the mid-summer heat, shoulder their guns and seek out the thickest coverts, and there in quest of a winged lure put themselves through a course of tactics that would try the fortitude of disciplined troops. It is all nonsense to decry summer woodcock shooting on the score of its fatiguing hardships. If a sportsman enjoys the toils of the pursuit no argument heaped upon argument can convince him that the pains are not four-fold compensated and rewarded by the pleasures. One might as well try to show the winter wild-fowl shooter that he is an idiot for half freezing himself to death. So long as game remains and the shooting instinct survives, the sportsman will court summer's heat and winter's cold, and bear each with smiling content, provided only he have anything to show as a reward.

STEWED DOG AS AN ADVERTISEMENT.—The enterprising managers of a cowboy-Indian show, now exhibiting in the vicinity of New York, have devised an ingenious method of utilizing the common cur of low degree with much profit to themselves. They cause the dogs to be slain, stewed and eaten by the Indians, giving out to the press that the savages are celebrating their regular annual traditional sacred weird and mystical dog feast. The wide-awake editors detail their reporters to witness the dog feast and write up vivid reports of it; and the readers have a column or two of stewed dog served up to them at breakfast or dinner. At first the Indians refused to eat any other than the traditional snow white dog, and the regular annual feast was not celebrated oftener than once a month, but now a dog of any color will do, and the annual feast is a weekly institution. The Indians are not squeamish, but there are signs that the newspaper reading public is becoming satiated and the show managers will soon be obliged to devise other schemes of advertising.

A TEXAS MAN has been found guilty of stealing his own horse and sent to the penitentiary. It would be well if Texas justice were meted out to the fellows who steal other men's dogs.

TWO MONTHS AMONG THE CREES.—I.

ONE spring some years ago I was stationed at a post of the Hudson's Bay Company, in the Northwestern Territory, and busily engaged in Indian trading. Opposition was strong and petty fur traders were traveling about in all directions. Early in March I received instructions to choose a man from the fort employees and pass the remainder of the trading season at a certain mountain some eighty miles distant, on the Lower Saskatchewan. Accordingly, having selected my man and everything being in readiness, one stormy evening we started, each driving a team of dogs, with a keen west wind blowing squarely in our faces. Onward we traveled over lake and portage, spelling about 3 A. M. and boiling our copper kettle of tea, with a meal of the inevitable pemmican (at the time the only food used through the North). The poor dogs looked wistfully on, their turn for food coming once only in the twenty-four hours, at the end of the day's journey.

Pierre, my companion for the spring, was a grizzled old French half-breed, who had spent a lifetime in the wild regions of the North, and had accompanied one of the overland expeditions in search of Sir John Franklin; many and oft were the tales he told over the camp-fire. However, at present, he was silent and rather glum, not relishing leaving his comfortable cabin for a stormy March night across country; but at that time I was young and full of zeal for my employers, and thought nothing of hardships to forward their interests.

Reharnessing our dogs, onward we went, reaching our destination late the next night. Choosing a suitable place for encampment we soon put up our leather tepees, and having stowed our trading goods under cover, were settled down for the spring.

In a short time I became acquainted with the surrounding Indians, and one of them, a venerable old chief named Yellow Bear, chose me as his grandson, and I reciprocating his attachment, we became great friends and used to chat by the hour over a cup of tea and a pair of long-stemmed pipes, using the Indian killikinnick with our tobacco. He had been a mighty moose hunter in his day, and had shot many a noble buck, telling me one time of a narrow escape when a wounded bull moose charging him, knocked him down and stood over him with his hoof raised; he lay as dead, for upon the first movement the brute would have trampled him with his forefoot. After some time it walked a short distance away, still watching his motionless form and finally went off; the old man, regaining his flintlock gun, reloaded and followed the brute, very soon giving him his quietus with a ball through the heart. I asked him if he was frightened. He said no, not at that time, but once having been on the trail of a moose for three days, eating little or nothing, (not being able to shoot at small game for fear of alarming the deer), he came on the track of a *Wen-de-go*, which means, translated, Evil Spirit or cannibal. He described it as very awful in appearance, and following it he came on the creature, according to his description of immense stature, with a skeleton body and a black face. Upon his firing at it there came a clap like thunder and the old man lost consciousness. Coming to after a time he found himself unhurt, but weak and giddy. Similar stories I have often heard from natives in different parts of the North; and I fancy their origin is in the Indians generally exerting himself violently for some time on very scant food and becoming light-headed in consequence.

We had started on our spring excursion but poorly supplied with provisions and were getting down to very short commons; the Indians likewise; all hands were anxiously looking for the arrival of the wildfowl. Geese were always the first to appear. Paddling up the river with Pierre one evening I had the good fortune to shoot a large sturgeon, which made a capital addition to our scanty fare. A week elapsed, when to the delight of all the encampment, a flock of geese passed over, and we immediately made stands and setting out our decoys succeeded in bagging five before the close of the day. For the rest of the spring we revelled in abundance of game.

All this time one or the other of us had been traveling to the different tents of Indians in the neighborhood, and getting a goodly share of furs. Some ten miles away a free trader had pitched his camp among what was considered a hard lot of Indians, all of them pagans and great medicine men. They had sent a message stating that there was no use of our visiting them as they had a trader and were going to give him all their furs. Pierre thought we had better take them at their word; but piqued at their off-hand treatment of a company which had often helped them in the hour of need, I determined to see them, and accordingly paddled up one morning, finding them encamped on the bank of a stream. On landing I met with a cool reception. Nothing daunted, however, I sat down and lit my pipe. Most of them were busily engaged feasting on duck eggs, and finally a tall, dignified looking old savage beckoned me to share his repast. The meal finished, I questioned a few of them as to whether they would trade, but was met by a prompt refusal. In despair I finally accosted a rather good-looking squaw and used all my powers of blarney with her, stating that on her next visit to the fort various small presents would come her way, if she would trade only a little. At last, after casting some dubious glances toward a grumpy-looking buck, she went to her tent and returned with ten muskrat skins. Unpacking my goods, I very soon satisfied her on the exchange. This proved only a beginning, for the sight of the glittering wares was too much for poor Lo. Before long, much to my delight and the disgust of the half-breed trader, I had most of the furs in the camp in my possession, with a cordial invitation to come again. So much for the powers of blarney.

Some evenings after this, taking my gun, I started toward the mountain which, crowned with firs to its summit, overhung our camp, while close by a rapid river rushed down its slope and sped on its way to the mighty Saskatchewan. Having shot a rabbit or two, I came on a large bear's track very fresh, and following it cautiously for a short time I caught a glimpse of Master Bruin through some stunted willows. Before I could get a shot he set off at a round pace, and with my heart thumping like a small engine I rushed after him, for it was my first bear hunt. I could depend well on my gun, it being what is called in this country distinctly an H. B. gun; they are all made of one standard, 28-bore, and rather long and heavy in the barrel, throwing ball like a rifle for 200 yards. Knowing the lay of the

country, I made for a point where it was likely the bear would pass. And hardly had I thrown myself down when crashing sticks warned me of his rapid approach. He suddenly came into view, a large brown beast, not over thirty yards distant. Firing rapidly, I struck him in the leg. It seemed only to enrage him, for, after biting at the wounded spot savagely, he rushed straight toward me. Not having had time to reload my barrel, I reserved the other until the muzzle nearly touched his jaws, and pulling the trigger jumped on one side. By the very impetus of his charge he was carried some paces past me, and after a kick or two lay stone dead. So close was he that the powder had scorched his mouth.

A-SI-SI KOA, Sipi, Oct. 27, 1885.

[TO BE CONTINUED.]

DAYS WITH THE BARMECIDE CLUB.

IX.

FOUR, eight and a pair, seven are fifteen two, twenty-five, that's a go; thirty-one, four holes—and almost innumerable variations on the above were played until the monotony of the proceedings became so thick it could have been cut with a club; and it must have been the disgust felt by the rainy day at our unprofitable employment indoors that dislocated its spinal column and buried it in the irrevocable past, while it was succeeded by a day of sunshine which unlocked our doors and again scattered us over lake and brook.

But a few days more were remaining in which we could practice our gentle art, and the time we improved though it was barren of wonderfully substantial results. But all the same we whipped the riffles and the eddies and the mirror-like stretchers on the brook, the ripples and the quiet on the lake; and managed by persistent effort to keep the wolf from the shanty, and we all felt that we had improved our casting to an appreciable extent, and that was idle time not idly spent.

But then, as has been said a thousand times, "it's not all of fishing to catch fish." The angler knows that fortune is a coquette, an inconsistent goddess, and when with sturdy stride he scatters the dewdrops sparkling on the spider webs, or presses with gentle steps the mossy path that leads him to the lake, he feels that, though he return with an empty creel, there is ample compensation in the cheerful songs which the birds are ringing out in a riot of melody, in the shrill scream of the loon, in the chattering of the saucy bluejay, in the partridge drumming his love beat in some leafy copse. The merry ripple of the bubbling stream, the radiant sunsets, the wild flowers which jewel the grass and moss, the goodly fragrance of the forest, make care and ill luck stand aloof.

Though we wooed every ripple with our most seductive casts, yet the fine trout were conspicuous by their absence. There is a wonderful fascination in the uncertainty of angling, and though there was present with us the consciousness that it was a will-o'-the-wisp beckoning us on, we followed and enjoyed the few finny favors we creeled, increased our *avoir-dupois* and deserved the success we could not command. Still we had the greatest amount of unadulterated sport during these last days, for after no meal were we a trout ahead, and consequently there was not the plague of fishes to admonish us to refrain from further captures, and we were all thankful that we had the good fortune not to catch too many trout and thereby spoil our sport.

These piscatorial conditions entailed an extra amount of exercise with the rafts, but we were equal to it, and "be mane stringth and arkwardness" we paddled and poled our clumsy but comfortable old bundle of logs to every promising and unpromising gallon of water in the lake.

We experimented with an almost endless variety of allurements, but neither standard flies nor those nondescripts evolved out of our inner consciousness effected good results, but only tended to confirm our belief that a limited assortment of flies selected with due regard to place and season was sufficient, for what few fish came to us came through the medium of our old friends. During these days we had neither forgotten nor neglected Our Lake, as some of us made almost daily trips to it for the exercise probably, as the fish were very chary of their favors. The two lakes in the immediate vicinity of our headquarters were visited, and though they received us with their most gracious smiles, they did not open their hearts.

George Eliot says, "The happiest women, like the happiest nations, have no history;" and so were these last days of our outing uneventful, but full of quiet rest, of comfort and content, until, according to appointment, the conductor of our team and sledge met us and we prepared for the return trip. The last night was spent in the shanty at Our Lake. We had been pilgrims of pleasure, and though slightly saddened by the consciousness that our pilgrimage must soon come to an end, for the grim old scythe bearer would not cease his never-varying stroke, we fell asleep to the lullaby of the leaves and the ripples.

MILLARD.

CHEYENNE, WY.

A QUAIN QUARRY.

THE other day, realizing the truth of the preacher's assertion, "much study is a weariness to the flesh," I left my books and quill (aye, I am an "out and out" conservative and still cleave to my quill), roused my favorite beagle from his post-prandial nap, took 'baccy, hat and stick and went forth a field.

It was a lovely afternoon of a typical May day—an English May—and my thoughts dwelt upon fair English scenes and the "sweet day, so cool, so calm, so bright" of the saintly Herbert and the prose-poetry of dear old Walton, and these, it may be, led my feet to the water rather than to the budding wood. I chose, as I always do, the "cool, sequestered" way to a pond, erstwhile a wonted haunt of mine for bottom fishing and whence I had taken many a goodly perch of a pound weight and more. Circumstances and sentiment have kept me from the place for years and I even began to wonder what changes might be visible in the once secluded and beautiful place. Secluded and beautiful I found it, but evidently more frequented than of yore and a less desirable and promising water for fishing. An old turnpike divides the pond, and on this "causeway" had been planted, since I last saw it, the ubiquitous and unsightly telegraph poles! I stood aghast and bewailed this flagrant change and untoward evidence of civilization. The pike, even in parts near to villages, had long been in desuetude, and this loveliest portion had been seized upon as a convenient place over which to hang the wires for the use of a new line of railway contiguous thereto, making a short-cut, though marring the beauty of the place.

I found a hole where I was wont to make a cast, and sat down to burn 'baccy and let my thoughts run riot in

meditative mood. Guy had long been doing so *in propria persona*, for the place was new to him and he had many strange nooks to explore. I was soon roused from my retrospection by his giving tongue, and starting up, I found him intent on almost taking to the water, but without seeing, at first glance, any cause for his undue excitement. Evidently thinking me very stupid and stolid, he looked into my face and again made the air ring with his music. I now saw, about a fathom's length from shore, a large fish rise to an alder catkin afloat on the surface. The water was so deep and so dark that I could not name the fish, but I presume it was a species of dace, once very abundant here. It was amusing to see the dog attempt to step upon the water and to hear his angry voice at being balked of a firm foothold and a dash at this novel prey. The fish soon disappeared, and so did Guy—to "fresh fields and pastures new," wondering, I trow, at his discomfiture, leaving me to moralize a bit and also to wonder if there were now as good fish in the pond as I used to draw thence. I am disposed to doubt the fact, for thoughtless boys and men have made within, as well as out of, the water, and very "small fry," as well as coarse, are only left "to point the moral" and to bear witness to the "changes and chances" which a greedy and selfish age is making in the fair domains of nature. O what heart of grace she has, however, and how bravely she strives to hide man's ravages beneath a veil of greenery and broderie of fair flowers! Ever kindly, ever soothing, ever glorious and beautiful and buoyant!

THE AMERICAN ASSOCIATION.

THE thirty-fifth meeting of the American Association for the Advancement of Science, will be held at Buffalo, N. Y., from Wednesday morning, Aug. 18, until Tuesday evening, Aug. 24, 1886.

The headquarters of the Association will be at the High School, and all the offices and meeting rooms will be in that building or in one of the school houses near by. The hotel headquarters will be at the Genesee House. A special circular in relation to railroads, hotels and other matters, has been issued by the Local Committee. In order to take advantage of these arrangements, members who have not received the Local Committee's circular should send for a copy at once. Arrangements for excursions and receptions will be announced by the Local Committee. For all matters pertaining to membership, papers and business of the Association, address the permanent secretary at Salem, Mass., up to Aug. 12. From Aug. 12 until Sept. 25, his address will be Buffalo, N. Y.

The officers of Sections D and H have issued special circulars relating to the meeting, which can be had by addressing the respective secretaries. Special information relating to any of the sections will be furnished by their officers. In Section E special attention will be given to the problems connected with the Niagara Falls and its gorge.

Arrangements have been made by the Local Committee for the proper care and exhibition of instruments and specimens, for the details of which and for all other local matters, members should address the local secretary. As many of the railroad companies will require a certificate of membership in the Association to be shown on purchasing tickets to Buffalo at the reduced rates, a certificate is inclosed in copies of the circular sent to members of the Association.

The meeting will be called to order in general session at 10 A. M., on Wednesday, Aug. 18, in the hall of the High School, by the President, Professor H. A. Newton, of New Haven, who will resign the chair to the President elect, Professor E. S. Morse, of Salem. After the adjournment of the general session, the sections will organize in their respective halls. In the afternoon the sections will meet and the Vice-Presidents will give their addresses. In the evening Professor Newton will give his presidential address. The general sessions and meeting of the sections will be held on the following days, except Saturday and Sunday, until Tuesday night, when the concluding session will take place.

The following officers were elected last year for the Buffalo meeting: President, Edward S. Morse, of Salem, Mass. Vice-Presidents: A. Mathematics and astronomy—J. W. Gibbs, of New Haven, Conn. B. Physics—C. F. Brackett, of Princeton, N. J. C. Chemistry—H. W. Wiley, of Washington, D. C. D. Mechanical science—O. Chanute, of Kansas City, Mo. E. Geology and geography—T. C. Chamberlain, of Washington, D. C. F. Biology—H. P. Bowditch, of Boston, Mass. H. Anthropology—Horatio Hale, of Clinton, Ontario, Canada. I. Economic sciences and statistics—Joseph Cummings, of Evanston, Ill. Permanent Secretary, F. W. Putnam, of Cambridge (office, Salem, Mass.). General Secretary, S. G. Williams, of Ithaca, N. Y. Assistant General Secretary, W. H. Pettee, of Ann Arbor, Mich. Secretaries of the sections: A. Mathematics and astronomy—S. C. Chandler, of Cambridge, Mass. B. Physics—H. S. Carhart, of Evanston, Ill. C. Chemistry—Wm. McMurtrie, of Champaign, Ill. D. Mechanical science—William Kent, of Jersey City, N. J. E. Geology and geography—E. W. Clappole, of Akron, Ohio. F. Biology—J. C. Arthur, of Geneva, N. Y. H. Anthropology—A. W. Butler, of Brookville, Ind. I. Economic science and statistics—H. E. Alvord, of Mountainville, N. Y. Treasurer, William Lilly, of Mauch Chunk.

The Entomological Club of the A. A. S. will hold its meetings during the week of the Association in the library of the Buffalo Soc. Nat. Sci. The first meeting will be held on Tuesday, August 17, at 2 P. M., and Prof. J. A. Lintner, President of the club, will deliver his address at that time. A special badge will be furnished members of the club at the desk of the local secretary. During the week there will be an excursion to some point of interest, and a reception has been tendered the club by the entomologists of Buffalo. It is very desirable that those entomologists expecting to attend should signify their intention to the secretary of the club, who will also furnish any further or additional information.—JOHN B. SMITH, Secretary Entomological Club A. A. S., National Museum, Washington, D. C.

The Botanical Club of the A. A. S. will hold its meetings, as usual, during the week of the Association. The first meeting will take place on Wednesday at 9 A. M. in the room assigned to the biological section. Any botanist or person specially interested in botany, who is a member of the Association and has registered for the Buffalo meeting may become a member of the club by filling out a

blank to be obtained at the desk of the local committee. Members of the club will be provided with a suitable badge. Special arrangements will be made by which the botanists can visit some interesting collecting field during the long excursion on Saturday. A special excursion will be given the club to some point in the vicinity of Buffalo; the date and place will be announced hereafter. The botanists of Buffalo have other plans for the entertainment of their guests, which are not sufficiently mature to announce. For further information address Dr. J. C. ARTHUR, Secretary of the club, Geneva, N. Y.

The Society for the Promotion of Agricultural Science will hold its seventh annual meeting in Buffalo, beginning on Tuesday, August 17. For further information address DR. BYRON D. HALSTED, Secretary, Ames, Iowa.

THE AUDUBON SOCIETY.

At a meeting of the Cincinnati Natural History Society, held Tuesday, July 6, the following report of the Committee on Destruction of Native Birds was submitted to the Society and adopted:

Your committee report as follows in the matter submitted to them, and state that they have carefully investigated the subject of the destruction of our native birds, and several papers have been prepared and read at three meetings of this Society. They find:

First—That native birds of many species have greatly decreased in numbers over large areas of the country. This is partly true of those water and game birds about which it is comparatively easy to obtain statistics.

Second—That the chief cause of such decrease, in addition to climatic changes, natural enemies, clearing up the country, etc., are the direct destruction of birds for their skins and feathers for decorative and millinery uses, the trapping of birds for cage purposes, the destruction of eggs and nests by men and boys, and the introduction of the European sparrow (*Passer domesticus*), which occupies the nesting places of many species. Three of these causes are preventable, and the evil results can be greatly lessened, first, if no birds be used for decorations; second, if none of the song birds and insectivorous species be used for food; third, if the laws protecting certain species be backed by stronger public opinion and be more rigidly enforced; fourth, if thoughtless men and boys could be shown the great economic value of birds and taught the desirability of protecting them and their eggs.

Your committee find that a widespread discussion of the bird question shows more interest in "our feathered friends" than they had hoped for, and they trust that Cuvier clubs, Audubon societies and other clubs of like aims will continue to flourish on all sides until public sentiment is entirely opposed to the destruction of our native birds.

A BLACK PRAIRIE DOG.—*Editor Forest and Stream:* During a recent visit to the West I saw at Laramie, Wyoming Territory, a black prairie dog. The animal was captured within four or five miles of Laramie, and while on exhibition at that town attracted a great deal of attention from old plainsmen and mountaineers, none of whom seemed to have ever seen a similar specimen. It was almost entirely jet black, though on the flanks and haunches the color changed to very deep, rich brown. The tip of the tail was much paler—almost fawn color—and the tip of the chin was grizzled, just as is often the case with the chin of an aged black dog. It is not certain to which species of prairie dog the animal belongs. The ranges of *C. ludovicianus* and *C. gunnisonii* overlap here, and both animals are common. The appearance of this melanistic individual leads me to think it probable that it was *C. gunnisonii*, as it had to my eye the somewhat more delicate and graceful form of the species, but it was impossible to definitely determine the point.—G. B. G. (New York, July 5).

EUROPEAN GOLD FINCH IN NEW YORK.—I am informed by Mr. W. A. Conklin, of the Central Park menagerie, New York city, that the European gold finch (*Carduelis elegans*) first appeared in the Park in 1879, having probably crossed the Hudson River from Hoboken, N. J., where some birds had been set at liberty the previous year. The species is now common and apparently resident. On April 20, 1886, I discovered in precisely similar situations, two nests, one of which containing five fresh eggs has been forwarded to the Smithsonian Institution. It was placed in a pine tree, resting among the tufts of long needles near the end of a slender horizontal limb, some twelve feet from the ground. The species seems to be gradually extending its range, as on May 23, 1886, I met with a pair occupying a clump of pines six or seven miles to the northward.—E. T. Adney in July Auk.

ELK ANTLERS.—Chehalis, Washington Territory.—I send you dimensions of an elk's head and horns in my possession. The animal was killed just before shedding the velvet, which makes them look magnificent. Dimensions: Face, from back of ears to tip of nose, 27 inches; butt of horns, 13 inches in circumference; spread of horns in widest part, 43 inches; 6 lines on each beam; from point of brow antler to top of horns, 53 inches; distance across from tip to tip, 37½ inches; distance between eyes, 10 inches; weight, about 50 pounds; being in velvet they are lighter than if rubbed.—W. G. MERCIER.

BRIGHT FEATHERS AND BRIGHT FOLIAGE.—Lawrence, Mass., June 23.—The Jay is a nicer bird than I thought he was. I won't shoot any more. He has a bad name among us boys, though. But late in the fall, when the wild grape is ripe, and everything is golden and the maples a-fire, I would not miss him for a good deal as he goes flashing through the woods like a blue flame, now screaming like wild and once in a while making the sweetest sound, which I can't compare to anything but a bell, and a mighty sweet-sounding one at that.—O. FRED NEWBERT.

SHOWER OF FISH.—Mr. W. L. May, Fish Commissioner of Nebraska, has shown us a bottle of small fish of an inch in length, which were picked up in the streets of Harvard, Neb., after a heavy rain and a cyclone, on June 14. The fish were identified by Dr. Bean as the fat head or black-head minnow (*Pimephales promelas*), a common species in the Ohio valley and upper Missouri. The fish are reported by Mr. May as having been very plentiful in the streets.

OCCURRENCE OF THE IVORY GULL AT HALIFAX.—A young bird in immature plumage was shot recently on the coast of Halifax county and is now in the possession of Mr. Thos. Egan, taxidermist of this city.—J. MATHEW JONES (Halifax, N. S., July 9).

BIRDS OF CENTRAL PARK—CORRECTION.—Litchfield, Conn., June 20, 1886.—*Editor Forest and Stream:* From an oversight on our part, the dates in reference to the occurrence of the yellow-bellied flycatcher (*Empidonax flaviventris*), in Central Park, are incorrect. The species in question was observed by Mr. Adney on May 10, 1886. We trust that this correction may appear in your columns as soon as possible.—L. B. WOODRUFF, A. G. PAINE, JR. [This note, owing to erroneous direction, was not received until last week.]

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

WOODCOCK.

Editor Forest and Stream:

If I were to relate what I do not know, into this dreamy, mysterious and charming game birdeches, I am sure more space in your valuable journal than jels of rocks hundred to spare me; hence, if you please, I shut in our train my experiences with the sober, Quaker-like bottom of a deeper pencils than mine the extensive tasket fring up the canvas and making the perfect picture.

Our first intimate acquaintance with the many years ago, when I was a boy of eight or nine years. It happened in this way. One of my duties at that time was to "drive and fetch" an old brindle cow to and from the rocky pasture lot in my native town in Connecticut. One morning in early June, after seeing the old cow safely behind the "bars" in the lot, I started to cross an old mowing field in which the grass was quite light, and scattered here and there were many venerable apple trees, and a few hickory trees which had been left standing on account of the choice quality of the nuts they bore, while the fence surrounding the field was fringed with hazelunt bushes, weeds and briars of various kinds. As I sprang from the fence and landed beyond the bushes, a woodcock started up in front of me almost at my feet and fluttered and tumbled off a few rods and almost turning a summersault settled apparently helpless in the grass.

Thinking it a crippled bird, boylike I darted after it, expecting an easy matter to make a capture, but in this conclusion I failed to consult the bird, for when I arrived within a few feet of her she seemed quickly to recover and easily eluded my grasp, but still fluttering and tumbling off as before, but a short distance again fell apparently exhausted. I increased my speed and made a dive in the grass where I had seen her fall, intending to cover her with my body, but again I was foiled by seeing her dart out just in time to escape me, when she again repeated the fluttering and tumbling act. By this time an idea struck me that I was being fooled by that sedate and simple bird, and she was leading and enticing me away from something she held dearer than her life; so retracing my steps to where I had jumped from the fence, in the merest apology for a nest composed of a few leaves and blades of dry grass there lay the objects of her anxiety, two young birds, evidently but a few days old, so young as to make no effort to run or walk, and evidently relying on instinct by the "tricks that were vain" (in this instance) of their mother to shield them from observation and harm. I did not touch nor disturb them, but sat gazing at their tenderness and simplicity for a few moments, when the old bird came flying back, but on discovering me immediately sank into the grass but a few feet distant and began her blandishments to allure me again to take up the chase. I shall never forget the brave and tender devotion of that mother to her young brood, or the artful wiles she adopted to shield them. After satisfying my curiosity I departed, leaving the young birds as I had found them.

The next morning I called to take another view of the young innocents, but they were gone. Probably the parent removed them during my absence, and if so, how? Or did they gain strength (which seemed to me improbable) and follow the mother to a new and more secluded home? Or were they devoured by hawk or fox? are queries I never could answer satisfactorily to my own mind. I have always had the impression that the parent bird in some way removed them. As this was the only woodcock nest I ever saw, and though I have been shooting this delicious and mysterious bird ever since, this simple sketch contains about all I know about woodcock. I should have said that this nest was located fully a quarter of a mile from any water, marsh or swamp, on high and dry ground; and though I am inclined now to believe that they usually breed near or in such places, this is the only positive evidence I have that they do not.

I used to be foolish enough to shoot the dear things in July, but have long since abandoned the pernicious practice. The last time I was guilty of this vile business was in company of my old friend Comf (now gone hence), and but for him I might then have lost my life, for he found me stretched under the shade of a tree overcome by the heat, and he ran nearly half a mile to the nearest spring, bringing his old felt hat full of cool water with which he bathed my head and hands and moistened my lips, reviving me sufficiently to enable me to reach home, and I have never attempted it since at that season of the year, not alone on account of the discomfort to myself, which generally overbalances the sport derived, but because the old birds are as unfit for food as a sitting hen, and the young ones are frequently half grown, soft and flabby, not having the strength to fly so as to make a creditable target for a true sportsman, and when shot, wrap them in fresh leaves and lay them as carefully as you may in your pockets, more than likely when you get home the poor things will have become spoiled or fly-blown. For the best interest of sportsmen and birds, no woodcock should be shot before the first of October.

I have watched their coming in the early spring, and once handled a bird that had met its death by flying against a wagon early one morning near the last of February in Queens county, Long Island. I have followed them in their secluded haunts amid the alders where the soft, springy ground was covered thick with ferns and the broad leaves of wild cabbage; and again during the last of July and August, have found them while moulting in the cornfield nearest to their feeding ground; but from the 15th of October to the

15th of November is the only time that affords good sport and really good birds, for they are then strong and healthy, making an honest target for the sportsman, and a true luxury for the table.

Speaking of strong flyers leads me to inquire if everybody but me knows how far a woodcock can fly without stopping? I confess I do not know. It is well known that many portions of Long Island afford excellent breeding ground for woodcock, and that during the month of July they are very plenty in many of the swamps. Do the old birds get there in the spring by crossing from New Jersey north of Sandy Hook, or do they cross the Hudson River, Manhattan Island and the East River? I am sure some cross this way, for I once picked up an exhausted bird that fell in the Seventeenth Ward of Brooklyn, and as I saw it an instant before it fell, the course indicated that it had crossed the East River, and possibly Manhattan Island and the Hudson. But when they leave the island to take their summer vacation further north, do they all take the above indicated routes, or is it possible for them to fly across Long Island Sound?

That under certain incentives they can fly rapidly, and quite a continuous distance was once illustrated to me in this way: I was hunting in Connecticut late in the evening on one of those still Indian summer days in October, and had just gained the summit of a ridge overlooking a broad swamp of alders and low underbrush, when a small sparrow hawk darted from a bush near by toward the ground in front of me; at the same instant a woodcock started up, disclosing at once the object of the wily hawk; and here began a race that so much surprised me that I forgot I had a gun, and I doubt much if the shot would have overtaken them, so rapidly did they put distance between us. They were a little below my line of vision, and I judged the woodcock to be ten or fifteen feet in advance, both flying in a direct line above the underbrush in the swamp beyond, as though they had been shot from a gun. In the few seconds I watched them they did not swerve to the right or to the left, but rapidly dwindled in size till they were lost to my vision in the hazy atmosphere ere the hawk had caught his prey or they had reached the ridge beyond, which I judged to be half a mile away. I stood musing a moment wondering whether that sparrow hawk had woodcock for supper, or whether the woodcock was quietly congratulating himself on winning the race for dear life. I confess I hoped for the latter to be true. I was surprised at the whole transaction, surprised that the woodcock did not sink into the cover of the swamp below, and surprised at the distance he flew, and above all at the rapidity with which he measured it off. It satisfied me that a woodcock has a few "extra links to let out" on important occasions, and this seemed to be one.

In regard to the lateness with which these birds tarry at the north, I can only say that one evening near the last of November I and Comf stood on a knoll overlooking a small swamp in which our dogs were trying to rustle out a partridge, when I heard a whistling sound in the air, and ere I had comprehended its source, Comf's gun cracked and the bird came down in front of us. I gathered it, and it was as fine a woodcock as I ever handled or ate. Everybody knows that a broiled woodcock, shot in the proper season, is good; in fact, is very good; but everybody may not know that there is another way to cook them which will give them a flavor epicures delight in, and which can be obtained in no other way than this, viz., dry pick the bird, taking care not to tear the skin. Do not cut it in any way nor remove anything from it but the feathers. Wrap it securely in two or three thicknesses of clean, unglazed brown paper; then bury it in hot wood ashes, over which spread a thin layer of live wood coals, and leave it till thoroughly roasted, which will be from fifteen to twenty minutes, according to the degree of heat above and below it. When done, split it open on the back and remove the case of worm-like entrail (for this will be all that will remain) together with the outlet. Season with salt and pepper to your taste, and you will find the most delicious flavor it is possible to obtain from a woodcock. Let those who have not already done so, try it some time and report. I never had a stomach for eating the bird after it has become "high," as some are pleased to term it, but prefer my birds fresh and untainted.

I hope, Mr. Editor, you will persistently continue your valuable efforts to confine the shooting of this charming game bird to the only proper season, which in my experience is during the months of October and November, and thus preserve and increase a bird which affords the most delightful sport and delicious food.

A.

PRAIRIE CHICKENS.

Editor Forest and Stream:

Prairie chickens are coming along in nice shape. The young chickens will be much larger than usual this season on the beginning of the shooting season, owing to favorable weather for early nesting.

The Hotel Kittson (R. W. Bloodgett, proprietor) can furnish ample accommodations for all that come. W. S. F. ASHBY, Minn., July 5.

A MYSTERIOUS DISAPPEARANCE.—It was an afternoon in August, 1888. I was stock hunting in the hills of Middle Arkansas. Riding along the top of a low ridge and passing through a small clump of bushes I flushed a covey of quail, and being in no hurry, I got off of my horse to let him graze while I tried my skill at killing the quail with stones, of which there was a bountiful supply all along the side of the hill. I carried my old muzzleloading rifle in my left hand. When I got within about forty yards of the foot of the hill and stopped to look for the quail, several of which had lit in the trees along the hillside, what should I see but a large buck leisurely walking up the dry bed of the ravine, and a short distance in the rear was a doe following him. On the instant I had a terrible attack of "fever and ague," that I could not hold myself steady, much less the gun. But then in a few moments my nerves were steadier and I laid my gun upon the limb of a little tree, and taking deliberate aim at him just behind the shoulder pulled trigger. Instead of hearing the sharp report and seeing the buck make his last leap for life, there was a click of the hammer on the tube and the deer stopped stock still and elevated his head just as old men who wear their glasses near the end of their noses do when trying to get a good look at something at a distance. I eased myself down by the side of the tree and commenced priming my gun by picking powder into the tube with a pin. It was the work of but a few seconds, and slipping another cap on to the tube I rose up again fully expecting to see them in full view. But lo! they had vanished. How they got away without my seeing or hearing them has always been a mystery to me, as it was all open oak and hickory woods, excepting a few small clumps of bushes here and there along the hollow.—ALPHA.

FOXHOUNDS AND FOXES.

Editor Forest and Stream:

I have hunted foxes in Virginia, New Hampshire and Maine, with a pack in the first-named State and with from one to a half dozen dogs in the other States, and therefore feel that I am thoroughly acquainted with the points in controversy. Both gentlemen are right as far as their own localities are concerned. The red fox of New England is the same as that of Virginia, and other things being equal, one is as hard to run down as the other. In the autumn in New England before the snow falls, a pack of picked fleet hounds might kill one out of a dozen foxes driven, but I do not think it possible for two or three of the best hounds in the world to do as much, simply because our country is full of roads, swamps and ledges, where so much time is lost in keeping the track that the fox gets far ahead, and the dogs can only trail fast, not drive by the body scent. In Virginia they run over a well wooded or grassed country and never road for hours as they do here. In winter the great masses of ice and constantly drifting snow make following a New England fox next to impossible, unless one has a slow, patient dog that will stick to his work till the day is done; but, of course, this is not driving in the Virginia sense. The question, as I conceive it, is not one of the kind of dogs needed, but the number used, and the character of the country run over. Virginia dogs do catch red foxes, I have owned them and seen them do it, but the same dogs can't do the same work here, and from past experience I believe it impossible to successfully run down and catch foxes in this part of the country. I have a Byron dog from the western regions of Pennsylvania, that comes near being a fox than any dog I have seen in this section, and a year old. Should he do still better next season, I should get four or five of the same strain and further test the question of catching foxes in New England. FOXGRAFT.

PORTSMOUTH, N. H.

"Red Eye" and "Hounding," of Virginia, and Mr. Newell, of Massachusetts, are each right as to their own localities. Here in Sullivan county, N. Y., a fox would grin at the notion of being caught by any dog. Foxes here run from four to forty hours, not without breaks and loss of track. We have good foxhounds; put them in an open country, like the South, and the run would be shorter and the fox caught or holed. As to Col. Tucker's fast hounds, produced as he claims by a cross between native and imported strains, we have plenty of that kind here, and there is no need to send South for them.—C. F. KENT (Monticello, N. Y.).

SOUTHERN HUNTING METHODS.

Editor Forest and Stream:

In reading the apparently interminable discussion on the "hounding" and "non-hounding" questions in your columns last winter, and also allusions to fox hunting in northern woods, "Coahoma" was led into some reflections upon the curious contrasts existing between Northern and Southern methods of pursuing certain sports.

In the South still-hunting for deer is rarely ever practiced, and for the most part only by "raftsmen" and such professional woodsmen.

The common practice with sportsmen, and which is considered legitimate sport, is to hunt the deer in very much the same manner as your fox hunting is described. A party of hunters go out on horseback with a pack of hounds. Each member is provided with a shotgun (rarely ever a rifle) and a blowing horn. One or two of the members "go in the drive"; that is, follow and control the hounds. The others are stationed at the various "stands," points where the deer is supposed to be most likely to run by. When a deer is killed by one of the "standers," a long blast is given on his horn to apprise the other hunters of the fact. Then a new drive is instituted in another locality. If the dogs run the game out of the drive without a shot they are recalled by the drivers as soon as practicable and a fresh drive entered upon.

This method of hunting deer certainly affords delicious sport. There is not a more thrilling experience, than, after hours of waiting suspense, perhaps, to hear the pack in full cry approaching your stand, with the exciting hallooing of the drivers behind them, while you stand trembling with excitement, your gun cocked and at a "ready," in momentary expectation of the quarry bounding into view and in range of your weapon. Or, as frequently happens, the swelling music of the pack (what orchestra or human chorus can equal its effect on your nerves?) will veer off to right or left, and you spring on your hunting pony, who is as full of excitement and interest in the proceedings as yourself, and dash wildly away, leaping over logs and dodging overhanging branches, to "head off" the game at another stand a mile away. But many a long, cold day, from "early dawn to dewy eve" hath this writer stood, or reclined against a tree trunk, vainly waiting in weary solitude for the deer that had pressing business in an entirely different part of the woods.

This method of deer hunting, as practiced in Louisiana and Mississippi, does not drive the deer permanently away from its accustomed haunts, but the same deer may be started in the same locality on successive days. The one great evil, however, which attends this sport, and for which there is no palliation, is the frequency with which the deer escapes carrying with it one or more buckshot, either to die a lingering and unprofitable death, or possibly recover after much suffering, which no true sportsman can contemplate without discomfort of mind.

Fox hunting, on the other hand, is conducted quite differently. Every huntsman is in the "drive," and there is not a gun in the party. If any unreflecting countryman should shoot a fox before the hounds, he would receive the hearty execrations of the whole hunt.

This different way of viewing the matter in the North and the South is probably due to the comparative scarceness of foxes in the latter region. They are by no means so numerous here as they appear to be in the North. The sight of a fox in this country except when put up by the hounds, is an exceedingly rare occurrence, one which this writer has never yet experienced.

In former years, when Southern planters could afford to indulge in the luxury, fox hunting was a favorite amusement. Pains were taken to select a pack with special view to harmony of voices, and the music which they made when in full cry on a crisp, frosty morning, made the nerves tingle as nothing else could. It was customary to start out a couple of hours before daybreak, and the chase was usually kept up till toward noon, covering a radius of perhaps five miles, the gray fox being the prevailing variety. He was either picked up on the ground, run to earth, or, as was

most usual, was found in a tree, with the pack baying around, sometimes after five or six hours' chase.

The writer remembers an occasion when he was a boy of ten years of age, and participated in such a hunt. Soon after setting out, a small beagle bitch started a fox on her own account, and after chasing it alone for several hours, brought it in the vicinity of the main pack, when it was speedily put up a tree. Wishing to have some further sport the leader of the hunt called off the pack and directed me to climb up the tree and force the fox to jump out. This I did, but he very soon "treed" again. The same tactics were pursued, but the poor creature was so exhausted that it permitted me to catch it by the tail and throw it to the ground, when the merciless dogs made short work of it. An Irish friend of mine, who is a considerable railroad and lever-tractor, who has a good deal of humor about him, somewhat given to drawing the "long bow," returned from Ireland on a visit a few years ago, and while there was invited to see the "county hounds." The pack consisted of about fifty, and he relates that they were so well trained that the keeper could marshal them in line like soldiers on dress parade, and order them out individually, by name, to a line of platters containing food, in their front.

Not to be outdone, Captain Mike told the keeper that did pretty well for the old country, but was not near equal to the packs we had in America. He said that he had owned a pack himself of one hundred and fifty dogs. The foundation for this claim was the fact that he once had a levee camp on our doors at emigrant travel by wagon, from the State at a few days' journey to Texas, and that it was his practice our gentle as the wagon trains and assembled was barren of wonder: attracted by the quantities of game that were shipped the

by the SHOOTING.

I see you are in question of spring shooting of all kinds, and wish to point out certain matters in connection with the present statute which forbids the killing of birds in the spring. Ex-Senator Wagstaff claims, and I believe deserves, the credit of having this law passed, but in so doing did he not get his seasons a little mixed? Early spring and careful study of the almanac have left on my mind the impression that spring consists of March, April and May, and that summer includes June, July and August. I have some doubts about March, and think a well-regulated arrangement of the weather would have left that among the wintry months, and so would not mind allowing him to take June in place of it. No one ought to quarrel over June, for there is nothing to shoot in that month of the year anyhow. But how did he come to steal the first half of July? The law protects bay birds till July 15. That is just exactly the middle of summer. Was our enthusiastic and able Senator over thorough, or was he attempting to rehabilitate the laws of the universe as well as the game laws? There always used to be a flight of snipe in the early part of July. The 7th was the conventional date, and then they are on their migration southward, and should be killed if they are ever to be. Why protect them for the benefit of our excellent friends in Jersey who do not even protect the brooding birds in spring? Unless, indeed, the Senator has a shooting box along the Jersey coast, in which case the sooner he invites me to join him there the less I will have to say about irregularity of times and seasons. How much virtue does he expect a New Yorker to be possessed of? There was a splendid flight of big birds the first week of this July, and is the average sportsman to stand idly by and let them go without firing a gun because summer comes sooner than the Senator's almanac had it? I being made of sterner stuff at the deck of my yacht and saw the marlin go past as many as thirty in a flock and did not kill a single one. To be sure I happened to have left my gun at home, but were it not for this law my gun would not have been at home. Now I have just written a novel wherein I dilate upon the many delightful attractions and resources of the Great South Bay, its fishing and shooting, but if the menhaden fishermen are to take thirty thousand bluefish in one haul and twenty tons of weakfish in another, as I am informed they have, and dump them almost all into their oil vats, and Senator Wagstaff is to stop the shooting by mistake spring for summer, what will become of my book? I shall either have to suppress the edition or be set down for an exaggerator, a thing that no fisherman can endure. I want therefore particularly to impress upon every one who shall hereafter undertake to prohibit shooting of any sort of birds in their northern migration, that spring is not summer and that summer is not spring, and one of the worst injuries that can be done to the efficiency of game laws is to make them unreasonable and contrary to the laws of nature.

ROBERT BARNWELL ROOSEVELT.

HOSPITABLE TEXAS.

THIS is a very paradise of a land, from a sportsman's standpoint, especially to those fond of the pursuit of that *cerme de la creme* of game birds, Bob White. The latter are thick on the creeks in the winter, and the open corn fields, etc., early in the season, in many parts of the State; especially so within a radius of sixty miles of this town. What more exhilarating pleasure can there be than getting up at 5 o'clock in the morning, and with two or three congenial companions, driving out to one's ground, ready to begin shooting about 8:30 A. M., and lunching at noon. A delightful thing it is to watch a well-bred dog, following all the commands of a competent trainer, noting the wonderful instinct they show when the coveys are not there, only alighted and then run on, or with what rigidity of muscle will they stand when the birds are there; how grandly they drop when the birds rise with a "whirr," leaving one or more of their comrades behind them. I know of nothing so trying to most men's nerves as the first whirr of a large covey, especially if they want to drop a right and left. Shooting quail when once scattered is as distinct from the first flush as killing a deer with a shotgun is different from performing the same feat with a rifle, in my humble opinion. I have shot partridges in the turnips, in England, but I must acknowledge that for downright good shooting, the little "Bob White" takes the palm. He is second only to the far-famed Scotch grouse, or perhaps that wily fellow, the woodcock.

What a pity it is that we can't get a bill passed prohibiting the netting or trapping of this noble little bird. There are far too many disposed of in this cold-blooded way. What they do it for passes my comprehension, as the price realized in these markets for quail per dozen would hardly pay for the net one would think; and each farmer must have an outfit of his own, or usually does so.

The weather becomes nice and cool down here about the end of October. Apropos of cool things, one of the coolest that I have struck down here happened to us last fall. When out shooting we had very carefully placed some bottles of Bass' ale in a cool spot, carefully hidden from the eyes of the vulgar, as we fondly deluded ourselves. However, on getting back to camp, dry and thirsty as leeches, to our horror our cool drink had given us the slip and no amount of careful searching could reveal its lurking place. We remember those kind, unselfish men to this day.

Besides quail, we have prairie chickens, all kinds of wild-fowl, turkeys, etc. For the rifle there are deer, antelope and bison. People are hospitable and only too pleased to see you if of the right stamp; and to the thorough sportsman who shoots for the sport and not for the dollar, a hearty welcome is accorded by all the best farmers. Some of the less educated ones have an idea that every man out with a dog and gun means so much out of their own pockets. One farmer remarked to me last year about a certain well-known sportsman down here who has paid large prices for his dogs: "I say, Mister, how long will it be before M. sells enough birds to pay for that \$1,000 bitch that I hear he has got."

What can you reply to such a man? ARTHUR STERT.
FORT WORTH, TEXAS.

NEW YORK WOODCOCK SEASON.—Fort Plain, N. Y., July 8. *Editor Forest and Stream:* Will you please inform me through the FOREST AND STREAM when the woodcock season opens in this State? As I understand it it is Aug. 1, and is generally so understood here and the sportsmen here are all making calculations on shooting woodcock Aug. 1. But a few claim the law was changed to Sept. 1 this summer. Will you please ascertain and let me know, as I do not want to shoot woodcock before it is lawful to. Furthermore I saw myself that a bill had passed the Legislature changing the time to Sept. 1, but have not seen anything of it since. I am in hope the law has changed to Sept. 1, and the majority of the sportsmen here think as I do, for we all know that nine out of ten men who go shooting woodcock in August shoot more or less ruffed grouse, or "short-bills," as they call them, and the summer hotels all buy ruffed grouse in August and say they prefer them, but call them short-bills. If the law has changed I think you should make it prominent in your valuable paper, as I know a great many depend on it for such information, at least I do.—A. W. B. [The season was correctly given in our last issue in list of open game seasons.]

NEWS OF THE CAMPING CLUBS.—Wellsville, O., July 9.—*Editor Forest and Stream:* Two special cars attached to the mail train and placarded "East Liverpool Camping Clubs, 1896," passed through here on the 2d ult. en route to Waynesburg, O., near which place they have selected a spot for their annual encampment. This section of country is noted for an abundance of game and its pretty women, so that a good time, both piscatorially and socially, for the boys is insured. A full fledged brass band accompanies them, but it is to be hoped they will be muzzled after arriving in the woods. The Geo. Weaver Fishing Club of Rochester, Pa., bound for Michigan; Pittsburgh Recreation Club, en route to Waynesburg, O., and the Pioneer Club going down the Ohio River passed through here this week with all the paraphernalia incidental to the art of castrametation. They anticipate having a good time.—BUZ.

DOVES IN NEW JERSEY.—Monmouth, N. J., July 2.—*Editor Forest and Stream:* Is there no law for the protection of doves in this State? If not I think it would be well for some of our leading sportsmen to bring the matter to the attention of the Legislature next winter. If something is not done, dove shooting will soon be a thing of the past in this part of the State. It has been customary to wait until after harvest and shoot them when they come in to feed in the stubble (which I think is too early). But some have been shooting them all through the month of June this year, also in the winter when the ground is covered with snow and they come to barnyards and grain stacks after food. I think that I am as fond of shooting as any one, but am willing that all should have a chance. Would be glad to have the opinion of sportsmen on this subject.—FAIR PLAY.

MASSACHUSETTS.—South Duxbury, Mass., July 8.—Fall shooting promises to be the best this season it has been for years. Quail are very plenty and can be heard in all directions, four to one compared to last year. Partridges are plenty, too, I found six beavies on my travels last Sunday; they were about a third grown. Woodcock are never plenty here as it is dry and sandy, not enough meadow ground. I have seen several lately past at sunset in the low ground, one was the largest I ever saw.—SOUTH SHORE.

PENNSYLVANIA.—Erie, July 5.—Woodcock are very plenty around here now, but I am sorry to say a great many young birds were bagged before the season was open. The bass fishing was very poor this spring, owing to the poundnets being on the bass ground, but we hope with the assistance of our assemblyman and State senator to have the pound nets done away with. There are several large broods of young ducks around, but the pot-hunters are killing them off when they can get a chance.—J. M.

NEW YORK GAME CONSTABLES.—Glens Falls, N. Y., July 1.—*Editor Forest and Stream:* Have you noticed that Sec. 2 of Chap. 429, of laws of 1886, provides that: "Game constables, constables, sheriffs and deputy sheriffs shall have the same powers as are conferred upon game protectors for the enforcement of the provisions of Chap. 534 of the laws of 1879 and the amendments thereto, and shall be entitled to the same fees therefor."—A. N. CHENEY.

NEW HAMPSHIRE.—Colebrook, July 12.—Trout have been taken in great numbers, but the recent hot weather has sent them in search of colder water, where they will be better secreted. They have diminished some from unlawful and unsportsmanlike methods of capture in certain localities where law does not avail.—NED NORTON.

THE PRINGLE SNIPE SCORE.—A correspondent tells us that the snipe shooting by Mr. Pringle, of Louisiana, concerning which inquiries were made in these columns recently, occurred in the month of February, at Bayou Teche, La. Gun, breechloader; load, 34 drams powder, 1 1-6 ounces No. 9 shot; time, 6 hours; number of snipe killed, 366.

PROFIT IN BEAR TRAPS.—A York county, New Brunswick, bear trapper took into Fredericton recently nine skins of bears, trapped in the neighborhood of Zionville. Some of the skins netted \$15 each in addition to the \$2 bounty. Beavers are still found in New Brunswick in certain localities numerous enough to make their trapping profitable.

RHODE ISLAND.—Manton, R. I., July 12.—Ruffed grouse and quail are quite plenty in this vicinity, but woodcock are scarce.—T. M. A.

MR. GRIFFIN SMITH. of Longmont, Colo., shot a mountain lion on the Little Thompson, and killed it nine feet from the end of its nose to the tip of its tail.

MUZZLE VS. BREECH.

Editor Forest and Stream:
I have been entertained by reading "Napoleon Merrill's" "Muzzle vs. Breech" in FOREST AND STREAM of July 1. Indeed I was interested enough to hunt up the copy for April 8, to which he refers. "N. M." shot 70 rods, or thought he did. He did not measure the distance, so I will wager that he did not shoot over 55 rods. I never knew a "guessed" 70 rods to pan out over about 50. And he killed 4 turkeys out of 20 shots. "N. M." must shoot better than that if he ever attends a turkey shoot in Canton, or the breechloaders will laugh at him. I used the old-fashioned muzzleloader long after breechloaders came in fashion, simply because I could not afford to buy a breech-loader. I have clipped chickens' and partridges' (grouse) heads off with it, and also just as easily with the breech-loader. I own a Remington .22 Winchester .32 and Marlin .38. The Remington and Marlin were regular stock guns; the Winchester was made to order, but is no better shooter than those of their regular stock. I am no marksman, shoot but little, and would be no man to champion any gun, but I would like to meet that muzzleloader of "N. M." at a turkey shoot. Some three years ago we shot here for a badge, 20 rods, 10 contests, half at any rest, half off hand. A 14-pound muzzleloading target gun and a fine double barrel were both left far in the rear before the string was shot out. At a 50yds. shoot, 10 contests, the double gun met the same fate, much to the discomfiture of a good friend of mine, who loaned it to a member of the club to show the boys what it could do. The heavy gun did not appear in that contest.
Tell "N. M." that I will on any still day take my little .22 Remington with 5 grains of powder and shoot for turkeys at 175yds. and "let 'em up for all the boys if I can't kill more than 3 in 20 shots." I'll take my 32 Winchester, 20 grains, at same distance, and agree to make it 10 out of 20 shots. My Marlin I have shot but little—I hardly know how it does shoot. But I'll shoot it just as many rods as "N. M." will his muzzleloader, and the man who gets the least number of turkeys pays all the bills. If "N. M." comes to Canton to shoot he will shoot just so many yards by the tape, whether at turkeys or target. If at the former he won't be ruled out for killing 4 turkeys in 20 shots either, and after he is satisfied with me he can take a twist at half a dozen others, any of whom will be happy to shoot with a man who thinks the killing of 4 turkeys in 5 shots a wonderful performance. There are good muzzleloaders and good breechloaders, and perhaps a muzzleloader can be found that can beat any breech-loader, but to do it it must shoot a long ways better than "N. M." did. He must not think breechloaders cannot shoot well simply because he struck a lot of fellows—I'll wager the guns were all right—who couldn't hit the broadside of a barn, unless they were on the inside of it. We had one such fellow at a shoot I remember. He fired 60 shots without drawing blood, and would have had equal success with either muzzle or breech-loader or even a hand spike. Our boys do not pretend to be good shots and their guns are all stock guns, costing perhaps \$15 each. Remingtons, Winchester, Stevens, Colts, Ballard, all sorts, mostly .32 and .38-cal.; but it takes about 40 turkeys to "go around" at a shoot! They don't make boys of themselves by killing them all at once; they let the 4 in 20 shots do their full share of the shooting, putting in a shot now and then when it gets dull, letting the "man who puts 'em up" keep a little ahead. So when it comes night each one has turkeys for himself and all his friends, the poor shots have their share of the fun and the owner of the turkeys comes out a few dollars ahead, as he ought to.
CANTON, N. Y. J. H. RUSHTON.

Don't twist your neck off, but use Allen's how-facing oars. Little catalogue free. Fred A. Allen, Monmouth, Ill.—Adv.

Sea and River Fishing.

TROUT IN WESTERN NORTH CAROLINA.

AT the request of a number of expert anglers who have enjoyed the delights of this sequestered retreat of brook trout—the genuine *Salmo fontinalis*—for years, I send you a brief description of the country, made famous by Craddock's "In the Tennessee Mountains," and of a fishing excursion just concluded. I do this for the information of those who truly love the sport, and who will be gratified to discover new streams and new scenes in which to spend their fishing vacation.

I am seated in a log cabin that has withstood the storms for over a quarter of a century, in view of that huge archæan pile, Grandfather Mountain—summit of ranges that never disappeared during the convulsions of millions of years—and at the foot of the knoll on which this cabin stands are the lovely meadows through which ripple the pellucid waters of Elk River after its animated descent. Down it has come from its source in a foothill of Grandfather, over boulders and beneath blooming laurel (rhododendron), with banks bordered and pools shaded by ivy (kalmia) and honeysuckles (azaleas), pausing here and there to afford shady retreats for its royal inhabitants, and again dashing over rocky impediments until it reaches the pebbly channel of the Banner Meadows. Through these it sings and laughs, hiding its "beauties" under an occasional clump of laurel until it reaches the rocky rapids that lead on down to Smoky and Scaly mountains. And every pool at foot of rapids is alive with trout—a fish that above all others that swim can thrill the nerves most deliciously when struggling on a brown hackle that has hooked him securely. And this Elk is but one of three limpid rivers whose sources are found in that foothill a couple of miles beyond the meadows.

This charming spot, with its sublime mountain surroundings, five or six thousand feet above the tide, and forest-clad on their tall-st summits, is never visited by anglers from the North because Bohemians have defamed and ridiculed these mountains out of consideration. Never was a greater wrong done to fishermen. For eight years successively and in the month of June the anglers of our city have gone to Banner's Elk, and been welcomed with a hearty, simple, dreamy hospitality found nowhere else out of these mountains; have been fed on well cooked and wholesome food at Mrs. Louis Banner's and have caught thousands of trout ranging in weight from six ounces to one pound. True, these pink-dotted darlings are not so large as can be found in some streams of the North, but they are just as gamy when hooked, and just as delicious when lifted from the frying pan.

Banner's Elk, headquarters for movements on the Elk, Watauga and Linnville rivers, is reached by the East Tennessee, Virginia & Georgia Railway to Johnson City, twenty-five miles south of Bristol and about 200 miles northeast of Chattanooga. The East Tennessee & Western Carolina

luna Railroad connects at Johnson's and will transport you to Cranberry, thirty-five miles distant in the mountains, where there is a gem of a hotel kept in Northern style. From Cranberry you go in a hack or on horseback, as you prefer, to Banner's Elk, eight miles distant. At Banner's Elk you can be accommodated at S. M. Dugger's, who keeps a regular boarding house, or at his father's, a farmer who takes in fi-hermen. Our club, including our ladies, always stop at Mrs. Louis Banner's, but as only ladies compose that family they are sometimes timid of entertaining those they do not know, realizing, no doubt, that few strangers turn out to be angels in disguise. Board is one dollar a day, and it is excellent for the mountains of any part of the country. An all-day ride from Johnson's to Cranberry carries you to the Great Portal—the Doe River Gorge—into the Alleghanies. This gorge pierces the mountain range that swings from the pillar of the Smokies—Roan Mountain—and latches on the pillar of the Blue Ridge—Grandfather Mountain—both of these lofty elevations entering the clouds 6,000 feet above the sea. The Doe has ground down a channel through this rocky spur, in places 1,000 feet deep, and alongside its rushing waters the railway ascends up grades 300 feet, and around curves as short as 20'. Now it is on a level with the stream, again it is 100 feet above; now the iron horse pants so close to the rear coach you can almost toss a cigar to the engineer five car-lengths away, again it dashes into a short tunnel that pierces a section of the Potsdam vertebrae. The peaks reach up into the clouds, usually clothed with pines, maples, beeches, lins and balsams, but occasionally exposing bare piles of rocks hundreds of feet perpendicular, which at times shut in our train as securely from sunbeams as if it was in the bottom of a deep well. Over the clear, cold water project fringes of blooming laurel, ivy and honeysuckle.

From Cranberry the road ascends on the bosom of the mountain that bounds Cranberry River on the south, affording snatches of lovely mountain views. After three miles you ford the Elk and then you ascend that river. If you come in June not only will the oaks, the maples, the hickories, poplars, chestnuts, cherries, lins and beeches and balsams clothe Smoky and Scaly, but the laurel will have on its glorious white plumes, the ivy its delicately tinted and dotted clusters, and the honeysuckle the great redly golden blossoms that are the glory of the mountain sides all through Western North Carolina. For over three miles you will ascend through bough-embracing forests, along the bosom of the mountains at whose feet the Elk tosses, tumbles and swirls, the water of which is clear as crystal, cold as ice and filled with speckled trout. Only the young and agile fishermen venture on these boulders, and they are always repaid with creels full of the largest fish found in this section of the mountains.

In the low mountain, three miles from Banner's Elk—a foothill of Grandfather—rise the Elk, Watauga and Linnville, and the springs of their sources are not a thousand yards apart. The Watauga leaves the feet of Grandfather, flows on by Valle Crucis to the Tennessee and thence through the Mississippi to the Gulf of Mexico. The Elk commingles in the same flood. The Linnville, however, pours down through a deep rift in the Linnville range, and after tumbling over a precipitous ledge one hundred feet perpendicular, it hurries on between the gloomy wall of a deep cañon to the valley and thence to the Atlantic Ocean. I am told by those who have followed the course of the Linnville from its source and gazed upon its rapids, pools, falls, cañons and beetling cliffs, that there is no sublimer scenery to be found anywhere on the continent.

It has been a wet June all over the country and these mountains have not been exempt from the discomforts of showers. We reached Banner's Elk on June 12 for dinner, and at 5 that afternoon began our first assault upon the gamy inhabitants of the Elk. Only three of the four men were in this first engagement and one of these was hampered by the presence of ladies who attempted the sport for the first time, yet when darkness fell, after two hours of whipping, there were discharged from the three creels upon the floor of the porch seventy-five toothsome beauties, and over twenty had been thrown back to grow larger by next year. From that evening on we found the brown hackle and the king of the waters or the coachman the most attractive flies. We never caught a large trout on a miller, though sometimes a little fellow would rise to it. Usually we fished with three flies on a six foot leader, a brown hackle always at the tail, then a king of the waters or a coachman and a miller or another hackle.

From Banner's Elk an excursion is made through the McCandless Cabin Gap to the sources of the Watauga and Linnville. It is for a while up the Elk, then through the dense laurel and up the precipitous face of the foothills, with a soil of leaves and woods decayed during centuries, twelve inches deep, covered with trees of fifteen feet girth, and ferns and mosses that are as beautiful as found anywhere else on earth. There is excellent fishing in the Watauga, beginning a little after you leave Callaway's, a mile or so below the source of the river. At Callaway's you can ascend to the summit of Grandfather, from which can be obtained an almost limitless view of mountain scenery. From Callaway's you can fish down to Shull's Mills, where the river makes a short turn to flow out into the valley of Valle Crucis. That journey will be an unalloyed delight—mountains, valleys, laurels, ivy, honeysuckles, dancing rapids, flower-shaded pools, trout large and plentiful. At Shull's Mills is Boone Fork, full of trout, and Joe Shull's residence, a reasonably comfortable lodging place. It is better to take lunch from Banner's and avoid the wretched cooking at Callaway's.

Returning from Shull's Mills along the highway, you enjoy the scenery to the full. After passing Callaway's you reach the Linnville, and in about three miles excellent fishing. You fish on down to Webb's Pond and spend the night at Estes, a half mile beyond; reasonably fair entertainment. In the morning you can go to Linnville Falls, then across to Martin Banner's for dinner, where you will get an excellent meal. You will now be only five miles from your feather bed and big wood fire at Mrs. Banner's, at Banner's Elk. One pressed for time can fish the Watauga to Shull's Mills, ascend to the summit of Grandfather, go down the Linnville to the falls, and be back to Banner's Elk within three days, after having a bushel of sport and a barrel of enjoyment.

There are other streams in Western North Carolina where trout are as plentiful and perhaps larger—as, for instance, the Nantithala, Toe (Chetstato) and Pigeon—but my heart turns lovingly to the Elk, Watauga and Linnville, and my homelike home at Banner's Elk. My residence is in Chattanooga, Tenn., and I will cheerfully answer all letters of genuine anglers who may wish to learn more of these arteries of the heart of the Alleghanies.
G. C. CONNOR.

BANNER'S ELK, Watauga County, N. C., June, 1886.

LIGHT RODS FOR SEA FISHING.

Editor Forest and Stream:

I have never fished in fresh water, but have caught many weakfish in the waters adjacent to New York, always using—as does everybody whom I see fishing in salt water—a stiff rod. But the query has often presented itself, why cannot a four or eight pound weakfish be taken with a light rod as properly as can a four-pound black bass? which has the reputation of being a mighty fighter.

I have had occasion this season to have a new rod made; but the tackle dealer would not permit me to have a light rod—I must have a stiff bamboo. And so say all the natives with whom I have talked upon the subject.

It seems to me that a four or six pound weakfish will not work more havoc than a black bass of similar weight; but it may be that where a fish is at liberty to run he will get the line afoul of one of the many oyster stakes with which weakfish grounds generally abound, and that as those fish are to be found mainly, if not only, at the beginning of the flood tide, where one fish on the flats he might lose several while monkeying with one. But the black bass light rod angler turns up his nose and says:

"Well, if that is the kind of feller you are, you had better go out and buy half a dozen lines and by and by haul them in and thus take your fish."

It is said that fresh-water fishes have hard mouths and when hooked generally stay hooked, and that salt-water fishes have tender mouths (as we all know weakfish have), and a weakfish is allowed play he will wear loose and the fisherman is speaking of tide runners and not school fish, for the purposes of this communication. But I would like to know if in the nature of things there is anything to prevent or to discourage the use of as light harness for weakfish as for the same weight of fresh-water fish.

NEW YORK.

A MAINE ANGLING TOUR.

REACHING Bryant's Pond by rail, thence the well-known delightful stage ride brought me to Andover, Me. From this village a buckboard takes us to the Androscoggin Lakes. Arriving at the "Arm" and making a tour of the lakes through to Rangeley City, my object being to visit the various camps, see all the improvements, give the boys a call, and try the fishing for a big one. We were in at the death of a few fish of eleven pounds and under, but not on our own hook this year. The grandeur of scenery of these magnificent lakes is too well known to all the world to need a word of remark at this day, but the early and best time of the fishing season here was past, as we expected. According to programme we pushed on to Kennebec Lake, where, for a few days, we had good sport with the little trout with which Kennebec is literally alive, one rod in one day scoring over a hundred with the fly.

Passing on from here we take the river and go north two miles to Little Kennebec, where we also find plenty of trout. Then after about three miles more of this enchanting scenery of the river, we leave our boats and take the trail leading to the Seven Ponds of the Dead River country. About eight miles over hill and through dale, now on the river bank, again winding about the mountains with the river two hundred feet beneath as it roars and pours along in the solitude of the forest, and here we are at Long Pond. We took here some fine trout of three-quarters of a pound and very gamy. Feeling that the day was passing we hurried on two miles more by spotted trail and arrived at L Pond, one of the seven. After crossing this, a short carry of half a mile brings us to our old camp, where all so well remember our fine sport of the previous two years; taking any desired number of trout three-quarters of a pound to a pound and a half each, all with the fly, finally becoming dissatisfied with a strike unless the captive turned the scales at a pound; and I doubt if better sport can be found in the States.

This year we expected a repetition of those conditions and were not disappointed. Here the poacher has not revealed, and thanks to the judicious legislation of Maine, he never can; and right here let me join in the chorus of voices that praise the efforts of the Maine Fish and Game Commission, for at Tim Pond, which has a basketful for each that come, whether publican or sinner, since the stealing from spawning beds has been stopped, the trout taken are of much larger average weight. The deer and caribou are becoming so numerous in this region that the New York deer bounding legislature would turn pale with envy at the sight of the tracks. The management of the camps and tables is in the hands of old timers in the business, and all we had to do was to enjoy ourselves and stay as long as home interests would permit.

Then we made our way out on horseback to Smith's farm, from which elevation is laid before one some of the finest scenery in New England, including views of Mt. Bigelow and other peaks. The stage rattles along its winding course to the panorama of the valley of the Caraboset River to Kingfield, where the railroad takes us up and soon whirls us back to our homes, healthier and wiser, if not better. M
BROOKFIELD HOUSE, Boston.

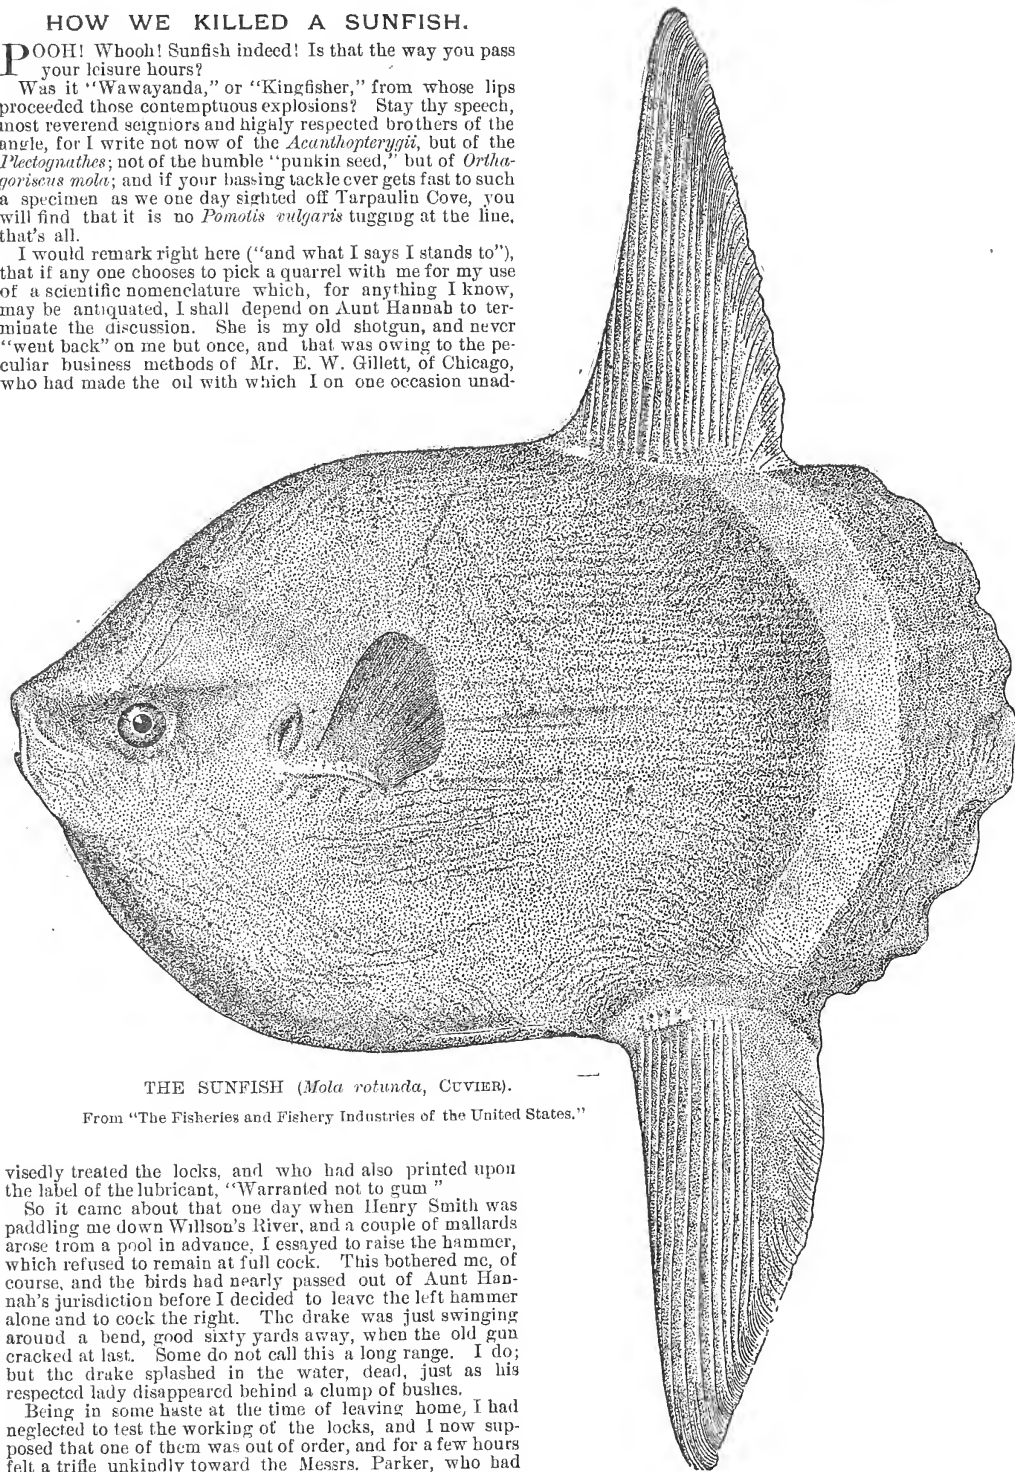

LAKE GEORGE, N. Y.—Game Constable Burnett learned recently that five men from Putnam had been spearing trout in Lake George, and was about to proceed against them when they got wind of the fact, and going directly to Justice of the Peace Lewis Burgess of Hazeu, made complaint against themselves, and were fined five dollars each. It was a comparatively easy way out of a bad scrape, as the Putnamites have been for some time notorious for indulging in the unlawful practice. The men earnestly declared that they "would not do so again," and the justice believes that the lesson taught them will prove a salutary one. Mr. Burgess, who is familiar with the lake and its fishes, is of the opinion that trolling for trout should be stopped, or at least that the close season should be extended until the first of July. He says no person unacquainted with the subject can imagine the number of trout that are taken by trolling from the first of May to the first of October, and especially at the opening of the season, when the trout are near the surface. He thinks still-fishing with hook and line the only legitimate way to take trout. As one specimen of the capabilities of the lake we would state that Mr. Wildman Smith of Hazeu, caught on Monday of last week, a salmon trout which weighed seventeen and one-fourth pounds. Two or three years ago Mr. Levi Newton captured a similar one that brought down the scales at the same notch. Neither of these stories are of the ordinary "fishy" description, both being well authenticated.—Glens Falls Republican, July 6.

HOW WE KILLED A SUNFISH.

POOH! Whooh! Sunfish indeed! Is that the way you pass your leisure hours?

Was it "Wawayanda," or "Kingfisher," from whose lips proceeded those contemptuous explosions? Stay thy speech, most reverend seigniors and highly respected brothers of the angle, for I write not now of the *Acanthopterygii*, but of the *Plectognathes*; not of the humble "punkin seed," but of *Orthogoriscus mola*; and if your bassing tackle ever gets fast to such a specimen as we one day sighted off Tarpaulin Cove, you will find that it is no *Pomotis vulgaris* tugging at the line, that's all.

I would remark right here ("and what I say I stands to"), that if any one chooses to pick a quarrel with me for my use of a scientific nomenclature which, for anything I know, may be antiquated, I shall depend on Aunt Hannah to terminate the discussion. She is my old shotgun, and never "went back" on me but once, and that was owing to the peculiar business methods of Mr. E. W. Gillett, of Chicago, who had made the oil with which I on one occasion unad-

THE SUNFISH (*Mola rotunda*, CUVIER).

From "The Fisheries and Fishery Industries of the United States."

visedly treated the locks, and who had also printed upon the label of the lubricant, "Warranted not to gum."

So it came about that one day when Henry Smith was paddling me down Willson's River, and a couple of mallards arose from a pool in advance, I essayed to raise the hammer, which refused to remain at full cock. This bothered me, of course, and the birds had nearly passed out of Aunt Hannah's jurisdiction before I decided to leave the left hammer alone and to cock the right. The drake was just swinging around a bend, good sixty yards away, when the old gun cracked at last. Some do not call this a long range. I do; but the drake splashed in the water, dead, just as his respected lady disappeared behind a clump of bushes.

Being in some haste at the time of leaving home, I had neglected to test the working of the locks, and I now supposed that one of them was out of order, and for a few hours felt a trifle unkindly toward the Messrs. Parker, who had fabricated the weapon; but they were all right and the gun was staunch and true, though the oil had coagulated around its machinery to an alarming extent. It would not have been a good tool with which to watch for grizzlies.

Certain considerations induced me to write the manufacturer of this oil, and he in his reply stated that the kind I had used was the cheapest grade of his make, and unless it was fresh, might need to be thinned with kerosene or turpentine. If I would order a certain other grade, which he named, I would have no such trouble. He courteously inclosed two labels, such as are placed on the sort I had used, and on that which he recommended. The legend on each—I have them now before me—reads: "Warranted strictly pure, and not to gum." The astounding lucidity of this exposition was so impressive, that I promised its author a gratuitous notice in some influential journal, and if the editor should see fit to publish what I have written, the public will be enabled to judge which of us has best made good his words.

I had nearly forgotten that we were speaking of sunfish. Did the reader ever see one? The short sunfish of the Atlantic. If not, he would perhaps thank the editor to spare space for an outline cut of this, one of the oddest among the many oddities of the briny deep.

I had been taking a tramp through the island of Martha's Vineyard, and had brought up at the Gay Head Lighthouse, which, by the bye, was my objective point. Tramping was in those days less common and more creditable than it became after the war; and having a good pair of legs, and a taste for natural history, I used to do a good deal of exploring in quest of Indian relics and the like, and had collected a few oddities.

It was during the reign of Sam Sanders as keeper of the light, and I boarded with him while roaming over the island and collecting fossils. On the tower was a Fresnel light, a marvelous affair, into the construction of which entered more than six hundred pieces of glass, and which was, I think, at that time the only one of the sort in America.

There landed one evening from a boat Mr. Levi Smith, and as he was the next morning to sail for Holmes Holl, I engaged my passage with him for that port. A young fellow named Sanford Herendeen was to accompany us. Accordingly, on the following morning, we shook our canvas to the breeze, as the rays of the rising sun, dispelling the floating mists, streamed down the Vineyard Sound. With much regret, I bade adieu to Gay Head Cliff, of manifold hues, which, refreshed by a recent shower, produced an effect which I could liken to nothing save a vast heap of the brilli-

antly colored kerchiefs upon the heads of West Indian negroes.

We had barely reached Naushon, and were about to tack, when Smith exclaimed: "There's a shirk, a big one."

Certainly a large fin of some sort was cutting the waves on the weather bow and some distance ahead. We all saw it, but after another look, Smith qualified his statement by saying that he "never see a shirk act that a way afore."

Neither had I; and we forthwith determined to cultivate an acquaintance with the strange fin. We at once tacked, and bore up in its direction.

The fin, which now monopolized our attention, was long, black and obtusely pointed, but slightly curved, and at times projected some eighteen inches above the surface of the water. Oddly enough, it continually waved from side to side, as though the shark—if shark it were—had that morning taken a double allowance of grog.

In a few minutes the boat glided past the creature, and so near that its outlines could be distinctly seen through the clear, green water. We all gazed in astonishment at the strange aspect of the fish, which was at least three feet in length by two or more in breadth. It was of a silvery gray color, having several irregular vertical splashes of a darker hue upon its sides. The back fin, which had first attracted our attention, was placed opposite a similar one projecting from the belly.

"Well," said the skipper, "I'll be gosh darned if I ever see the like o' that afore."

"Neither have I," I said, "but I think that it is the 'little sucking pig'—the short sunfish of the Atlantic. I have seen it figured in published works on the fishes of our coast."

We decided to attempt the capture of the fish and at once proceeded to cast about for the means at hand, which certainly seemed inadequate. We had neither grains nor lily-balls, of which we loaded our double-barreled shotgun, with a loosely fitting conical ball, found in the pocket of the skipper, and placed a charge of No. 4.

By the time our preparations were completed the fish had freshened and the sea became somewhat rough. The fish waved in sight. I took my stand with the half deck forward with Smith at the helm, while Herendeen sat amidships.

of the shot was to fluster the creature and set it flying about in various directions. The skipper put the boat about and I fired the shot charge at a range not greater than before, and as formerly through several inches of water.

Herendeen had by this time become intensely excited, and we could not persuade him to sit still.

"Now, shoot now," he shouted, as his head popped up, just a few inches too high.

"You be banded," said I, "Look out she's going to jibe." I was a trifle too late. If that young fellow is now living, his hair is probably growing gray, but I will venture that he remembers the peculiar sensation which he experienced when the boom took him just abaft the right ear, and sent him over to leeward among the sand bags. He lay half stunned for a moment, then slowly rising, crept back to his seat, remarking meanwhile, "I guess I'll sit down."

"You'd better," observed Smith, grimly, as he lashed the tiller, poised an oar, butt foremost, and darted it from him like a whaleman's lance. The boom struck the sunfish squarely on the side, and the force of the blow sent his head partly out of water as the boat shot past, when I took him precisely upon the end of his snub nose with a charge of No. 4.

This completed the demoralization of the creature, and Smith managed to seize the back fin. The fish may have weighed a hundred and fifty pounds, perhaps two hundred, we could not tell, but it was all that the three of us could do to haul it over the side. Its skin was rough like that of a shark, or dogfish; and injured our hands somewhat, besides scraping the paint from the gunwale of the boat.

When at last deposited in the bottom of our boat, the fish kept its fin going for some time, with the regularity and almost with the force of a steam-engine. We regretted our inability to sooner terminate his sufferings, but he seemed iron-clad and bomb-proof; and we were unable to devise any method of hastening his decease.

The first two charges—ball and shot—had glanced diagonally from the fish, leaving indeed palpable marks, but with little apparent abrasion of the skin, and the last shot had inflicted but slight injury to the flesh. Either of these would have been driven bodily through a board at the same distance.

When we landed at Holmes Holl, some sailors strolled by just as I was searching the cuddy for a rope, which happened at the moment to be covered with ship's biscuits which had broken loose from their bag.

"Well," said one, "I'm blessed (I think that he said 'blessed') if ever I see a man keep his bread and his rigging in the same locker afore. Hello! they've got a old sunfish."

"What's she good for?" said a boy standing near.

"Why, the ile's jest fust chop med'ine fer the rumatiz, 'n I wish 't I had some o' 't naow."

"Ain't he good ter eat?"

"Eat h—, Why, you might as well try a cut off'n that 'ere hawser. You couldn't git yer teeth through a slice o' that 'ere critter in a week. You jest cut out a chunk and fire it at that spar, 'n you'll see it bound like a niujy rubber ball. But the ile's bang up, naow, I tell ye."

I had hoped to send this fish to some scientific institution, believing it to be, in these waters at least, of very unusual occurrence; but no practicable method of doing this could be found, and as Smith was anxious to test the virtues of the oil (which was obtained by subjecting the liver of the fish to the action of the sun), we concluded to submit the creature to the dissecting knife.

The flesh was cartilaginous throughout, but as we had been told, on being exposed for a day or two in the sun, it nearly all disappeared, leaving but a watery sediment.

Aside from the rays of the fins, the only bones we could find were those of the jaws; in which the teeth are united, and appear as one.

There were also four or five small teeth (or what appeared such), shaped much like cows' horns, and attached to a fleshy protuberance on each side of the throat. Not having at hand my notes made at the time, I cannot give a more accurate description.

Our victory, as against the fish, was not one to be reckoned among the triumphs of a true sportsman. The conquest, such as it was, was mainly over adverse circumstances, and I have sometimes regretted that we were successful in our attack upon this inoffensive fish. KELPHE.

JUNE 14, 1886.

THE FLUTTERING FLY.—Several correspondents are discussing the origin of the fluttering fly in some of the sporting papers and a Mr. Millard, of Cheyenne, Wyoming, sends the following to FOREST AND STREAM: "In June, 1876, I was angling on Twin Rock Lake, near Morehouseville, Hamilton county, N. Y. Giles Becraft was with me, and we had excellent sport with the trout. One of the flies I used was something like the fluttering fly illustrated in FOREST AND STREAM of June 10. It was made by one of the best fly-tiers I ever knew, Robert Perrie, of Utica, N. Y. It was a hackle reversed, and its hooking qualities were first-class. I do not think Mr. Perrie claimed to have originated it, but of that I am not sure." In conversation with Mr. Robert Perrie on the subject, who is now the proprietor of Third Lake House, Fulton Chain, he informed us that he was the originator of the fluttering fly in question and that the same has been successfully used for years by many anglers. He also remembers with pleasure the Mr. Millard who now writes from the Far West.—Boonville (N. Y.) Herald, July 8.

A MAINE SALMON.—A letter addressed to us said a salmon might be expected at the office of FOREST AND STREAM within a few days and that it would be directed to the S-a and River Department for division among such of the staff as might be in town, but the donor requested that there be no acknowledgment. We made arrangements to have it sent to Mr. Blackford's refrigerator and divided. We ate of this salmon in steaks at breakfast, cold for dinner, cold boiled for lunch next day, and pickled for tea, and if we ever tasted one that came up to this in flavor and firmness we have no recollection of it. The fish weighed about fifteen pounds and we will comply with the request of the sender about an acknowledgment, so far as never to tell who it was that so kindly remembered the toilers in the city while he was casting his fly on the salmon rivers of Maine. May the salmon chew up all the flies in his book and the largest ones come to his gaff.

RESTIGOUCHE SALMON.—Editor Forest and Stream: The thing here has been excellent this season. Dr. J. H. Baxter, a fish here last week, killed two fish which Henry W. De Forest took. Have done well.—Restigouche.

"THE PRESIDENT AS AN ANGLER."—Under the above heading in your issue of June 17, you say, "A Lockport, N. Y., correspondent, who was a schoolmate of President Cleveland, writes us that the latter's angling proclivities were developed at an early age." As I presume the Lockport correspondent refers to me, I wish to make a correction. I think that I wrote you that "I had fished and hunted with Grover Cleveland in our boyhood days, thirty odd years ago." At the time I was a clerk in the store of his brother-in-law, Wm. E. Hoyt, at Theresa, N. Y., and Grover came there to spend his vacation, and thus it happened that we fished and hunted together on Indian River. He did most of the fishing while I did most of the hunting, and I shall never forget how he hooked and lost a large black bass in some flood wood, and I could not get him away from that place for an hour, as he was bound to have that bass as it was larger (we always lose the largest fish) than any he had caught, but he did not succeed, and that was the only time I ever knew him to get beaten. Last August, while spending my vacation on Indian River, I located the place, but the flood wood had disappeared, as had also the hickory trees where I spent most of the time shooting black and gray squirrels, while Cleveland was fishing for black bass. We did no angling in those days, but the bass are there yet and also the gamy muscalonge and the less gamy pickerel, and arrangements are now being made to place from 150,000 to 250,000 California trout in Indian River and a few of the ten lakes in the town of Theresa, and should President Cleveland ever renew his "angling proclivities" on Indian River he will probably have to take in a few trout and more "long snouts" (as "Kingfisher" puts it) and possibly a thirty or forty pound muscalonge.—J. L. D. (Lockport, N. Y., July 8).

BLOOMING GROVE PARK.—The Fourth of July, 1886, was celebrated on the fifth at Blooming Grove Park. There were fifty guests at the club house. While many of the members were catching trout in the Blooming Grove and Shahala creeks, and others were trying the bass on Lake Giles, clay-pigeon matches were contested. [The scores are given elsewhere.] There was one thing very noticeable about the Fourth at the Park, and that was the absence of the fire-cracker and the inevitable burned fingers and hands of the small boy. Beyond a few torpedoes, the entire noise of the day was made by the shooting of the guns on the pigeon range. Two of the members went after woodcock and succeeded in bagging five on Tuesday and four on Wednesday. The fishing now at the park is most excellent. There is no trouble in any one taking his quota of twenty-five trout, all over seven inches, and the bass fishing, especially at Lake Laura, is really wonderful. Lake Giles is stocked from Lake Laura, and when parties go to the latter lake they are required to keep alive as many of the catch as is possible. Last Saturday five rods, using bait and fly, took from Lake Laura five hundred and fifty black bass, keeping alive over three hundred of them. These will be taken to Lake Giles to day. Of these bass some weighed over a pound, a few about a pound and a quarter.

PRESEIVING FRESH FISH.—*Editor Forest and Stream:* I desire to benefit my fellow sportsmen by a suggestion on the preservation (in perfect condition) of fish. My experience at the Northern lakes has been that it was impracticable to save for transportation, especially the catch which had to be immediately killed, on account of being badly hooked, as well as those selected from the car at the time of departure from the fishing camp. I visited Camp Bemis, Rangeley Lakes, this season, arriving there May 30. June 7 I caught a beautiful speckled three-pounder, which was so badly hooked we immediately killed it, and on landing treated it with Rex Magnus, Viandine brand. At the close of my fishing, the 12th, I selected the choicest specimens from my catch, gave them the same treatment, and the 14th carefully wrapped them in cloth and birch bark dampened with a solution of Rex Magnus, placed them in my gripsack, carried it with me in the cars, and had them served in my home the 20th, where they were pronounced by experts to be first-class trout in every respect. I am resolved never to go to the lakes without a supply of Rex Magnus.—FRANKLIN H. HART (New Haven, Conn., June 29).

FIVE BASS THAT CANNOT BE CAUGHT.—The Athens, Pa., *Gazette* of July 10, says: "From the Chemung River bridge can be seen almost any clear day five large black bass, which good judges pronounce will weigh from four to six pounds. It is said by some that they were seen there last season. They are old fish—too old in fact, for the best fishermen in this vicinity; they take to nothing but water and small fish, and the small fry must not be attached to hook or line. The most tempting morsels have been set before them, yes, whole picnics of toads, frogs, bullheads and everything a bass could possibly relish has been cast to them. Davies, Smith, Knuesboro, Kinner and all the celebrated fly-fishermen have spread the surface of the water with ornamental feathers for a week past; shotguns and rifles have been brought to bear upon them. Hill tries his new experiment now and then, but the old bass wink in a manner that would indicate that the fellow with the shot-gun was a little fresh. One of the number at least has been there, as he trails a leader nearly four feet long. Parties from other towns are working with them. They come, fish and go, but the bass are still there."

NEW BRUNSWICK.—Magaguadavic Lake in the parish of Prince William, easily accessible from Fredericton, is said to afford good trouting. Two St. John anglers took the train for the station alongside the lake a few days ago. They fished during the afternoon and evening, taking upward of one hundred. The largest weighed five pounds, and the smallest turned the scales at fifteen ounces. This lake is one of the best trout fishing waters in New Brunswick.—FRED.

MAINE.—Machias, June 28.—The circulation of FOREST AND STREAM in Maine is one of our greatest helps in fish and game protection. Game prospects are good. Deer are reported in large numbers about the sea shore, in meadows and about openings and streams. I have seen plenty of tracks at their crossings. Grouse are having a good season for hatching. I don't believe the crust did much damage to game last winter.—H.

NEW HAMPSHIRE.—Colebrook, July 12.—From short trips to northeast and northwest from this place to Canadian borders I can report deer feeding in the marsh lands in greater numbers than I have ever before seen signs of. Moose in some secluded localities have made the muddy shores look like the pasture lands in more civilized localities.—NED NORTON.

How to CATCH FROGS.—Frankfort, Ky., July 4.—Your correspondent, "Hoosier," asks "Kingfisher" how to catch frogs for bait. Now, having seen "Kingfisher" on all fours chasing speckled frogs through a Michigan meadow, with the frightened frog sometimes "a leetle ahead," but both jumping six feet at a bounce, we are not going to interfere with his experienced explanation to "Hoosier" of "how to do it." But we would advise "Hoosier," despite "Jeems Mackerel's" lucid instructions to the contrary, that there is no better way to catch frogs for bait than by sprinkling salt on their tails.—SNAKE ROOT. Keokuk, Iowa, July 6.—If "Hoosier" will try the frogs with an ordinary landing or minnow net, he will have no trouble in catching them.—JASON.

A FISH-LINE DRYER.—We have just seen a neat device for drying lines, which can be attached to a tackle box or other object. It is nickel plated and is both neat and handy. It is called the "Brooks fish line drying reel," and is sold by A. G. Spalding & Bros.

So easy to row with Allen's bow facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.—*Adv.*

OYSTER CULTURE.

BY FRED MATHER.

[Read before the American Fisheries Society.]

MR. E. G. BLACKFORD, Commissioner of Fisheries of New York: Sir: I herewith submit to you the report on "Oyster Propagation" at Cold Spring Harbor during the summer of 1885. I had watched the experiments of the late Professor Henry J. Rice, the previous season, with great interest, and saw that while he hatched many oysters in the wooden tank, they came to nothing because, as I believe, the temperature of the water was too high, the tank being in the sun without cover and supplied with a very small stream of water through a $\frac{1}{4}$ inch hose. This tank was made of two-inch pine plank, twelve feet long, six feet wide and three feet deep, coated with coal-tar inside and out. I moved the tank to the north side of the fish-hatchery building where it would be shaded, and covered it with boards to keep it clean. The water for the experiments was supplied by a hot air engine belonging to the Fish Commission, and was pumped from our salt-water pond some 700 feet distant from the hatchery, and thrown up on the hill in a cemented reservoir from whence it was brought into the building through two-inch pipes. Two to three hours pumping daily was all that was required for these operations.

We also made experiments in the large salt-water pond, spoken of above. This pond is some 280 feet long, by 150 feet wide, and receives water at high tide through a flood gate which holds it at all times. It will be noticed by the record given below, that the water in this pond, which has a depth of two to six feet, was warmer, as a rule, than that in the wooden tank in the shade of the building, and it was in the pond that our greatest success was made.

We obtained oysters at the spawning season from the oyster-men here, and these were opened, and all whose appearance denoted ripeness were selected and placed one side. The sign of ripeness was the peculiar fullness and milky appearance of the ovaries and spermaries which is readily seen by any person who is at all familiar with them. The oysters then, lying on one shell, were taken and the mantle and gills trimmed off with small sharp scissors; pressure was then applied with the scissors to the ovaries and the exuding drop was placed upon a glass slide under the microscope, where the eggs can readily be distinguished from the milt of the male, after a person has once had the difference pointed out to him.

The male oysters were separated from the female, so that we could see what proportion we had of each. Sometimes we would lack the male element and consequently could get no impregnation. At other times there was a fair amount of both sexes. The eggs were stripped from the female by pressure, and then the male was treated in the same manner, taking both the eggs and the milt in an ordinary milk pan and adding water gradually. In a short time a drop of this water placed under the microscope would be seen swarming with the spat in the swimming stage of its existence, and then they were placed in the tank or in the pond. The bottom of the tank was covered with gravel, and scollop shells were suspended on strings across it. The current was very light and the spat seemed to sink and catch upon the gravel, for we caught none upon the hanging shells in this water. Toward the last of August the tank was examined and the few oysters adhering to the gravel were removed and placed in the salt-water pond. The success in this wooden tank was not as complete as the experiment in the pond, and but few oysters were got from it.

During July and August, while the record was kept, the variations in temperature were very slight, while the density of the water was remarkably uniform; the greatest specific gravity being 1.020 and the least 1.018, and the temperature of the water in the tank was at all times below that of the pond, in which the sun shone directly. We made no attempt to estimate the number of these minute eggs, which are only visible under the microscope, but took all we could get from the four bushels of oysters.

The bottom of the large pond was covered with scollop shells; stakes were stuck about twenty feet apart all over its bottom and strings were stretched between these, while on the strings we hung perforated shells. We obtained a good "set" of oysters in this pond, the best on the shells at the bottom, and, while there was six feet of water in the center of the pond, we obtained no "set" whatever on the suspended shells beyond three feet from the bottom. At three feet we noticed an occasional oyster, within two feet of the bottom they were more plentiful, and increased as the bottom was approached. On Sept. 19 we drew off the pond and examined it for the last time before winter; there were thousands of young oysters of the size of a dime.

Prof. John A. Ryder, of the U. S. Fish Commission, has suggested an admirable way to collect spat by means of a canal provided with ledges near the top to support receptacles for the cultch. These receptacles are formed by wooden strips and wire cloth, and hold about three bushels of shells each, the "basket" being three feet wide, three feet deep and only six inches thick, so that the shells are thickly presented to the floating spat. The experiments of Prof. Ryder have been very valuable, and so have those of Prof. Brooks, Lieut. Winslow, Prof. Rice and Col. McDonald in America, and these of Profs. Hock, Horst and Möbius, and M. Bouchon Brandy in Europe. Prof. Ryder lays down the following principles:

1. Oyster embryos, under ordinary conditions in open water, diffuse and affix themselves throughout the three dimensions of such a body of sea water. This is a well-known and readily verifiable fact.

2. The fry will adhere to smooth surfaces as well as to rough ones.

3. The surface upon which spatting occurs must be kept as free as possible from sediment and organic growths, in order that the tiny young mollusks may not be smothered and killed during the most critical period of their lives.

4. Artificial fertilization of the eggs of the oyster is feasible, and will become an important adjunct to successful spat culture.

5. Water charged with embryo oysters may be passed through a steam pump without injury to such embryos.

6. Oyster fry adheres to the under surface of shells or other collectors most abundantly because the lower side is cleanest and most favorable to the survival of the animals.

7. The spat of the oyster will grow and thrive with comparatively little light.

8. The specific gravity of the water may range from 1.003 to 1.0235.

9. The most favorable temperatures of the water for spatting seem to be from 68 degrees to about 78 or 80 degrees Fahr.

10. Spatting will occur just as freely in ponds or tanks as in the open water.

These are well ascertained elementary facts and upon them we must base our new method, which is essentially a system of spat culture, or method of rearing seed oysters for the purpose of cultivation on the open beds or any suitable bottom. We must, however, first of all throw aside as too expensive any and all systems in which tiles or slates are used, especially if these must be fastened together in nests and coated with lime and cement, as practiced in Europe. Oysters are too cheap in America to be produced by any of the old-fogy systems which are available there, as it will not pay to flake off the spat from the collectors under ordinary circumstances in cultivating the American oyster for market, because of its low price.

The experiments at Cold Spring Harbor have attracted some attention from the oystermen about there, and some of them have expressed themselves pleased with the results, and incline to think that seed oysters could be raised in quantities by any person who had an enclosed pond such as ours, where the water came in at times of high tide, and that they would be reasonably certain to get a fair "set" on proper cultch.

The following is from the journal kept by my foreman, Mr. F. A. Walters:

July 1—Received first lot of oysters, opened one bushel, found 17 ripe females and 1 ripe male; took spawn from these. After 9 hours, as there was no sign of life, considered not good.

July 4—From $\frac{1}{2}$ bushel, 9 females, 3 males, milt not active, no sign of life after 10 hours.

July 5—From $\frac{1}{2}$ bushel, 11 females, 1 male. Three hours after taking spawn young were swimming; put in tank.

July 9—Put in tank 3 pans of spawn.

July 10—From 200 oysters 175 were ripe females, 18 not spawning and 7 partly ripe males; had to lose all.

July 11—From 80 oysters 60 ripe females, 4 unripe males, and 16 not spawning.

July 14—Cleaned tank.

July 16—Ground-gate of salt pond had to be taken out owing to a leak, poor tides followed, pond did not fill for five days, could not pump and consequently no circulation in tank for that time.

July 20—Opened 70 oysters, found 20 ripe males, 30 females and 20 not spawning. Took two pans of spawn at 10:20 A. M., swimming at 2 P. M., put in salt pond.

July 22—Put spawn from 200 in salt pond.

July 26—Cleaned tank, could find no set.

July 28—Put in pond 4 pans of spawn in good order.

July 31—Put in tank 4 pans of spawn, the best lot taken.

August 11—Cleaned tank, and put in spawn from 1 bushel oysters.

August 20—Discovered set in tank.

September 8—Cleaned tank, found a number of shells and about a peck of gravel with sets on, but all dead. There were no sets on the hanging shells; the reason for this, I think, is owing to lack of current, which should be quite strong, there is more danger of getting too little than too much. Lowered salt pond.

September 19—Found a good set, the hanging shells had sets 3 feet from the bottom, but the shells on the bottom did the best.

During July the temperature of the water in the tank ranged from 65 to 73 degrees, and during August from 70 to 74, while in the pond it ranged from 71 to 87 degrees. The density varying in each from 1.017 to 1.020, standing at the latter figure steadily from July 19 to the close of the season.

[Discussion to follow.]

FISH HATCHING AT LARAMIE.—A little more than a week ago I had the pleasure of inspecting the fish hatchery at Laramie, Wyoming Territory. The drive out of town was a delightful one, and Mr. W. A. Jameson's quick-stepping little team of bays whirled us rapidly along over the smooth road which led us out toward the hatchery. The Laramie plains never looked more beautiful. They were brightly green, level as a floor, and in the distance rising in regular benched terraces to the foothills of the grand mountains which flank them to the east and west. Here and there the green of these terraces is interrupted by red-washed bluffs which, in the light of the setting sun glowed like the coals in a furnace. Away to the right was old Fort Saunders, once a post of considerable importance, but now abandoned and occupied by squatters, who hope to get a title to it before long. The fish hatchery consists of two or three unpretentious wooden buildings; but the work done there seems excellent. The actual business of hatching is over for the season, but the troughs still contained many thousand fry, some of them less than an inch long, which are waiting to be turned out. Of these there are four species, lake trout, California trout, rainbow trout and mountain brook trout, all of them apparently in the best of health. The ponds in the grounds are five in number. The upper one, which is quite small, contains at present no fish. In the second 24,500 lake trout fry were placed last year, and they are now active, vigorous fish, from six to eight inches in length. The third pond contains a number of brook trout from ten to fourteen inches long. In the first pond below the house, 17,500 California trout fry have been placed. These do not seem to be doing so well as the other fish, and a number of dead ones were noticed on the bottom of the pond. The attendant explained that these fry when alarmed take refuge in a fine green vegetable scum which forms along the margin of the pond, and that this killed them. It seems probable that death is caused by the fine fibers of this plant becoming entangled in their gills or else winding about the head so that they cannot breathe. Below this pond is another larger one in which the fish are allowed to shift for themselves and to breed at will. It is said that there are some fish in it weighing up to five and six pounds. The Fish Commissioner, Mr. Otto Gram, is enthusiastic in his devotion to his work, and his efforts to stock the streams of the Territory are being crowned with abundant success. Already certain streams which were once barren are well stocked with trout, and it is said that not long ago, an urchin who was fishing in the Laramie River for suckers, captured to his intense astonishment a four-pound trout. The introduction of the lake trout into some of the many lakes of the Territory will prove a great blessing to certain localities. It is said that Mr. Gram expects shortly to start East to obtain from near the Mississippi River a supply of coarser fish with which to stock such waters as are not adapted to the *Salmonidae*. Wyoming Territory may be congratulated on her enterprise in the matter of fishculture.—LARAMIE.

SALMON IN THE HUDSON.—Mr. Matthew Kennedy, game protector of the third district of the State of New York, reports to Commissioner Blackford that Mr. Putnam Slingerland, of Coeyman's, took a twelve pound salmon at Mull's fishery, Castleton, last week. This is the fifth adult salmon captured from the plant of 1882, so far recorded, besides the reports of other fish seen.

The Kennel.

FIXTURES.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Charles A. Boxer, Secretary, Box 282, Winnipeg.
Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.
Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.
Nov. 32.—Eight annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.
Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

DOG SHOWS.

July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Oleott, Manager, Milwaukee, Wis.
July 27 to 31.—Dog Show of the California Bench Show and Field Trials Club. E. Leavely, Superintendent, 436 Montgomery street, San Francisco, Cal.
Aug. 21, 22, 26 and 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. George H. Hill, Manager, P. O. Box 76, Cincinnati, O.
Sept. 8, 9 and 10.—Hornellsville, N. Y. Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville.
Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3810.

CARLO.

THE story of Sancho, so pleasantly told by your correspondent Mr. T. S. Van Dyke in your issue of Feb. 18, called to mind like experiences. I find laid away in my portfolio a package labeled "In Memoriam," pages written twenty years ago. As I read them to-night they bring me back through many days of pleasure, as I have tramped through the woods and the field. Perhaps it may be a pleasure to your readers to listen to the story of my dog:

As I make this record, I write the biography of a friend, one who was a companion in many pleasant walks, and as you read of some of his doings you will not wonder that I sometimes thought he enjoyed with me the silence of the grand still woods and the beauty of the fields. Often as I sat down on the hillside to rest, he would lie beside me and seem to enjoy the beauty that I saw and, forgetful of pheasants and quail, look through his large kindly eyes upon the woods all aglow with the flames that the frost had kindled. With all his intelligence he was true in his friendship; over willing, always trying to please me; never sharing his affection with any one else; hardly noticing a kind word from any one but his master, quick to hear my voice or footstep. He was a large, strongly built pointer, liver color and white, flecked with fine spots. His thin ears and soft fine coat told his blood. From a pup he seemed to have but few "dog ways". Often he would sit down and seem to be in serious thought, unmindful of everything about him, then quickly starting up would hasten to do something that in his thoughts he had planned to his satisfaction. As he grew, his intelligence showed itself in many ways beside his woodcraft. Sometimes he was sent on errands to the grocers. One time on his way home, carrying a small basket of eggs, a little cur ran out and snapping at him, followed him some way. Carlo walked leisurely along; coming to a house he walked up on the porch, carefully set his basket down, and with vengeance in his eyes, hastened back, and giving the cur a good shaking, laying him on his back, holding him with his paw, he seemed to tell him "never again do you bother me when I am carrying eggs." Hurray back with a satisfied air, he took up his basket and trotted home.

Making my home one evening, I found that I had carelessly lost my paper along the way. It was snowing hard; I did not like to face the storm again, but I felt that my rest beside the cheerful fire would not be complete without my evening paper. Carlo had heard my step, and as I stood inside the door he seemed to notice that there was something wrong and looking up into my face would seem to say "What is the matter now?" "Old fellow, I have lost it, go find it." He started off into the darkness and was gone. Seated by the fire I was wondering if I should have my paper, when a scratch at the door told me I was wanted; opening it in bounded the dog with the lost paper folded in his mouth; putting it on a chair with a smile upon his face (he sometimes smiled I am sure) he looked intently in my face much as if to say "You are all right now."

When in the field or woods his intelligence seemed to be almost human. When young he, like all hunting dogs, was sometimes excited, and in a careless way would flush his birds. One bright October day I started out for a few hours sport with the woodcock. The fresh crisp air was an excuse even for my dog to be over full of life. Soon I reached the cover, where I felt sure my dog would find birds. Talking to him, he seemed to try and control himself, but for all, up goes the bird without a single stop from the dog. After a smart switching we started on, Carlo a few yards ahead, when I saw him jump over a very narrow brook. As he struck the opposite bank without taking a single step he stood on a point for a moment, without a motion, then with tail and body stiff he backed down the bank, through the water, up the other bank, turning neither to the right nor left until a number of feet from the stream. What all this meant I could not understand. Soon, however, he seemed to gather up his wits, and moving cautiously up toward where I was standing, crossed the brook. As he passed I thought I could see a smile upon his face. With a steady step he walked on until he came within a few yards of where he first stood. Here he came to a point. A sharp "go on!" from behind the roots of an upturned beech, scarcely a yard from where he had made his first sudden halt, rose a woodcock. In a minute more as the dog laid it at my feet, with a laugh in his eyes as if to say "no whip this time, but a narrow escape." I laughed too, and was sure then of the smile I thought I saw as he ran by me the few moments before.

Shooting in company with a friend another season, as we came toward a buckwheat stubble, we saw our dog working carefully up to a corner of a brush fence, that was between us and the next. Brers and the tall weeds made this a good cover for game. Carlo steps along slowly, and when within a few rods of the fence stops, pointing straight ahead. With our guns ready we were about to move on, when with a sudden turn of his head he pointed a few yards down the fence. Again he changes to another point. While wondering at this we see him make five separate points; then stiff with his fore foot raised, he stands without a motion. We move up to the fence. Three of the live quail that lay hidden within that thirty feet were soon in our bags.

Another account will show with what zest he entered into this sport. With the same friend I had been tramping all the morning. What had become of the birds we could not tell, our dog had failed even to find an old scent. Under a beautiful birch, near a clear cold spring, we sat down to eat our

lunch and have a smoke. We soon missed our dog but knew he would not stray far away, so pulling our hats down over our heads, and lying back on the soft moss that, with here and there a bunch of partridge berries, like a carpet of green and crimson, covered the ground, while over head the golden sheen frescoed the ceiling, we were soon asleep. In a little while I felt a pull at my hat, there was my dog pawing at my shoulder; from his earnest look I knew there was business on hand. In his own way he soon told us what he wanted. Running backward and forward, at last taking hold of my coat, as much as saying "come on! hurry up," over the fence he led us, whining and looking back at almost every step, across a meadow into a cornfield where the shocks were still standing, and the orchard grass grew thick upon the ground. As he drew near a corner of the field, too rough and stony to be plowed, covered with briars and here and there a sumac holopung its red torch, he slackened his pace and his cat-like tread gave us notice to be ready; a stop; the command; a whirl of many wings, and live out of the cover went into our empty bags. Carlo had found this bevy and led us nearly a quarter of a mile.

My faithful friend was growing old, and before he was to be put on the retired list I wanted to get a young dog broken in, one to take his place if possible. I had a pup, broken to mind in many ways, but he knew nothing of "business." I thought to give him over to Carlo to train in the way he should go. Frequently I would go to the woods with them, the old dog always taking a patronizing air over the greenhorn. Often I have seen him find the track of a pheasant, follow it along until the pup took it, then step aside and let the young dog follow it up, watching him all the time with the greatest satisfaction. If his protegee lost the scent or was "mixed up," he would hasten to his help and soon set him right. Now the time came when I had to give up my faithful friend. One morning I missed his friendly greeting, and on going to his kennel found him hardly able to move; as he slowly drew himself out I saw his hind legs were paralyzed and he could not use them. All I did for him was of no avail, and he must die; to put him out of his misery was the greatest kindness I could do; to let some one else by a careless shot cruelly murder him, I could not think of; to shoot him myself; could I do it? One chilly morning I lifted him gently into my wagon and drove out into the woods; as I laid him down in the old wood road the remembrance of other days came to him, and he started into the brush snuffing the air and dragging his useless limbs stretched out behind him, I called to him to stand, I lifted my rifle to my shoulder, but through my tears I could not see the sights; brushing them quickly away the crack of the gun told me "A gash an faithful tyke as ever lap a sheugh or dyke" was dead.

PENNSYLVANIA.

COON HUNTING.

BRETHREN of the rifle and shotgun, if you want exciting sport just follow a good coon dog for one night. You will get all the fun you want in just four hours. There's nothing like it under the moon. When the dog is far ahead and you are following as fast as possible, suddenly down you go, your hat jammed over your eyes, a small sapling up your pants, and another down the back of your neck, all of which serves to bring from you a warm blessing on coon hunting. After you have got out of this dilemma you listen for the dog, you can't hear him. You can't hear anything except the chirping of insects, and the thumping of your heart. You experience a burning sensation in your throat. Your mouth is parched. You don't know what else to do only to whoop. After you have yelled once or twice quite loud and you receive no answer, you yell again, and again, and yet receive no reply. What are you to do? You are so tired you don't want to climb the hill, and so you make your way up the gully which you are in, falling over stones, tangled up in blackberry vines, slipping into the water, until you are so completely fagged out you can't go further, and so you sit down to rest.

While you are thus occupied with your thoughts, you are startled to hear a slight pattering on the dead leaves. Shortly after you distinctly hear a scratching as if something was climbing a tree a few rods back of you and up the hill. While you are listening to this you are startled by hearing the dog's shrill yelp on top of the knoll in front of you. On he comes, letting out a yell every jump he makes until he has passed you and is on his way up the hill behind you, where his music is changed to several prolonged howls. Ah, he has treed something sure, and very much excited you make your way carefully to where he is barking. There stands the little fellow, tongue out, his eyes shining brightly in the dark, jumping up on the tree and trying to tell you that he has got a coon up there. Presently you hear voices, then some one sings out: "Speak to him, Darb," and you recognize the voice of your friend or, "Here he is, Dorr, come here," you yell, and soon he is with you. "Where's John?" "Oh, he's coming," and sure enough, for seeing the light of your lanterns, he says "Got him, boys." "Yes," says Dorr, "hurry up here."

The preparations are made for climbing the tree. John is the climber. Strapping on his clinchers and looking to his revolver, he makes the ascent. "Look out, boys, I'm going to shoot," says John. Bang goes the old pistol. Then again, "He's coming," yells John, and we can hear the coon thumping from one limb to another, then crash upon the ground, where he is instantly seized by Darb, who soon chokes him to death. "Boys, I see another," says John. "Well, let him come," we yell in chorus. Bang, then a solid thump on the ground a little way down the hill. The dog hears it and is away. We follow rapidly with short club in our hands, and when we find them it is nip and tuck for the mastery, but the dog comes out winner. We pick up the coon and go back to the tree; John is just sliding down. "Pretty good luck, eh? Guess we better go home," says Dorr. And thus ends our experience in coon hunting.

GREENWING.

DOGS OF THE OCCIDENT.

Editor Forest and Stream:

The San Francisco bench show will open at Platt's Hall in this city on Tuesday, July 27, and continue until July 31 inclusive, under the auspices of the California Bench Show and Field Trials Club. The gentleman selected by the Executive Committee to superintend the show is Judge E. Leavely, of Gilroy, a gentleman of great experience in dog matters and one who is fully competent to take charge of the same. He is well known by every practical sportsman on the Pacific coast. Everything indicates a grand success for the show and it is expected that a large number of valuable sporting and non-sporting dogs will be placed on exhibition. Our Eastern brethren interested in dog matters who intend visiting us during the encampment of the Grand Army will have an excellent opportunity to see and judge for themselves the kind of dog stock we have on this coast. I promised to inform the readers of FOREST AND STREAM of some of the pointer stock of this coast and show that we have a few good pointers, whether Col. Stuart Taylor knows of their existence or not, I will start the list with some of the noted dogs which have a public record.

R. T. Vandevort, of Los Angeles, Cal., is the owner of Don, too well known to your readers to need a description.

Mr. J. H. Hardy, of Wells, Fargo & Co.'s Express of this city, is the owner of Bruce II. (A.K.R. 695). It is claimed that he is the counterpart of Don in his marking, build and general appearance. He is a beautiful animal, thoroughly broken and under perfect control. Bruce II. is sired by Hinde, by champion Faust out of Devonshire Lass; dam, Flight, by champion Bow out of Read's Madge.

E. W. Briggs, of this city, is the owner of a very handsome

lemon and white pointer, Climax, sire Bang Bang, dam Belona. Mr. W. S. Kittle, of this city, is the owner of a handsome lemon and white pointer bitch, Surf, by champion Bow out of King Maid, purchased from a gentleman in Arizona Territory. J. M. Barney is the owner of Tom Pinch, winner of the Derby Stakes, Pacific Coast Field Trials. He is a fine lemon and white, bred by John Wise, of Richmond, Va.; sired by Wise's Toro, dam Belona. William Scareiber's lemon and white dog Mountain Boy (imported) is a very likely-looking dog and a grand fielder; in fact, he is all that any one would desire. He is also the possessor of a lemon and white bitch, Lassie (imported), which is a beautiful specimen of the pointer breed. She is by Prime out of Forest Lily. Mr. Schreiber is a great lover of sporting dogs, and his importations are a credit to the kennels of this coast.

H. A. Bassford is the owner of Solano B, a liver and white dog, by Glen out of Josie Bow, he is a large, grand looking animal and was placed second in the Derby stakes, Pacific Coast field trials. W. E. White, of Sacramento, is the owner of a very nice dog called Sancho Panza, he is by Bow, Jr. out of Mollie Ash. E. A. Robbins also is the owner of another fine pointer called Jay Bird, by Bow, Jr. out of Mollie Ash. H. C. Brown of Sacramento is another one of the fortunates in having in his possession a (Bow, Jr.—Jessie) pointer called Prude. A. B. Truman of this city has purchased a brace of pointer puppies by champion Sensation out of Seph G., winner of first prize in New York last May (the only time exhibited); they are very handsome puppies, showing good nose and staying qualities for their age, as I have seen them both in the field; the bitch, the hand-omest of the two, has been purchased by Mr. F. J. Pinder of this city, a well known dog man. A. B. Ellford, of this city, as soon as he saw these pups ordered one from the same litter, which is also a very fine specimen. There is a gentleman in this city who has a (champion Faust—Daisy) dog that is a fine specimen, he is a large and powerful dog and one that is well known. Clarence A. Haight, of this city, owns a very nice and intelligent lemon and white dog, he is one of the best yard broke dogs on the Pacific coast. It was not my intention to take up so much of your valuable space, but when "the people" get writing on a subject such as this they never know where to stop. We have good pointers. Why should we not? We have the strains of all the celebrated pointer dogs of the world, Col. Stuart Taylor to the contrary notwithstanding. Vox POPULI.

SALES OF SPORTING DOGS AT ALDRIDGE'S. The second of the season's sales of sporting dogs took place at Aldridge's, in St. Martin's lane, yesterday (Friday), when a valuable lot of animals, from the kennels of Sir T. B. Lennard and others, were submitted to auction, including a team of Clumber spaniels from Mr. F. J. S. Fe jambe. The latter sold well, five couple realizing 34½ggs., Dun and Drake making the highest figures, 17gs. and 13½ggs. respectively. A lot of working pointers and setters, twenty-one in number, sold by orders of the executors of the late Mr. H. Burra, totalled 197gs., the seven-year-old Carmey, by Macgregor—Lady Pearl, being a cheap lot at 7gs.; Bounce, by Priam, made 22gs.; Don, by the same sire, a winner at Aberdeen this year, 18gs.; Bon and Beam, a handsome brace of lemon and white setters, 42gs.; Milo II., a grandson of Mr. Lord's Joek, 18gs.; York III., 15½ggs., and Rose of Glenmarkie, 15gs., were the highest figures realized by the remainder. A wavy-coated retriever bitch, Black, first prize Aberdeen in 1886, was cheap at 13gs. Two other retrievers reached 19gs.; and two fair deerbouds, Earl and Smoker, were cheap enough at 3½ggs. and 5gs. respectively. Two brace of setters from Mr. Cunningham were bid to 52½ggs. Seven brace of pointers from Sir T. B. Lennard, went within their value at 130gs.; Chandos, second at Birmingham in 1885, and 1 third Crystal Palace, 1886, securing the top figure, 24gs. Guy and Goblin, by Luck of Hessen, from a daughter of Priam, sold for 15½ggs. and 14½ggs. each; and Belhus Magpie, by Priam, 14gs. Other properties realized smaller sums, and two couples of pretty little rabbit beagles brought 9gs.—London Field, June 26.

ST. LOUIS PRIZES NOT PAID.—Boston, July 8.—Editor Forest and Stream: In this week's issue of your paper I read a letter from Mr. Wade finding fault with the Pittsburgh medals. I can beat that. I sent two dogs to St. Louis, won \$25, and have not received a cent for trouble and expense, which amounted to \$22.50, besides getting my dogs back in boxes without anything but bare boards to ride on over a thousand miles. After waiting a number of weeks I wrote to Mr. Munson, and he answered in reply that the treasurer would attend to it at once. As it is over a month since receiving this answer, I think the dog public should be notified.—JOHN P. BARNARD, JR.

THE COVINGTON DOG SHOW.—We have received the premium list of the first annual dog show of the Latonia Agricultural Association, to be held at Covington, Ky., Aug. 24 to 27. Major J. M. Taylor, of Cleveland, O., will judge the setters, pointers, foxhounds and beagles. Mr. H. L. Goodman, of Chicago, Ill., the remaining classes. There are champion prizes of \$10 in the English and Irish setter and pointer classes for both dogs and bitches, with \$10 and \$5 in the open classes, the latter including black and tan setters. There are champion prizes of \$5 for greyhounds and pugs. The remaining open classes are \$5 and \$3.

ILFORD CROMWELL VS. ILFORD CAUTION.—Editor Forest and Stream: In yours of the 1st you get me all wrong on the above. It was Mr. Lee's concurrence with me that Ilford Cromwell was the best mastiff in America that encouraged me to stick to it. I suppose you will blame the blunder on me anyhow, so I may say that Mr. Cook, the former owner of these dogs, has made it very easy to blunder by his string of Ilford Cs., as the two above, Ilford Claudia, Charity, Chancellor, Cambria, etc.—W. WADE (Hulton, Pa., July 2, 1886). [Mr. Wade is right, the blame rests on him, as his manuscript will plainly show.]

WESTCHESTER COUNTY DOG SHOW.—The Society of Agriculture and Horticulture of Westchester county, N. Y., will hold their first annual fair on the fair grounds near White Plains, September 27 to October 2. There will be a dog show in connection with the fair, with prizes of \$5 and \$3 for the best kennel and \$2 and \$1 each for mastiffs, St. Bernards, setters, pointers, pugs, hounds and bulldogs. Full particulars may be obtained of the Secretary, Eben B. Long, White Plains, N. Y.

THE WAVERLY DOG SHOW.—The first fall dog show of the New Jersey Kennel Club, to be held at Waverly in conjunction with the State Agricultural Society in September, promises to be a great success. The Agricultural Society will erect a building on the fair grounds, 200 by 100 feet, to be devoted exclusively to the dogs. This will give ample room for a large show.

AMONG THE NORTHERN LAKES of Wisconsin, Minnesota and Iowa, are hundreds of delightful places where one can spend the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely rejuvenated. Each recurring season brings to Oconomowoc, Waukesha, Beaver Dam, Portage, Okoboji, Minnetonka, White Bear and innumerable other charming localities with romantic names, thousands of our best people whose winter homes are on either side of Mason and Dixon's line. Elegance and comfort at a moderate cost can be readily obtained. A list of summer homes with all necessary information pertaining thereto is being distributed by the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—Adv.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Banner Girl and Bissell. By A. C. Krueger, Wrightsville, Pa., for white, black and tan beagle bitch, whelped April 20, 1886, by Bannerman (A. K. R. 1709) out of Pet (A. K. R. 521).

Mona, M. S. Nells m. Irene and Maggie May. By Samuel Coulson, Montreal, Can., for red Irish setter bitch, whelped May 21, 1886, by Shaun Rhue (Morris's Con—Nan) out of Florie (A. K. R. 2679).

Paris Gem. By W. B. Bowen, Rockland, Mass., for black, white and tan English setter dog, whelped Jan. 10, 1886, by Count Gladson (Royal Blue—Mojaska) out of Paris Queen (Paris—Miss Twilight).

Little Rock. By Geo. Laick, Tarrytown, N. Y., for black, white and tan beagle dog, whelped Nov. 14, 1885, by Lewis's Bugler (Hoe's Rattler—Lewis's Do.) out of Rye (Ringwood—Roxy).

Molly Malloy. By Geo. Laick, Tarrytown, N. Y., for red Irish setter bitch, whelped Jan. 1, 1886, by Glencho (Elcho, A. K. R. 295—Noreen, A. K. R. 297) out of Fanchon (A. K. R. 184).

Little Play and Munele. By Geo. Laick, Tarrytown, N. Y., for black, white and tan beagle bitch, whelped Nov. 14, 1885, by Lewis's Bugler (Hoe's Rattler—Lewis's Do.) out of Rye (Ringwood—Roxy).

Milesian, Freeland, Ormond and Landsdowne. By Samuel Coulson, Montreal, Can., for red Irish setter dogs, whelped May 21, 1886, by Shaun Rhue (Morris's Con—Nan) out of Florie (A. K. R. 2679).

Lady Isabella. Editor Forest and Stream: In the last issue of FOREST AND STREAM Mr. C. W. Littlejohn claims the name Lady Isabella for a lemon and white pointer bitch. I own a pointer bitch, lemon and white, now three years old, that is registered as Lady Isabella (A. K. R. 461) and that has taken several prizes under that name. I would suggest to Mr. Littlejohn that it might avoid future confusion if he selected another name for his bitch. —FLOYD VAIL.

BRED.

Notes must be sent on the Prepared Blanks.

Queen—Cameron's Racket. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Queen (A. K. R. 1730) to his Cameron's Racket (Rally—Louise), June 10.

Mitie—Bannerman. F. C. Bates's (Cleveland, O.) beagle bitch Millie (Tucker—Sara) to A. C. Krueger's Bannerman (A. K. R. 1709), June 5.

Zora—Bannerman. Wm. L. Maun's (Elizabeth, N. J.) beagle bitch Zora (Ringwood—Maid) to A. C. Krueger's Bannerman (A. K. R. 1709), June 2.

Chloe—Argus II. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Chloe (Flassh—Chloe) to his Argus II. (imported Argus—Brant), June 21.

Red Mogg—Glencho. W. W. Sweeney's (Chardon, O.) Irish setter bitch Red Mogg (Muegan—Red Maud) to W. H. Pierce's Glencho (Elcho—Noreen), June 23.

Highgate—Buckingham. A. S. Hoffman's (Morrisville, Pa.) English setter bitch Highgate (Antic—Princess Mix) to Geo. DeHaven's Buckingham (Dude—Dudeen), July 2.

Lady F—Captain Fred. A. Spring's (West Winsted, Conn.) pointer bitch Lady F. (A. K. R. 2744) to Atwood Collins's Captain Fred, June 23.

Regalia—Bob. Edward Stern's (Boston, Mass.) pointer bitch Regalia (Sensation—Whiskey) to G. W. Amory's Bob (Bang—Princess Kate), June 1.

Molly—Bob. W. White's (Newton Highlands, Mass.) pointer bitch Molly (Don Carlos—Regalia) to G. W. Amory's Bob (Bang—Princess Kate), May 25.

La Belle—Lava Rock. Mr. Wallace's (Fredericksburg, Va.) English setter bitch La Belle (Dashing Lion—Victoria, A. K. R. 1383) to A. E. Burche's Lava Rock (A. K. R. 369), June 3.

Hedge—Lava Rock. Mr. Tatem's (Philadelphia, Pa.) English setter bitch Hedge (Dash III.—Diana) to A. E. Burche's Lava Rock (A. K. R. 369), May 30.

Jennie—Lava Rock. Mr. Taft's (Washington, D. C.) English setter bitch Jennie (Dashing Lady—Daisy) to A. E. Burche's Lava Rock (A. K. R. 369), May 20.

Victoria—Spark Noble. A. E. Burche's (Washington, D. C.) English setter bitch Victoria (Warwick—Belle) to his Spark Noble (Count Noble—Spark), May 7.

Helene—Spark Noble. Mr. Moss's (Lancaster, Pa.) English setter bitch Helene (Dashing Lion—Victoria, A. K. R. 1383) to A. E. Burche's Spark Noble (Count Noble—Spark), June 23.

Lola—Spark Nobis. A. E. Burche's (Washington, D. C.) English setter bitch Lola (Rake—Fanny) to his Spark Noble (Count Noble—Spark), May 13.

Red Biddy—Glencho. Geo. Laick's (Tarrytown, N. Y.) Irish setter bitch Red Biddy (Chief—Biddy) to W. H. Pierce's Glencho (Elcho, A. K. R. 295—Noreen, A. K. R. 297), June 23.

Rye—Rattler. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Rye (Ringwood—Roxy) to Chas. R. Hoe's Rattler (Chancellor—Careless), April 7.

Jipse—Treasure. Detroit Kennel Club's (Detroit, Mich.) pug bitch Jipse (Don Juan—imported Foxey) to Chas. A. Leouhard's Treasure (A. K. R. 479), June 12.

Lena—Lava Rock. Mr. Bell's (Brookville, Md.) English setter bitch Lena (Dashing Lion—Victoria) to A. E. Burche's Lava Rock (A. K. R. 369), May 10.

WHELPS.

Notes must be sent on the Prepared Blanks.

Belle of Bryn Mawr. F. C. Sayles, Jr.'s (Pawtucket, R. I.) English setter bitch Belle of Bryn Mawr (A. K. R. 3571), July 2, two (one dog), by T. H. Adams's Prince Napoleon (A. K. R. 2671).

Sarah. C. T. Brownell's (New Bedford, Mass.) bull-terrier bitch Sarah (Dandy—Dido), June 30, five (three dogs), by Frank G. Tripp's Sir.

Beech Grove Gabrielle. Beech Grove Farm Kennels' (Beech Grove, Ind.) Beech Grove Gabrielle (A. K. R. 3371), July 4, by Geo. Jackson's Beech Grove Duke (A. K. R. 3370).

Minnie N. A. S. Hoffman's (Morrisville, Pa.) cocker spaniel bitch Minnie N., July 2, five (four dogs), by G. Whitehead's Pluto (Ono II.—Critic).

Seph G. Dr. J. B. Holmes's (Rome, Ga.) pointer bitch Seph G. (A. K. R. 2411), June 29, nine (five dogs), by Graphic Kennels' Graphic (A. K. R. 2411).

Rye. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Rye (Ringwood—Roxy), June 7, five (three dogs), by Chas. R. Hoe's Rattler (Chancellor—Careless).

Early Dawn. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Early Dawn (Nixey, A. K. R. 177—Princess Louise, A. K. R. 117, June 30, seven (six dogs), by Arnold Burges's Dashing Berwyn (Dash III.—Princess).

Ruby Croxteth. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Ruby Croxteth—Seitner's Lass, July 1, ten (seven dogs), by their King Bow (A. K. R. 83).

Elsa. James Rae's (Buffalo, N. Y.) Dandie Dinmont bitch Elsa (A. K. R. 2908), June 29, five (three dogs), by his Bobbie Burns (A. K. R. 2907).

SALES.

Notes must be sent on the Prepared Blanks.

Piney. White and tan beagle bitch, whelped Nov. 23, 1884, by Bannerman out of Katie, by A. C. Krueger, Wrightsville, Pa., to Wm. C. Fromm, Cleveland, O.

Queen Bird. White, black and tan beagle bitch, whelped March 26, 1885, by Ringwood out of Burdie, by A. C. Krueger, Wrightsville, Pa., to W. S. Dufferin, Baltimore, Md.

Red Mogg. Red Irish setter bitch, whelped 1883, by Duncan out of Red Maud, by Arthur L. Garford, Elyria, O., to W. W. Sweeney, Canton, O.

Bannerman—Pet whelps. White, black and tan beagle bitches, whelped April 20, 1886, by A. C. Krueger, Wrightsville, Pa., one to W. J. Perceval, Stanton, Mich., and one to J. H. Jacobs, Wrightsville, Pa.

Bannerman—Myrtle whelp. Beagle bitch, whelped April 18, 1886, by A. C. Krueger, Wrightsville, Pa., to E. E. Shauer, Pittsburgh, Pa.

Jingo and Chinkie. Golden fawn pug pups, whelped March 28, 1886, by imported Tuck out of Toodles (A. K. R. 2147), by Geo. W. Dixon, Worcester, Mass., to C. Henry, Rochester, N. Y.

Nellie. White bull-terrier bitch, whelped August, 1883 (A. K. R. 2194), by Geo. W. Dixon, Worcester, Mass., to J. W. Newman, Boston, Mass.

Silver. Stone fawn pug bitch, whelped March 28, 1886, by imported Tuck out of Toodles (A. K. R. 2147), by Geo. W. Dixon, Worcester, Mass., to C. Henry, Rochester, N. Y.

Three—Toodles whelp. Pug bitch, whelped March 28, 1886, by Geo. W. Dixon, Worcester, Mass., to Chequasset Kennels, Lancaster, Mass.

IMPORTATIONS.

King Cole, Jr. Bulldog, whelped July 29, 1883 (King Cole—Dona

Sol), by J. P. Barnard, Jr., Boston, Mass., from J. S. Pybus-Sellon, Sydenham, Eng.; weight, 32 pounds.

DEATHS.

Jobbo. Black cocker spaniel dog (A. K. R. 3631), owned by C. S. Davol, Warren, R. I., July 6, by accident.

Don Belton. White and liver English setter dog (A. K. R. 3280), owned by E. G. Cone, East Hampton, Conn., May 26, from distemper.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

C. H. S., Chestnut Hill.—I have a setter pup four months old which has had round worms for some time. He has passed three or four different times about seven inches long. He is now very thin and does not eat very much. His coat seems dead. Have given him arecanut and santonine, but it did no good. Ans. Your puppy probably still suffers from worms. You may try the fluid extract of spigelia and senna in teaspoonful doses after a fast of twelve or twenty-four hours. If no worms are passed, tone your dog up with nourishing food and give three drops of Fowler's solution three times daily.

H. D. M., Melbourne, Quebec.—My water spaniel had some sort of lice on her and continual scratching has caused two or three sores to appear which I healed by washing with soap and applying roose oil. As far as I can see all the lice have left her, but the skin is scaly and dry looking and her hair is thin in places. There does not appear to be any appearance of mange. What can I do to make her hair soft and glossy as it naturally is and to clean her skin of this dandruff. I have washed her several times but it does not appear to take it off. Ans. After washing your dog, rub in vasoline in moderate quantity. This renders the coat glossy and softens the skin. Give five drops of Fowler's solution of arsenic in the food night and morning.

A READER, Peterboro, N. H.—My beagle is in very thin flesh, and will not eat well. At times his nose is hot and his nose and eyes run a little. If a little frightened or excited his eyes turn green. At times his breath is unpleasant and never very bad. Can find nothing to show that he has worms. He is built right to take a large amount of work, but if he runs a few hours he will seem very tired the next day, and his eyes will be almost closed. His feed is Indian meal cakes with milk and table scraps. Have tried other kinds of feed, but he will only eat a little. He is fifteen months old and has been in the same condition the three months I have had him. Have given him no medicine, not knowing what to use. Ans. Give your beagle five drops of Fowler's solution of arsenic in his food night and morning. His protan eyes will come out all right. When the pupil dilates they look green, when it contracts the eyes look black.

J. H., Cleveland, O.—1. My beagle puppies, four weeks old, are getting lumps in their throats. I keep them in a perfectly clean and dry box about 3 ft. x 1 ft., with clean excelsior for bedding every day. 2. My beagle bitch has worms, such as I have never seen before. Have given her two grains of santonine and a purge about four hours after, purge thrown up five minutes after taking; throws up food frequently; otherwise lively; appetite good. Ans. 1. It is impossible to say from this distance and without more particulars, what causes the tumors in your puppies. It is doubtful as to enlargement of the glands. 2. Salivary or lymphatic glands may be the cause. You do not get enough of the right kind of milk from the mother. Test the milk with litmus paper and see whether it is acid or alkaline. If the former give soda in the food or lime water in the milk. You may try cod liver oil in teaspoonful doses three times daily to the puppies. 2. The bitch has a tapeworm. Fast her for twenty-four hours and give thirty drops of the oleoresin of aspidium or filix mas; purge in three hours with castor oil. After treatment build her up with nourishing food.

HUMPHREYS' VETERINARY SYSTEM.—No well-informed person denies that the ownership of animals involves the obligation of their proper nursing and care when sick. It is generally admitted that the common mode of treatment is cruel as well as wasteful in life and suffering. But before you condemn us show us a better system. Now, this is precisely what we propose to do. Humphreys' Homeopathic Veterinary Specifics have been in use twenty-five years, and the testimony of respectable horse and stock owners of the results are entirely satisfactory. The medicines are suited to almost every possible disease among domestic animals, and can be given without the slightest trouble. They are not poisons nor destructive to health, but cure in far less time than any other remedies. This system of treatment is free from intricacy or difficulty, one that tells the owner just what to do and how to do it, and which save and satisfactory results, it secures the animal from all cruelty and unkindness. More over it affords the best chance for their recovery and renewed usefulness. We think we are acting in the interest and for the benefit of our animal friends, who cannot speak for themselves, when we cordially endorse Humphreys' Homeopathic Veterinary Specifics.—Adv.

RANGE AND GALLERY.

THE CREEDMOOR PROGRAMME.

TO guide those intending to take part in the matches of the Fall Meeting at Creedmoor, Sept. 13 to 18 next, the Association has issued the list of matches to be held, with a prize list as far as secured. Many of the matches are fixtures on the annual programme, but there is opportunity for a display of both military and any rifle shooting. The list of matches includes: No. 1. Directors' Match—200yds., open only to directors of the N. R. A., 5 rounds, standing, any military rifle, including specials. Prize, the directors' championship gold badge, shot for annually and held by the winner during the year. To be shot at any time during morning. The third prize will be a handsome bronze pitcher, value \$30, presented by Messrs. Benedict Bros. of No. 171 Broadway.

No. 2. Judd Match—Open to all comers, any military rifle, including specials. Remington rifles, State model, will be allowed one point on each score; 300yds., standing, 7 rounds. Entrance fee, \$2 each, re-entries \$1. Only 3 entries allowed to be shot on each day, match to occupy 2 days. Prizes—Cash presented by the N. R. A. \$245, divided into 27 prizes, the aggregate of two scores to count for the first 5 prizes.

No. 3. Wimbledon Cup Match—Open to all citizens and residents of the United States, 1,000yds., 30 shots, any rifle within the rules, cleaning allowed. Position, any without artificial rest. First prize, the Wimbledon Cup, value \$500. Won in 1875 by Maj. Fulton, in 1876 by I. L. Allen, in 1877 by Dudley Welch, in 1878 by Frank Hyde, in 1879 by C. H. Laird, in 1880 by W. M. Farrow, in 1881 by F. J. Rabbeth, in 1882 by W. Budworth, in 1883 by H. T. Rockwell, in 1884 and 1885 by J. W. Todd.

No. 4. President's Match—First Stage—200 and 500yds., 7 shots at each, open to all members of the Army, Navy and Marine Corps of the U. S., or the national guard of any State. Remington State model and Springfield 45 cal. 3 grooved and chambered for 2 1/10-in. shell only. Twenty-three prizes, total \$210. Second stage—Open to all prize winners in the first stage, 700yds., 10 shots, position any, rifles same as in first stage, but 50-cal. Remington State model will receive one point allowance. Prize, the mid-range championship of America for 1886, a handsome bronze pitcher, value \$30, awarded to the competitor making the highest aggregate score in both stages.

No. 5. The Storkley Match—Any military rifle, including specials, 800, 900 and 1,000yds., any position, all comers, 10 shots at each distance. Twelve prizes aggregating \$110.

No. 6. Continuous Match—All comers' continuous match, 200yds., standing, 7 shots on the American standard target, any rifle, military rifles, as permitted in match No. 4, will be allowed 4 points and other military or special military rifles 3 points on each score. The aggregate of 3 scores to count for each of the first 5 prizes, aggregate of 2 scores to count for the others, entries unlimited, \$300 divided into 33 prizes.

No. 7. Governors' Match—Seven shots at 500yds., position any, any military rifle, including specials, open to all comers, re-entries allowed. The aggregate of 3 scores to count for first 5 prizes, aggregate of 2 scores to count for the others, 2 points allowed on the aggregate of the 3 scores in the first 5 prizes to State model rifles of 30-cal., 1 point allowed on aggregate of the two scores, \$300 divided into 18 prizes.

No. 8. All Comers' and Marksmen's Badge Match—Open to everybody, 200 and 500yds., position standing at 200, prone at 500, 5 shots at each, entrance \$1, re-entries allowed, rifle Remington 50-cal. State model, 34 prizes, \$275.

No. 9. Bilton Trophy Match—Open to teams of 12 from the military or militia of any country, 200, 500 and 600yds., 7 rounds at each.

position standing at 200yds., any at 500 and 600, any military rifle which has been adopted as an official arm. Prize, a trophy, presented by Hon. Henry Hilton, value \$3,000. Also a medal to each member of the winning team. Won in 1878 and 1879 by State of New York, in 1880 by Division of the Missouri, U. S., in 1881 by State of New York, in 1882 by State of Pennsylvania, in 1883 by State of Michigan, in 1884 and 1885 by Division of the Atlantic, U. S. A.

No. 10. Short Range Team Match—Open to teams of 4 from any regularly organized rifle club or association or military organization, no limit to number of teams from one organization, but no competitor can shoot in two teams, ten shots at 200yds., standing, any rifle, American standard target, teams to shoot the Remington rifle. Position, standing at 200, prone at 500, 5 rounds at each distance. Prize, a trophy, presented by the State of New York, value \$300.

No. 11. Inter-State Military Match—Open to one militia team from each State or Territory in the United States, 200 and 500yds., position at 200yds., standing, at 500 prone, any military rifle which has been adopted as an official arm. Prize, to the team making the highest aggregate score a large bronze trophy, also a medal to each member of the winning team. Won in 1875 by N. Y., 1876 by Conn., 1877 by Cal., 1878 and 1879 by N. Y., 1880 by N. J., 1882 by Pa., 1883 by Mich., 1884 and 1885 by Pa.

No. 12. Inter-State Long-Range Match.—Open to teams of four from any rifle club in the U. S., Members of the various teams participating must, at the time of shooting, be residents and must have resided in the State represented for at least three months prior to the date of the match. 800, 900 and 1,000yds.; 15 shots at each distance; any rifle within the rules. Prize, a trophy, also a medal to each member of the winning team. Won in 1877 by Amateur Rifle Club, N. Y.; in 1878 by Massachusetts Rifle Association; in 1879 by New Jersey State Rifle Association; in 1880 by Empire Rifle Club, N. Y.; in 1881 by Illion Rifle Club; in 1882 by Illion Rifle Club; in 1883 by Illion Rifle Club; in 1884 by Amateur Rifle Club, N. Y.

No. 13. New York State National Guard Match.—Open to teams of 12 from the National Guard of the State of New York. 200 and 500 yds. Position, standing at 200, prone at 500; 5 rounds at each distance. Prize, a trophy, presented by the State of New York, value \$300.

No. 14. First Division National Guard Match.—Open to teams of 12 from each regiment, etc., in the First Division of the N. G. S. N. Y. Remington rifle, State model; 200 and 500yds.; 15 shots at each distance. Position, standing at 200, at 500 prone. Prize, a trophy, presented by the State of New York, value \$100.

No. 15. Second Division National Guard Match.—As No. 14 for Second Division.

No. 16. General Sheridan's Skirmishers' Match.—Open to teams of 6 from the regular Army, Navy, Marine Corps, National Guard, Volunteers, or militia of any country, State or territory, 600 to 200yds., and return, second-class targets, military rifle with which the organization has been regularly armed. A commanding officer or coach may be allowed in rear of each team, or as a member on the firing line. The first prize is a trophy presented by S. D. Schuyler Esq., value \$150. This prize is to be won three times before becoming the property of the winner. It will be held for a year by the officer commanding the winning corps. Also a bronze medal to each member of the winning team. Won 1884 and 1885 by 4th Artillery, U. S. A.

The matches will be shot as nearly as possible upon the following days, though the right is reserved after entries are made to change the order of shooting: Monday, Sept. 13, Nos. 1, 2, 3, 6, 7, 8; Tuesday, Sept. 14, Nos. 1, 2, 5, 6, 7, 8; Wednesday, Sept. 15, Nos. 1, 4, 6, 7, 8, 10; Thursday, Sept. 16, Nos. 1, 6, 7, 8, 10, 12; Friday, Sept. 17, Nos. 1, 6, 7, 8, 13, 14, 15; Saturday, Sept. 18, Nos. 1, 6, 7, 8, 11.

THE SPRINGFIELD TOURNAMENT.

SPRINGFIELD, Mass., July 6.—The New England Rifle Association could not have had a more propitious day for the opening of their four days' tournament at Riverside Grove than to-day. There was sufficient sunshine to make the beautiful places to which the sharp whizz of the bullets kept excitement at high tide throughout the day. Only a few of the visiting delegates arrived in time to take the early boat to the grove. Hartford and Meriden each sent a score of men who were accompanied by Colt's band, of Hartford; Fort Trumbull had two representatives and the Springfield Schuetzenverein mustered 32 shooters.

Shooting was not begun till after 11 o'clock, when 10 of the 11 matches were opened. These 10 matches will be continuous through the four days, and the only one which will be shot on the first day was the target of honor, opened at 3 o'clock. The first shot was by Capt. Buchholz, who fired a salute in honor of President Cleveland, and scored a bullseye, 25 points. Julius Heber, of Hartford, shot in honor of Gov. Robinson, and also scored 25. Chas. Stockler, of Meriden, shot in honor of the mayor of Springfield, and scored 25. P. Myer, of New Britain, shot in honor of Senator Phillips, and scored 25. Lieut. Kron shot in honor of Gov. Harrison, of Connecticut, and scored the fifth hit in the bullseye. Lieut. Hare followed with a shot in honor of the Boston Schuetzenverein and made 25.

July 7.—Sunny skies and just wind enough to make a welcome breeze opened the second day of the New England Rifle Association's tournament at Riverside Grove, and the competing riflemen and their friends were correspondingly happy. The attendance was much better than on the first day. Many prominent marksmen arrived during the day, and at once started to compete for the honors. Among the named shots present were A. C. White, of Worcester, who is at present the champion on the Massachusetts target; George Joyner, of Brooklyn, N. Y.; J. A. Higgins, of Pittsburgh, Pa.; O. M. Jewell, of Lawrence; G. H. Wentworth, of Dover, N. H.; O. B. Hall, of Collinsville, Conn.; W. W. Tucker, of Hartford; Messrs. Crafts, Schaeffer and Ludwig, of the Boston Schuetzenverein; W. M. Farrow, formerly of this city but now of Brattleboro, Vt., and Sergt. Lowry and Corp. Stamford, from Fort Trumbull, Conn.

Shooting on the different targets was in brisk progress all day, but interest centered in the competition on the "target of honor," which was closed at 4 P. M., and resulted in the Springfield marksmen capturing 14 out of 40 prizes, T. T. Cartwright, of this city, being the victor. The prizes were distributed in the following order, according to each contestant's score: T. T. Cartwright, of Springfield, 44, King's badge and silver service; D. Seymour, of Hartford, 43; M. W. Bull, of Springfield, 42; Wm. Tucker, of Hartford, 41; E. T. Stephens, of Springfield, 38; Wm. Selhe, of Meriden, Conn., 37; Wm. Helfry, of Hartford, 37; F. K. Rabol, of Springfield, 36; J. A. Higgins, of Pittsburgh, 35; Lieut. of Hartford, 34; Peter Taylor, of Hartford, 33; C. Herold, of Springfield, 32; P. Maurer, of Meriden, 32; S. S. Bumstead, of Springfield, 31; H. K. Cooley, of Springfield, 31; A. E. Barnes, of Springfield, 31; A. Krom, of Springfield, 49; S. Miller, of New Britain, 39; H. Pope, of Hartford, 38; H. Dorr, of New Britain, 38; G. Lining, of Meriden, 37; F. Remesauer, of New Britain, 34; L. H. Mayott, of Springfield, 34; O. Heuning, of Hartford, 34; A. Hollenstein, of Springfield, 34; J. Teising, of Meriden, 33; R. T. Hare, of Springfield, 33; A. Meyer, of Meriden, 33; L. Heimgartner, of Hartford, 33; W. Haden, of Meriden, 33; A. Detenich, of Meriden, 33; C. Drechsler, of Meriden, 33; H. Buchholz, of Springfield, 34; M. Glassnap, of Meriden, 34; T. B. Wilson, of Springfield, 33; T. Britton, of Hartford, 33; F. Engle, of New Britain, 33; L. Leibert, of Hartford, 32; J. Huebner, of Hartford, 31; E. Hoffman, of Meriden, 30.

The City guard's team of this city have so far been the only ones to shoot in the military team match, although several teams from other military organizations have entered. The following is the score of shooting by this team:

Lieut. McDonald.....44518—20 T. T. Cartwright.....44431—19
Sergt. Sterling.....45513—21 E. T. Stephens.....44451—21
M. W. Bull.....45555—24

W. A. White, of Worcester, was, up to to-right, first on the Massachusetts target, and George Joyner of Brooklyn had a good lead on both the Mau and German target. Some remarkable shooting was done by Louis Brehm, secretary of the Pittsburgh (Pa.) Rifle Club, with a 10 pounder bullet, he has made 45 bullseyes. Probably the most interesting event in the tournament is making a respectable number of bull-eyes on the 3 1/2 inch bullseye target, and not many of the marksmen present have yet made much of a record except J. A. Higgins, of Pittsburgh, who has succeeded in making seven bullseyes. Capt. Buchholz performed the pleasant duty of crowning the winner of the "target of honor" match, T. T. Cartwright, last evening in his usual happy manner, and the new king of the Schuetzenbund for 1886 responded in a brief speech.

July 8.—To-day was strictly devoted to business at the Schuetzenverein's tournament at Riverside Grove, each marksman present hanging away steadily at the targets from 9:30 in the morning until 7:30 P. M., the closing hour. A large number of spectators were in attendance, and showed much interest. It was not an extra day for fine shooting, the wind being rather strong and the light variable, but some good scores were made. Many more noted marksmen have arrived, including F. Hayes, of Collinsville, Conn.; William Hayes, of New York, N. Y.; R. A. Whipple, of Adams; George E. Butts and W. H. Beardsley, of Bridgeport, Conn.; C. A. Hynds, of Orange; G. R. Warfield, of Gardner; G. R. Russell and N. Frye, of Boston; J. F. Klein, of Creedmoor, N. Y., and many others. The arrival of the day, however, was that of the famous Zettler Rifle Club, of New York city, their two crack shots, C. G. Zettler and T. J. Dolan, who are expected to do some splendid work. The question of which militia team will win the handsome sword offered for first prize seems to lay between the City and Peabody Guards, no other teams having as yet

entered. The Peabody took their turn at shooting to-day with the following result:

	First entry.	Second entry.
F R Bull.	5544-23	4554-22
George Adams.	4545-21	4445-20
J Leonard.	3504-13	3444-18
T B Wilson.	5444-21	4454-22
Kimball.	5544-23	4554-22-104

The team that point behind their opponents, but will try to overcome them to-day.

The various other targets were well patronized. Much of the interest of the members of the Schuetzenverein centered in the "novice match" between members of that society, in which some very good scores for novices are being made. A. Hollenstein is the leader so far, having a total of 95 out of a possible 125 to his credit. He is closely followed by Capt. Buchholz, who has a total of 91, while A. Schultz and Fred Lenoir follow with 87 and 85 respectively. In the individual military match some good scores have been made and many more entries are expected to-day. M. W. Bull, of the City Guard, is ahead so far, and is looked upon as the probable victor, although his competitors are working hard to catch up with him. The score up to to-night was as follows:

M W Bull.	23	22	27	J A Sterling.	30	21	61
E T Stephens.	23	23	21	Capl Southmayd.	20	17	53
T C Cartwright.	21	21	21	Henry McDonald.	17	16	36

On the Massachusetts target, C. White at present the leader, but he is being pushed by others as the score will show, each 3 scores counting as a continuous one:

A C White.	58	56	55	G Joyner.	55	54	52-161
E T Stephens.	56	55	56	W B Beardsley.	52	52	51-155
O B Hull.	56	55	56	T Brehm.	53	50	153
O M Jewell.	55	55	55	Z C Talbot.	52	52	47-151
H Engle.	55	55	54	E Hoffman.	47	46	49-139
T Cartwright.	58	58	51	G E Betts.	50	46	43-139
G H Wentworth.	56	53	53				

The competition on the German ring target is very close and some excellent work is being done on it, most of the best marksmen present being entered for it. Unless something happens it looks very much as if J. A. Huggins, of Pittsburgh, Pa., will bear off the prize, he having done the steady shooting thus far and holding first place with a total of 71 out of a possible 75 with Jewell, of Hartford, a close second. The following score shows the position of the contestants: J. A. Huggins, 71; O. M. Jewell, 70; D. S. Seymour, 68; Wm. Tucker, 66; H. A. Huggins, 66; G. Joyner, 65; E. T. Stephens, 64; A. C. White, 64; L. H. Myott, 63; E. Hoffman, 61; A. H. Merriam, 61; A. Kron, 59; O. Helfreich, 59; C. Herold, 53; T. Brehm, 46; W. R. Schaffer, 32; Wm. Halm, 31. On the "man" target, which represents the head and shoulders of a man and is more complicated and trying to some marksmen than the ordinary bull-eye target, G. Joyner is the champion so far, he having a lead of two points over his nearest opponent. The score: G. Joyner, 53; A. H. Merriam, 51; A. Huggins, 51; Z. C. Talbot, 50; C. A. Miller, 48; H. Pope, 47; W. Tucker, 46; Wm. Halm, 44; E. Hoffman, 43; P. Mauer, 42; C. Rebeck, 40; G. Lining, 40; A. E. Barnes, 40; C. Helfreich, 33; A. Denackin, 31; G. W. Rogers, 29; H. Doerr, 20; M. Glassnap, 19; F. Reuzschler, 13; J. G. Glassnap, 13; F. Engel, 11.

July 9.—The Schuetzenverein closed their rifle tournament to-night after an excellent four-days' outing. With the exception of a rather strong and changing wind the last one was a good one for shooting, and each marksman realized it, for the target-keepers were kept on the jump from early in the morning until the shooting closed at 7 o'clock in the evening. The tournament is the most successful ever held by the society, both financially and in the scores made by the contestants. The attendance has been large, and the best of order has been kept on the grounds and the comfort of every one present, whether spectators, marksmen or workers, has been carefully looked after. Secretary T. T. Cartwright, Shooting Master Dick Hare with his aids and President Buchholz have worked hard to bring the affair off successfully and deserve credit for their exertions. There has been but very little "kicking" by those competing for prizes, and what little was done has been on minor points. The New England Rifle Association and the Springfield Schuetzenverein may congratulate themselves on the success of the rifle tournament of 1886.

The winning scores in the several matches, with the conditions under which they were shot, are as follows:

No. 1.—Target of Honor. Open to members of the New England Rifle Association only. The winner takes the first choice of prizes and the King's gold badge, and will be crowned Shooting King for 1886.

No. 2.—German Ring Target.—Open to all comers; any rifle, 3 shots to a score. Entry, \$2; re-entry, \$1; entries unlimited. Each shooter can obtain but one prize; 24 prizes; value \$310:

J A Huggins.	24	25	24	Z C Talbot.	23	23	21-67
W Haves.	23	24	25	G Zettler.	24	24	19-67
M Dorrier.	24	24	23	T B Wilson.	19	25	67

CREEDMOOR.—The N. R. A. have but four shooting days during the present and following month. Matches are set for July 17 and 31, and Aug. 14 and 28. The matches are: 1. The champion Marksmen's Class Match.—Open to all members of the N. G. S. N. Y., and members of the National Rifle Association. 200 and 500 yds., 5 shots to each; the Remington Rifle, N. Y. State model; standing at 200 yds., lying head to target at 500. First prize, a gold marksmen's badge for 1886, the badge to become the property of the competitor who, at the close of the season of 1886, shall have won it the greatest number of times. 2. The qualification match of 1886.—Open to members of the N. G. S. N. Y. and N. R. A. 100 and 200 yds., 5 shots at each range. Remington Rifle, N. Y. State model. Standing at 100 yds., kneeling or sitting at 200.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ST. HUBERT GUN CLUB.

OTTAWA, July 9.—I enclose you the scores made at the recent shooting tournament held in this city under the auspices of the St. Hubert Gun Club. Although in point of attendance the meeting can hardly be deemed a success, still all the sportsmen from a distance who did attend expressed themselves as well satisfied with the treatment they received, and at the manner in which the various matches were conducted. As you will perceive our American cousins carried off a fair share of the honors, and their shooting, especially at long ranges, was certainly first-class.

Our committee felt very much disappointed that owing to the fact that so few Canadian gun club's sent delegates to the meeting, they were obliged to postpone the formation of a Dominion Gun Association on the model of the National Gun Association of the United States; but the plan will not be lost sight of, and renewed efforts will be made in that direction so soon as a favorable opportunity occurs. As you will perceive by the papers, we were interrupted on the first day by a contest with the S. P. A., who issued several summons to local sportsmen to appear on Saturday on a charge of having committed cruelty to animals. The issue is looked forward to anxiously, as it will, of course, establish a precedent for the future.

—W. L. CAMERON, Sec'y.

First match, 10 single clay pigeons, 5 traps, fatorial rules: Trudeau.....0001100110-4 J Dunlap.....0111110101-7 McMurchy.....0111110111-9 Throop.....0111110111-9 S Glover.....01000101-6 Leclerc.....0111110111-6 Folsom.....0111110111-8 Cameron.....01110111-7 Lock.....01010111-8 Tache.....0101101000-5 Presley.....0101010111-6 Deslauriers.....0011110101-6 E Hudson.....0111110111-9 Guy.....11 Retired. Fleischer.....01011111-8 T Glover.....1001010001-5 Courtney.....1001010100-6 H Whitney.....1111111111-10 M C Smith.....1111111111-10

Mr. Whitney arrived too late to compete in this match, but his score was allowed to count for the aggregate prize, a medal presented by Messrs. Ligowsky & Co. of Cincinnati.

Ties of 9 on 3 clays, 20 yds.; Throop missed first, McMurchy and Hudson on 3 each; second tie 2 each, third tie McMurchy 3, Hudson missed first and withdrew. Ties on 8, at 20 yds.; Fleischer missed second and withdrew. Folsom and Lock 6 straight, third tie Lock 1, Folsom 2.

Second match, 15 singles and 5 pairs double, Ligowsky clay-pigeons, from five traps.

S Glover.....111101011111-11 11 11 10 10 11-22
E Hudson.....111111111111-10 11 11 10 10 11-20
W L Cameron.....0111 11111111-11 10 10 11 11-21
J Presley.....101010101101-10 00 10 11 01 01-23
M C Smith.....111111111101-11 11 11 11 01 01-23
J Courtney.....111101111111-11 11 10 11 01 01-21
A Throop.....111011111111-11 10 10 10 11 11-19
H H Fleischer.....0111110111-10 01 11 10 01 01-19

H Whitney.....111111111111-01 11 11 11 11-24
E Folsom.....111111111111-01 11 11 11 11-24
Varib.....000101001 retired -3
Wilkes.....110100100 retired -5
Lock.....111111111101-01 01 00 01 10-18
T Glover.....10101111001010 01 11 00 11 11-15

On shooting off, W. L. Cameron took first, Folsom second, Hudson third, Smith fourth and S. Glover fifth.

The third match was to have been a club team match, open to teams of 5 from any club; there being only two clubs on the ground able to enter a legitimate club team, this match had to be struck off the programme. Fourth match at 25 single clay-pigeons, 5 traps:

Hudson.....1101111011110101111-22
McMurchy.....1101011111111101111-21
Cameron.....10010001011111111101-19
Deslauriers.....0111111010101010101-17
Parret.....00010111001010101011-14
Fleischer.....11111111111001111111-21
Whitney.....111010111111111101011-21
Smith.....10111111110101111111011-20
S Glover.....1111101011111101011111-21

Ties of 21 at 5; Whitney 4 and retired, Hudson and Glover 5 each; second tie, Hudson 5, Glover missed second and retired.

Fifth match at 10 single clay-pigeons, 5 pairs double, 5 traps:

E Hudson.....01111111-11 11 10 11 11-17
S Glover.....111110101 01 10 10 10 11-14
H McMurchy.....111110111 11 11 11 11 11-19
H Whitney.....101101011 11 11 11 10 10-14
M C Smith.....011101111 10 00 01 11 11-14
Fleischer.....10101010 10 10 10 10 11-13
Courtney.....11011111 10 11 11 11 11-18

On ties of 10 shot off, Glover and Fleischer won.

There being no entries for match No. 6, a twin team handicap sweepstakes, it was struck off the programme. The aggregate scores in matches 1, 2, 4 and 5 were as follows:

E Hudson.....9 24 21 17-71 M C Smith.....10 22 20 14-66
H McMurchy.....9 20 22 19-70 Fleischer.....8 19 23 13-63
A Whitney.....10 24 21 14-69 S Glover.....6 22 21 14-57

Mr. E. Hudson, of Syracuse, N. Y., therefore won the Ligowsky medal with the handsome score of 71 out of a possible 80; i. e., 60 single birds and 10 pairs (30) double birds.

Match at 21 live birds, 20 yds. rise, 14 oz. shot:

Lock.....111111110001011010-15
Leclerc.....111100010000101111-13

Murchy, Cincinnati, 18, H. Fleischer, Syracuse, and C. Wilkes, Mon-
treal, 17, divided \$75; G. Briggs, Toronto, C. Small, Toronto, and E.
Hudson, Syracuse, 17, divided \$35.

LYNCHBURG, Va., July 9.—Editor Forest and Stream: To awaken an interest in artificial target shooting in this locality, with a view toward organizing a club, I had a blue rock trap and birds sent here and gave two shoots, one on the 7th and another on the 9th. A local dealer being anxious to exhibit a Decatur red bird trap, we used one red bird and one blue rock alternately. The red bird trap did not work well and broke over 30 per cent. from the trap, annoying the shooters greatly, the flight of this bird seemed to be uneven and weak, not going over about 30 yds. The blue rock was the favorite, and will probably be adopted. They flew beautifully, being thrown from 50 to 65 yds. from the trap at low elevation, making a target to try the skill of the best shooters. Most of the gentlemen who participated in the shooting are good field shots but made low scores, having never before seen the targets at which they were shooting. The following scores were made after considerable preliminary shooting:

July 7.—First score at 3 red birds and 3 blue rocks:
Thos Clayton.....000110-2 Thos Kyle.....000010-1
Gen Smith.....000110-2 Richards.....01101-3
Jas Kyle.....000110-3 R L Miller.....00111-4
Thos Nelson.....100110-3 W Clark.....00011-4
Jas Cleland.....000110-3 Dr Morgan.....11001-2
Penn.....001001-2 W D Miller.....00001-1

Second score:
Thos Clayton.....100111-4 Thos Kyle.....100001-5
Gen Smith.....000100-1 Richards.....11101-5
Jas Kyle.....000100-2 R L Miller.....11011-5
Thos Nelson.....111110-5 W Clark.....01010-3
Jas Cleland.....000101-1 W D Miller.....11001-3
Penn.....000111-2 Dr Morgan.....00101-2

Third score at a pair of doubles, Miller getting both.
Richards and Nelson one each.

July 9.—Third score:
Thos Clayton.....110101-3 W W Moss.....00000-0
Jas Kyle.....000001-1 Allen.....01000-1
Gen Smith.....000001-1 Richards.....11110-4
Thos Kyle.....010101-2 R L Miller.....00000-0
Thos Nelson.....111110-5 W S Fore.....10001-1
J W West.....000111-1 Catham.....00101-1
R S Terry.....110101-3 D Morgan.....0101

Broken up by dust and rain storm.—BEDFORD.

ST. LOUIS, July 8.—The members of the Excelsior Gun Club held a very enjoyable shoot this afternoon at Rinkerville. Mr. F. M. Rath-
burn was referee and Messrs. N. Rosche and Z. Winger, of Jefferson
City, officiated as judges. J. G. Schaaf won the Trescher gold medal
for the best aggregate of the day.

The medal shoot, 5 live birds at 20 yds. and 5 at 21 yds. rise. Ties,
miss and out, at 21 yds., 1 barrel:

J G Schaaf.....111111110-9 Phil Nolting.....010100011-5
L Krieger.....0101011-7 F Krieger.....10101011-5
Theo Rick.....01010010-3 G W Rinke.....10101011-7
W McDowell.....010100001-3 F Pohlman.....001111101-7
J W Fischer.....010101010-4 L Spelbrink.....011110101-7
H Griesdieck.....10110101-7

J. G. Schaaf first club gold medal, Phil Nolting silver medal, L.
Spelbrink second club gold medal.

Second Shoot, Sweepstakes.—Five live pigeons, 20 yds., ties 31 yds.,
miss and out. Three money, 30, 30 and 20 per cent.:

G Rinkel.....01011-3 McDowell.....11111-5
L Spelbrink.....11011-4 Loerke.....01111-4
Krieger.....01111-4 Pohlman.....11111-5
Schaaf.....11111-5 Seiber.....10010-2
Fischer.....01101-2 P B Jacoby.....00110-2
Rick.....00111-3 J S Moser.....10010-3
Griesdieck.....11111-5 F Fink.....10011-3

Nolting.....01001-1
Krieger, Seiber, Moser and Pohlman divided first; L. Spel-
brink, Krieger, Loerke, divided second; G. Rinkel, third.

Third shoot. A private sweepstakes for \$50 was added between
J. W. Fisher and L. Seiber of the first part and Theodore Rick with
P. B. Jacoby of the second part:

Fisher.....11111-5 Mosler.....10110-3
Seiber.....01001-2 Pohlman.....11110-4
Rick.....01001-2 Loerke.....11111-5
Jacoby.....01001-1 Hudich.....01001-2
J W Rinkel.....11111-5 W Rinkel.....11111-5
Griesdieck.....11011-4 Phil Krieger, Sr.....10111-4
Krieger.....10111-4 Ax.....11111-5
McDowell.....11110-4 Nolting.....00111-3

Loerke and J. W. Rinke divide first money, Krieger and Pohlman
divide second money, Moser and Nolting divide third money.

Mr. Fisher's side wins the private sweepstakes.

GREENWICH vs. WESTPORT.—On the 5th a match was shot be-
tween the Westport and Greenwich (Conn.) gun clubs, teams of 6,
20 clay birds, 18 yds. rise, 3 traps. Greenwich won by the appended
score:

Westport. Greenwich.
G Ferris.....1011011011010001-13 Lockwood.....0111011111111011-17
J Ketchum.....1011011011011011-14 W White.....0111101101101001-13

NIAGARA FALLS, N. Y., July 5.—Match at Niagara Falls black-
bird's, sweepstakes:

E H Smith.....111111-7 W Treat.....1111001-5
C S Shirley.....111110-5 F Gombert.....1111010-5
John Pierce.....101101-5 W H Case.....1111110-6
Wm Gombert.....111111-7 C Rose.....101111-6
F Cline.....110101-5 Jenne, Sr.....101010-4

Ties on 7 and 6 divided. Ties on 5—Shirley 3, F. Cline 0, Treat 3, F.
Gombert 1. Shirley and Treat divided.

Second match, same conditions:

E H Smith.....11111111-9 W H Case.....11110111-9
W Gombert.....11111111-9 Jenne, Sr.....10110111-8
C S Shirley.....10111111-9 J H Jewett.....11011100-7
John Pierce.....10111111-9 J Kline.....11111111-10
F Gombert.....10111111-8 Jenne, Jr.....11011111-9
R Cline.....10110110-6 T Pearson.....11110110-7

Ties on 10 divided. Ties on 9: Shirley 4, Pierce 4, Treat 2, Case 5,
Jenne 6; Case and Jenne divided. Ties on 8: Divided. Ties on 7:
Jenne 5, Case 2.

Third match, same conditions:

W Gombert.....11101111-9 J H Jewett.....10010111-7
E H Smith.....11111111-10 Jenne, Jr.....11111111-10
John Smith.....01000111-5 Kline.....11111100-8
Treat.....100111101-7 T Stephens.....10110100-6
F Gombert.....01101010-5 W Bowen.....10111101-8
W H Case.....10111111-9

Ties were divided.

Fourth match, same conditions:

E H Smith.....11111111-10 J Kline.....01101011-7
J Jenne, Jr.....11111101-9 T Bowen.....10111111-9

T Stephens.....01001010-4 Jenne, Sr.....10111010-7
W Gombert.....10011011-7 J Pierce.....10111111-9
H W Case.....11111111-10 W Green.....01111011-8

Ties of 10 and 8 divided; ties of 9 divided on shoot off by Jenne
and Bowen.

Fifth match, same conditions:

E H Smith.....111111-7 Treat.....1111010-5
W Gombert.....111111-7 F Gombert.....1111010-5
C Shirley.....111110-5 W H Case.....111110-6
J Pierce.....101111-6 C Rose.....111111-6
F Kline.....101111-5 Jenne, Jr.....101110-4
Treat.....111111-5 Case.....111-3, 1; Rice 110-2, 111-3.

ST. LOUIS, July 4.—Western Gun Club, Kelsor's Hill Range. The
first match was 10 single clay pigeons at a distance of 18 yds.; entrance
money, 50 cents. The score was as follows:

Thurber.....111111101-5 M Siegmund.....101000101-5
Hilde.....101011111-8 Pat.....000101011-5
T Silberman.....011110111-8 Nagel.....010001011-5
J Hassfurter.....111011011-8 Bauer.....100001011-5
Clark.....111010111-7 Lenhart.....000101110-5
F Peterson.....111010111-7 Weber.....001010110-5
P Weber.....111010111-7 Heithaus.....111010110-5
Sheer.....111010111-7 Mackwitz.....010100001-4
Cruon.....111010110-7 Fox.....001010101-4
A McGivney.....110101010-6 E Meyer.....101000101-4
Millenberger.....010110101-6 Carvoiser.....010100100-4
P McGivney.....001101010-6 Blue.....101100000-4
G LeFavre.....111110000-6 Everts.....010000001-2
Stiemenski.....011001011-6 Labadie.....000100001-2
Henry.....110010110-6 Ernst.....000100000-1

The first money was taken by Thurber, the second divided between
Hill and Hassfurter after a tie in a second contest, the third Phil
Weber, the fourth divided been A. McGivney and Geo. LeFavre after
a second tie.

There were thirty-two entered the second shoot at 10 single Peoria
blackbirds at a distance of 18 yds. The score was as:

Hill.....111111111-10 Jul Hassfurter.....110001111-7
Phil Weber.....111111111-10 Mocking.....011110001-6
Williams.....011111111-9 T Siebeman.....1011110-6
Le Faivre.....111110111-6 Henry.....101101001-6
A McGivney.....110101111-8 B Weber.....100101011-6
Bauer.....101101011-8 Fox.....100101011-6
Thurber.....101110111-8 A Herold.....001101011-6
Ed Meyer.....111110001-8 Whithaus.....010110001-5
Sideman, Sr.....111110111-8 Clark.....011110000-5
Siemenki.....111010111-8 Borsewether.....000110111-5
Lenhart.....111010111-8 F Conroisier.....010101011-5
Millenberger.....011010111-7 Locatell.....100110001-5
Sheer.....000101011-7 H Vogel.....100100101-4
Pavag.....001010111-7 P McGivney.....001000001-3
Hutchinson.....001011011-7 E Everts.....001000001-3
Crayon.....111110101-7 Green.....000100100-2

The first prize, \$8, was divided between Hill and Weber without a
second match; the second was also divided between Williams and
Le Faivre. After six rounds, in which there was some shooting
done, the third prize was divided between Bauer and Thurber. Mil-
tenberger made three straight hits in the contest for the fourth money
and took it.

The prizes were \$4, \$3, \$2 and \$1 in the third match, 10 single blue-
rock pigeons at 18 yds. The following score was made:

Jones.....110111111-9 H Wilhelm.....101101011-6
E Meyer.....011111111-9 A McGivney.....100110001-5
Le Faivre.....111111111-9 Homer.....101110000-5
Thurber.....110110111-8 Eliesick.....101100101-5
Hutchinson.....111011011-8 T Siebeman.....001100101-5
Lenhart.....010110111-8 T O Sletenman.....100011011-5
Kacer.....00111111-7 Clark.....01010001-5
Tether.....110111111-7 Conroisier.....011000001-5
Sheer.....100110111-7 Stimenski.....001001101-5
Parent.....100011111-7 Green.....101101001-5
H Nagel.....111100101-7 B Westbus.....100110010-5
Phil Weber.....010110111-7 Henry.....111000100-4
F Dengler.....101010111-7 B Bencke.....100101001-4
Hill.....101111111-7 Miltenberger.....010000101-3
Griesdieck.....01111001-7 J Scheske.....001010010-3
Le Faivre.....111111111-7 E Herold.....100000001-3
Frigler.....101010111-6 Simpson.....00014001-2
Bauer.....1010010111-6 J Reinhardt.....001010100-2
Crayon.....010100111-6 Labadie.....000100000-1
Locatell.....110101001-6 Fox.....000000001-1
C Weber.....100100111-6

The man at the end of the string then began throwing Peoria black-
birds in pairs. The best prizes were for the greatest number of hits
in 5 pairs at 15 yds. The contest was entered by 35 men and the fol-
lowing the record made. The first money was taken by A. Mc-
Givney in the shoot off:

A McGivney.....10 11 11 11 11-9 Stimenski.....10 11 01 01 10-6
J Ha-shutter.....11 10 11 11 11-9 Scher.....10 10 10 10 10-6

Dempsey,

Mayflower, whatever the result may be, and whether successful or otherwise, this year Galatea's record is likely to outmatch that of Irex in the estimation of yachtsmen.

WORDS OF PRAISE.—Small Yachts; their Design and Construction. Exemplified by the Ruling Types of Modern Practice. By C. P. Kunhardt. London: Sampson Low, Marston, Searle and Rivington. This is a most exhaustive work of some 500 pages folio, and it is produced with that liberality almost extravagance in details—which often marks American treatises appealing even to a limited class of readers. There are chapters in Mr. Kunhardt's book which require more careful reading, perhaps, than the non-technical student would, as a rule, be able to accord them; the chapters on draughting and modeling. But they were necessary to the completeness of the whole, and the ordinary reader may still gather the main principles of construction without attempting to reduce them to practice. For the rest, the whole art of yachting—building, fitting, sailing and sundry—is covered; and the comparative values of form and rig are presented, theory being checked by experience. The pictures and plans are very numerous.—*Illustrated Sporting and Dramatic News*, London, June 25.

THE CORINTHIAN Y. C.—This club has marked the opening of its second season by the publication of a neat little club book, wherein it shows the wonderful growth of the club. Established only a year ago, it now numbers 215 members and a fleet of 92 yachts, 50 of them keel boats. Last year five regattas were held and this year seven are on the programme. The club is purely Corinthian, no professionals are allowed in the races, which are limited to yachts of 30 ft. l. w. l. and under, though many larger vessels are on the club list. The anchorage is in Marblehead Harbor and the course is just outside. The club have secured a cottage on the Neck near the Eastern Y. C. house, where members may sleep, while meals can be secured near by. The success of this club shows what might be done in many other places with equally good management. The officers for 1886 are: Commodore, B. W. Crowninshield; Vice-Commodore, I. P. Palmer; Secretary, Everett Paine; Treasurer, J. B. Rhodes; Measurer, C. H. Foster.

ALTERATIONS—THE SET OF THE TIDE.—It is instructive to notice the sole direction in which all alterations are now made in yach's large and small. Last winter we noted the addition of outside lead on many yachts, and the change from centerboard to keel, while there was not a single instance of the removal of outside ballast to inside of hull, or in any noticeable case of a change from keel to centerboard. This season three of the large yachts have been altered in the same direction. Mayflower stows more lead on keel and increases draft. Priscilla shifts her mast aft and lowers her rig, Atlantic shifts mast aft also after trying it well forward. Are there any instances of a change in the opposite direction, where masts have been shifted forward and cutter rig been abandoned for sloop in any detail?

EASTERN Y. C. CRUISE.—The fleet of the E. Y. C. were at anchor in Marblehead Harbor on July 9, and a meeting was held on board the Fortuna, at which it was decided to proceed first to the Isle of Shoals, and then to Portland, where another meeting would be held to settle a further course for the cruise. On Saturday at 8:15 a gun from the flagship sent the fleet away. Dreadnaught leading, by Starfish, were Onida and Adelta, steamers, and Fortuna, Dreadnaught, Mohican, Latona, Actea, Meta, Tioga, Wanderer, Slvie, Stranger, Vandal, North Star and Edith. The fleet laid at Portland on Saturday night and Rockland on Monday night.

ROYAL NOVA SCOTIA YACHT SQUADRON.—We have received the club book for 1886, containing a list of 25 yachts. The events for the year, in addition to the open race of June 10 for the Archibald prize cup, are: July 10, open regatta, Mayor's cup; July 27, Lorne cup; July 31, squadron day; August 7, open, Lieut.-Governor's cup; August 21, open regatta; September 4, Lord Lansdowne's prize. A second prize is given in each race. The Archibald and Lorne cups must each be won twice. The sloop Mentor already holds one leg for each cup.

SEIZURE OF AN AMERICAN YACHT.—Sir Roderick Cameron left New York lately in his schooner Rena, bound for his summer residence at Tadoussac, on the St. Lawrence. After leaving the owner at that place the yacht sailed for New York, but after some rough weather put into the little port of Bactouche for repairs, where she was seized by the customs officials and a fine of \$400 imposed, which her owner refused to pay. The case was laid at once before the Minister of Customs at Montreal, who ordered the release of the yacht.

CRUISING.—Bedouin is now off Beverly, Mass., where her owner resides in summer. Clara has also returned from Larchmont, leaving at 2:30 P. M. on July 6, passing Cape Cod at 7:15 P. M. on the 7th, and arriving at Beverly at 9 A. M. on July 8. Nokomis, schooner, Mr. Royal Phelps Carroll, was at Halifax on July 8. On Friday evening Fleetwing, schooner, arrived at Bar Harbor from Portland. Athlon, sloop, Dr. J. C. Barron, has been cruising about Cape Cod. Electra, Com. Gerry, N. Y. Y. C., was at Vineyard Haven on Thursday last.

A HASTY PATCH FOR LEAKY SHIPS.—Mr. Edmond Redmond, of Rochester, N. Y., has invented a patch for use on ships in case of collision, consisting of two sheets of canvas, with a system of parallel steel ribs between. Lugs and guy ropes are fitted by which it may be secured after dropping over the vessel's side. It is fitted for use over any aperture, large or small.

PIEGRASS'S YARD.—Mr. Henry Piegrass has been compelled to move from the location which he has leased for some years past at Pottery Beach, Greenpoint, and so has purchased the yard and business of Mr. David Carll at City Island, the price being \$30,000. The Greenpoint establishment will be moved up there at once.

AMERICAN PHOTOS OF ENGLISH YACHTS.—Mr. K. L. Stebbins, of Boston, whose work is so favorably known to American yachtsmen, sails for England this week to photograph some of the English cracks. He will witness the R. Y. S. regatta at Cowes and return to Boston in time for the trial races.

CHANGES OF OWNERSHIP.—Nautilus, keel sloop, has been purchased by Mr. Arthur Ryerson, N. Y. Y. C. Ariadne, sloop, built last year for Mr. Howe, has been sold to Mr. H. W. Banks, A. Y. C. Josephine, sloop, has been sold to Mr. A. J. Cassatt, former owner of Frolic and Valky.

RACE ON THE SHREWSBURY RIVER.—On July 9 a race was sailed over the ten mile course on the North Shrewsbury in a good S. E. wind. In the first class the winner was Etelka, with the Annie B. second. In the second class the Fern was first with the Little Spot second.

RACE IN JAMAICA BAY.—The first of three races to take place in Jamaica Bay was sailed on July 11, open to all sail boats on the bay. The course was from Seaside House Dock to the red can buoy and return, and 14 yachts started. Ripple won in first class and Kate in second.

THE TRIAL RACES.—A meeting will be held to-day, at which the report of the Cup Committee will be made. It is settled that the trial races will be held about Aug. 15-20, and will be open to single stick yachts of 75 ft. or over only. The Brenton's Reef race will be sailed about Aug. 9.

RACES FOR THE BIG YACHTS.—Bar Harbor Y. C. have proposed to offer a cup costing \$1,000 for a race of the four large boats, and a similar project has been mentioned in connection with the Atlantic Y. C. cruise, but neither is likely to be carried out. The boats cannot be at Bar Harbor in time, nor will all of them be on the cruise.

CAPE MAY COURT HOUSE Y. C.—This club sailed its annual regatta on July 5 over a 19-mile course. The Emma won the championship flag in first class, and the Shortcliffe the second prize. In the second class the winners were the Harry and the Laura.

ANOTHER YACHT FOR THE TRIAL RACES.—Messrs. Gesner & Marr, of New Haven, are now building a sloop of 75 ft. load waterline, for Mr. Henry Kinland, of New York, which is expected to take part in the trial races.

ROYAL CANADIAN Y. C.—At a meeting on July 7 it was decided to contribute \$100 toward the trophy which the L. Y. R. A. will offer, and also to sail a regatta at Toronto on the day following that of the Toronto Y. C. Aug. 11.

"HUNT'S YACHT LIST."—This valuable little volume comes to us in handy size, though larger than in previous years, and with a still larger collection of useful matter. A number of American clubs are included in the list.

PRISCILLA.—It has been generally reported that a lead keel will shortly be placed under Priscilla, but the report is denied by those connected with her. A new mast of Oregon pine is now being stepped.

SOUTHERN Y. C.—This club sailed their annual regatta on June 29, the course being 15 miles. The winners were Mephisto, open boat; Hope, schooner; Anon, cabin sloop; Gypsy, open sharpie, and Carrie V., cats.

A NEW MARINE GLUE.—The Russia Cement Co., of Gloucester, Mass., are introducing a new marine glue, made from codfish skins, for shipbuilders and cabinet-makers.

PUZZLE.—This steam yacht, built last spring by Jacob Lorillard, has been sold by him to Mr. Frederick Brandreth, of Sing Sing, for \$10,000.

OONA.—The body of one of the crew of the Oona has been found on the beach at Malahide and identified as one of the seamen, Grace.

EAST RIVER Y. C.—This club will move next month to a new anchorage near Hallett's Cove, where better water can be had.

KING PHILIP.—This boat, laid up for some time after her failure as a racer, has been fitted out with reduced spars as a cruiser.

DI-MASTED.—On Monday last in Long Island Sound the sloop Gladiator lost her mast at the deck and was towed in for repairs.

OIL-BURNING STEAM LAUNCHES.

THE accompanying cuts show the engine and boiler used by Thos. Kane & Co. in their steam launches, of which they are now building a variety of sizes, from 19 to 30 ft. The Linn valveless engine, as it is called, is a single-acting three-cylinder engine of the

SIDE VIEW OF ENGINE.

simplest construction, all valves, eccentrics, guides, piston rods, crossheads, stuffing boxes and flywheel being dispensed with. The working parts are comprised, as shown, in three fore and aft cylinders, each with a wide piston and a pitman, and a triple crankshaft.

END VIEW OF ENGINE.

A lever and a plain sliding plate serve to stop or reverse the engine instantly. The oil used runs down and is caught in the lower part of the iron casing, perfectly lubricating the crankshaft. The latter, as well as the pitmans, is of cast steel, all bearings being of Babbit metal. The boiler is of the porcupine type, a vertical shell with a

ENGINE AND BOILER.

number of radiating tubes, affording a large surface and easy means of cleaning. The fuel, ordinary kerosene oil, is carried in a tank at the bow or stern, a 1/4 in. iron pipe leading to the boiler. Of course, there are no coal nozzles, with the accompanying dirt and labor. The engine may be fitted to any boat, or the complete launch, ready to run, can be furnished.

Every pair of Allen's bow facing oars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

Louise Leighton owns a pretty white, shaggy-coated Yorkshire terrier that one night convulsed 1200 people with laughter. "Il Trovatore" was being sung, with Miss Leighton and her husband, William Eckert, in leading roles. In the blissful tenderness of their wedding duet Mr. Eckert's heart stood suddenly still with a cold, cold chill, as he felt something clawing his white silk tights. The little dog had escaped from the dressing room. In vain did his master shoo and scowl; in vain did stage hands whistle and call from the wings. Doggie had found friends and would not go away. Presently he squatted down, held up a right paw as he had been taught, and looked up sideways with such a comical leer that it was almost impossible for his master or mistress to follow the orchestra. When the duet was finished the audience yelled, but doggie would not budge until Mr. Eckert went along. In "Robinson Crusoe" this same little dog improved his opportunity of a legitimate appearance. In the castaway mariner's lonely island home "this real, truly dog," as the children say, performed many pleasing tricks and did his part as well as any actor in the piece.—*San Francisco A.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc. of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, trips, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

7—Brooklyn, Paddling. 2—New York, Fall Regatta.
13-27—A. C. A. Meet, Grindstone.

CANOEING ON BLACK CREEK.

IN early days the Genesee River and other tributary streams were made useful in conveying merchandise, and in travel to and from the Indians made use of the streams in carrying home their game, as well as for hunting and fishing. The Genesee was kept clear of obstructions and was navigable for a long distance above Rochester. The methods of travel have changed of late, to such an extent that an eighteen mile ride in a canoe is something of a novelty. When I placed my boat in the stream at 9 o'clock one morning the stream was filled by recent rains, thus increasing the speed of the current, enabling me to make the trip at this time with greater ease than ordinarily. It was a bright May day; the birds were singing in every tree and bush; the dew sparkled in the tufts of grass, and caps of foam were spread over the surface of the stream like large water lilies. An ample lunch lay in the bow of the boat, and beside it lay my gun, which I have taken in all my hunting trips, and which is valuable from old associations.

"What do you expect to hunt at this season of the year?"
"Nothing."
"Why do you take a gun along?"

"It is a habit I have when roaming through the fields and by the streams, whether there is game or not."

Facing down stream, pushing the boat before me, I glide along with pleasant anticipations. Sometimes turning to the right or left to avoid snags or rocks; now darting under low, hanging boughs of willow or elm; now shooting over the rapids, a little further on sweeping under a bridge; again I am circling through a forest, an open meadow, or fields of grain. A horse feeding by the stream looks at me distrustfully, gives a snort and scampers away; the cows, pigs and sheep also indicate their surprise. Now and then a woodchuck rattles over the brush and darts into his hole. How many bridges there are. Residents have been taxed heavily for iron bridges to span the stream. There are from two to five bird's nests under every bridge, and I stop occasionally to admire their construction, and the beautiful eggs that lie like opals and pearls in the security of these snug homes. Often I would not have noticed them were it not for the belligerent attitude of the birds. Many of the nests were just constructed or not completed, and the birds seemed to have moistened the grasses and other materials in order to shape them. How many strange birds there are in our woodland and along our streams. Although I am expected to make an annual report on the peculiarities of our birds, I often meet those I am unable to name. Of recent years I have noticed a small red bird and a blue bird of the same size, which seemed to be new comers. I did not hear one bobolink along the way, but the black-birds, robins, kingfishers and field sparrows were numerous. I did not see a swallow. These valuable insect destroyers are disappearing; not long ago the eaves of the farm barns were filled with their nests, now they are rarely seen in those places. The country will soon be destitute of birds unless methods are taken for their protection.

Now turn my boat and pull with my face backward. I pull along much faster this way, and the change is desirable. I fly along at rapid speed and congratulate myself on the good time I am having. Everything is so quiet and so strange. Every bend in the stream opens up new views, it is a series of surprises, like the turning of the road in which you are driving. Your imagination is constantly exercised to know what is ahead. Landscape gardeners introduce these surprises when laying out parks and grounds with fine effect.—bump—swash. What now? We have struck a boulder standing high above the stream. I am nearly knocked out of the boat which swings around the other end foremost. I shall have to be more careful or be upset. Face downward is better after all.

How the farm wagons rattle over the bridges in comparison to the still carriage in which I ride. I escape the dust and heat of the highway and ride most of the time in the shade of the elms. The train of cars booming along does not seem to convulse its passengers as easily as small craft carries its lone voyager. Do not suppose that I am making great haste toward the end of my journey. No, such trips as these should be taken at leisure, giving time to take in the scenes of beauty, and revel in the music of nature as given in the blossoming month of May. Many of us could accomplish more in our walks and hunts and in our business enterprises if we made less haste. I could exhaust myself in an hour by pulling at these oars, thereby marring the pleasure of the remainder of the journey. How many mar the pleasure of a lifetime by straining by main force to tug along the business oar without needed rest and recreation. I am no idler, but have been hard at work all the winter and spring, my business cares gradually weighing heavier and heavier, but a day's recreation like this gets me out of the ruts, and I go back to my work feeling it a much lighter burden.

Query—How can a spider weave its web across a stream eighty feet wide? I have to brush these webs from my face continually.

Query—How is it that people who never eat pickles and ordinary circumstances eat them ravenously at picnics? There are several pickles in my lunch, and I begin to feel row as though I would like to nibble one.

Query—Why is it that men desire to kill innocent birds and game that they have no use for? Probably for the reason that their ancestors existed by the chase and they inherit this propensity and take pleasure in it. What a snipe! Bang goes the gun—misses him. Another—bang again. He comes fluttering down into the water. How much prettier he was before he was shot. Man with all his boasted culture is something of a barbarian. I think I will put in a few bucks now, as I notice woodchucks are getting plenty. I do not proceed far before I surprise one some distance from his hole and discharge my gun at him. He is hit fatally but is rapidly dragging himself toward his hole. I run my boat ashore and leap out to head him off, arriving at his hole just in time to see him disappear like a charge down the mouth of a cannon. I have lost the woodchuck and the boat also, for the current has swung the other end around and she is floating down stream.

Query—Why did I want the woodchuck? Cannot tell, but I am sure I want the boat. The prospect of getting it is about as favorable as that of getting the woodchuck. I gain it, however, about a quarter of a mile below, where it has become entangled in the willows.

Time, 11 o'clock A. M. Again I feel like attacking the pickles, but conclude to wait until the regular meal hour for dining.

Black Creek is continually blocked by great trees that have fallen into the stream. In most cases I can find a passage for my boat, but now I arrive at a point where I must pull it over the bank and around the obstruction, wading through four to six inches of water. Off I go again. The freshest must have raised the stream several feet, for the buttercups raise their heads preciously a foot or more under water, and I often float over fields of wheat and oats over which some honest farmer has toiled. I think now I will land my boat and save the wonder slope and dispossess it of some of the water that has gained admittance. I will get up good speed in order to run my boat well upon shore. The current is strong, I am going pretty fast—bump, we have struck, the bow heading down stream. I jump out, and in the twinkling of an eye the current has shifted the boat down the stream and filled it with water. My overcoat, undercoat, powder-flask and lunch are floating about, while my gun is submerged. I make a grab first at the lunch—notice the divergence I make, saving the most valuable part of the cargo—next the powder-flask, next the gun, next the undercoat, then the overcoat, at the same time speculating upon the condition of the sandwiches, etc. The powder is hopelessly wet. No more destruction of woodchucks for this day. Alas! "the plans of men are apt to gang astray," but I soon forget all about this incident as I am again gliding down, for we have struck a beautiful part of the stream shaded by that most beautiful American forest tree, the elm, which we love and revere and are forever endeavoring to get over.

Here are two farmers resting upon their toes, having been engaged in plowing corn. They observe me, and I stop to chat. "There was two fellers up here from the city last winter after rabbits. They

were dressed to kill and had breechloading guns and two trained rabbit dogs. They came by my house on the way down to the swamp below, intending to cross the stream about this spot. They were tremendous hunters. I know by the way they talked, and I knew there was no hope for any rabbits in this part of the country. I told them they had better look out for the ice, as it was a little soft. They looked at me as much as to say they did not want any advice from country fellers. Well, I watched them as they struck the creek, and by and by I heard a yell and saw enough of the fellow that was on ahead in clear up to his neck, and the one feller g after him had tumbled down flat among the broken ice and mud. Well, I pulled them out and dragged them to the house, put them to bed, hung their clothes over the stove, and finally sent them home about nine o'clock that night. They didn't put on half so much style when they went away as they did when they came. The rabbits around here in the woods look to me as though they had been laffin' ever since. I have no time to hear stories so on I go. The shores of the creek are strewn with shells, the better part of the clam having been eaten by muskrats. The stream is fragrant at many points with the smell of musk (not at all disagreeable to me), and yet I did not see a muskrat the entire day. Most boys living near streams have had experience in hunting these animals, and no doubt the boys living here have watched with eager interest their carefully adjusted traps and proudly marketed their accumulation of furs. The banks are covered at many points with the most beautiful ferns. Before me is a group of beautiful white blossoms, something that I have not before seen. Stumps of the soft maple are entwined in bright red leaves that look in the distance like a mound of red flowers. I catch a glimpse now and then through the openings in the elms, of apple orchards in blossom and farm gardens with their quinces, currants and raspberries. How sleepy the farmhouses look. Now and then I see a boy driving the cows out of the wheat fields which they have reached by swimming the stream. Sometimes I see a solitary man plowing or hoeing. What a quiet life is the farmer's—far too quiet. Better that his blood should get heated and his courage roused, even though by a mild cata-trophy. Strikes, paucis, mobs, all have their compensating features, although no one desires them. They develop men and call into use latent ability.

If the reader fancies rural scenes and boating I advise him to take a sail down Black Creek. When the water is very low he will doubtless have difficulties caused by blockades of the stream, but at this season of the year the high water will doubtless give him pretty fair sailing. There is no ray that I can shake off business cares so successfully. A boat ride on the lake, bay or river cannot be compared to it. The scene on the creek is changing every moment, with no two views alike.

Query—Why are woodchucks, weasels and other animals endowed with such remarkable curiosity as they possess? A weasel scends under the roots of a tree, but no sooner is he out of danger than he pops his head out to see what is going on. A woodchuck will always thrust his head out of his hole after escaping his pursuer if all is quiet for a few moments. Chipmunks scend along the shores of the creek frightened almost to death, but no sooner do they reach their hiding place than they step out to take in the situation. The gray squirrels scramble up the elms and beeches to sit in full view, with tails curled over their backs, watching the solitary oarsman as he glides by. Even the birds seem to be interested in me and twist their necks to get a better view.

Query—Why are the male birds most attractive in plumage and song? Look at that blackbird. What glossy black plumage, circled with scarlet, compared with his modest companion in Quaker garb. The comparison between the male and the female bobolink is equally noticeable, likewise many other species. Possibly because the male birds are alone valuable only as they are made the target for every boy who carries a gun, while the female is clad in obscure colors, which permits her to escape observation.

Query—Why has not man made better use of the enormous water power that is present in every creek and river along the shores of the great lakes? What a ting the current gives my boat; it carries me down against a snag or rock in spite of my best endeavors.

I have now entered a long, level tract of swamp land, in which the stream diverges into many branches. I am at a loss to know which branch to take. I run down one and find it blocked, down another and find it also blocked, go back to the first and haul my boat around, and this is kept up at frequent intervals. I am at a loss to discover where will be my way and slip over easily. Heave away; now she goes like a rocket and entirely out of my power. All I can do is to make a leap aboard. I succeed in landing one foot in the boat and one in the stream. This upsets the boat and fills it to within a few inches of the top with water, throws my gun into the stream and leaves me with wet feet considerably excited. I have bailed a barrel of water out of the boat with the oar, permitting four barrels to remain in. I propel myself slowly onward through the tangle of brush and driftwood, proceeding thus a quarter of a mile with the danger of being swamped until I can reach high enough ground where I can land and tip out the water. Now I perceive how much better things are managed for us than we could manage them ourselves, for the lurch, being ballasted with the water it had absorbed in adventure No. 2, has retained its position in the boat, whereas had it retained its normal position it would have been tipped out into the stream and lost.

Time 12 o'clock. I must watch for a better place to lunch; 12:15. I have found an inviting knoll, furnished with a broad stump carpeted with green grass and dotted with many an inviting flower. With many misgivings about the lunch, I spread it upon the stump. Pickles sound, no blemish; boiled eggs in prime condition, cheese about so so, ham sandwiches, sponge cake, mince pie. Well, it is folly to go into minute details in regard to all these items, unless one is a Diogenes and can make the discussion of the buttons on a man's coat interesting. I have scarcely begun my lunch when a mosquito perches upon my nose. Having a sandwich in one hand and a pickle in the other I do not deem it best to be rude to the stranger. Soon this mosquito was joined by five hundred of his companions, and they gave me a most cordial and hearty welcome to that part of the country. I cannot remember when I have had such marked attention paid me, yet I bore the honors with great meekness. I would have chosen that they had been less familiar, but they seemed bent upon making every moment available during my stay, and I could not but be annoyed by the importunities of these annoying insects. I certainly did on this occasion, and taking a late bite of the pickles, I made a dash for the boat.

About a mile further on my boat swings out into the midst of green pastures, by the side of orchards and green fields, the stream is largely augmented, having gathered together all its branches. I

shoot along rapidly, soon reaching the aqueduct over which the Erie Canal passes. The creek at this point is only about three feet at the highest, and the water is dripping from above rapidly. I passed through with little inconvenience, however, and soon found myself upon the broad Genesee, which lay before me like a sea of glass. I am now five miles from Rochester. My ride down the Genesee proves to be the least enjoyable. There is no shade from overhanging boughs, and the scenery is monotonous. I pull along with a steady oar, exchanging greetings with the fishermen and boatmen along the way, landing in time to reach the evening train going west. ROCHESTER, N. Y. CHARLES A. GREEN.

ROYAL C. C. ANNUAL REGATTA.

THE twentieth annual regatta of this club took place at Teddington on Saturday last, June 26, when the weather, as usual, favored the canoeists and their friends. A new feature was introduced this year, in the shape of a camp competition, which proved a great success, though a difficulty in procuring a suitable site caused a delay in sending around notices. It is to be hoped that this experiment—or, at all events, a camp—will be repeated next year, and that other members and visitors will come and exhibit their camping gear for the mutual benefit of all present. Mr. W. Baden Powell was camp officer, and had an exceedingly neat and compact tent and appliances with his new canoe Nautilus, but did not take part in the competition. The other campers were Messrs. Percy Nisbet, T. H. Holling, G. F. Holmes, A. C. Hamerton and W. Stewart. The decision of the judges is not yet announced, as the weights of the various klls have not yet been sent in.

The regatta commenced with a sailing race for second-class sailing canoes, the only starters being Messrs. A. B. Ingram (Akaroa) and Rede Turner (Sabrina). There was almost an entire absence of wind, and the course was shortened to one round. Both canoes kept close together, Akaroa slightly leading until two-thirds of the course had been sailed, when Akaroa got a light air and came away, winning easily.

Half Mile Paddling Race for Novices.—E. W. Lewis, 1; J. Hill, 0. A good race nearly all the way.

Half Mile Paddling Race (any canoes).—G. T. B. Porter, 1; P. Nisbet, 2; A. C. Hamerton, 0. Porter soon obtained the lead, eventually; Hamerton some distance behind Nisbet.

Paddling Sailing Race.—E. B. Tredwen, Pearl 86. 1. Also entered: Irene, Percy Nisbet; Sabrina, Rede Turner; Akaroa, A. B. Ingram; Pearl 85, W. Stewart. Irene was first at the end of the paddling round, followed by Akaroa and Sabrina, the two heavy Pearls being some way behind. As soon as it came to sailing, however, Pearl 85 and Pearl 86 picked up the others, and Pearl 86 took the prize.

One Mile Paddling Race in Rob Boys.—G. T. B. Porter, 1; E. Lewis, 0. A good race, both men being level at the half distance; Porter, however, came away at the finish and won.

Canadian Canoe Race (two men in each canoe).—Percy Nisbet and F. M. Featherfield, 1; A. C. Hamerton and S. Fitcher, 0. A good race, but the losers were apparently under-bored.

Sailing Race (Round the Buoyed Course).—Owing to the paltry wind, the course was shortened to two rounds. Entries were: Pearl 86, E. B. Tredwen; Nautilus, W. Baden Powell; Sabrina, Rede Turner; Pearl 85, W. Stewart. In the lightest of air they drifted to windward to the lower buoy, and took the lead alternately as each caught a puff. In the last run-up, however, W. Stewart in Pearl 85, got clear away and won easily; Pearl 86 second; Nautilus, third.

Challenge Cup Paddling Race, One Mile.—Prize, the £50 challenge cup, and a presentation prize, value £5. There was also an extra prize offered by Mr. J. W. Clayton, for the first foreign or colonial canoeist winning the cup, but there were no challengers outside the club. The holder, Claid Scott, was unfortunately not able to put in an appearance for this race, in which G. T. B. Porter, P. Nisbet, and E. W. Lewis were entered. Only Porter and Lewis started, and the former very soon showed in front, and won by several lengths.

Sailing Race (Running Only).—Pearl 86, E. B. Tredwen, 1. Also entered: Pearl 85, W. Stewart; Akaroa, A. B. Ingram; and Sabrina, Rede Turner. Four Paddle Race, One Mile.—R. C. C. v. Royal Naval Artillery Volunteers.—R. C. C. crew: S. Fitcher, J. H. Hills, E. W. Lewis, G. T. B. Porter, R. N. A. V. crew: Percy Nisbet, Rede Turner, R. H. MacIure, S. Roberts. The R. C. C. soon showed in front, and going right away, won by several lengths.

Class over Land and Water.—S. Fitcher, 1; P. Nisbet, 2. This race created, as usual, considerable amusement, S. Fitcher, contrary to expectation, getting over the river for the last time in advance of Nisbet, who used an inflated Indian rubber canoe of very light structure.

Scratch Four.—These races, as is very often the case, produced some of the closest matches of the day. In the end, Porter's crew beat Nisbet's by a bare two feet, and took the pots. The race was started by the arrival of the launch Jeannette, whose owner had kindly placed her at the disposal of the club for the regatta. The veteran, Mr. Herbert, was again at his post as judge at the finish of the paddling races, and the captain (Rob Roy) was present at the camp during a great part of the day.—Field July 3.

OAKLAND C. C. CRUISE.

THE Oakland C. C. has at length succeeded in securely planting canoeing in Pacific waters and in raising the sport from the position of a questionable experiment to that of a recognized institution. The club is a most active and energetic one, and its races and cruises are attracting general attention and doing much to extend the popular knowledge of canoeing, and to bring it favorably to public notice. The club house on Oakland Creek now contains a fine fleet of canoes, while the creek, so called, with a stretch of six miles, offers a fine sailing ground. On Decoration Day a very successful regatta was held, with 11 events on the programme. The club have lately made a cruise to Clear Lake, a journey of a day and a half from Oakland by rail, steamer and wagon. The canoes, 10 in number, were transported over the mountains on wagons, being carefully packed. On June 4 the club arrived at Lakeport and went into camp. On June 12 a regatta was held, the programme including a race for second class canoes, won by Undine; one for first class canoes, won by Spray; a single paddling, won by Whitewing; a standing paddling, won by Whitewing; a swimming race and a contest between a tandem canoe and a four-oared barge, won by the latter. The canoeists were very handsomely entertained by the residents of Lakeport. They returned home well pleased with their cruise.

THE A. C. A. TROPHY.—Editor Forest and Stream: I beg to acknowledge the following subscriptions to the A. C. A. international challenge cup: J. H. Rushton, second subscription, \$5; Paul Butler, \$10; previously acknowledged, \$27.15; total to date, \$52.15. There remains still about \$100 to make up, and I request that all interested will act at once if they have not already contributed.—Wm. Warrlock, Chairman, 37 West Twenty-second street, New York.

A. C. A. MEMBERSHIP.—The applicants to date are Messrs. S. O. Howell, Goshen, N. Y.; J. E. Brouse, Jr., H. A. Field, C. W. Lane, Brockville, Canada; W. H. Fisher, Montreal, Canada; George Auldjo, Lacrosse, Canada. Dr. Neldé left for Grindstone on July 7 and will have all ready by Aug. 13. Canada will turn out in full force this year.

YONKERS C. C. ANNUAL REGATTA.—The first annual regatta of the Yonkers C. C. was held on July 3. The single paddling race was won by J. G. Reeves in Jennie R., the tandem by J. G. Reeves and A. B. Patton in Goblin, hand paddling race by H. L. Quick in Spy. Owing to lack of wind the sailing races were postponed. The regular monthly meeting was held July 6, 1886, at which the following officers were elected for the ensuing year: P. K. Sheers, Commodore; H. L. Quick, Vice-Commodore; L. Simpson, Secretary-Treasurer.

THE INTERNATIONAL RACES.—We learn that Mr. E. B. Tredwen will be unable to visit America as he proposed to do, owing to the serious illness of his father. Mr. Baden-Powell is now building a new 15x31½ canoe to race for the New York and A. C. A. cups.

SUBSCRIPTIONS TO THE CANOE EXHIBITION.—Mr. Stanton writes to us that the subscription of \$20 to the expenses of the exhibition was contributed by Mr. Rushton, through his agent, Mr. Squires.

MUSKETA C. C.—This club, located at Bergen Point, will make a cruise in August to Lake Hopatcong, returning down the Delaware River and through the Raritan Canal.

NEARLY EIGHTEEN THOUSAND MEN were paid cash benefits in 1884 by the Travelers Insurance Company, of Hartford, Conn., for losses by accidental death and disabling injury.—Adv.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

W. B. R.—Train oil is whale oil.

B. C. W.—See table of open seasons in our last issue.

VACATION.—What is the best bait for salmon and large trout in lakes? Ans. Live minnows if still fishing at a buoy, or dead ones if trolling.

D. B. K.—I have on my property near Seabright, N. J., a lake which abounds in carp. In the early part of June I took 9 with a light fly-rod, averaging ½ lbs. each, using worms for bait, at which they bit eagerly and run well, making very good sport. For the past three weeks I have been unable to tempt them. Can you suggest any other bait at which they will be likely to bite? Ans. Try boiled peas and also cotton wet and rolled in flour. The latter stays on the hook best.

D. M. Lynn, Mass.—Will you or some of the readers of FOREST AND STREAM please give me information of the following questions: 1. Where can the greenheart, so-called by rod-makers, be procured near here? 2. Is the same as hornbeam? 3. Do rod makers use muriatic acid to draw the temper or for other purposes on greenheart, if so please inform how? Ans. 1. Try some importer or woods in Boston or some rod maker. 2. No; hornbeam is a native wood, called also ironwood. 3. We never heard of such a practice.

R. Augusta, Ga.—We had a clay pigeon match here and were shooting doubles. A went to the score and announced ready, when two traps were sprung. One of the birds was broken from trap and the other was not. A. shoots at the broken bird and then refuses to shoot the other or second bird, and wants two new birds. Is he entitled to them or does he lose both? I claim if both birds had went from trap all right, and A. shot one and failed to shoot the second, that he lost both. I also claim that when A. shot at a broken bird and missed, and refused to shoot at the second bird, that he lost both. Ans. By firing at the first bird he accepted it and scores a miss; by neglecting to fire at the second bird he scored a second miss.

W. S. C., Jamestown, N. Y.—Please inform me what the law requires in order to post a private trout stream, what size of board should be used and how the notice should read. Ans. The laws of New York require that you publish, "at least once a week for three months, in a paper of general circulation, printed within the county or counties within which such land, or lands and water, are situated, a notice describing the same." In this notice must be a clause declaring that the lands or water will be used for propagating and protecting fish, etc., and within six months you must put up sign boards warning all persons against trespassing. These boards must not be less than one foot square and not more than forty rods apart. See Laws of New York, 1883, Chap. 255, Sec. 27, amended by laws of 1880, Chap. 551.

J. B. M., Chillicothe, O.—1. What game is most abundant in Northern Nebraska along the Sioux City & Pacific R. R.? 2. Are prairie chickens usually most abundant in an unsettled section, or do they become more numerous as cultivation progresses? 3. Is there good fishing in the Niobrara River and its tributaries? If so, what variety are abundant and how are they taken? 4. How do the climate and game of Southern Dakota compare with those of Northern Nebraska in the months of September and October? 5. What hunting rifle is best for the country named, and where and at what price can it be obtained? 6. What make of sights are best for long-range shooting (game shooting)? Ans. 1. Chiefly birds, i. e., prairie chickens and in season and suitable localities ducks and geese. 2. Prairie chickens (prairie grouse) are usually more plentiful in a settled region, but sharp-tailed grouse (also called prairie chickens) are more abundant in unsettled regions. 3. Not very, mainly catfish. 4. Climate and game are similar. 5. Any good rifle by a standard maker costing from \$16 to \$40. There is no dangerous game and light charges may be used. 6. It is a matter of taste and fancy.

PUBLICATIONS RECEIVED.

THE AMERICAN SALMON FISHERMAN, by Henry P. Wells. Illustrated. New York: Harper & Bros., 1886. Price, \$1.50.

THE PERCHERON HORSE IN AMERICA, by M. C. Weld; in France by Chas. M. Huys. Illustrated. New York: O. Judd Co.

The other day one of St. Paul's most prominent society men went in his canoe to one of the towns down the river. On arriving he proceeded to the hotel for dinner. The young gentleman was attired in a boating costume, with the addition of sleeves and hose. When he entered the hotel the proprietor greeted him as if he thought he had escaped from Stillwater. The hungry canoeist asked the way to the dining-room, but was refused admittance by the hotel keeper, with the assertion that "there were ladies in the dining room, and a man ought to be arrested for walkin' around in that rig." The young gentleman was forced to leave the hotel without his dinner.—St. Paul Pioneer Press.

Two Sample Flies by mail post paid, 15c; per doz., 75c. One 3-piece Trout Rod, Reel, 100ft. Line, six Hooks to gut, one Sinkers, one Leader and one Fly, complete, \$2.00. Post paid, \$2.50. Send for our new catalogue, \$30 large pages, 300 illustrations of all sporting goods, covers printed in 15 colors, sent by mail for 25 cents. PECK & SNYDER, 126 Nassau St., N. Y.

The Fluttering Fly.

PATENTED MAY 4, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are: 1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will still be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: "More like a natural insect than the old patterns whose wings elude when being drawn through the water. * * * Great merit lies in its superior booking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. This fly will certainly, when drawn against the current or over a placid pool, seem the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it."

ABBEY & IMBRIE, Manufacturers of Fine Fishing Tackle,

MUZZLE-LOADER VERSUS BREECH-LOADER.

The Ballard against the World.

ON SATURDAY, JUNE 26, one of the most interesting and exciting rifle contests took place at Union Hill. It has been a mooted question for some time who was the best man, WM. HAYES, of the Newark Club, the acknowledged champion of set trigger shooting in the U. S. for a number of years, or M. DORRLER, of the Zettler Rifle Club, who has been doing some remarkable shooting during the past year (one of his targets may be found on the cover of the Marlin Fire Arms Co.'s catalogue). The mutual friends of these parties have been anxious to bring them together in a friendly contest, and a match was made, the stakes being a Delmonico dinner for twenty-four persons. All the leading riflemen of New York and vicinity were present. The day was very unfavorable for good shooting, and the score was not up to the highest standard of either party. Hayes shot his old MUZZLE-LOADER which has brought him so many trophies, and Dorrler used his BALLARD No. 10, which he has been shooting for about two months. The result was:

M. Dorrler, 100 shots, German Target,	-	-	-	2,178
W. Hayes, 100 shots, German Target,	-	-	-	2,145

The men are undoubtedly on a par, the advantage being with Dorrler because he shot a

BALLARD RIFLE.

We are informed that Mr. Hayes, who owns three BALLARD RIFLES, will give up his muzzle-loader for the future and use his No. 6 BALLARD.

If you want to make big scores, shoot nothing but a Ballard.

BALLARD GALLERY RIFLES are used in all the larger shooting galleries in the principal cities. The scores published from Conlin's and the White Elephant Galleries are all made with BALLARDS, and all the Inter-State Gallery matches for the past two years have been shot with BALLARDS.

The Ballard for Nice Holding and Accuracy is Head and Shoulders Above any other.

SCHOVERLING, DALY & GALES,

84 & 86 Chambers Street, New York.

VICTORY WON

BY SHOOTERS USING THE

Chamberlin Cartridge

AT THE

Tournament of the Illinois State Sportsmen's Assoc'n,

JUNE, 1886.

First and Diamond Badge by GEO. KLEINMAN, killing 29 out of 30 live birds.

Second Prize by ABNER PRICE, killing 28 out of 30 live birds.

First by C. E. WILLARD, in the first event of the "Open to the World" contest. Eighty-two entries.

Also divided in nearly every other event of the great Tournament.

The Chamberlin Cartridges also winners of the Smith Cup, by C. M. HINS DALE, in the Iowa State Tournament at Burlington.

These Cartridges were from regular stock sold by dealers.

10 consecutive shots at 200 yds. off-hand, Dec. 18, 1885, with Ballard 6 1/4 Rifle, 38-55, by Wm. P. Gage, Saratoga, N. Y. Highest recorded score in the U. S. on the American Decimal Target, counting 95. Cut is one-quarter size.

20 consecutive shots at 200 yds. off-hand, made in the Sharpshooters' Match at Walnut Hill, Mass., Dec. 26, 1881, by H. G. Bixby, of Nashua, N. H., being two consecutive scores counting 115 each on the Mass. Target. These were made with a Ballard 6 1/4, 38-55. Cut is one-sixth size.

10 consecutive shots at 200 yds. with rest, made at Guttenberg, N. J., on May 8, 1886, by M. Dornier, using a Ballard No. 10 Rifle, 38-55. Cut is full size.

Send for Reduced Price List of Marlin and Ballard Rifles, dated June 1st, 1886.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

CRATEFUL-COMFORTING. EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

Made simply with boiling water or milk. Sold only in half-pound tins by Grocers, labelled thus: **JAMES EPPS & CO., Homoeopathic Chemists, London, England.**

"Murcia" Silk Worm Gut. FISHING AND SURGICAL USE.

In lots to suit, all grades and lengths, "Extra Heavy" to "Extra Fine." Assorted thousands, ten different grades, including "Extra Long," put up for country trade and clubs. Prices, \$5 to \$15 per 1,000. Assorted thousands, \$7.50. Address LATASA & CO., P. O. Box 2,708, Washington Building, N. Y.

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and, when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

In the Stud.**The "Boss" in Stud.**

Services limited to ten approved bitches, at \$50 each. A. K. R. 2218. His ancestors all champion and show dogs. As a stud dog he cannot be excelled, his get being very large and finely marked.
Boss' Record.—Vhc. at New York in 1885, as a puppy. In 1886, 2d prize N. E. K. Club at Boston. He also took 2d prize in open class and special prize as the best American bred mastiff at the Westminster K. C. N. York, 1886.

Boss is a large dog, weighing upward of 180 lbs.; is good in skull, with grand body, legs, feet and bone.—*Am. Field*, April 8, 1886.
In mastiffs there was but one new one of any pretension and that was Boss. He possesses length of body with great substance, and is perfectly sound in limbs.—*Sporting Life*, March 31, 1886.
A few choice pups of great promise for sale, sired by Boss out of equally grand females, with best of pedigree and markings.
Also a pair of Great Danes, 5 mos. old, marked alike white and blue; great beauties. Pair \$50; others from \$15 to \$30 each.

July 1, tf. J. L. WINCHELL,
Fair Haven, Vermont.

**Gus Bondhu
IN THE STUD.**

Imported from Mr. Llewellyn's kennels (he is bluest of the blue), by Dashing Bondhu ex Novel. He is also a grand field dog, as his record shows at the late trials of the N. F. T. Club at Grand Junction, beating such noted dogs as Gladstone Boy, Mainspring, Bessie A., Gath's Mark, Trinker's Bang and other fine ones. Fee \$35. A. M. TUCKER, 85 Main street, Charlestown, Mass.

CHAMPION LAVERACK SETTER**ROCKINGHAM,**

The acknowledged best English setter in America, and a grand field dog. Will be allowed to serve a limited number of approved bitches. Fee \$50.

DARLING'S FUR DODGE.

IT rather seems as if the case which was going to show the way in which the Massachusetts courts would teach a lesson to those of Maine upon the game laws of Maine had somehow failed to do so. The well-known "Jack" Darling, of Maine, brought a suit in the Municipal Court of the city of Boston against the American Express Company for failure to deliver certain goods in Boston. The "goods," which consisted partly of skins, horns, etc., of deer and caribou, were seized at Bangor by Game Warden Allen, the contraband articles confiscated and the box containing the remainder of the articles, fox and beaver pelts, forwarded to the Boston consignee. For this failure to deliver Darling brought his action. The express company was represented by Louis D. Brandeis, of the firm of Warren & Brandeis, of Boston. It appeared in evidence that a regulation of the company forbade the transportation of these articles and that Darling knew of this regulation. That when Darling presented his box to the station agent, who was also express agent, he was asked what the box contained. He answered "Fur." The agent swore that if he had known that deer or caribou were in the box he would not have taken it. It was further proved that "fur" in the language of those acquainted with skins does not include deer. Two points among others grew out of these facts: (1) The defendants contended, by Mr. Brandeis, that if any contract to carry these deer or caribou existed, it was a contract procured by the fraud of Darling, and any loss must fall on him. (2) The agent, under the regulation had no actual authority to bind the company, and as the regulation was known to Darling, Darling knew he had no authority, consequently the company was not liable. The Court gave a verdict for the express company.

Mr. Darling's fur dodge did not work. He may now sympathize with the Pacific genius who shipped on the steamer Queen of the Pacific a box labeled "Fresh Clams." When the San Francisco customs officers investigated the clam box they found beneath a strata of cinders and ashes an hermetically sealed tin case containing thirty cans of opium of five tael each. The clam man was full of virtuous indignation, but the matter was not taken into the courts.

A WOODCOCK CASE.

IN another column will be found a communication from a correspondent, "Ajax," who relates that on repairing to a favorite shooting ground when the New Jersey woodcock season opened, he found that for three weeks prior to the lawful time market-gunners had been killing the game. In a note accompanying his communication "Ajax" tells us that he has the names of the shooters, and can bring sufficient evidence to convict them, witnesses being willing to testify. He asks the substantial assistance of some of the numerous advocates of proper game protection. The case seems to us to be one which may be successfully pushed. Our correspondent, who is well known to us, will probably be satisfied with a much smaller sum than he asks for, and we may state for him that if a sum sufficient to meet expenses be furnished, the guilty parties will be prosecuted at once.

WHERE ARE THE BLUEFISH?

ANGLERS and marketmen are lamenting over the prolonged absence of the bluefish, and many think there will be no bluefishing this summer. A trip through our city markets will show a dearth of fish at this time when they are usually plentiful. No species is now plentiful, and the absence of the bluefish and weakfish at this time of year is noticeable. Striped bass are scarce, kingfish are absent, shad have gone and mackerel have not filled the gaps. We believe, and have maintained, that the interests of anglers and marketmen are identical, and but for the fact that a few over-zealous anglers would restrict the sale of trout too closely, or prohibit it entirely, and that some marketmen are unscrupulous about observing close times, there should be no differences between them. Both want to see fish abundant, and the fact that the American Fisheries Society, formerly the American Fishcultural Association, carries on its rolls of membership the following dealers in fishes attests this fact: A. Booth, of Chicago, and Benj. West, S. B. Miller, Pulaski Benjamin, Gilbert Carman, Albert Haley, Caleb Haley, J. N. Harris, W. Middleton, E. G. Blackford, Ernest Miller, H. M. Rogers and Israel Woods, all of Fulton Market, New York. These men are with the fishcultivists in their endeavors to increase the food supply, and watch the investigations of Prof. Baird at Wood's Holl with interest.

For weeks the small craft have sailed out from Long Island and from Barnegat laden with anglers on the lookout for a school of bluefish, and the more scientific of them who fish with rod and reel in the tideways, look in vain to see the trollers strike the advance of the incomers. Night finds them disconsolate, for like Rachel, they mourn for what is not. Most of them blame the menhaden steamers for catching up the food of the bluefish and making oil and fertilizers of it, and others go further and accuse the steamers of using small bluefish for oil, when they can take a school of them. This, they claim, is the cause of the decrease of the bluefish, the weakfish and the striped bass.

On the other hand Prof. Huxley has said that the efforts of man are puny compared with the destruction of herring, etc., by the fish, birds and seals, and this has been indorsed in this country by Prof. Goode and, we think, by Prof. Baird. Mr. Blackford is reported to accept this view of the case also, but with all respect to the weight of authority of these names, we cannot agree with them. It is possible that natural agencies destroy many times more of the herring tribe, and of other defenseless fishes, than man does, but nature provides for this, and before man invented and used such destructive means of fishing as he now does the balance was kept up. When man was content with the hook and line, the seine and the gill net, the sea fishes had a chance to escape, but with pound nets along shore and purse seines at sea, and the continued dragging of our bays by nets in order to get fish for fertilizers and oil, the menhaden is not only thinned out but is not safe on its spawning grounds. We cannot believe that with steam cruisers lining our coasts, with men at the masthead on the lookout for a school of menhaden, the capture of these fish on which our better fish feed does not affect the supply of the latter, especially when it is known that a school of menhaden sighted is as good as captured entire by the greedy purse-net.

It is possible that the bluefish are merely belated and may come in later, but the striped bass are not belated, for they are with us all the year and are gradually disappearing. In our columns the "menhaden question" has been argued at length by both sides. Mr. S. B. Miller, of Fulton Market, is reported in the *Evening Post* as saying that he has seen the menhaden steamers bring a load of 10,000 weakfish caught with the bunkers (menhaden), and we do not doubt it. We

believe that the capture of menhaden for oil affects the presence on our coast of the migratory fishes which feed upon them, and that the menhaden oil and fertilizer factories are a curse to the marketman, the angler, and the professional fisherman.

THE INTERNATIONAL RIFLE SERIES.

IN our Rifle columns we have endeavored to bring into one comprehensive group all the international matches in which, since the advent of modern rifle practice, the American riflemen have taken part. For several years past the National Rifle Association have failed to issue any reports, and this has made the gathering up of official statistics no easy task. The record is a proud one for our countrymen, and though there are defeats to chronicle, the weight of merit is largely on our side. In small-bore shooting we remain champions of the world, with very little seeming desire on the part of outsiders to take that championship away.

In military marksmanship we have the championship yet to gain; and it is not all to the credit of the National Guardsmen of over two score States that for three years there has been not even a whimper of protest at the fact that the British volunteers remain head marksmen in the citizen soldiery. The error which the Amateur Rifle Club committed in allowing the Canadians to score a victory at long range work is one that should be corrected by sending up a strong team and bringing back the championship. Perhaps the live New York Rifle Club will take up the task, or the Walnut Hill men could do it in fine style if they only will.

It has been our pleasure and profit to witness the majority of these matches, to note the progress of the interesting battles, to see the team men fight wind and weather on the one hand and their opponents as well. The whole series has been of remarkable value in making the rifle of to-day so vastly superior to the small arm of a dozen years ago.

DEATH OF CAPT. H. C. CHESTER.—On Saturday last Captain Herbert C. Chester, of the U. S. Fish Commission, died at his home in Noank, Conn., of consumption contracted in the Arctic regions. Originally captain of a whaleship and a man of giant frame and brawny constitution, he was one of the ill-fated Polaris expedition, and after the burial of Captain Hall and the loss of the ship, built the raft on which Lieutenant Buddington and his party escaped. At Noank, in 1872, he joined the forces of the Fish Commission, and for some years had charge of the dredging. For the past few years he has been superintendent of the hatchery station at Wood's Holl and has invented several forms of hatching apparatus, besides the "Chester folding anchor." We saw him last May, and while he said he was not well it was difficult to believe it. Captain Chester has rendered the Commission great service and his loss will be severely felt. He was about 52 years old and leaves a wife.

A SUPERIOR ARTICLE IN THE WAY OF CLUBS is manufactured in New London, Conn., for the Aleuts of the Pribylov Islands, who annually club to death their quota of 100,000 seals. The clubs are from five to six feet in length, three inches in diameter at the head, and the thickness of a man's forearm where grasped by the hands. They would be just the thing for Adirondack deer hounders, and Dr. Sam. B. Ward, Mr. John T. Denny or some other great philanthropist would win the gratitude of the oarsmen "guides" by providing them with a supply of these weapons against the arrival of city "sports" next season.

LETTERS FROM THE YELLOWSTONE NATIONAL PARK speak of the heat and drouth there as being very bad, and state that it is very difficult to extinguish the forest fires. There has been very little rain anywhere in the northern Rocky Mountain region this year and the snows last winter were very light, so that there is everywhere a scarcity of water. Owing to the failure of Congress to make a timely appropriation for the Park, the Government work there has stopped.

MR. J. H. BRAYTON, of Chicago, deserves sympathy. He is an angler and had planned to spend his vacation fishing with friends. Instead of that, however, he found himself the other day among the twelve men selected to sit as jurors in the Anarchists' trial.

THE NEW JERSEY DOCTOR, who studied the sufferings of broken-backed dogs, has been fined in a court of justice. The laws are not strict enough on these matters.

THIS IS A GOOD BEAR YEAR.

The Sportsman Tourist.

Address all communications to the Forest and Stream Publishing Co.

TWO MONTHS AMONG THE CREES.—II.

APRIL was now nearly half gone and the fur season was drawing to a close, so I decided on letting Pierre return to headquarters while I remained to close up the spring's trade.

A day or two after his departure I noticed there was considerable excitement in the Indian camps, and going over found them busily engaged in constructing a large oval inclosure of poles and pine brush, while at one end was a raised platform. I learned that a large party of beathen Saulteaux were to pay them a visit the next day to join in their usual conjuring and medicine practices, which are held yearly. Never having seen anything of the kind, I was quite pleased when my Indian grandfather asked me to attend the feast which was to open the ceremonies.

The next evening at about 7 an Indian boy was sent over for me, and going over I found the long tent filled with Indians, men, squaws and children, women on one side and men on the other, while on the raised dais at the north end was laid out the feast, beavers and geese roasted whole, quantities of moose and bear meat, ducks, small game and bladders full of bear and moose fat. Taking a seat by my grandfather cross-legged on the ground like the rest, I waited events.

After a prolonged silence two old medicine men, naked to the breech clout and painted in fanciful designs, stepped into the center of the tent, each holding a long stemmed stone pipe, and proceeded to give the four winds a smoke by holding the mouthpiece to the four points, commencing with the north; then the pipes were passed round and all hands, myself included, took a puff or two. Another Indian now stepped forward with a bag of geese down and small feathers, and went around the tent putting a handful on each person's head. This was supposed to bring good luck in hunting wildfowl. The feast proper now began with a large bark dish filled with a rather suspicious looking compound; this was passed round, each person taking a spoonful or two. On my turn coming I made a feint of tasting it, and luckily so, as I learned afterward it was raw bear's grease and blood beaten up together. Half a beaver and half a goose were now put before me, and an equal quantity before all the men present. I should say about twenty-six pounds of meat. It is considered a point of honor at an Indian feast to leave nothing unfinished. Knowing this, from time to time I quietly placed a portion of meat on the Indians' plates next me, they readily consuming it together with their own share. The tom-toms were now being beaten by some old bucks at the end of the tent with the monotonous *li-Ya-Ya* song, and about midnight dancing commenced, men and women nearly naked stepping after one another around the ring, with a jerky sort of step. As the music (so-called) played faster they quickened their paces and exerted themselves so violently that in one instance a woman fainted. Toward morning, tired by the noise, I quietly left and slept long into the next day.

I had long been meditating over an expedition to the top of the mountain, partly for the view and partly for a little prospecting, as I had seen a small piece of quartz among the Indians some time before, in which gold could plainly be seen. Their story was that, on crossing the mountain one spring, and while in a rocky pass, one of their number struck a projecting rock with the back of his tomahawk and broke off a portion, a piece of which I saw. Accordingly, one morning early I started, taking my blanket and gun, expecting to reach the summit easily by noon; but alas for inexperience in mountain climbing, noon came and the top seemed as far off as ever, while the walking was something dreadful, being chiefly muskeg (that is, springy moss, with water under it), through which I would sink at times to the waist. Finally it became so bad that I gave up the attempt and turned homeward. The distance, however, was too great to reach camp; so, shooting a partridge for supper, I busied myself in making things snug for the night. Cutting a quantity of pine brush, I made a lean-to of poles, placing the brush at the back and on the ground, and made a good fire in front, the nights being still frosty. After poking (roasting) my partridge, I placed my capot for a pillow and wrapped my blanket round me, lighted my pipe, and lay with feet stretched to the fire. Drowsiness soon came on, and the next thing I knew was waking with a chilly sensation to find daylight already in the sky. I soon reached camp all safe and sound.

As the Indians were about done hunting fur, I decided on starting home, so went off next morning to hurry up an old Indian who was making canoes for us, he had already finished a large one, which Pierre had taken home loaded with fur. But the other, which was for my private use, was very small. Wishing my Indian friends adieu with, I must say, a feeling of regret, as their kindness had been great to the stranger among them, I pushed my canoe from the bank, and the current being strong was soon well on my way down the river.

It was a year of high water, and at such times it is difficult to know where the banks of the stream are, as the whole lower country with the exception of a few knolls is under water. It was with some trouble I found a spot dry enough to boil my tea kettle at noon, and after that no more land was to be seen. As I paddled steadily onward, shooting an occasional goose or duck, evening came on and there was no sign of a dry spot. My legs were much cramped, as my little craft was loaded to her utmost capacity with camp truck and the balance of furs, and it left but a small space to kneel in. As it was now quite dark, I made for some trees along the submerged bank and feeling for the bottom with my paddle found the water was about five feet deep. It is at best a ticklish matter to get out of a small canoe and so I found it. Letting myself over the side as gently as possible I could feel bottom under my feet, so I let the canoe go and stood upright; but alas! I happened to be close to the edge and a piece of the bank giving away, down I went, swallowing water and mud at a great rate. But regaining my presence of mind I soon rose to the surface to see my canoe half way across the stream. It was with difficulty that I reached it by swimming, the water being still cold and a slight breeze sending the light bark onward. Landing lower down I secured it to a tree and wading about with my small axe, felled enough trees to make a rude stage and collecting some dry wood succeeded in making a fire at one end. A good cup of tea and a pipe soon improved matters, and stretching myself on the logs I

dozed off to sleep, waking with a great start about 2 P. M. Imagining a gun had gone off close to me, quite forgetting my situation, I swung my legs over the stage to find them knee-deep in water. It seems an old beaver had been swimming about close to my camp and smelling me struck the water with his tail in diving, making a great racket.

I started off at sunrise and paddled all day, not finding another dry spot. Glad was I to see the broad Saskatchewan into which the stream I came down emptied about a mile from the trading post, which I soon reached, the current being very swift.

My chief was pleased to see me back, especially as I had made a good and profitable spring trade, which is the *ne plus ultra* to a fur trader, and we were soon deep in sorting and packing our winter's collection, 80,000 muskrats being one of the items, with a large quantity of fine fur. REX.

THE MUSKOKA COUNTRY.

SECOND PAPER.

AT Muskoka wharf on our way northward, we come to the foot of the Muskoka Lake, and beyond, its associates, lakes Rosseau and Joseph. Here the daily steamers of the Muskoka and Nipissing Navigation meet the trains and convey their passengers to Bracebridge, Rosseau, Port Cockburn, Bala and intermediate ports. The scenery upon the three principal lakes already mentioned has already been spoken of in the warmest terms in previous letters. But it seems to lose nothing with age and to grow even more pleasing with further acquaintance. The scenery is said to resemble that of the Thousand Islands, and the constant, yet varying combinations of the numerous groups make the resemblance quite striking.

Before we get away from Muskoka wharf, I should like to mention the moose calf we found there awaiting shipment to Toronto. I have never seen an adult moose, but this creature is evidently the promise of something more gigantic than yet dreamed of in my philosophy. It seemed to take captivity kindly, and munched his green browse as unconcerned as though in its native forest. What a grand plan it would be for somebody with spare money to buy a tract of forest and make a moose preserve that might preserve these noble animals a few years longer!

At Rosseau the steamer usually arrives about eight o'clock in the evening and remains over night. Here, after disposing of our traps, we made a tour of investigation in the village, and arranged to buy such camp supplies as we should take with us into our fishing station. Rosseau is the largest of all the ports on the Muskoka chain of lakes, excepting only Bracebridge, and like the latter, is headquarters for fitting out the lumber camps that lie deeper in the wilderness. Unfortunately it has now but one hotel, the Pratt House, which stood on a bold bluff overlooking the lake and was burned some time ago, never having been rebuilt. After supper we strolled up to the deserted site, and found in its few remaining blackened timbers a melancholy contrast to the brightness and activity of two years before.

In buying our supplies we stood by the substantial, and laid a foundation of coffee, bacon, flour and sugar, etc., which would safely support the most elaborate structure probable (if not possible) for a fisherman's table. One article, however, that is usually regarded as indispensable in a sportsman's outfit, was entirely omitted. We bought no whisky. While I am a temperance man, but not a teetotaler, my views have undergone some modification on what is really desirable in such cases. When we first began to go into camp ten years ago, some of us who rarely saw whisky from year's end to year's end, felt it incumbent upon us, under existing traditions, to take along a liberal supply of alcoholic stimulants for the guides. The latter seemed to accept the arrangement as a matter of course, and while nearly all of them drank it, few seemed to care for it especially, and some who did not say so evidently preferred to be without it (or at least in quantities only meant for emergencies), and we find that we get fully as good service with the first case of dissatisfaction in consequence yet to be reported.

And this brings up still another point in this same connection, and I advance it with some fear lest I may be misapprehended. Frequently in trips into desirable fishing grounds, one comes upon the trail of men of ample means who go into hunting and fishing camps mainly with the idea of having "a little time," and who treat the legitimate spoil of the rod or gun as a matter of secondary moment. Such men do not a little to demoralize good guides, because they are prone to pay them extravagantly on the one hand, or to accept careless and imperfect service on the other. The consoling part of it, however, is that none learn better to distinguish than the guides themselves the difference between real sportsmen and "make-believers." I know what would be urged in reply to what has been said—that the guide's service is unusual in character, and that he has it in his power to extend favors outside the strict line of actual requirement. But for all that I do not want the man who goes into the woods or upon the streams merely for the purpose of spending money to build up a series of extravagant precedents which shall fence me out ultimately because of the limited extent of my purse. So much for a sermon, now for the remainder of my journey.

Our trip, by the way, contemplated two separate expeditions—the one through Rosseau to the maskallonge waters previously visited, the other through Bracebridge into certain trout waters beyond Trading Lake. It is worthy of note that, while the Muskoka lakes and the waters to the westward abound in black bass, the brook trout is comparatively scarce; and yet to the eastward, where the trout are found in the greatest plenty, the black bass is unknown. A plausible explanation of this state of things may be that the black bass, like the maskallonge, appear to have originally come up from Georgian Bay, and hence they are found only in waters that have near or remote connections with it. Trading Lake, Hollow Lake, and their tributaries, are, it is said, entirely without black bass, although the latter are well stocked with trout. Of what we found in the way of *Salmo fontinalis* I shall speak again.

Seven o'clock the next morning found us safely stowed away, with all our impedimenta, in the Parry's Sound stage, an open vehicle, such as is known in the States as an express wagon. All the roads in this region are hilly, but none of these stages are supplied with brakes, a deficiency that seems a very serious one to a Yankee who first sees the heavily-loaded vehicle chase the horses down a long and steep declivity, with an even chance between the two. But the solicitude exercised by the Government for Her Majesty's mails is frequently the means of furnishing prompt and inexpensive transportation to the sportsman tourist, and these vehicles carry him out of the beaten tracks of the great body of

pleasure-seekers, who are content to keep in sight of the hotels and summer boarding places located along the principal lines of travel.

Some eight miles east of Parry's Sound (one of the semi-arctic regions of our juvenile geography) we left the stage road for the trail that guided us to our lake. Here we met by arrangement the teamster that was to carry us over the five mile portage intervening, and our traps were soon loaded on a two horse jumper. Possibly this may not be familiar to all the readers of the FOREST AND STREAM and it may not be amiss to say that it is to navigation in the forest what the birch bark canoe is to the inland lake and river. Imagine a low, broad sled with a skeleton frame, the runners made of split saplings sprung into shape, and a few light boards laid over the top. Upon these your rods and other baggage are lashed and otherwise secured by such devices as you can command, and the whole glides, jumps and slips through the woods over logs and across rocks and other obstacles where wheels would be utterly useless. The jumper is a sort of land canoe, and it is an almost indispensable vehicle in all long distance portaging in the wilderness. At the end of our portage we find the boats of our guide awaiting us, and we renew, with a pleasing undercurrent of anticipation, the acquaintance of two years before.

Our first afternoon on the lake was devoted to a preliminary exploring expedition, in which we cruised over the southern portion in waters to which we were comparative strangers. Again we drank in the wild beauty and unsimulated loveliness of shore and island, sighing regretfully to think that one day only too soon there would come great unsightly blotches of bare brown earth, and the glory of the virgin wilderness would depart forever. But the Muskoka country promises to be a joy and a delight for many a year to come, even though it may not retain all its pristine beauty, and perhaps it is not best to borrow trouble about the future.

If the topography of the forest is confusing to the novice in woodcraft, the intricacies of our lake are no less bewildering. The shores curve in and out in many an irregular sweep, and here and there approach each other so closely as to leave only a narrow inlet through which the little boat glides smoothly into a broad bay beyond. Frequently at the very mouth of the inlet an island is planted, at a little distance its foliage blending with the main shore and disclosing no passage. Once fairly within the labyrinth, its openings closed behind him as he advances, a stranger might wander for hours among the tortuous waterways and count himself fortunate if he found his way out unaided. But we soon got our landmarks, and learned that some of the most narrow and uninviting passages led to some of the most inviting and fruitful fishing grounds beyond.

It was at one of these narrows that I fastened to my first maskallonge of this trip, and enjoyed a renewal of my experience of the year before. The little boat, with Josh at the oars, myself the only other occupant, swung slowly around the point and into the wider water beyond, and suddenly the spoon stopped short as though it had fastened on a rock or struck a sunken log at the bottom. The line spun from the reel at a lively rate till the boat's headway could be checked. (Something always has to give at such times, and my experience is that it is better the reel than either the rod or the line.) "Hold on, Josh; we're on the bottom." But suddenly the "bottom" began to give, the spoon was shaken as a terrier shakes a rat, the line swung out toward deep water, and then I knew we (that is, Josh and I) were fast to a maskallonge. It was an instinctive movement to transfer part of the strain from the line to the rod, as it was to head the boat the way the fish was going, and we were ready for further proceedings.

At one end of fifty yards of line, the other curved over a ten-ounce rod, and the fifty yards duplicated around a good multiplier, a twelve-pound maskallonge is "a charming sight to see." And we saw this one at least three times as he came full length out of the water and made furious attempts to disengage the spoon. The situation was an interesting one, but it didn't make me half so nervous as it would if the experience had been entirely a new one. But there was enough uncertainty about the final result to keep one up to an enjoyable tension, and when the fight ended, as it did in our favor, and the great fresh-water tiger lay in the bottom of the boat, there was a sigh that was half pleasure and half regret that it was over.

But the black bass and yellow pickerel abound in our lake, and when we wanted milder and less exciting sport, we could find either in abundance and on short notice. It is worthy of mention that when our guide selected fish to cook for dinner his choice always fell on the pickerel.

JAY BEBE.

TOLEDO, O., July 10.

DEATH OF "NED BUNTLIN."

EDWARD Z. C. JUDSON, widely known to the readers of fiction as "Ned Buntline," died at his home in Stamford, N. Y., last Friday, aged 64 years. His death closed a remarkable career. Judson's father was a Philadelphia lawyer, who insisted upon putting Ned through a course of Latin and Blackstone at an early age. The boy rebelled, and one day after a severe flogging ran away to sea as cabin boy to a ship that sailed round the Horn. The embryo celebrity was then but eleven years old. The next year he entered the Government service as an apprentice on board a man-of-war. A year later, when thirteen years old, President Van Buren sent him a commission as midshipman for meritorious conduct in rescuing the crew of a boat run down by a Fulton ferryboat on East River. Young Judson was assigned to the Levant. Other midshipmen refused to mess with him because he had been a common sailor before the mast, and while on the way to join the Gulf Squadron he challenged thirteen of them to fight. Some withdrew their refusal and associated with him, but he fought seven of them, one after another, in Florida, New Orleans and Havana, escaping without a scratch himself, but marking four of his antagonists for life. Perhaps one circumstance that reduced the number of midshipmen that he had to fight was a little exhibition on the way down. The captain, who made a kind of pet of the boy, hung a bottle out on the yardarm, and Judson, at the word of command, broke the bottle with one bullet and cut off the string above it with another. That was the first intimation given that he was one of the half dozen best shots in the United States. He fought in four wars—the Seminole, Sioux, Mexican and civil—and carried on his body the marks of many wounds. He had in his right knee a bullet received in Virginia, and had twelve other wounds inflicted by sword, shell and gun, seven of which were got in battle. The title of Colonel came to him as Chief of Scouts in the rebellion of 1861-65.

W. A. Croft, who visited Col. Judson at his home in 1885, wrote of him: "Ned Buntline" was in the fatigue uniform of the army, blue coat, with brass buttons, and upon his blue vest twinkling decorations—the badge of the Sons of America, the head of Washington set on a gold shield, with two American flags crossed above it, the original badge of the order of United Americans, which he organized, a golden band crisscrossing an enamelled serpent, bequeathed to him by Congressman Whitney of New York when he died, a Grand Army badge and a Masonic pin. His gray hair is cut short. His only beard is a full white mustache. He weighs more than 200, I should think.

"Come on, Edly!" shouted the Colonel to a chubby face at the bay window, as we alighted, "come on, my son! It is sunset; let's pull down the flag!" And a way to the balliards of the tall flag-pole hurried the infant and the gray-haired father, and the twenty-foot flag lay on the ground in a heap. "Ned Buntline" seems to-day to have two passions—the latest and most absorbing a love for this promising child, and the other, the devotion to the stars and stripes which has led him into every war we have had since he was born, which led him to join Lopez to capture Cuba, and which induced him to start the Know Nothing party. Every pleasant day of the year this big flag is unfurled from this flag-pole, visible over 100 square miles of the Delaware valley.

"I asked him how many stories he had written. 'I made a little calculation the other day,' he said, 'and I am alarmed to find that I have written between 300 and 400 novels, which, if published in book form, would each make a book of about 400 pages.'"

"I asked Col. Judson about his thirteen duels, and inquired if it could be possible that he was an accomplished swordsman and good shot at thirteen. 'Only a fair swordsman,' he answered, 'but a dead shot. When I was an infant my father lived up in this valley, and he very early taught me to shoot. I was exhibited to visitors at the age of six, shooting at a mark at one hundred paces, with an old rifle balanced across the fence. I shot my first deer when I was eight; and then, as ever since, I was always under the most perfect command when I was most excited. I could have killed some angry midshipmen in those seven duels if I had wished to do so. I had shipped to the United States Navy as an apprentice, and had been promoted to be a midshipman without the influence of any powerful relatives, but I felt that my rights were equal to theirs.'"

The signature of "Ned Buntline" was familiar to readers of the FOREST AND STREAM, the files of which journal contain many sketches from his pen.

DISAPPEARANCE OF THE BOBOLINK.

Editor Forest and Stream:

The bobolink, sweetest and best of our New England meadow singers, is gone. The pidd dandy of tussock and springing golden rod no more in this vicinity tinkles his tangled bell music in our fields. Around our city and especially in the West Springfield meadows, as all up and down the valley of the Connecticut, used to be the resort and home of the characteristic and blithe bird. This is the first season that I have failed absolutely to see or hear a single one.

Of late years they have been fewer, each season being made melancholy in a measure by the steadily depicted numbers of the birds, and now I believe there are none. Others may have seen or heard them, but after diligent seeking, foreseeing as I have the inevitable, I fail to find a single songster.

One great cause of this is the shooting of this song bird by our friends further south for food. Garbed in russet, in the fall he becomes in Maryland the rice bird or the ortolan, and is shot and strung up in Baltimore and Philadelphia markets by the hundreds to be eaten.

I should feel as if I were eating dead music if I attempted to eat one of these. There are bigger and better things to eat than they. Why not leave in life this epitome of tremulous melody, instead of reducing him to the level of an oyster or a clam? Our southern friends have dainties enough for the table without him in their terrapin and canvasbacks.

Will our Southern AUDUBON SOCIETIES think of this and let us see if the bobolink cannot be saved from extinction.

E. H. LATHROP.

SPRINGFIELD, MASS.

NOTES CONCERNING AN OUTLAW.

THERE may be animals more gifted in wiles than the fox, but from time immemorial he has borne the doubtful honor of being the most adroit trickster, next to his arch enemy, man, of all created beings, and him even he fools oftener than please the lord of creation.

What stock of wisdom and cunning he may have had to begin with we can only guess, but may conclude that he was not very well outfitted therewith in Samson's day. Imagine three hundred foxes of these latter days suffering such outwitting by one man in one harvest time! But perhaps the strong man of old got all the foolish ones into his snares, or some way into his clutches, and our foxes are the natural outcome of the survival of the fittest. And doubtless in all the centuries the world has whirled through since then, the race has grown in vulpine grace, sharpening its wits by constant attrition with foe and prey. It is said that the silver and cross foxes are sharper witted, more wary of traps, more fertile in devices for eluding hound and hunter, than their less valuably clothed red brethren, which is only to be accounted for by the greater eagerness of their pursuit, for the silver, or black, and the cross foxes and the red foxes are often litter brothers. The haud of man and the tongue of woman—which is most terrible let man and fox say—have been against poor Reynard in all the long years that have come and gone since the one became hunter and shepherd and the other poultry wife. The shepherd and the hen wife would destroy him off the face of the earth if they could have their way, but the hunter's hate is akin to love; he will kill, but he would not exterminate; would eat his cake and keep it, the cake growing at one side while he takes bites off the other. He will kill him relentlessly in his own way and in his own time, but he is more unloving toward the man who traps or poisons the fox, or destroys the young, than he is toward his beloved enemy.

If there is any scapegrace without some leaven of good traits it is not the fox. For one thing, in his prime and in his bravest attire, he has beauty of shape, color and motion, and it is good to be beautiful. How his graceful ruddy-clad

form dimly seen in the dull whiteness of the early winter morning, enlivens the dead landscape as he mouses in the orchard or pasture or meadow, where the tangle of aftermath harbors mice under its blanket of snow, or when in the white glare of day he takes with light leaps the fence-side snow drifts, or picks his careful footsteps over the treacherous crust that breaks beneath his havier pursuer, the hound. In this land it is good to be smart, and no one who has seen Reynard's face while he studies tricks and hunts for scentless footing when the hounds are bellowing on his trail, can doubt his possession of this American virtue. It shines from his eyes, radiates from his whiskers, the cock of his ears indicates it, and the turn of his nostrils shows that he is "up to snuff." But caught, what a sneaking, sorry varlet he is, as unlike Reynard fire as the culprit who sits to add his portrait to the rogues' gallery is to the sharp rascal who was robbing a house the night before.

Last, and since usefulness has become of so little worth, least, he is entitled to some consideration for the good he does; this, perhaps, not from any pious intention, but because it was appointed unto him to do. In the provisioning of himself and his family he makes way with, besides many other things not so well made way with, no end of pestiferous field mice, and I have ripped his pouch in October when it was ready to burst with grasshoppers, as many as would fill the crop of the biggest gobbler of the dame's flock three over.

But one evil deed committed by fox or man cancels many a good one, and when Reynard departs from the path of rectitude and takes grasshoppers second-hand, after they have been ground in the turkey's mill, and gone to the making of gallinaceous flesh and fat, gobbles the gobbler, bolts the mill, hopper, stones, grit and all, all his well doing is forgotten, and he is nothing but a thieving, murdering fox. And it must be admitted against him by his best friends that at such times his bloodthirst gets the better of his few small virtues. Let him once get among a flock of turkeys, and he can never get enough of slaughter while one victim is left. The blood of the last member of the flock must be the sweetest, and he ravens like a wolf in the fold. Such deeds are his undoing, for if he would temper his trencher-valor with more discretion when these opportunities come in his way, his enemies would be fewer and less vengeful. One lamb at a time usually suffices him, and old ganders will beat him off with savage blows of their wings, so that he sets but now and then a struggling wife or child of their family. But turkeys are his weakness, and when the dame goes to gather her flock from the woodside field and finds it harried, two-thirds, perhaps, killed outright, and the remainder maimed or frightened out of their slender wits, her wrath and despair struggle for the first places in her heart and voice. Vengeance is sworn against the spoiler, and woe be unto his house if in the following May the vixen's nursery be in the earth where pick and spade may prevail, and the farmer finds it. And even if their house be builded in the rocks, old and young are laid in wait for and unseasonably shot down. But if some fox hunter gets wind of the intended raid, he makes some disturbance about the threshold; the hint is taken, and the young are removed by the vixen to a safer retreat. I knew one old hunter who took a litter of young foxes from a hollow log and carried them in the bosom of his frock to a den in the rocks, the mother following, chiding him with her gasping bark. The family were his debtors for some months of happy life, for which, at the falling of the leaves and the first falling of the snow, he took in payment a dozen jolly days of sport with dog and gun, and two-thirds as many well-furred pelts. It is not at all uncommon for a litter of foxes to be reared, or at least well started in life in a burrow in an open pasture which, though so exposed, is likely to be unsuspected of harboring such sly folk, and has the other advantage of giving the watchful mother a timely view of coming enemies. But it is quite as much the custom of madame vixen to make her nursery in the woods, in some sandy knoll that gives easy digging of her cellar of many entrances, to whose neighborhood seldom comes a worse enemy than the hound, not then greatly to be dreaded.

Notwithstanding his outlawry, the fox holds his own wonderfully in the continual warfare that man wages against him. Perhaps in the economy of nature he is as valuable as a turkey or a lamb. Verily, I think, by the way she cherishes him that she loves him more than them or their owners. How should we prosper, endure even, so persecuted, or they without our constant care? Perhaps we are not of such great account in the world as we think. If in some years or seasons the fox is hardly to be found in a certain range, the scarcity seems due only to a partial migration, for likely enough in the next year or month his tribe is there in force. This winter in this region foxes are plenty enough within a mile of the lake shore, while it is hard starting one three miles back among the hills. Why within a half hour's run of a fox, one locality should be much frequented and the other almost deserted, it is hard for any one but a fox to tell. They are plentier in the oldest settled parts of the country than in the wilderness, and probably plentier now than they were two hundred years ago; certainly so if as some hold, our red fox is of European origin, concerning which I for one have reasonable doubts. For his protection and maintenance the fox has his cunning, ranges of woodland and rocky hills for his haunts and fastnesses, his ability to subsist on short commons, and a varied bill of fare to choose from, whereof if one article is not to be had another will do—mice, grasshoppers, poultry, lamb, carcass of domestic animal dead of old age, disease or accident, hares, grouse, quail, muskrats dug out of their houses in winters that favor the fox but not the poor muskrat, beech nuts, and at a pinch of hunger even frozen apples—all are grists that come to his mill's grinding, and keep him alive and alert and active in all weather and seasons. Is it a peculiar odor, or is it a sort of free masonry instituted when fox and dog were nearer akin, or is it the gallantry of the dog toward the weaker sex that protects the female fox from her canine foe during her breeding season? Whatever it is, it helps the race to endure in spite of its enemies.

Foxes taken young are seldom long kept in captivity. If death does not release them a slipped collar or broken chain does. Even though one becomes so tame that he will play with his master, come to his call and follow him like a dog, soon or late the sleeping spirit of wildness arises and takes possession of him, carrying him off to raid and frolic under the stars with his fellows, and henceforth he is as wild as the wildest of them. An acquaintance of mine had a coon, the result of unearthing two litters, which he kept in a tight board pen till they were nearly grown, when one of them in his continual prying and spying, found where he could tunnel his way to freedom, and presently there was a jail delivery and twelve foxes, sharp set for mischief, were at

large among the turkeys of the neighborhood. Two or three of them were killed in a day or two before they had got their land legs on, but the others got to the woods, and soon picked up the broken thread of wild life and strengthened it perhaps with some boldness spun in during their close acquaintance with mankind, so that there were none of their tribe in the county better outfitted for getting an honest living.

The sorriest hunt I ever saw or took part in, and one that would almost disgrace Newport was when a fox that had been in captivity since his early cub-hood, was turned out before four or five dogs in the first winter he had seen. He knew not what to make of seeing the men who had fed him and played with him, a mini-ter among the lot, all at once turned enemies, cheering on the hounds that had been his familiars to worry him, and at first would not run, and afterward only in a dazed uncertain fashion, as if he knew no outdoor tricks of his kind, nor any of the runways of his foregoers and brethren. When his legs gave out and refused to carry him further, the hounds were so loth to lay hold of him that he was picked up and put in a bag before his body got much hurt. Yet his poor soul was so sorely wounded by the sudden and unaccountable persecution that he pined away, and his sordid owner knocked him in the head to save his life—and his pelt.

Reynard's human enemies have many devices for his taking off. Poison is sometimes set for him with deadly effect, but this dangerous and unlawful practice is discountenanced by almost every one. Trapping in the old way, in a prepared bed of ashes or chaff, baited with toasted cheese and lard scraps for some days before setting the trap, which was first carefully smoked to disguise the scent of the iron, so it was said, was never destructive enough to work much harm to fox or fox hunter. The fox cares no more for the scent of iron than for that of wood or stone, which is evident from the fact that he crosses a railroad track as unconcerned as he does a fence or a rock. The odor that he is shy of than any other in the world, under conditions that bear a suspicion of foul play, is the scent of human kind, though he will often run in the newly made track of a man, and his nose is so keen that it will detect this hateful odor many days after a trap or bait has been handled. I should justly incur the displeasure of all honest fox hunters if I told the secret of the modern fox trapper's success, and I will only say that everything tainted with his touch is covered by something which completely deodorizes it, even beyond the suspicion of a fox's sensitive nostrils, and the bait is fragrant with a compound that allures his victims from afar off. This also often betrays the neighborhood of the trap to the fox hunter, who then ferrets out the cunningly hidden gin of his sneaking rival and makes it harmless.

When "holed" by dogs the fox is sometimes taken by setting a trap just inside the entrance to the burrow, that being then stopped. In such dire extremity the fox has been known to have faithful friends among his kindred. Two fox-hunting acquaintances of mine, whose word I have not the least reason to doubt, told me that having slightly wounded a fox, he "holed," which is New English for going to earth, wherein I think the New English is better for us than the old, as our foxes often take to holes in the rocks and in hollow logs. They stopped the entrance to his retreat, which was in a ledge, and getting a trap, set it just inside the blockade. They visited the place every day, expecting that starvation would bring their prisoner to the door and so into the trap. But in this they were for some time disappointed, till at last they discovered fragments of mice and squirrels close by a crevice so small that they had not thought it necessary to stop it. They were satisfied that outside foxes had fed the captive through it, and cutting off this channel of supply, in a few days more they caught the poor fellow. Under ordinary circumstances it seems more in the spirit of fair play for the hunter to give up beaten when the fox takes sanctuary in the bosom of our common mother; especially in this case it would have been magnanimous to let the captive go, in consideration of his friend's felings if not of his own. But I am sorry to say that his pelt went to market at the common price, though he was not quite a common fox—in experience. It is not to be denied that some hunters are impelled by a greed more ignoble than bloodthirst.

When the fox is pursued by hounds he has endless devices for eluding them, some inborn, some learned. This of holding is ordinarily his last card, though in some seasons he seems more drawn thereunto than in others, and holes without apparent necessity, to the great disgust of his two-legged and four-legged pursuers. The oldest hunters tell us that in by-gone days, when there was more forest than cleared land, the foxes were very apt to run into hollow logs after a short run. But they are wiser now, and if such vulnerable fortresses were as easily come to now, I doubt if they would use them except at the last pinch. Doubtless in his own hunting the fox has learned that treading often in his own tracks is confusing to his pursuer, has discovered the deodorizing effect of fresh earth, that glare ice holds no scent, that wind blows the subtle odor away, and that one scent neutralizes another. And so when he hears the bugle of the hound sounded on his trail, profiting by experience and the traditions of fox lore, he runs in circles, across newly plowed fields, on ice, over naked rocks, on fence tops, in the paths of hares, in highways and through flocks of sheep, and when it rains or snows he trusts in the kindly skies to quench or smother the reek of his footsteps. To cope with him and foil his tricks the hound must be wise as a serpent, full of experience and endowed with all the gifts of his breed, keen nose, strength of limbs and wind, and steadfastness in holding to his work. A tried old hound so possessed is greatly valued by hunters, and is a dog of note throughout half a county.

Unseasonable and almost uninterrupted persecution which unenforced game laws do but little to prevent, has made the pursuit of almost all furred and feathered game an unprofitable pastime in the older States, but still the fox endures for the few who care to hunt him in our way. The hunting of him in the common fashion of the North, on foot with hound and gun, has never been much in favor with those who think it great sport to shoot little birds over dogs, and silly hares before them, or float for deer at night, or row up to them in daytime and club them to death. Some are honest enough to confess that it is too hard work to tramp so far for so few shots, perhaps none; others say that it lacks the element of fair play, though why more than hare or deer shooting is unexplained. I never saw one of these disparagers of our Yankee sport who, if he had the luck, was not proud of the shooting of a fox. It is no feather-bed sportsman's work to tramp all day over the rough hilly country, and it requires knowledge of the animal's ways to give one a reasonable chance of a shot at times, and that got, good shooting to

cut him down as he dodges among tree trunks, or flashes through the haze of brush, or flies at full speed across the open. Big as he is, and he is not as big as his fluffy coat makes him look, nor as big as a deer, which sometimes escapes unhurt, it is no disgrace to miss him under these conditions. To see the dogs working out of an old trail, unraveling foot by foot the tangled web of the foxes' morning mousing is an interesting sight, and seeing which for the hundredth time one can but marvel at the fine sense that tells the hound which way the cold scent tends. The hunter following at leisure or now seated on the top rail of a fence, shares the growing excitement of the dogs as the subtle exhalation rises warmer to their nostrils and their mellow baying becomes more continuous and eager. Then when the fox is started and a hundred phantom voices from cliff and woodside join in the melodious uproar, the hunter's heart chokes him with its wild upward leaps as he pushes for the nearest runway. Then he waits, all ears and eyes, for the sound of Reynard's light footsteps scarcely stirring the fallen leaves, or his ruddy apparition suddenly growing out of the brown and gray of the autumn woods, or dun herbage of the frosted fields. If the wily rogue slips by unseen or out of range, what a heart-sinking ensues; and if a shot is made and missed, what humiliation of spirit. But if the pellets or bullet hit the flying mark and the fox falls, dyeing the earth redder than his tawny coat, who that loves the music of hounds and the freedom of the woods can ask for a happier moment? And yet in that moment one may ask himself by what right he has quenched such a vigorous flame of wild life and be unable to quite answer his own question.

There seems to be in the best-tamed and law-abiding of mankind a lurking love for outlaws. Who has not a place in his heart for bold "Robin Hood," and "Little John" and jolly "Friar Tuck," and does not wish them all alive again and under the good green wood. As for me, though never a turkey comes to Thanksgiving again, nor fat goose to help us keep Christmas, I pray that the days of the red-coated outlaw of our New England woods and fields may be lengthened far beyond mine, and that the sound of his wild voice in the gloaming may not be to my children's children only an old man's tale.

ROWLAND E. ROBINSON.

FERRISBURGH, VT.

ASSOCIATIONS OF MONTEREY.

WRITING of Monterey, California, Judge John Dean Caton, says:

Formerly the antelope and deer were most abundant in the vicinity of Monterey. The antelope have long since entirely deserted this region, though the deer still remain in considerable numbers. These are all of the California variety of the mule deer (*Cervus macrotis* var. *californicus*) which I first discovered at Santa Barbara ten years ago, and described in "The Antelope and Deer of America." Later investigations convince me that it occupies the entire coast range south of San Francisco, while north of that great bay not one occurs, but the ground is almost, if not entirely, occupied by the Columbia or true black-tailed deer (*Cervus columbianus*).

As I look upon these mountain ranges and fertile plains I cannot help thinking of the time when, as Dr. Canfield tells us, the whole country, from the mountain to the sea, was literally covered with antelope, and when the deer were so plentiful that it was hardly sport to shoot them. This place has too a peculiar interest to me from the fact that it was here first discovered and recorded that our antelope is a genus by itself, differing from all other known quadrupeds in having a hollow yet a deciduous horn, thus being an intermediate link between the hollow-horned and the solid-horned ruminant. This great discovery was here made by Dr. Canfield, who was the first, so far as is recorded, to domesticate this strange animal, and was thus enabled to make more careful observations of it than was possible of the wild animal. I feel like taking off my hat when conscious that I am treading the ground where he trod. The Doctor has long since passed away, but the memory of the great discoverer will long be cherished by the naturalist.

BROOKVILLE (IND.) SOCIETY OF NATURAL HISTORY.—Bulletin No. 2 of the Brookville Society contains a List of the Fishes observed in the Vicinity of Brookville, by Barton W. Evermann; a List of the Birds observed in Franklin County, Indiana, by Amos W. Butler; a Preliminary List of Reptiles and Batrachians of Franklin County, by Edward Hughes; The Flora of Franklin County—Endogens, by O. M. Meyneke, and Fossil Corals of Franklin County, by David R. Moore. Most of these lists are quite fully annotated and are of great interest. Of fishes, 35 species are noted; of birds, 235; of reptiles and batrachians, 40, and about 100 species of endogenous plants. About 25 species of fossil corals are enumerated from the Silurian and from the Devonian drift. Franklin county is a region especially interesting to the ornithologist, for it includes in its fauna many species of the birds of both the North and the South, whose ranges here appear to overlap. The good work to be done by local natural history societies, whose members devote themselves to thoroughly investigating their own limited territory, can hardly be overestimated, and we wish that there were an energetic association of this kind in every county in the United States.

A LARGE LOBSTER.—Searching along the Winthrop shore, a few days ago, for whatever was to be found contraband in the lobster trade, Deputy Fish Commissioner, F. R. Shattuck, came upon what might be termed a stunner in the possession of Belcher brothers, who had just brought in from their traps something wonderful in crustacean life. It proved to be an example of the size a lobster can attain if left unmolested a long time. Unlike the average large lobster, it was symmetrical, so much so as to cause remark in that regard. It weighed 11½ pounds; length over all, 29½ inches; large claw, 11 inches; small claw 10½ inches. The question of the age of this sample of what lobsters might attain is an interesting one. Commissioner Shattuck, who is making the lobster a study, suggests that he may be twenty-five years old. The shell has been mounted, and will be on exhibition in Appleton & Litchfield's window for a few days.—*Boston Transcript*.

EARLY OCCURRENCE OF THE GREAT WHITE EGRET AT WASHINGTON, D. C.—An adult white egret (*Ardea egretta*) was seen by Mr. Otto Luggen, July 15, in a marsh near the mouth of the railroad tunnel, about a mile from the Washington Navy Yard. This record is remarkable for its earliness. The northward migration of the white egrets after the breeding season is too well-known to require comment here.—C. HART MERRIAM.

BIRDS OF KANSAS.—Col. N. S. Goss has recently brought out a revised edition of his catalogue of the birds of Kansas. The catalogue of 1883 embraced 820 species and races, of which 161 were known to breed within the State. The present revised list includes 335 species, of which 175 are known to breed within the State. The catalogue contains much interesting matter and has evidently been compiled with great care. To his list of species of Kansas birds, Col. Goss has added the report of the A. O. U. Committee, appointed to investigate "the eligibility or ineligibility of the European house sparrow," and also an appeal for protection for our birds. This appeal consists mainly of extracts from Bulletin No. 1, of the American Ornithologists' Union Committee on the Protection of North American Birds, and includes a notice of the AUDUBON SOCIETY and its purposes, an article on bird laws, and an appeal to the women of the country on behalf of the birds.

WHAT THE CROW EATS is a matter of financial interest about here. The favorite diet in early summer in other and warmer localities is not to be found to satisfy his thievish propensities, but a substitute for corn here is the potatoe fields, and the crow's propensity to search for the object of man's soil is rewarded by a generous repast when unmolested. Yesterday I surprised a family of six within thirty yards of my house, not after potatoe destroying insects, as I was inclined to believe, but digging the row and cutting off the young tubers and eating them. This family has had sympathy enough growing in range of my 10-bore daily to feel its power to average misplaced confidence.—NED NORTON.

THE MARTEN, WE PRESUME.—Will some of the Canadian readers of FOREST AND STREAM be kind enough to tell me what animal it was that the early French explorers called the sable? Was it the fisher, *M. pennanti*, Erxl., or the marten, *M. americana*?—JOHN G. HENDERSON.

THE NEXT MAN TO DIE is just as likely to be yourself as any of your neighbors, and unexpected death is continually happening. Take a combined life and accident policy in the Travelers, of Hartford, Conn.—*Adv.*

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

MONTANA WOLVES AND PANTHERS.

MONTANA is simply overrun with destructive wild animals at present. During the year 1884, soon after the last buffalo disappeared across the Canadian border, and when the great herds of domestic cattle succeeded to the stamping grounds of the native bison, there was a remarkable increase in the number of gray wolves on the Montana ranges. To be accurate, this species of wolf, together with his cousin, the prairie coyote, always did hang around the buffalo herds, ever watchful to pounce upon some superannuated bull driven from the band by the younger ones, or to snap up some weak calf or unwise animal that chanced to stray too far from the main body. With the disappearance of the buffaloes from Montana, these scavengers of the prairie also disappeared, because, being left without sufficient food supply, they of course followed the wild herds as they retired to more remote pastures. In 1884 the great buffalo herds in the Canadian northwest became pretty well decimated, and so the wolves returned to their old haunts. Not being so particular as to object to beefsteak when buffalo hump was not to be had, they played sad havoc with the cattle herds that year. Cattlemen did not begin to pay much attention to the matter until last year, when it was found that it knocked considerable from their profits to support such immense swarms of these pests. Cattle, and especially young and weak calves, dropped during the winter time, have been the food upon which they subsisted.

In 1884 the Territory offered a bounty for the scalps of destructive wild animals brought in to be punched. The bounty is fifty cents on a coyote, one dollar on a wolf, eight dollars on mountain lions or panthers, and the same on bears. This law cost the Territorial Treasurer \$12,740.50 that year, besides which nearly every county offered as much, if not more for the scalps of wild animals than did the Territory. Many cowboys entered into the scheme of poisoning wolves, which besides affording them plenty of sport and winter amusement, also yielded a handsome largess for the ear punching, after which the skins were sold. In this way a number of the cowboys more than doubled their summer's pay which they received for rounding up and herding cattle. Some of the counties also offered strychnine to all who would use it, and even some of the cattlemen volunteered to subscribe a beef or two. This latter alternative, however, was not necessary, as there are always sufficient dead animals lying around to be used for bait and even the wolves and coyotes themselves manufactured plenty of material for their own destruction in the animals they killed for food. Such an industrious warfare has been carried on for two years against the coyotes and wolves, that one would suppose the rascally thieves would begin to show a diminution in numbers, but such is not the case.

In 1885 they were on the ranges in greater swarms than ever and the damage they did counted heavily against the profits for the year. On the chestnut range in Northwestern Montana the stockmen came to the front with a handsome offer to wolf killers, which will make it a paying business for anybody to engage in that occupation alone. It will give the wolfer plenty of poison and not less than \$5 for each skin, after which he is at liberty to sell the hide for what he can get.

Mr. Wallace Taylor, of Choteau county, in a recent letter, reported a bad state of affairs in his section of the country, occasioned by the wolves devouring cattle and sheep. He says, "The animals are rapidly increasing and getting bolder every day. They even attack bulls and large cows, and in many instances get away with them. The stockmen are doing everything in their power to exterminate them by the liberal use of poison and the increase of bounty; but thus far the animals have not diminished, and the stockmen fear they will actually be obliged to leave that part of the Territory

and secure other quarters." Mr. Taylor is a reliable gentleman, who is not given to exaggeration, so we may receive with the utmost confidence what he says. Mr. Chas. Smith, inspector of the cattle district in and around Helena, in his last report speaks particularly of the great loss of lambs by depredating wolves. "The animals are rapidly increasing," he says, "and getting bolder and more ferocious each day. The sheepmen are becoming frightened over the rapid disappearance of their flocks and are using every means to exterminate the pests." At the late convention of cattlemen, held at Miles City, the question of destroying wolves was one of the principal topics discussed. The discussion developed the fact that the number of calves destroyed by wolves is simply astounding, and a campaign in earnest was organized against these nuisances. One stockman stated that he could show carcasses of fifteen or twenty calves which had been killed by wolves near his ranch. Another stockman had found four in one day near his ranch that the wolves had slain, and all agreed that there had been a large increase of wolves in the country this year. One hundred and fifty dollars was in a few minutes paid into the hands of the chairman of the committee to purchase poison to be given to those who wished to kill wolves. In addition to the above, the chairman of the wolf committee informed all that it was expected of each stockman to keep on hand a large supply of poison, and have his employees put it out judiciously and persistently. Mr. Van Buren, a member present, announced his intention of putting out a supply of poison 150 miles in length, and many of the stockmen present offered to furnish him meat to use for bait. This species of wolf, the animal referred to, is not the ordinary black wolf of the States, but is a great big animal nearly the size of a young calf, gaunt and hungry looking even when well fed, and has plenty of pluck and grit. This gray wolf is a good traveler, and may be found to-day in one county and to-morrow many miles from there. On the other hand the coyote is a sneaking, cowardly creature, seldom showing fight and living in the same locality month after month until killed or driven off. The States wolf above mentioned has never been found in Montana to my knowledge, but several parties on the Shonkin range in Choteau county assert that they saw a genuine black wolf a few days ago, although no one succeeded in getting a shot at him. He is certainly not a native of Montana, and where he came from it is hard to say. Perhaps he is a straggler who drifted down from some one of the Canadian Provinces. As before remarked, some of the cowboys have gone regularly into the business of wolf killing. J. W. Proctor, of Billings, arrived a day or two ago from the Musselshell, where he spread a string of poisoned meat thirty miles long, for the deceleration of the gray wolves and coyotes out there. Unfortunately a heavy snow storm covered up the bait, but nevertheless a great many "varmints" were bagged; certainly sufficient to pay all expenses and leave a handsome margin besides.

In Yellowstone county the boys have struck quite a bonanza. In addition to the territorial bounty the county offers one dollar on a coyote, and two dollars on a wolf. This just doubles the territorial bounty on each animal killed or brought in.

A young fellow named Martin, with not much on his hands except idle time, practiced a week at the business in Yellowstone county, and the result was nine wolf skins and twenty-six coyote skins. To sum up he got \$13 and \$25 for the coyotes' ears, and \$9 and \$18 for those of the wolves; after which he sold the hides for an average of about \$1.50 each to a fur dealer in Billings. Total profit, \$118.50, and lots of fun; cost about \$5 for strychnine and time. Bait was had in one dead animal picked up on the range.

So much for coyotes and prairie wolves. There is another dangerous animal in Montana, which is almost as destructive as the above two species, but which is a great deal more dangerous, and as much to be feared by human beings as by animals. I refer to what is commonly called in this country the mountain lion. These beasts should be styled more correctly, pumas, catamounts, or American panthers. In this northwestern country they grow to an enormous size, and are just as fierce and bold, if not more so, than the same species found in Africa and other countries. Scores of adventures could be related by Montanians who have met and conquered these monsters, but a few of them will suffice to let the readers of the FOREST AND STREAM understand the style of neighbors we have in this yet new and undeveloped country.

A ranchman living on the Yellowstone River, while coming to Miles City during the late Christmas holidays, espied a herd of antelope near Sunday Creek and raised his rifle and fired at them. The bullet wounded an antelope, and the noise of the explosion started the herd on a dead run, the maimed animal also endeavoring to get away. The hunter started to secure his game, and had made but a few steps in that direction when he discovered that the wounded antelope was claimed in another direction. Two mammoth mountain lions had exhibited themselves, secured the antelope, and were marching away with it. To own the truth the hunter, or rather ranchman, was a little frightened, and preferred to let the thieves have the game rather than risk a fight with the two of them. Another gentleman living on the south side of the Yellowstone, related his experience with mountain lions, which are quite numerous on his range, about forty miles south of this fort. He says they will drag down a heifer or young steer and take off a quarter almost as neatly as a butcher would with his knife, which they drag away and devour. When they are hungry again they attack another beef, and never return to a carcass they have left.

He recently came upon a bunch of five lions while out with a party of friends. He struck their trail just over the divide, between Powder River and Cottonwood Creek. After following it in the snow for some time he found where they had chased a deer, and from there they branched off in several directions, he taking the trail of the largest one, which led him down into one of the gulches. After mounting a large rock he looked over and discovered the beast he was after about thirty feet from where he was standing. Immediately upon seeing him the lion took a jump over a coulee about twenty feet deep and thirty feet wide, landing safely upon the other side, from whence he looked back in a very contemptuous manner at our friend. The latter raised his rifle and fired and at the report two other lions came in sight and walked toward a cave which was a short distance away. Taking them one at a time he gave them twelve rounds, at the end of which they had reached the cave and disappeared inside. He was then joined by the rest of the party, and upon arriving at the cave they found that the largest lion had rolled down, the others succeeding by numerous rolls and jumps in following the leader. Finding the outlet some eighty feet from the mouth they filled both en-

trance and outlet with pine and spruce logs and set it to burning. After waiting and watching a long time and no lions appearing the hunters concluded the animals were dead, but it should be added that none of them had the grit of old Israel Putnam to go in and see for themselves.

Still another ranchman from the same section, whose ranch is on Tongue River about eighty miles from here, brought into Miles City a few days ago the pelts of three mountain lions, for each of which he received a certificate of \$8, or \$24 in all. He says he has six more lions killed and will shortly bring in their skins for punching. He reports between twenty-five and thirty more lions in his neighborhood, all of which he is confident he will bag this winter. Mr. and Mrs. W. L. Perkins, as they were returning from the sawmill on Bridger Creek to their ranch near Bozeman, a few days ago, came upon a large mountain lion devouring the carcass of a recently killed deer. The lion fled at their presence, which gave them the opportunity of dragging the remains of the deer toward their ranch. This being done, thoroughly poisoned it with strychnine, and had the satisfaction the next morning of finding not only the unconsumed venison intact, but also the still form of the mountain lion cold and stiff beside the bait. This ferocious "king of the forest" was captured without any daring and bloody encounter. He measured over eight feet from tip to tip.

Mr. Thomas Brenton a couple of weeks ago killed a large mountain lion in Dry Gulch, four miles east of Helena, that measured nearly eleven feet from the tip of his nose to the end of his tail. He was quite a monster, and seized upon and carried away a large dog, apparently with as much ease as a cat would a mouse. He was followed by Mr. Brenton, and after setting off without injury three large traps, was finally overtaken and shot. He leaped across a chasm fully twenty feet in width with ridiculous ease, and made a leap that distance when he sprang upon the dog. Mr. Brenton brought the pelt to Helena and permitted the ears to be punched, for which he received \$8; but he would not part with the hide. Mr. Chas. O'Neill, an up-the-country ranchman, has a good-sized mountain lion cub which had snuffed from an overdose of strychnine. The little fellow is yet young enough to be harmless and playful; but it won't be long before he becomes a dangerous plaything. The above are only a few of the many truthful instances that could be related about the mountain lions of Montana. I did intend to say a few words about what we do with our numerous black cinnamon and grizzly bears, but as my letter is already of too great a length, I will defer that portion of my correspondence until another time.

CARL.

FORT KEOGH, Montana, February, 1886.

THE SHORE BIRDS.

SALEM, Mass., July 19.—Peeps of both varieties (*minutilla* and *pusillus*) were seen in good numbers at Ipswich last week; also a few ringnecks (*A. semipalmata*), robin snipe (*M. griseus*), and scattering yellowlegs. Jack curlew (*N. hudsonicus*) are seen passing over. They seldom stop here. I heard the first npland (*T. bartramius*), last Saturday. Grass birds (*A. maculata*) are also seen. Some varieties have been here for the last two weeks. Our season should open July 1, because some of the birds are either here then or soon will be, and July 15 is too late a date, for the simple reason that before this the southerly migration has begun and nature herself has thus opened the season. Let us hope to see next season more intelligence in this direction by those who frame as well as those who pass our game laws. I have omitted beetle head (*S. helveticus*), one chicken bird (*S. interpres*), and a still sandpiper (*M. himantopus*), as also seen. I have shot a good number of the above mentioned birds this season.

X. Y. Z.

ATLANTICVILLE, Long Island, July 17.—A party of three shot from this place 60 large snipe on the 15th, of which 53 were dowitchers, 2 greenlegs, 2 creekers, 2 yellowlegs, large and 1 jack curlew. What most surprised me is the 53 dowitchers. I think it likely that there is not any record made where there have been so many of this kind of bird shot within three years. It looks as if the spring law had something to do with this flight of snipe. Even if it does stop Mr. R. B. Roosevelt from shooting until the 15th of July, Mr. Roosevelt says that there is no shooting in the month of June. Mr. R. is sadly mistaken, as we all are likely to be, yet I presume that Mr. R. will allow me to state that I have seen in the latter part of the first week, also the first part of the second week of June, flights of yelpers, dowitchers and robins with plover. This may not happen every spring or summer, whichever we might call it, yet it has happened and is likely to happen again. The law is just right; it suits me, so let it be. Let Mr. R. sit on his yacht, it will do him good even if he did see such a flight of snipe as is spoken of in his letter.

AN OLD GUNNER.

HANDLE WITH CARE.

Editor Forest and Stream:

In view of the frequent deaths and mutilations caused by the criminal carelessness of those handling firearms, I wonder if it would do anything toward preventing the same, if makers were to inscribe all over the locks, stocks, and barrels of every gun made, in as prominent manner as possible, the above caution? I am inclined to think it would do but little good, for even then men would still persist in pressing back the hammer of an old muzzleloader with their toe while they "blew in the barrels just to see if they were loaded," or would draw a gun by the muzzle from a boat or wagon, or across the pommel of a saddle, and thus "get their name in the papers," and what is left of their bodies in the hands of an undertaker.

This is a grim subject to joke about, but if men will not be brought to their senses by serious talk and the frequency of such accidents, they should be shamed into it by ridicule, or be prevented from handling a gun at all. The old saw, that accidents will happen in the best regulated families, is as true as ever, and in the use of firearms is no exception. With the best of sportsmen accidents will sometimes occur, but never from sheer carelessness or criminal neglect of the exercise of proper caution.

I have used a gun for many years and have never caused or met with a serious accident, and yet I was once hunting with a party in Connecticut where one occurred which caused us sorrow we shall never forget. There were six in the party and by my suggestion we laid out our ground and divided so that but two could hunt together or near each other. The two where the accident occurred were following up a ravine, one on either side, with bushes so high between them as to obscure each from the view of the other; their dog was working up the ravine when a partridge rose, and one o

the men having got in advance of the other turned to look back for the bird just as the one in the rear saw it emerge from the cover, when he fired and at the instant heard the scream of his friend. I was some distance away, but I heard the voice and knew at once what it meant. We hastened out of the bushes for the road below just in time to see one of our party leading another out to the road. All soon gathered around our injured companion and a more sorrowful party I never witnessed; hardly men as we all were, it is no discredit to say we cried like schoolboys. Kneeling on the ground beside our friend I opened the injured eye and was at once satisfied it was ruined, although the man himself thought not—he thought he could discover a gleam of light when I opened it. He was a man of pluck, for while we were mourning and weeping over his misfortune he said to us: "Boys, don't feel so bad about it; it is done and can't be helped; nobody is to blame for it." And then, as if to cheer us, he said: "A man can see a good deal in this world with one eye if he watches closely."

The object of this article and the naming this painful incident is to impress upon sportsmen the need of the utmost care, caution and coolness while shooting in company with others. For those who blow into the muzzles of loaded guns or drag them toward themselves by the muzzle I have but little sympathy, but should be glad to prevent the anguish of their friends caused by such senseless accidents, and also avoid the shame brought upon sensible sportsmen by such heedless acts.

I never allow the muzzle of my gun to point toward myself or any one with whom I am hunting, and I will hunt with no one who does not observe the same precaution. I always make it a point to know where my companion is, and that he shall know where I am, while hunting in cover. I will not hunt with a careless man, or one who gets so excited as to lose his caution or judgment.

I presume some young men in reading this are ready to exclaim, "Old fogey!" We know how to handle a gun without any of your caution." I hope so; but if this sketch induces any one to become a little more careful, and thus prevent even one serious accident, I am sure the editor will not deem the valuable space it occupies entirely lost.

CHICAGO, Ill.

FOXES AND FOXHOUNDS.

Editor Forest and Stream:

The differences of "Hounding," of Virginia, and Mr. H. C. Newell can be reconciled upon the theory that each possess dogs best adapted for his respective ways of hunting. It does not require very much logic to convince us that the foxhound with deep, loud and indifferent tongues that follows the walking and trotting fox, whether it be over the granite ledge or more favorable ground, analyzing each step of reynard, can and will run longer than the sweeping dog. A good dog of either breed will run as long as the fox, and the length of time a fox can run depends upon whether he is permitted by the pack to set his own pace or not. While the ground run over necessarily makes a difference in the pace of the dogs and fox, yet I know from experience that there is a vast difference in dogs. My early hunting was with the gun in the mountains of western Pennsylvania, and while yet a boy I killed as high as twenty-three foxes in one winter. After moving to this place I joined a party on a fox hunt. We left our camp before day upon a very favorable morning for running, and by daylight a red fox was jumped and in a very few minutes ran in plain view of our entire party. I saw the fox and the dogs at the same time, and I confess that kind of running was a surprise to me. I had a gun in my hands, yet nothing could have induced me to have shot that fox. In less than two hours the fox was run to earth. The dogs were immediately taken to where another fox had been seen by some of the party, and in a few minutes he was up and going; and in less time than the first was haled, this one, after considerable labor, was dug out and killed.

In going to other woods a gray fox was started, caught and killed in twenty-five minutes by the watch. The following day another red fox was caught and killed in a race of two hours and twenty minutes.

After this introduction the shotgun policy was vetoed and nothing said about Pennsylvania hounds running twenty-four and thirty-six hours after the same fox. There is also a difference in the running of the same pack of dogs, much depending upon a favorable scent. There is also a difference in the running of different foxes and of the same fox upon different days. Start an old red fox immediately after he has feasted, and I have known the dogs to earth or catch one in a few minutes by crowding him from the jump. Men who have dogs they rely upon to kill, well know that with favorable scent there is no such a thing as dogs running over six or seven hours after the same fox; and in the majority of cases three hours will end the fox's career. The man who once runs with such dogs has no use for the gun. He would not use it if he had it. What he most needs is something to carry him across the fields, over the fences and ditches with safety to the "death," and I might add that the man standing behind a tree with gun in hand anxiously watching a log, hoping that the fox may select it, from which he can watch the delighted twenty-four-hour dog snuffing all the scent out of his tracks, while the fox is either killed, or like the Irishman "made to love that," has no use for other than a slow dog, and the slower the better his chances of gratifying them—to him—exquisite pleasure of lugging home his gun upon one shoulder, while from the other hangs suspended the mutilated remains of the fox that nature had given no other means of defense than his legs.

A. C. STRECK.

OTTAWA, Ia., July 14.

MASSACHUSETTS GAME LAWS.—Editor Forest and Stream: I have heard more complaints relating to the inconsistency of our new game laws recently made by our Legislature than ever before; and when I say that the present game laws in this State are unjust and unreasonable I believe that I am speaking for a large majority of those who are most directly interested in them. We can now shoot woodcock from August 1, ruffed grouse from Oct. 1, quail from Oct. 15. The shooting of woodcock in August is of no account and ought to be abolished as it acts as a cover for those who would shoot chicken partridges before they ought to be shot; but after Sept. 10, there is no more harm done (if it were not for the present law) in shooting a partridge than there is in October, and in our strict covers of this State those who shoot by fair means do not make large bags of partridges in September. Why can't we have a law as follows: Partridge and woodcock laws off after Aug. 31 to Jan. 31; Quail law off after Oct. 14 to June 1? I believe that would be for the best interests of the game and at the same time be more congenial to the majority of those most interested.—LAUREL (Boston).

A TOUGH BEAR.

Editor Forest and Stream:

It is well known that bears will stand a deal of killing. I will give you an instance. I overtook a large one running "right smart" with one of my heaviest traps fast on one fore-foot, clogged with a beech sapling weighing seventy-five pounds or more. I wished to stop him before he reached a muddy swamp, for which he was making, and gave him a shot on the jump. The bullet struck him in the head and laid him out, but he was soon up and came for me. On trying to reload, I found I had forgotten to take my cartridges. Bruin was most up to me, but by dodging around trees I secured a hold of the end of the clog and threw my whole weight upon it till it caught beneath a root. The momentum swung him about against a sapling. This was my opportunity, and I lifted the clog and made a turn of the chain around the tree. He was jumping and striking savagely all the while. To go back to camp, five miles, for cartridges was not to be thought of, so he must be dispatched with a club. At every blow he roared, till the wood seemed like a menagerie of caged beasts at feeding time. The brush and limbs prevented giving only half-arm blows, many of which he dodged, but never parrying, as we are told they will always do. Still the blows were not light taps, for the blood poured in streams from month and nostrils, mingled with froth, and for every blow he jumped and struck straight from the shoulder like a pugilist. I got completely winded after a while and sat down on a log to rest and wipe off the perspiration, and after getting my second wind went for him again. The old fellow was at the scratch as soon as I, but he had become blind, and soon exposed his head so I got in a full swinging blow on his occiput and laid him down quiet; but to make sure, I put the knife in his throat. I have known of instances where bears, on being freed from the trap, have revived and got away, and sometimes the hunter has been badly chewed up. On skinning him out, I found his head was a mere pulp; not a bone larger than a twenty-five cent piece.

Please excuse violation of rule to write on one side only, as I am very short of paper and don't like to use back.

WARFIELD.

SUMMER WOODCOCK SHOOTING.

I BELIEVE if my time I have read about two thousand articles denouncing summer woodcock shooting in New Jersey. I have also heard nine-tenths of my friends, including myself, scarily the practice. Yet, when I go out in July, I stumble across many writers of these articles and often see them creep on hands and knees through green briars and wade waist deep in mosquitoes to get a shot at the "fond hovering mother bird." I am now also prepared to make oath that I do not believe the life of one single woodcock was ever saved by the above mentioned articles or by the verbal denunciation of the summer shooting practice.

For twenty-six years I have been scaring up woodcock whenever I got a ghost of a chance. For exactly twenty-six years I have kept within the letter of the game law, although my family and friends are very large land owners and I could have anticipated the open season without fear of any trouble. From what it has taken me twenty-six years to learn, I now wish I had my life to live over again and if I would not make it hot for "the fond flutterers" you might pepper me with bird shot for an idiot.

When I hear the words "game laws" now I grin with fiendish delight, for I know that practically in Northern New Jersey no such things exist. There is not a month in the year when the unsuspected woodcock resides there, that it is not shot at and killed, and I have yet to learn of the first arrest and punishment of a game law breaker. What is the earthly use of advocating the abolishment of woodcock shooting in July and August, and at the same time doing nothing about March, April, May and June. Of course, woodcock should not be killed until October, but I, for one, do not propose to keep my hands off and let a lot of irresponsible country bumpkins skim the cream under my nose.

What happened this year? Simply this: I waited until the open season came along, only to find that a horde of market shooters for over three weeks past had been killing the birds off on the ground I shoot over. Yet, on July 3 three broods of birds were found by different parties, that could not fly. Indeed, one brood was just out of the egg. In each instance the mother bird was killed, and from personal knowledge the young did perish.

There are a score of farmers who know who the law-breakers are. The matter is no secret. The shooters were seen shooting the birds and I have their names and all particulars. For this reason I write this. Now all you two thousand gentlemen who have been writing against game law breaking and spring and summer shooting, etc., I want you to come to the front. If you mean business let each one of you chip in a dollar bill to the editor of the FOREST AND STREAM. He will tell you I am a responsible person. When the two thousand gentlemen have been heard from, he or I will place the matter in the hands of one of the best known lawyers in New Jersey and I will spend both my time and money to try and put these fellows through a course of sprouts. He shall from time to time publish a statement that will satisfy every one that the matter is not being botched. If, however, the law is found on this test case to be defective I will give you all the exact locality of the ground and you can all go there next May or June and be on an equal footing with the woodcock hogs of Sussex and Warren counties.

AJAX.

THE HOUNDS MUST GO.—Montreal, Can., July 15.—Editor Forest and Stream: Mr. Andrew Lyndecker, a guide of the Smith's Lake region and Beaver River, Adirondacks, is an intelligent man, and informs me that the guides in that section of the Adirondacks are bitterly opposed to deer hounding and have banded themselves together as a body to prevent dogs from being used in that region. That means "death to the hounds." They saw far more deer during this trip than it would have been possible to have seen had dogs been allowed to run there during the past year. Our sportsmen repeat the cry, "Death to the hounds," and let it be echoed throughout the Adirondacks, and the population of long-eared dogs will rapidly decrease there and the deer will in proportion increase. Take up the cry, brothers.—STANSTEAD.

NEW YORK.—Pearl River, Rockland County, June 14.—The FOREST AND STREAM's note on the supervisors and the woodcock law has been copied into our county papers, and has had a good result; so far I have heard of no shooting. Quail prospects are better here this season than for a long time.—C.

THIS BIT OF PERSONAL INTELLIGENCE about the author of "Canoe and Camp Cookery" is given in the Syracuse Standard: "Many Syracusans may have noticed a modest little book called 'Canoe and Camp Cookery' recently put forth by the Forest and Stream Publishing Company, without knowing that the author is a native of this city and until a few years ago a resident of Syracuse. It is not long since the figure of Henry H. Soule was a familiar one here. A cripple from boyhood, he early showed evidence that if his body was less active than that of other boys, his mind was unusually alert and his talent for acquiring languages and certain kinds of scientific information something extraordinary. Young Soule's taste for hunting and fishing, as an adjunct of outdoor life, of which he was an ardent lover, kept him while at college at Ithaca constantly at war with the professors, and formed the subject of much good-natured raillery among his friends who liked more sociable companions than a dog and gun. Soule's camping expeditions and his adventures on the waters of Cayuga Lake have passed into legendary history at Cornell. On more than one occasion the young fellow who could not walk a foot without his crutches, or swim a stroke, has paddled his frail canoe from Ithaca to Syracuse by way of Cayuga Lake, the Seneca River and Onondaga Lake, sleeping under his boat at night and with no other companion than his dog. Young Soule's connection with the University was severed before he completed his course, the only study he cared greatly for being nature, and that not being included in the requirements for a degree at Cornell, he one day turned up missing. Since his University days, he has not lost in any degree his enthusiasm for outdoor life. No one but a lover of the woods would have inserted this paragraph in a cook book: 'A good many campers—and especially lady campers—think it necessary to carry a camp stove; some people go into the woods with an ice-box and a ton of ice, and others bring with them hair mattresses. I do not camp with such people, and I think every true woodsman will agree with me, that these deluded persons do not enjoy to the full the pleasure and wholesome exhilaration of real camp life. A bed of spruce or hemlock browse, properly shingled and of good depth, is the cleanest, softest, most fragrant and healthful couch in the world. If I never camped for any other reason, I would go once a year for the express purpose of enjoying for a brief sea-on the delicious odor and natural elastic softness of this best of beds.' Many passages in the book remind the reader of Thoreau, so much of the spirit of nature does the writer contrive to catch in his limpid sentences. The person who looks for Thoreau's philosophy in this little cook book, will of course be disappointed, but Mr. Soule has flavored his recipes with the smell of pine woods, and makes the reader long for a drink of spring water as it bubbles from the sand and a night's sleep on hemlock browse; he has in short put the essence of outdoor life into a little volume intended to teach the slave of the office desk and the book-worm how to get the fullest enjoyment out of a week spent under the open sky, along some lake or water course.

A SNAKE, A LARK, A DOG, A MAN AND A STICK.—Bayshore, L. I., July 16.—*Editor Forest and Stream:* As I was out yesterday, exercising a young dog, I flushed a young meadow lark. he could just fly nimbly and alighted in a hedge about twenty-five yards from me. I went straight toward the place and my dog came to a point. Looking ahead of her I saw a black snake three and a half feet long, with the lark in his mouth. He had the bird by the head, and moved off four or five feet with it struggling in his mouth. I backed out of the hedge, cut a stick and went for him. I killed the snake and the lark flew and lighted in the grass. It could not have been more than a minute, or perhaps two, from the time I flushed the bird until the snake had him.—H. P. ROSEMON.

OHIO GAME.—Wooster, O., July 18.—Woodcock shooting in this neighborhood has been splendid. The largest bag of the season was made on the 5th by E. F. Stoddard of Dayton. Ruffed grouse are plentier than usual; quail plentier than for years past. I have located over a dozen large flocks of grouse for the opening Sept. 1, when the above gentleman and myself will try them.—JOHN BOLUS.

MICHIGAN BEARS.—Central Lake, Mich., June 30.—There are many bears, that is, it seems like a good many, in this county just now. One swam across the Intermediate not fifty rods below this village the day before yesterday, and they are frequently seen on the roads. Some hunters, with a good bear dog or two, might "save" several, I think, but no one hunts them.—K.

MR. GRIFFIN SMITH, of Longmont, Colo., claims to have shot a mountain lion on the Little Thompson, which measured nine feet from the end of its nose to the tip of its tail.

NEW YORK DEER LAW.—The full text of the New York deer law will be given in our next issue.

MUZZLE VS. BREECH.

Editor Forest and Stream:

Your issue of July 1 contained an article from the pen of Mr. Napoleon Merrill, contrasting the difference between muzzle and breech-loading rifles at a shooting match at turkeys, where his "Old Betsy" did first-rate, "killing four turkeys out of twenty shots at seventy rods," while four breechloaders killed one turkey at thirty-two rods and four (shooting at the heads) at nine rods. He claims from this, as well as from the record made last fall, that the muzzle-loader is far in advance of the breechloader as a hunting rifle, and "that the public is getting tired of these as hunting rifles, generally, and it only now wants a few bold and disinterested leaders to forsake them for the masses to follow them, and with a high glee at that." Allowing me to be a judge, I should say that, so far, the "high glee" is all coming from the other side of the house. "The proof of the pudding is in the eating." Just so; and that is what is killing "Old Betsy" to-day. Is it possible that any amount of talk would convince a majority of our Adirondack or Western hunters that the old single-barrel muzzle loader of ponderous weight, beset with patent muzzle, ball starter, and all the paraphernalia attending one of those turkey killing old-timers is ever to supersede the breechloader of to-day for all kinds of reach-and-reach hunting? A gun that is light in weight, with magazine carrying from ten to fifteen loads, waterproof in all kinds of weather, easily kept in order, and of so many different makes that the hunter can order one carrying a light, medium or heavy charge of powder and lead, all combine to make a perfect weapon.

The great error of Mr. Merrill's theory is that he is trying to combine a d make one gun take the place of two distinct weapons. No target gun has ever been invented to fill the bill of a good hunting rifle. A perfect target gun ought to be accurate enough to hit four turkeys out of twenty shots at seventy rods every day out of the week. But place this same weapon in the hands of a Western hunter. Let three antelope jump up within fifty yards and scurry off across the plains. The "Old Betsy" is now fired off and a clean score made. The game takes a few jumps; drops and looks around to see what caused such a racket. But here stands a hunter companion armed with a magazine breechloader, who drops one in its track and another on the run before they get out of range. Query: Who gets the roast this time?

DEEP SEA FISHING.

ATLANTIC CITY, N. J., July 12.—Thirty-three years ago this place was called "Abscom," and we dedicated it on a hot summer day to the American pleasure seeker at a big dinner party or cold luncheon in the dining hall of the United States Hotel. It was then a waste of white sand as far as eye could reach, with an endless extent of beach, and only one house in sight. Now its resident population is 12,000 souls, and for last Sunday 860 cars carried down to the sea 40,000 people between Saturday 4 P. M. and Sunday noon. The like of this cannot be seen anywhere else in the world.

Here Mathew Stanley Quay, State Treasurer of Pennsylvania, has his summer habitat, and remains "high hook" among fishermen on the Atlantic coast. But even this genial lover of the life and example of good old Izaak Walton has suffered disappointment in deep sea fishing this year. Whether the cold spring had anything to do with it I cannot say. Not a single drum has the kindly and generous Quay brought to bay this summer; but with the true spirit of the thoroughbred fisherman the Hon. Matt goes out three times a week after the black drum, and his patience will soon find its "pure and perfect work" in a big, brilliant and successful day among the drum.

Anglesea in Cape May county is the point where the biggest fish have been caught, and I do not remember a finer sight than to see a dozen ardent piscatorial gentlemen wading in above their knees, with 200 feet of line in a basket, shoving their cotton-laid twine lines far into the surf, and patiently awaiting a bite. The last week in May mine eyes saw a sight which rejoiced me inwardly, as I gazed upon twenty five big black drumfish prone upon the beach, while the eager sportsmen were plunging into the waves up and down the beach, looking like an awkward squad of soldiers at a country picnic on the Fourth of July.

The Hon. Mathew Stanley Quay has become a fisher of men, and he is likely to be returned to the United States Senate from Pennsylvania, vice Senator Mitchell, who I hear is not seriously a candidate for re-election. Mr. Quay, who lives close to the heart of the people, thinks like Azeglio, the Italian statesman, that good sense and good faith are ample endowment, and guides sufficient for that man who has the high and honorable ambition to have "listening Senates" at his heels. But a truce to politics! the dog-days almost rage; and an ocean breeze bears more "balm in Gilead" just now than hecatombs of slaughtered politicians.

Mr. Quay tells in a most interesting manner of his "outing" in Florida, in December and January last. The sheephead were so thick at Punta Rassa that he and his *Fidus Achates*, Capt. Ben Sooy, the companion of all his fishing joys and dangers, caught sixty sheephead within one hour, the most of which were re-conveyed to the embrace of the sounding sea. Sheephead galore, when they can be picked out with more freedom than the country boy yanks in chubs with his hook attached to a horsehair line, become a drug in the market, a weariness to the fisherman's flesh. When I get a spare hour I will tell you how statesman Quay and fisherman Sooy, aided by skipper Smith, captured a 1,900 pound devil-fish last winter. It was a battle royal, and a picture worthy of a painter, it was to watch the devil-fish bigger than the boat in which they baited him; Smith poisoning his harpoon; Quay with a Ballard rifle in his hand ready to deal the dangerous foe a deadly bullet below the belt! The fight lasted an hour, in which the frail boat was well nigh submerged before the huge sea monster lay gasping and dying on the sandy beach.

But I began this to tell how, with Counsellor Harry L. Slape, one of our brightest and best lawyers in Atlantic, we braved the perils of the deep to feel the sheephead and bring to basket the countless blackfish. It was sunrise when we were, like Chaucer's Emily, of whom it is said:

Up rose the sun,
And up rose Emily.

By 6:30 Ben Sooy, the best fisherman on the island, had the white wings of his yacht spread, and the good boat Tillie Covert (a gift to Sooy from Matt Quay) was rapidly ploughing the seaway toward the wreck of an iron steamer, which went down with a load of sugar eight years ago. Here the sheephead and the wary flounder and the greedy blackfish most do congregate. There was just wind enough to send the Tillie darting like a swallow to the fishing banks. At 7 A. M. we were on the wreck and had our Chestertown hooks baited with surf clam, the most tempting lure for sheephead as well as flounders. And, by the way, I caught last week the first and only sheephead caught as yet at the wreck; but here, on an auspicious summer day, the Pennsylvania statesman has been known to bring to boat fifty four sheephead in a single day. But Anglesea is still the sheephead's paradise, as dozens are caught there daily.

Nature never bestowed on a hungry fisherman a diviner day than last Saturday. Leaving the Tillie Covert in charge of a "broth of a boy," we three fishermen bold betook ourselves to the little sharpie and in half an hour we had taken a dozen of the finest flounders I have seen in six years, as they have almost disappeared from this locality. But our most numerous enemies were the bladder-fish, of which, amid the wild and hilarious imprecations of skipper Sooy, we brought in out of the wet at least four dozen. But as we drifted around, meanwhile drinking in (with a trifle of cold beer—our only stimulant to wash down the sandwich was there) the ozone in the sea air sweeter than "nard or cassia," or poor Keat's "luculent syrups tinct with cinnamon," as we drifted about we caught on to a school of blackfish and soon had seventy-five hooked and in the boat, some weighing as high as four pounds. Now and then we varied the day by catching half a dozen kingfish and a twenty-pound shark. For blackfish and flounders I always use the Chestertown hook, and I seldom lose either hook or fish.

At first Counsellor Slape distanced me on "high hook" but as the big bass (as we call 'em) began to bite and hold on, on my side of the sharpie, the handsome Counsellor put in a plea of "confession and avoidance," and the special plea of *non vult contendere* (which he freely translated that he "didn't want to contend with the vultures"), and at last Capt. Sooy voted it an even thing between Slape and J. M. S., which was a close approach to the facts in the case.

We had all the fish we could use, and we wanted to give Sooy another chance for the afternoon pleasure and fish

seeking, so we whistled to "Mickydoo," the boy in charge of the Tillie Covert, and were soon on board, ready in less than an hour to do justice to Mrs. Eckert's good dinner at her comfortable cottage, "The Radnor." As we stepped ashore, I thought of the poet's invocation to the sea, where dwell, as the wise, witty and winsome Heine says—

"Goldfish and pearls and brightest of sea shells,
Which thou preservest in secret places,
There down below in crystal palaces,
Oh! how I pined afar in desert places,
Like to a withered flower * *
Shut in japanned box of the dry botanist,
So lay my heart in my breast,
Odors here, murmurs here, breath soft with laughter,
Birds in the blue sky singing out clearly,
'Be thou greeted, thou infinite sea.'"

J. M. S.

LOCHLEVEN TROUT FOR SUNAPEE.

Editor Forest and Stream:

Possibly a few paragraphs in relation to Lochleven and its justly celebrated trout may not be uninteresting to your readers. I am visiting the loch for the purpose of investigating personally the nature and habitat of the *Vario leucensis*, pronounced by a recent authority to be a true landlocked salmon peculiar to these waters and certainly the gamiest fish that ever strained rod for me—as well as with a view to arranging for the purchase and shipment of a number of thousands eyed ova next December, to be incubated in the Sunapee Lake hatching house, the fry to be distributed in the tributaries of the lake.

It has been sufficiently shown in the columns of the FOREST AND STREAM that Lake Sunapee contains four varieties of *Salmonidae*, some native to its waters, others descendants of imported species; and that owing to an abundance of appropriate food, both natural and introduced, these fish attain in a short time extraordinary proportions. To my satisfaction I proved last May that large trout were on the surface, feeding in shallow water, and among others killed a 3½-pound specimen of the new species which Col. Webber has happily christened *Salmo sunapee*, unfortunately snapping a double leader on a second that was much heavier. As June wears on, all the *Salmonidae* recede into water from 50 to 100 feet deep, and can be taken during July and August by deep fishing with worms and live minnows only. Some anglers try to persuade themselves that this is sport, and claim that as the trout is reeled toward the surface and begins "to see daylight" his struggles become frantic. But the science of optics demonstrates that the loss of sunlight at this depth is but slight, while physiologists well know that the sudden removal of the pressure of 100 feet of water would tend to induce syncope rather than exaggerated activity. Sharks drawn from great depths faint on the surface. The problem we have to solve is this: Are there any trout that will remain on the shoals in Sunapee during the summer months, and rise to the artificial fly? We think the rainbow will, we have reason to believe the *Vario leucensis* will, if he forget not his habits and instincts after he has become naturalized in America. In Lochleven, trout are found upon the shoals all summer, and afford rare sport to the angler. As fighters, they are two to one to *Salvelinus fontinalis*, and no fish in the world can surpass them in delicacy of flavor. They also attain an extraordinary size. It was our good fortune to see the prepared skin of a ten-pounder, captured with rod and reel by Mr. George Barnett of the Lochleven Angling Association. The largest specimen on record weighed nearly 18 pounds, but the average size of fish ordinarily taken with a fly is from 1 to 1½ pounds. At the Howietown Fishery, Stirling, where we were most courteously shown about by Mr. J. R. Guy, Secretary of Sir James Maitland, the owner of the hatchery, our heart was made glad by the sights of thousands of these noble trout, from fry an inch in length to fish 8 and even 10 pounds in weight. At this establishment great pains are taken to obtain the strongest embryos and healthiest fry. The milt of young and selected males only is used; all eggs are eyed on glass grilles; partially boiled clams, which have been found to impart a rich salmon hue and unwonted vigor and size to both ova and fish, are fed to the stock throughout the year; the most approved piscicultural apparatus is employed, the proprietor having adopted the principle that "it is of no use to hatch fry unless the ova have been so incubated as to endow the fry with strong constitutions." Among the various foods, insect crustacean, and vegetable, the Lochleven trout thrives upon in his native waters, a small snail stands first in importance. This snail has been successfully propagated at Howietown, and the writer is making arrangements to import the snail with the first instalment of 30,000 Lochleven trout for Sunapee waters, in the belief that if it be added to the variety of foods already existing in the New England lakes, the success of the plant of Lochleven trout will be assured. We shall reserve some of our fry until as yearlings they will more readily become acclimated and shall have acquired the power of caring for themselves. So capricious is this sharp-eyed, quick-mind beauty, so indifferent to the anglerworm of the hoodlum, so appreciative of the most refined "casts," that if he once "takes hold" or transfuses his blood by hybridization into the native species, fly-fishing in Sunapee, as well as in other waters unpolluted by poisons and unswept by nets, will be permanently insured. Depopulation by legitimate angling will be impossible. After a personal inspection of the magnificently appointed fishery at Howietown, I can most confidently recommend all desirous of stocking depleted waters with the bravest fighter of his race, and the most difficult of extermination because so fastidious in his tastes, to do as we have done, and import the eyed ova. The loss on shipboard has always proved insignificant. "The History of the Howietown Fishery," by Sir James Maitland, now in press, containing a full account of all the operations carried on at the Hatchery, as well as a description of the most recent piscicultural apparatus, liberally illustrated with first-class wood cuts, will certainly be the highest authority on the subject yet issued, as such must prove invaluable to every American aquaculturist.

I doubt if the world numbers among its lakes the equal of Lochleven. To many the Scottish loch must yield in beauty, but what other has the fish and at the same time the historic association? In full view of the castled Isle of Queen Mary, one casts his delicate flies deftly knotted on the finest and most invisible of gut. As he floats toward the suggestive ruin, the scenes in Queen Mary's eventful life flit before him—from her youth, whose rare beauty is immortalized in the Orkney portrait, to the beginning of the end, when charged with complicity in the murder of Darnley she was committed to Lochleven Castle in 1567; to her escape the follow-

ing spring with the aid of "Little Douglas," who yielded to the power of her resistless charms; to the revolting murder that closed her career in 1587, and the agony so vividly expressed in the livid pallor and contracted features of the Abbot's painting of the Queen's head after decollation—but look! that gleam through a wave's crest! Instinctively your wrist turns, and the barb of your tiny hook is set in the lip of a pound and a half Lochleven trout. The movement you have dreamed of for years has come at last. Be cautious, for your tackle is refined to the utmost, and your fish is the prince of funny diplomats. His first rush is toward the drifting boat. "Catch the pin!" cries the watchful oarsman, and in response you reel madly on the slack and lead your fish successfully past the bow. Who but a brother of the angle can conceive of the sublime frenzy which accompanied the rush of that trout at the descending "teal and red"—who else, that cretichism, short-lived, unearthly, that electrified every nerve in your frame as you twisted the steel into his jaw and felt him "fast"—that concentration of delight in the struggle that followed, wherein the noblest fish that God has made matched his brute intellect, perhaps his experience, against your reason and art; wherein your slight Leonard split bamboo (unknown on these waters, where two-handed sixteen-foot rods are still the rule) beautifully responded to his desperate leaps for life and arch-d in perfection to his wild circles—who but an angler knows of the sweet calm that follows victory as you tenderly placed your dying captive on the boat bottom, and wearied by the excitement sat down to watch his colors fade, with the feeling that if your life were forthwith to end, it had not been altogether a failure. And now that he has so skillfully taken your fish in out of the wet, untie your boatman's tongue with a Campbellton and Islay blend, and he will entertain you with bits of history folk lore: for every hillside, each wood, each ruin has its tale, and you long to make them speak of prehistoric ages, of the thousand years that intervened between the landing of the Celt and Julius Caesar, when the Arch Druid was absolute in the land, even of the stone men who preceded the Celt, and whose remains and implements are imbedded in the caves and river strata of Britain. Our eyes have lifted from the east to the distant mountains, as if they would indeed find voice and satisfy the craving. "There's a lovely one, sir!" growls the oarsman, disgusted with our pre-occupation, risen while we were dreaming of by-gone years. A flash of bluish silver beneath the flies, like the blaze of a Brazilian diamond, and that is all. He has recognized the sleeve silk and feathers, and has glanced past, up wind, in pursuit of the genuine *Cuticula*. Let him go. "You are not greedy, sir," says our boatman. We have had our share, more than our share, for many an angler spends days at Lochleven, awaiting favorable weather, without killing his single trout, and our take already, to be announced in the Glasgow Herald of June 30, is 10 tsh, weight 8 pounds 12 ounces.

As we plod our way at evening toward Harris's Hotel in Kinross, the sights and scenes about us recall Tannahill's picture of the close of the Scotland day:

"Beneath the golden gloaming sky,
The mavis mends her lay,
The redbreast pours his sweetest strains
To charm the lingering day;
While weary yeldrins seem to wail
Their little nestlings torn,
The merry wren, frae den to den,
Gaes jinkin' through the thorn.

The roses fault their silken leaves,
The fox-glove shuts its bell,
The honeysuckle and the birch
Spread fragrance through the dell.
Let others crowd the giddy court
Of mirth and revelry,
The simple joys that nature yields
Are dearer far to me."

Adieu! Lochleven. If our venture prove a success, we shall live over these happy hours, see again in fancy thy castled isle and crumbling ruin, dream again of thy Druids and Culdees, thy Pictish princes and thy Scottish kings, as we killed thy spotted children in the Lake of Sunapee.

JOHN D. QUACKENBOS.

LOCHLEVEN, Scotland, June 24, 1886.

THE TROUT OF MONTEREY.

BY JOHN DEAN CATON, L.L.D.

FOR several years past I have spent a month or two of the spring time at Monterey, California, which I think is the most beautiful resort for tourists of the many charming places in that State. The Hotel del Monte is located in an open forest of old live oaks and pines, whose appearance suggests thoughts of prehistoric times, and the wild and gnarled appearance, especially of the live oaks, attract admiration by their grotesque forms. Among these are the pleasure grounds of the resort, where very large sums of money have been and are being expended under the supervision of a skillful gardener. The Arizona Garden, as it is called, which occupies but a small portion of the ground, is filled with a great variety of cacti, brought hundreds of miles from the great sandy deserts, where the most extraordinary forms of this plant are found, and having been successfully introduced and are now vigorously flourishing in this unnatural environment.

But what interested me most on my first visit was the prospective fish pond. This was a pond or lagoon of perhaps fifty acres, of about seven feet in depth, resting in a bed of sand and separated from the great bay of Monterey by a high bank of sand, which had been raised by the wind, and why this sand has always stopped short on that high hill only partly covered with bushes, and had not passed on and filled up this little lake whose waters extend nearly to its base, is quite beyond my philosophy. The outlet of this lake was a little rivulet which ran its course along parallel with the sandhill for perhaps three hundred yards, where it emptied itself into another pond still larger, which in turn emptied into the bay through a considerably larger though sluggish stream in the very town of Monterey, beyond the sandbank which had dwindled away to a proper sea beach for half a mile before the mouth of the outlet into the bay was reached. This final outlet may be called a tidal stream, for the tide sets up into it at times. The outlet of the upper lake had been closed up and covered over, with a screen at the upper end.

For the purpose of stocking this lake with trout, a fish hatchery had been erected on the grounds and placed in charge of a most competent expert, Mr. Dyson, which was a complete success. This was rendered possible by a great

abundance of the purest and coldest water, which was brought in large iron pipes from the headwaters of the Carmel River in the mountain twenty five miles away. This water is cold, as you will see later on, and in great abundance, and the overflow makes a nice brook. A pipe is conducted into the pond, from which a four inch jet is thrown up, I should judge, at least forty feet when the water is turned on, and as the standpipe is below the surface of the water it has a pretty appearance. Ordinarily the overflow ran through the fish hatchery.

When I first visited Monterey and spent nearly two months there in the spring of 1884, I found this fish hatchery in a very prosperous condition, and so again in the spring of 1885. The little lake seemed to be swarming with the young trout, but it was wisely determined not to turn loose the guests of the hotel upon the lake for another year, and of course all recognized the fact that to make any exception to this rule would be unwise. Only the California or rainbow trout were introduced into the lake for the reason Mr. Dyson explained, that they grow more than twice as fast as the eastern brook trout and that they can endure more vicissitudes as well.

When on my way over to the same destination last March I revelled in anticipation of trout fishing in this beautiful lake and I promised myself to do my share toward supplying the table of the Hotel del Monte with trout. I had hardly registered at the hotel when I inquired of Mr. Simmons, the new manager, about the trout in the lake. He answered with a sigh, that they were all gone and that there were only catfish there! My heart and hopes fell to a very low point very quickly; I could not at the time even inquire the cause of this misfortune. So soon as I could I commenced the inquiry from what I supposed to be the best sources of information. Mr. Dyson was gone; the hatchery was closed; the fountain was never seen flowing, the shores of the lake looked neglected and the beautiful driveway around its shores was dilapidated and impassable. All interest in the beautiful little sheet of water, which had promised to be one of the strongest attractions of that charming place, seemed to have completely died out.

The first explanation was that the divers had caught out all of the trout; and in proof of this I found a person who had shot a number of the divers; in the craws of one or two of the birds young trout were found. There are two or three species of these aquatic birds which settle in great numbers upon the ponds along the coast, especially this one, twice a year, and remain for several weeks. This did not satisfy me. I pursued my inquiries in quarters which I thought must be absolutely reliable. From this source I learned that the lake was full of large catfish, which was true, and that they had eaten up all of the trout! This information was so positive that it fairly staggered me, and I tried to get a specimen of these ferocious and nimble catfish, but they refused to be taken. I was very anxious to see a catfish with its stomach full of speckled trout. At length I learned that Mr. Dyson was engaged stocking with fish a system of lakes near Castroville, Cal.; to him I addressed a letter containing many inquiries on the subject. I can do no better than to give his answer in full. While it satisfactorily explains the loss of the trout in the pond spoken of, it contains much valuable information about fishculture on the Pacific Coast.

ESPINOSA LAKE, Castroville, May 23, 1886. Hon. John Dean Caton, Hotel del Monte. DEAR SIR—Absence from home and your letter having been mislaid are the causes of your not receiving a reply before this, which I trust you will pardon. First, as to the number of trout that were put in the lake at the Del Monte, I have only my recollection as my authority. When I took possession of the hatchery there I found some memoranda, and secured the number of trout put in the lake, and that number gave 183,000 eggs for Del Monte, and 32,000 eggs for another place, I don't know where, so according to this, if there were 75 per cent. of the eggs hatched, there were 137,250 trout put in the lake by Mr. Woodbury, who at that time attended to the fishery. During my stay at the Del Monte I paid particular attention to the trout in the lake. I used to catch some every day and examine them, and I found them in excellent health. That was from Feb. 7 to July. Shortly after I left I was told that they ran a seine net across the lake, but did not succeed in catching any trout. If they had caught any I should have simply said that the trout were very lazy, not to be able to get out of the way of a net.

I can't understand why the trout should have disappeared so quickly, and the only cause I can give is, that they permitted the water in the lake to get foul by not letting fresh water into the lake, and the fish, not having any shade from the sun, naturally sickened and died.

No doubt the divers might have destroyed a number of these fish, but the catfish do not eat live fish. They will destroy the spawn. My opinion is that the "diver and catfish business" is a very small excuse to get through a large-sized hole. If the trout are all dead there, it was neglect in not keeping the water good.

The insect I used to feed the young fry on was what is commonly known as the water flea and a small red water worm. I also used to feed them on the water scorpion, also a small periwinkle that is found attached to all water plants. You can find all the above insect life in the pond, just outside the Del Monte grounds, just east of Mr. Ulrich's house. You then could see for yourself, and would be much better satisfied than by my description. I do not know the scientific names for them.

I was very fortunate in my hatching of trout. Put into the lake here 95 per cent. of eggs actually received. I fed my young fry mosquitos, which I boiled hard, with "curdled milk." You can catch them in a paste and then spread upon a flat piece of board about 3 in wide and 4 in, thick, and then dipped in the water. On this food the young fry did remarkably well for three weeks. I then gave them a little raw liver worked very fine mixing with maggots. At this age I began to feed them on the insects mentioned. I also fed them with the roots of water vegetation, which I did by pulling up a large handful from the ditch below the fish house and putting it in the troughs with the young fish. This acted like a charm when the fish were locked into a paste and then spread upon a flat piece of board about 3 in wide and 4 in, thick, and then dipped in the water. On this food the young fry did remarkably well for three weeks. I then gave them a little raw liver worked very fine mixing with maggots. At this age I began to feed them on the insects mentioned. I also fed them with the roots of water vegetation, which I did by pulling up a large handful from the ditch below the fish house and putting it in the troughs with the young fish. This acted like a charm when the fish were locked into a paste and then spread upon a flat piece of board about 3 in wide and 4 in, thick, and then dipped in the water. On this food the young fry did remarkably well for three weeks. I then gave them a little raw liver worked very fine mixing with maggots. At this age I began to feed them on the insects mentioned. I also fed them with the roots of water vegetation, which I did by pulling up a large handful from the ditch below the fish house and putting it in the troughs with the young fish. This acted like a charm when the fish were locked into a paste and then spread upon a flat piece of board about 3 in wide and 4 in, thick, and then dipped in the water. The Marquis had built himself a substantial house on the point only a few rods from the well, where he lived in good style, much beloved and respected by his neighbors for his goodness to the poor and his kindly and benevolent disposition. But the venture had cost him his snug little fortune. Reverses came and he was forced to sell out his possessions for a song. After lingering for a time around the place that had made him penniless, vainly trying to stem the tide of ill fortune that had set against him, he moved to Chicago and went to work at any kind of labor he could get for means to support his family. After a time he drifted into a gilt-edged gin mill as a bartender (I tell the story as it was told me), and one day there came into the place two or three of his former friends from sunny France. They recognized him at once, him, a French Marquis, mixing the seductive cocktail behind an American bar. Their cold surprise seemed to cut deep into his sensitive nature, and feeling keenly the disgrace of his position, with a sudden impulse he placed a pistol to his head, and before any one could interfere, sent a bullet through it and fell dead by his own hand. It afterward appeared that his people in France were very wealthy, but having learned that he had married an American wife had stopped his remittances. By the laws of France his widow could not lay claim to a franc of his share of the estates, nor could his eldest son inherit his title. After his death his family, left to the cold charities of the world, drifted into obscurity, and for some years their old neighbors and friends at Provemont and along Carp Lake have entirely lost sight of them.

Such in substance was the story of the oil well, and the interest aroused in us by the tale determined us so pay it a visit on our way back to camp.

At the point as we went back we pulled the boat up on the sand and walked up to the sloping bank to the level above, some ten or twelve feet above the lake, but nothing was to be seen of the well. In front of us and a few rods from the water were the crumbling remains of an old cellar wall, the only reminder of the house the Marquis built, the house itself and the outbuildings having long since been destroyed by fire. From here back to the heavily wooded hills, an eighth of a mile perhaps, the view was unobstructed by tree or shrub or bush. On the left and along the curving shore of the little bay was a scattering growth of stunted cedars and bushes and up to the right a heavier growth of woods extending back to the hills, altogether a picture that was very pleasing to the eye.

A walk of less than a hundred yards toward the woods to the right as we had been directed, brought us to the well, the wonderful bore we had heard so much about. There it was in a little sag in the surrounding ground, a clear white column of water not more than three feet high spouting up apparently out of the earth, as the pipe had been broken off a short distance below the surface and was not to be seen unless by a close look. Since the first grand squirt of forty feet the pressure had grown weaker till the water had gone down to the height we found, but for several years past it has maintained this even pressure with no sign of going lower or giving out. Our philosopher said some one told him there was a stone wedged fast in the pipe somewhere, obstructing the flow of the water, but the appearance of the column does not bear out this supposition. The water falls back into a pool a foot or more in depth around the pipe, from whence it finds its way into the lake a few rods away in whimpering thankfulness, I had a notion, as though glad to escape from the black caverns of the earth below into the light of the pleasant sunshine, and lingering a moment in the pool to get accustomed to the brightness, then it goes laughing down the slope to mingle with the warmer waters of the smiling lake.

Muller was curious to see how far he could poke an old handspike down the pipe and in tramping around over some loose wet planks that partly covered the pool he slipped off and went into the water over his boot tops. Like most other water it had a tendency to fill up all the space in the boots not taken up by his legs, and it is extremely doubtful if he ever in his life displayed so much energy and agility in a given length of time as he did in getting out of that pool and on solid dry ground where he could tilt up his feet and let the frigid fluid run out. Muller is willing to make a conscientious statement too that the temperature of the water in the pool is only a trifle above 32°. The water is as clear as crystal and as cold as the famous spring at the foot of Six Mile Lake of the Intermediate chain and would, I am convinced, if analyzed show that it is possessed of some valuable medical properties. The stones and gravel over which the little stream flows on its way to the lake, and the boards and planks lying around the spouting column are covered with a blackish yellow deposit which would indicate the presence of iron and sulphur, although the water has no perceptible odor. However, on drinking it a noticeable taste of sulphate of magnesia (in plain camp language, epsom salt) is left on the palate, but the water is so cold and pure that it is not unpleasant. We drank of it, and took our way back to the boat feeling as cool as a couple of walking icicles, but the hot sun soon thawed us out and before we had gone a mile on our way to camp we felt as lazy and shiftless as a pair of summer tramps. But we had seen the wonder of the Leelanau peninsula and were satisfied.

Last year in July Col. Whitfield, Cincinnati's postmaster, and Mr. J. C. Morrison, with their wives, spent a couple of weeks with neighbor Couturier, and the Colonel came back "jest a bilin' with enthusiasm" over the fine bass fishing he had in Carp Lake. He took from twenty-five to sixty pounds of bass a day, not counting the longsnouts nor taking into account some scores of goggeleys and bliegills that he yanked out between times to keep his wrist in play. Nor did they allow a good while to elapse between drinks at the "oil well," and they were so well pleased with the water and the locality and the fishing in the lake, that Mr. Morrison bought fifty acres of the point, taking in the well, and is this summer going to build a house near it where they can spend their yearly vacation from business with their families, drink the water and fish in the lake to their heart's content, but as he is the Colonel's father-in-law, it may be said to be "oil in the family." Alf's "well" that ends "well."

At camp we found that preparations had mildly set in for a start for home, as the next day but one was fixed on for the final breaking up. This is the only part of a vacation that bears hard on a lover of the woods; we can stand the ills of camp, which are never many; the broiling sun, the cold and rain, the few mosquitoes, or millions of 'em for that matter, and preserve an even balance; but when the fateful day comes at last, we stand around at first in a dazed sort of way, wondering where to begin and wishing we didn't have to begin at all.

We want to stay another day or two, another week, another month; but there's the inexorable last day staring

us in the face and there is no dodging it. We make up our minds right there that life is too short, that work is a burden and a calamity to be deplored, and go to packing up odds and ends that come first to hand, which are sure to get into the wrong place, and then we stop and rest awhile and study it all over, and wonder where the next camp fire will be kindled, and then we undo all the first work and begin over again with a little more heart in it, for we see at last that it has to be done and done well.

With what bright visions and anticipations of rest and recreation and sport do we make a camp; how reluctant and cheerless the breaking up. A good deal of packing talk was indulged in that evening, but little was actually done. A few things were folded up, the store tent taken down and put where it would be out of the dew, one of the stoves "unlimbered," and we went to bed feeling that a start had been made toward breaking up the pleasant camp.

At daybreak I crawled softly out of the tent, leaving Jim and Muller peacefully snoring, and without disturbing any of the others, took a boat, the old rod and a bucket of frogs, and pulled quietly across the lake and down to the little bay where I had done the first early morning fishing, a mile and a half below, where I knew it was good to be while the mists were yet on the water, for some bass were there and I wanted a farewell solitary "fish," alone and undisturbed, for the afternoon was to begin the real work of packing up.

With due respect to the gregarious element of the brotherhood, I have a notion that to enjoy to the full the contemplative man's recreation, the angler should have no companion but his rod, no one to disturb his meditations, none to bother him with needless suggestions, none to feel a twinge of envy at his triumphs or dole out scanty sympathy at his defeats. The angler and his rod are always the best of friends, and no dissensions mar their companionship.

By the time the sun was half an hour high I was off the point near the bay with four large-mouthed bass and five longsnouts, a fair morning's fishing if I got no more. Just at the head of a belt of burfishes a few rods below the point I took the first and only small-mouthed bass that fell to my rod during the trip. A good many had been taken by the others, but my luck had run to big-mouths, and I was so elated over the capture of this game fellow, a 3½-pounder, that I would not have exchanged him for a score of the other variety, and a boat load of longsnouts thrown in.

The small-mouth is king, and I stand up for him to the last.

Along the rushes for a couple of hundred yards and back I took six more big-mouths and lost a small-mouth at the last that took a turn around an old sunken log standing on end just below the top of the water, and he broke away with the hook, gimp and a yard or more of line. The performance took place in plain sight, as the boat was within a few feet of the log when he dashed around it, too close in fact to hold him away from it, else the mishap might not have occurred. It would be a waste of words to try to tell the glories of that brief fight and how big that bass was, and it is not necessary to speak further of the log, for it would require an intimate knowledge of several languages to do it proper justice. With a simple but vehement "Great Scott!" I wilted down on the seat of the boat, tied on another hook, and headed up lake toward camp, for the calamity had given me a backset that it would take days to get over, and I was ready to go back and assist the others in the preparations to break up and go home. At the point near the old log road another bass fell a victim to the wiles of the seductive speckled frog and I pulled across to camp with twenty fish, having taken three more longsnouts coming up. The summer's work of the faithful old rod was over and it was to be laid away, to do no more trusty battle against the bronze-backed warriors of the northern waters for another year. Write it down, ye younger fry of the rising generation of anglers, that an honest rod is a priceless friend, whether trimmed with lusterless brass, or resplendent in burnished silver.

None of the others had been out to wet a line, and now the rest of the day was to be devoted to packing up everything not needed for the night and an early breakfast. After lingering around the camp-fire in the evening till late bed time, listening to the last of the series of open-air concerts given nightly by our friends the mosquitoes, the circle broke up in silence, feeling that doubtless this would be the last night the happy family, "the Joneses," would pass together with all the present members ready to answer to roll call, it might be for years and it might be forever. But I am sure the memories of that delightful summer vacation will be a bright spot in the lives of "our girls," that will live with them to be talked of till their locks are turned to silver, and the old friendship more firmly cemented, and the new ones formed there in that pleasant Camp of the Kingfishers will endure till old Father Time flourishes his scythe as a signal that we are wanted in the happy hunting grounds.

By 9 o'clock in the morning everything was packed except the tents and fly, which were left to the last that the sun might drive out the last dew drop hiding in the canvas to start a mildew; and when they were at last folded and in the boxes, the signal whistle of the little tug away down the lake warned us we had finished none too soon, for we had decided to go out by Leland, and Captain Dunkelow had promised to call for us on his way up to the big wood pile, and give us a ride back on the forward end of a loaded wood scow.

At the Narrows going down we slowed up a minute below the bridge to cast off neighbor Couturier's boats, which were towing astern, and waving him an adieu as he stood in the back door of the store (Bob said she'd like to stop and get a chunk of maple sugar), we were soon out of sight of the sleepy little hamlet and into the widening lake below.

It is a glorious sheet of water from the Narrows down to Leland, more lovely, if anything, than the upper part, and I longed to put the old rod together and make just one more cast at one or two likely-looking places along the rush-lined shore; but it was an idle wish, prompted only by an ingrained love of the gentle sport. As we neared the village the puffing little tug seemed to be going straight ashore, but just as we were looking for her to strike she swung into a narrow, winding stream, not noticed before—the outlet of the lake—and in a few minutes we were at the landing, almost in the business part of the town.

Here the "calamities" were loaded on a tramcar and run out on the pier on the Lake Michigan side, a couple of hundred yards or so away, for which we paid the modest sum of \$1.50, an indication that the tramway must have cost "a heap o' money" if the sum paid was to be taken as an average rate of interest on the outlay. But "it was good enough for the Joneses, fur they never was used to the very best o' treatment nobow," and we were satisfied. We hurried down to the pier, as the captain was afraid the Cummings had arrived on her way from Frankfort and gone by; but we

waited over an hour before she hove in sight, which served as a reminder of Billy G.'s experience in catching a train one morning when he started to go a short distance from the city for a day's fishing. As he neared one end of the depot he saw the train pulling out at the other, and he just "humped himself" on a dead run till he overtook it, panting and puffing like a wind-broken horse, and utterly spent. Slamming his lunch basket, minnow bucket and rod up on the rear platform, he scrambled after them, and sat down on the top step all out of breath, but feeling mighty good that the laugh was now on his side instead of the score or more of hangers-on who had cheered him in his race. In telling it, he said: "After I got on the platform the train didn't go more than fifty feet till it stopped, and then the cussed thing switched off on another track and backed right straight into the depot, and didn't start for a plumb half an hour."

When the Cummings had made fast to the pier all went at once on board, except old Ben, who staid behind to superintend the landing of the baggage and "hev some fun" with the knot of village idlers standing around "sizing up" the party. As the boatmen took hold of Jim's big box to slide it down the gang plank, Ben said in his deliberate, solemn way, "Look out boys, don't drop that overboard, fur it contains the trapeze fixin's an' tight ropes on which Mamselle Hyperboler Jones over there [pointing to one of the girls standing on the upper deck] does her astonishin' double-gear'd act o' turnin' five summersets on two ropes," and as one of the camp chests was started down the plank, "Easy now with that feller, it's got Signor James Mackerel's wingless flyin' masheen in it an' his shoes that he walks on the water with—when it's froze," with a solemn wink at them that started a grin in the crowd, for they had begun to "ketch on," as a slangy girl would translate it. When they came to the frog box in which were the dog tent and minnow buckets, not visible through the wires, they were cautioned, "Handle that mighty keerful, my friends, fur it's got the trained rattlesnakes in it an' the big Californy boa constrictor thats eats a bushel of frogs every day." Then a packing box was rolled on the plank with, "Don't spill that box in the water whatever ye do, fur it's got all the ladies' spangled gyarments in it what they perform in, an' if we'd lose that the show would be busted;" and so on till the last piece was on, when he got aboard and turned with a wave of his hand and "Good-bye folks," and then to "Signor James Mackerel," who looked like the roustabout of the "show," "Did ye feed them snakes to day?"

Rare Ben! "yer like is not on the face o' this livin' airth," Captain Robertson pulled the signal bell, the screw turned, and in five minutes we were steaming at full speed up the coast through a soft blue haze that took the elders of the "Kingfishers" back to the glorious dreamy Indian summer days of years ago when, with boat and rod, they stole off up the river of a Saturday, leaving the Sunday wood anent, to feast on "water grapes" and learn with patient zeal the mysteries of the gentle art.

Rounding Cathead Point we had yet forty-five miles to Traverse City, but the afternoon was so lovely and the bay so quiet, barely rippled by a lazy breeze, that we took no note of distance and were only aroused from the enjoyment of the delightful ride by a prolonged scream of the ear-splitting whistle for Northport. Here we stopped a few minutes to discharge some freight and a couple of Indian families going to attend a camp meeting of their brethren then in full blast somewhere back in the "bresh." At Omena, Captain Robertson kindly made a departure from his time schedule to allow us to have a look at Brother Fould's New Mission farm, he going along to show us the farm, where we spent over an hour, and were well repaid for the walk of a mile from the landing to the house and back to the boat. It was dusk when we got aboard again, but the little steamer was put to her best speed and shortly before 10 o'clock we were at the wharf at Traverse, and at 11 o'clock were on the train and off for home, however, leaving behind Miss Fanny, Jim and Mother Jim, for a ten days' further jaunt up around Charlevoix, Petoskey and Mackinac Island.

At Fort Wayne, Ind., we parted with the old "Pelican," "Hyperboler" and Miss Bob with many regrets, leaving only five of the original "Jones family" to finish the journey, after having spent the happiest vacation I think of our lives.

And now in reading up these "Carp Lake letters" I may say to the readers of FOREST AND STREAM that they have been written under a good many difficulties—lack of time, rightly distributed and other circumstances have unavoidably caused some interruptions; and if at times they have seemed tiresome I trust that this explanation may stand as a part excuse, and that the brethren may have looked with lenient eye on my shortcomings. They have been written with a view to please "our girls," the brotherhood of the rod and all who read the beloved old journal, and if anything has crept in that will instruct, or any hint been given that will benefit a brother, "the skipper" will be more than repaid for the writing, and I close them with a kindly greeting to all who love the woods and the waters and a good wish fraternal to every honest angler "on the face o' this livin' airth." KINGFISHER.

CINCINNATI, O., July 15, 2 o'clock A. M.

THE "SPEY" AND "SWITCH" CASTS.

AT the recent angling tournament in England the judges disqualified the "Spey" cast. On this subject Maj. John P. Traherne writes to the *Fishing Gazette* as follows:

"I have much pleasure in acceding to a request that I should give my opinion as to whether the Spey cast should have been allowed at the switch competition at the Casting Tournament, held at Richmond on the 5th inst., and to which it appears an objection was raised by one of the competitors. In order that it may be perfectly understood on what grounds my opinion is based, I propose to give a short description of each, and also state the circumstances under which they are usually adopted in actual practice.

"In the case of a switch the angler is supposed to be standing on the banks of a river with either rocks or trees, etc., in such close proximity to him, that to be able to fish his water he must necessarily adopt this method.

In making a switch the line is not lifted out of the water in the first instance, as it is when casting in the ordinary fashion, in which case the result would probably be that the fly would either get hung up in the trees or smashed on the rocks. What the angler, therefore, has to do is to lift the line to the surface of the water by raising the point of the rod, and then to drag it through the water in the direction he is standing, carrying the point of the rod behind him as far as such obstructions allow. Then, by a sudden down cast of the rod, the line, as yet having been allowed to rest on the water in front of him, is propelled with that force suggested by the length required. During this process the fly has not been lifted out of the water until the very last inch of the

ine has preceded it. While the line is propelled it will thus be made to assume a shape somewhat similar to that of a wheel, which diminishes in size as it rolls on its tracks, beating the surface of the water. The coil, or loop, as it is commonly called, naturally vanishes at the point the fly has reached when the cast is completed.

"To make an extra long Spey cast, the salmon fisher requires a rapid stream to work in which will, before making every fresh cast, carry his fly down-stream to the full extent of his line straight and taut, the point of his rod being held as low as possible for the purpose; then by suddenly raising the rod very high the line is lifted out of the water to the very end, and without a moment's pause the rod is carried up-stream to the right or left (as the case may be) by a rapid motion, but not so rapid as to send the fly too far up-stream past the angler, the object being to let the fly strike the water just above where he is standing, at which moment the whole of the line is on the reverse or upper side of him. Then with a sweep peculiar to this particular cast, the line is propelled over (and not along) the surface of the water, after the fashion in ordinary casting.

"The foregoing descriptions of the two methods may not be strictly accurate, but they will give the reader a fair idea of how each one is made. It will be seen that the one is widely different from the other, the line and the fly in the switch remaining in the water until the switch is nearly completed, whereas in the Spey cast both must be lifted out of it before it may be said to have commenced. When the Spey cast is mentioned in conversation, it always brings to my mind a man wading up to his waist in a rapid stream. It was, doubtless, under the like circumstances it had its origin, and if I may use the expression, 'the stream and not the bank, is its home.' It can be, and often is, made successfully from the bank, when there is a strong current running closely alongside of it, even should there be rocks or trees within two or three feet behind the man who is casting; but if these obstructions should overhang the bank in such close proximity above him—that is to say, higher up the river—that his rod or any part of his line must necessarily come in contact with them when making a Spey cast, he will have to adopt some other method, and it is under such difficulties that the switch comes to its aid.

"A much longer line can be cast in the Spey fashion than by switching, and according to my ideas, the Spey cast is not a switch, partaking more the character of an overhand cast. Bearing this in mind, and also that the Committee of the Casting Tournament is offering a prize for the best switch cast, evidently did not contemplate that any other than that particular method would be resorted to at the competitions. I am of the opinion that the judges were right in disqualifying the Spey cast. JOHN P. TRAHERNE."

LIGHT RODS FOR SALT-WATER FISHING.

A CORRESPONDENT, "A. E. C.," on p. 489, asks for information in regard to the use of a light rod for salt-water fishing. I think he is making a move in a direction that will add materially to his enjoyment in fishing. To encourage him, I will state that I have done a good deal of fishing in both salt and fresh water. Many years ago I used a stiff, heavy rod for salt-water fishing, but during the past twenty years I have gradually reduced the weight of my rod until now it weighs less than twelve ounces; and nothing would induce me to use a heavier rod, unless I were going for tarpon or something of that kind. As a matter of fact, I use my black bass rod for weakfish and striped bass more frequently than any other, and with greatly increased pleasure. Still, I would not advise "A. E. C." to use so light a rod for a beginning, since it is evident he is not familiar with the use of a light rod.

In my younger days we could have a grand time with the weakfish and striped bass without leaving Manhattan Island. You will have to make a long journey now to enjoy such splendid fishing as we had at Castle Garden, Sandy Gibson's, Hell Gate, Harlem River, and other places I could name. For a change we would go to Governor's Island, the Penny Bridge, Fort Hamilton, Coney Island, Bergen Point, the Hackensack, the Passaic, etc., and always come home with a full basket. Then I used to love salt-water fishing; but it is all changed now, and so is my love. Since I have to make a journey to indulge my taste for angling, I have learned to love better the grand lakes, the gently-flowing rivers, and the babbling mountain brooks where the trout loves to dwell. My love of nature and love of angling are both more fully gratified, and I become a stranger to discontent. There has always seemed to me to be this difference between salt and fresh water fishing: In the former you are disappointed (and often something worse) if you have not taken a string of fish; in the latter you have had a good time anyhow. I hope "A. E. C." will try it. PETRA.

THE FLUTTERING FLY.—*Editor Forest and Stream:* The information in the inclosed report from an old number of FOREST AND STREAM, may be interesting to the gentlemen whose communications about the patented "fluttering fly" have lately appeared in your columns. The extract I copy from a note by Mr. B. B. Redding, which I had pasted in a scrap book several years ago; it was taken from your issue of Oct. 13, 1881. Mr. Redding says: "The Indians of Kern River made use of an artificial fly for the capture of trout, and probably used it for ages before Europeans invented it for the same purpose. The hook of the 'sroat' form, but without a barb, was made from the shin bone of a deer. On the leg of a California deer, corresponding to the chestnut or warts on a horse's leg, are also warts but covered with stiff long hairs of a darker color than those on the other parts of the animal. These warts and the hair growing on them have a strong and peculiar scent of the deer, which is not easily removed or washed away. A small bundle of these hairs is neatly fastened at one end around the shaft of the hook, the loose ends pointing to the eye of the hook. The fly was thrown in the water and kept as near the surface as possible by continuous short jerks. Every motion of the hook in the water causes the loose end of the hair fastened to it to open and shut. At a short distance it would resemble the motion of a caterpillar in the water, that had dropped from an alder and was struggling to reach the shore. This kind of fly is still used, but the hook is now made of telegraph or other iron wire." I became interested in the fly that "would resemble the motion of a caterpillar in the water, that had dropped from the alder, and was struggling to reach shore," and three or four years ago, got Pat Worden, of Kriders, to tie for me some flies closely resembling the "aboriginal" as described by Mr. Redding, two of which I enclose you. I may add we did not use the stiff long hairs from the chestnuts or warts of the California deer, as deer were not handy.—SANDPIPER.

A HUMAN SALMON.—The Halifax Mail reports: A small invited company of ladies and gentlemen left the lumber yard wharf yesterday afternoon at 4 o'clock for McNab's Island to witness Lieut. Edmonds, of the Royal Artillery, perform an interesting swimming feat. Arriving at the government wharf, all landed, and in a few minutes the lieutenant, clad in a bathing suit, was ready to enter the water. The feat which he was about to try is very popular with swimmers in England, and is simple yet difficult. It is called "playing the salmon," and is simply a trial of strength and endurance while in the water. A belt is placed around the swimmer's body, and to this is attached a salmon line. He then enters the water and endeavors to break away. The fisherman on this occasion was Lieut. Kent, of the Royal Engineers, who is a salmon fisher of much experience. Mr. Edmonds, when he had once got in the water, by vigorous strokes went out about one hundred yards. At this point he found that the fisherman evidently intended he should go no further. And here the swimmer performed such maneuvers as he thought were calculated to break the line. It was a strong one, however, and would not snap. After being in the water about ten minutes the belt to which the line was attached came off, thus freeing the swimmer. Mr. Edmonds came ashore and was quite fresh, notwithstanding his struggle. He expressed a desire to try again after five minutes rest, but the spectators were of opinion that he had already had enough of that particular kind of exercise for one afternoon, and at their request he gave up a further trial. Mr. Edmonds certainly showed himself a powerful swimmer. In the water he appears thoroughly at home. He can make very rapid progress swimming straightaway and dives like a duck. He was loudly cheered after coming ashore at the conclusion of his struggle with fisherman Kent, and after bowing his acknowledgments he took a header off the wharf, much to the alarm of the ladies present. The party returned to the city before 6 o'clock, well pleased with the little sea trip and the novel exhibition.

LANDLOCKED SALMON IN ANONYMOUS POND, MAINE.—While it has always been known that large numbers of landlocked salmon deposited their eggs in the streams emptying into Long, Bear and Anonymous ponds, the upper lakes of the Sebago Lake system, the general belief has been that they only visited these upper waters during the spawning season, and that Sebago Lake was their sea, where they again congregated after having performed their family duties. The taking of an occasional "black spot" through the ice, when pickerel fishing in the winter, would not dispel the notion, it being argued that they were late visitors who would have soon returned. But the capture of a 6-pound landlocked in Long Pond, by Arthur Plummer, of Bridgton, in May, 1885, did make it look as though they remained with us; and now more evidence has been added, for Mr. Wood, of Newark, N. J., while fishing for pickerel in Anonymous Pond, July 6, boated a 4½-pound salmon. Now that we are certain they remain with us, we trust more time will be devoted to angling for them; they are a prize worthy of any man's rod and of far more credit to him as an angler than hundreds of fingerling trout from our depleted brooks.—BLACK SPOT.

ANGLING FOR BUFFALO FISH.—Boston, July 13.—*Editor Forest and Stream:* I hope during September to be in Dakota in the vicinity of a large pond or lake which is said to contain, in addition to pike, perch, bullheads, etc., quite a number of buffalo fish, which grow to a large size. The natives, I am told, are not up to taking them with rod and bait. Judging from the plate and description given in "The Fishery Industries of the United States," of the red-mouthed buffalo fish (*Ictiobus bubalus*), I should take them to be of the carp family, and consequently should suppose that some paste made with flour, with perhaps angle worms or maggots chopped up in it would be the proper bait. Also that ground baiting of a certain locality for some days would be an important preparation for a day's fishing. I am told they run very large in size, and if any way of getting them to take hold of light tackle could be used, that the sport would be very good. If any of your Western experts could give me some points in this matter, they would very much oblige MIC-MAC.

HEDGE HOG POND.—Monson, Me., July 15.—Among the numerous lakes and ponds in this vicinity none has such an abundance of spotted trout as Hedge Hog Pond, which is in Ellottsville plantation. It is about five miles on an old logging road beyond the primitive residence of the famous backwoodsman known as "Doctor Brown." The road from here to Brown's is a very good one for buckboards. It is about one mile around this pond, and the trout are so plenty that a fair bait or fly-fisherman can easily take from 75 to 100 of these in a day. They are from ¼ of a pound to 2 pounds in weight. The scenery from here to this place is grand, and a party of genuine anglers who desire to go on a fishing trip and sleep on fir and spruce boughs at night cannot find a more satisfactory place in Northern Maine than this. Two Monson guides, E. B. Hall and Orin J. Rice, have recently been there with some Boston parties and all pronounced it the best trout fishing that they had seen for many years.—J. F. S.

A WEST VIRGINIA RESORT.—Your correspondent "R. W. McL." Chillicothe, O., will find Kanawha Falls, W. Va., the place to go with an invalid wife for recuperation. It has one good, plain hotel, or accommodations might be secured with one of the villagers. River fishing just below the falls is excellent, and I was told that good trout could be had back in the mountain streams, which three years ago had hardly felt the angler's touch. The Falls are easily accessible from Chillicothe via Chesapeake & Ohio Railroad. The climate is healthful and the scenery grand. Here you can spend the time in peace and quietness, and avoid the jams and fussiness of more popular resorts.—D. (New York).

WEAKFISH NEAR NEW YORK.—July 16.—I tried the weakfish yesterday in Raritan Bay oyster flats, from half ebb until half flood tide. Caught forty-three, the largest from one and a half to three pounds during young flood. Crab bait. Weather threatening with stray wind from S. S. E. Parties going to Tompkinsville, Staten Island, or Perth Amboy, can secure boats there.—BROOKLYNITE.

SARATOGA LAKE, July 12.—*Editor Forest and Stream:* Bass fishing has been poor here, so far. I have only caught one (big-mouth), about 2½ pounds, but it came up like a water-soaked stick. I hear that a few good fish have been taken at the lower end of the lake; but the seining, jacking at night and such practices make fish scarce.—B. C.

ADIRONDACK TROUT.—Montreal, July 15.—To-day Mr. E. S. Whitaker, of Watertown, N. Y., with guide and Adirondack skiff passed by this city, en route for the Thousand Islands. Mr. Whitaker went into camp on Beaver River May 1, then made a trip through the Middle Adirondack region to the headwaters of the Hudson, then down to Lake George, through this lake to the Champlain, etc. Mr. Whitaker says that he saw a couple of *S. fontinalis* that were caught by a Boston party in "Spring pond," of the Bog River chain, that weighed 5½ and 5¼ pounds each.—STANSTEAD.

MAINE MAPS.—N. C. Brackett & Son, Phillips, Me., have just issued new maps of Franklin and Oxford counties, Me. The Oxford county map gives the Rangley Lake region, showing the location of all the lakes, ponds and mountains, hotels and camps, and even the ferries and carries. Those of Franklin county include the Dead River region and all the fishing grounds.

So easy to row with Allen's bow facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.—Adv.

Fishculture.

Address all communications to the Forest and Stream Publishing Co.

THE AMERICAN FISHERIES SOCIETY.

[Discussion following the paper on oyster culture published in our last issue.]

MR. BARTLETT—Can you tell us what indicates the ripeness of the oyster?

MR. MATHER—The appearance of ripeness is a milkiness and swollen appearance of what you might call the body of the oyster, and when you press it you get a milky substance; in fact, the whole oyster is distended a great deal as a ripe fish is.

MR. BARTLETT—It is quite apparent then?

MR. MATHER—Very apparent to a person who is at all familiar with it, as I have explained in this paper.

MR. CLARK—I would like to ask Mr. Mather if any one has tried to make any computation of how much spawn there is in one female?

MR. MATHER—It has been done. I cannot give you the figures now, but I think if I were home and had access to my library I could very easily give that to you. I have an idea that perhaps an oyster of ordinary size may have nine or ten millions of eggs, and that it would vary as it does in the case of fish.

DR. HUDSON—The Chair would state in answer to that question that the estimates vary considerably, and many of them are made very much higher than what Mr. Mather has stated. It has been estimated in many cases as high as fifty millions.

MR. CLARK—Have you any idea of your own, Mr. Mather, what portion you impregnate?

MR. MATHER—I have not, because to get at this it will be necessary to go over the whole mass with the microscope, and you would have very few in the field at a time. We made no effort to estimate the amount of any impregnation. We recognize the fact that this thing is in its infancy. Several gentlemen have experimented before I did, whose names I mention in the paper read, and from whom I obtained considerable knowledge before I attempted it. I don't know what percentage we did get. We were contented to just work along, the main thing being to get ripe oysters and hatch something, doing the best we can. There is no trouble in hatching them. Every year along our bays and harbors there is a greater or less amount of spawn.

MR. FAIRBANK—The set has been found to be best, I understand, on the bottom?

MR. MATHER—Yes, sir; but where there are swift tideways there comes a time in the life of the little oyster when it wants to settle down to steady habits and quit this roving life, and whatever it takes hold of must be clean, and if it falls down in the mud it is gone. You can easily see, gentlemen, that, in a state of nature, many millions of spawn must be sent out and but few are impregnated. When the female oyster gets ready, she opens her shells and lets her eggs go, and they must run their chance of a current from somewhere bringing them to the milt of some male oyster who has also just reached the supreme moment, and the chances of their coming in contact at the proper instant of course are very small. The great mass must remain unimpregnated, and then, of those which are impregnated, many of them fall into the mud and into other unsuitable places, not to mention dangers after they get their shells on them.

A MEMBER—Would the impregnation by artificial means be an economic way?

MR. MATHER—I think so, and I think Prof. Rider thinks so also, and those means which he gives to catch the spat I think to be a better way of procedure than the process I have adopted.

MR. BOOTH—I think perhaps it may be interesting to some of you gentlemen to give you one of my little experiences. The results I have just heard are very good, very nice indeed. It shows that oysters can be propagated, but it can be done so much more cheaply and in a more practical manner. Some four years ago I planted 12,000 bushels of shells that we had thrown away in the week, in the water in Delaware Bay, where there were no shells or oysters in the neighborhood. Last year we took up from those shells without planting any oysters on them a little over 40,000 bushels of as fine oysters as you ever saw in your life, and I think there are quite as many left on that ground. I say this to give you a little idea of how rapidly oysters will grow. If they would only plant, as Mr. Mather says, the proper shell or material at the proper time, that is all that is necessary. The time oysters spawn is usually in June or July, varying according to the warmth of the atmosphere and the condition of the water. Those are the months that they spawn, and at the time that the oysters are ripe throw over your old oyster shells and try and have no fungus or vegetable matter on them and the spat adheres to those oyster shells and you have no difficulty in getting more oysters than you can handle. Just take oyster shells and scatter them and you will find oysters enough to re-supply the whole territory. I have done that on the Delaware and also on the Baltimore, but in Chesapeake Bay we have no right to any grounds there, have no title and consequently no water. In the Connecticut waters this has been done for the last eight or ten years, so where there were no oysters a few years ago there are millions of bushels. The enemy to the oyster there is the starfish. They come sometimes in myriads and they kill all the oysters unless they are taken up and removed to some other place. There is not the slightest trouble in the world to replenish our oyster product on this coast or any other section of the country where you have warm weather in June or July.

MR. MATHER—From Mr. Booth's remarks it may be inferred that our mode of artificial hatching is not adapted to practical work. We think that it is. The method which he speaks of is a very old one and often is all that is sufficient, but there are years when the oystermen will tell you "there is no set," meaning that the young failed to hatch or to catch on to something after hatching. Often a heavy rain kills the swimming oysters, or there may be currents which take the eggs to sea. It will readily be seen that the conditions must all be favorable in order to secure a good set, and nature provides for the loss of immense numbers of eggs and embryo oysters,

and it is this great waste which we are trying to save. If we do no more than to mix the eggs and milt together it is a great improvement on nature's methods which only brings an occasional egg within reach of the fecundating fluid.

DR. HUDSON—I could talk of course on this subject for hours, for this is a matter we have had a great deal to do with in Connecticut for the last six years. I would simply add to what Mr. Booth has said that in Connecticut and on Long Island Sound the time for spawning oysters varies from about the middle of June to the first of September. It is governed entirely by the depth of the water. Where the water is shallow it becomes warm more rapidly than where it is deep water. Oysters there grow where it is ten feet deep out to where it is ten fathoms or sixty feet. Mr. Booth has described sufficiently for practical purposes the method of cultivation, which is the one universally carried on there, and were it not for the starfish, as he has said, I think the product would be almost unlimited. The only other enemy that we have on Long Island Sound is the drill, which is nothing like as dangerous in its effect as the starfish. There is another enemy to the oyster in portions of New York State—the drumfish, a very powerful fish with powerful jaws, which crushes the oyster and destroys a great many. It is called the drumfish owing to the peculiar sound which it emits, and which can be heard by those who are immediately over it.

MR. BISSELL—I would like to ask if your Commission have ever attempted to spawn the oyster, or have you simply attempted to catch them in the water?

DR. HUDSON—We have never done that, as a general thing. Some of these experiments have been made, and the most interesting one in our water was by Lieut. Winslow, who has been engaged in this business. He came to Connecticut some four or five years ago and he had a can invented, and he could drop this can to the bottom of the Sound, and then when it reached the bottom by a peculiar contrivance he could pull out the bottom, so that whatever was inside was let loose. Just previous to that he had taken oysters in the same manner which Mr. Mather has described and had hatched out a very large number. You gentlemen may be all aware, probably, that the great difficulty up to a very recent time has been to induce these young oysters to live beyond three days. There has been no difficulty about hatching out oysters and in keeping them alive through what is called the free swimming stage, which is about three days. At the end of that time it is their nature to attach themselves to something and they have invariably, up to a very recent period, died when they reached that stage. Some recent experiments have been made by which they have succeeded in carrying them beyond that. Prof. Rice, whom some of us have met, told me he had succeeded in carrying some of them three or four weeks.

MR. MATHER—Yes, in a small aquarium, but they finally died.

DR. HUDSON—The experiment that was tried in Connecticut was to take these young oysters during this free swimming stage, put them down on good bottom on Long Island Sound and there release them. The product of that particular locality was remarkably good afterward, but the general set of the Sound was so great that it was very difficult to appreciate just how much the set was increased by this peculiar process. As Mr. Booth has said, the system that was adopted in Connecticut of distributing clean shells has been attended with great success. Some large dealers distributed as many as three thousand bushels during the season of shells, and the young spat clinging to the "couch," as it is called, in immense quantities, such quantities that in very many instances they have to be culled out and removed to other localities for fear that they will smother each other, and as I said before, were it not for the enemies, the amount of oysters which might be produced would actually be almost unlimited.

MR. FAIRBANK—When are they destroyed by starfish?

DR. HUDSON—Generally when they are very young. The starfish is a very peculiar animal. They have a faculty of extruding the stomach and covering the entire oyster or other mollusk. They surround a little oyster, perhaps the size of a half dollar, more or less. The starfish puts its fingers round this oyster and it is supposed by some, smothering it, so that it has to open its shell; by others it is supposed that the star emits a peculiar acid which obliges the oyster to open its shell, and then the star protrudes one of its fingers into the shell and devours the stomach of the oyster.

SALMON IN THE TOBIQUE.—Mr. Edward Jack, of Fredrickton, N. B., writes to the *Globe* of that city: "In a late issue of the *Globe* an anonymous correspondent makes some remarks with regard to the occurrence of California salmon in New Brunswick. In relation to this matter I may mention that some statements respecting their having been taken in the upper St. John appearing in one of the Boston newspapers and having met the eye of the United States Fish Commissioner, he wrote to me for information on the subject, giving me at the same time notable features by which I would be able to distinguish them from our ordinary salmon. It was late when the letter was received. Mr. W. Guion, of this city, to whom I went for information, notified me a few days after that Mr. Ben Waugh had caught one not far from Fredrickton. I unfortunately failed to see it, however, and have heard of no other one having been taken since, although I have offered \$10 for a specimen to forward to the United States Fish Commissioner. A change seems to have taken place lately in the Tobique salmon, it may be that those introduced from the Restigouche may be taking the place of the St. John River fish. I have ascertained the following facts, which I now communicate, viz.: That at least 15 salmon were taken last summer with the fly in the Tobique by two persons, somewhere within twenty miles of the mouth of the river, a circumstance which is said to have never occurred before. The first salmon in the Tobique made their appearance there last year about the first of June; they were said to have differed from any that had been seen there at any time previously, being long and slim, and weighing six or seven pounds each, being nothing more than large grilse. The common Tobique grilse usually runs from three to five pounds. St. John River salmon of the length of these large grilse, an informant said, would weigh fifteen pounds. The appearance and size of the June run of fish attracted the attention of the people living on the Tobique, as well as the fact that more salmon fly were seen in that river last season than for years before."

LOOK OUT FOR HIM.—New York, July 16.—*Editor Forest and Stream:* There seems to be a party traveling through the Eastern States who presents letters of introduction from me, claiming in some instances to be chairman of the Fish and Game Committee of the Legislature, and on the strength of these letters, which are forgeries, he applies for a loan of money, and has been successful in obtaining it in some instances. He called on Mr. E. A. Brackett, at Winchester, Mass., representing himself as Mr. T. Royall Roosevelt. After that he called on Mr. Hooge, the Commissioner of Fisheries of New Hampshire, and presented a letter purporting to be signed by me, introducing him as Mr. R. B. Roosevelt. I wrote this to you in order that you may, if you think proper, publish it as a warning to all parties that this party is a fraud and a scoundrel, as I have given out no letters of introduction to any parties traveling on business of the Fish Commission.—E. G. BLACKFORD.

A HIGH FISHWAY.—Inspector Rogers inform us that both shad and alewives have successfully passed through his fishways over the falls at Maguadavic River at St. George, N. B. It will be remembered that he built his patent fishway there last fall, and for the first time in the history of the world fish have been successfully passed over a fall of sixty-eight feet in height, and the most of it perpendicular.—*Halifax Herald.*

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Charles A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

DOG SHOWS.

July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

July 27 to 31.—Dog Show of the California Bench Show and Field Trials Club. E. Levesly, Superintendent, 430 Montgomery street, San Francisco, Cal.

Aug. 24, 25, 26 and 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. George H. Hill, Manager, P. O. Box 76 Cincinnati, O.

Sept. 1 and 2.—First show of the American Fox Terrier Club, at Newport, R. I. For fox-terriers exclusively. Edward Kelly, Secretary, 45 Exchange Place, New York.

Sept. 8, 9 and 10.—Hornellville, N. Y., Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellville.

Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3893.

PARASITIC DISEASES OF DOGS.—IV.

THE entozoa of the dog having now been described, the lesions produced by them noted, and the proper treatment for such parasitic diseases discussed, the next canine parasite which claims our attention is the nasal mite (*Pentastomum tenuicorne*). The adult mite—this species belonging to the *Arachnida*—presents the following character: The body is worm like and lanceolate-shaped, and flattened at the ventral surface. Posteriorly the body is narrowed, and is transversely marked with about ninety rings. The cephalo-thoracic segments support four strong retractile claws. The skin is perforated with numerous respiratory openings (*stigmata*), these are wanting in the cephalic segment. The head is blunt and is furnished with an oval mouth armed with a horny lip. The adult female measures from three to four inches in length, but the male is only about an inch long. The genital pore of the female is placed at the extremity of the tail, that of the male in the anterior part of the abdomen.

In the mature state this ugly parasite infests the nasal cavities and even the frontal sinuses of the dog and wolf; more rarely it is found in the horse, sheep and other animals; even man himself has suffered from the presence of this parasite in his nasal chambers.

The mode of reproduction is oviparous, and the nasal mucus of an infected dog contains numerous tick eggs; these eggs are expelled in the act of sneezing, and are so scattered over fruits, vegetables and grass. Should any of these ova be swallowed along with food by any herbivorous animal, they hatch in the stomach and a small embryo emerges. This larva penetrates the intestinal wall and migrates to the liver. Here it becomes encysted in much the same way as do larval tapeworms, grows and goes through various changes of form, until it passes into the stage long known as *Pentastomum uniculatum*. This larval form is found mainly in sheep and hares; it has the body armed with many rows of small, sharp spines, and is also provided with two pairs of double claws. The length is $2\frac{1}{2}$ lines. After a certain period of time the capsules undergo calcareous degeneration, and the encysted parasite dies if not transferred to a new host. The encysted form has been found not infrequently in man, encysted in one or other of his organs; fortunately the symptoms produced by it are unimportant. In the lower animals the presence of larval ticks seems to cause no special inconvenience to the bearer.

If the cyst-infested flesh of any animal is eaten by a dog, the larval ticks are liberated and make their way into the nasal cavities or frontal sinuses and there acquire sexual organs, and develop into adult specimens of *Pentastomum tenuicorne*. If individuals of both sexes have been ingested, the nasal mucus of the dog now soon contains ripe eggs, which are strewn broadcast by sneezing, to be swallowed with food by some herbivorous animal or by man himself.

The life history of this parasite is thus shown to very nearly resemble that of the true tapeworms: the two forms, however, bear no relationship whatever to one another, the *Pentastomes* being true *Arachnida*—mites, ticks, itch insects, etc., belonging to this class.

This gigantic tick produces in the dog a formidable train of symptoms, and may even cause the death of the animal. We believe that ozena or fetid nasal catarrh is an exceedingly rare disease in the dog except when caused by the presence in the nasal fossa, or frontal sinuses of *Pentastomes*, at least in the great majority of cases of this disease parasites will be found within the nasal chambers.

The clinical history of a case of nasal tick parasitism is as follows: There is a more or less constant secretion from one or both sides of the nose of purulent matter, which may be offensive in odor, and which has a strong tendency to accumulate in dark colored crusts within the nasal cavities. The dog sneezes frequently and violently, and there may be almost complete nasal obstruction, with consequent loss of smell. Hemorrhage from the nose is an occasional symptom. The general health is much impaired if the disease has persisted for a long time, and the animal is listless and easily fatigued. The absolute diagnosis is to be made by examination of the nasal discharge with the microscope for *Pentastomum* eggs. Some information may always be obtained by examining the dog's nose with a laryngoscope reflector and a nasal dilator; this can only be done by a skillful surgeon, and is of little value. The symptoms are sufficient to establish a diagnosis in most cases.

The prognosis of ozena depends largely on the reparative powers of the system; in all cases it is a very serious affection, and even death may result either from exhaustion or suddenly from the migration of *Pentastomes* into the larynx, wind-pipe or bronchi, so producing suffocation. We regard prolonged fetid nasal catarrh as a marked cause of pulmonary phthisis in the dog as well as in the human subject. Under treatment parasitic ozena can usually be entirely cured in young animals. Where profound intra-nasal structural changes have taken place, such as death of bone, ulceration and the formation of polypi, little can be done for the canine victim, though in all cases skillful treatment should be tried.

The treatment of this disease is fairly satisfactory; the indications are, first, to destroy and expel the parasites, and, second, to cure the nasal inflammation they have caused. Perhaps the most valuable local application is Lambert's listerine. This should be used in the strength of three fluid drams to one ounce of distilled water. The dog's head should be taken under the left arm, the chin being supported by the left hand, and with a small, hard-rubber syringe about two

drams of the solution should be carefully and gently, not forcibly, injected into the nostrils, the muzzle being elevated and the stream being directed toward the eye of that side, so as to make the application to the whole nasal mucous membrane, a very important consideration. This application should be made daily until the purulent character of the discharge is changed to a serous or colorless and watery exudate, when the strength of the listerine should be reduced one-half and the injections made only every second day, until a cure results. Another almost equally valuable injection consists of carbolic acid (crystal), ten grains; glycerine, one fluid dram; distilled water to make one fluid ounce, mix, and use in syringe. This is to be used in the same way as the listerine, and the strength must be gradually decreased as improvement takes place.

Reckless syringing of a dog's nose without careful attention to the stage of the disease can only be productive of great evil, and the greatest care and thoroughness should be exercised in conducting the treatment. The following may also be used: Thymol, $1\frac{1}{2}$ grains; alcohol, 2 fluid drams; distilled water, to make one fluid ounce; mix, and use as an injection. This is especially valuable in very chronic and offensively smelling cases. It is a powerful application, and should be used with care and judgment, and only after other forms of treatment have failed. Sulphate or iodide of zinc in the strength of two grains to the ounce of water are valuable applications when the discharge has become serous in character; one dram may be injected every other day, the greatest care being used. Internally, chincona, chloride of ammonia, possibly iron, and certainly cod-liver oil, are of great service, and a generous diet and regular exercise are essential.

Dead bone requires removal by a skillful surgeon, and nasal polypi can only be treated by an expert provided with proper instruments. Ulcers require treating with a solution of silver nitrate (100 grains to the ounce of water), but this should only be trusted to a veterinary surgeon of undoubted skill. If applied to comparatively healthy mucous membrane only harm will result from its use.

Of all diseases to which man and beast are heir perhaps none have been so ignorant and insanely maltreated as ozena, and we would impress most strongly on all readers of these letters the necessity of letting cases alone until they can be put under intelligent scientific treatment.

Various forms of treatment for ozena in the dog have been recommended, none are of especial value and many are altogether harmful. The only other remedy calling for mention is the daily insufflation of a few grains of finely powdered boric acid into the nasal cavities. The treatment here described is equally applicable to the fetid nasal catarrh in the dog when not of parasitic origin, but this disease must not be confounded with simple acute or sub-acute catarrh, the latter disease generally calling for no local treatment.

The means by which *Pentastome* parasitism may be prevented has already been suggested: If dogs are allowed to eat no butcher's offal and if wounds are never allowed to "break up" in the field they cannot acquire parasitic ozena. It is evident also how important it is to cure as speedily as possible a dog harboring *Pentastomum*; an infected dog should be isolated, and his yard and kennel kept scrupulously clean, and if the *Pentastomes* are expelled entire or can be removed with a forceps (which can so rarely be done, owing to the peculiar formation of the dog's nasal cavities, that we did not speak of this method under treatment), they should be thrown into boiling water and so annihilated. This is a common canine disease in Europe, but fortunately rather rare in this country; further observations and statistics of its frequency of occurrence are much needed.

The follicle mites (*Demodidae*) infesting the dog are mere varieties of the species which attack man. The common species (*Demodex folliculorum* var. *caninus*) is distinguished by the following characters: Body elongated, with worm-shaped abdomen; the head is armed with stout-toothed jaws and a sucker; there are four pairs of short stamped feet of three joints, but the young mite has only six feet. The length is about 1-100 of an inch. The body is grayish white in color and semi-transparent. The eggs are elliptical. The habitat of these tiny creatures is the sebaceous follicles; they are gregarious, and as many as thirty of these parasites have been found in a single follicle of the dog. The man-infesting parasite of this species confines itself to the sebaceous follicles of the face, but the canine variety occupies any part of the dog's body.

By the presence of large numbers of this mite, acne-like pustules are formed; this is accompanied with shedding of the hair, and the infested dog is said to suffer from follicular mange. When the pustules are very numerous, great impairment of health and even death may result from the excessive irritation. The propagation of this parasite is quite simple; the eggs are thrown off along with sebaceous matter or with the discharge from the pustules, and adhering to the coats of other dogs, hatch, find their way into the skin follicles, and the symptoms of follicular mange appear.

As might be pre-supposed from its pathological history, follicular mange is an actively contagious disease, but filthy kennels, bad food, and general neglect, certainly pre-dispose dogs to acquiring follicle mites.

The symptoms of this disease are highly characteristic, the follicles of the skin undergo inflammation and the neighboring skin becomes red and tumefied. The hair falls out and the exudation in the follicles becomes purulent, pustules resulting. The pustules soon break, discharge their contents, and run together, unsightly scabs are formed. These are hard in character and crack open and bleed frequently. The disease extends, and the unfortunate animal soon becomes a hideous object, exhaling a most offensive odor. The disease is accompanied by some itching, and often by severe pain. Nutrition is greatly disturbed if the disease is allowed to continue, and the health of the animal fails. The itching in this affection is much less severe than in sarcoptic mange, and the odor and peculiar appearance of the irritation are diagnostic. An absolute diagnosis may be made by examining the contents of a diseased follicle under the microscope, when the *Demodex* will be found.

Follicular mange is entirely curable under proper treatment, but this must be continued for a number of months to insure a cure. The animal should be first well washed with carbolic soap, and the hair then clipped from all around the seat of the irritation. If crusts have formed, these must be removed by soaking them with lard or olive oil, and afterward washing them away with soap and water. They will generally loosen in about a day if the oil be liberally applied. The skin is now prepared for local medication.

One of the most valuable applications in follicular mange is pure carbolic acid. This should be used in the strength of half a fluid ounce to the pint of pure water, and the dog must be thoroughly mopped with this lotion twice a day. A salve of Peru in the strength of one part to six of alcohol is also very efficacious. In stubborn cases of the disease the follicles may be pencilled with a brush with the following, as advised by "Ashmont": Carbolic acid, Canada balsam, of each one part, mix. In using this preparation it must be remembered that carbolic acid is readily absorbed by the skin and is very poisonous; it should therefore be used with great care, and not painted over the skin generally, but applied only to the diseased follicles. If an ointment is preferred, one composed of one dram of creosote to three ounces of lard or vaseline, is a very valuable application. It is to be well rubbed into the skin.

We believe that in many stubborn cases great good can be done by injecting the most diseased follicles by means of a hypodermic syringe, with the half-ounce-to-the-pint solution of carbolic acid. Only a few drops of the solution should be used in each pustule.

The application of the carbolic solution in water should be

kept up for some weeks after apparent cure, in order to destroy all *Demodex* eggs which may remain; and if the attack has been severe the dog will require tonic remedies and careful feeding for some weeks after the eruption subsides.

In the prevention of this disease its highly contagious character should be remembered, and a dog with follicular mange should always be isolated. As it is to some extent communicable to the human skin, some care must be used in cleansing the hands after handling diseased animals, though the symptoms produced in man by the *Demodex* are but trifling; indeed, according to authorities, one individual in twenty among men harbors these parasites.

DEATH OF CHAMPION RUSH.

WE have received a letter from Mr. Orgill which we publish below, announcing the death of champion Rush. But few dogs are more widely known than Orgill's Rush. His first appearance in public was at Baltimore in January, 1877, where he won second in the puppy class his litter sister Rose winning first. At the first show of the Westminster Kennel Club in May, the same year, he won first in the open class for dogs under fifty-five pounds. His first champion prize was won at Philadelphia, in 1879. In 1880 and 1881 he won the champion prize at New York. He also won many other prizes at prominent shows.

He was also a good dog in the field, and ran twice at field trials, but was unplaced. He was used extensively in the stud and leaves behind him a large number of descendants, some of which have made their mark both in the field and on the bench. Following is Mr. Orgill's letter:

"THE CEDARS, Bond's, Tenn., July 16.—*Editor Forest and Stream:* Our old pointer dog champion Rush died this morning, aged 10 years and 3 months. He did not seem to have any disease, but passed quietly away without suffering the least pain.—THOMAS ORGILL."

FOX-TERRIER SHOW.

THE American Fox-Terrier Club will give their first show at Newport, R. I., Sept. 1 and 2. Mr. F. Redmond, of London, Eng., a well-known authority on the breed, has consented to act as judge. The prize list is liberal one, and the classification provides for all. The premium list is as follows: Champion dog (smooth), \$25; bitch, the same. Open dogs, \$20, \$15, \$10 and \$5; bitches, the same. Puppies, dogs, \$15, \$10 and \$5; bitches, the same. Wire-hair, open, dogs, \$15, \$10 and \$5; bitches, the same. Puppies, dogs or bitches, \$10 and \$5. Veteran class, smooth or wire-hair, dogs or bitches over seven years of age, \$15 and \$10. Novice class, smooth or wire-hair, dogs or bitches, \$15, \$10 and \$5. Silver cups, value \$25, are offered for best dog or bitch, best dog, best bitch, best wire-hair dog or bitch, best pair, dog and bitch; best exhibit, not less than three. Mr. F. Redmond kindly offers a silver cup, value five guineas, for the best American bred dog or bitch under 12 months old. Entry blanks may be obtained of the secretary, Mr. Edw. Kelly, 45 Exchange place, New York.

THE ENGLISH FIELD TRIALS.—Newark, N. J., July 12. *Editor Forest and Stream:* I think you have been led into error about the Reynald stake of the English National field trials. The *Kennel Gazette* record you quote is incomplete. The London *Field's* account is very different. It says, May 1, page 549: "The judges now placed Mr. D. R. Scratton's Hero first in pointers; Mr. Heywood Lonsdale's Jovial first in setters. Hero also taking the honors awarded for the absolute best of both varieties in the stake. As to the second best dog therein, the setter Rose and pointer Lass of Bow ran off to see which would better grace that position. The latter went with all her old style, and made a fine point at the bottom of the first field, and was quickly backed. Somehow or other the worker of Rose made his dog raise the birds, which caused the spectators to believe she had gained the point, which was not the case. In another field Rose had two points, to which Belle of Bow [sic] showed so much jealousy, by rushing in and standing them as if they were really hers, that the judges properly decided in favor of the setter." I think you should make the record complete in *FOREST AND STREAM*.—SYNTAX. [The above was in type for last week, but was inadvertently omitted. The *Field's* report is as quoted and is undoubtedly correct.]

THE WAVERLY DOG SHOW.—A contract for five years has been signed by the New Jersey State Agricultural Society, Amos Clark, President, and the New Jersey Kennel Club, C. J. Peshall, President, by which it is agreed that the Agricultural Society is to provide on the fair grounds at Waverly a suitable building and that the Kennel Club is to give annual dog shows in connection with the State fair. The Kennel Club to have full charge of the show.

THE ST. LOUIS PRIZES.—Boston, July 17.—*Editor Forest and Stream:* I received a check from St. Louis Club this A. M., July 17, for premiums won by me.—J. P. BARNARD, JR.

THE TRIAL OF DR. WATSON, of Jersey City, for cruelly torturing dogs, was held last week; the doctor being convicted and fined.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

G. J. S., Black River Falls, Wis.—I have a Gordon and Irish setter pup, born in January, 1886, that seems to be all right in every way except his eyes. They are clear and bright, but the lower lids hang down and the white of the eye is more or less bloodshot all the time. The pup is remarkably large for his age, and in good condition. I thought at first he was going to have distemper, but he is apparently all right every other way. Can you tell me the probable cause and

give me a remedy? The eyes appear to be redder after having been in water. Ans. Get a stick of blue stone (copper sulphate) and touch the lower lid lightly every morning, or have a solution of zinc sulphate made of the strength of two grains to the ounce of water, and drop a few drops into the outer corner of the eye night and morning, allowing it to diffuse itself over the eyeball.

L. D. H., Bethel, Conn.—A setter has had a slight attack of distemper; he has entirely recovered with exception of a severe twitching of face and jaws. Ans. Your dog suffers from chorea, a very common sequel to distemper. Give three drops of the following solution three times daily in the food: Of strychnia sulphate, two grains; of water, one ounce. Mix. After three weeks stop this and give Fowler's solution of arsenic in four-drop doses in the food three times daily.

S. H. H., Concord.—A setter had the distemper in April, from which I thought he had recovered with the exception of his eyes, in which every morning there is collected quite a quantity of thick whitish matter in the lower corners, otherwise they appear all right, not seeming weak. About three weeks ago I noticed a few small red blotches on the inside of forelegs and on breast, they have since spread and have appeared on his flanks, and a few on his body. I suppose this is caused by the fact that he has washed his affected parts in a solution of carbolic acid as recommended by Stonebrink; his coat is very bad, dry and thin, the hair falling out very easily. He is rather thin in flesh though not particularly so. Is fed principally on boiled Indian meal and what few vegetables and scraps of meat are left from table. His appetite is not very good; but he is in good spirits and is as eager for a walk in the fields as ever. Ans. Keep on with the wash and give Fowler's solution of arsenic in four-drop doses three times daily in the food. Increase the dose one drop daily up to 10 drops and then decrease in same way. Keep the bowels easy with syrup of buckthorn in teaspoonful doses.

DISTEMPER.—Macon, Ga.—I would like to have some of your many readers try the following remedy (and report result) in any and all cases where the mucous membrane is involved, as in diarrhoea, dysentery, and particularly in distemper, viz: Sulphate of copper (blue stone), dose, $\frac{1}{4}$ gr. in for aged dogs and half the quantity for pups 8 weeks old. I have tried it twice and the result in both cases was absolutely miraculous. The first case, a two-year-old pointer, very much jaundiced and reduced from overwork, contracted distemper in its worst form, given over to die. At the suggestion of a friend, gave him one dose of blue stone, the next day he was up and lively, anxious to eat, and was in the field again in one week. The other case, a pup ten weeks old, in the most persistent and malignant case of dysentery, constant discharges of blood for four days and nights, would eat nothing, and was so reduced and weak that had no hope for him; gave him $\frac{1}{4}$ gr. and in one hour he was anxious to eat, and all discharges stopped and he was quite himself again in a few days. Although he had commenced with castor oil and castor seed, bismuth and opium, and he continued to get worse, until I gave him the blue stone, it is efficacious in treating cholera, and the already specified ills in the human family. I have been an ardent sportsman for forty years, and I have derived valuable information from your *Kennel Management*, and naturally desire to contribute something in return, and should the above save the life of some good dog, I shall feel more than repaid for my trouble in writing. W. W. PARKER. [Copper sulphate is a natural astringent of considerable power, and is often of great use in diarrhoea and dysentery, and those cases where there is catarrhal relaxation of the mucous membrane of the gastrointestinal canal. Where diarrhoea and dysentery are prominent symptoms in distemper—as they are in a large proportion of cases—it acts very well. Alone it would not cure the disease, but the stopping of exhausting evacuations is a very important element in the therapy of any disease of this nature. *FOREST AND STREAM* has advised it in cases in the past.]

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 300 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.
Don. By Frank F. Dole, New Haven, Conn., for white, brown ear, bull-terrier dog, whelped May 23, 1886, by Count (A.K.R. 3178) out of White Violet (A.K.R. 3799).
Lady Jane. By Frank F. Dole, New Haven, Conn., for white bull-terrier bitch, whelped May 23, 1886, by Count (A.K.R. 3178) out of White Violet (A.K.R. 3799).
Model Bondhu. By A. H. Bassett, for black and white English setter bitch, whelped March 29, 1886, by Gus Bondhu (Dashing Bondhu—Novel) out of Model Maid.

Shell Bondhu. By F. A. Waite, North Attleboro, Mass., for black and white English set dog, whelped March 4, 1886, by Gus Bondhu (Dashing Bondhu—Novel) out of Lynn (A.K.R. 3420).
Dollie Edgecomb, Edgewood Maid, Edgewood Lassie, Daisy Edgecomb, Bonnie Edgecomb and Edgewood Beauty. By Lottian Kennels, Stepieny, Conn., for sable and white collie bitches, whelped May 4, 1886, by Oscar II. (Imported Oscar—Imported Faun) out of imported Lady Edgecomb.
Fitzpatrick. By J. R. Barraclough, South Norwalk, Conn., for lemon and white pointer bitch, whelped March 21, 1886, by Vic (Rush—Belle) out of Pitzer's Flirt (Sensation—Flirt).
Luthia. Chief. By Lottian Kennels, Stepieny, Conn., for sable collie dog, whelped May 21, 1886, by Montrose (A.K.R. 891) out of imported Midlothian Lassie (Ernest—Tishie).
Luthian Help. By Lottian Kennels, Stepieny, Conn., for black and tan collie dog, whelped May 21, 1886, by Montrose (A.K.R. 891) out of imported Midlothian Lassie (Ernest—Tishie).
Flirtation. By H. M. Wilson, Baltimore, Md., for white and lemon pointer bitch, whelped March 17, 1886, by Fritz (A.K.R. 248) out of Bird (A.K.R. 1058).
Luthian Prince. By Lottian Kennels, Stepieny, Conn., for sable and white collie dog, whelped May 21, 1886, by Montrose (A.K.R. 891) out of imported Midlothian Lassie (Ernest—Tishie).

NAMES CHANGED.

Lady Isabella to Isa.—*Editor Forest and Stream:* As Mr. Florid Vail has claimed the name Lady Isabella for his pointer bitch prior to myself, as per your last issue, please change the name of mine to Isa, and oblige.—C. W. LITTLEJOHN (Leesburg, Va., July 16).

BRED.

Notes must be sent on the Prepared Blanks.
Lady—Count. G. Howard Davidson's (Mabettville, N. Y.) bull-terrier bitch Lady to F. F. Dole's Count (A.K.R. 3178), June 4.
Borras—Count. Geo. Jordan's (Montreal, Can.) bull-terrier bitch Borras (The Earl—Trouble) to F. F. Dole's Count (A.K.R. 3178), July 15.
Bertha—Count. John Whitaker's (Philadelphia, Pa.) bull-terrier bitch Bertha (Dutch, Jr.) A.K.R. 1887—Young Venom) to F. F. Dole's Count (A.K.R. 3178), July 17.
Silver Queen—Montrose. E. J. Hawley's (Stepeny, Conn.) collie bitch Silver Queen (King Macbeth—Midlothian Lassie) to Lottian Kennels' Montrose (A.K.R. 891), July 14.
Lady Clyde—Montrose. E. J. Hawley's (Stepeny, Conn.) collie bitch Lady Clyde (A.K.R. 883) to Lottian Kennels' Montrose (A.K.R. 801), July 10.
Princess—Montrose. W. N. French's (Tumbull, Conn.) collie bitch Princess (Montrose, A.K.R. 691—Fannie, A.K.R. 881) to Lottian Kennels' Montrose (A.K.R. 891), July 10.

Topy—Montrose. P. A. Howe's (New Milford, Conn.) collie bitch Topy to Lottian Kennels' Montrose (A.K.R. 891), June 16.
Fanny II.—Montrose. E. J. Hawley's (Stepeny, Conn.) collie bitch Fanny II. (A.K.R. 881) to Lottian Kennels' Montrose (A.K.R. 891), July 8.
Scotch Mollie—King Macbeth. O. H. Hull's (Monroe, Conn.) collie bitch Scotch Mollie (A.K.R. 2464) to Lottian Kennels' King Macbeth, July 10.
Kelpie—Bobbie Burns. Associated Fanciers' (Philadelphia, Pa.) Dandie Dinmont bitch Kelpie (A.K.R. 1318) to Jas. Rae's Bobbie Burns (A.K.R. 2907), May 14.
Van—Croxeth. R. L. Hall's pointer bitch Van to Neversink Lodge Kennels' Croxeth (Bang—June), June 18.
Dolly—Drake. Neversink Lodge Kennels' (Guymard, N. Y.) pointer bitch Dolly to their Drake (Croxeth—Lass), July 12.
Beauty—Croxeth. J. Finn's pointer bitch Beauty to Neversink Lodge Kennels' Croxeth (Bang—June), June 16.
Madge—Johnny. Capt. F. H. D. Vieth's (Ottawa, Ont.) Clumber spaniel bitch Madge (Ben—Joan) to F. H. F. Mercer's Johnny (Ben—Joan), July 11.
Flora—Gene. Locust Grove Kennels' (Manton, R. I.) native English setter bitch Flora (Dick—Gipsy) to E. A. Milne's Gene (Druid—Ruby), June 29.

WHELPS.

Notes must be sent on the Prepared Blanks.
Little Nellie. F. F. Dole's (New Haven, Conn.) bull-terrier bitch

Little Nellie (Paddy—), July 11, six (two dogs), by his The Baron (Dutch—White Rose).
Rhena. Bayard Thayer's (Lancaster, Mass.) pointer bitch Rhena (Snapshot—Rose), June 14, nine (five dogs), by Locust Grove Kennels' Dean (Sensation—Daisy Dean).
Smoot II. Locust Grove Kennels' (Manton, R. I.) rative setter bitch Smoot II. (Pratt's Trim—Smoot), July 1, eleven (eight dogs), by their Sam (Green's Sam—Smoot II.).
Floy. J. E. Thayer's (Lancaster, Mass.) pointer bitch Floy (Charley Ross—Flirt), July 8, seven (five dogs), by Locust Grove Kennels' Dean (Sensation—Daisy Dean).
Lue. H. P. Dorch's (Goldsborough) pointer bitch Lue (Bow—Jaunt), July 9, four (four dogs), by Graphic Kennels' Graphic (A.K.R. 2311).

SALES.

Notes must be sent on the Prepared Blanks.
Toney. White bull-terrier dog, whelped May 23, 1886, by Count (A.K.R. 3178) out of White Violet (A.K.R. 3799), by F. F. Dole, New Haven, Conn., to Jas. M. Cox, Morristown, N. J.
Lady Jane. White bull-terrier bitch, whelped May 23, 1886, by Count (A.K.R. 3178) out of White Violet (A.K.R. 3799), by F. F. Dole, New Haven, Conn., to G. Howard Davidson, Mabettville, N. Y.
Don. White, brown ear, bull-terrier dog, whelped May 24, 1886, by Count (A.K.R. 3178) out of White Violet (A.K.R. 3799), by F. F. Dole, New Haven, Conn., to H. E. Twitcheil, Boston, Mass.
Lillie. White bull-terrier bitch, whelped May 23, 1886, by Count (A.K.R. 3178) out of White Violet (A.K.R. 3799), by F. F. Dole, New Haven, Conn., to Harry D. Steers, New York.
Nellie. White bull-terrier bitch (A.K.R. 2194), by Geo. W. Dixon, Worcester, Mass., to J. W. Newman, Boston, Mass.
Tom and Jerry. Black and tan pointer dogs, whelped Feb. 8, 1886, by Judge out of Pink, by Geo. L. Barnes, Tyringham, Mass., to Henry M. Plummer, New Bedford, Mass.
Scotch Mollie. Black and fawn collie bitch (A.K.R. 2764), by Lottian Kennels, Stepieny, Conn., to O. H. Hull, Monroe, Conn.
Bubble. Black cocker spaniel dog, whelped Sept. 15, 1885, by Bub (A.K.R. 131) out of Jennie, by R. E. Westlake, Olyphant, Pa., to Associated Fanciers, Philadelphia, Pa.
Leo. Fawn and white pointer dog, whelped June 20, 1884, by Sultan II. out of Nell II., by Rev. I. Phelsh Humphrey, Niveveh, N. Y., to Associated Fanciers, Philadelphia, Pa.
Bub Acres. Lemon and white pointer dog, whelped May 31, 1885, by Rush III. (A.K.R. 402) out of Flirt (A.K.R. 124), by R. T. Greene, Jersey City, N. J., to Associated Fanciers, Philadelphia, Pa.
Kelpie. Pepper Dandie Dinmont bitch, whelped June, 1881 (A.K.R. 1318), by Associated Fanciers, Philadelphia, Pa., to Louis A. Shaw, Chesham Hill, Mass.
Peep Bo. Black cocker spaniel bitch, whelped Feb. 23, 1886, by Obo II. (A.K.R. 423) out of Fannie Obo, by H. C. Bronson, Boston, Mass., to P. J. Herring, same place. [This sale was wrongly given last week as Yum Yum.]
Lady David. Lemon belton English setter bitch, whelped Dec. 2, 1885, by Ruyel out of Little Fraud, by G. F. Clark, St. George's, Del., to E. Wallin, Monongomery, Ala.
Dan. Red Irish setter dog, whelped April 30, 1882, by Patsy out of Swella, by R. E. Westlake, Olyphant, Pa., to Associated Fanciers, Philadelphia, Pa., and resold by them to D. W. McKee, Morganza, Pa.

PRESENTATIONS.

Bannerman—Trinket whelps. Be-gles, whelped May 25, 1886, by W. S. Diffenbacher, Baltimore, Md., a dog and bitch to Wm. Kizer and a dog to Jas. G. Clark, Jr., same place, and a bitch to F. B. Donaldson, Elk Ridge, Md.

DEATHS.

Paris Gem. English setter bitch, whelped June 10, 1886 (Count Gladson—Paris Queen), owned by W. B. Bowen, Rockland, Mass., July 12, from distemper.

Rush. Lemon and white pointer dog, whelped April 17, 1876 (A.K.R. 337), owned by Edmund Orgill, New York, died July 12, from distemper.
Ruby. Black, white and tan English setter bitch, whelped Jan. 15, 1878 (A.K.R. 130), owned by H. E. Hamilton, New York, July 4, from paralysis of the heart.

EVERY pair of Allen's bow facing oars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.—adv.

Rifle and Trap Shooting.

HIGH TRAJECTORY.

Editor Forest and Stream:
In your issue of June 17, "Archimedes" gives your readers an example in high mathematics. The paragraph has just come under my eye, and I venture in a crude and hasty manner to take issue with "Archimedes" in his conclusions. The proposition is that if a rifle is fired from an elevation of say 20,000 feet above the earth's surface, vertically toward the earth, the propelling force will be exhausted and the speed of the bullet will decrease until, at some point in its downward flight, it will acquire precisely the same velocity that it would if dropped from the hand at the same elevation; and that it will reach the ground with the same velocity as if dropped from the hand. I fancy that "Archimedes" has overlooked some factors that will greatly disturb his results. When a bullet is fired horizontally near the earth's surface, there are two forces at work: the earth's attraction and diminish its velocity in a progressive ratio every successive moment until it is brought to a stop on the earth's surface. These are gravity and atmospheric resistance. If there were no atmosphere or other medium through which it passed of a material nature, the bullet would travel further, but finally come to the ground from the force of gravity.

If there were no gravity the bullet would finally come to a stand in the air, in the same horizontal line on which it started. If there were neither gravity nor atmospheric resistance the bullet would continue through all eternity, upon the same line and with the same velocity with which it started. There is no such thing as exhausting the propelling force unless there is some opposing force to exhaust it. The force of gravity is greater than the atmospheric resistance, as evidenced by the fact that any body, heavier than air, even a feather, will finally reach the ground when dropped. A bullet fired from a high elevation toward the earth will encounter very rapid atmospheric resistance, but little resistance due to the force of its flight. The force of gravity plus the propelling force, will be resisted slightly by the rarified atmosphere. The velocity of the bullet will be increased, not diminished. It will reach the earth with the velocity due to gravity minus the atmospheric resistance, that is, the same as if dropped from the hand, plus the initial velocity due to the propelling force.

COAHOMA.

MEMPHIS, Tenn.

NEWARK, July 17.—The rifle match of 100 shots each at the German ring target, at the Forest and Stream of last week, came off with much enthusiasm at Union Hill, N. J., this afternoon. 25 contestants paid an entrance fee of \$5 each, and began the first of a series of 3 contests for a solid silver cup. Mr. Wm. Hayes, with his muzzle-loader was the winner of the cup with the nice score of 2196. The next contest will take place at Newark, N. J., Aug. 7. The entrance fees were divided into \$10 prizes and distributed to the 12 highest scores, all the shooters used the heavy German rifles with hair trigger, except Capt. Barrett and Mr. Gunther, who shot with 10 lb. rifles and 3 lb. trigger pull. Capt. Barrett's score of 2196 is the highest on record for rifles under the rules of the National Rifle Association. It is noticeable that the first five winners are all members of the Zettler rifle team of New York city; the following are the scores in series of ten shots:

Wm Hayes.....	208	214	211	221	231	217	215	229	224	228	2196
M. Dorrer.....	200	249	211	217	242	222	212	213	219	219	2186
A. Lobert.....	217	210	230	219	220	210	235	243	214	215	2183

THE INTERNATIONAL MATCHES.

A REVIEW OF TWELVE YEARS.

INTERNATIONAL rifle matches start with the Irish-American match of 1874. In the summer of the previous year the Irish team of small-bore marksmen had for the first time won the Elcho Shield from the Scotch and English shooters. They were the champions then of Great Britain, and Major A. Blennerhassett Leech, who in 1867 had founded the Irish Rifle Association, was so pleased over the doings of his compatriots, that he sent out a sweeping challenge across the ocean, hoping to extend the fame of the Irish team in this direction. His letter was published here in November, 1873, and the Amateur Rifle Club, a young organization, at once took up the challenge. The club knew next to nothing of long-range work, but with the hope rather than any expectation of victory, the conditions of the challenge were agreed to by Col. Geo. W. Wingate. The match took place on Sept. 26, 1874, at Creedmoor. It was a very hot day, and the foreigners suffered with the heat. The highest possible score per man at each range was 60, under the old system of marking. The score stood:

AMERICAN TEAM—Col. G. W. Wingate, Captain.				
	800yds.	900yds.	1000yds.	T'l
Lieut Henry Fulton, Remington.....	58	57	56	171
G W Yale, Sharps.....	55	56	51	162
Col John Bodine, Remington.....	54	51	53	158
Col H A Gildersleeve, Sharps.....	53	51	51	155
L L Hepburn, Remington.....	53	46	46	149
Gen T S Dakin, Sharps.....	53	45	41	139
Team aggregate.....	326	310	298	934

IRISH TEAM—Major A. Blennerhassett Leech, Captain.				
	800yds.	900yds.	1000yds.	T'l
John Rigby, Rigby.....	52	55	55	163
James Wilson, Rigby.....	54	51	55	160
Dr J B Hamilton, Rigby.....	53	52	50	155

Edmund Johnson, Rigby.....	50	49	51	150
Capt Phillip Walker, Rigby.....	46	55	43	144
Team aggregate.....	317	312	302	931

There was a return match in 1875. The Irishmen wanted satisfaction and on their own soil. A team was called together, and on June 29, upon the historic Dollymount in Dublin harbor, the match was fought. A fine team had been sent over under Col. H. A. Gildersleeve, and another victory followed for the Americans. It was not a good shooting day, but the scores ran high, as follows, same scoring as before:

AMERICAN TEAM—Col. Henry A. Gildersleeve, Captain		800yds.	900yds.	1000yds.	T'l
Gen Thomas S Dakin, Remington.....	58	55	52	165	
Col Henry A Gildersleeve, Sharps.....	56	56	52	164	
Col John Bodine, Remington.....	52	59	51	162	
Maj Henry Fulton, Remington.....	58	57	46	161	
Geo W Yale, Sharps.....	57	52	51	160	
Capt R C Coleman, Remington.....	56	48	52	156	
Team aggregate.....	337	327	304	968	

IRISH TEAM—Major A. B. Leech, Captain.				
	800yds.	900yds.	1000yds.	T'l
Jas Wilson, Rigby.....	58	55	55	168
Edmund Johnson, Rigby.....	58	54	50	162
Dr J. B Hamilton, Rigby.....	56	54	51	161
J G Pollock, Rigby.....	59	53	49	161
John McKenna, Rigby.....	52	44	53	149
J K Milner, Rigby.....	55	37	41	133
Team aggregate.....	333	292	299	924

The Canadian small-bore men thought it would be a good stroke to challenge the victorious Americans, and in this way jump in as champions of the world. A challenge was sent by the Victoria Rifle Club, of Hamilton, Ont., to the Amateur Rifle Club, promptly accepted, and on Sept. 25, 1875, the match was shot at Creedmoor against a junior team. There was a rear fishtail wind and the Canadians suffered a defeat. The scoring was upon the present target, making each man's highest possible at each range 75 points. The score stood:

AMERICAN TEAM—Gen. T. S. Dakin, Captain.				
	800yds.	900yds.	1000yds.	T'l
W B Farwell, Remington.....	63	61	63	187
A V Canfield, Jr., Remington.....	62	68	57	187

Geo Disner, Metford.....	59	50	58	167
James Adams, Rigby.....	54	50	56	160

In 1876 the Centennial of the United States was celebrated and as part of this celebration a "Palma" as the emblem of the long-range championship of the world was provided and all the world bidden come and shoot for it. It was to be a two days' match in teams of eight men at the new targets, possible 75 per man per range, and at Creedmoor on Sept. 14 the match opened with beautiful weather. The teams and scores were:

First Day.

While the Irishmen were in America they asked and were freely and promptly accorded another "go" at the American rifle men. The match was set down for Sept. 21, 1876. It was a cold, gusty day, and once again the Irishmen were beaten. The score running, with a possible 75 points per man per range:

AMERICAN TEAM—Major Henry Fulton, Captain.				
	800yds.	900yds.	1000yds.	T'ls

The series of discomfitures which they had suffered seemed to annoy the riflemen of the United Kingdom very much. They were

The series of discomfitures which they had suffered seemed to annoy the riflemen of the United Kingdom very much. They were specially anxious to have a distinctively national match, with the best of America against the best of Great Britain. This came off at Creedmoor in 1877. In a two days' match, Sir Henry St. John Halford, a member of the Council of the National Rifle Association of Great Britain, had chosen from the English, Irish and Scotch Elcho "Eight" the best small-bore talent, and he confidently looked for a victory. The contest took place in fine shooting weather on September 13 and 14, and the score stood:

First Day.—AMERICAN TEAM—Gen. T. S. Dakin, Captain.				
	800yds.	900yds.	1000yds.	T'ls

The Canadians in 1883 were rewarded for their many repulses by securing a victory over an American team. The American team went up in very bad form, defeat was predicted and it came. The match was fought on the Ainslee Wood Range, near Hamilton, Ont. The weather was so bad that the match was interrupted and the Canadian score was finished on the day following. The match was fought on Aug. 16, 1882, and the score ran:

CANADIAN TEAM.

	200yds.	300yds.	400yds.	500yds.	600yds.	700yds.	800yds.	900yds.	1000yds.	T'l

July, 1883, found the American team at Wimbledon, according to the agreement for a return match. Col. G. E. P. Howard was the captain and his team was made up of Lieut. Walter Scott, Third Separate Company Infantry, N. Y.; Sergt. T. J. Dolan, Twelfth Regiment, N. Y.; Sergt. W. L. Cash, Washington Light Infantry; Sergt. J. L. Paulding, Twelfth Regiment, N. Y.; Priv. J. M. Pollard, Washington Light Infantry; Priv. G. Joiner, Twenty-third Regiment, N. Y.; Priv. J. N. Brown, Seventh Regiment, N. Y.; Priv. C. W. Himmann, First Regiment, Massachusetts; Priv. M. W. Bull, Second Regiment, Massachusetts; Priv. John Smith, Ninth Regiment, New Jersey; Priv. S. I. Scott, Washington Light Infantry.

Sir Henry Halford again led the British Volunteer team and had under him: Priv. R. McVittie, First Dumfriess; Sergt. J. H. Dods, First Berwick; Corp. C. G. Parry, Second Cheshire; Major G. Pearce, Fourth Devonshire; Corp. H. Bates, First Warwick; Capt. J. P. Godsal, Second Bucks; Major A. F. Humphrey, Cambridge University Rifles; Major G. H. Young, Twentieth Middlesex; Quartermaster S. S. Gouldsmith, First Gloucester; Priv. G. C. Gibbs, First Gloucester; Priv. F. Lowe, Thirteenth Middlesex; Priv. C. D. Wattlesworth, Fifth Lancashire.

The arms used were on the British side: The Deeley Edge Metford rifle, by Wattlesworth, Godsal, Parry, McVittie, Pearce, Lowe, Humphrey and Dods. The Metford rifles were used by Gibbs, Young and Gouldsmith, while Bates had a Webley-Wiley. On the American team: S. I. Scott, Pollard, Dolan and Cash had the Remington-Heppburn, while the other members were armed with the Brown Standard rifle.

The match was fought on two days, July 29 being given up to the 200, 400 and 600yds. work, while the next day was devoted to the 800, 900 and 1000yds. shooting. They were two days of storm and rain, gale and lightning, and it was not surprising that low scores resulted. Each man, as before, fired 7 shots at each range, making a total possible of 35 points. The scores stood:

BRITISH TEAM—Sir Henry Halford, Captain.
First Day. Second Day.

With this defeat for the Americans abroad the series of international matches closes. It will be seen that in small-bore, long-range work the victory lies on this side the Atlantic, and the Palma, emblematic of the champions' lip in the line of marksmanship, still remains on American soil. In military shooting the honors are on the British side, and after two defeats the American guardsmen seem indisposed to make an effort toward bringing all championships to this country.

RANGE AND GALLERY.

HAVERHILL, Mass., Rifle Club, July 17. Practice Match:

S. E. Johnson.....	9	7	9	7	8	9	7	9	7	9
W. W. Johnson.....	7	4	4	4	4	4	4	4	4	4
J. Busfield.....	7	5	8	9	9	7	10	6	8	5
E. Brown.....	5	6	6	6	6	6	7	8	9	7
A. Edgerly.....	7	7	5	7	5	6	8	9	7	6
C. Brown.....	6	3	4	5	6	6	5	4	6	5
J. Choate.....	4	7	9	0	6	5	6	4	5	7
J. P. M. Green.....	7	5	6	3	3	4	4	10	3	5

JAMES TOWN, N. Y., July 17.—At the regular shoot for club medals yesterday, 200yds., off-hand, Creedmoor target, the following scores were made, wind strong from 10 o'clock:

Norton.....	55544445—46	Carters.....	54344453—39
Hazeltine.....	4435554—45	Baker.....	45455344—36
Burns.....	35444445—44	Hazzard.....	55323444—36

CREEDMOOR, July 17.—It was very hot at the Creedmoor range during most of today, but the shooting was unusually good. The attendance was the largest of the year, excepting that of July 5. The entries numbered 850 and the first cash prize amounted to about \$8. The winners in the champion marksmen's class were as follows:

	200yds.	500yds.	Total.
Sergt. T. Mahoney, 12th Reg.....	20	25	45
Lieut. C. Wallace, 14th Reg.....	22	22	44
Private J. W. Hale, 7th Reg.....	22	22	44
Sergt. W. N. Baird, 12th Reg.....	22	22	44
Private G. T. Merchant, 7th Reg.....	20	23	43
Lieut. J. R. Byrd, 23d Reg.....	20	23	43
Sergt. G. H. Frazer, 4th Reg.....	23	20	43
Sergt. R. M. Kallach, 7th Reg.....	19	23	42

Sergt. Mahoney made a perfect score at 500yds. This has been done but three times this year. Private J. T. Klein, of the 17th Separate Company, who won the medal last year, scored a total of 47 today, but as was the winner of last year, he was entitled to no prize. A peculiarity of the shooting this year is, that in the five matches that have been shot no marksmen has won the first prize twice.

A CANADIAN MATCH.—Moncton, N. B., July 15.—The first inter-provincial rifle match, Nova Scotia and New Brunswick participating, took place on the Moncton Rifle Range today. The shooting commenced about 11 and was concluded at 5. The conditions were favorable, the wind being almost a fishtail and hazing light. The score beats the best Wimbledon record, New Brunswick's total for the range being 701, or four more than the highest in the competition for the Kolapore Cup, while Nova Scotia's 698 was but four behind. The riflemen are delighted at the successful inauguration of the inter-provincial matches, and if the Nova Scotians are disappointed the New Brunswickers are surprised at the phenomenal success. The score sheets show the following: 200, 500 and 600yds., 7 shots, highest possible, 35 at each range:

	Nova Scotia.	200yds.	500yds.	600yds.	Total.
Capt Bishop.....	30	32	27	89	
Capt Corbin.....	31	29	29	89	
Gunner Campbell.....	31	26	33	90	
Lieut Fiske.....	31	28	29	88	
Capt Weston.....	30	29	29	88	
Lieut Adams.....	30	26	30	86	
Gunner Fader.....	30	28	27	85	
Major Walsh.....	26	26	26	78	
Team aggregate.....	239	224	230	693	

New Brunswick.

	200yds.	500yds.	600yds.	Total.
Lieut Langstroth.....	32	31	31	94
Sergt. Langstroth.....	28	32	30	90
Lieut McKee.....	28	32	30	90
Col Beer.....	27	29	27	87
Lieut Smith.....	31	32	32	95
Capt Hartt.....	29	34	25	87
Major Arnold.....	29	26	24	87
Capt Kinnear.....	31	27	29	79
Team aggregate.....	234	234	225	701

BOYTON, July 17.—The attendance at the range at Walnut Hill today was not large. The weather conditions were favorable. Follow are the scores:

Rest Match.

H. J. Foster, A.....	9	10	9	10	10	10	10	10	9	98
D. L. Chase, F.....	10	10	10	10	10	10	10	10	9	98
W. H. Oler.....	10	10	9	9	10	9	10	9	10	95

Five Hundred Yard Match.

LL Chase (spg rifle).....	55555555—50	E. L. Brackett (mil.).....	4444554555—43
W. Henry (mil.).....	455555455—43	E. E. Benjamin (mil.).....	4235555155—43
A. S. Brackett (mil.).....	555555444—43	C. S. Saunty.....	5453144545—43

State Militia Match.

F. E. Benjamin.....	21	22	21	21	22	22	22	22	22	22
E. C. B. Erickson.....	21	21	21	21	21	21	21	21	21	21
C. M. Cook.....	21	22	21	21	21	21	21	21	21	21

WILMINGTON, Del., July 14.—There was a fair attendance at the public rifle matches, held by the Wilmington Rifle Club at Schuetzen Park this afternoon, and the shooting was continued until the target was washed away by torrents of rain. The conditions of the first match were: Creedmoor target, 200yds., off-hand, and prizes divided by score classes. After deciding ties the prizes were awarded as follows: First, S. J. Newman; second, W. C. Seeds; third, U. Fuller; fourth, Wm. O'Connor. The following is the full score out of a possible 23 points:

S. J. Newman.....	5454—22	J. E. Seeds.....	4434—19
W. C. Seeds.....	4454—21	H. Simpson.....	4443—18
C. Heinel, Sr.....	4454—21	I. W. Seeds.....	3433—17
U. Fuller.....	4345—20	W. A. Bacon.....	335—16
H. B. Seeds.....	5344—20	J. E. Newman.....	2343—16
W. O'Connor.....	3444—19		

At the second match a new plan was tried, which gave general satisfaction. Bacon and Simpson were appointed to select two teams from those present to compete with each other. This awakened a spirit of rivalry which made the match exciting and interesting. Bacon's team won by 19 points, holding the lead from the start. The prizes were awarded according to the highest scores of the entire match, and were as follows: First, Charles Heinel, Sr.; second, Jas. E. Newman; third, S. J. Newman; fourth, U. Fuller; fifth, H. B. Seeds. The conditions were 200yds. off-hand, Massachusetts target. The full score is as follows, out of a possible 108 points for individuals, or out of 540 points for teams, William F. Seeds shooting as odd man:

W. A. Bacon.....	6	11	4	7	9	9	9	8	9	71
S. J. Newman.....	9	7	12	8	9	9	9	10	10	83
H. B. Seeds.....	10	12	11	8	7	9	8	6	9	80
J. E. Newman.....	12	8	10	9	7	9	11	12	7	85
J. E. Seeds.....	12	9	12	10	9	11	2	8	5	78
W. A. Bacon.....	48	47	49	42	41	47	40	44	39	397
H. Simpson.....	2	10	11	10	4	8	5	6	6	62
C. Heinel, Sr.....	8	9	12	11	9	9	11	8	12	89
U. Fuller.....	8	12	10	8	8	10	7	7	8	82
W. V. Seeds.....	6	5	11	9	8	10	7	10	7	75
William O'Connor.....	10	9	5	10	5	6	4	10	10	70
Team aggregate.....	37	45	49	43	34	39	40	38	45	378

At a meeting of the club held at the close of the matches the weekly shooting day was changed to Monday. It was also decided to visit the West Philadelphia Rifle and Gun Club at Stockton range, near Camden, N. J., on Monday, July 24.

WIMBLEDON, July 15.—The regular match between members of the House of Lords and members of the House of Commons has been abandoned because it has been found impossible to complete the teams, owing to the absorbing interest in the election. The shooting of the first stage of the contest for the Queen's prize was finished today. Corporal Reur, of the Aberdeen Rifles, made 90 out of a possible 105, taking the bronze medal.

July 19.—There was some fine shooting in the rifle matches today. Rigby, for instance made 15 consecutive bullseyes at 600yds. Light breezes prevailed for a time, and the weather afterward became rainy. The shooting for the London Corporation prizes was confined to marksmen from the colonies. The highest scores at the first range, 600yds., were as follows: Baruhill, of Canada, and Davis, of India, 40 each; Armstrong, of Canada, Cork, of Australia, and Harwood, of India, each 38.

July 20.—The shooting was continued today. The weather was favorable. In the match for the Queen's prize, Corp. Richardson, of Cambridgeshire; Sergt. Barret, of Lancashire, and Private Jackson, of Lincolnshire, tied, with 2.5 points each. The tie was shot off and resulted in Jackson winning.

NATIONAL RIFLE CLUB.—Editor Forest and Stream: The twenty-ninth annual meeting of the club will be held at Vernon, Vt., Sept. 7, 8 and 9. A general invitation is extended to all interested in rifle shooting. Any one can become a member and entitled to all the privileges of the club by paying \$5 entrance fee to the match for prizes and the club medal. The standard weight of rifle barrels being 15lbs. all over men give the following odds: From 15 to 30lbs. 24 to the pound for every 10 shots. From 30 to 30lbs., 16 to the pound for every 10 shots. From 30 to 40lbs., 16 to the pound for every 10 shots. Ten per cent. odds will be allowed to parties shooting from the shoulder. First string will be shot Tuesday afternoon, second and third strings on Wednesday. Distance 40 rods. Time rules.—N. S. Brockway, Secretary, Bellows Falls, Vt.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Sound, and disbanded there.

CRUISE OF THE COOT.

XXV.

IT was early in the forenoon when the Coot reached down from her night's anchorage in Broad Creek to the North River light, and worked out against a light S. westerly breeze. The narrow passage is marked by a midchannel buoy at each end, but I could find no traces of the inner one. Many of the beacons and marks in the Sound had been carried away by the heavy ice of the winter, the light at Roanoke River being knocked off its legs, and all the stakes gone in Core Sound. Strange to say, the Lighthouse Service has been slow to replace the marks, contrary to its usual despatch in such matters. Several vessels were lost in consequence. One schooner was split on the submerged iron socket of a stake in Core Sound and sank. The destination of the Coot was Elizabeth City, at the head of the

A "SOUNDER"—BEFORE THE WIND.

Pasquotank River, the first met with, steering west. From North River the shore can be followed pretty close, passing half way between it and Wade's Point Light, erected on a long sandspit jutting across the mouth of the Pasquotank, after which beacons properly painted will pilot you safely up the river, the city opening to view upon rounding Brickhouse Point. The wind had increased to the regulation mild gale from S.S.E., and the Coot went flying before it

in Albermarle and Pamlico, connect here for the North. The river water is fresh enough to fill up your tanks. Some miles higher up the old Dismal Swamp Canal has its entrance. To this canal the prosperity of Elizabeth is originally due, and there is now a movement to dredge it out to suit modern traffic. Meanwhile manufactures have sprung up to add to the life of the town. There is a cotton seed mill, an ice house, a net and twine factory, several saw mills, a large four-story brick hotel occupying a whole block, a fine cotton house and many handsome little dwellings with tastefully decorated gardens. Likewise specimens of the old home-stead of antebellum era and a large contingent of tenants' cottages scattered about the outskirts. The stores take up several blocks near the water, and most necessities are to be had at fair prices. A general air of thrift and progress pervades the place. It may be remarked that all the manufactures are carried on by men from the North. The professions are well represented, and supply the society of the town, which is somewhat noted for its contingent of fair young ladies. I saw whole troops of them about the streets, but of course took no interest in them. The shipping in the harbor is confined to a few schooners, a propeller or two and the Old Dominion's fine sidewheeler Shenandoah, which runs to New Bern up the Neuse River. The small boats are peculiar. The moment you leave the Cootjock Canal you enter into a separate zone of boat construction. The style you then meet prevails all over the Sound to the exclusion of every other. In hull these boats are a cross between the canoe and ordinary ship's yawl boat. In rig they are quite original. The mast is stout and short. A sail short on the luff and long on the head, with much peak about like a cutter's main-sail, is spread by a sprit from tack to head. A jib to stem head is deemed absolutely necessary, as all boatmen here are strongly opposed to taking the rough waters of the Sound without some head sail. My experience is that they are right, for the Coot's cat rig was a sorry

chance in more than one instance. Equally indispensable to the "Sounder" is a flying topsail of heavy material. It is carried full but the worst weather, and is in reality a stout yard, which is hoisted to the masthead, the heel coming half way down the mast where it is secured. A headstay leads from head of yard to the stem of the boat, and the sheet from a yard on the foot of the topsail, is taken directly to the boat's quarter. Thus the top-sail is independent of the mainsail, and can be maneuvered at will. When running before the wind the mainsail is winged out one side and the topsail on the other. The cut of these rigs gives them a very smart look on the wind. So keen has competition become all round the coasts that piles of sandbags are shifted to windward by the crews as in racing machines about New York, and everybody is on the qui vive to beat everybody else. "Can she run well?" was the first question asked of the Coot, "running" referring to her sailing qualities in general. Every one about the Sounds is an expert at boating. From infancy the youngster is bred to a boat. At five years of age he knows it all. I overheard two little urchins seriously discussing the Coot's mainsheet. "Ah, but can he haul in all those parts quick enough?" said the first. "Yes he can, for I saw him do it," was the quick rejoinder. The doctor makes the rounds through the country in his boat. Sick people sail fifty miles in a "kunner" to catch the doctor. The grocer sends his boy with his wares by the rivers and creeks. The lawyers look up their clients under sail, and the farmers come to town in their ducats. The rallants take their lady loves out for a cruise down harbor, and the average man goes fishing when he has nothing else on hand, while the boy of the town does his loafing afloat instead of in the gutters. The Coot came in for endless comment and such a stream of visitors that I shifted my berth next day for a lonely place up river. An expedition inland revealed large and well-tilled farms and an open country in which I was told there was no game, and birds were scarce owing to the thick settlement. Every one pointed to Hyde and Dare counties and the Alligator River as the great preserve for deer, bear, swans, geese, ducks, quail, partridge, oysters, clams, turtles, squirrels, snipe, beach chickens, willets, crabs, eagles, minx, otter, beaver, muskrats, etc. and sportsmen in these counties, they being thinly settled, and well wooded and difficult of access. I believe that all that portion of Dare county east of the Alligator is under lease to the Kittyhawk Sportsman's Club of New York. What the terms are I do not know, but the natives are certainly not familiar with any such rights, for they hunt through that region as they please, and pretty much when they please, regardless of game laws. What little they bring down, however, is only for their immediate consumption and would never be missed. The ground will remain practically virgin as long as the city tourists can be held at bay. One man told me about ten coon or hog farms he and a guide had brought down near the shores of the Alligator. The bears had been in search of grubberies, and gave notice of their whereabouts a long way off through the cracking of the limbs as they tore them from the trees. About Far Creek and Long Shoal River deer are very plenty, also swan, geese and ducks

with great foaming curlers in her wake. Off the town there is a deep hole of 40ft. The proper anchorage is in 10ft. around the last red beacon, and abreast of the railroad and steamship wharf at the northern end of the town. There protection is also had against the sea, which constantly rolls in upon the city wharves. Though Elizabeth is not very impressive to one fresh from Norfolk, it is the largest and most important town on the Sound, and the last likely place at which to fill up with stores. All the surrounding country draws upon Elizabeth. It has the only marine railway on the Sound, and is connected with Norfolk by rail. Steamers from various points

A "Core Sounder".

A "SOUNDER"—ON THE WIND.

in season, oysters without end. When a boatman gets hungry hereabouts he rounds up, fills the sternsheet full of oysters in a few minutes and draws jib again.

HULL Y. C. 1ST CHAMPIONSHIP RACE.—The morning of July 17 was so calm that all of the entries in the first championship race of the Hull Y. C. were not able to reach the start. About noon, however, a good breeze came out from E.S.E., shifting later to W., and then dropping to a calm. Soon after a very severe squall struck the fleet, cap-sizing two yachts, but doing no serious harm. Twenty-four yachts started, the first at 3 P.M., in the five classes. When the squall struck Zetta was compelled to anchor and ride it out, afterward giving up. Rocket and Crusader, two of the centerboards, were capsized, but all hands were rescued. Most of the yachts rode out the squall under bare poles. The times were:

FOURTH CLASS KEELS.			
Zetta, H. E. Fowler.....	20.00		Withdrawn.

The prizes were: First class keels, \$35. (Carmen); first class centerboards, \$35; second class keel, \$20, Lizzie F. Daly; second class centerboards, \$20, Ramblor; third keels, one-half of prize, \$7.50, Kitty; third class centerboards, \$15, Posy; fourth class centerboards, \$12, Mabel; fifth class, Wildfire, \$10. Mabel and Tartar filed cross protests against each other.

SHREWSBURY RACES.—On July 16, the third race for the North Shrewsbury championship was sailed in a light S. wind. The times were:

FIRST CLASS.				
	Start.	Finish.	Elapsed.	Corrected.
Little Night.....	2 21 46	4 35 39	2 13 50	2 13 50
Evela.....	2 20 37	4 31 28	2 09 51	2 09 36
Maud I.....	2 21 29	4 33 56	2 11 27	2 12 27
Annie.....	2 22 15	4 41 12	2 18 57	2 16 57
SECOND CLASS.

Spot.....	2 29 27	4 36 46	2 06 19	2 07 04

An open sweepstake regatta is proposed, to be sailed on the Shrewsbury the last of this month.

GENESTA AND IREX.

THE challenge of Irex for the two cups won by Genesta premises to do little to increase the reputation of the former even in the event of winning. There are a great many abroad as well as here who think the proper place for the leader of the racing fleet is where the America's cup is, and while it is still held in America there is little glory in heating the C. class or winning other international cups at second hand. It is seldom that we can agree with our able and fairminded contemporary the *Saturday Review*, but in this case we can do so heartily as far as Genesta and Irex are concerned. "The ingenious plan of the Yacht Racing Association for putting obsolete and ill-designed vessels on a par with the best that the accomplished naval architects of our day can produce scarcely seems likely to succeed so well as might be desired. In spite of the enormous penalties imposed upon the fast ships, they may possibly still be enough in the van to win, and the slow vessels may find themselves in the position which is perhaps not unnatural for them, but which nevertheless causes their owners extreme annoyance. Possibly later in the season they may be more fortunate, the cry which has been raised for special prizes for specially dull sailers may meet with some response; but for the present the vessels which can go quickly through the water are not getting the worst of it, and in spite of having to sail at 340 tons, the Irex appears to be the leading yacht. There is, it seems, to be a race between this vessel, which, even when all allowance is made for the skill with which she is sailed, must be regarded as the fastest English racing craft, and the Genesta. It was announced last month that the owner of the first-named had challenged the Genesta for the Brenton Reef and Cape May challenge cups so brilliantly won by the latter in American waters last season. Now, unless the challenge has been issued by the wish of the chivalrous owner of the Genesta, as is quite possible, this seems a rather mistaken proceeding on the part of the gentleman to whom the Irex belongs. That cutter did not go boldly over to New York last year and fight for the America's Cup, but was engaged in the comparatively inglorious work of winning prizes on the English coast. After attempting the impossible—that is to say, trying to beat a centerboard built specially for the race—the Genesta, sailing against keel vessels, won the two cups in a manner unparalleled in yachting. It might well have been thought that, unless an American came over to compete for them, she would have been left in undisputed possession of the trophies she had so nobly won; but now we learn that an English yacht which did not venture across the Atlantic is, with remarkably tardy valor, offering to do battle with her. Every one must hope that Sir Richard Norton will retain the trophies which he gained so well; but undoubtedly there is a considerable chance of his losing them, as the extraordinary speed of the Irex in reaching and running may give her great advantages in the race to Cherbourg and back; but, even if his vessel is beaten, it will be one of those contests in which all the honor rests with the defeated; and though yachtsmen are said to be a jealous race, we doubt whether there will be any jealousy on this occasion, and whether, if Mr. Jameson is successful, any one will in the smallest degree envy him the prizes he takes from the vessel of which Englishmen are justly proud."

CAROLINA Y. C. REGATTAS.

THIS season has been the most exciting one ever sailed by the boats of this club. On June 27, the opening regatta, twelve yachts reported ready for action, and a more beautiful race we have never had. After running six miles the race was between Vixen, Capt. Latimer, and Idler, Com. Jones. Each boat had her respective backers, and at the finish Vixen led, giving Idler a good second. Next in was Ripple. The prizes, \$50 to the first boat, \$20 to second, \$10 to third boat, were awarded the above yachts.

Our July 3 regatta was the largest ever held by the club. The city was deserted, and all who could borrow or beg a boat were landed safely on the beach to witness this race. In the club house were 600 people, guests of members, and the race was between Vixen, Capt. Latimer, and Idler, Com. Jones. Each boat had her respective backers, and at the finish Vixen led, giving Idler a good second. Next in was Ripple. The prizes, \$50 to the first boat, \$20 to second, \$10 to third boat, were awarded the above yachts.

The judges, Capt. Mitchell, W. S. Cutler Colfax, Mr. Richard Bradley and Capt. Wm. Smith, gave the start promptly at 12 o'clock, and at the firing of the first gun from the cutter, which was anchored some 100 yds. distant, the yacht Glide, Mr. Cameron, made the start, followed by the Restless, Mr. Cowan; Lillian and Florence, Mr. Bowden Soule, Mr. Atkinson; Rosa, Mr. Smith; Mist, Mr. Conoley; Ripple, Mr. Giles; Vixen, Mr. Latimer; Idler, Com. Jones; Mascotte, Mr. Farsley. Wind from E. and a close haul the boats were made for Inlet Buoy. On their return Vixen and Idler gained the first places, and we do not believe ever before two boats ran more evenly than they did. For 7 miles there was not 10 ft. difference from the starting, and only by sheer boldness did their position change. The last mile of the race the boats were compelled to make a short tack in order to avoid a shoal, and Idler having nothing to lose, being a good second, crossed the shoal without grounding, and won the race in the fastest time on record, the 8 mile spring sailed in 1h. 21m. 50s.; Vixen second, Mascotte third, Ripple fourth, Glide fifth.

Since the arrival in our waters of the Idler and Vixen, it is a strange coincidence that our races have had less tacking than ever before, and to this cause some of the yachts attribute their success. We will hope at our next regatta that the wind will blow hard and from a point that will make dead windward work, and the owners of Idler and Vixen will not be as jubilant after this race as they are at present. Ripple and Mascotte are always close behind them, and all they ask is for more close sailing.

C.

IREX AND MARJORIE.—The results of the races between these two, now almost the sole representatives of the British racing fleet, only go to show that if Marjorie had come out here one or two years ago she would have had a far better chance against the existing boats which would then have been matched against her, Mischief, Gracie, Fanny and others, than Genesta and Galatea have against Puritan & Co. Besides she would have had Duncan in her, and we all know what he could do. Marjorie is a much less extreme boat than the 90-tonners, and for that reason would have had a far better show with our wider boats.

JERSEY CITY Y. C. 28TH ANNUAL REGATTA.—The Jersey City Y. C., almost the oldest in the United States, sailed its 28th regatta on July 15, over the following courses: Class A.—From a line between judes' boat and Bartholdi's statue on Bedloe's Island, thence to and around buoy 8½ and return, keeping to eastward of buoys 11, 13, 15 and Oyster Island buoy and to westward of Fort Lafayette; going and returning keeping buoy 8½ on the port hand. Classes B and D.—Starting from same place, thence to and around buoy 11 and 16 and return, keeping buoys on the port hand. Classes C and E.—Starting from same place, to and around buoy 15 and return, keeping buoy on port hand. Finks for all classes at same line as start. Allowance of time for classes A, B and D 2 min. to the foot, other classes 1½ min. to the foot; one-quarter of overhang included in measurement. At 11:20 A. M. the signal for the start was given. The tide was nearly out and a light S. E. wind was moving, increasing in the afternoon. The times were:

CLASS A—CABIN SLOOPS.			
Start.	Finish.	Elapsed.	Corrected.
Coucord.....	11 21 00	3 30 00	
Naushon.....	11 22 10	Disabed.	4 13 00

CLASS B—CABIN SLOOPS.			
Start.	Finish.	Elapsed.	Corrected.
E'sie May.....	11 26 50	3 09 00	3 42 30
Alexander F.....	11 27 00	2 55 00	3 24 55

CLASS C—CABIN SLOOPS.			
Start.	Finish.	Elapsed.	Corrected.
Eleanor.....	11 32 00		
Kt. Templar.....	11 32 40	2 52 30	3 19 50

CLASS D—OPEN CAT YACHTS.			
Start.	Finish.	Elapsed.	Corrected.
Bessie.....	11 33 40	1 50 15	2 19 35
Fanny Parrell.....	11 31 30	2 00 53	2 29 23
Lizzie B.....	11 31 10	2 00 50	2 30 40

Concord carried away her bowsprit and withdrew. Naushon, Alexander F. and Bessie win in their classes. The regatta committee were Messrs. J. H. Love, J. T. Roberts and J. A. Hilton; and the judges, Messrs. J. A. Nugent, J. H. Carnes and A. Blau, Jr.

JAMAICA BAY RACES.—The second race of the series was sailed on July 17, starting at 8:30, the course being from against the Seaside wharf, around Red buoy No. 4, in Rockaway Inlet. The times were:

CLASS A.			
Start.	Finish.	Elapsed.	Corrected.
Ours.....	3 40 00	4 55 30	1 15 30
Lottie R.....	3 40 00	4 55 00	1 15 00
Julita.....	3 40 00	4 57 15	1 17 15

CLASS B.			
Start.	Finish.	Elapsed.	Corrected.
Lady Glenmore.....	3 40 00	4 56 00	1 16 00
Estelle.....	3 40 00	5 57 45	1 15 40
Gracie.....	3 40 00	4 59 30	1 19 30
So So.....	3 40 00	5 58 00	1 18 30
Blond.....	3 40 00	5 01 10	1 20 10
Aurora.....	3 40 00	5 01 00	1 21 00

CLASS B.			
Start.	Finish.	Elapsed.	Corrected.
Florence.....	3 40 00	5 04 30	1 24 15
Kate.....	3 40 00	5 10 15	1 30 15

The regulations were that all boats must be sailed by amateurs, and Lady Glenmore and Ours were consequently disqualified. Lottie R., Julita, Estelle and So So win in Class A, and Florence in Class B.

AN ANOMALY.—Messrs. William J. Elton and William W. Crawford of South Boston are the owners of a boat that is something different from the ordinary run of small sailing craft, and which attracts considerable attention. The Elford, as she is called, was originally a boat of the class known as "clippers centerboard dory," and was built by Small, of Swampscott, in 1884. Her model is different from any other dory in many respects. She is somewhat the style of the Nautilus that was sailed across the Atlantic by the Andrew Brothers in 1873. Her dimensions are: Length over all, 10 ft. 6 in.; extreme beam, 4 ft. 10 in.; depth, 30 in. Her present owners were at work on her during the winter months and made many alterations in her. The boat was decked over, leaving an oval standing room 9 ft. 6 in. long and 8 ft. 10 in. wide, around which was put a slender oak washrail. A keel 8 in. deep was put on, extending the whole length of the boat and the rudder was enlarged to correspond. The seats are arranged so that she will carry eight persons with comfort. She is rigged with a sprit mainsail and jib, the mainsail containing 37 yds. and the jib 3 yds. of drilling. The mast is 15 ft. 6 in. from deck to top, 4 in. in diameter at deck, and 2½ in. in diameter at top. The sail hoists 12 ft. and measures 12 ft. at the foot and 8 ft. 6 in. at the head. The sprit is 18 ft. long, and when up it carries the peak of the sail 2½ ft. from the deck. The bowsprit is a very light adjustable spar, that can be put on or taken in at pleasure. The hull of the boat weighs about 350 lbs. and she usually carries 500 lb. of ballast aboard. She shows great speed with sheets started and when close-hauled her keel enables her to hang on and sail as fast as the wind. She is a boat that can be taken safely almost anywhere and has been sailed with reefed mainsail in a wind of 30 miles per hour. This class of boats, while somewhat unique, is no doubt destined to become very popular in time with amateur sailors.—*South Boston Enquirer.*

"THE BOAT SAILER'S MANUAL."—While no one can learn to sail a boat by staying ashore and reading treatises on the subject, there is yet a great deal of important information regarding boats and their rigs which may be acquired by intelligent study. The ranks of the yachtsmen are of late being rapidly augmented by recruits from the boat sailers and carvoemen, already a numerous class, while their places in the musquito fleet are being taken just as rapidly by novices. Never before was boat sailing so popular as now, and with a greater variety and improved models of boats it is each year extending over new waters to those young sailors who wish to learn all that can be acquired from books, we recommend the valuable little hand book lately compiled by Lieut. E. F. Quailtrough, U. S. N., author of the "Sailor's Handybook." The "Boat Sailer's Manual" contains in a very neat and compact little volume, suitably bound in flexible leather, all the essential information which the novice requires. The principles of flotation, stability and lateral resistance, and the action of rudder, ballast and sails are clearly explained, and the various parts of the boat, with the various operations of the rigging aloft, are shown by diagrams. The question of the best boat for each purpose is dealt with in a practical manner, and the characteristics of the different

types are discussed, a large number of boats being described and illustrated. The management of boats under sail is considered in a separate chapter, racing and its rules, as well as practical boat handling, being dealt with under this head. The cutter and sloop rigs are described and compared, and canoe sailing comes in for an extended notice. The final chapter contains in a compact form some useful hints on weather indications, cookery, bating and restoring the dro'ned and similar subjects. The book is published by Chas. Scribner's Sons, New York.

NEW YORK Y. C.—On July 15 a meeting of the N. Y. Y. C. was held at Delmonico's. A resolution was passed, inviting Lieut. Henn to join the club cruise and to enter the Goelet cup race. The following members were also elected: Morris K. Jessup, Frederick Lovejoy, J. C. Bergen, Henry Cragish, George H. Warren, Alfred J. Weston, Philip Tilghmash, Lewis H. Livingston, August W. Conover, M. Ballou, E. J. Greacen, Stanley Greacen, B. F. Gambrill and Robert Browne.

NEW YORK Y. C. CRUISE.—The following orders for the coming cruise have been issued by Com. Gerry: FLAGSHIP ELECTRA, N. Y. Y. C., NEW YORK HARBOR, July 20, 1886. GENERAL ORDERS, No. 1. The Commodore hereby assumes command of the squadron. Mr. William Krebs is appointed Fleet Captain.—ELBRIDGE T. GERRY, Commodore.

FLAGSHIP ELECTRA, N. Y. Y. C., NEW YORK HARBOR, July 20, 1886. GENERAL ORDERS, No. 2. The vessels of the squadron will rendezvous at New London, off Pequot House, on Wednesday, Aug. 4. Captains of the reports aboard the flagship at an hour which will be duly indicated by signal the same evening. During the cruise, the owl and the game cock colors, with the accompanying challenge cups, will be raced for by the gigs and double scull cutters and dingies belonging to the yachts of the squadron, and the holders will be subject to challenges at any time, on one day's notice. Special attention is called to the race for the cups presented by Captain Goelet, which will take place at Newport at a time to be determined on at the meeting of the captains on the 4th inst. Also to the fact that Rule V. of the printed sailing regulations prohibiting the carrying of clubpoisals during the annual cruise, was rescinded in that respect at the June meeting of the club. By order of the Commodore, WILLIAM KREBS, Fleet Captain.

YACHTING NOTES.—Bedouin has received her new main boom at Lawley's. The East River Y. C. proposes soon to sail a regatta on a novel plan. A prize will be given for the last boat, no owner to sail his own boat. The yachts will be allotted to the different members by the regatta committee, and as each man will sail not his own boat but a rival, he will do his utmost to bring her in first. Beele, cutter, Mr. Augustus Hemmenway, has been leased by Mr. Bancroft Davis, and Captain Crocker's brother William will sail her.

OPEN REGATTA ON THE SOUND.—On July 28, a large open regatta will be held at Westport over a 10-mile triangular course, open to four classes of yachts, as follows: First to measure 35 ft., second 30 ft., third 25 ft., and fourth 20 ft. All boats in fourth class to be cat-rigged. Prizes of \$25 will be awarded in each class. The measurement will be from stem to rudderhead. A time allowance of 1½ min. to the foot will be given. Mr. F. Burritt, of South Norwalk, has charge of the entries.

AMERICA.—The alterations in Gen. Butler's schooner are completed, and on Saturday she started on a trial trip, having her owner on board. She has now an outside keel of lead, weighing 26 tons, with a single bowsprit in place of her old bowsprit and jibboom, while her sails are entirely new. She sailed nearly to Marblehead in company with Mayflower, and then stood off shore for a thorough trial trip at sea.

TRANS-ATLANTIC YACHTING.—The English yawl Xarifa arrived at Cowes on July 15. Coronet, schooner, Mr. R. T. Bush, of New York, arrived at Queenstown on July 18, after a passage of 17 days. She will visit Cowes and Havre, remaining abroad about 6 weeks.

MEDUSA.—Mr. Robert Cooter, former owner of the cutter Vindex, has just purchased the cutter Medusa, built by Lawleys from a design by J. Beaver Webb. She is now fitting out and will join the N. Y. Y. C. cruise.

EASTERN Y. C. CRUISE.—On July 13 the fleet sailed from Rockland at 9:15 A. M., reaching Bar Harbor about 4 P. M. A meeting was held on board Fortuna next morning, at which the fleet was disbanded.

ALLEN'S bow-facing oars can be attached to any boat in 5 minutes. Try them. Little catalogue free. Fred A. Allen, Monmouth, Ill.—*Adv.*

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. W.—See game seasons in our issue of July 8.

A CONSTANT READER is recommended to apply to any fish dealer in his own city or in New York.

J. C. W., Paterson, N. J.—The three years' law was not enacted; the season remains as before.

R. W. McL., Chillicothe, O.—See correspondent's reply to your inquiry in Sea and River columns.

C. H., Providence, R. I.—The season for landlocked salmon in Maine is from May 1 to Oct. 1. June is usually the best month. They troll for them there with minnows mostly. If you use flies we would advise trying the silver doctor. Jock Scott, Montreal and royal coachman. You may find good fishing in September.

Salmon Fishing in Canada.

We have the largest stock in America of Forrest & Son's celebrated Salmon Flies, Rods, Reels, Casting Lines, etc., etc. We have everything in Fishing Tackle for the successful capture of Salmon and Trout in Canadian waters. American anglers can obtain their complete outfit from us at below New York prices. Spliced Salmon and Trout Rods a specialty. Salmon and Trout Rods made to order and repaired. W. W. Greener's Guns Eley Bros. Ammunition, Curtis and Harvey's Diamond Grain Powder, Clay Pigeons, Blackbirds, Glass Balls, Traps and all kinds of sporting goods. Send stamp for 42-page illustrated catalogue.
T. W. BOYD & SON, 1841 Notre Dame st., Montreal, Canada.

Among the Many Novelties
Introduced by us for the coming season, we wish to call attention to our
Dead Finish, Waterproof, Braided Silk Fly Lines,
FOR SALMON, TROUT AND BLACK BASS.
We have been experimenting for some years in the hope of making a perfect waterproof line. Success crowned our efforts somewhat less than two years ago, but we have not offered the lines for sale till we were certain of their excellence in every particular. These lines will not crack, chip off or become sticky and stiff. They are completely waterproofed, not merely on the surface. They will not become tender in use or by age.
SAMPLES AND PRICES FURNISHED ON APPLICATION.
Also a new style **LANDING NET**, made of waterproof braided linen line, which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

GRATEFUL—COMFORTING.
EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette. Made simply with boiling water or milk. Sold only in half-pound tins by Grocers, labelled thus: JAMES EPPS & CO., Homoeopathic Chemists, London, England.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

VICTORY WON

BY SHOOTERS USING THE

Chamberlin Cartridge

AT THE

Tournament of the Illinois State Sportsmen's Assoc'n,

JUNE, 1886.

First and Diamond Badge by GEO. KLEINMAN, killing 29 out of 30 live birds.

Second Prize by ABNER PRICE, killing 28 out of 30 live birds.

First by C. E. WILLARD, in the first event of the "Open to the World" contest. Eighty-two entries.

Also divided in nearly every other event of the great Tournament.

The Chamberlin Cartridges also winners of the Smith Cup, by C. M. HINSDALE, in the Iowa State Tournament at Burlington.

These Cartridges were from regular stock sold by dealers.

TATHAM & BROS., Eastern Agents,
82 Beekman Street, New York City.

SMALL YACHTS.

**Their Design and Construction, Exemplified by the
Ruling Types of Modern Practice.**

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio volume (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500.

LIST OF PLATES.

I. The Sloop Yacht Scherer.
II. The Nuckel.
III. The Windward.
IV. A Newport Catboat—Portable Catboat.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and, when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

TERRA COTTA KENNELS, Box 345, Toronto, Can.

In the Stud.

The "Boss" in Stud.

Services limited to ten approved bitches, at \$50 each. A. K. R. 2218. His ancestors all champion and show dogs. As a stud dog he cannot be excelled, his get being being very large and finely marked.

Boss' Record.—Vho. at New York in 1885, as a puppy. In 1886, 2d prize N. E. K. Club at Boston. He also took 2d prize in open class and special prize as the best American bred mastiff at the Westminster K. C. New York, 1886.

Boss is a large dog, weighing upward of 180 lbs.; is good in skull, with grand body, legs, feet and bone.—Am. Field, April 8, 1886.

In mastiffs there was but one new one of any pretension and that was Boss. He possesses length of body with great substance, and is perfectly sound in limbs.—Sporting Life, March 31, 1886.

A few choice pups of great promise for sale, sired by Boss out of equally grand females, with best of pedigree and markings.
Also a pair of Great Danes, 5 mos. old, marked alike white and blue; great beauties. Pair \$50; others from \$15 to \$20 each.
